DRAFT DETERMINATION

Fair Work Act 2009
s.156 - 4 yearly review of modern awards

4 YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

(AM2018/26)

XXXX
XXXX
XXXX

XXXX, XX XXXX 201X

4 yearly review of modern awards – Social, Community, Home Care and Disability Services Industry Award 2010.

A. Further to the decision issued on XXX in AM2018/26 ([201X] FWCFB XXXX), the above award is varied as follows:

1. By deleting clause 25.1 and inserting in lieu thereof:

25.1 Ordinary hours of work

(a) The ordinary hours of work will be 38 hours per week or an average of 38 hours per week over the employee's roster period, up to a maximum of four weeks.

(b) Subject to clause 25.1(c), the maximum ordinary hours that can be worked per shift is 8.

(c) By agreement between an employer and an individual employee, ordinary hours may be worked up to 10 hours per shift.

2. By deleting the words 'or period of work' in clause 25.4(a).

3. By deleting clause 25.5(d)(ii) and inserting in lieu thereof:

(ii) However, a roster may be altered at any time:

A. by agreement between the employer and relevant employee, provided the agreement is recorded in writing;

B. to enable the service of the organisation to be carried out where another employee is absent from work on account of personal/carer's leave,

compassionate leave, community service leave, ceremonial leave, leave to deal with family and domestic violence, or in an emergency; or

C. where the change involves the mutually agreed addition of hours for a part-time employee to be worked in such a way that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle.

4. By deleting clause 25.5(f) and inserting in lieu thereof:

(f) Client cancellation

(i) This clause applies where a client cancels or changes a scheduled home care or disability service which a full-time or part-time employee was rostered to provide.

(ii) Where a service is cancelled by a client under clause 25.5(f)(i), the employer may either:

A. direct the employee to perform other work during those hours in which they were rostered; or

B. cancel the rostered shift.

(iii) Where clause 25.5(f)(ii)(A) applies, the employee will be paid the amount payable had the employee performed the cancelled service or the amount payable in respect of the work actually performed, whichever is the greater.

(iv) Where clause 25.5(f)(ii)(B) applies, the employer must either:

A. pay the employee the amount they would have received had the shift not been cancelled; or

B. subject to clause 25.5(f)(v), provide the employee with make up time in accordance with clause 25.5(f)(vi).

(v) The make up time arrangement cannot be utilised where the employee was notified of the cancelled shift after arriving at the relevant place of work to perform the shift. In these cases, clause 25.5(f)(iv)(B) applies.

(vi) Where the employer elects to provide make up time:

A. the make up time must be rostered in accordance with clause 25.5(a);

B. the make up time must be rostered to be performed within 3 months of the date of the cancelled shift;

C. the employer must consult with the employee in accordance with clause 8A regarding when the make up time is to be worked prior to rostering the make up time; and

D. the make up shift can include work with other clients or in other areas of the employer's business provided the employee has the skill and competence to perform the work.

5. By deleting clause 20.9 and inserting in lieu thereof:

20.9 On call allowance

An employee required by the employer to be on call (i.e. available for recall to duty at the employer's or client's premises and/or for remote response duties) will be paid an allowance of:

(i) $17.96 for any 24 hour period or part thereof during the period from the time of finishing ordinary duty on Monday to the time of finishing ordinary duty on Friday; or

(ii) $35.56 in respect of any other 24 hour period or part thereof on a Saturday, Sunday, or public holiday.

6. By inserting new clause 20.10 as follows:

20.10 Remote response

(a) In this award, remote response duties means the performance of the following activities by an employee outside of hours at the direction of, or with the authorisation of, their employer:

(i) responding to phone calls, messages or emails;

(ii) providing advice ('phone fixes');

(iii) arranging call out/rosters of other employees; and

(iv) remotely monitoring and/or addressing issues by remote telephone and/or computer access,

in circumstances where the employee is not required to attend their employer's premises, or any other particular place of work, and at a time when the employee is either on call or has not otherwise been rostered to work.

(b) Subject to clause 20.10(f), where an employee is directed or authorised by their employer to perform remote response duties between 6.00am and 10.00pm, the employee will be paid at the applicable rate of pay specified in this Award for

any such work performed between these hours, with a minimum payment of 15 minutes.

(c) Where an employee undertakes multiple separate instances of remote response duties during a particular period referred to in clause 20.10(b), and the total time spent performing such duties does not exceed 15 minutes, only one minimum payment is payable.

(d) Subject to clause 20.10(f), where an employee is directed or authorised to perform remote response duties between 10.00pm and 6.00am the employee will be paid at the applicable rate of pay specified in this Award for any such work performed between these times, with a minimum payment of one hour. Where such work exceeds one hour, payment will be made at the applicable rate for the duration of the work.

(e) Where an employee undertakes multiple separate instances of remote response duties during a particular period referred to in clause 20.10(d), and the total time spent performing duties does not exceed one hour, only one minimum payment is payable.

(f) Subject to clause 20.10(g), an employee who performs remote response duties must maintain and provide to their employer a time sheet specifying the time at which they commenced and concluded performing any remote response duty and a description of the work that was undertaken. This record must be provided to the employer prior to the end of the next full pay period or in accordance with any other arrangement as agreed between the employer and the employee.

(g) An employer may implement an alternate method or system for the recording and notification of the details referred to in clause 20.10(f).

(h) An employer is not required to pay an employee for any time spent performing remote duties if the employee does not comply with the requirements of clause 20.10(f) or any alternate method or system pursuant implemented under clause 20.10(g).

(i) For the purposes of this clause, remote response duties do not include employees undertaking administrative tasks such as (but not limited to) reviewing or inquiring about their roster or seeking changes to their roster.

(j) Clause 28.3 does not apply where an employee performs remote response work in accordance with this clause.

7. By deleting clause 28.4 and inserting in lieu thereof:

28.4 Recall to work overtime at the employer's or client's premises

An employee recalled to work overtime after leaving their place of work to attend at a premises where work is performed will be paid for a minimum of two hours' work at the appropriate rate for each time recalled. If the work required is completed in less than two hours the employee will be released from duty. This clause does not apply to an employee performing remote response duties in accordance with clause 20.10 of this Award.

B. This determination comes into operation from XX XXXX 201X. In accordance with s.165(3) of the Fair Work Act 2009 these items do not take effect until the start of the first full pay period that starts on or after XX XXXX 201X.

[Insert the Seal of the Fair Work Commission]

XXXX

Fair Work Commission: 4 yearly Review of modern awards

REPLY SUBMISSION

4 YEARLY REVIEW OF MODERN AWARDS: (AM2018/26) SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010 - SUBSTANTIVE ISSUES

AUSTRALIAN BUSINESS INDUSTRIAL

- and -

THE NSW BUSINESS CHAMBER LTD

5 APRIL 2019

TABLE OF CONTENTS

1. BACKGROUND

1.1 This reply submission is made on behalf of:

(a) Australian Business Industrial (**ABI**);

(b) the New South Wales Business Chamber Ltd (**NSWBC**);

(c) Aged & Community Services Australia (**ACSA**); and

(d) Leading Age Services Australia Limited (**LASA**),

collectively, '**our clients**'.

1.2 This reply submission is filed in accordance with the Amended Directions of the Fair Work Commission (the **Commission**) issued on 4 February 2019 in respect of the *Social, Community, Home Care and Disability Services Industry Award 2010* (the **Award**).

1.3 This reply submission addresses those claims of the Health Services Union (the **HSU**), the United Voice, and the Australian Services Union (the **ASU**) that were identified during a mention on 3 April 2019 before the President, Ross J, as being scheduled to be dealt with during the hearing listed for 12 April 2019.

1.4 Those claims are identified as follows:

(a) S44A – Deletion to the 24 hour care clause (United Voice);

(b) S47 – Variation to the excursions clause (United Voice);

(c) S51 – Variation to the overtime clause (United Voice);

(d) S57 – Variation to the public holidays clause (United Voice);

(e) S40 – Consequential amendment to the sleepover clause (United Voice);

(f) S48 – Rates or pay for casuals on weekends and public holidays (HSU);

(g) S43 – Deletion of 24 hour care clause (HSU);

(h) S19 – First aid certificate renewal (HSU); and

(i) S6 – Community language skills (ASU).

1.5 This reply submission addresses the above claims, as pursued by the respective unions in their submissions as follows:

(a) the submission of the HSU dated 15 February 2019 (**HSU Submission**);

(b) the submission of the United Voice dated 15 February 2019 (**UV Submission**) and

(c) the submission of the ASU dated 18 February 2019 (**ASU Submission**).

Our clients

1.6 ABI is a registered organisation under the *Fair Work (Registered Organisations) Act 2009* and has in excess of 4,000 members. ABI represents the interests of businesses in a variety of industries including the social, community, home care and disability services industry. Its primary role is to develop workplace policy and to shape debate on major workplace relations issues.

1.7 NSWBC is a recognised State registered association pursuant to Schedule 2 of the *Fair Work (Registered Organisation) Act 2009* and has some 18,000 members. NSWBC is the State's peak business organisation and represents all businesses from small enterprises to large corporations across a variety of industries including the social, community, home care and disability services industry.

1.8 ACSA is the leading peak body supporting church, charitable, other not-for-profit and government providers of residential care services, community care services and retirement living for older people in Australia.

1.9 LASA is the national peak body representing and supporting providers of age services across residential care, home care and retirement living. LASA's membership base is made up of private, not-for-profit, faith-based and government operated organisations providing care, support and services to older Australians.

2. LEGISLATIVE FRAMEWORK APPLICABLE TO 4 YEARLY REVIEW

2.1 The legislative framework applicable to the 4 Yearly Review has been considered in detail in *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 (***Preliminary Issues Decision***), and *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 (***Penalty Rates Decision***).

2.2 More recently, the legislative framework applicable to the 4 Yearly Review was considered in *4 yearly review of modern awards – plain language re-drafting – standard clauses* [2018] FWCFB 4177 issued on 18 July 2018[1] and summarised in the *4 yearly review of modern awards – Alpine Resorts Award* [2018] FWCFB 4984. The main propositions may be summarised as follows:

(a) section 156(2) provides that the Commission must review all modern awards and may, among other things, make determinations varying modern awards;

(b) the term "review" has its ordinary and natural meaning of "survey, inspect, re-examine or look back upon";[2]

(c) the discretion in s 156(2)(b)(i) to make determinations varying modern awards in a review, is expressed in general, unqualified, terms, but the breadth of the discretion is constrained by other provisions of the *Fair Work Act 2009 (Cth)* (**FW Act**) relevant to the conduct of the review;

(d) in particular the Modern Awards Objective in s 134 applies to the review;

(e) the Modern Awards Objective is very broadly expressed,[3] and is a composite expression which requires that modern awards, together with the NES, provide "a fair and relevant minimum safety net of terms and conditions", taking into account the matters in ss 134(1)(a)–(h);[4]

(f) fairness in this context is to be assessed from the perspective of the employees and employers covered by the modern award in question;[5]

---

[1] [2018] FWCFB 4177 at [3]-[13]
[2] *Shop, Distributive and Allied Employees Association v The Australian Industry Group* [2017] FCAFC 161 at [38]
[3] *Shop, Distributive and Allied Employees Association v National Retail Association (No 2)* (2012) 205 FCR 227 at [35]
[4] [2017] FWCFB 1001 at [128]; *Shop, Distributive and Allied Employees Association v The Australian Industry Group* [2017] FCAFC 161 at [41]–[44]
[5] [2018] FWCFB 3500 at [21]-[24]

(g) the obligation to take into account the s 134 considerations means that each of these matters, insofar as they are relevant, must be treated as a matter of significance in the decision-making process;[6]

(h) no particular primacy is attached to any of the s 134 considerations and not all of the matters identified will necessarily be relevant in the context of a particular proposal to vary a modern award;[7]

(i) it is not necessary to make a finding that the award fails to satisfy one or more of the s 134 considerations as a prerequisite to the variation of a modern award;[8]

(j) the s 134 considerations do not set a particular standard against which a modern award can be evaluated; many of them may be characterised as broad social objectives;[9]

(k) in giving effect to the Modern Awards Objective the Commission is performing an evaluative function taking into account the matters in ss 134(1)(a)–(h) and assessing the qualities of the safety net by reference to the statutory criteria of fairness and relevance;

(l) what is necessary is for the Commission to review a particular modern award and, by reference to the s 134 considerations and any other consideration consistent with the purpose of the objective, come to an evaluative judgment about the objective and what terms should be included only to the extent necessary to achieve the objective of a fair and relevant minimum safety net;[10]

(m) the matters which may be taken into account are not confined to the s 134 considerations;[11]

(n) section 138, in providing that a modern award may include terms that it is permitted to include, and must include terms that it is required to include, qualifies that power to be exercised "only to the extent necessary to achieve the Modern Awards Objective and (to the extent applicable) the minimum wages objective", and

---

[6] *Edwards v Giudice* (1999) 94 FCR 561 at [5]; *Australian Competition and Consumer Commission v Leelee Pty Ltd* [1999] FCA 1121 at [81]-[84]; *National Retail Association v Fair Work Commission* (2014) 225 FCR 154 at [56]

[7] *Shop, Distributive and Allied Employees Association v The Australian Industry Group* [2017] FCAFC 161 at [33].

[8] *National Retail Association v Fair Work Commission* (2014) 225 FCR 154 at [105]-[106]

[9] See *National Retail Association v Fair Work Commission* (2014) 225 FCR 154 at [109]-[110]; albeit the Court was considering a different statutory context, this observation is applicable to the Commission's task in the Review

[10] As above at [28]-[29]

[11] *Shop, Distributive and Allied Employees Association v The Australian Industry Group* [2017] FCAFC 161 at [48]

emphasises the fact it is the minimum safety net and minimum wages objective to which the modern awards are directed;[12]

(o) what is necessary to achieve the Modern Awards Objective in a particular case is a value judgment, taking into account the s 134 considerations to the extent that they are relevant having regard to the context, including the circumstances pertaining to the particular modern award, the terms of any proposed variation and the submissions and evidence;[13] and

(p) where an interested party applies for a variation to a modern award as part of the 4 yearly review, the task is not to address a jurisdictional fact about the need for change, but to review the award and evaluate whether the posited terms with a variation meet the objective.[14]

2.3 When considering the merit basis to make variations, the *Preliminary Issues Decision* held that:

(a) there may be cases where the need for an award variation is self-evident. In such circumstances, proposed variations can be determined with little formality;[15] and

(b) where significant award changes are proposed, they must be supported by submissions which address the legislative provisions and be accompanied by probative evidence properly directed to demonstrating the facts supporting the proposed variation.[16]

2.4 Lastly, the Commission should proceed on the basis that *prima facie* the modern award achieved the modern awards objective at the time it was made.

3. THE SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY

3.1 The social, community, home care and disability services industry is undergoing unprecedented structural change by reason of the significant reforms that have recently been (and continue to be) implemented across the country.

3.2 The two main reforms which are having a significant impact on the operating environment are the National Disability Insurance Scheme (the NDIS) and the introduction of 'Consumer-Directed Care' for home care packages. Other similar reforms are also taking place in respect of State and Territory funding models. Broadly speaking, these reforms involve a move away from a block funding model to an individualised funding model.

3.3 These reforms all have a shared focus: empowering individuals to exercise a greater level of choice and control over the delivery of their support services. The reforms aim to empower individuals to exercise more choice and control in their lives by having a greater ability to determine what services are provided to them, and when, where, how and by whom those services are delivered.

3.4 However, the reforms also represent a major challenge for employers in the industry, and require businesses to rapidly transform the structure and nature of their workforces in order to remain viable.

Consumer-directed care in the home care sector

3.5 The aged care reform agenda places older Australians at the centre of the system (consumer directed care) and is predicated on four principles :

(a) ageing in place - based on the preferences of older people to age at home;

(b) consumer choice - care recipients are empowered to choose who provides the age services that best meet their changing needs and preferences;

(c) market based competition - as a mechanism to drive value for money and ensure diversity in care providers to meet consumer choices; and

(d) consumer contributions - where recipients of care and services contribute to the cost of their care, commensurate with their ability to do so.

3.6 Australia's aged care system supports more than 1.3 million older Australians annually, the majority of whom are supported at home in line with their clear preference to remain at home.

3.7 The aged care industry is comprised of residential aged care (which is covered by the Aged Care Award 2010) and home care, which is covered by the SCHCDS Award. In the non-residential aged care sector, there are two main programs under which services are delivered: the Commonwealth Home Support Program (CHSP), and the Home Care Packages (HCP) Program. Entry to the system is though My Aged Care operated by the Federal Government. The system is designed, regulated and funded by the Federal Government.

3.8 In the home care sector, the Federal Government announced reforms in 2012 creating Consumer Directed Care. Consumer Directed Care (CDC) is a model of service delivery designed to give more choice and flexibility to consumers, by allowing individuals to have more control over the types of care and services they access and the delivery of those services (including who delivers the services and when).

3.9 CDC was first piloted as a model of care within the HCP Program in 2010-11. Following the success of the pilot, all newly released Home Care Packages from August 2013 were required to be delivered on a CDC basis. From July 2015, all Home Care Packages must be delivered in a CDC basis.

3.10 Home Care Packages are generally available to older persons who need coordinated services to help them to stay in their home, and to younger persons with a disability, dementia or other special care needs that are not met through other specialist services.

3.11 Prior to the introduction of CDC, Home Care Packages in Australia were provided as a bundled set of services relatively tightly-specified by government. Availability of Commonwealth funding for these services had been capped by the allocation of funded "places" to a limited group of approved providers (as provided for in the Aged Care Act 1997), by the funding levels prescribed and by a cap on consumer fees. This created a market characterised by:

(a) limited supply;

(b) lack of price competition;

(c) limited scope for competition on quality; and

(d) limited product differentiation.

3.12 Previously, a set planning ratio dictated the number of "home care places" which were allocated to approved providers for specific geographic regions – meaning that supply was constrained both in total levels and in location.

3.13 However, the recent reforms have shifted the dynamic in the sector to a more market based system – in the old model, providers selected consumers to receive care; in the new model, consumers select suppliers.

3.14 Under the reforms, consumers' needs dictate the allocation of services. Providers, meanwhile, can provide services to (approved and prioritised) consumers wherever they are located – as long as providers have an attractive service offering. However for providers, it also brings the challenge of no longer having a guaranteed number of places and therefore income. This issue is addressed in more detail at paragraphs 4.6-4.10 below.

The National Disability Insurance Scheme

3.15 The NDIS was established under the National Disability Insurance Scheme Act 2013 (Cth), with the objectives of:

(a) supporting the independence and social and economic participation of people with disability;

(b) providing reasonable and necessary supports, including early intervention supports, for participants;

(c) enabling people with disability to exercise choice and control in the pursuit of their goals and the planning and delivery of their supports;

(d) facilitating the development of a nationally consistent approach to the access to, and the planning and funding of, supports for people with disability; and

(e) promoting the provision of high quality and innovative supports to people with disability.

3.16 The NDIS supports people under the age of 65 who have a permanent and significant disability. Under the NDIS, individual consumers (eligible 'participants') have greater choice and control over how their services are delivered, which includes control over what services are provided to them, when those services are provided, where those services are provided, and by whom those services are provided. Participants have the ability to choose their service providers, and to terminate their service arrangements at their discretion.

3.17 Each participant's supports are set out in a 'NDIS Plan' which is developed by the National Disability Insurance Authority (NDIA) in consultation with the individual participant. Service providers do not have any control over, or input into, the NDIS Plans. NDIS Plans specify a 'global' funding amount for different categories of 'fixed' and/or 'flexible' supports, but typically do not specify details of how or when those supports are to be provided.

3.18 Participants then typically enter into a service agreement with one or more service providers for the delivery of services outlined in their NDIS Plan.

3.19 The transition to an individualised funding model has meant that employers have had to be more flexible and responsive in the delivery of their services in order to meet the goals of the individuals to whom they are established to support. This has led to a number of challenges, including:

(a) a reduction in the stability or predictability of demand, as individual participants are now free to terminate their service arrangements at any time;

(b) a fragmentation of working patterns, as the employer is no longer able to organise the work in a manner that is most efficient to it;

(c) an increase in cancellations and requests for changes to services by participants; and

(d) an increase in requests for services to be delivered by particular support workers.

3.20 The above challenges have also been accompanied by diminishing profitability and viability of providing some types of services due to the inadequacies of the NDIS pricing model, which is addressed at paragraphs 4.11-4.14 below.

4. FUNDING CONSTRAINTS

4.1 For many decades, prior to the introduction of the NDIS and the CDC reforms, there was a high degree of certainty and stability around the funding for organisations in this industry. However, as the markets have moved to a more decentralised, dynamic, market-based model, employers have had to be responsive to the needs and desires of individual consumers, resulting in significant financial stress. This is particularly so in the disability sector where prices are fixed by the NDIA, and so employers are in many cases unable to recoup an amount sufficient to meet their costs for particular services.

4.2 There are two distinct features of businesses operating in the SCHCDS industry which should be recognised.

4.3 Firstly, the prices that can be charged for most services are regulated and in some cases fixed by the Government (or otherwise businesses are limited by the funding that is provided to deliver certain services).

4.4 Secondly, many employers in the SCHCDS industry are not-for-profit organisations with a deeply-embedded mission to support the community. This fact means that these businesses are not driven by the same imperatives or motivations as most other commercial businesses.

4.5 The above two factors lead to a dynamic whereby many service providers in the SCHCDS industry, if/when faced with the choice, will elect to provide services to consumers at a loss in order to meet the organisation's mission rather than not provide the service by reason of it being unprofitable.

Financial position of the home care sector

4.6 The home care sector is under significant financial strain.

4.7 The data provided by the *StewartBrown Aged Care Financial Performance Survey* is the most contemporaneous information on the financial performance of the sector. These quarterly surveys are the largest benchmark within the aged care sector and incorporate detailed financial and supporting data from some 25,000 home care packages across Australia.

4.8 According to this data, the average profit per client per day for home care providers fell 48 percent over the two year period between the December quarter of 2016 and the December quarter of 2018, from $6.40 to $3.33 per client per day.[17]

4.9 Its most recent report, the *Aged Care Financial Performance Survey; Sector Report (Six months ended December 2018)*, contains financial data based on over 27,164 home care packages (503 home care programs) across Australia. The Report indicates that:

(a) the HCP segment experienced "a significant decline in profitability in FY18 with revenue and overall EBT per client per day declining";[18]

(b) while there had been seasonal improvement in results since the end of the financial year in 2018, the underlying year-on-year results indicate declining financial performance;[19]

(c) there was a financial performance decline in the 2018 financial year, seeing revenues reduce by an average of 6.1 per cent resulting in an overall reduction in profitability of 29.8 per cent;[20]

(d) the number of providers have increased by 80.6 per cent since June 2016, however the number of home care funding packages has only increased by 43.4 per cent in the same period;[21] and

[17] EBT per client per day.
[18] StewartBrown, *Aged Care Financial Performance Survey; Sector Report (Six months ended December 2018),* 2019, p.27
[19] Ibid, p.5
[20] Ibid, p.6

(e) there has been a decline in Level 4 (high care) packages, with a decline in return from $24.80 per client per day in July 2015 to $5.92 per client per day, representing a return on revenue of 5.3 percent which is described as "bordering on being unsustainable".[22]

4.10 This decline in profitability likely reflects a range of factors including input costs increasing at above the rate of indexation, increased competition driving lower prices or more attractive service offerings to maintain or grow market share, and reduction in the level of package utilisation.

Financial position of the disability sector

4.11 A regular complaint of service providers in the disability services sector is the inadequacy of the NDIS pricing system. In certain areas, there are signs of market failure.

4.12 The legitimacy of this concern has been borne out in a range of studies, including most comprehensively in the Final Report of the Independent Pricing Review commissioned by the NDIA and published by McKinsey & Company dated February 2018.[23]

4.13 Amongst a range of findings, the Independent Pricing Review found:[24]

(a) "signals that concerning" in the attendant care market, including a "significant proportion of providers that currently have unprofitable operating models"; and

(b) while some providers have operating models that are profitable at the current price points, "many are struggling, particularly traditional providers delivering attendant care supports", which is attributable to a combination of factors, including:

(i) higher overheads;

(ii) challenges in adapting to unit pricing and NDIA systems improvement opportunities;

(iii) lower utilisation of workers; and

(iv) higher labour costs.

4.14 The findings of the Independent Pricing Review are consistent with the feedback from service providers that has been received over the past few years, which is summarised in the

[21] StewartBrown, *Aged Care Financial Performance Survey; Sector Report (Six months ended December 2018),* 2019, p.6
[22] Ibid, p.29
[23] McKinsey & Company, *Independent Pricing Review: National Disability Insurance Agency* (Final Report, February 2018)
[24] Ibid, p.5

Independent Pricing Review and a range of other surveys and publications, including the *State of the Disability Sector Report 2018* published by National Disability Services (NDS). This feedback includes that:

(a) current loadings for complex participants do not fully reflect the additional costs of serving those participants;[25]

(b) travel allowances do not adequately cover the costs of provider travel and participant transport in regional areas and isolated communities;[26]

(c) in attendant care, existing providers are struggling to adjust their business models to operate under the NDIS unit-funding model and the current level of price caps;[27]

(d) a very large number of service providers ranked the NDIS pricing as their top concern, and believed they would not be able to provide NDIS services at their current prices; [28]

(e) many service providers are not making a profit/surplus;[29] and

(f) the inadequacy in pricing has resulted in some providers discontinuing services to some participants.[30]

5. THE UNIONS' CLAIMS

5.1 The Unions' claims must be considered against the backdrop of the significant structural reforms that have been implemented over the last five years, and the significant financial and operational pressure currently being experienced by businesses as they struggle to transition to a radically new system of service delivery.

5.2 Our clients do not have any philosophical objection to the Award providing a 'fair and relevant' minimum safety net of terms and conditions. However, the task before the Commission ultimately requires a balancing exercise whereby the needs and interests of employees are balanced with the needs of employers in order to ensure a fair, sustainable and viable industry.

5.3 From the perspective of service providers in this industry, yhe reality is that any variation to the Award which results in increased labour costs will inevitably have a material adverse impact on employers in the industry and will threaten the viability of their operations and their ability to continue providing certain services, unless there is some equivalent increase to the funding received by the business.

5.4 Equally, any variation that adversely affects employers' operational flexibilities will also have a material adverse impact on the businesses' ability to deliver quality services to some of the most vulnerable members of the community.

5.5 By way of summary, our clients oppose the following variations sought by the Unions:

(a) S44A – Deletion to the 24 hour care clause (United Voice);

(b) S47 – Variation to the excursions clause (United Voice);

(c) S51 – Variation to the overtime clause (United Voice);

(d) S57 – Variation to the public holidays clause (United Voice);

(e) S40 – Consequential amendment to the sleepover clause (United Voice);

(f) S48 – Rates or pay for casuals on weekends and public holidays (HSU);

(g) S43 – Deletion of 24 hour care clause (HSU);

(h) S19 – First aid certificate renewal (HSU); and

(i) S6 – Community language skills (ASU).

5.6 Each of these claims is addressed in detail below.

6. CLAIMS RELATING TO 24 HOUR CARE CLAUSE (S43, S44A AND S40)

The HSU and United Voice claims

6.1 The HSU and United Voice both seek the deletion of clause 25.8 of the Award, which deals with 24 hour care. The current clause provides:

> ***25.8 24 hour care***
>
> *This clause only applies to home care employees.*
>
> *(a) A 24 hour care shift requires an employee to be available for duty in a client's home for a 24 hour period. During this period, the employee is required to provide the client with the services specified in the care plan. The employee is required to provide a total of no more than eight hours of care during this period.*
>
> *(b) The employee will normally have the opportunity to sleep during a 24 hour care shift and, where appropriate, a bed in a private room will be provided for the employee.*
>
> *(c) The employee engaged will be paid eight hours work at 155% of their appropriate rate for each 24 hour period.*

6.2 The United Voice also seek a consequential amendment to remove certain wording in clause 25.7(a),[31] which will be an uncontroversial amendment if the 24 hour care clause is removed from the Award.

6.3 While the United Voice have articulated their concerns about the 24 hour care clause in some detail in their written submissions, the HSU have advanced a whole three paragraphs in support of the proposed deletion of clause 25.8.

6.4 A range of submissions are advanced in support of the deletion of clause 25.8, including that:

(a) the clause is unclear, in that it provides no certainty regarding the hours or work of an employee or the sleeping arrangements to be applied; [32]

(b) the clause is rarely used;[33]

(c) the entire engagement is 'work' and should be remunerated as such;[34]

[31] This is described as claim S40.
[32] HSU Submission at [64]-[65]; United Voice Submission at [18]
[33] Ibid

(d) the clause does not adequately compensate employees, or provides for remuneration at a "discounted rate", for the time they are required to be available for work;[35]

(e) the clause may breach section 323 of the FW Act because it permits an employer to require an employee to work for a 24 hour period but does not require the employer to pay the employee in full for that work;[36]

(f) the clause creates situations where an employee is effectively liable to work in excess of the notional hours attributed to the engagement, and the hours that such engagements will 'require' the employee to work are not foreseeable;[37] and

(g) leaving employees for lengthy periods on duty dealing with complex interpersonal matters is problematic.[38]

6.5 We address firstly the history and rationale for the current 24 hour care clause, and then turn to each of the above arguments in detail below.

History of the 24 hour care clause

6.6 Provisions relating to 24 hour care have been a common and important feature of industrial regulation in the SCHCDS industry for many years.

6.7 Numerous pre-reform awards contained 24 hour care provisions, including:

(a) the *Charitable Sector, Aged and Disability Care Services (State) Award 2003*;[39]

(b) the *Charitable, Aged and Disability Care Services (State) Award*;[40]

(c) the *Community Services (Home Care Service of New South Wales) Care Workers Award 2002*;[41]

(d) the *Community Services (Home Care) (ACT) Award 2002*;[42]

(e) the *Disabilities Services Award*;[43]

(f) the *Disability Support Workers Award - State 2003*;[44]

[40] AN120118
[41] AP815060
[42] AP816351
[43] AN150046

(g) the *Home and Community Care Award 2001*;[45]

(h) the *Miscellaneous Workers Home Care Industry (State) Award* [NAPSA – NSW];[46] and

(i) the *Social and Community Services Employees (State) Award*.[47]

6.8 These pre-reform awards covered a very large number of employees across the home care and disability services sectors throughout the majority of States and Territories.

6.9 During the Award Modernisation process which led to the making of the current Award, the AIRC published an Exposure Draft on 25 September 2009 contained a 24 hour care provision at clause 24.8.

6.10 Following the publication of the Exposure Draft, parties were given the opportunity to file submissions in respect of the Exposure Draft. Notwithstanding that the unions raised a number of concerns about the terms of the Exposure Draft, it is notable that the union parties did not raise any issue with the proposed 24 hour care clause. For example, no issue was raised with the 24 hour care clause in the following submissions of the unions:

(a) the submission of the ASU dated 16 October 2009;

(b) the submission of the HSU dated 16 October 2009;

(c) the submission of the ACTU dated 16 October 2009; and

(d) the submission of the AWU (Queensland Branch) dated 16 October 2009.

6.11 In contrast, the employer parties did raise issue with the Exposure Draft provision. For example:

(a) In its submission of 16 October 2009, AFEI raised concerns with the clause and submitted that the clause may result in severe operational difficulties for employers providing this type of service and may ultimately cause such a service to become unviable. AFEI then submitted that clause 5 of the *Miscellaneous Workers – Home Care Industry (State) Award* should be adopted;[48]

(b) In its submission of 19 October 2009, ABI raised concerns with aspects of the clause, including that the wording in the Exposure Draft failed to contemplate the situation whereby an employee is required to provide care for a client outside of the client's

---

[45] AP806214
[46] AN120341
[47] AN120505
[48] At [24]-[27]

home. The ABI submission also enclosed a marked-up version of the Exposure Draft which included the specific amendments sought;[49] and

(c) In its submission of 19 October 2009, the Aged Care Employers raised the same concern as ABI about the clause being limited to the provision of care within a client's home, and proposed an amendment to that effect.[50]

6.12 In response to the above submissions, the ASU filed a submission on 5 November 2009 in which it rejected "as a standard award condition across the whole industry" the proposition of the employers that the clause be amended to allow for the provision of care outside the client's home.[51] Notably, the ASU then, in response to the proposal for the insertion of a "Live-In employees" provision as per the *Miscellaneous Workers – Home Care Industry (State) Award*, stated:

> *The ASU supports the Full Bench decision to insert the 24 hour care provisions as a standard and submits that the existence of a "Live In" care provision in one New South Wales award is not a proper basis for inclusion of such a condition in the Modern Award.* [emphasis added]

6.13 The ASU submission of 5 November 2009 then attached a 'comparison table' summarising the various positions of the interested parties. The table records, in respect of the 24 hour care clause, that each of the "ASU, HSU, AWU, LHMU, ACTU" ... "support" the ED.[52]

6.14 No other written submission was made by any union concerning the 24 hour care clause in the Exposure Draft. Nor have we been able to identify any specific discussion about the clause during the hearings held between October and November 2009.[53]

6.15 Given the lack of dispute between the main interested parties in respect of the clause, the AIRC unsurprisingly retained the clause unaltered when it made the modern award on 4 December 2009.[54]

6.16 Subsequent to the Award Modernisation process, the Award has contained a 24 hour care clause since it was created in 2010.

[54] [2009] AIRCFB 945

6.17 Aside from a variation to the clause following an application by the ASU in 2012 to clarify that it only applies to home care employees,[55] the clause has otherwise operated without any controversy until these proceedings.

The rationale for, and importance of, the 24 hour care clause

6.18 The Unions' support for the inclusion of the 24 hour care clause during the Award Modernisation process reflects the fact that these provisions were common features of the pre-reform industrial relations system, and represents an acknowledgement of the importance of the Award facilitating 24 hour care arrangements.

6.19 While the 24 hour care clause is not used on a daily basis by most service providers, it facilitates the provision of a valuable service to elderly Australians who are in receipt of home care services. By way of example, where a family has an elderly family member in their care and the family wishes to take a holiday, the 24 hour care clause allows them to arrange for a home care worker to attend their home and provide care to the elderly family member in his/her own home, without the need to organise respite care in an out-of-home setting. These arrangements are consistent with the aims of the CDC model of encouraging individuals to stay at home for as long as possible and to give consumers choice about how they are cared for. The Award should continue to facilitate the delivery of such a service.

Response to the Union contentions

6.20 Before turning to the issues raised by the unions, we make the following observations about the current clause:

(a) first, the operation of the clause is limited to employees working in the home care stream, and so the clause must be viewed in that context and consideration must be given to the peculiar characteristics pertaining to that sector;

(b) second, while the clause requires an employee to be available for duty in a client's home for a 24 hour period, it explicitly requires them to provide "no more than eight hours of care"; and

(c) third, the clause provides for a loading of 155% of the appropriate rate of pay for the 8 hours of work performed.

6.21 We now address each of the unions' submissions.

[55] Fair Work Commission; PR531544

Alleged ambiguity or lack of clarity

6.22 Concerns have been raised by both the HSU and the United Voice about the lack of clarity in the clause. The matters complained of appear to be confined to:

(a) first, that the clause is silent as to what happens when an employee is required to perform more than 8 hours' work;[56]

(b) second, that the clause provides no certainty regarding the hours or work of an employee, creates situations where an employee is effectively liable to work in excess of the notional hours attributed to the engagement, and the hours that such engagements will 'require' the employee to work are not foreseeable;[57] and

(c) third, that the clause is unclear regarding aspects relating to sleeping.[58]

6.23 We respond to these matters as follows.

6.24 As to the first matter, it is correct that the clause does not specify what happens where an employee is required to perform more than 8 hours' work during a 24 hour care shift. Our clients accept that there is a degree of tension within the clause given that it states, on the one hand, that an employee is required to be "available for duty ... for a 24 hour period", and then on the other hand states that the employee "is required to provide a total of no more than eight hours of care during this period".

6.25 Our clients' view is that the intent of the clause is that employees are not required to perform any more than 8 hours' work, however there may be occasions where additional work may be required (for example, in the event of a medical emergency). While the employer may not be able to require the employee to perform more than 8 hours' work, the employee can agree to perform additional work and, where that occurs, such work will amount to work that is additional to their rostered hours and will be regulated by the overtime provisions at clause 28.

6.26 In our submission, the above position is the logical conclusion and reflects the proper construction of the current Award having regard to the principles of interpretation of industrial instruments.[59]

6.27 In relation to the second matter, we reject the suggestion that the clause provides "no certainty" concerning the hours or work of an employee.[60] To the contrary, clause 25.8(a)

[56] HSU Submission at [65]
[57] United Voice Submission at [20]
[58] HSU Submission at [65]
[59] See *AMWU v Berri Pty Limited* [2017] FWCFB 3005

expressly provides that "The employee is required to provide a total of no more than eight hours of care during this period". In practice, there is likely to be some flexibility as to precisely when the 8 hours of work are to be performed over the 24 hour period, as is required given the nature of the work. However, ultimately the span of the engagement (being 24 hours) is clearly known to the employee.

6.28 In relation to the third matter, an issue is raised with the alleged lack of clarity around the phrase "...where appropriate, a bed in a private room will be provided for the employee". Specifically, the HSU complain that the clause is ambiguous as to whether the employee will be provided with "a safe and clean space to sleep". It is of course accepted that the current clause does not expressly provide that employees will be provided with "a safe and clean space to sleep", however we are not aware that the absence of any such wording has caused an issue before in the 9 years the clause has been in operation. There is certainly no evidence of any issue before the Commission upon which a finding could be made that the clause is not operating sensibly.

6.29 Ultimately, if the Commission forms the view that one or more aspects of the clause are ambiguous or would benefit from clarification, our clients would not be opposed to the clause being varied to resolve any such ambiguity provided the substance of the clause is not altered. This would of course be consistent with s 134(1)(g) of the FW Act.

6.30 However, it must be stressed that a finding of ambiguity in the clause's operation does not necessitate or warrant the wholesale deletion of the clause.

Prevalence of use of the 24 hour care clause

6.31 Importantly, the HSU do not assert that the clause is *not* used. Rather, the HSU assert that the 24 hour care clause is "rarely used".

6.32 While our clients do not dispute that the clause may not be used frequently by all employers, the clause is utilised by a number of employers throughout Australia.

6.33 Indeed, a quick internet search for "24 hour home care" returns a lengthy list of providers who offer 24 hour care in the home care sector. Further, there are a large number of enterprise agreements in operation in the home care sector that contain 24 hour care provisions.[61]

---

[60] United Voice Submission at [18]

[61] See for example, *Fresh Hope Care Home Care Enterprise Agreement 2017* (AG2018/1325); *Regis Aged Care Pty Ltd, ANMF & HWU Enterprise Agreement – Victoria 2017* (AG2018/5594); *Jubilee Community Care Enterprise Agreement 2016* (AG2016/3888); *Just Better Care Northern Rivers Enterprise Agreement 2018* (AG

An allegation that the entire 24 hour period is "work"

6.34 The thrust of the unions' submissions is that where an employee is required by their employer to stand in readiness for work, or is otherwise not free to engage in leisure activities, the time should be treated as time worked and paid as such.

6.35 At a theoretical level, the proposition is sound. However, the modern award system contains a range of provisions dealing with situations where employees are required to be on-call, on stand-by in readiness for work, or otherwise available to perform work. These situations and provisions are not unusual, and clause 25.8 of the Award is no different to other clauses in a large number of other modern awards that require employees to be on stand-by or otherwise on-call whilst not performing "work". The various modern awards deal with those situations differently, and provide for different compensation mechanisms, having regard to the specific obligation imposed on employees and the particular circumstances applying in that industry.[62]

Remuneration applying to 24 hour care shifts

6.36 As stated above, clause 25.8 entitles employees to 8 hours' pay at 155% of the appropriate rate of pay.

6.37 The unions argue that the remuneration provided by clause 25.8 is inadequate when one considers the requirements imposed on employees. However, the unions do not provide any indication as to what level of remuneration they consider would be adequate. They simply assert that the entitlements provided by the Award are inadequate.

6.38 There is no evidence before the Commission as to the value of the work that would justify any change to the amounts payable for the work. In the absence of any evidence regarding the disutility associated with the performance of 24 hour care shifts, the Commission should

---

2018/7264); *Just Better Care Multi Enterprise Agreement 2018* (AG 2018/1456); *Australian Unity Home Care Enterprise Agreement 2017* (AG2017/6064); *Australian Unity Home Care EA 2017*; *Flexi Care Inc Care Providers Enterprise Agreement 2017* (AG2017/5995); *Thompson Health Care, NSWNMA, ANMF NSW Branch and HSU New South Wales Branch Enterprise Agreement 2017*; *Flexi Care Inc Care Providers Enterprise Agreement 2017; JBC Brisbane North Enterprise Agreement 2015* (AG2015/6180); *Amana Living Home Care Enterprise Agreement 2015* (AG2015/4566); *SYC Specialised Residential Care Workers Enterprise Agreement 2014-2016* (AG2014/6402); *Envigor Home Care Enterprise Agreement 2014* (AG 2015/143); *Southern Cross Care (Victoria) Community Services Enterprise Agreement 2014* (AG2015/412); *Multicultural Aged Care Services Geelong Inc, Community and Home Care Employees, Enterprise Agreement 2013* (AG2013/2499); *SOS Home Carers' Agreement 2013* (AG2013/2282); *Jewish Care Victoria Inc – Social, Community, Home Care, Disability, Health Professionals & Support Services Enterprise Agreement 2011-2014* (AG2012/5038); *After-Care (A'sia) Pty Ltd Enterprise Agreement 2010* (AG 2011/14915)

[62] See for example, clause 26.6 of the *Electrical, Electronic and Communications Contracting Award 2010*; clause 21.8 of the *Telecommunications Services Award 2010*.

not depart from the prima facie position that the 155% loading provides appropriate compensation for the work undertaken and any disutility associated with the engagement.

Alleged arguable contravention of section 323 of the FW Act

6.39 We do not consider that clause 25.8 contravenes section 323 of the FW Act.

6.40 The chief submission advanced by the United Voice appears to be that clause 25.8 "may" breach s 323 of the FW Act because it "permits an employer to require an employee to work for a 24 hour period but does not require the employer to pay the employee in full for the performance of the work".[63]

6.41 That submission should be rejected. As stated in paragraph 6.27 above, the clause explicitly does *not* require an employee to undertake more than eight hours' work. Further, as stated in paragraph 6.35 above, the notion of employees standing in readiness to perform work (but not actually performing any work at that time) is not a novel or unusual feature of the modern award system.

Fatigue concerns

6.42 The United Voice assert that "leaving one employee for long periods of time to deal with complex interpersonal matters is problematic".[64] The submission is not developed any further than that single sentence, and is unsupported by any evidence.

6.43 As previously stated, the clause requires employees to provide no more than 8 hours' care, and provides for the opportunity to sleep. Given the lack of further detail or evidence in support of the assertion, it should be given no weight and disregarded.

Conclusion

6.44 None of the matters complained of by the unions warrant the clause being deleted from the Award. That is a significant step which would have adverse implications for the elderly and disabled members of the community who receive care in their home under this clause.

6.45 The claim should be dismissed.

7. UNITED VOICE CLAIM RELATING TO EXCURSIONS (S47)

The United Voice claim

7.1 The United Voice seek a variation to clause 25.9(a) to alter the way in which TOIL is calculated or accrued where employees agree to supervise clients in excursion activities involving overnight stays away from home during the week (i.e. between Monday and Friday).

7.2 Clause 25.9(a) currently provides that where employees undertake 'excursion' work during the week, they will be paid at the ordinary rate of pay for time worked between the hours of 8.00am and 6.00pm up to a maximum of 10 hours per day, and that the employer and employee may agree to accrual of time instead of overtime payment for all other hours.

7.3 The United Voice propose that where an employer and employee agree to TOIL instead of overtime, the time accrued will be calculated at the overtime rate. By that we understand that the intention is that where TOIL is agreed, an employee would be required to be given the equivalent amount of time off work based on the applicable rate of pay that would have otherwise been payable (i.e. the employee would take 1.5 hours or 2 hours off work for each hour of overtime worked, depending on the overtime rate that would have applied). This is described as the 'time for penalty' approach, rather than the 'time for time' approach.

7.4 The United Voice also propose a consequential amendment to clause 25.7, which is uncontroversial if their claim in respect of clause 25.9 was to be successful.

7.5 In support of the claim, the United Voice assert that the existing clause is ambiguous as to whether the accrual of time would be equivalent to the normal hourly rate or the overtime rate.[65] Further, they submit that:

(a) unless their variation (or interpretation) was to be accepted, the clause would not meet the modern awards objective as employees would not be compensated for working overtime;[66]

(b) it is unfair for the Award to provide for TOIL on an 'hour for hour' basis, as the arrangement does not reflect the "true value of the work";[67] and

[65] United Voice Submission at [44]
[66] Ibid at [45]
[67] Ibid at [46]

(c) the clause "allows employers to apply pressure" on employees to accept accrual of time at an 'hour for hour' rate instead of paying overtime, given the "power imbalance" that exists between employer and employee.[68]

7.6 We address each of these contentions as follows.

Alleged ambiguity of the clause

7.7 Contrary to the United Voice assertion, there is no ambiguity in the existing clause as to the 'rate' of accrual of TOIL.

7.8 Having regard to the principles as to the proper interpretation of industrial instruments[69], it should be uncontroversial that the TOIL process in clause 25.9 operates on a 'time for time' basis. That has been the prevailing or default position since the *Family Leave Test Case*[70] in 1994, and so if the drafters of the Award intended for a different approach to be taken, they would have explicitly stated that.

7.9 Further, the main TOIL provision in the Award, clause 28.2, expressly states at clause 28.2(c) that the period of time off that an employee is entitled to take is the same as the number of overtime hours worked. Given that express provision, certainly the framers of the Award would have expressly specified in clause 25.9 if a different arrangement was intended to apply.

7.10 Lastly, it should be noted that the current Award position regarding the rate of TOIL reflects the position in two of the main pre-reform awards upon which the modern award was based, namely the *Social and Community Services (ACT) Award 2001* and the *Social and Community Services (State) Award* (NSW).

7.11 For the reasons outlined above, there is no substance to the United Voice claim that clause 25.9 is ambiguous. However, and in any event, to the extent that the Commission was minded to make the clause abundantly clear, our clients would not oppose the insertion of wording in clause 25.9 to specify that TOIL is to be taken on a 'time for time' basis.

[68] United Voice Submission at [46]

[69] See for example *Automotive, Food, Metals, Engineering, Printing and Kindred Industries Union' known as the Australian Manufacturing Workers Union (AMWU) v Berri Pty Limited* [2017] FWCFB 3005

[70] *Family Leave Test Case - November 1994* (1994) 57 IR 121; *Family Leave Test Case, Supplementary Decision* (1995) AILR 3-060

Response to other submissions

7.12 As to the other matters raised by the United Voice as summarised in paragraph 7.5 above, we respond as follows.

7.13 In response to paragraph (a), that assertion must be rejected. Contrary to the United Voice submission, the existing clause and Award *does* compensate employees for working overtime. The only circumstance where an employee would not receive overtime payments is where the employee has elected to take TOIL in lieu of the overtime payment.

7.14 In respect of paragraph (b), the Award as presently constructed ultimately allows individual employees to determine how they wish to "value" the work they have performed: they can choose to be paid at overtime rates, which is the default position, or they can reach agreement with their employer to take TOIL. That "value" judgement is something that individual employees will assess differently and make their own individual decisions about.

7.15 In respect of paragraph (c), the suggestion that employers are able to "apply pressure" on employees to take TOIL rather than receive overtime payments is unsupported by any evidence at all, and should be disregarded.

The Award Flexibility decisions

7.16 The United Voice have conveniently ignored the various Full Bench decisions in the common issues Award Flexibility proceedings, which recently considered in detail the issue of TOIL in the modern award system.

7.17 In those proceedings, the Commission considered a number of claims to vary certain modern awards in respect of make up time and TOIL. In the July 2015 decision[71], the Full Bench expressed certain provisional views about the type of model TOIL term to be inserted into 113 modern awards, of which the SCHCDS Award was one.

7.18 Relevant to the issue of the 'rate' of TOIL, the Full Bench held at [255]:

> *We have had regard to these contextual differences in our consideration of the Family Leave Test Case. Despite the differences in the statutory framework we have concluded that some aspects of the Family Leave Test Case TOIL provision retain their cogency in the current statutory context. <u>In particular, we see no reason to depart from the test case standard regarding the calculation of time for the purpose</u>*

[71] [2015] FWCFB 4466

> *of TOIL, that is at the ordinary rate (i.e. time for time) rather than the overtime rate (i.e. time for penalty).* [emphasis added]

7.19 The Full Bench then outlined a provisional model term which included the following:

> *Overtime taken as time off during ordinary time hours shall be taken at the ordinary time rate; that is, an hour for each hour worked.*[72]

7.20 A subsequent Full Bench decision of 8 July 2016 then affirmed the provisional view that the model TOIL term should provide for TOIL on a 'time for time' basis.[73]

7.21 The decisions of the Full Bench in the Award Flexibility proceedings are centrally relevant to the current United Voice claim here, and only serve to reinforce that the United Voice claim should be dismissed.

7.22 The United Voice have failed to articulate any basis for the Commission departing from the decisions of the Award Flexibility Full Bench.

[73] [2016] FWCFB 4258

8. ASU CLAIM RELATING TO COMMUNITY LANGUAGE ALLOWANCE (S6)

The ASU claim

8.1 The ASU seek the introduction of an allowance titled "Community Language and Signing Work" into clause 20 of the Award.

8.2 Under the proposed clause, employees using a community language in addition to their normal duties to provide services to persons who speak other languages or those with hearing difficulties, will receive an allowance.

8.3 The quantum of the allowance will be determined by how often an employee uses the community language skill. If an employee uses the language occasionally to meet demands, they will be paid $45.00 per week. If an employee provides regular assistance with their community language, they will be entitled to $68.00 per week.

8.4 The proposed clause is set out in full below:

20.10 Community Language and Signing Work

20.10.1 Employees using a community language skill as an adjunct to their normal duties to provide services to speakers of a language other than English, or to provide signing services to those with hearing difficulties, shall be paid an allowance in addition to their weekly rate of pay.

20.10.2 A base level allowance shall be paid to staff members who language skills are required to meet occasional demands for one-to-one language assistance. Occasional demand means that there is no regular pattern of demand that necessitates the use of the staff members language skills. The base level rate shall be paid as a weekly all purposes allowance of $45.00.

20.10.3 The higher level allowance is paid to staff members who use their language skills for one-to-one language assistance on a regular basis according to when the skills are used. The higher level rate shall be paid as a weekly all purposes allowance of $68.00.

20.10.4 Such work involves an employee acting as a first point of contact for non-English speaking service users or service users with hearing difficulty. The employee identifies the resident's area of inquiry and provides basic assistance, which may include face-to-face discussion and/or telephone inquiry.

20.10.5 *Such employees convey straightforward information relating to services provided by the employer, to the best of their ability. They do not replace or substitute for the role of a professional interpreter or translator.*

20.10.6 *Such employees shall record their use of community language skills.*

20.10.7 *Where an employee is required by the employer to use community language skills in the performance of their duties*

a) *the employer shall provide the employee with accreditation from a language/signing aide agency*

b) *The employee shall be prepared to be identified as possessing the additional skill(s)*

c) *The employee shall be available to use the additional skill(s) as required by the employer.*

20.10.8 *The amounts at 2.10.2 and 2.10.3 will be adjusted in accordance with increases in expense related allowances as determined by the Fair Work Commission.*

8.5 By way of summary, the grounds relied upon by the ASU in support of this variation consist of the following:

(a) an assertion that the ability to communicate in more than one language is a skill that is highly sought after in potential employees in the social and community sector; [74]

(b) a submission that the use of language skills is not contemplated by the classifications in the Award and therefore not taken into account for the purposes of the base rates of pay; [75]

(c) an assertion that the value of bilingual workers in the community sector is recognised as providing a superior professional service to clients;[76] and

(d) an assertion that community organisations make extensive use of professional interpreters and translators to assist people who find themselves unable to communicate effectively with essential community services.[77]

[74] ASU Submission at [39]
[75] ASU Submission at [39]
[76] ASU Submission at [42]
[77] ASU Submission at [43]

Response to the claim

Preliminary issue

8.6 As a threshold issue, in order for the claim to succeed, the Commission must be satisfied that the existing wage structure does not already contemplate employees exercising a 'community language skill'.[78]

8.7 While it is accepted that the current classification structures in the Award do not explicitly refer to "language" skills or proficiency, that fact does not establish that the Award classifications and rates of pay do not take into account these capabilities. The capabilities which are the subject of the application (i.e. an ability to speak a language other than English) are not new capabilities, and may indeed have been taken into account in the determination of wages in the industry. Certainly, the evidence falls short of establishing that there has been some proliferation of the requirement to use these skills in the industry.

8.8 To the extent that the above threshold issue can be satisfied, the claim for a new allowance essentially involves the proposition that employees should be compensated for being required to utilise a particular skill that is not otherwise compensated for in the Award.

8.9 Although s 156(3) does not apply to this claim, the principles applicable to such claims are relevant here as guiding principles. In the present case, there is no explanation as to how the ASU have reached the quantum of the allowances sought, nor sufficient evidence that would allow the Commission to make a proper assessment as to the value of the "skill".

Merit basis for variation

8.10 Turning to the general rationale for the variation, it is not disputed that *certain* employers will value the ability of an employee or prospective employee to speak a community language other than English. That is an uncontroversial proposition, and is not one that is unique to the SCHCDS industry.

8.11 Nor is it uncontroversial that employers will value a range of other competencies. Employers in the SCHCDS industry value a whole range of different life skills, experiences and attributes held by employees that may not be an inherent part of the particular role. For example, in the home care and disability sectors where personal care is provided to individuals, employers actively seek to match support workers with consumers who have shared experiences or interests.

[78] See s 139(1)(g)(ii) FW Act.

8.12 Employees in this sector demonstrate an ability to build rapport with consumers, and therefore become highly valued employees, in a range of different ways. These attributes make them more desirable employees in the sector. A community language skill is just one of a number of life skills that employees may possess.

8.13 For the Commission to insert the proposed allowance into the Award, it must be satisfied that the claim does not offend section 138. In our submission, the evidence before the Commission does not permit the Commission to reach that conclusion.

8.14 While there may be certain sections of the industry for which a community language is required to be used, we do not consider that the issue arises across the industry, or even in a large part of the industry. It strikes us that a community language allowance is something that is better left to be dealt with at the enterprise level, rather than on an industry basis.[79]

8.15 We turn now to some of the other issue that must be considered in the context of the ASU claim.

Ambiguity of the proposed variation

8.16 The proposed variation is unclear in a number of respects. For example:

(a) clause 20.10.1 introduces the term "community language skill" but does not define the term;

(b) the purpose and effect of the words "according to when the skills are used" in clause 20.10.3 are unclear;

(c) clause 20.10.4 commences by stating "Such work...", however it is not clear whether the "work" being referred to is the work contemplated by clause 20.10.3, 20.10.2 or 20.10.1;

(d) equally, clause 20.10.5 commences with "Such employees...", however it is not clear to which employees the clause is referring (i.e. does the clause refer to employees caught by clause 20.10.3, employees caught by clause 20.10.2, or is it a broader reference to clause 20.10.1?);

(e) it is not clear what the purposes of clauses 20.10.4 and 20.10.5 are. Are they intended to be definitions of "community language skill", or do they have some other purpose?; and

[79] See s 134(1)(b) of the FW Act.

(f) clause 20.10.1 is an operative provision imposing an obligation on employers to pay an allowance (see *"shall be paid"*), the quantum of which is referable to clauses 20.10.2 and 20.10.3. However, the clause does not state that an allowance is only payable where the employee is "required by their employer" to use the skill. The variation should not be made without such a precondition.

8.17 While some of the above issues may be able to be rectified, the proposed variation suffers from further issues which are less easily resolved.

8.18 First, the proposed allowance is expressed to apply to employees using a community language skill "as an adjunct to their normal duties". The term "adjunct" is defined as:

> *noun* 1. something added to another thing but not essentially a part of it.
>
> 2. a person joined to another in some duty or service; an assistant.
>
> 3. *Grammar* a modifying form, word, phrase, etc., depending on some other form, word, phrase, etc.
>
> 4. *Logic* a non-essential attribute.
>
> –*adjective* 5. joined to a thing or person, especially subordinately; associated; auxiliary.

8.19 The proposed variation would therefore require employers and employees to make an assessment as to whether a person's language skills are utilised as an "adjunct" to their normal duties, or whether it is used as a core part of their work. Such a distinction is likely to be difficult to draw in many cases.

8.20 Second, there is then a lack of clarity as to which allowance is payable. The language in clauses 20.10.2 and 20.10.3 requires an assessment as to the frequency of use (i.e. whether there is "no regular pattern" of use or whether the usage is on a "regular basis").

8.21 Third, there is also a lack of clarity as to when the allowance is payable, or how it is to be calculated. For example, if an employee is, from the commencement of their employment, required to *occasionally* use a community language skill as an adjunct to their normal duties, is the obligation to pay the allowance triggered immediately and payable on an ongoing basis given that there is some expectation that in the future they may need to use their language on an occasional basis? Or is the allowance only payable in respect of pay periods where the skill is actually utilised? Does the clause require employers to make that assessment at the conclusion of each pay period? If so, over what period is the assessment made?

8.22 Fourth, what happens when the level of usage fluctuates over time between occasional and regular? How often must a review and assessment be made?

Accreditation

8.23 The proposed variation should properly include a requirement for employees to have their community language skill accredited by an appropriate body as a precondition of receiving the allowance. However, as currently drafted, the proposed variation does not do this.

8.24 Clause 20.10.7(a) does not operate as a precondition to the obligation to pay at clauses 20.10.1, 20.10.2 and 20.10.3.

8.25 Further, clause 20.10.7(a) imposes an obligation on employers to "provide the employee" with accreditation if their purported skill is required. There is no sound basis for the burden of accreditation to be placed on employers. It should operate as a precondition of payment, but should be something that is obtained by the relevant employee. For example, it would be unfair for employers to incur costs in respect of sending an employee to obtain accreditation for a skill in circumstances where an employee has represented that they have a certain language proficiency for which the employer is not in a position to assess. The claim does not meet the modern awards objective in that respect.

Implications of the ASU claim

Cost to employers

8.26 Given that the ASU claim proposes to insert a new monetary entitlement in the form of an allowance payable in certain circumstances, the variation will undoubtedly have an adverse impact on employment costs for a number of employers.[80] The extent of the cost imposition cannot be measured, given the lack of evidence before the Commission as to the number of employees who possess community language skills, the proportion of those who use them as an adjunct to their role, and how frequently the skill is used (or required to be used).

8.27 It would also involve an up-front cost in respect of having to cover the costs of employee accreditation.

Administrative burden

8.28 The proposed variation, if properly understood, creates a significant administrative burden on employers. This burden arises from the need to maintain a new suite of records regarding the language proficiency of certain employees and their usage of that language skill.

[80] Fair Work Act 2009 (Cth), s.134(1)(f)

8.29 It will also impose administrative complexity in processing the proposed allowance. As stated at paragraph 8.21 above, it is unclear how the payment obligation is to be determined or paid.

Conclusion

8.30 The claim is inconsistent with section 138 and should be dismissed.

9. UNITED VOICE CLAIM RELATING TO PUBLIC HOLIDAYS (S57)

The United Voice claim

9.1 The United Voice seek the introduction of a new clause, to be numbered clause 34.2(c), that would prohibit employers altering rosters for the purpose of avoiding public holiday entitlements under the Award or the NES.

9.2 The argument advanced by the United Voice in support of this variation is a bald assertion, unsupported by evidence, to the effect that "there are some employers who are altering the rosters of part-time employees to avoid the payment of public holiday rates".[81]

Response to United Voice claim

9.3 The claim is a novel one.

9.4 Contrary to the generic assertion proffered by the United Voice, the Award as presently formulated does not permit an employer to alter a part-time employee's roster at a whim. Rather, the Award contains numerous conditions on such an exercise, including:

(a) chiefly, the requirement at clause 10.3(c) that employers reach agreement in writing with part-time employees on a set pattern of work, which can then only be varied by agreement with the individual employee (and recorded in writing);

(b) second, employers must provide 7 days' notice of roster changes in accordance with clause 25.5(d), subject to certain exceptions; and

(c) third, the consultation obligations at clause 8A would apply.

9.5 The effect of clause 10.3(c) is that an employer could not lawfully engage in the practice complained of unless the employee agrees to the variation (which must be recording in writing in accordance with clause 10.3(e)), and the other applicable provisions of the Award are satisfied.

9.6 This claim should be dismissed.

[81] United Voice Submission at [166]

10. HSU CLAIM TO VARY RATES OF PAY FOR CASUALS ON WEEKENDS AND PUBLIC HOLIDAYS (S13 AND S48)

The HSU claim

10.1 The HSU seek to increase the rates of pay payable to casual employees when working on weekends and public holidays.

10.2 They seek to do this by having the Award varied to provide that the casual loading is payable in addition to the penalty rates provided for in clauses 26 and 34.2.

10.3 The relevant current Award provisions are set out below:

> ***26. Saturday and Sunday work***
>
> *Employees whose ordinary working hours include work on a Saturday and/or Sunday will be paid for ordinary hours worked between midnight on Friday and midnight on Saturday at the rate of time and a half, and for ordinary hours worked between midnight on Saturday and midnight on Sunday at the rate of double time. These extra rates will be in substitution for and not cumulative upon the shift premiums prescribed in clause 29—Shiftwork and the casual loading prescribed in clause 10.4(b), and are not applicable to overtime hours worked on a Saturday or a Sunday.*
>
> *...*
>
> ***34.2 Payment for working on a public holiday***
>
> *(a) An employee required to work on a public holiday will be paid double time and a half of their ordinary rate of pay for all time worked.*
>
> *(b) Payments under this clause are instead of any additional rate for shift or weekend work which would otherwise be payable had the shift not been a public holiday.*

10.4 The bases for the proposed variations consist of the following contentions:

(a) a general assertion that the casual loading should be paid in addition to any overtime, weekend and/or public holiday penalty, given the function of the casual loading;[82]

(b) a submission that the proposed variation is consistent with the 'default approach' discussed by the Full Bench in the *Penalty Rates Decision*;[83] and

[82] HSU Submission at [48]

(c) a submission to the effect that it is unfair for other penalties to operate to subsume the casual loading.[84]

10.5 We address these two proposed variations as follows.

Threshold issue – work value considerations

10.6 There is a threshold question as to whether s 156(3) applies to this claim.

10.7 Section 135 of the FW Act relevantly provides that:

(1) Modern award minimum wages cannot be varied under this Part except as follows:

(a) modern award minimum wages can be varied if the FWC is satisfied that the variation is justified by work value reasons (see subsections 156(3) and 157(2));

10.8 Section 156(3) provides:

In a 4 yearly review of modern awards, the FWC may make a determination varying modern award minimum wages only if the FWC is satisfied that the variation of modern award minimum wages is justified by work value reasons. [emphasis added]

10.9 Section 284(3) provides the definition for 'modern award minimum wages', which is expressed as follows:

(3) Modern award minimum wages are the rates of minimum wages in modern awards, including:

(a) wage rates for junior employees, employees to whom training arrangements apply and employees with a disability; and

(b) casual loadings; and

(c) piece rates. [emphasis added]

10.10 Given that the effect of the HSU claim would be to increase the amount payable to casual employees when working on weekends and public holidays, there is a reasonable basis to conclude that the claim represents a proposal to vary "modern award minimum wages". On the basis, the claim can only succeed if it is justified by "work value reasons".

10.11 The HSU have failed to meet the requirements of s 156(3).

---

[83] HSU Submission at [48]
[84] Ibid at [52]

Background to clause 26 of the Award and previous decisions

10.12 In putting their position, the HSU conveniently ignore the relevant historical background to clause 26 of the Award and the previous decisions (including a Full Bench decision) which involved a detailed consideration of the rationale for the current Award position.

10.13 The issue of rates of pay for casuals on weekends has been considered in detail by the Commission on at least two occasions since the Award was made:

(a) Firstly, by VP Watson in the course of the 2 yearly review of the Award;[85] and

(b) Secondly, by a Full Bench of the Commission in the context of an appeal against the decision of VP Watson.[86]

10.14 The relevant background to this matter is set out as follows.

10.15 When the Award was first made on 4 December 2009, clause 26 provided that:

> *26. Saturday and Sunday work*
>
> *26.1 Employees whose ordinary working hours include work on a Saturday and/or Sunday, will be paid for ordinary hours worked between midnight on Friday and midnight on Saturday at the rate of time and a half, and for ordinary hours worked between midnight on Saturday and midnight on Sunday at the rate of double time. These extra rates will be in substitution for and not cumulative upon the shift premiums prescribed in clause 29—Shiftwork.*
>
> *26.2 Casual employees who work less than 38 hours per week will not be entitled to payment in addition to any casual loading in respect of their employment between midnight on Friday and midnight on Sunday.*[87]

10.16 This clause remained unchanged until the transitional review of the Award. As part of the 2 yearly review of the Award, the ASU sought to delete clause 26.2, which would have had the effect of entitling casual employees to the same penalties as provided for full-time and part-time employees when working on weekends.

10.17 In a decision of 27 June 2013, VP Watson determined to vary clause 26 to provide for casual employees to receive the applicable weekend penalties in lieu of the casual loading when working on weekends (the **VP Watson Decision**).[88]

---

[85] *Australian Municipal, Administrative, Clerical and Services Union* [2013] FWC 4141
[86] *Australian Municipal, Administrative, Clerical and Services Union* [2014] FWCFB 379
[87] See PR991066

10.18 In reaching the conclusion, VP Watson had regard to both the history of the provision and the approach taken by a Full Bench in modifying an identical provision in the *Aged Care Award 2010*.[89]

10.19 The ASU then appealed against the VP Watson Decision in respect of the findings in relation to, inter alia, the issue of weekend penalty rates for casual employees.

10.20 In the appeal decision[90] (the **Appeal Decision**), a Full Bench upheld the findings in of VP Watson in respect of the issue of weekend penalty rates for casual employees. In dismissing this aspect of the appeal, the Full Bench held:

> *[29] In paragraph [33] of the Decision, it is reasonably apparent that Vice President Watson intended that that casual employees should be entitled to the weekend penalty rates for ordinary time work specified in clause 26.1, but that consistent with the approach taken by the Full Bench in paragraph [59] of the Aged Care Award 2010 decision, those weekend penalty rates should be in substitution for and not in addition to the casual loading. This meant that his Honour intended that the total loading for casual employees should be increased from 25% to 50% for Saturdays and from 25% to 100% for Sundays.*
>
> *[30] We do not consider that the ASU has succeeded in demonstrating any error in his Honour's consideration of that part of its claim which concerned the working of ordinary hours by casual employees on weekends. Although in paragraphs [30]-[33] of the Decision his Honour did not make an explicit finding concerning the weight of regulation in pre-existing awards and instruments, we consider that it is implicit in his Honour's reference to and reliance upon the approach taken in the Aged Care Award 2010 decision that he recognised the weight of the pre-existing position but considered that the increase in the casual loading should be regarded as an offsetting factor.*
>
> *[31] We accept that the ASU was able to demonstrate convincingly that the predominant position in the pre-existing awards and instruments was that casual employees were entitled to penalty rates for working ordinary hours on weekends of the same quantum as those applying to full-time and part-time employees in addition to payment of a casual loading. To the extent that the respondents took*

---

[88] *Australian Municipal, Administrative, Clerical and Services Union* [2013] FWC 4141 at [31]-[33]
[89] Ibid at [33]
[90] *Australian Municipal, Administrative, Clerical and Services Union* [2014] FWCFB 379

issue with the ASU's analysis in this respect, it was largely at the margins and did not serve to alter the main conclusion to be drawn from the analysis. However, it is equally clear that as a result of the adoption of a standard 25% loading for casual employees in modern awards, a large majority of casual employees will upon the completion of the operation of the SCHCDS Award's transitional provisions have received an increase in their casual loading. In the majority of pre-existing awards and instruments, the casual loading had been 20% or less, so that many casual employees will receive a reasonably substantial increase in their ordinary rate of pay (leaving aside weekend penalties) under the SCHCDS Award. In rectifying the omission of weekend penalty rates, we consider that it was open to Vice President Watson, as it was to the Full Bench in the Aged Care Award 2010 decision, to take that matter into account and to award weekend penalty rates that operated to the exclusion of the casual loading. We do not consider that in taking this course, his Honour fell into error in any of the respects identified in paragraph 2.3 of the ASU's appeal notice. [emphasis added]

10.21 The above passage discloses a sound rationale for the current Award position. That is, the introduction of the Award effectively led to an increase to the quantum of the casual loading for many casual employees, and so that fact was quite properly taken into account in determining the appropriate level of remuneration to be payable to casual employees when working on weekends.

10.22 Other than pointing to the observations of the Full Bench in the Penalty Rates decision as to the 'default approach' to determining penalty rates for casual employees and asking the Commission to adopt that approach, the HSU have failed to recognise or engage with the particular factors that were unique to the SCHCDS industry and which led the Commission to set the current entitlements for casuals working on weekends in the way that they did.

10.23 The HSU have not advanced any persuasive argument that would warrant the Commission revisiting or departing from the conclusion of the Full Bench in the Appeal Decision.

Public holiday entitlements

10.24 While the issue of public holiday rates of pay for casual employees was not the subject of consideration by VP Watson during the 2 yearly review, the observations of the Full Bench in the Appeal Decision are equally applicable. That is, introduction of the Award resulted in an increase to the quantum of the casual loading for many casual employees. Accordingly, we submit that, consistent with the decision of VP Watson as affirmed by the Full Bench in the

Appeal Decision, that fact is relevant and should be taken into account when considering the HSU claim for a further increase to amounts payable to casual employees when working on public holidays. The HSU proposal should not be adopted without a proper consideration and assessment of this background.

Conclusion

10.25 The HSU claims should be dismissed.

11. UNITED VOICE CLAIM RELATING TO OVERTIME RATES FOR CASUALS (S51)

The claim

11.1 The United Voice seek a variation to clause 28.1(b)(iv) of the Award to provide that casual employees are entitled to the casual loading when working overtime.

11.2 The current clause provides:

> *(iv) Overtime rates payable under this clause will be in substitution for and not cumulative upon:*
>
> *(A) the shift premiums prescribed in clause 29—Shiftwork; and*
>
> *(B) the casual loading prescribed in clause 10.4(b),*
>
> *and are not applicable to ordinary hours worked on a Saturday or a Sunday.*

11.3 The United Voice seek to remove clause 28.1(b)(iv)(B) such that clause 28.1(b)(iv) will be read as follows:

> *(iv) Overtime rates payable under this clause will be substitution for and not cumulative upon the shift premiums prescribed in clause 29 - Shiftwork and are not applicable to ordinary hours worked on a Saturday or a Sunday.*

11.4 The rationale for the claim is an assertion that casual employees do not receive an amount in respect of casual loading when working overtime.

11.5 The United Voice assert that the 'default approach', as referenced in the *Penalty Rates Decision*, should be adopted unless there is some 'cogent industry or sector specific reason'.[91] The United Voice relies on passages from the Penalty Rates Decision in support of this claim, and argue that the casual loading and overtime rates serve different functions and so should therefore both be payable.

Threshold issue – work value considerations

11.6 There is a threshold question as to whether s 156(3) applies to this claim. The submissions contained in paragraphs 10.6-10.11 above are equally applicable to this claim.

11.7 Given that the effect of the HSU claim would be to increase the amount payable to casual employees when working overtime, there is a reasonable basis to conclude that the claim represents a proposal to vary "modern award minimum wages". On the basis, the claim can only succeed if it is justified by work value reasons.

[91] United Voice Submission at [164]

11.8 The United Voice have failed to meet the requirements of s 156(3).

Background to clause 28.1(b) of the Award and previous Full Bench decision

11.9 The UV submission does not address the relevant historical background to clause 28.1 of the Award. Notably, this issue (and this exact claim) was previously the subject of an unsuccessful application to vary the Award by the ASU during the 2 yearly review of the Award.

11.10 We outline some of the relevant background to this claim as follows.

11.11 When the Award was first made, it did not contain any overtime entitlement for casual employees.[92]

11.12 During the 2 yearly review of the Award, the ASU made an application to vary the Award to provide for casual employees to receive overtime payments, which were sought to be payable in addition to the casual loading.

11.13 The application was one of a number that was dealt with by VP Watson, the findings of which are contained in his decision of 27 June 2013 (described above as the **VP Watson Decision**). In that first instance decision, VP Watson declined the application.[93]

11.14 The ASU subsequently appealed this aspect of the VP Watson decision.

11.15 On appeal, the Full Bench overturned the aspect of the VP Watson Decision dealing with overtime entitlements for casuals[94], and then re-determined the claim.

11.16 The Full Bench concluded that the absence of overtime provisions applicable to casual employees in the Award was an "oversight"[95], and observed that there was no sound rationale for casual employees being excluded from overtime penalty rates in circumstances where they apply to full-time and part-time employees.

11.17 Turning then to the specific variation to be made, the Full Bench determined that the overtime entitlements for casual employees should be in substitution for the payment of the casual loading.[96] In reaching that conclusion, the Bench took into account:

(a) the "somewhat mixed" position which applied in the pre-existing awards and instruments in respect of the overtime rates payable;[97] and

[92] See clause 28.1 of Award as made on 4 December 2009
[93] *Application by Australian Municipal, Administrative, Clerical and Services Union* [2013] FWC 4141 at [34]-[36]
[94] Ibid at [36]
[95] Ibid at [38]
[96] Ibid at [44]

(b) that the provision of overtime penalty rates for casual employees, even without the addition of the casual loading, will be a significant benefit for those casuals who work overtime, and will equalise the overtime cost of full-time, part-time and casual employees.

11.18 The Bench then specifically noted that their decision did not intend to foreclose further consideration in the four yearly review process as to whether, under the SCHCDS Award, the casual loading should be payable in addition to weekend and overtime penalty rates.[98]

Response to the United Voice's submissions

11.19 As outlined above, a Full Bench of the Commission has already considered and determined the manner in which overtime rates are to be payable to casual employees. Accordingly, as a starting point the Commission should not depart from that previous Full Bench decision unless there are cogent reasons for doing so.

11.20 That said, it is acknowledged that the Full Bench, when determining that overtime rates for casual employees should be in substitution of the casual loading, also expressly referred to the potential for further consideration of the issue during the 4 yearly review of the Award. In that context, it is acknowledged that the principle of the Commission generally following previous Full Bench decisions unless there are cogent reasons for not doing so, must be viewed in that light.

11.21 Again, we submit that the Commission should take into account the observations of the Full Bench in the Appeal Decision to the effect that the making of the Award resulted in an increase to the quantum of the casual loading for many casual employees. In our submission, that provides a basis for the Commission not applying the 'default' position as referred to in the *Penalty Rates Decision*.

Conclusion

11.22 The United Voice claim should be dismissed.

[97] Ibid at [42]
[98] Ibid at [45]

12. HSU CLAIM RELATING TO FIRST AID CERTIFICATION

The HSU claim

12.1 Clause 20.4 of the Award currently provides for payment of a first aid allowance to full-time, part-time and casual employees where they:

(a) are required by the employer to hold a current first aid certificate; and

(b) are required to perform first aid at their workplace or, in the case of home care employees, are required to be responsible for the provision of first aid to employees employed by the employer.

12.2 The quantum of the first aid allowance is currently:

(a) $16.03 per week for full-time employees; or

(b) a pro rata amount of the above for part-time and casual employees based on their ordinary weekly hours of work.

12.3 The HSU seek the introduction of a new and further entitlement in respect of the costs and time associated with an employee maintaining a first aid certification. Specifically, they seek the insertion of the following provision to supplement the existing clause 20.4:

First aid refresher

(i) Where an employee is required to maintain first aid certification, the employer will pay the full cost of the employee updating their first aid certification by:

a. reimbursing the employee's registration and attendance expenses; or

b. paying the registration and attendance costs.

(ii) Attendance at first aid refresher courses will be work time and paid as such.

12.4 In support of this variation, the HSU submit that:

(a) many employees engaged in disability support or home care roles are required to hold a current first aid certificate in the performance of their roles;[99]

(b) even where the employer does not require an employee to possess first aid certification, the qualification is likely to be beneficial for the employer; and

[99] HSU Submission at [63]

(c) where an employee is required to maintain their first aid certification, they should be entitled to be reimbursed for the costs of maintaining that certification.

12.5 In considering these submissions, it is necessary to first consider the history of the existing first aid allowance clause, the scope of its operation and the rationale for the current provision.

History of the clause

12.6 The first aid allowance clause has undergone a couple of variations since the Award was first introduced.

12.7 Initially, when the Award was first made the clause read as follows:

> *19.4 First aid allowance*
>
> *An employee who holds a current first aid certificate issued by St John Ambulance or Australian Red Cross Society or equivalent qualification, and who is required by their employer to perform first aid duty at their workplace, will be paid an allowance of 1.67% of the standard rate per week.*

12.8 However, three applications were subsequently made in 2010 which sought to vary the clause.[100] Those applications were dealt with together by VP Watson. In broad terms, the applications raised two issues:

(a) Firstly, that the clause contained an ambiguity or error in respect of home care employees, given that:

(i) the phrase "at their workplace" created ambiguity in relation to employees in the home care stream, given the nature of the work;

(ii) the intent of the clause was to apply to situations where employees were required to provide first aid to fellow employees (rather than to customers or clients);

(iii) the pre-reform awards covering home care employees did not provide entitlements to a first aid allowance; and

(iv) a first aid certificate is an inherent requirement for the role of a home care employee, is part of the certificate III qualification, and so is already contemplated as part of the classification structure; and

[100] Matters AM2010/77, AM2010/109, AM2010/112

(b) secondly, that the clause did not deal with the issue of pro rata entitlements for part-time and casual employees.[101]

12.9 On 3 August 2010, VP Watson held that the clause contained ambiguities in respect of the two issues referred to above, and indicated that he was inclined to grant the applications and adopt the wording sought by VECCI, however directed the parties to confer in relation to the precise terms of the variation to be made.

12.10 After hearing further form the parties on 21 September 2010 and considering two alternative formulations, VP Watson decided to make the variation in the terms proposed by VECCI.[102]

12.11 The subsequent Determination varied the clause so as to read:

19.4 First aid allowance

(a) First aid allowance—full-time employees

A weekly first aid allowance of 1.67% of the standard rate per week will be paid to a full-time employee where:

(i) an employee is required by the employer to hold a current first aid certificate; and

(ii) an employee is required by the employer to be, in a given week, responsible for the provision of first aid to employees employed by the employer.

(b) First aid allowance—casual and part-time employees

The first aid allowance is payable at 1/38th of the full-time allowance per hour for part-time and casual employees where:

(i) an employee is required by the employer to hold a current first aid certificate; and

(ii) an employee is required by the employer to be responsible for the provision of first aid to employees employed by the employer.[103]

12.12 The decision of VP Watson was then the subject of an appeal brought by the ASU.

[102] Transcript of AM2010/77, AM2010/109, AM2010/112, 21 September 2010 at [94]-[95]
[103] See PR500495

12.13 In the appeal proceedings, the parties were encouraged by the Full Bench to have discussions to endeavour to resolve the issues between them regarding the clause, and this led to a consent position being reached regarding an award variation which resolved the various parties' concerns with the clause.

12.14 In light of that agreed position, on 23 December 2010 the Full Bench allowed the appeal by consent, set aside the variation made on 21 September 2010, and varied the Award to include the first aid provision as agreed between the parties.[104]

12.15 The clause read as follows:

(a) First aid allowance - full - time employees

A weekly first aid allowance of 1.67% of the standard rate per week will be paid to a full-time employee where:

(i) an employee is required by the employer to hold a current first aid certificate; and

(ii) an employee, other than a home care employee, is required by their employer to perform first aid at their workplace; or

(iii) a home care employee is required by the employer to be, in a given week, responsible for the provision of first aid to employees employed by the employer.

(b) First aid allowance - casual and part - time employees

The first aid allowance in 19.4(a) will apply to eligible part time and casual employees on a pro rata basis on the basis that the ordinary weekly hours of work for full - time employees are 38.

Rationale for the current Award position

12.16 A number of observations can be made from the above background to the current first aid allowance entitlement.

12.17 Firstly, the clear intent of the existing first aid allowance at clause 20.4 is that it applies only to those employees who are designated as first aid officers in a particular workplace and who may be called on to render first aid to colleagues in the event of an illness or injury. The allowance does not apply to employees who might be required to hold a certification as

[104] See [2010] FWAFB 9880.

an inherent requirement for their position or where the role might involve rendering first aid assistance to a client (e.g. support workers in the home care and disability services streams).

12.18 Secondly, the rationale for the Award not providing first aid allowance entitlements to employees who provide support and care to clients (e.g. home care and disability services employees) is due to the very nature of the work undertaken by those employees.

12.19 This rationale is sound, and was ventilated during the hearing before VP Watson, as demonstrated by the following exchange between the Vice President and Mr Nucifora for the ASU on 21 September 2010 at PN36-PN42:

> *THE VICE PRESIDENT: Just about every one of the employees would be required to perform first aid if there's someone injured in a basic sense, because the clients are incapable of administering basic first aid to themselves.*
>
> *MR NUCIFORA: Yes, your Honour, and we would say that there is no recognition in the classification structure for first aid qualifications. It is - - -*
>
> *THE VICE PRESIDENT: Isn't it inherent in the nature of the work and the nature of the certificates they hold at various levels? I haven't looked at the detail of the certificate courses that employees in this sector commonly hold. They are quite skilled in dealing with everything that's required for the care of their clients.*
>
> *MR NUCIFORA: I was just distinguishing them from, say, the Nurses Award and those that provide medical attention.*
>
> *THE VICE PRESIDENT: Yes, and for example the house with those suffering epilepsy, a lot of those employees are former nurses that have come from an institution where the services are provided to a house in the community but they are - they have nursing experience and, to a point, qualifications.*
>
> *MR NUCIFORA: We would suggest, your Honour, that it might have been an issue that was dealt with at the review, and that certainly there'd be discussions between the parties about how some of the new sectors that have been picked up by the modern award - because clearly it didn't come up or we're not aware that it came up under the previous underpinning awards, and I'm talking about the SACS awards in particular, but there certainly was a practice where they were required to provide first aid to service users outside the traditional workplace.*
>
> *THE VICE PRESIDENT: Or even in their traditional workplace. The argument against you is that for many employees in this sector, it's part and parcel of their job to*

administer basic first aid, and to hold certain qualifications to perform those basic duties, and it is encompassed within the classification structure. That's the argument against you.

12.20 That is why the Award clause was varied in the manner it was by VP Watson at first instance and then through the consent position of the parties endorsed by the Full Bench on appeal.

Response to the HSU claim

12.21 For the same reasons that underpin the scope of the existing clause 20.4, the Award should not be varied to require employers to reimburse employees for maintaining their ability to perform the inherent requirements of their position.

12.22 The HSU claim is not limited to employees who fall within the scope of clause 20.4. Rather, the claim seeks to provide an entitlement to all employees who are required to maintain first aid certification, regardless of whether they are designated first aid officers at their workplace to provide first aid to their fellow employees.

12.23 That being the case, the claim will capture a huge number of employees in the industry, by reason of the very nature of the work undertaken by the vast majority of them.

12.24 The HSU claim should be dismissed for the following reasons:

(a) first, the proposed variation is inconsistent with the modern awards system;

(b) second, the proposed variation allows for employees with more than one job in the industry to receive reimbursement from multiple employers for the single cost; and

(c) third, if granted the variation will impose significant costs on employers in circumstances where (in many cases) the employer will not be able to pass the additional cost onto customers.

<u>Inconsistency with modern awards system</u>

12.25 The modern award system does not typically provide for allowances in respect of costs borne by employees in maintaining their ability to perform the inherent requirements of their position. To provide some relevant examples:

(a) the *Nurses Award 2010* does not require employers to reimburse employees for the costs associated with maintaining their registration with the Nursing and Midwifery Board of Australia;

(b) the *Health Professionals and Support Services Award 2010* does not require employers to reimburse employees for the costs associated with maintaining their registration with the relevant health profession Board;[105]

(c) neither the *Passenger Vehicle Transportation Award 2010*, nor the other two road transport industry awards[106], require employers to reimburse employees for the costs associated with maintaining the applicable heavy vehicle licences; and

(d) the *Legal Services Award 2010* does not require employers to reimburse certain employees for the costs associated with maintaining their professional certifications (e.g. practising certificates).

12.26 As another example, many Award-covered employees across the award system are required to hold and maintain a valid driver's license as a necessary (and inherent) requirement for their position, and yet modern awards do not contain allowances in respect of the costs incurred in holding and maintaining a driver's license. Many awards do of course provide a motor vehicle allowance in respect of employees required to use their vehicles in the course of their duties. However, that is a different proposition to compensating employees for the costs associated with holding and maintaining a driver's license in order to allow them to perform the inherent aspects of their role.

Potential for reimbursement from multiple employers

12.27 The evidence in these proceedings is that secondary employment within the industry (i.e. individuals holding more than one job in the industry with multiple employers) is not uncommon.[107]

12.28 As presently drafted, there would be nothing preventing an employee from claiming back the costs of first aid certification from multiple employers at the same time, and obtaining a windfall gain that is in excess of the costs incurred by the employee. A clause which allows for such practices or outcomes does not lead to the Award meeting the modern awards objective of providing a 'fair and relevant' minimum safety net.

12.29 Even if such a mechanism was to be inserted into the proposed clause preventing employees from claiming back the cost from multiple employers, there is still a question about which employer would be required to pay, and how that question would be determined.

---

[106] The *Road Transport and Distribution Award 2010* and the *Road Transport (Long Distance Operations) Award 2010*

[107] Statement of Bernie Lobert at [1]; United Voice Submission at [133]

Cost implications for businesses

12.30 Lastly, the costs associated with this claim should not be underestimated. As stated above (and acknowledged by Vice President Watson in 2010), a very large number of employees in this industry are required, as an inherent requirement of their position, to hold a first aid certificate. The Award has never before contained a term requiring employers to cover those costs. For large employers in the industry, the costs would be significant.

12.31 Further, in many cases those costs will not be able to be passed onto customers, given the regulated nature of the industry, meaning that the variation will have a direct adverse impact on the viability of the industry.

Conclusion

12.32 For the reasons outlined above, the HSU claim should be dismissed.

12.33 In the alternative, to the extent that the Commission is minded to introduce a provision into the Award to require employers to reimburse employees for the time and cost associated with maintaining their first aid certification, such a clause should be limited to those employees to whom the existing clause 20.4 applies. That is, the clause should only apply to employees who are designated as first aid officers to provide first aid to fellow employees at their workplace.

13. CONCLUSION

13.1 For the reasons outlined in this submission, the claims should be dismissed.

AUSTRALIAN BUSINESS LAWYERS & ADVISORS

Fair Work Commission: 4 yearly Review of modern awards

SUBMISSION

4 YEARLY REVIEW OF MODERN AWARDS: (AM2018/26) SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010 - SUBSTANTIVE ISSUES

FILED ON BEHALF OF:

- **AUSTRALIAN BUSINESS INDUSTRIAL**
- **THE NSW BUSINESS CHAMBER LTD**
- **AGED & COMMUNITY SERVICES AUSTRALIA**
- **LEADING AGE SERVICES AUSTRALIA**

2 JULY 2019

TABLE OF CONTENTS

1. INTRODUCTION

1.1 This submission is made on behalf of:

(a) Australian Business Industrial (**ABI**);

(b) the New South Wales Business Chamber Ltd (**NSWBC**);

(c) Aged & Community Services Australia (**ACSA**); and

(d) Leading Age Services Australia Limited (**LASA**),

collectively, '**our clients**'.

1.2 ABI is a registered organisation under the *Fair Work (Registered Organisations) Act 2009* and has in excess of 4,000 members. ABI represents the interests of businesses in a variety of industries including the social, community, home care and disability services industry. Its primary role is to develop workplace policy and to shape debate on major workplace relations issues.

1.3 NSWBC is a recognised State registered association pursuant to Schedule 2 of the *Fair Work (Registered Organisation) Act 2009* and has some 18,000 members. NSWBC is the State's peak business organisation and represents all businesses from small enterprises to large corporations across a variety of industries including the social, community, home care and disability services industry.

1.4 ACSA is the leading peak body supporting church, charitable, other not-for-profit and government providers of residential care services, community care services and retirement living for older people in Australia.

1.5 LASA is the national peak body representing and supporting providers of age services across residential care, home care and retirement living. LASA's membership base is made up of private, not-for-profit, faith-based and government operated organisations providing care, support and services to older Australians.

1.6 This submission is filed in accordance with the Amended Directions of the Fair Work Commission (**Commission**) issued on 7 June 2019. This submission is made in support of the proposed variations advanced by our clients, as recorded in a Draft Determination filed on 2 April 2019 (**Draft Determination**).

1.7 By way of summary, our clients are seeking three categories of variations to the *Social, Community, Home Care and Disability Services Industry Award 2010* (the **Award**):

(a) a variation to clause 25.5(f) of the Award dealing with client cancellation, to extend the scope of the clause to all types of disability services, and to provide a more structured and balanced regime for employees working make-up time;

(b) a proposal to introduce a 'remote response' allowance to provide a fair and relevant compensation regime for employees performing remote response duties outside of their normal working hours; and

(c) a variation to clause 25 of the Award dealing with hours of work and rostering, to remove unnecessary prescription around when ordinary hour are to be worked, and to clarify when a roster may be altered under clause 25.5(d)(ii).

1.8 These submissions are supported by witness statement and other documentary evidence, as well as other material that has been filed in these proceedings which goes towards the nature of the operating environment in the industry.

2. LEGISLATIVE FRAMEWORK OF THE FOUR YEARLY REVIEW

2.1 The legislative framework applicable to the 4 Yearly Review has been considered in detail in *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 (**Preliminary Issues Decision**), and *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 (**Penalty Rates Decision**).

2.2 More recently, the legislative framework applicable to the 4 Yearly Review was considered in *4 yearly review of modern awards – plain language re-drafting – standard clauses* [2018] FWCFB 4177 issued on 18 July 2018[1] and summarised in *4 yearly review of modern awards – Alpine Resorts Award* [2018] FWCFB 4984.

2.3 We rely on the summary of the applicable legal principles as set out in the reply submissions filed by our clients in this matter on 5 April 2019.[2]

2.4 We also refer to, and agree with, the summary contained in the document titled 'Legislative framework relevant to the Review' published by the Commission in this matter on 12 April 2019.[3]

[1] [2018] FWCFB 4177 at [3]-[13].
[2] See [2.1]-[2.4].
[3] Published pursuant to a Statement issued on 12 April 2019 ([2019] FWCFB 2514).

3. OPERATING ENVIRONMENT IN WHICH THESE VARIATIONS ARE SOUGHT

3.1 There is considerable material before the Commission going to the challenges currently facing service providers in the industry and, in particular, the disability services and home care sectors.

3.2 Broadly speaking, the reforms in both the disability sector and the aged care / home care sectors have involved a deregulation of the markets through a move away from the traditional 'block funding' approach to a 'consumer-directed care' approach whereby individual consumers receive a tailored, individualised care plan (with individualised funding), under which consumers have a far greater ability to choose how care services are provided to them (including what, when, where, and by whom those services are provided).

3.3 These reforms are significant, with many describing the introduction of the National Disability Insurance Scheme for example as the most significant social policy reform in Australia since the introduction of Medicare.

3.4 The key features of the National Disability Insurance Scheme (the **NDIS**) and the similar reforms in the home care sector have been detailed in materials filed in the course of the review of this Award, including in:

(a) the Reply Submission filed by our clients on 5 April 2019;[4]

(b) the Reply Submission filed by Ai Group on 8 April 2019;[5]

(c) the Productivity Commission Position Paper 'National Disability Insurance Scheme (NDIS) Costs' published in June 2017;[6]

(d) the Productivity Commission Study Paper 'National Disability Insurance Scheme (NDIS) Costs' published in October 2017;[7]

(e) the 'Independent Pricing Review: National Disability Insurance Agency' Final Report published in February 2018 by McKinsey & Company;[8]

(j) the article 'Wage theft, underpayment and unpaid work in marketised social care', by Fiona Macdonald, Eleanor Bentham and Jenny Malone, The Economic and Labour Relations Review 2018, Vol. 29(1) 80–96.[13]

3.5 While these consumer-directed-care reforms are widely supported by all stakeholders (including by our clients and their respective memberships), their implementation has (perhaps unsurprisingly) caused significant uncertainty and disruption to the operations of service providers. One of the major areas of change for service providers (and one of the major challenges) has been in the area of workforce management and, in particular, rostering.

3.6 At the workplace level, the consumer-directed-care reforms have caused employers to lose a degree of control over the organisation of work, by reason of consumers having more control over the delivery of their services. This has led to the disaggregation of working patterns, and challenges around organising a series of discrete (and often short) customer engagements into a block of work for a particular employee. For example, service providers are required to coordinate three or four (or more) short customer engagements (e.g. 30 minute home care services) and turn it into a shift for an employee. This involves having regard to factors such as:

(a) the geographical location of the work (i.e. organising the work in an efficient manner having regard to the locations of the clients, while also trying to meet the clients' preferences around times of services);

(b) the timing of each of the separate customer services so the work can be done in an efficient manner so as to minimise the unproductive time and ensure a 'utilisation' rate that is viable; and

[13] Attachment 'FM2' to the Statement of Dr Fiona Macdonald, filed by the HSU on 15 February 2019.

(c) matching employees and clients based on factors such as client needs, employee capability, and also client preference.

3.7 This is particularly challenging in rural and remote areas where the demand is less consistent, the volumes are lower and distances between clients greater.

3.8 The above challenges around workforce flexibility have then been compounded by funding constraints, which have also been well publicised. Many of the reports referenced at paragraph 3.4 above detail the funding inadequacies in various areas of the system and the consequential pressures being felt by service providers. The reports referred to above have also been supplemented by other materials filed in these proceedings, including:

(a) The StewartBrown 'Aged Care Financial Performance; Survey Sector Report (2018 Financial Year)', published in 2018; and

(b) the StewartBrown 'Aged Care Financial Performance; Survey Sector Report (Six months ended December 2018', published in 2019.

3.9 Those publications were summarised at part 4 of our clients' Reply Submission of 5 April 2019.

3.10 The state of the operating environment, as outlined above, is critically relevant, at least contextually, to the Commission's review of the Award.

3.11 Our clients (and their memberships) support the proposition that the Award should provide a fair and relevant minimum safety net of terms and conditions. However, such terms must operate in harmony (or at the very least not in direct conflict) with the regulatory and funding environment.

3.12 It is in this context that our clients pursue the following variations to the Award.

4. PROPOSED VARIATION TO HOURS OF WORK AND ROSTERING CLAUSES

4.1 Our clients propose some relatively minor amendments to the hours of work and roster provisions in the Award. The proposed variations are designed to achieve the following:

(a) remove unnecessary prescription around the structuring of hours of work; and

(b) clarify the operation of clause 25.5(d)(ii).

Proposed variation to clause 25.1

4.2 Clause 25.1 sets out the ordinary hours of work. Under that clause, the ordinary hours of work are expressed to be 38 hours per week or an average of 38 hours per week.

4.3 Clause 25.1(a) then continues by prescribing how those ordinary hours are to be worked. It expressly prescribes that the hours "will be worked" in one of three different ways as set out in items (i), (ii) and (iii) of clause 25.1(a).

4.4 The effect of items (i), (ii) and (iii) of clause 25.1(a) is to require ordinary hours to be worked in a particular way. The main element of these clauses is to prohibit shifts exceeding 8 hours each.

4.5 However, when one considers clause 25.3 of the Award, it is unclear what other work items (i), (ii) and (iii) of clause 25.1(a) have to do.

4.6 This is because clause 25.3 provides that employees, other than casuals, will be free from duty for not less than two full days in each week or four full days in each fortnight or eight full days in each 28 day cycle.

4.7 Our clients propose a simplified clause 25.1, that retains all of the key elements of the existing provision, but which removes unnecessary and superfluous prescription which does not actually have any operative effect.

4.8 Our clients propose a new clause 25.1 in the following terms:

25.1 Ordinary hours of work

(a) The ordinary hours of work will be 38 hours per week or an average of 38 hours per week over the employee's roster period, up to a maximum of four weeks.

(b) Subject to clause 25.1(c), the maximum ordinary hours that can be worked per shift is 8.

(c) By agreement between an employer and an individual employee, ordinary hours may be worked up to 10 hours per shift.

4.9 This variation is more in the nature of a minor or technical variation rather than a substantive amendment. However, in our submission, the variation has the benefit of being simpler and easier to understand, without reducing employees' entitlements in any way.

Proposed variation to clause 25.4(a)

4.10 Equally, our clients propose the deletion of the words 'or period of work' in clause 25.4(a) as a minor and technical variation rather than any substantive amendment. The words "period of work" do not appear to have any work to do, and seem to be an unnecessary duplication of the concept of "shift". That phrase is not used throughout the rest of the Award, and is unnecessary as any "period of work" that falls outside the bounds of a "shift" is addressed separately in clause 28, which deals with rest breaks after overtime.

Proposed variation to clause 25.5(d)

4.11 Clause 25.5 deals with rostering for permanent employees. Under clause 25.5(a) ordinary hours of work of full-time and part-time employees are required to be displayed on a fortnightly roster which is to be posted at least two weeks before the commencement of the roster period.

4.12 Under clause 25.5(d), an employee's roster can only be changed in certain specified circumstances. Clause 25.5(d)(ii) provides that:

> However, a roster may be altered at any time to enable the service of the organisation to be carried on where another employee is absent from duty on account of illness, or in an emergency.

4.13 Our clients propose a relatively minor variation to clause 25.5(d)(ii) to:

(a) permit rosters to be altered at any time by agreement between the employer and the relevant employee (provided the agreement is recorded in writing); and

(b) clarify the operation of the existing provision allowing for roster changes in the event of another employee being absent from duty on account of "illness".

4.14 The wording proposed is consistent with the Full Bench decision in 4 yearly review of modern awards - *Nurses Award 2010* [2018] FWCFB 7347.

5. PROPOSED VARIATION TO CLIENT CANCELLATION CLAUSE

Background

5.1 Our clients propose that the scope of the client cancellation clause at 25.5(f) of the Award be expanded to capture the provision of disability services in the community (for example, care services provided in the community to people with a disability).

5.2 The current client cancellation clause already applies to a significant part of the disability services sector, as it applies to services provided to people with a disability *in their home*. However, there is no reason for distinguishing between supports provided to persons with a disability in their home and services provided in the community.

5.3 Other than the location, there are clear similarities between care services provided by support workers in the home and care services provided in the community, including that:

(a) community-based services are just as susceptible to client cancellation as in-home care services;

(b) community-based services are subject to the same cancellation rules under the NDIS as attendant care in the home; and

(c) the nature of the work is the same or very similar.

5.4 There is no good reason why the Award should provide a regime for dealing with client cancellations of rostered "home care" services, but not provide any such regime for client cancellations of attendant care services in the community for people with a disability.

The current position

5.5 Clause 25.5(f) of the Award permits employers to change an employee's roster where a rostered "home care service" is cancelled or changed by a client.

5.6 It also provides that where a roster is changed, an employer is not obliged to make a payment to the employee where the requisite notice was given to the employee (being by 5pm on the day prior to the rostered shift in question).

5.7 The clause also entitles employers to direct employees to make-up time equivalent to the cancelled time in that fortnight or during the subsequent fortnight.

5.8 The phrase "home care service" is not defined in the Award. The phrase is only found once in the Award, at clause 25.5(f). However, the phrase "home care service" is most likely intended to mirror the scope of the "home care sector", which is one of four defined sectors which the Award is expressed to cover.

5.9 The term "home care sector" is defined at clause 3.1 to mean the "provision of personal care, domestic assistance or home maintenance to an aged person or a person with a disability in a private residence" [emphasis added].

5.10 It is clear from that definition that the home care sector encompasses the provision of services to persons with a disability.

Funding arrangements for client cancellations

5.11 NDIS service providers are bound by a price cap. They are also bound to comply with rules relating to client cancellations.

5.12 Under those cancellation rules, service providers are prohibited from charging clients for cancelled services where the participant provides notice of cancellation prior to 3pm the day before the scheduled service (regardless of the reason for the cancellation).

5.13 Where a 'short-notice' cancellation (being a cancellation after 3pm on the day before the scheduled service or a 'no show' on the day), service providers are permitted to charge up to 90% of the agreed price. For personal care and community access supports, the fee may be charged against a participant plan up to 8 times per year. Beyond this threshold, the NDIS will require the provider to demonstrate they are taking steps to actively manage cancellations.

5.14 While the intention behind the NDIS cancellation rules is to attempt to strike a balance between the interests of service providers and participants, the reality is that the cancellation rules place service providers in a very difficult position.

5.15 Unless there is an ability to cancel the rostered shift (without being required to pay the employee), or redeploy the rostered employee to other available work, service providers will incur costs regardless of the scheduled service having been cancelled, yet will not derive any revenue.

The disconnect between the NDIS rules and the Award regarding cancellations

5.16 There is a clear disconnect between the terms of the Award and the funding arrangements under the NDIS when it comes to client cancellations. This disconnect is having a materially adverse impact on the viability of businesses operating in this sector.

5.17 Our clients acknowledge the desire of many employees in having job security, stability in income, and reasonably predictable hours of work. However, those interests need to be balanced against the interests of employers in being responsive to client needs.

5.18 Where it is not feasible to redeploy a permanent employee to other work in the event of a client cancellation event, the employer should have the ability to cancel the employee's rostered shift and offer them make-up time at a later date.

5.19 This type of regime is not new in the home care sector, including in situations where the in-home service is provided to a person with a disability. However, it should be extended to the broader disability sector where supports are provided in the community.

5.20 Under our clients' proposal, the make-up-time regime in the existing clause 25.5(f) would be replaced with a more robust and comprehensive clause, which allows for the make-up-time to be worked over a 3 month period rather than within a fortnight under the existing clause.

6. PROPOSAL FOR REMOTE RESPONSE WORK CLAUSE

Background

6.1 One of the issues raised during the review of this Award is how the Award operates in circumstances where an employee, who is not 'at work' or otherwise rostered to work or performing work at a particular time, is contacted and required to undertake certain functions remotely without having to physically attend the employer's premises (such as providing information to the employer over the telephone).

6.2 This issue was raised by a number of parties at the commencement of the review process, including by:

(a) Jobs Australia, which questioned whether the 'recall to work overtime' provision at clause 28.4 of the Award might apply to circumstances where an employee is not required to physically return to the workplace (e.g. where an employee takes a phone call while on-call);[14]

(b) AFEI, which proposed an amendment to clarify what constitutes a recall to duty to perform overtime, to ensure that employees (whether on-call or not) who answer telephone calls or respond to text messages are not deemed to have been recalled and thus entitled to two hours minimum pay at overtime, or alternatively to create a regime within the Award to accommodate employees receiving phone calls;[15] and

(c) the HSU, which had flagged pursuing a variation to provide for an "on-call penalty payment" when an employee is telephoned while not receiving an on-call allowance.[16]

6.3 It was also raised by our clients at that time, who flagged proposals to clarify the operation of the 'recall to work overtime' provision at clause 28.4,[17] as well as to introduce a "Telephone Advice Payment" where employees provide telephone advice outside of their rostered ordinary hours of work.[18]

6.4 There are now two competing proposals advanced on this subject in the current proceedings:

(a) a proposal advanced by our clients; and

---

[14] Submission of Jobs Australia, 2 March 2015, at page 5.
[15] Submission of AFEI, 5 March 2015, at page 3.
[16] Submission of HSU, 2 March 2015, at page 5.
[17] Submission of ABI and NSWBC, 2 March 2015, at page 2.
[18] Submission of Aged Care Employers (which consisted of ACSA and LASA), 1 March 2015, at page 2.

(b) a proposal advanced by the HSU.

The HSU proposal

6.5 The HSU have proposed that clause 28.4 be varied to include a new sub-clause dealing with circumstances where an employee is required to perform work from home after leaving the employer's or client's premises. Under the HSU proposal, the employee would be entitled to a minimum of one hours' pay at overtime rates "for each time recalled".[19]

Our clients' proposal

6.6 In contrast, our clients' claim involves a proposed new clause 20.10, as well as consequential amendments to clauses 20.9 and 28.4. Under the proposed new clause 20.10, employees would be entitled to payment for performing remote response duties, with the quantum of such payment and the relevant minimum payment dependent on when the remote response duties are performed. Specifically, it is proposed that employees be paid:

(a) at the applicable rate of pay for work performed between 6.00am and 10.00pm, with a minimum payment of 15 minutes; and

(b) at the applicable rate of pay for work performed between 10.00pm and 6.00am, with a minimum payment of one hour.

6.7 While there is a large degree of overlap between the competing proposals, the key difference between the proposals relates to the scheme of remuneration to be applied when employees perform remote response work.

Our clients' proposal

6.8 The intention of our clients' proposal is to provide a scheme of remuneration for situations where an employee is required, outside of their working hours, to provide advice or assistance remotely.

6.9 This is not a novel claim or provision. Similar types of provisions appear in:

(a) the *Local Government Award 2010* (at clauses 24.4(d) and 24.6(d));

(b) the *Local Government (State) Award 2014* (NSW) (at clause 19E);

(c) the *Water Industry Award 2010* (at clauses 26.4(d) and 26.6(d));

(d) the *Business Equipment Award 2010* (at clauses 30.6(d) and 30.7); and

(e) the *Contract Call Centres Award 2010* (at clauses 26.4(d), 26.6(d) and 26.7).

[19] See [16] of Amended Draft Determination of HSU, filed 15 February 2019.

The disutility associated with performing remote response work

6.10 If the Commission was minded to insert such a provision into the Award, the Commission's task is to determine what an appropriate monetary entitlement is for this type of work.

6.11 In the scheme of a minimum safety net instrument, this task involves an assessment of the value of the work and the extent of disutility associated with the time at which the work is performed. In the Penalty Rates Decision, the Full Bench observed at [202]:

> A central consideration in this regard is whether a particular penalty rate provides employees with 'fair and relevant' compensation for the disutility associated with working at the particular time(s) to which the penalty attaches.

6.12 Unlike being physically recalled to the workplace in the traditional sense (or being on call to be recalled to work), the level of disutility associated with employees performing remote response work is significantly less, as employees are not required to:

(a) stay in the vicinity of the workplace while on-call;

(b) keep themselves, their work clothes and transport in a state of readiness while on-call for a possible recall to work;

(c) spend time travelling to or from the workplace if recalled to work; or

(d) incur additional travelling expenses (such as public transport fares, petrol or road tolls) if recalled to work.

6.13 An employee can be on-call remotely from anywhere. They do not need to remain static at a particular location, be in readiness to attend work or be in (or change into) work clothing to perform the work.

6.14 Our clients' proposal provides a fair and relevant minimum safety net payment regime for this type of remote work, which is proportionate to the lower level of disutility associated with remote work.

7. CONCLUSION

7.1 For the reasons outlined above, our clients' proposed variations should be granted.

AUSTRALIAN BUSINESS LAWYERS & ADVISORS

On behalf of:

- **AUSTRALIAN BUSINESS INDUSTRIAL**
- **THE NSW BUSINESS CHAMBER LTD**
- **AGED & COMMUNITY SERVICES AUSTRALIA**
- **LEADING AGE SERVICES AUSTRALIA**

Fair Work Commission: 4 yearly Review of modern awards

REPLY SUBMISSION

4 YEARLY REVIEW OF MODERN AWARDS: (AM2018/26) SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010 - SUBSTANTIVE ISSUES

FILED ON BEHALF OF:

- AUSTRALIAN BUSINESS INDUSTRIAL
- THE NSW BUSINESS CHAMBER LTD
- AGED & COMMUNITY SERVICES AUSTRALIA
- LEADING AGE SERVICES AUSTRALIA

12 JULY 2019

TABLE OF CONTENTS

1. INTRODUCTION

1.1 This reply submission is made on behalf of:

(a) Australian Business Industrial (**ABI**);

(b) the New South Wales Business Chamber Ltd (**NSWBC**);

(c) Aged & Community Services Australia (**ACSA**); and

(d) Leading Age Services Australia Limited (**LASA**),

collectively, '**our clients**'.

1.2 Our clients have a material interest in the review of the *Social, Community, Home Care and Disability Services Industry Award 2010* (the **Award**).

1.3 This reply submission is filed in accordance with the Amended Directions of the Fair Work Commission (the **Commission**) issued on 28 June 2019 (the **Amended Directions**).

1.4 This reply submission addresses the outstanding union claims as listed in Attachment C to the Amended Directions, being claims advanced by the Health Services Union (the **HSU**), the United Voice and the Australian Services Union (the **ASU**), save that it does not address the claims relating to travel time by reason of the variation made to the Amended Directions on 11 July 2019.

2. OUR CLIENTS

2.1 ABI is a registered organisation under the *Fair Work (Registered Organisations) Act 2009* and has in excess of 4,000 members. ABI represents the interests of businesses in a variety of industries including the social, community, home care and disability services industry. Its primary role is to develop workplace policy and to shape debate on major workplace relations issues.

2.2 NSWBC is a recognised State registered association pursuant to Schedule 2 of the *Fair Work (Registered Organisation) Act 2009* and has some 18,000 members. NSWBC is the State's peak business organisation and represents all businesses from small enterprises to large corporations across a variety of industries including the social, community, home care and disability services industry.

2.3 ACSA is the leading peak body supporting church, charitable, other not-for-profit and government providers of residential care services, community care services and retirement living for older people in Australia.

2.4 LASA is the national peak body representing and supporting providers of age services across residential care, home care and retirement living. LASA's membership base is made up of private, not-for-profit, faith-based and government operated organisations providing care, support and services to older Australians.

3. LEGISLATIVE FRAMEWORK OF THE FOUR YEARLY REVIEW

3.1 The legislative framework applicable to the 4 Yearly Review has been considered in detail in *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 (**Preliminary Issues Decision**), and *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 (**Penalty Rates Decision**).

3.2 More recently, the legislative framework applicable to the 4 Yearly Review was also considered in *4 yearly review of modern awards – plain language re-drafting – standard clauses* [2018] FWCFB 4177 issued on 18 July 2018[1] and summarised in *4 yearly review of modern awards – Alpine Resorts Award* [2018] FWCFB 4984.

3.3 We rely on the summary of the applicable legal principles as set out in the reply submissions filed by our clients in this matter on 5 April 2019.[2]

3.4 We also refer to, and agree with, the summary contained in the document titled 'Legislative framework relevant to the Review' published by the Commission in this matter on 12 April 2019.[3]

[1] [2018] FWCFB 4177 at [3]-[13].
[2] See [2.1]-[2.4].
[3] Published pursuant to a Statement issued on 12 April 2019 ([2019] FWCFB 2514).

4. THE SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY

4.1 Our clients have previously addressed in a range of submissions the nature of the SCHCDS industry and the unprecedented change and structural reforms which various parts of the industry are currently undergoing. By way of example, we refer to:

(a) Part 3 of our reply submissions filed on 5 April 2019; and

(b) Part 3 of our submissions filed on 2 July 2019 in support of the claims being advanced by our clients in these proceedings.

4.2 We refer to and rely on those aspects of our previous written submissions in respect of the nature of the industry generally.

4.3 The SCHCDS industry is a diverse industry, both in relation to the functions of the organisations regulated by the Award and in relation to the characteristics of the work and working patterns that are required to undertake those functions.

4.4 Given the diversity of work that is regulated by the Award, it is unsurprising that there is diversity in the characteristics of the work and the working patterns that are required to deliver the various services.

4.5 In broad terms, the work arrangements regulated by the Award can be divided into two categories of work:

(a) the first type is work that is stable, consistent and certain, and where employees generally perform the work in the one work location (their primary place of work), and have relatively fixed working patterns (such as a working pattern of five days of 7.6 hour shifts performed at the same work location); and

(b) the second type is where the nature of the work, including the location, the time and the duration, is dynamic, variable and difficult to predict with any degree of certainty due to the client-driven factors that cause the working arrangements to be subject to regular change.

4.6 The first category of work can be described as the more 'centralised' areas of service provision where the particular service is made available by the business at a particular location and during specified operating hours that are determined by the business. Examples of this type of work include:

(a) community services that are provided from a fixed location - for example: community legal centres, family counselling centres, migrant support centres, health

and mental health referral centres, indigenous support centres, tenancy support centres, homelessness support centres, drug and alcohol rehabilitation support centres, social policy and advocacy centres, etc.);

(b) institutional, residential or group home services - for example: group homes that are established to provide 24 hour care to residents, with support workers employed to provide home-based care to those residents; and

(c) other services which are provided at a particular time that is determined by the service provider (i.e. the employer) - for example: a community transport service which runs to a fixed timetable or a schedule determined by the employer.

4.7 For the above types of services, the nature of the service is such that the employer can, subject to the usual commercial and market considerations, largely determine when, where and how the service is provided. Further, the nature of the work is such that the work can be organised by the employer into regular, predictable and lengthier segments of work.

4.8 As to the second category of work, this work includes the provision of individualised, customer-centric services in a non-institutional setting such as home care services or disability support services in the community.

4.9 In the disability service and home care service areas, businesses historically had a far greater level of control as to when, where and how these services were delivered. However, as a result of the NDIS and other reforms, the individual consumers (i.e. the customers, clients or 'participants') now have a greater level of choice and control over how these services are delivered to them.

4.10 To provide an example: where an employee with a disability was eligible to receive personal care services to assist him/her to get ready in the morning. Prior to the reforms, a service provider that was contracted to deliver that service would determine when the service was to be provided, and could therefore schedule that service in an efficient manner having regard to other operational factors. However, now under the NDIS or other reforms, the consumer is able to advocate for and request a time that is most suitable to him/her, which in many cases will be operationally less efficient for the service provider. This leads to the service provider having to make the following decision: provide the service at a time which is not operationally efficient for it, or decide not to provide the service.

4.11 While some of the work in the home care and disability services areas will continue to have a degree (or a large degree) of regularity and stability (e.g. a client who requires personal care

assistance in getting showered and dressed in the morning), there will still be occasions where those services will be changed or cancelled to meet the various needs of the individual.

4.12 And then there are the more variable items of support. For example, an individual with a disability who is eligible under the NDIS to receive a prescribed number of hours of support to facilitate his/her independent living skills is able to determine when they might wish to utilise those supports, which may be dependent on what they wish to do and when a particular event is on. For example, the consumer might wish to attend a football game one week on a Friday night which starts at 7pm, while the following week the football game may be on the Sunday afternoon at 2.30pm. Service providers are therefore required to be sufficiently agile to meet the needs of customers and deliver these services.

4.13 Further, the nature of this work is also often characterised by short segments of work, given that:

(a) the services provided (e.g. personal care) typically only take a short period of time to provide; and

(b) consumers tend to request shorter periods of service (to get more perceived "value" in terms of the support services they can receive).

4.14 While this is, in many respects, the typical market environment in which many businesses and industries operate, there are two significant differences in the SCHCDS industry:

(a) firstly, the prices that can be charged for certain services are in many cases regulated and fixed by the Government (or otherwise businesses are limited by the funding that is provided to deliver certain services); and

(b) secondly, most businesses in the SCHCDS industry are not-for-profit businesses with a deeply-embedded mission to support vulnerable members of the community, and so are not driven by the same commercial imperatives or motivations as other private sector businesses.

4.15 The above two factors lead to a dynamic whereby many service providers in the SCHCDS industry, when faced with the choice, will elect to provide services to consumers at a loss in order to meet the organisation's mission rather than not provide the service.

4.16 Given the diversity in the nature of the work across the industry, and the other unique characteristics of the industry, the task of striking the right balance and providing a fair and

relevant minimum safety net of terms and conditions for all Award-covered employees is no easy feat.

4.17 However, it ultimately requires a balancing exercise whereby the needs and interests of employees are balanced with the needs of employers in order to ensure a fair, sustainable and viable industry.

4.18 In this regard, it is critical that the Commission have regard to the impacts on service providers that any variation to the Award would have. There is considerable material before the Commission demonstrating that the industry is under significant financial pressure, and so any variation that is likely to further exacerbate these issues must be implemented in a way that minimises these adverse impacts.

4.19 To synthesise these observations into factual findings that the Commission is invited to make, our clients submit that the following uncontroversial findings can be made:

(a) since the Award was first introduced in 2010, the industry (or parts of it) have undergone significant and unprecedented structural change;

(b) the consumer-directed-care reforms have led to individual consumers having more choice and control over the delivery of services to them, including what, when, where, how and by whom those services are delivered;

(c) many of the care services provided to consumers in the home care and disability services sectors are for short periods of time, including for less than one hour;

(d) employers in the industry are predominantly not-for profit, mission-based businesses which are not driven by the same commercial imperatives or motivations of other private sector businesses, which leads them to make decisions based on community need rather than profitability;

(e) employers in the industry are often reliant on government funding and subject to price regulation, for which there is evidence of inadequacy of such funding in particular areas; and

(f) many service providers and the industry generally is under significant financial pressure arising from the decentralisation of the funding arrangements and the aggressive pricing models (for example, under the NDIS).

5. SUMMARY OF OUR CLIENTS' POSITION IN RELATION TO THE UNIONS' CLAIMS

5.1 The Unions' claims, if granted, would represent a truly significant alteration to the current safety net instrument.

5.2 If implemented, the changes sought by the Unions will have a significant deleterious impact on the viability of most businesses in the sector, which are already under significant pressure due to the inadequacy of the current funding models and the major structural reforms that have occurred over the last five years.

5.3 Already, many businesses are unable or barely able to sustain themselves and cover their operating costs.

5.4 Our clients do not have any philosophical objection to the Award providing for a 'fair and relevant' minimum safety net of terms and conditions. In this context, our clients have taken a reasonable approach to these proceedings and have either not opposed a number of claims (or aspects of certain claims), or have proffered alternative variations which rectify the particular mischief complained of by the Unions without damaging the sustainability of businesses.

5.5 The reality is that if the Award is varied in such a way that results in the labour costs of employers increasing, that variation will have a material adverse impact on employers and will threaten their sustainability and viability, unless there is some equivalent increase to the funding received by the business.

5.6 Equally, if the Award is varied in such a way that adversely affects employers' operational flexibilities, this change is likely to have a material adverse impact on the businesses' ability to deliver services to vulnerable members of the community. This will then undermine the objectives of the NDIS and other consumer-directed-care reforms and have a tangible adverse impact on the community.

5.7 While our clients oppose the vast majority of the variations that have been sought by the Unions, we acknowledge that there is a need to vary the Award in a number of areas to ensure that it meets the modern awards objective.[4]

5.8 For convenience, we set out a summary of our clients' position in relation to the Unions' claims. The reasons for these views are set out in further detail in separate sections of this submission below. However, by way of summary, our clients' position is as follows.

[4] Among the necessary variations are those that our respective clients are pursuing.

Minimum engagements

5.9 In respect of proposed changes to minimum engagements, our clients:

(a) are opposed to any change to the existing minimum engagements for casual employees;

(b) are opposed to the proposed introduction of any minimum engagement for full-time employees; and

(c) are opposed to the introduction of a uniform 3 hour minimum for all part-time employees.

5.10 However, our clients are not opposed to the introduction of minimum engagements for part-time employees, provided that:

(a) they are consistent with the existing minimum engagement periods for casual employees; and

(b) attendances for the purpose of staff meetings and training / professional development are subject to a minimum engagement of one hour.

Broken shifts

5.11 In respect of proposed changes to the broken shifts clause, our clients are opposed to the Unions' claims, save that our clients do not oppose:

(a) the introduction of a requirement that broken shifts only be worked where there is mutual agreement between the employer and individual employee; and

(b) that the existing payment under clause 25.6(b) be varied such that the applicable shift allowances be determined by either the starting time or the finishing time of the broken shift, whichever is the greater.

Overtime for part-time employees

5.12 Our clients are opposed to the proposed introduction of additional overtime entitlements for part-time employees when working agreed additional hours or when working more than 8 hours in a day.

5.13 However, our clients are not opposed to a variation that would provide a mechanism for reviewing and adjusting a part-time employee's hours of work where they are regularly working more than their guaranteed minimum number of hours. Further details of this proposition are outlined in paragraphs 8.26 to 8.29 below.

Overtime for casual employees

5.14 Our clients are opposed to the proposed changes to overtime for casual employees.

Phone allowance

5.15 Our clients are opposed to the proposed variation to the telephone allowance clause.

Clothing and uniform allowance and reimbursement

5.16 Our clients are opposed to the proposed variations in respect of clothing and uniform allowances.

Client cancellation

5.17 Our clients are opposed to the HSU's proposed variation to the client cancellation clause, and have proposed a separate variation to the client cancellation clause which we consider should be made.

Recall to work

5.18 Our clients are opposed to the proposed variation to the recall to work overtime clause, and have advanced a separate proposal to introduce a remote response duties compensation regime.

Roster changes

5.19 Our clients are opposed to the United Voice proposal in respect of roster changes.

5.20 However, our clients consider that the rostering provisions of the Award (particularly for part-time employees) require consideration to ensure they provide an appropriate balance between the interests of employees in having have sufficient certainty around working patterns, and the interests of employers in being able to continue to utilise part-time employment as a viable form of employment under the current operating environment.

5.21 This requires a consideration of the interaction between clauses 25.5(d) and 10.3(c), with a focus on ensuring that part-time employment is appropriately flexible to meet the needs of employers to prevent those terms acting as a bar to employing people on a part-time basis, and leading to a casualisation of the workforce.

6. CLAIM FOR CHANGES TO MINIMUM ENGAGEMENT PROVISIONS (S10)

The HSU claim

6.1 The HSU seek the introduction of uniform 3 hour minimum engagements into the Award for all classes of employee (full-time, part-time and casual). When considered across the various categories of employment, the claim involves:

(a) in respect of full-time employees, the introduction of a 3 hour minimum engagement in circumstances where the Award does not currently contain any minimum engagement;

(b) in respect of part-time employees, the introduction of a 3 hour minimum engagement for part-time employees, in circumstances where the Award does not currently contain any minimum engagement;

(c) in respect of casual employees working in the home care sector, an increase to the existing minimum engagement from 1 hour to 3 hours;

(d) in respect of casual employees undertaking disability services work, an increase to the existing minimum engagement from 2 hours to 3 hours;

(e) in respect of casual employees working in the crisis assistance and supported housing sector, an increase to the existing minimum engagement from 2 hours to 3 hours; and

(f) in respect of casual employees working in the family day care scheme sector, an increase to the existing minimum engagement from 2 hours to 3 hours.

6.2 The only area of the existing Award which the HSU do not seek to disturb is in relation to casual employees in the social and community services sector who do not perform disability services work. Otherwise the claim impacts every other category of employee.

6.3 In support of the variation, the HSU note that the Award does not presently contain any minimum engagements for part-time employees.

6.4 The submissions advanced in support of the variation are summarised as follows:

(a) first, the HSU submit that the existing protection for part-time employees at clause 10.3(c) is inadequate, has "little relevance", and is not "observed" or "honoured";[5]

[5] HSU submission at [26]

(b) second, where employees (such as disability support workers and home care workers) perform work at different or various locations on any given day (or throughout the course of the day), those employees make a "greater investment of time and effort" for the performance of each shift;[6]

(c) third, it is commonplace within the industry that employees are rostered to perform very short shifts;[7]

(d) fourth, it is commonplace that those very short shifts are interspersed with unpaid breaks in which employees are required to travel between clients;[8] and

(e) fifth, the majority of workers in the industry are employed on Award rates only.[9]

6.5 We address this claim below.

Recent consideration of minimum engagements: The Casual and Part Time Employment decision

6.6 Minimum engagement provisions across the modern awards system were recently the subject of detailed consideration by a Full Bench of the Commission as part of the common issues Casual and Part-Time Employment proceedings.[10]

6.7 Those proceedings primarily concerned a claim by the ACTU for the introduction of, *inter alia*, uniform 4 hour minimum engagements for both part-time and casual employees in approximately 108 modern awards. The SCHCDS Award was one of the awards covered by the ACTU claim.

6.8 In its decision of 5 July 2017 (the ***Casual and Part Time Employment Decision***)[11], the Full Bench rejected the ACTU claim in relation to 4 hour minimum engagements.[12] However, the Bench formed the provisional view that a 2 hour minimum engagement provision should be introduced for casual employees in respect of modern awards that contained no minimum engagement period for casual employees.[13] The Bench rejected the ACTU claim altogether in respect of minimum engagements for part-time employees.

[11] [2017] FWCFB 3541
[12] Ibid, at [407]
[13] Ibid, at [408]

6.9 Given that the SCHCDS Award already contained minimum engagement provisions for casual employees, the *Casual and Part Time Employment Decision* did not impact the SCHCDS Award in respect of minimum engagements.

6.10 Notwithstanding the above, the reasoning in the *Casual and Part Time Employment Decision* remains relevant. In their decision, the Full Bench considered the history and case law authorities on award minimum engagements, and made the following observations:

(a) modern awards contain a range of different minimum daily engagement periods for casual and part-time employees;[14]

(b) minimum engagement periods in awards have developed in an ad hoc fashion rather than having any clear founding in a set of general principles;[15]

(c) the issue of minimum engagements did not receive any systematic consideration during the award modernisation process which led to the establishment of the modern awards;[16]

(d) the award modernisation process largely preserved the predominant provisions concerning minimum engagements contained in pre-reform awards;[17]

(e) existing award minimum engagement provisions generally derive from provisions in pre-reform awards which were in most cases likely formulated by the agreement of the award parties;[18]

(f) where such pre-reform award minimum engagement provisions were derived by agreement of the award parties, it can be presumed that in doing so the parties took into account the circumstances of the industries in which they operated that prevailed at the time;[19] and

(g) in particular modern awards, it is clear that that the minimum engagement periods were intended to meet the peculiar circumstances of special types of work or workers. [20]

[14] At [404]
[15] At [399]
[16] At [346]
[17] At [402]
[18] At [404]
[19] Ibid
[20] Ibid

6.11 As to the rationale of minimum engagement provisions, the Full Bench observed at [399]:

> ...their fundamental rationale has essentially been to ensure that the employee receives a sufficient amount of work, and income, for each attendance at the workplace to justify the expense and inconvenience associated with that attendance by way of transport time and cost, work clothing expenses, childcare expenses and the like. An employment arrangement may become exploitative if the income provided for the employee's labour is, because of very short engagement periods, rendered negligible by the time and cost required to attend the employment. Minimum engagement periods are also important in respect of the incentives for persons to enter the labour market to take advantage of casual and part-time employment opportunities (and thus engage the consideration in paragraph (c) of the modern awards objective in s.134).

6.12 However, the Full Bench then observed that there are a number of "important countervailing considerations" that need to be taken into account in establishing award minimum engagement requirements, namely:

(a) longer minimum engagement periods may prejudice those persons who wish to and can only work for short periods of time because of family, study or other commitments, or because they have a disability;

(b) the need for and length of a minimum engagement period may vary from industry to industry, having regard to differences such as in rostering practices and whether there are broken shifts;

(c) an excessive minimum engagement period may cause employers to determine that it is not commercially viable to offer casual engagements or part-time work, which may prejudice those who desire or need such work; and

(d) a minimum daily engagement period for part-time employees might not need to be as long as for casual employees, because part-time employees are likely to enjoy the greater security of a guaranteed number of weekly hours of work.[21]

6.13 The considerations outlined above should be taken into account and applied when dealing with the present claim.

[21] At [403]

6.14 The ultimate conclusions of the Full Bench in respect of the ACTU's claim for model 4 hour minimum engagement provisions for part-time and casual employees appears at paragraphs [407]-[408], the relevant aspects of which are extracted as follows:

> *[407] While a 4 hour minimum daily engagement might under some awards represent an appropriate balancing of the competing considerations to which have earlier referred, we do not consider that it can be adopted on the across-the-board basis proposed by the ACTU. That would not in all awards meet the modern awards objective in s.134, because we consider that it might have the counter-productive result of reducing workforce participation and social inclusion, and also because under some awards it may inhibit flexible modern work practices and the efficient and productive performance of work. The ACTU's claim for a standard 4 hour minimum engagement for casual and part-time employees is therefore rejected.*
>
> *[408] However, we do consider, having regard to those same competing considerations, that it is necessary for modern awards to contain some form of minimum engagement period for casual employees in order to avoid their exploitation in order to meet the modern awards objective. The modern awards listed in Attachment G contain no minimum engagement period at all. We have reached the provisional view that such awards should be varied to include a 2 hour minimum engagement period for casuals. However we will provide interested parties an opportunity to provide further submissions concerning this proposition.*

6.15 While the *Casual and Part Time Employment Decision* is of course relevant to the current proceedings, that decision does make it clear that ultimately the task of considering minimum engagements in modern awards needs to be undertaken having regard to the particular characteristics of the industry covered by the award.

6.16 We now turn to an award-specific consideration of minimum engagement provisions for the SCHCDS industry.

Background to minimum engagements in the SCHCDS industry

6.17 While there may not have been a systematic consideration of minimum engagement periods during the award modernisation process, the issue certainly was considered in detail during the course of the AIRC making of the SCHCDS Award.

6.18 During that process, a number of party draft Awards were submitted to the AIRC for consideration. For example:

(a) Jobs Australia submitted a draft *Social, Community and Employment Services Award 2010* on 24 July 2009 which was proposed to have a broader coverage including the labour market assistance industry, and which proposed a four hour minimum engagement for full-time employees and a two hour minimum engagement for part-time, casual and sessional employees;[22]

(b) AFEI submitted a draft *Social and Community Services Employees Award 2010* which proposed a two hour minimum engagement for part-time and casual employees, and no minimum engagement for full-time employees;[23] and

(c) the ASU submitted a draft *Social, Community, Disability and Employment Services Industry Award 2010* which proposed a three hour minimum engagement for casual employees, and no minimum engagement for full-time or part-time employees.[24]

6.19 When the Exposure Draft was published on 25 September 2009, it contained a three hour minimum engagement for casual employees, and no minimum engagement for the other categories of employment.[25]

6.20 Following the publication of the Exposure Draft, a considerable volume of submissions was then received by the AIRC which addressed the proposed three hour minimum engagement for casual employees. Put simply, employers and employer parties forcefully objected to a proposed three hour minimum engagement, particularly in relation to the home care and disability sectors.

6.21 For example, the Aged Care Employers (consisting of our clients, ACSA and LASA) submitted that the casual minimum engagement should be reduced from three hours to one hour in respect of home care employees.[26] The Aged Care Employers submitted:

> [9] The concept of a three hour minimum payment to a casual employee is foreign to many home and community care projects and services. It will be unfunded.
>
> [10] It will also be contrary to client needs and schedules. In many cases clients only require less than one hours assistance with medication administration, or early morning or evening care/assistance. The flow-on effect of a three hour minimum payment is that employers will be forced to juggle and change client schedules (against client wishes) so as to ensure the full three hour payment is allocated to a

[23] See clauses 10.2 and 10.3.
[24] See clause 10.4(c).
[25] See 10.4(c) of the Exposure Draft, published 25 September 2009.
[26] Submission of Aged Care Employers, 19 October 2009 at [2].

client and/or working time. Given that the home and community care industry relies so heavily on achieving client satisfaction as a measure of its effectiveness, it is wholly inappropriate to impose three hour minimum starts on both providers and their clients. A one hour minimum is consistent with sector and client needs and Clause 10.4(c) must be amended accordingly. Such an outcome has already been determined in respect of homecare employees under the Aged Care Award.

6.22 ABI also lodged a submission raising similar concerns in its submission of 19 October 2009:

> 24. Sub-clause 10.4 provides for a minimum start of three hours for casuals. This condition creates an impediment to the flexibility demanded by the industry, and is problematic for the reasons that follow.
>
> 25. Many of the services provided by this industry, including but not limited to, respite and home-care services, are carried out by casual employees. The flexibility associated with casual work is a critical feature attracting many employees to the industry.
>
> 26. The nature of the services provided vary. However, there is typically strong demand for assistance at the beginning and end of the day. For example, many clients require assistance getting ready before school and/ or work and preparing for bed in the evenings. The nature of this care would not typically require three hours.
>
> 27. Nor, in most cases, can the same employee provide this type of home assistance to more than one (or perhaps two clients who are geographically close) because clients cannot be left unable to start (or finish) their day well into the morning (or night).
>
> 28. Further, the three hour minimum requirement contained in the Exposure Draft is inconsistent with a number of programmes common to the industry. These include (but are not limited to):
>
> - Attendant Care - support provided to people with a physical disability to meet the requirements of their personal care needs. This is limited to a maximum of 35 hours per week and divided roughly into 5 hours per day - usually 2-3 hours in the morning with either 2 x 1 hour shifts at other times of the day or 1x 2 hour shift in the evening;

- Veterans Homecare - provision of a maximum of 6 hours per week in personal care, with domestic assistance and respite that is usually provided in 1 or 2 hours shifts;
- Commonwealth Respite for Carer's - allocation of regular 1 to 2 hours shifts to support a family member who is the primary carer for someone elderly or with a disability;
- HomeCare NSW - provision of 1 and 2 hours shifts to provide domestic assistance, personal care or respite for the frail elderly or those with a disability.

29. The ABI draft [consisting of a one hour minimum engagement for casual employees] restores the necessary flexibility with respect to casual employment.

6.23 A flood of other submissions were received which also raised the same or similar concerns with a proposed three hour casual minimum engagement. Without being exhaustive, these included submissions from the following interests:

(a) AFEI;[27]

(b) Business SA;[28]

(c) the Attendant Care Industry Association of NSW Inc;[29]

(d) the Disability Trust;[30]

(e) the Hills District Nursing Service;[31]

(f) Mamre Association Inc;[32]

(g) the Queensland Community Services Employers' Association (QCSEA) Inc;[33]

(h) Interchange Respite Care (NSW) Inc;[34]

(i) Spinal Cord Injuries Australia;[35]

(n) Disability Alliance.[40]

6.24 The issue of minimum engagements for casual employees was also subject to further consideration and oral submissions during a Full Bench hearing on 5 November 2009, as recorded on transcript.

6.25 Finally, there is clear evidence that the issue of minimum engagement periods for casual employees was specifically considered at the time the Award was made. In the decision of *Award Modernisation* [2009] AIRCFB 945, the Full Bench specifically referred to minimum engagement provisions for casual employees, and observed at [83] that:

> [83] The minimum period of engagement for casuals has been altered to take into account the different sectors of this industry...

6.26 While there is an absence of detailed reasoning in *Award Modernisation* [2009] AIRCFB 945 behind the Full Bench's decision to set the casual minimum engagements in the manner they did, the only rational conclusion available is that the Full Bench was persuaded by the submissions put by the employer parties.

6.27 Ultimately, the reasons which were advanced by employer parties during the award modernisation process in support of short minimum engagement periods remain just as relevant today, if not more so following the implementation of consumer directed care reforms. We rely on the matters raised in those submissions.

6.28 There is no proper basis to depart from the conclusions reached by the Full Bench when the Award was made.

6.29 We now address the HSU's proposal in respect of full-time and part-time employees.

Proposal for a 3 hour minimum engagement for part-time employees

6.30 When the Award was made, the AIRC decided not to provide minimum engagements for part-time employees. This is despite, as addressed above, the fact that the issue of minimum engagements received considerable focus during the making of the Award.

6.31 The issue of minimum engagements for part-time employees (or lack thereof) was then the subject of re-consideration by the Commission during the 2 yearly review of the Award. In those proceedings, the ASU sought the introduction of a 3 hour minimum engagement for part-time employees across all streams of the Award.

6.32 In support of their application, the ASU submitted that the absence of a minimum engagement period for part-time employees was at odds with both the "critical mass" of relevant pre-reform awards as well as the position provided for other employees under the Award.

6.33 However, in the Commission's decision of 27 June 2013[41], VP Watson dismissed the application and relevantly held that:

> [19] It is clear that in common with many other awards, the AIRC deliberately did not insert a minimum engagement period for part-timers in this award. It was obviously influenced by the variable position under predecessor awards. In my view the introduction of a minimum engagement period for part-time employees as part of this review would require a strong case that evaluated the impacts on employees and employers across the various sectors covered by the award. The application fails to meet this standard.

6.34 The above aspect of the VP Watson Decision was not challenged by the ASU on appeal.

6.35 While the Commission rejected the application for minimum engagements for part-time employees during the 2 yearly review process, it is relevant that the Commission decided to grant another of the ASU's claims relating to part-time employees.

6.36 VP Watson granted the ASU's claim for the insertion of a provision that is now clause 10.3(c) of the Award, which imposes an obligation on employers to agree with part-time employees in writing on an agreed pattern of work (including number of hours to be worked, the days on which work is to be performed, and the starting and finishing times on each day) which can then only be varied by written agreement.

[41] [2013] FWC 4141

6.37 In granting that variation, VP Watson considered the absence of minimum engagement provisions as a particularly influential factor leading to his decision. In the decision, VP Watson held:

> [20] That part of the application seeking a requirement that part-time arrangements be agreed in writing prior to commencing employment is a common award provision. It requires employees to be given clear information as to the basis of their employment when they are engaged. I consider that the case for such a clause is strong, <u>especially when there is no award minimum engagement period</u>. In my view the concerns of the employers can be allayed by standard procedures that comply with the clause, such as those that have been developed for employers covered by similar provisions in other awards. I will make this change prospective to allow employers to prepare for the change. <u>If significant practical problems emerge an appropriate variation can be sought</u>. I will insert the clause sought by the ASU with effect from 1 August 2013. [emphasis added]

6.38 It follows from the reasoning of VP Watson that if minimum engagements for part-time employees were to be inserted into the Award, the case for maintaining clause 10.3(c) is weakened, and should be reconsidered.

6.39 This is the case now, particularly given the submissions that have been advanced by the HSU as to the operation of clause 10.3(c).[42] For example, the HSU assert that clause 10.3(c) "appears to have little relevance", despite the HSU opposing a claim advanced by some of our clients in the Casual and Part-Time Employment proceedings to vary clause 10.3(c) for that very reason.

6.40 In our submission, any proposal to introduce a minimum engagement for part-time employees should not occur without a contemporaneous review and reconsideration of clause 10.3(c).

6.41 Another matter should also be noted. To the extent that the Commission is minded to introduce minimum engagements for part-time employees, the observation of the Full Bench in the *Casual and Part Time Employment Decision* at [403] is relevant. There, the Full Bench observed:

[42] See HSU submission at [26].

a minimum daily engagement period for part-time employees might not need to be as long as for casual employees, because part-time employees are likely to enjoy the greater security of a guaranteed number of weekly hours of work.

6.42 This observation is of course applicable to the SCHCDS Award, where part-time employees have the security of permanent employment, guaranteed hours, and a pre-agreed pattern of work as per clause 10.3(c).

Our clients' position in relation to minimum engagements for part-time employees

6.43 It is notable that the HSU acknowledge that it is "commonplace within the industry that employees are rostered to perform very short shifts".[43] This is of course true. Indeed, it is a fundamental feature of the industry, brought about by the fact that customers (particularly in the home care and disability services sectors) require care services of a short duration to assist them to undertake basic activities such as showering, cooking, medication prompting, getting dressed, etc.

6.44 Given that many of these services involve a short engagement of anywhere between 30 minutes and 2 hours, employers are required to effectively bundle a series of different customer service engagements together in order to 'build' a longer shift for employees. It is of course in the employer's interest to build a shift that is attractive to those employees who do not require or desire the flexibility of shorter shifts (as some employees do).

6.45 This is particularly challenging in regional and rural and remote areas where there is a lack of scale or where clients are geographical dispersed. The reality is that in some cases, it is simply not possible to bundle multiple separate customer engagements together to create a three hour shift.

6.46 This fundamental feature of the industry is precisely the reason why the Commission should not introduce a three hour minimum engagement. If a three hour minimum engagement was to be implemented, it would have a very significant adverse impact on employers. It will also seriously disadvantage members of the community who access services from these employers, as employers would not be prepared to continue delivering support services of a short duration, which is contrary to the objectives of the NDIS and other consumer directed care initiatives. It will also adversely affect employees who prefer short shifts to accommodate their other family, caring or study commitments.

[43] Ibid at [29]

6.47 In summary, our clients are not opposed to the introduction of minimum engagement provisions for part-time employees, subject to two conditions:

(a) they reflect the existing minimum engagements for casual employees; and

(b) there be a one hour minimum engagement applied for casual and part-time employees where they are required to attend staff meetings and training / professional development.

6.48 That is, our clients would not be opposed to:

(a) a one hour minimum engagement for part-time home care employees;

(b) a two hour minimum engagement for part-time employees undertaking disability services work;

(c) a two hour minimum engagement for part-time employees in the crisis assistance and supported housing sector; and

(d) a two hour minimum engagement for part-time employees in the family day care scheme sector; and

(e) a three hour minimum engagement for part-time employees in the SACS sector (excluding disability services).

6.49 We now turn to full-time employees.

Proposal for a 3 hour minimum engagement for full-time employees

6.50 Put simply, there is no merit basis for the introduction of a minimum engagement period in respect of full-time employees.

6.51 Under the current terms of the Award, full-time employees must be engaged to work 38 hours per week or an average of 38 hours per week, and the way in which those hours can be worked are conditioned by a range of requirements, including that:

(a) shifts must not exceed eight hours each, or up to 10 hours by agreement;

(b) the employee must be free from duty for not less than two full days in each week or four full days in each fortnight or eight full days in each 28 day cycle; and

(c) the employee must be given a break of not less than 10 hours between the end of one shift or period of work and the start of another.

6.52 That being the case, the prospect of full-time employees performing shifts of a short duration would be very remote, and there is certainly no evidence at all before the

Commission that would support a finding that full-time employees are affected by unreasonably short shifts.

6.53 Further, even if there was such evidence (which is denied), the fact of the employee having a guarantee of 38 hours' work and pay per week eliminates or satisfactorily ameliorates any adverse impact.

6.54 The claim should be dismissed.

7. CLAIMS TO VARY THE BROKEN SHIFTS PROVISION (S35, S36, S37)

7.1 There are various claims on foot in respect of clause 25.6 of the Award.

7.2 While there is a degree of overlap between the three Union claims, each of the Union claims is different, as summarised below.

The HSU claim (S35)

7.3 The HSU seek to materially vary the broken shifts provision (clause 25.6) of the Award. The proposal involves varying the existing clause in at least six respects:

(a) firstly, they seek to limit the clause to part-time and casual employees, thereby preventing full-time employees from being permitted to work broken shifts;

(b) secondly, they seek to impose a limit of one break per broken shift;

(c) thirdly, they seek to introduce a requirement that broken shifts only be worked where there is mutual agreement between the employer and individual employee

(d) fourth, they seek to introduce a requirement that each portion of a broken shift be subject to the proposed 3 hour minimum engagement;

(e) fifth, they seek that travel time between broken shifts be treated as time worked and be paid at the appropriate rate; and

(f) sixth, they propose that the shift allowances be determined by either the starting time or the finishing time of the broken shift, whichever is the greater.

7.4 This reply submission does not deal with the travel time aspects of the HSU's claim.

The United Voice claim (S37)

7.5 The United Voice seek a different variation to clause 25.6, which involves two main components:

(a) firstly, they seek to impose a limit of two portions to a broken shift; and

(b) secondly, they seek a variation to the way in which the existing loading is determined.

The ASU claim (S36)

7.6 The ASU seek the introduction of a 15 percent loading to be paid when employees work a broken shift. The loading is expressed to be payable not in respect of each hour worked during a broken shift, but in respect of the entire duration of the broken shift from

commencement of the first portion of work to the cessation of the final portion of work (inclusive of breaks).

7.7 Further, the loading is proposed to be payable in addition to the existing requirement that penalty rates and shift allowances in accordance with clause 29 be payable, with shift allowances being determined by the finishing time of the broken shift.

Grounds relied upon by the Unions in support of the proposed variations

7.8 In relation to the HSU claim, the grounds relied upon in support of the variations are summarised as follows:

(a) firstly, the HSU assert that the broken shifts provision is "manifestly open to exploitation" in the absence of appropriate minimum engagement provisions;[44]

(b) secondly, the capacity for multiple breaks during a broken shift can result in:

(i) employees having to undertake work on a non-consecutive basis over an extended period of time in order to generate a reasonable amount of earnings;[45]

(ii) employees being paid only for a proportion of the time that is expended in performing the work required by the employer;[46] and

(iii) employees can endure stretches of "dead" time waiting time during the course of the day.[47]

7.9 In relation to the United Voice claim, the grounds relied upon in support of their claim include:

(a) that it is common for employers to only provide employees with a few paid hours of work in several broken shifts over a long span of hours;[48]

(b) that the impact of broken shifts on employees is compounded by other "issues" within the Award, including the lack of minimum engagements for part-time employees, and the practice of some employers requiring employees to travel to the next work location during unpaid break periods;[49]

[44] HSU submission at [36]
[45] Ibid at [37]
[46] Ibid
[47] Ibid
[48] United Voice submission at [114]
[49] Ibid at [115]

(c) a submission that broken shifts are disruptive to the lives of employees;[50] and

(d) a submission that the current method of calculating shift premiums is anomalous and results in employees not receiving adequate additional remuneration for working shifts.[51]

7.10 In relation to the ASU claim, the rationale for the proposed 15 percent loading is said to be to compensate employees for the "disutility" or "disability" associated with working broken shifts.[52] The ASU also submit that:

(a) the existing clause provides employers with "exceptional" rostering flexibility without significant restriction or compensation;[53]

(b) other features of the Award contribute to provide for significant rostering flexibility with little restriction;[54]

(c) the broken shifts provision in the Award is out of sync with broken shift provisions in other Awards.[55]

7.11 Our clients' response to these Union claims is set out as follows.

Background to the broken shifts clause

7.12 Under the current Award, clause 25.6 provides for certain types of work[56] to be undertaken on a non-consecutive basis.

7.13 Clause 25.6(b) currently provides for broken shifts to be paid at "ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift".

7.14 The effect of clause 25.6(b) is that employees working broken shifts are shiftworkers for the purposes of the Award and receive the applicable shift loading in respect of the broken shift.

7.15 There is a very clear and compelling basis for the Award to permit the working of broken shifts. Due to the nature of the work being undertaken by support workers, there is a very clear pattern of service/labour demand whereby customers wish to receive services for a

[50] United Voice submission at [126]
[51] Ibid at [147] to [148]
[52] ASU submission at [18]
[53] Ibid at
[54] Ibid at [23]
[55] Ibid at [31] to [32]
[56] Clause 25.6 only applies to employees in the home care stream and employees in the social and community services stream when undertaking disability services work.

short period of time in the morning, and then again for a short period in the evening. There is also evidence that supports a third peak in demand around midday.

7.16 Accordingly, the broken shifts clause allows employees to provide services on a non-continuous basis to meet customer demand. Absent such a provision, employees would not be able to be given the same number of hours' work, or alternatively employers will not be able to meet customer needs, which is inconsistent with the consumer directed care reform agenda.

Consideration of the broken shifts clause during the 2 yearly review

7.17 The broken shifts provision was considered during the 2 yearly review. In that matter, the ASU sought to vary clause 25.6 to remove the availability of broken shifts in the disability services sector. In the alternative, the ASU sought the introduction of a broken shift allowance.

7.18 In that review process, Vice President Watson concluded that he was not satisfied that a case had been made out to modify the existing arrangements.

7.19 Ultimately, the unions (and particularly the ASU) are simply seeking to re-litigate a matter which had previously been advanced and rejected.

7.20 That said, we respond to the contentions advanced in support of the claims.

Other changes can remedy any concern that may exist with the broken shifts provision

7.21 Our clients accept that the current Award requires amendment to ensure that employees are not exposed to practices which do not provide them with a fair and relevant safety net of terms and conditions. However, our clients do not accept that there is any need to materially alter the broken shifts provision.

7.22 Rather, our clients consider that the issues identified by the unions can be properly addressed and rectified by:

(a) making some modest adjustments to the broken shifts provision (as detailed below);

(b) addressing the concerns around travel time; and

(c) by introducing appropriate minimum engagements for part-time employees in the form suggested in paragraphs 6.47 and 6.48 above.

7.23 This approach is at least in part acknowledged by United Voice, who contend in their written submissions that "the impact of broken shifts on employees is compounded by other 'issues' within the Award, including the lack of minimum engagements for part-time employees, and

the practice of some employers "requiring employees to travel to the next work location during unpaid break periods".[57]

7.24 We now turn to the specific claims advanced by the unions and our position with respect to same.

Response to the Union claims

Response to the HSU claims

7.25 Firstly, in respect of the HSU proposal to limit the application of the broken shifts clause to part-time and casual employees, the basis for that proposal is not clear. The HSU submissions do not appear to address this issue at all.

7.26 In respect of the proposal to impose a limit of one break per broken shift such that a broken shift cannot consist of more than two portions of work, our clients are opposed to this claim for a number of reasons. Firstly, such a variation would reduce operational flexibility and prevent employers from having employees work a broken pattern of work across the course of a day to meet customer needs. Secondly, the variation would likely have the effect of reducing the number of hours that employers can offer to employees, thereby reducing their hours of work and take home pay.

7.27 That said, to the extent that the Commission was minded to impose a restriction on the number of portions of a broken shift, our clients would not oppose a variation to the Award that would only permit a broken shift of more than two portions of work to be worked by agreement with an individual employee.

7.28 Our clients are not opposed to the proposal to introduce a requirement that broken shifts only be worked where there is mutual agreement between the employer and individual employee.

7.29 In relation to the proposal that a three hour minimum engagement be applied to each portion of a broken shift, our clients oppose that variation. The minimum engagement applicable to a broken shift should be considered in the context of the recent findings in the *Casual and Part Time Employment Decision* and the previous authorities considered in that decision. For example, the notion of a "daily" minimum engagement had effectively developed to ensure employees received a sufficient level of remuneration to justify their attendance at work. On that logic, if the Commission has determined an appropriate minimum daily engagement, it is unclear why that period would apply twice if a broken shift

[57] United Voice submission at [124]

is work. This is particularly so given that the broken shifts provision of the Award already provides for a shift loading.

7.30 In relation to the proposal that the shift allowances be determined by either the starting time or the finishing time of the broken shift, whichever is the greater, our clients do not oppose this variation.

Response to the United Voice claim

7.31 In respect of the proposal to impose a limit of one break per broken shift such that a broken shift cannot consist of more than two portions of work, we refer to paragraphs 7.26 and 7.27 above.

7.32 In relation to the proposal that the shift allowances be determined by either the starting time or the finishing time of the broken shift, whichever is the greater, our clients do not oppose this variation (as stated in paragraph 7.30 above).

Response to the ASU claim

7.33 Our clients are opposed to the introduction of a 15 percent loading to be paid when employees work a broken shift.

7.34 While our clients do not cavil with the contention that there is likely to be a degree of disutility associated with working a broken shift for some employees, it is not appropriate that a 15 percent loading be applied *in addition* to the existing penalty rates and shift allowances.

7.35 Further, it is not fair or reasonable that the 15 percent loading be payable in respect of the entire duration of the broken shift from commencement of the first portion of work to the cessation of the final portion of work (inclusive of breaks and unpaid non-working time). This is plainly unreasonable.

7.36 By way of illustration, a common working pattern is for employees to perform a 2-3 hour shift in the morning, and then have a large break from work until the afternoon or evening where a further period of work is performed. The gap between the two portions of the broken shift may in many cases be in the range of 6-8 hours, which provides an ample period of time for employees to engage in leisure activities, go home, rest, or in some cases perform work in secondary employment. It is not fair or reasonable for an employer to be required to pay a 15 percent loading in respect of a 12 hour span, in circumstances where up to 8 hours of that period the employee was not at work.

7.37 In respect of part-time employees, the alleged 'disutility' of working broken shifts needs to be assessed against the requirement at clause 10.3(c) that their pattern of work be agreed in writing on commencement of employment. In light of that existing protection, any disutility arising from a broken shift is largely mitigated by the employee having agreed on commencement of employment to the pattern of work and by having advanced notice of that fixed pattern of work.

7.38 Lastly, there is no merit basis for casual employees to receive an additional loading for working broken shifts. Casual employees receive a casual loading which compensates for working irregular hours. Further, casual employees are under no obligation to accept shifts that they do not wish to take on.

8. HSU CLAIM RELATING TO OVERTIME FOR PART-TIME AND CASUAL EMPLOYEES (S50)

The HSU claim

8.1 The HSU seek the introduction of new overtime benefits for part-time and causal employees. Under the proposed variation:

(a) part-time employees would be entitled to overtime when working in excess of their rostered hours; and

(b) both part-time and casual employees will be entitled to overtime when working in excess of 8 hours per day.

8.2 Under the current Award, no overtime is payable where part-time employees agree to work additional hours (i.e. additional to their rostered hours), save for where they work in excess of 10 hours per day, 38 hours in any week or 76 hours in any fortnight.[58] In respect of casual employees, the current Award provides for overtime where they work in excess of 10 hours per day, 38 hours in any week or 76 hours in any fortnight.[59]

8.3 The grounds relied on by the HSU in support of the variation consist of the following:

(a) the absence of overtime rates for part-time employees working additional hours creates a "structural incentive" on the part of employers to underestimate the number of hours of work required of the employee[60] and utilise part-time workers like a pool of casual employees[61];

(b) work performed by carers in private homes and in the community providing personal or domestic assistance is both physically and mentally taxing;[62]

(c) the taxing nature of the work is compounded by the (often unpaid) travel involved;[63] and

(d) during long shifts, there may be little opportunity, or appropriate facility, for proper rest breaks.[64]

Response to the HSU claim

8.4 It is difficult to understand the rationale for this claim.

---

[59] See clauses 28.1(b) (i) and (ii)
[60] HSU submission at [46]
[61] Ibid
[62] Ibid at [47]
[63] Ibid
[64] Ibid

8.5 Many of the concerns raised by the Unions in these proceedings revolve around underemployment and their members having to work a particular pattern of work that is too short, or not efficiently allocated, or where their members are not able to secure as many hours of work as they would like. There is also evidence of employees being engaged in secondary employment in order to secure a sufficient amount of work. By way of example, the Unions assert that:

(a) there are high levels of underemployment within the sector, necessitating secondary employment;[65]

(b) since the commencement of the Award, there has been an increase in the proportion of care workers employed for fewer hours;[66] and

(c) there is a need for employees to work additional hours to maximise their incomes.[67]

8.6 The HSU claim runs counter to the above concerns.

8.7 The proposed variation will do nothing to address the above concerns, and will only have an adverse affect on both employees and employers.

8.8 The claim should be dismissed for the following reasons:

(a) the claim for overtime entitlements for hours worked in excess of 8 hours per day is inconsistent with the overall modern awards system and the position in other comparable modern awards;

(b) a case has not been made out on the evidence that would justify the introduction of overtime after 8 hours (rather than the existing position which is 10 hours);

(c) a very likely consequence of the variation would be a reduction in the working hours of part-time and casual employees, as employers will adopt rostering practices in order to avoid triggering overtime entitlements; and

(d) the mischief which the claim intends to seek to largely address can be more effectively dealt with in a more appropriate way by implementing certain safeguards to prevent employers from artificially underestimating the number of hours of work that can be given to part-time employees.

8.9 These matters are expanded on as follows.

---

[65] See United Voice submission at [133]
[66] See HSU submission at [15]
[67] See ASU submission at [27]

Proposal to introduce overtime for work in excess of 8 hours in a day

8.10 The proposal to introduce overtime rates for work performed in excess of 8 hours in a day is inconsistent with the current modern awards system, and does not accord with the position in comparable modern awards. By way of example:

(a) the *Nurses Award 2010*, under which caring work of a similar nature is performed, provides for 10 hours to be worked before overtime rates are payable;[68]

(b) the *Health Professionals and Support Services Award 2010,* under which caring work of a similar nature is performed, provides for 10 hours to be worked before overtime rates are payable;[69]

(c) the *Supported Employment Services Award 2010,* under which employees responsible for the supervision of employees with a disability are employed, provides for 10 hours to be worked before overtime rates are payable;[70]

(d) the *Aged Care Award 2010*, under which caring work of a similar nature is performed, provides for 10 hours to be worked before overtime rates are payable;[71] and

(e) the *Local Government Industry Award 2010* provides for between 10 and 12 hours to be worked before overtime rates are payable.[72]

8.11 The current Award position cannot be said to be inconsistent or out of sync with other comparable awards such as those set out above. Further, while the work of many employees covered by the Award may well be physically or mentally challenging, it cannot fairly be said to be any more taxing than the work of nurses, health professionals, employees supervising supported employees, and the work of other employees doing comparable work.

8.12 Significantly, it should be noted that the *Local Government Industry Award 2010* covers employees of local government employers who perform community care work, which is essentially the same work as that regulated by the SCHCDS Award.

8.13 It is also notable that other inherently dangerous industries such as the road transport industry permit a greater number of hours to be worked before overtime rates are triggered.[73]

[68] Clause 21.2
[69] Clause 23.3
[70] Clause 21.5
[71] Clause 25.1
[72] Clause 21.5.

8.14 No persuasive evidentiary case has been advanced which would support a conclusion that the current Award position is inadequate.

Proposal to introduce overtime for agreed additional hours by part-time employees

8.15 The proposal to introduce overtime entitlements for part-time employees working additional hours is a significant claim, and is a significant departure from the current Award position.

8.16 Since its introduction in 2010, the Award has allowed for part-time workers to work hours that are in excess of their rostered hours, by agreement. Where there is such an agreement, no overtime is payable in respect of those hours.

8.17 This has been a longstanding and well-established arrangement in the SCHCDS industry.

8.18 This well-entrenched industrial standard recognises the lack of certainty in demand for labour and the variability in working hours that naturally occurs when providing care services to individuals whose circumstances are subject to change.

8.19 It also provides a mechanism for employees to be given additional hours without the structural disincentive of triggering overtime payments. The simple reality is that employers would not readily offer employees additional hours if it would trigger an additional cost.

Implications of the proposed variations

8.20 Giving the funding constraints plaguing the industry, employers do currently and will continue to actively seek to avoid or minimise the number of overtime hours that are worked/paid.

8.21 As an example, the NDIS pricing system does not factor in overtime rates of pay, which means that if employers are required to pay overtime rates for particular hours of work, they cannot recover that cost from the participant or the NDIA. The effect of this would very likely be that the particular service is rendered unprofitable and cost accreting for the employer.

8.22 There is no reasonable basis for the imposition of overtime penalties for work in excess of 8 hours in a day, or where part-time employees agree to work additional hours, when one properly considers both:

(a) the obvious adverse implications for employers; and

(b) the very likely adverse implications for employees (as detailed below).

---

[73] *Road Transport (Long Distance Operations) Award 2010*, clause 20.2(b)(ii).

8.23 The very likely implication of this claim for most Award-covered businesses in the SCHCDS industry would be that employers would take all available steps to ensure that part-time and casual employees never work more than 8 hours in a day. For those employees who are currently receiving shifts of more than 8 hours' duration, the employer will look at alternative options regarding the arrangement of work in order to avoid triggering overtime payments. This is borne out in the evidence of service providers filed in these proceedings.

8.24 Equally, employers would have no choice but to dramatically adjust their business models to avoid part-time employees triggering overtime payments for agreed additional hours.

8.25 In our submission, to the extent that the Commission considers that a variation is necessary in this regard, there are more effective ways to remedy the issues raised by the union which will not create chaos for a large part of the industry. This is addressed below.

Addressing the HSU's concerns around part-time employee hours

8.26 To the extent that the Commission forms the view that the Award contains any 'structural incentive' to set part-time employees' hours of work at artificially low levels, one approach to addressing that issue might be to introduce a mechanism for reviewing employees' hours upon request and adjusting their guaranteed hours to a more realistic reflection of their actual working patterns, subject to an ability for employers to refuse on reasonable business grounds.

8.27 This approach has been adopted in the context of enterprise bargaining in this sector. For example, we are aware of a number of enterprise agreements in the aged care and home care sector that contain a clause in the following form (or similar):[74]

Review of part time hours

(a) At the request of an employee, the hours worked by the employee will be reviewed annually. Where the employee is regularly working more than their guaranteed minimum number of hours then such hours shall be adjusted by the employer, and recorded in writing to reflect the hours regularly worked.

(i) The hours worked in the following circumstances will not be incorporated in the adjustment:

[74] For example; The Presbyterian Aged Care, NSWNMA and HSU NSW Enterprise Agreement 2017-2020; BaptistCare NSW & ACT Aged Care Enterprise Agreement 2017; McLean Care Ltd (NSW), NSWNMA and HSU NSW Enterprise Agreement 2017-2020; The Lutheran Aged Care Albury NSWNMA and HSU NSW Enterprise Agreement 2017-2020 and Diocese of Lismore Care Services, NSWNMA and HSU NSW Enterprise Agreement 2017-2020.

A. If the increase in hours is as a direct result of an employee being absent on leave, such as for example, annual leave, long service leave, parental leave, workers compensation; and

B. if the increase in hours is due to a temporary increase in hours, for example, due to the specific needs of a resident or client.

(ii) In addition to those matters covered in sub-clause x.x(a)(i) changes to hours for Home Care employees may be affected by:

A. continuity of funding;

B. client numbers; and

C. client preferences for services including their ability to choose particular care workers.

(iii) The employer will not unreasonably refuse to change the hours of a Home Care employee based on the circumstances in subclause x.x(a)(ii) unless there is an imminent change to any of those circumstances.

8.28 The above mechanism provides an opportunity for employees who regularly work in excess of their contracted hours to request that their hours be reviewed and increased on an annual basis, and employers cannot unreasonably refuse.

8.29 In our submission, such an approach would remedy the concerns raised by the HSU.

9. CLAIMS RELATING TO THE TELEPHONE ALLOWANCE (S21)

9.1 Two separate claims have been advanced by the unions in respect of clause 20.6 of the Award.

The HSU claim (S21)

9.2 The HSU seek a variation to the telephone allowance at clause 20.6 of the Award. The stated purpose of the variation is to effectively modernise the provision which is currently expressed to apply only to situations where an employee is required to install and/or maintain a landline telephone for the purpose of being on call.

9.3 The HSU propose to extend both the operation of the provision and the quantum of the entitlement.

9.4 In respect of the operation of the provision, the HSU propose that the entitlement apply:

(a) where an employee is required to use a mobile phone rather than a landline telephone; and

(b) where the employee is required to use the phone for "any work related purpose" rather than only where employees are required to be "on-call".

9.5 Further, the HSU seek to alter the substance of the entitlement. The HSU propose that where the clause is triggered, employees be entitled to either:

(a) the provision of a mobile phone that is fit for purpose *and* reimbursement of the cost of "any subsequent charges"; or

(b) be refunded for the "cost of purchase" and "subsequent usage charges" on production of receipts.

9.6 The grounds advanced by the HSU in support of the variation include:

(a) that the current telephone allowance clause is "outdated" because it refers to a landline telephone and does not deal with mobile phones;[75]

(b) that the vast bulk of employees now have mobile phones which are available to them during the course of their work;[76]

(c) that employers "frequently require or expect" care workers to be contactable by mobile phone when performing their duties;[77]

[75] HSU Submission at [59]
[76] Ibid

(d) that employees who are required to use their phones for work purposes should receive a telephone allowance "that reflects the cost of maintaining and using such mobile phone";[78] and

(e) that employees required to use a smart phone should be reimbursed for the cost of purchasing one "if such purchase is necessary".[79]

The United Voice claim (S21)

9.7 The United Voice advances a similar claim to the HSU claim.

9.8 The variation sought by the United Voice is expressed in different terms:

> *Where the employer requires an employee to install and/or maintain a telephone or mobile phone for the purpose of being on call, for the performance of work duties or to access work related information, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.*

9.9 As can be seen from the above drafting, the United Voice claim differs from the HSU claim in the following respects:

(a) the allowance is payable on three specific occasions, being when an employee needs a phone for:

(i) the purpose of being on call;

(ii) the performance of work duties; or

(iii) the purpose of accessing work related information.

(b) the employer is required to refund the installation costs, but not to 'provide a mobile phone'.

9.10 The grounds advanced by the United Voice in support of their claim are summarised as follows:

(a) the Award contains no clear allowance or mechanism for an employee who is required to purchase and maintain a mobile phone for work purposes to receive any reimbursement of costs associated with the work related use of the phone;[80]

---

[77] HSU Submission [60]
[78] HSU Submission [60]
[79] HSU Submission [60]
[80] United Voice Submission at [82]

(b) the Award contains classifications where work takes place outside a conventional workplace office and an assertion that employees therefore perform a significant amount of work away from the workplace;[81]

(c) a general assertion that a mobile phone has the "status" of a tool of trade and that where a mobile phone has become a tool of the trade and an employee is directed to use one for work, the employee should be reimbursed;[82]

(d) a reference to an apparently "established principle" of the modern awards system "generally" providing some form of compensation where an employer directs an employee to use a particular "tool of trade";[83]and

(e) that the telephone allowance in the Award is anachronistic, does not reflect the current ubiquity of mobile 'smart' phone use and their status as work tools.[84]

Failure to adduce relevant evidence in support of the claim

9.11 While there is evidence of widespread mobile phone and smart phone ownership throughout Australia and evidence from some employees within the industry, the Unions have failed to adduce any evidence of:

(a) the proportion of employees in the industry who are required to use mobile phones in the course of their employment; and

(b) the proportion of work-related versus non-work-related usage by employees of mobile phones.

9.12 Nor is there any evidence before the Commission of:

(a) any Award-covered employer requiring prospective employees, as a condition of employment, to own a mobile phone; or

(b) any Award-covered employer directing or otherwise requiring existing employees to purchase a mobile phone.

9.13 Indeed, the evidence on smart phone and mobile phone ownership in Australia recently relied upon in the review of the *Aged Care Award 2010* suggested that such scenarios would be very rare – for example:

(a) approximately 83 per cent, or 15.97 million Australian adults, already have a smart

[81] United Voice Submission at [83]
[82] United Voice Submission at [90]
[83] Ibid
[84] Ibid at [101]

(b) phone; and

(c) approximately 96 per cent, or 18.57 million Australian adults, own a mobile phone.[85]

9.14 When one takes into consideration the fact that elderly adults are less likely to have a mobile phone, the data suggests that it would be highly unusual for someone of working age to not own a smart phone, let alone a mobile phone.

9.15 In line with the above, the evidence from United Voice is that the employees already have their own mobile phone, and that upon commencement of employment, the employee is asked for their mobile number so that the employer can communicate with the employee with regard to rosters.[86]

9.16 Evidence from the HSU suggests that some employers provide mobile phones[87], and others have employees use their own mobile phone which they already own.[88]

Response to Unions' claims

9.17 There are a range of issues with the drafting of the proposed claims.

9.18 Firstly, the submissions appear to be advanced in respect of "care workers".[89] However, the application of both clauses is not confined in such a manner. Rather, it is expressed to apply to all employees covered by the Award. This would extend to managerial staff and other very senior employees who do not work as carers or support workers.

9.19 Secondly, the HSU clause requires an employer to either "provide" a mobile phone, or refund the "cost of purchase" of a mobile phone, where one is required to be used for specified purposes. However, there is no exemption in circumstances where an employee already owns a mobile phone. There is nothing to prevent an employee who already owns a mobile phone from purchasing a new one, simply in order to obtain the reimbursement for it.

9.20 Thirdly, there is nothing to prevent an employee from seeking reimbursement of the purchase costs of a mobile phone that was purchased years before the employer required the employee to use it for work purposes, provided the employee can produce "receipted

[85] Australian Communications and Media Authority, Communications Report 2017-2018, p. 33. (30 November 2018)

[87] Statement of Thelma Thames at [22], Statement of Heather Waddell at [31], Statement of Pamela Wilcock at [19]
[88] Statement of Bernie Lobert at [18]
[89] See HSU submission at [60] and United Voice Submission at [83]

accounts". This would result in the employer bearing the costs of a depreciated asset and subsidising the employee's personal use of the device.

9.21 Fourth, in relation to both Union claims, there is no limitation on the costs which are required to be borne by the employer.

9.22 There is no reference to refunding the "reasonable" purchase costs or "reasonable" subsequent charges. There is also no mechanism in the clause for the employer to have any control or oversight at all over the type of device or service arrangement that employees might purchase or enter into. It appears that the employee would be free to decide what device to purchase and what service arrangement they wish to obtain.

9.23 The evidence tendered during the hearing in relation to the review of the *Aged Care Award 2010* demonstrated that the costs of mobile phones (both up-front costs and ongoing usage costs) vary wildly depending on:

(a) The type of device purchased;

(b) The type of usage 'plan' or fee arrangement that is in place;

(c) The amount of 'data' provided for use under the plan; and

(d) The extent of usage by the employee (in relation to calls, texts and 'data').

9.24 Fifth, both clauses fail to link the monetary entitlement to the type of device that an employer requires an employee to use. For example, an employer may only require an employee to have a basic mobile device that allows them to make and receive phone calls and text messages, yet unless the employer physically provides the device, the employer would be obliged to cover the purchase costs of whatever device the employee chooses to purchase (which may not be the basic device required by the employer). There is nothing to prevent an employee from purchasing a smart phone even though the employer only requires a more basic device.

9.25 Sixth, and most importantly, the clauses do not require an employer to reimburse or refund an employee for only the work-related costs associated with the use of a mobile phone. It requires the employer to cover all costs, both up-front costs and "subsequent charges". This is plainly unreasonable.

9.26 In practice, if the claim was to be successful, an employee could be required by their employer to use their mobile phone once per week to check their work roster, and the employer would automatically be obliged to cover both the purchase costs of the mobile device and the subsequent charges relating to the device. There would be nothing

preventing the employee from taking out the most expensive mobile phone plan, using it virtually exclusively for personal use, and requiring the employer to foot the bill.

9.27 In relation to the United Voice claim specifically, the drafting uses the same wording that was used for the home phone telephone allowance that exists within the Award already. This means that there is reference to 'installation costs' being refunded. A mobile phone does not need to be installed and there would be no costs associated with that. It is therefore not clear if this is intended to entitle employees to be refunded the cost of purchase (as is the case with the HSU claim), or if the reference to installation is irrelevant in respect of mobile phones.

Implications of the Unions' claim

9.28 The Unions' claim would undoubtedly have a considerable adverse impact on employment costs for employers.[90] More importantly, it would impose an unreasonable cost on employers, given the issues identified above.

9.29 There has been no attempt by the Unions to limit the cost imposition on employers to only those expenses which are directly attributable to the work-related use. This does nothing to achieve a "fair and relevant" minimum safety net.

9.30 Of significant concern is the fact that the cost to be borne by employers under the proposal will be disproportionate to any benefits that an employer would derive, given that they will be subsidising an employee's (potentially significant) personal use. It is not difficult to imagine situations where an employee inadvertently incurs a huge mobile phone bill because they or a family member streams movies through a mobile device while travelling on a family holiday. On the drafting proposed by the Unions, the employer will be required to reimburse the employee for these costs.

9.31 It is difficult to understand how an employer can reasonably be expected to reimburse an employee for the up-front and ongoing costs of their mobile phone in circumstances where the employee already owned a mobile phone prior to commencing work with the employer, and primarily uses it for personal use.

9.32 The Unions' claim also fails to recognise that where an employee incurs a work-related expense, the applicable income tax legislation entitles the employee to claim a tax deduction, which has the effect of reducing the individual's taxable income (and thereby

[90] *Fair Work Act 2009* (Cth), s. 134(1)(f)

reduces the amount of income tax required to be paid). This is a fundamental and well-established feature of the income tax system in Australia.

9.33 One of the rationales for the current system of tax deductibility of work-related expenses is that it generates consumption benefits and stimulates the economy. Another important rationale is that certain cost items tend to have mixed uses or mixed functions (i.e. certain costs are partly work-related and partly non-work related). For example, employees incur a range of expenses which are partly work-related and partly for personal use. Common expenses include motor vehicle expenses, telephone expenses, home internet, laundry expenses, home office expenses, etc.

9.34 The vast majority of costs borne by employees through the purchase, use and maintenance of their mobile phone will almost certainly be related to their personal use of the device (rather than work-related use). We would expect that for most employees, their work-related usage would be only a small proportion of their overall usage, and as such the work-related costs would be a small proportion of the overall costs.

9.35 In light of the anticipated breakdown of the source of cost, in our submission the current tax deductibility system is the appropriate mechanism for this usage to be dealt with.

Conclusion

9.36 Our clients are opposed to the Unions' claims for the reasons outlined above. A merit basis for the claim has not been made out. No mischief or problem has been properly identified which would warrant the intervention of the Commission. The claim will pass an unreasonable cost onto employers, which is in no way equivalent to the usage of mobile phones for work-purposes. The claim would effectively require employers to subsidy employees' personal usage of a personal device, for which employers have no way of controlling or maintaining. This is plainly unreasonable, and is inconsistent with the notion of creating a fair and relevant minimum safety net of terms and conditions. The proposed Award term will result in the Award not meeting the modern awards objective. The proposed term offends section 138 of the FW Act.

9.37 The Unions' claims should be dismissed.

10. CLAIMS RELATING TO CLOTHING AND UNIFORMS (S20, S2A, S20A)

The HSU claim (S20A)

10.1 The HSU seek the introduction of a new clause in the Award (to be numbered clause 20.3) to provide for a "damaged clothing allowance".

10.2 Under the proposed clause, employers would be required to compensate employees, to the amount of the "reasonable replacement value", for any damage to, or soiling of, any clothing or other personal effects (excluding hosiery) which are damaged in the course of the employee's employment.

10.3 The grounds relied upon by the HSU in support of this variation consist of the following:

(a) an assertion that many employees, particularly support workers in home care and disability services, wear their own clothes to work and are not provided with a uniform;[91]

(b) a submission that employees' clothes are at risk of being soiled or damaged in the course of their duties;[92] and

(c) an assertion that employees' clothes "will frequently become damaged, soiled or worn" given the nature of the work they do.[93]

Response to the HSU claim

10.4 The Award already contains an allowance at clause 20.2 for uniforms and their laundering. That provision is expressed as follows:

(a) Employees required by the employer to wear uniforms will be supplied with an adequate number of uniforms appropriate to the occupation free of cost to employees. Such items are to remain the property of the employer and be laundered and maintained by the employer free of cost to the employee.

(b) Instead of the provision of such uniforms, the employer may, by agreement with the employee, pay such employee a uniform allowance at the rate of $1.23 per shift or part thereof on duty or $6.24 per week, whichever is the lesser amount. Where such employee's uniforms are not laundered by or at the expense of the employer, the employee will be paid a laundry allowance of $0.32 per shift or part thereof on duty or $1.49 per week, whichever is the lesser amount.

[91] HSU submission at [61]
[92] Ibid
[93] Ibid at [62]

10.5 If an employer does not provide the employee with a uniform (as is the case with the two witnesses that provide evidence in support of the HSU claim), the employee is entitled to receive a uniform allowance. This uniform allowance can be used to purchase clothes to wear to work, and, if those clothes become damaged in the course of their employment, to replace them. The alternative is that the employer provides a uniform, and if it is damaged, the employer replaces the uniform.

10.6 The primary concern with this variation is that the Award already provides an allowance for employees who are not issued with a uniform.

10.7 There are also both drafting and practical issues with the clause., given the lack of precision around how the replacement value of clothing is to be calculated and the phrase "suffers any damage".

10.8 For example, it is not clear how an employer should determine what the "reasonable replacement value" is, and whether the employer would be required to replace a second-hand piece of clothing with a new piece of clothing.

The United Voice claim (S2A, S20)

10.9 United Voice seek the introduction of a new clause 20.2(b) in the Award to insert additional wording in relation to the requirement that an "adequate number of uniforms" be provided to an employee.

10.10 Under the proposed clause, employers would be required to provide employees with enough uniforms to allow employees to go the full week without needing to launder their work uniforms more than once per week.

10.11 Our clients do not accept the contention advanced by United Voice that "the decision as to what constitutes an 'adequate' amount of uniforms is often made solely by the employer".[94] The Award terms are clear, and the obligation requires an objective assessment as to the adequacy of the number of uniforms to be provided, having regard to the particular circumstances.

10.12 If there is any dispute about the number of uniforms provided by a particular employer, the matter can be resolved through the application of the dispute resolution procedure provided for in the Award including, if necessary, the involvement of the Commission.

10.13 We do not consider that a sufficient case has been made out for this variation.

[94] United Voice submission at [50]

11. CLAIM RELATING TO RECALL TO WORK (S22)

The HSU claim

11.1 The HSU seek a variation to clause 28.4 to introduce a regime for compensation where employees are required to perform work remotely outside of working hours, without having to physically be recalled to work.

11.2 Under the HSU proposal, the employee would be entitled to a minimum of one hour's pay at overtime rates "for each time recalled".

11.3 The HSU have not advanced any submission as to why the minimum payment of one hour's pay should be adopted, other than to point out that the "work should be compensated appropriately".[95]

11.4 There is no specific submission which addresses why a minimum payment of one hour is appropriate, or why such a payment provides employees with 'fair and relevant' compensation for the disutility associated with working at the particular time(s) to which the penalty attaches.[96]

11.5 Our clients are opposed to the HSU claim.

Our clients' competing proposal

11.6 Our clients have a competing claim in respect to this issue.

11.7 Our clients' claim involves a proposed new clause 20.10, as well as consequential amendments to clauses 20.9 and 28.4. Under the proposed new clause 20.10, employees would be entitled to payment for performing remote response duties, with the quantum of such payment and the relevant minimum payment dependent on when the remote response duties are performed.

11.8 Specifically, it is proposed that employees be paid:

(a) at the applicable rate of pay for work performed between 6.00am and 10.00pm, with a minimum payment of 15 minutes; and

(b) at the applicable rate of pay for work performed between 10.00pm and 6.00am, with a minimum payment of one hour.

[95] HSU Submission of 15 February 2019, at [71].
[96] See Penalty Rates Decision at [202].

11.9 While there is a large degree of overlap between the competing proposals, the key difference between the proposals relates to the scheme of remuneration to be applied when employees perform remote response work.

11.10 We refer to our submissions dated 2 July 2019 as to the reasons why our clients' proposal is to be favoured and should be adopted.

12. CLAIM RELATING TO CLIENT CANCELLATION PROVISION (S29)

The HSU claim

12.1 The HSU seek a variation to the client cancellation provision at clause 25.5(f) to increase the amount of notice required to be given by employers to employees in the home care stream of a cancellation of, or change to, a rostered home care service in order to avoid the obligation to pay the employee for the cancelled shift.

12.2 Under the HSU proposal, where an employer fails to provide the employee with 48 hours' notice of a cancelled shift, the employer would be required to pay the employee for their minimum specified hours on that day.

Our clients' position on the HSU claim

12.3 Our clients are opposed to the HSU's claim. The reality is that most cancellations or changes to rostered home care services by customers are made in the 24 hours prior to the commencement of the scheduled service. The evidence before the Commission will overwhelmingly support this.

12.4 That being the case, the HSU variation would effectively nullify the utility of this clause for employers, which is more important than ever in the context of the consumer-directed-care reforms that have recently been implemented.

Our clients' competing proposal

12.5 Our clients recognise that the current client cancellation clause requires review and amendment to ensure:

(a) it provides a fair and balanced framework for dealing with client cancellation events;

(b) its scope is extended to disability services work; and

(c) it operates harmoniously with other Award provisions concerning roster changes.[97]

12.6 Our clients are pursuing a separate variation to this clause, which is set out in a Draft Determination filed on 2 April 2019, and supported by submissions filed on 2 July 2019.

12.7 It is critical that the current client cancellation clause be extended to the disability services sector, and that it operates harmoniously with the NDIS rules and pricing arrangements dealing with client cancellations. We refer to paragraphs 5.1 to 5.20 of our submissions filed on 2 July 2019.

[97] The clause as currently drafted is arguably inconsistent with clause 10.3(c) in respect of part-time employees.

13. CLAIM RELATING TO THE SLEEPOVER CLAUSE (S38)

The HSU claim

13.1 The HSU seek to vary clause 25.7(c) of the Award which relates to sleepovers. In essence, the HSU propose to vary the items required to be provided to employees when performing a sleepover.

13.2 The current Award clause provides:

(c) The span for a sleepover will be a continuous period of eight hours. Employees will be provided with a separate room with a bed, use of appropriate facilities (including staff facilities where these exist) and free board and lodging for each night when the employee sleeps over.

13.3 Under the variation proposed by the HSU, employers would be required to provide the following:

(a) "a separate and securely lockable room with a peephole or similar in the door, a bed and a telephone connection in the room";

(b) "suitable sleeping requirements such as a lamp and clean linen";

(c) use of appropriate facilities (including staff facilities where these exist); and

(d) free board and lodging for each night when the employee sleeps over.

13.4 Items (a) and (b) above represent variations to the current Award provision.

13.5 In support of this claim, the HSU have filed written submissions totalling two paragraphs, one of which does not deal with the specific variation that has been sought.[98] The submissions advanced in support of the variation are limited to:

(a) a submission that the Award should be varied "to ensure appropriate facilities are provided" to employees when undertaking a sleepover; and

(b) an opinion that sleepover shifts are "compensated modestly".[99]

Response to the HSU claim

13.6 As to the first ground relied on in support of the variation, the HSU have failed to articulate why it is that they consider the current clause to be deficient. Put simply, the basis for the variation is unclear. The application is not accompanied by sufficient evidence going

[98] HSU submission at [74]
[99] Ibid at [73]

towards demonstrating that there is any problem with the current clause, or that the variation proposed will rectify any such problems.

13.7 As to the second ground, the HSU's opinion as to the adequacy of the sleepover allowance does not appear to have any relevance to the variation sought. The variation proposed does not have any relevance to payment.

13.8 Turning to the specific terms of the variation sought, the proposed variation relates to the specific items that are required to be provided by an employer during a sleepover. The current Award clause refers to providing employees with "use of appropriate facilities". We consider that formulation to be sensible, as it is sufficiently flexible to apply to a broad range of circumstances. Ultimately, what is "appropriate" will vary depending on the circumstances of a particular situation, having regard to a range of factors.

13.9 Given that the Award is an industry-wide minimum safety net instrument covering employers operating in a diverse range of sectors and catering to a broad customer base, we do not consider that it is appropriate to prescribe in any greater detail the specific items that must be provided to every Award-covered employee across Australia performing sleepover shifts.

13.10 For example, it cannot be said that it is necessary or appropriate to require employers in all circumstances to ensure employees are provided with a room that is "securely lockable", and that the door has a "peephole or similar". Nor can it be said that it is necessary or appropriate to require employers in all circumstances to ensure every room used by employees for sleepovers has "a telephone connection in the room". While these types of facilities may well be "appropriate" in some circumstances, it is not the case that such requirements are necessary or appropriate in all situations.

13.11 There is insufficient evidence before the Commission of instances where employers have not provided suitable facilities for employees performing sleepover shifts, and so insufficient evidence of the current clause not operating unsatisfactorily.

13.12 It cannot be said that the variation is self-evident. Therefore, in the absence of any probative evidence substantiating the issues that the HSU seek to address, the claim should be dismissed.

14. CLAIM RELATING TO ROSTERS (S3)

The United Voice claim

14.1 The United Voice seek a variation to clause 25.5(d)(i) to provide that full-time and part-time employees will be entitled to the payment of overtime for roster changes where seven days' notice is not provided.

Our response

14.2 Roster changes are a significant issue in many parts of the SCHCDS industry, and the rostering arrangements in the Award require consideration.

14.3 This proposed variation is reflective of the issues currently facing the SCHCDS industry. United Voice note at [71] of their submissions that:

> This needs to be considered in the context of a sector in which there are constant and unpredictable shift changes. Our witnesses all indicate that there are frequent changes to their rosters and a significant variability in hours from week to week.

14.4 The challenges facing employers in this industry with respect of rostering appear to be well accepted from both employer and union parties. The reality is that employers do not change rosters for fun. Where employers seek to change an employee's roster, it is for a legitimate operational reason and generally in order to meet the needs of the vulnerable customers which the organisation is providing care services to.

14.5 Employer parties have been vocal about the challenges around rostering since the commencement of the four yearly review. This has particularly been an issue in the disability services sector as a result of the introduction of the NDIS. Two of our clients, ABI and NSWBC, sought a variation to clause 10.3(c) of the Award as part of the Casual and Part-Time Employment common issues matter in order to specifically address this challenge. The variation sought in that proceeding was to remove some of the restrictions on the rostering of part-time employees to meet the needs of industry, and to ensure that the part-time employment category continue to be fit-for-purpose so as to prevent the casualisation of the workforce.

14.6 The union parties opposed the variation sought by ABI and NSWBC in that matter, and advanced evidence from witnesses who were support workers who almost exclusively worked in group homes in a bid to demonstrate that the hours of part-time employees were reasonably predictable and not subject to change.

14.7 In the current proceeding, we now have union parties advancing evidence from part-time employees working outside of a group home setting, for whom employers struggle to provide reasonably predictable hours of work.

14.8 Ultimately, if the Award is varied to make it even more difficult for employers to utilise part-time employees in the current dynamic operating environment (for example, by imposing overtime payment obligations where a part-time employee's roster is changed), employers will transition towards a workforce composition with a greater proportion of casual employees.

14.9 Contrary to the assertion of the United Voice, the Award currently does not provide "a significant level of flexibility in rostering".

14.10 Although the 'change in roster' provision at clause 25.5(d)(i) purports, at first glance, to provide the employer with the ability to change the roster of an employee on 7 days' notice, the reality is that this right is limited in two ways:

(a) Firstly, the employer must consult with the employee (and his/her representative, if any) regarding the proposed roster change in accordance with clause 8A, which involves:

(i) providing information about the proposed change;

(ii) inviting the employee (and their representative) to give their views about the impact of the proposed change on them; and

(iii) considering the views expressed by the employee and their representative (if any),

prior to implementing the roster change under clause 25.5(d)(i); and

(b) Secondly, where the employer wishes to change the roster of a part-time employee, clause 10.3(c) operates so as to prevent the employer from utilising the right conferred on it under clause 25.5(d)(i) unless the employee agrees in writing to the change.

14.11 The first limitation outlined in paragraph 14.10(a) above is not cavilled with.

14.12 However, the second limitation materially diminishes the right under clause 25.5(d) to change a part-time employee's roster.

14.13 In our clients' submission, the rostering provisions in the Award (particularly for part-time employees) require consideration to ensure they provide an appropriate balance between

the interests of employees in having have sufficient certainty around working patterns, and the interests of employers in being able to continue to utilise part-time employment as a viable form of employment under the current operating environment.

Fair Work Commission: 4 yearly Review of modern awards

SUBMISSION IN REPLY

4 YEARLY REVIEW OF MODERN AWARDS: (AM2018/26) SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010 - SUBSTANTIVE ISSUES

FILED ON BEHALF OF:

- **AUSTRALIAN BUSINESS INDUSTRIAL**
- **THE NSW BUSINESS CHAMBER LTD**
- **AGED & COMMUNITY SERVICES AUSTRALIA**
- **LEADING AGE SERVICES AUSTRALIA**

13 SEPTEMBER 2019

PART A: BACKGROUND

1. INTRODUCTION

1.1 This submission in reply is made on behalf of:

(a) Australian Business Industrial (**ABI**);

(b) the New South Wales Business Chamber Ltd (**NSWBC**);

(c) Aged & Community Services Australia (**ACSA**); and

(d) Leading Age Services Australia Limited (**LASA**),

collectively, '**our clients**'.

1.2 ABI is a registered organisation under the *Fair Work (Registered Organisations) Act 2009* and has in excess of 4,000 members. ABI represents the interests of businesses in a variety of industries including the social, community, home care and disability services industry. Its primary role is to develop workplace policy and to shape debate on major workplace relations issues.

1.3 NSWBC is a recognised State registered association pursuant to Schedule 2 of the *Fair Work (Registered Organisation) Act 2009* and has some 18,000 members. NSWBC is the State's peak business organisation and represents all businesses from small enterprises to large corporations across a variety of industries including the social, community, home care and disability services industry.

1.4 ACSA is the leading peak body supporting church, charitable, other not-for-profit and government providers of residential care services, community care services and retirement living for older people in Australia.

1.5 LASA is the national peak body representing and supporting providers of age services across residential care, home care and retirement living. LASA's membership base is made up of private, not-for-profit, faith-based and government operated organisations providing care, support and services to older Australians.

1.6 Collectively, our clients represent a significant proportion of employers in the industries covered by the *Social, Community, Home Care and Disability Services Industry Award 2010* (the **Award**).

2. SCOPE OF THIS REPLY SUBMISSION

2.1 This reply submission is filed in accordance with the Amended Directions of the Fair Work Commission (**Commission**) issued on 2 September 2019. This reply submission addresses each of the union claims relating to travel time, which consists of:

(a) a claim by the HSU to vary clause 25.6 of the Award (the **HSU Travel Time Claim**);

(b) a claim by the United Voice to introduce a new clause 25.7 into the Award (the **UV Travel Time Claim**); and

(c) a claim by the HSU to vary clause 20.5(a) of the Award (the **HSU Travel Allowance Claim**);

collectively referred to as the **Travel Claims**.

2.2 The HSU claims are recorded in an amended Draft Determination filed on 15 February 2019.

2.3 The United Voice claim is recorded in a Draft Determination filed on 1 April 2019.

3. LEGISLATIVE FRAMEWORK OF THE FOUR YEARLY REVIEW

3.1 The legislative framework applicable to the 4 Yearly Review has been considered in detail in *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 (**Preliminary Issues Decision**), and *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 (**Penalty Rates Decision**).

3.2 More recently, the legislative framework applicable to the 4 Yearly Review was considered in *4 yearly review of modern awards – plain language re-drafting – standard clauses* [2018] FWCFB 4177 issued on 18 July 2018[1] and summarised in *4 yearly review of modern awards – Alpine Resorts Award* [2018] FWCFB 4984.

3.3 We rely on the summary of the applicable legal principles as set out in the reply submissions filed by our clients in this matter on 5 April 2019.[2]

3.4 We also refer to, and agree with, the summary contained in the document titled 'Legislative framework relevant to the Review' published by the Commission in this matter on 12 April 2019.[3]

[1] [2018] FWCFB 4177 at [3]-[13].
[2] See [2.1]-[2.4].
[3] Published pursuant to a Statement issued on 12 April 2019 ([2019] FWCFB 2514).

PART B: UNION CLAIMS

4. HSU TRAVEL TIME CLAIM

4.1 The HSU seek a variation to clause 25.6 of the Award, which deals with broken shifts.

4.2 Specifically, the HSU seek a new sub-clause 25.6(d), to provide that:

> *(d) Where an employee works a broken shift, they shall be paid at the appropriate rate for the reasonable time of travel from the location of their last client before the break to their first client after the break, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.*

4.3 This is one aspect of a broader proposal by the HSU to substantially vary the broken shifts clause. Our clients responded to the non-travel related aspects of the HSU claim to vary clause 25.6 in our Reply Submission filed on 12 July 2019.

4.4 We confine these submissions to the proposed new clause 25.6(d).

4.5 The current clause 25.6 does not contain any provision similar to that sought by the HSU.

4.6 Currently, clause 25.6 permits home care stream employees as well as employees in the social and community services stream who are undertaking disability services work to work 'broken shifts'.

4.7 A 'broken shift' is defined at clause 25.6(a) as 'a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours'.

4.8 Accordingly, clause 25.6 permits specified classes of employees to work hours on a non-consecutive basis, in the sense that they can work shifts which are split into two or more portions of work, with intervening periods of unpaid non-work time.

4.9 Employees who work broken shifts are entitled to shift allowances in accordance with clause 25.6(b).

4.10 Under the current Award, employees are not entitled to any payment in respect of the non-work time which falls between the portions of work time in a broken shift.

4.11 The HSU claim proposes to materially alter that position.

4.12 Under the HSU claim, employees will be entitled to "be paid at the appropriate rate" for the "reasonable time of travel" from the location of their last client before the break to their first

client after the break", and appears to deem the time as "time worked" ("such time shall be treated as time worked").

4.13 In support of this variation, the HSU submit that:

(a) firstly, the broken shifts provision is "manifestly open to exploitation" in the absence of appropriate minimum engagement provisions;[4] and

(b) secondly, the capacity for multiple breaks during a broken shift can result in:

(i) employees having to undertake work on a non-consecutive basis over an extended period of time in order to generate a reasonable amount of earnings;[5]

(ii) employees being paid only for a proportion of the time that is expended in performing the work required by the employer; and

(iii) employees enduring stretches of "dead" time waiting time during the course of the day.

4.14 We note that the first ground outlined above is sought to be addressed by a proposed variation to the minimum engagement periods in the Award.

4.15 As to the second category of grounds advanced in support of the claim, we note that there are multiple claims being advanced by union parties that are designed to rectify these alleged issues. For example, the ASU claim for a 15% loading to be applied to broken shifts appears designed to address the issues outlined above, which are relied on by the HSU in support of its proposed variation.

5. THE UNITED VOICE TRAVEL TIME CLAIM

5.1 United Voice seeks the introduction of a new clause 25.7 into the Award. The proposed new clause is in the following terms:

25.7 Travel time

(a) Where an employee is required to work at different locations they shall be paid at the appropriate rate for reasonable time of travel from the location of the preceding client to the location of the next client, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.

[4] HSU submission at [36]
[5] Ibid at [37]

(b) This clause does not apply to travel from the employee's home to the location of the first client nor does it apply to travel from the location of the last client to the employee's home.

5.2 There is considerable similarity between the UV Travel Time Claim and the HSU Travel Time Claim. However, the two claims also vary in two respects. These are:

(a) First, the HSU claim only applies in relation to broken shifts, whereas the UV claim applies to all forms of shifts and working arrangements; and

(b) Second, the HSU claim only applies to employees in the home care and disability services streams, whereas the UV claim applies to all streams of work and categories of employees covered by the Award.

5.3 The grounds relied upon by United Voice in support of the UV Travel Time Claim are summarised as follows:

(a) the time spent travelling between the homes of clients is "essential" to perform the duties of the job;[6]

(b) the current terms and conditions of the Award lend themselves to inappropriate and unsustainable work patterns;[7]

(c) there is little or no incentive for employers in what is an increasingly competitive and diverse sector to structure work efficiently;[8] and

(d) the cost of poor rostering decisions and taking on work which is geographically remote or at different times of the day are able to be shifted onto employees.[9]

6. HSU TRAVEL ALLOWANCE CLAIM

6.1 Separately, the HSU seek an additional variation relating to travel.

6.2 The HSU also seek to amend the existing clause 20.5(a), which provides a travel allowance/ reimbursement of $0.78 per kilometre for employees required and authorised by their employer to use their motor vehicle in the course of their duties.

[6] Supplementary submission of United Voice at [4]
[7] Ibid at [9]
[8] Ibid
[9] Ibid

6.3 The HSU propose a new clause 20.5(a) as follows:

(a) Where an employee is required and authorised by their employer to use their motor vehicle in the course of their duties, the employee is entitled to be reimbursed at the rate of $0.78 per kilometre.

Disability support workers and home care workers shall be entitled to be so reimbursed in respect of all travel:

(i) from their place of residence to the location of any client appointment;

(ii) to their place of residence from the location of any client appointment;

(iii) between the locations of any client appointments on the basis of the most direct available route.

6.4 While the HSU claim does not seek to disturb the existing travel allowance / reimbursement of $0.78 per kilometre, it seeks to extend the application of that entitlement so that it applies where certain specified classes of employee travel from their place of residence to their first working location prior to the commencement of work, and from their last working location to their place of residence after the cessation of work.

6.5 For clarity, our clients consider that the activities described in:

(a) items (i) and (ii) of the HSU proposed drafting represent an extension to the existing Award position; and

(b) item (iii) of the HSU proposed drafting does not depart from the existing Award position, in that the activity described in item (iii) is already captured by the existing clause 20.5(a).

6.6 The grounds relied upon by the HSU in support of the Travel Allowance Claim are summarised as follows:

(a) firstly, that disability support workers and home care workers are as a matter of course required to travel considerable distances during the course of their working days in order for them to perform their work for their employers;[10] and

(b) secondly, the travel to the first client and from the final client of the day:

(i) is a fundamental part of the duties performed by those workers;

(ii) is necessary in order to perform the principal caring duties; and

[10] HSU Submission at [41]

(iii) well exceeds the usual travel engaged in by employees to and from their workplaces.[11]

[11] Ibid.

PART C: OUR CLIENTS' POSITION IN RELATION TO THE UNIONS' TRAVEL CLAIMS

7. SUMMARY OF POSITION

7.1 Our clients do not have any objection to the notion that employees should receive reasonable compensation for time spent travelling in the course of their duties.

7.2 However, our clients do not consider that employees should be compensated for the time or cost in travelling to and from their place of residence to attend work or to return home from work at the conclusion of their shift.

7.3 The Award already provides compensation to employees when travelling in the course of their work, as the time spent travelling will fall within their working hours and will be paid as such.

7.4 The only circumstance where an employee might not receive remuneration for travelling in the course of their duties is when working a broken shift, and where an employee is expected to travel from one client's residence to another client's residence during the unpaid break (i.e. the gap) between two portions of work in a broken shift.

7.5 There are very clear, longstanding and compelling merit and policy reasons for the Award to permit the working of non-consecutive working hours or 'broken shifts', given the nature of the work undertaken by support workers and the patterns of service/labour demand.[12] Broken shifts are a fundamental and necessary part of the home care and disability services sectors.

7.6 To the extent that clause 25.6 is capable of being applied in a manner that does not appropriately compensate employees for time spent travelling between clients' residences when working broken shifts, our clients are not opposed to that issue being rectified.

7.7 However, we make the following observations in respect of addressing this issue:

(a) First, the Travel Claims advanced by the union parties do not address the issue in a satisfactory or workable manner;

(b) Second, there are government-imposed limitations on the charges that employers can pass onto consumers in respect of travel costs in the disability services sector, and these limitations should be taken into account; and

(c) Third, the industry must be given a reasonable period of time to prepare for any variation (in the form of a delayed commencement date of any variation).

[12] See paragraphs 7.15-7.16 of our Reply Submission, 12 July 2019.

7.8 Each of the above issues is addressed in more detail in Section 8 below.

7.9 In light of our clients' position as set out in paragraphs 7.6 and 7.7 above, we propose an alternative variation for the Commission's consideration which our clients consider address any issue with the existing broken shifts provision, but which does not suffer from the problems with the Union proposals which we consider are significant and insurmountable, as detailed below.

7.10 Details of the alternative variation proposed by our clients are set out in Section 9 below.

7.11 Our clients are not opposed to the introduction of the alternative formulation, subject to there being an appropriate delay to its implementation to provide the industry with time to prepare for its implementation.

8. ISSUES WITH THE SPECIFIC PROPOSALS

Issues with the HSU Travel Time Claim

8.1 Under the HSU's proposed clause 25.6(b), a 'broken shift' is defined to be a shift that includes 'a break (other than a meal break)'. This formulation is consistent with the general notion of a broken shift; that is, a broken shift is a shift which involves two or more portions of work which are broken by periods of non-work time. See for example the existing definition of 'broken shift' at clause 25.6(a) of the Award.

8.2 However, their proposed clause 25.6(d) then appears to 'deem' certain periods of non-work time (that is, certain time falling during the break between the portions of work) as 'time worked':

> *Where an employee works a broken shift, they shall be paid at the appropriate rate for the reasonable time of travel from the location of their last client before the break to their first client after the break, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.*

8.3 Clause 25.6 appears to have the effect of deeming certain unpaid non-work time (i.e. time falling in the break period between two portions of work) as 'time worked'.

8.4 On the ordinary words of the proposal, it is unclear whether the time spent travelling *is* time worked or whether it is simply *treated* as time worked. This is particularly the case given the wording in the proposed clause 25.6(b).

8.5 If it is the former, the proposed drafting does not appear to achieve that objective. There would also be an apparent inconsistency between the proposed new clause 25.6(d) and the proposed clause 25.6(b).

8.6 Given the drafting, we have assumed that the intention is to *treat* certain unpaid non-work time as 'time worked'. This appears to be reinforced by the HSU submission of 15 February 2019, which states at [39] that:

> *"The relevant restrictions should be ... that the employee is paid, as if working, for the time necessary to travel between clients required to be undertaken during any break in the shift".*

8.7 While it is clear that the HSU seek that the 'reasonable time of travel' occurring during the break of a broken shift be 'paid at the appropriate rate', it is not clear whether that time is intended to be recognised as 'time worked' for all purposes under the Award.

Is the reasonable time of travel 'time worked' for all purposes?

8.8 If the 'reasonable time of travel' undertaken during breaks between portions of work in a broken shift time is intended to be *time worked* for all purposes, this will have significant implications and flow-on impacts in respect of:

(a) ordinary hours of work at clause 25.1(a) of the Award;

(b) the maximum shift lengths at clauses 25.1(a)(i)-(iii) and 25.1(b) of the Award;

(c) meal break entitlements under clause 27.1 of the Award;

(d) tea break entitlements under clause 27.2 of the Award;

(e) overtime entitlements under clause 28.1 of the Award;

(f) the operation of minimum engagement provisions in the Award;

(g) rostering requirements under clause 25.5;

(h) leave entitlements;

(i) superannuation contribution obligations;

(j) the requirement at clause 10.3(c) of the Award to agree in writing on a regular pattern of work; and

(k) the requirement under clause 8A of the Award to consult about changes to hours of work.

8.9 By way of example, if it is proposed that the 'reasonable time of travel' be time worked for the purposes of 'ordinary hours of work', clause 25.5 would require that the time be displayed on the roster.

8.10 It would also require the time be included in the written agreement made with each part-time employee under clause 10.3(c). It is not clear whether the 'actual time' would need to be specified in this agreement, or the 'reasonable time'.

8.11 It would also appear that any changes to the 'reasonable time of travel' would need to be the subject of consultation under clause 8A of the Award.

'Reasonable time of travel'

8.12 The HSU proposal would require that employees be paid for the 'reasonable time of travel'.

8.13 This drafting is unclear and ambiguous.

8.14 It is not clear whether the provision would require employees to be paid for the *actual* time spent travelling, or whether it requires employers and employees to reach agreement on a nominated 'agreed' period of time.

8.15 There is a distinct lack of precision as to what this phrase means or how it is intended to apply in practice.

Identifying which 'time' is the 'time worked'

8.16 Due to the nature of the home care and disability services sectors, there are many occasions where employees work broken shifts that involve providing support to clients for a relatively short portion of time in the morning, and then providing further support to clients for a relatively short periods of time in the evening. For example, the work may involve assisting elderly clients with showering and getting ready for the day in the morning, and then further assistance with the preparation of meals in the evening.

8.17 The effect of this is that quite often, a broken shift will involve a break of some 6 or more hours between the two portions of work.

8.18 The break time often significantly exceeds the time that would be involved in travelling between client's residences.

8.19 Under the HSU proposal, there will be situations where the 'reasonable time of travel' may be 30 minutes, but the period of non-work time between the two portions of work in the broken shift may be 6 hours.

8.20 Under those scenarios, if the 'reasonable time of travel' is 'time worked' for the purposes of the Award, the 'time' will need to be capable of being identified.

8.21 Our clients consider that there are real difficulties with the notion of declaring the 'reasonable time of travel' (whatever that phrase may mean) as 'time worked' in the type of scenario referred to above. For example, based on the above scenario, it is unclear which 30 minute period of the 6 hour break is the 'time worked'. It is also unclear how that is to be determined, and by whom.

8.22 For example:

(a) Does an employee decide when within the 6 hour period they are going to undertake the travel, or does the employer dictate when the travel is to be undertaken?

(b) What happens if the employee engages in misconduct during the 6 hour span? Is the employee 'at work' at the relevant time?

(c) What happens if the employee is injured during the 6 hour span? Is the employee 'at work' at the relevant time?

(d) Is the employer able to direct the employee when to undertake the travel, given it is time worked?

(e) What happens if the employee elects not to comply with an employer's directions about when to undertake the travel?

(f) What happens if the employee chooses to take a less direct route, which results in the travel time taking more than 30 minutes? If the travel takes 60 minutes, what part of the time spent travelling is work, and what part is not work?

8.23 If a period of time is to be declared time worked, it is important that employers and employees are able to clearly identify and distinguish between working time and non-working time. This will be relevant for all of the matters listed at paragraph 8.8 above, and will also be relevant for matters such as work, health and safety obligations.

8.24 Our clients acknowledge that the above issues do not arise to the same extent where the employee is undertaking 'direct' travel between locations in order to perform work, where the gap between the portions of work in the broken shift is equal to the time taken to travel between locations.

8.25 However, where the travel is undertaken during a larger break between engagements, a whole raft of issues arise.

Issues with the UV Travel Time Claim

8.26 The United Voice Travel Time Claim is in similar terms to the HSU claim, and so unsurprisingly suffers from the same problems outlined in paragraphs 8.1 to 8.25 above. The submissions above are equally applicable to the UV Travel Time Claim.

8.27 However, the United Voice claim has the following additional issues.

8.28 First, its application is not limited to broken shifts, and instead applies generally to all forms of shifts and work, and across all streams covered by the Award. This is unnecessary, given that the only circumstance where an employee could be required to travel between clients in the course of their duties and would not be entitled to be paid for that time would be when the travel time falls in the gaps between portions of work in a broken shift.

8.29 The broad and generalised nature of the proposed variation is also unnecessarily broad given that:

(a) the variation is clearly targeted at home care workers and disability support workers who undertake support work at various locations (principally clients' residences);[13]

(b) the evidence and submissions filed in support of the variation relate to employees working broken shifts; and

(c) the United Voice acknowledge in their submissions that the claim is 'interrelated' to their proposal to vary the broken shifts provision.[14]

8.30 Notwithstanding the breadth of application of the proposed clause, the drafting of the proposed variation is also problematic. On the one hand, the clause refers to employees who are required to work at 'different locations'. However, in the following sentence it then refers to the location of 'clients'. That is, the clause presumes that the relevant location is the location of 'a client'.

8.31 While that will be the case for support workers in the home care and disability services streams, it cannot be assumed that other employees covered by the Award are always visiting 'clients' when travelling in the course of their duties.

8.32 For the avoidance of doubt, the UV Travel Time Claim also suffers from issues relating to:

(a) the lack of clarity around whether it deems the 'reasonable time of travel' as 'time worked' for other purposes of the Award;

[13] See Supplementary Submission of United Voice, 1 April 2019, at [4].
[14] Ibid at [8].

(b) the ambiguity surrounding the phrase 'reasonable time of travel'; and

(c) the difficulties with identifying which 'time' is 'time worked' and the raft of issues that creates.

Response to the HSU Travel Allowance Claim

8.33 The HSU Travel Allowance Claim proposes to extend the entitlement to the travel allowance at clause 20.5 of the Award to the travel undertaken by disability support workers and home care workers in attending work from their place of residence, and in returning home from work after the conclusion of their shift.

8.34 Our clients are opposed to this claim.

8.35 The HSU Travel Allowance Claim is inconsistent with the overall system of modern award regulation, and is an outlier in the context of the award system of minimum entitlements. It does not achieve a 'fair and relevant' minimum safety net, and offends section 138 of the FW Act in that the proposal goes well beyond the extent necessary to achieve the modern awards objective.

8.36 The HSU Travel Allowance Claim should be dismissed.

9. ALTERNATIVE FORMULATION TO ADDRESS THE TRAVEL ISSUE

9.1 In light of the issues with the unions' Travel Claims which are articulated above, and for which no party has been able to come up with a satisfactory solution, the unions' Travel Claims must be dismissed.

9.2 However, to the extent that the Commission finds that the existing broken shifts clause does not meet the modern awards objective of providing a fair and relevant minimum safety net of conditions, our clients consider that an appropriate way of dealing with the issue of unpaid travel time in the gaps between portions of work in a broken shift is to introduce payment mechanism into the Award in the form of an allowance. This avoids the complexities which arise if the time was to be 'time worked'.

9.3 We note that a number of pre-reform awards dealt with this issue in this way.

9.4 For example, clause 29(ii) of the *Miscellaneous Workers Home Care Industry (State) Award* (AN120341) provided for a payment at the rate of 3% of the ordinary hourly rate per kilometre travelled where employees were rostered to work with consecutive clients. The clause provided:

(ii) Where employees are rostered to work with consecutive clients they shall be paid for the time taken to travel between locations at the rate of three per cent of the ordinary hourly rate per kilometre travelled, excluding travel from the employee's home to the first place of work and return to home at the cessation of his or her duties; provided that this payment shall not be made if the employee is being otherwise paid under this award.

9.5 Similarly, clause 20.4.2 of the *Community Services (Home Care) (ACT) Award 2002* (AP816351CRA) had a substantially similarly worded provision. It provided:

> *Where employees are rostered to work with consecutive clients they shall be paid for the time taken to travel between locations at the rate of 3% of the ordinary hourly rate per kilometre travelled, excluding travel from the employee's home to the first place of work and return to home at the cessation of his/her duties.*

9.6 An allowance such as those mentioned above would appear to be a sensible way of compensating employees for time spent travelling during periods that are expressed in clause 25.6(a) as not being work time.

9.7 Such an allowance appears to meet the objectives of the Unions in terms of compensating employees for travel time, without any of the complex implications outlined in paragraphs 8.8 to 8.11 above.

9.8 An allowance of this type would also appear to more readily meet the modern awards objective, in the sense that it:

(a) provides additional remuneration for employees working broken shifts;

(b) provides an entitlement that is simpler and easier to understand than the Unions' proposals;

(c) addresses the relative living standards and the needs of the low paid;

(d) provides a floor entitlement from which parties can collectively bargain;

(e) does not prevent the utilisation of broken shifts (see the 'need to promote flexible modern work practices and the efficient and productive performance of work');

(f) does not impose an unreasonable regulatory burden on business (notwithstanding it representing a significant new cost imposition on employers).

9.9 As stated at paragraph 7.11 above, our clients are not opposed to the introduction of a form of allowance, subject to there being an appropriate delay to its implementation to provide

the industry with time to prepare for its implementation. In this respect, we address this issue as follows.

10. FUNDING LIMITATIONS AND IMPLEMENTATION OF ANY CHANGE

10.1 In certain parts of the industry, there are government-imposed limitations on the charges that employers can pass onto consumers in respect of travel costs. For example, the disability services sector is regulated by the NDIS rules and regulations, and prices are effectively capped in that sector.

10.2 Under the NDIS Price Guide providers can only claim travel costs from participants in certain circumstances, being:

(a) the Support Catalogue indicates that providers can claim travel for the particular support item;

(b) the participant agrees in advance; and

(c) the provider is required to pay the worker for the time spent travelling.

10.3 If those requirements are satisfied, the maximum amount of travel time that can be claimed is 30 minutes for some areas, and 60 minutes for others.[15]

10.4 While our clients acknowledge that government-based funding limitations do not operate as a barrier to the Commission varying modern awards, the operating environment must be taken into account in the assessment of a 'fair and relevant' minimum safety net of conditions, and issues such as funding and the overall profitability or viability of the industry are relevant to many of the considerations in section 134(1).

10.5 These issues should also be taken into account in the context of the proposed implementation of any variation to the Award.

10.6 Given that any variation will impose a new cost on employers, the implementation of any such variation should involve a delayed commencement date so the industry has an appropriate period of time to prepare for the change.

FAIR WORK COMMISSION
4 Yearly Review of Modern Awards
Social, Community, Home Care and Disability Services Industry Award 2010
Matter: AM2018/26

STATEMENT OF GRAHAM SHANAHAN

I, Graham Shanahan, of [redacted], affirm as follows:

MY BACKGROUND

1. I am the General Manager of Coffs Coast Health & Community Care Pty Ltd trading as NSW Home Support Services (**the Company**).

2. I am based at Coffs Harbour.

3. I have been employed with the Company since around March 2013.

4. My role involves overseeing the daily operations of the business and I also head the finance department as the financial controller.

5. Prior to working with the Company, I was employed in finance as an Accountant and Manager in an Accountancy/Tax Practice. I have over 20 years' experience in the accountancy profession.

6. I am a Fellow of the Association of Chartered Certified Accountants (FCCA), I hold a Chartered Tax Advisor (CTA) membership status with The Tax Institute of Australia and also hold a Bachelor of Commerce majoring in Economics from the University College Cork, Ireland.

INFORMATION ABOUT THE BUSINESS

7. The Company is a privately owned company that has been in operation since around 1991.

8. The Company operates in the home care sector and predominantly provides services through the Commonwealth Home Support Program, Home Care Packages and the Department of Veteran Affairs. This is where the majority of the Company's funding comes from.

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

9. The Company provides home care to enable people to remain in their homes as long as possible without going into residential care. The Company's objectives are to:

   (a) support people who are frail aged to remain in their home;

   (b) support family or other primary care givers in their role;

   (c) operate the organisation in an effective, efficient and accountable manner; and

   (d) maximise flexibility to respond to the expressed preferences of consumers.

10. The Company provides a range of services to frail aged people and their carers in the surrounding regions of three local government areas, being Coffs Harbour, Bellingen and Nambucca.

11. The services that the Company provides include:

   (a) DVA Community Nursing;

   (b) Veteran's Home Care Program;

   (c) Home Care Packages; and

   (d) Flexible Respite programs, funded by the Department of Health.

12. The Company's service portfolio also includes brokerage and private clients, although both are currently very small components of the services the Company provides.

13. The Company operates under three separate funding schemes. They are:

   (a) Department of Veteran Affairs;

   (b) Commonwealth Home Support Program; and

   (c) Home Care Packages.

14. The home care industry introduced Consumer Directed Care in 2011, however this was a pilot scheme and it has developed significantly since then and in particular since de-regulation of the Home Care Package environment in February 2017. The clients we provide care to are in control of how they spend their money and what provider they use, and following de-regulation, competition has increased significantly. Prior to de-regulation providers were required to tender each year for additional Home Care Packages.

15. In the aged care industry, there is a shortage of packages. I am aware of people having waited in the queue for over 12 months for home care packages.

THE COMPANY'S WORKFORCE

16. The Company currently employs approximately 70 employees. The Company's workforce consists of 6 full-time employees, approximately 31 part-time employees, approximately 33 casual employees and approximately 10 independent contractors.

17. The Company has a high level of part-time and casual employees because we are not able to offer enough consistent work to engage a high number of full-time employees due to the unpredictability in the industry (resulting from cancellations due to hospitalisations etc). The full-time employees we engage are our Community Services Manager, two Case Managers, two Rostering Co-ordinators and myself as General Manager.

18. The Company offered all regular casual employees to convert to part-time employment, however of the approximately 20 employees who were offered to convert, only six employees wanted to move to permanency and they were transferred to part-time employees. This took place in May 2019.

19. The *Social, Community, Home Care and Disability Services Industry Award 2010* (**the Award**) is the principal industrial instrument applying to the Company's employees. The Company does not have an enterprise agreement but does have a Collective Agreement. Coffs Coast Health & Community Care Pty Ltd Employee Collective Agreement 2009-2011 is still in place, however the Company typically pays Award rates of pay.

CLIENT CANCELLATION ISSUES

20. The Company experiences client cancellations on a regular basis. The Company prepares a monthly report of the cancellations and the reasons for the cancellations. The reports for the months of March, April and May 2019 are attached and marked **Attachment 'A'**.

21. Each of the funding schemes that we operate under, as set out at paragraph 13, have different terms in respect of cancellations.

22. Some of the reasons why a client cancels their scheduled services include that the client is ill, the client is in hospital, the client has had a fall, the client's family are visiting and they do not require the care, the client has passed away, or the client has been moved into permanent residential care.

23. When a client cancels a scheduled service, the Company tries to place the employee who was supposed to work that shift, with another client. For example, if another employee is sick, the employee who has had their client cancel would be moved to cover the sick employee's shift. If the Company cannot find alternative work, the Company sends the employee home and pays them for one hour.

24. The amount of notice that is typically given by clients when they cancel a scheduled service is on the day a client goes into hospital, permanent care or when they pass away. It is almost impossible to plan for such events and even more difficult to replace the loss of work or hours for the employees that are affected.

25. The Company is able to charge the client for the cancellation in certain circumstances. The maximum amount that the Company is able to charge is for one hour under the Department of Veteran Affairs Home Program. Under the Department of Veteran Affairs Home Program, if the client cancels within 24 hours of the booking, we are able to claim one hour from the client. This is irrespective of the duration of the booking. This means that an employee could be rostered to work three hours with a client, and if they cancel with no notice, we are only able to claim one hour. If the client does give notice of at least 24 hours, we are not able to claim any monetary compensation from the client.

26. If the Company was required to pay the employee for the full rostered shift following a client cancellation with less than 48 hours' notice, the Company would become insolvent and the existence of the Company would be threatened. If the Company ceased to exist, 70 people would lose their jobs.

27. The Company has a policy in place which states that we will only charge one hour for our clients under all funding arrangements. The reason the Company introduced this policy was to remain competitive in the market.

28. While the Department of Veteran Affairs Home Program provides a limit of one hour, I am aware that larger organisations operating in the home care industry charge more than one hour for

cancellations if the required notice is not given for other schemes. The large organisations are able to do this under the Commonwealth Home Support Program and Home Care Packages. However, as we are a smaller organisation operating in a regional area, we need to be mindful of the community. If we were to charge the clients more like the large organisations do, we would lose clients.

PART-TIME EMPLOYEES

29. The Company offers part-time employees work in excess of their minimum contracted hours regularly. This is because of the unpredictable nature of the industry and the clients' demands.

30. In the month of May 2019 we offered 902 additional extra hours to our part-time workforce.

31. If the Company was required to pay overtime to part-time employees who work in excess of their contracted hours, we would be hesitant to employ part-time employees. The economic impact of paying part-time employees overtime for work in excess of their contracted hours would mean, for example, that in the month of May 2019, we would have had an extra cost of $17,400. If the Company were to have that cost every month for a year, that would equate to $205,200 over the 12 month period. This would simply make this organisation insolvent and thus 70 jobs would be lost.

32. If the Company was required to pay overtime for that work, our business model would not be workable. Ultimately it would mean that we would employ less part-time employees.

MINIMUM ENGAGEMENTS

33. The Company's work is based on client demands and therefore rostering takes place around the preferred times of our clients.

34. If the Company does not provide services in the requested time period the clients will leave and go to another service provider. We have had a lot of clients transfer to us who have left other service providers because they were not being provided with what they requested. For example some clients only want 30 minute visits and some providers charge a minimum engagement of one hour. We however cater to the needs and demands of the client as the client is at the centre of all decisions and we have therefore had a number of clients come to us from other providers to accommodate these 30 minute visits.

35. In respect of morning visits especially for medication prompting and personal care, visits shorter than one hour are common. Approximately 80 per cent of all visits are less than one hour.

36. The Company provides services in blocks as small as 30 minute slots and one hour slots and up to longer lengths if they are requested by a client.

37. It is common for services to be required in the morning and the evening. The reason for this is that clients require showers in the morning and assistance with their meals, and then in the evening they require another meal and preparation for bed. Because of this demand, we often have, for example, shifts rostered from 6.00pm to 8.00pm to accommodate dinner time and showers as requested by clients.

38. It is common for an employee to be rostered to work four 30 minute blocks to form a two hour shift. This is usually due to client demand. We often allocate one employee a 5.00pm to 7.00pm shift, and another employee a 6.00pm to 8.00pm shift. If we were required to provide a three hour minimum engagement, it would not only mean that one employee would lose their shift, but we also wouldn't be able to cover the client demand that falls in the overlap period of 6.00pm to 7.00pm.

39. It is difficult to provide some employees with shifts longer than 2 hours because many clients demand certain employees, and threaten to leave if they do not have that particular employee. This makes rostering difficult if there is a client demanding a particular employee for half an hour of an afternoon, but we do not have any other work, or very minimal work to give them, surrounding the requested time.

40. If the Company was required to provide a three hour minimum shift to all employees there would be a significant financial strain on the business. There is a real chance that if we retained the same number of employees, and were required to provide 3 hour minimum shifts, that the business would not survive.

FAIR WORK COMMISSION
4 Yearly Review of Modern Awards
Social, Community, Home Care and Disability Services Industry Award 2010
Matter: AM2018/26

STATEMENT OF SCOTT HARVEY

I, Scott Harvey, [redacted], affirm as follows:

MY BACKGROUND

1. I am employed by ConnectAbility Australia Limited (**ConnectAbility**) in the role of Operations Manager, based at the organisation's head office in Warabrook, NSW.

2. I have been employed with ConnectAbility since around September 1996.

3. My role involves operational oversight of:

   (a) the ConnectAbility Community Disabilities business stream (this includes NDIS service delivery in Community Supports, Supported Independent Living, Support Coordination); and

   (b) Community Program development at the Jesmond Neighbourhood Centre.

4. Team Leaders, Rostering Officers, Support Coordinators and the Community Centre Coordinator report directly to me. I oversee the direct supervision of the frontline staff by the Team Leaders.

5. I hold a Bachelor of Arts with a Major in Psychology.

THIS STATEMENT

6. The information in this statement is based on my experience and observations from either working at ConnectAbility or from my experience generally working in the social, community, home care and disability services industry, and is true to the best of my knowledge.

7. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections.

8. Where I comment on matters that I did not personally observe, I identify the source of that information in this affidavit.

INFORMATION ABOUT CONNECTABILITY

9. ConnectAbility was established in September 1992 by a group of community members and families to meet the needs of people with significant disabilities to provide opportunities to access community based resources, facilities and services.

10. ConnectAbility is a not for profit Company limited by guarantee, and is registered as a gift deductible recipient with tax charity concessions. We are governed by a Board consisting of volunteer community and consumer representatives.

11. ConnectAbility operates in the social, community, home care and disability services industry.

12. ConnectAbility provides service to over 600 customers across the Hunter Region and Central Coast Regions of NSW. ConnectAbility provides a broad range of personalised supports to people with a disability, older community members, children and young people.

13. ConnectAbility provides direct service delivery in the following areas:

    (a) NDIS Disability support including Community Social and Civic Support, Daily Activities, Supported Independent Living and Support Coordination;

    (b) Department of Health and Ageing 65+ supports - These are community based supports to people with disability aged 65+ who were not eligible for access to the NDIS scheme on its implementation on 1 July 2013;

    (c) Aged Care 'Home Care Packages' (**HCP**) and 'Commonwealth Home Support Packages' (**CHSP**) services;

    (d) Community Programs through Jesmond Neighbourhood Centre; and

    (e) Adolescent and Family Counselling.

14. ConnectAbility assists people with in-home personal care and domestic assistance, shopping and meal preparation, assistance with medication management and social supports both in-home, and in the community.

15. ConnectAbility is an accredited provider of supports through various government bodies, including:

    (a) the National Disability Insurance Scheme (**NDIS**);

    (b) the Department of Family and Community Services; and

    (c) Department of Health, Ageing and Aged Care.

16. ConnectAbility is a registered service provider with the National Disability Insurance Authority.

17. I have considerable knowledge and experience in managing the delivery of services to individuals under these government schemes.

CONNECTABILITY'S WORKFORCE

18. ConnectAbility currently employs approximately 270 employees, in a range of roles including:

    (a) frontline care workers (for example, Community Support Worker, Residential Support Workers, Caseworkers, Domestic Support Workers, Adolescent and Family Counsellors);

    (b) team leaders, coordinators and managers (for example, Disability Team Leaders, Support Coordinators, SIL Team Leader, SIL Coordinator, Accommodation Manager, Centre Coordinator, Aged Care Manager); and

    (c) administration and senior management (for example, CEO, CFO, Operations Manager, Executive Officer, People and Culture Manager, finance administration, quality and compliance, Roster Officer).

19. The *Social, Community, Home Care and Disability Services Award 2010* (the **SCHADS Award**) is the principal industrial instrument applying to ConnectAbility's workforce. ConnectAbility does not use an Enterprise Agreement in engaging staff. The Company typically pays Award rates of pay.

20. ConnectAbility has a large proportion of front line community support staff engaged in part-time employment (approximately 69%). No direct support workers in the community support workforce are employed on a full-time basis. Currently 30% of the frontline community supports workgroup are employed as casual support workers.

21. Currently 17% of casual support workers are engaged to work permanent scheduled supports with customers each week. It is the nature of engagement from customers that the same support workers are engaged with customers for the same scheduled supports each week. This is to ensure continuity of supports to customers with complex physical and behavioural support needs.

THE NATIONAL DISABILITY INSURANCE SCHEME

22. ConnectAbility is a registered service provider with the National Disability Insurance Authority.

23. The NDIS incorporates approximately 93% of business revenue across its operations.

24. ConnectAbility currently has 358 NDIS customers who receive Core Support funding through the NDIS Scheme. These services can be broken down into the following categories:

    (a) 73% of NDIS customers are funded for Community Social and Civic participation (of this group, 11% are children aged 13 and under); and

    (b) 27% of customers are provided Supported Independent Living supports which is care in the home.

25. The major impact of the NDIS for ConnectAbility is the increased administration requirements to meet the NDIS Terms of Business. The introduction of the NDIS service provider portal and customer support claiming has required an increase of administrative staffing resources to fulfil claims process to ensure cash flow and quality safeguards are in place.

26. The NDIS Portal system has been plagued with problems leading to inefficiencies to ConnectAbility as a service provider. These overhead costs attributed to deployment of extra resources and extra time invested by Disability management staff has not been recognised by the NDIA quickly enough and incorporated into the pricing framework for Core Support delivery.

27. ConnectAbility implemented a rostering team in its Community Disability operations in December 2017. Initially a Full Time role was introduced. This has increased to a 1.6 FTE operation specifically for Community supports. Prior to the introduction of the rostering team, the Community supports Team Leaders were responsible for customer rostering.

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

28. The model of Rostering for customers has generally not changed but with the introduction of the NDIS it offered opportunities for customers to select supports outside of business hours and on weekends/public holidays. The scope of rostering increased significantly due to this. Currently ConnectAbility is investigating the continued viability of providing weekend/public holiday supports under the current pricing framework. There is potential that the weekend/public holiday model of service delivery will be withdrawn if new pricing framework to be delivered by the NDIA does not sustainably match the actual costs for services provided.

29. The NDIS has led to increased organic growth for delivery of community support services. Community support Team Leader portfolios currently range from 56 – 68 customers across the team. The Disability support team initially employed 4 FTE team leaders with portfolio sizes ranging from 40-45 customers. Due to the current pricing framework for Core Supports service delivery and Team Leader roles being non-billable under the NDIS, the Team Leader group has reduced to 3 FTE.

30. The Team Leader group were supported by a Level 3 Support worker team to assist in rostering, NDIS administrative tasks and as a communication conduit with the frontline support worker group. However, this role and two positions were made redundant in September 2017. This role was unbillable in the NDIS service delivery model and staff members in the role were not generating income. This role was deemed financially unsustainable and ConnectAbility made an operational decision to reduce administration wage overhead costs to improve the viability and sustainability of the Community Supports program.

31. ConnectAbility roster staff to match customer needs, and acknowledge the choice and control of the customer in who they engage.

CLIENT CANCELLATION ISSUES

32. ConnectAbility experiences client cancellations on a daily basis.

33. ConnectAbility has implemented data collection of client cancellations for services provided under Community Social and Civic supports. This data is collected monthly from our Hunter Region community support customers.

34. Data collected from the 2018 Financial Year (1 July 2017 - 30 June 2018) recorded that:

(a) there was a total of 1,134 customer cancellations;

(b) 72% of those total cancellations were "late notice" cancellations or "no shows" from customers/families;

(c) 13% of total cancellations were provided within the notice period by customers/families; and

(d) 15% of total cancellations were made by ConnectAbility.

35. The definition used for "late notice" cancellations was adopted from the SCHADS Award, and the terms for how cancellations are dealt with are clearly outlined in ConnectAbility's NDIS Customer Service Agreement. A copy of the template NDIS Customer Service Agreement is attached and marked **'A'**.

36. The data recorded shows that 75% of cancellations are made within 24 hours or not provided at all by the customer. The most common cancellation is communicated on the day of the scheduled support. While the data collected does not drilldown into this level of detail, I would estimate that between 80-85% of cancellations would occur on the day of scheduled community supports and within 3 hours of support scheduled to commence.

37. There are a wide variety of reasons provided by customers as to why they cancel their scheduled services. Some of these reasons include:

(a) the customer cancelling due to ill health;

(b) the customer being hospitalised;

(c) the customer taking holidays with family members;

(d) the customer cancelling due to complex behavioural needs;

(e) the customer cancelling due to poor weather;

(f) the customer electing not to have supports on the scheduled support time and day; or

(g) a customer "no-show" (the customer not attending a scheduled support, or not being home at the scheduled time).

38. There are also occasions where ConnectAbility cancels a scheduled support due to not having the appropriate staff resources available at the time.

39. When a client cancels a scheduled service, the Company will attempt to first re-deploy the staff member with another customer/s who may require support. However, this is not always a straightforward process, as it requires the staff member to have been inducted to provide supports to that particular customer, unless they are working alongside another staff member who can assist with mentoring inducting the staff member. This is usually the case where a support gap has occurred due to a staff member being absent from work on the corresponding day or is taking approved leave.

40. Staff members have been re-deployed to be supernumerary in a community or centre based group support activity, but this option is no longer operationally approved as the support costs for this supernumerary engagement cannot be billed against the customer, therefore there are unrecoverable wage costs incurred by ConnectAbility.

41. Staff members are redeployed to be inducted to work with a customer with complex support needs they have not worked with before. This assists build staffing resources for customers who have limited staffing resources attached. The NDIS buddy shift component in the customers plan is limiting with only 6 hours per plan allocated for staff buddy shifts. This again incurs unrecoverable wage costs for ConnectAbility.

42. ConnectAbility attempts to re-engage the customer to have service provided at another available time. This proves difficult to match with customer and staff member and ensuring the same rostered hours can be completed.

43. Where no redeployment opportunities are available staff members are provided alternative duties within the CSW position description and unrecoverable wage costs are incurred. If staff decline alternative duties they are offered the opportunity to use Annual Leave provision or take time as leave without pay (LWOP). For weekend support late notice cancellations where redeployment or alternative duties are not possible staff are paid rostered wages in full.

44. Changes to the NDIS Pricing Framework from 1 February 2019 only allow for 90% of the billable support item price to be claimed back for short notice cancellations. Short notice cancellations have a cap per customer as determined by the NDIS terms of business and

service providers are currently unable to claim for short notice cancellations after the first 12 short notice cancellations.

45. In the new 2019/2020 NDIS Pricing Guide the limit has been abolished and providers are only able to claim for short notice cancellations in very specific circumstances. A cancellation is a short notice cancellation (or no show) if the participant has given less than 2 clear business days' notice for a support that is less than 8 hours continuous duration and worth less than $1000, and less than 5 clear business days' notice for any other support.

46. There is no limit on the number of short notice cancellations (or no shows) that a provider can claim in respect of a client in the 2019/2020 NDIS Pricing Guide, but providers have a duty of care to their clients and if a client has an unusual number of cancellations then the provider should seek to understand why they are occurring and report it to the NDIA.

47. Client short notice cancellations equate to 2,647 support hours not able to be billed. In total revenue based on the pricing framework for the 17/18 FY this is equivalent to $104,786 across the financial year.

48. If ConnectAbility was required to pay employees for the rostered shift where the client cancels with less than 48 hours' notice, our wage overhead costs would increase by approximately 65% on top of the amount referred to in paragraph 47 above.

PART-TIME EMPLOYEES

49. The Company employs part-time employees in a variety of roles, including as community support workers, residential support workers, adolescent and family counsellors, and support coordinators.

50. The Company offers part-time employees work in excess of their contracted hours. Part time employees are provided minimum contract hours depending on each person's availability and rostered supports. All part time community support workers and residential support workers are engaged to work above contract hours stated in employment contract. Due to fluctuating support requirements of customers and changing needs of customers we have found it impossible to provide staff with rostered hours that directly match contract hours. Customer

control and choice has dictated this in the way part time contract hours are calculated for each individual staff member.

51. If the Award was varied to require ConnectAbility to pay overtime to part-time employees who agree to work in excess of their contracted hours, ConnectAbility would be forced to reduce part time employment opportunities and casualisation of the workgroup would be required.

52. Wage overhead costs due to overtime wages has been identified as not financially viable given the set NDIS pricing framework and unsustainable for ConnectAbility to continue as a provider of community participation supports under a part time model involving payment of overtime for hours in excess of contracted hours.

MINIMUM ENGAGEMENTS

53. Our work is based on client demands and therefore rostering takes place around the preferred times of our clients. This has always been the case for ConnectAbility even prior to the NDIS model. Customers engage ConnectAbility as a service provider due to the flexible nature of support provided and different support models offered as a community or centre based model either 1:1 or shared supports 1:2, 1:3; 1:4, etc. Customer/family control and choice has always existed and driven when service is to be delivered.

54. The NDIS has increased the number of customers requiring supports, and many people who are eligible to receive services under the Scheme are receiving low levels of community participation funding. We have received many referrals for short increments of community participation support (for example, 2 hours per week each Friday; or 1 hour weekly to provide transport).

55. Delivery of such services is not viable for ConnectAbility. It is not financially viable to engage customers for small increments of support under the NDIS pricing framework and in some instances where the requests do not meet current SCHADS Award minimum engagement.

56. ConnectAbility will not take on customers for periods of service that do not meet minimum engagement as per the Award (i.e. less than 2 hours). We have also established minimum engagement benchmarks for community participation supports, which is set at 8 hours per week. In other words, we do not take on customers who are wanting less than 8 hours of

services per week, as the costs in establishing those arrangements outweighs any commercial benefit (i.e. profit) that is derived from the delivery of the service. These costs include administrative costs in preparing service agreements, time spent liaising with the customer and his/her family/carers, undertaking plan reviews, staff training, quality and compliance obligations, liaising with other client stakeholders/service providers assisting the client, claims invoicing and reconciliation.

57. ConnectAbility has approximately 20 staff members who are engaged for small increments of support (for example, 2 hours). However, wherever possible these supports are rostered to back on to other roster supports of similar durations. This is particularly the case for a cohort of 40+ customers currently supported by ConnectAbility from Hunter Residences Stockton. This is a large residential facility for people with disability. ConnectAbility has two modified wheelchair accessible vehicles housed on site at the facility. Staff engaged may support 2-3 customers back to back from the facility. This enables staff to be engaged to provide support to customers who only require small increments of support due to their complex presentations and support requirements in the community. This also creates a 6-8 hour working day for support workers making it an attractive work engagement for staff.

58. Other scenarios where small 2 hour support shifts are provided is when a customer requires in-home support and then the staff member is engaged to support another customer/s for a larger block of time. This roster model is set where travel between customers is minimal (for example, 15 minutes travel time between customers). This also provides a more attractive work day for staff and assists to retain support worker staff.

59. ConnectAbility does not provide morning/afternoon supports or before/after school supports unless the customer commits to having a minimum of 8 hours of service per week in accordance with our minimum weekly engagement benchmark.

60. If ConnectAbility was required to provide a three hour minimum shift to all employees, this may affect customers' ability to maintain current service levels depending on their NDIS Core support package funding. For example, if a person is funded for 8 hours of support and is provided with 2 hours of support 4 days per week, a 3 hour minimum engagement will impact

the organisation's ability to provide that service, and will thereby reduce time in the community or supports provided in-home for the individual.

RECALL TO WORK

61. ConnectAbility has an on-call team for its community supports service provision. This role is currently provided by Team Leaders and Rostering staff. Community support workers are not engaged to provide on-call responsibilities as part of their role.

62. ConnectAbility also has an on-call team for supported independent living (SIL) operations. This role is currently provided by accommodation coordinators and managers. Residential support workers are not engaged to provide on-call responsibilities as part of their role.

63. The on-call process is implemented to ensure Direct Support staff members have access to emergency support and advice after hours. The on call role is to provide advice to minimise any risk, ensure compliance with legislative requirements and policy and procedure and to provide support to staff experiencing critical issues.

ConnectAbility NDIS Service Agreement

Service Agreement with ConnectAbility

Thank you for choosing ConnectAbility Australia (ConnectAbility) as your Service Provider. This service agreement sets out agreed expectations around how the Service will be delivered by ConnectAbility to you. It outlines each party's responsibilities and obligations, and how to resolve any problems should they arise.

This service agreement is made between: **[insert name]** and ConnectAbility.

Description of Services

ConnectAbility agrees to provide you with Core Supports, Supported Independent Living (SIL), Specialist Disability Accommodation (SDA) services and/or Support Coordination services. The supports are listed in the Support Schedule, along with any arrangements needed to make sure the supports can be provided to you.

This Agreement will commence on **[insert date]** and will conclude on **[insert date]**

The types and duration of supports will continue unless a review is initiated earlier by either party. ConnectAbility would respect notice periods in relation to any changes in the type or duration of supports in the event of a review of your NDIS plan occurring. Where pricing changes are implemented by the NDIA, ConnectAbility will apply the new benchmark price levels for services delivered from the start date of the newly implemented NSW NDIS Price Guide.

Access to your National Disability Insurance Agency Plan:

By making this Agreement with ConnectAbility you agree to provide a copy of, or provide access to, a current copy of your NDIS Plan. This may require interaction with the NDIS Portal or representatives.

Participant's responsibilities: By entering this Service Agreement, you agree to:

- Work with ConnectAbility to ensure that the services meet your needs, and is also in accordance with all applicable legislation
- Have the right to be treated with dignity and respect and to have my choices and aspirations supported as far as is reasonably possible
- Try to solve any problems with our service by talking with us; if this is unsuccessful, there are other agencies that can help you with your complaint
- Treat staff and other customers with courtesy and consideration at all times

- Advise ConnectAbility with reasonable notice where unable to attend the services as planned.
- Keep ConnectAbility informed of any changes to my situation that I expect will have an impact on this Agreement;
- Pay for your services under the terms of this agreement.
- Be respectful of ConnectAbility's property, as you may be responsible for the costs of any deliberate damage caused
- Provide ConnectAbility the required notice if you need to end the Service Agreement (see 'Ending this Service Agreement' below for more information); and
- Let ConnectAbility know immediately if your NDIS plan is suspended or replaced by a new NDIS plan or you stop being a participant in the NDIS.

Responsibilities of ConnectAbility

In agreeing to provide this support arrangement ConnectAbility will:

- Provide the supports and services that are outlined in this Agreement
- Work cooperatively with the customer and in line with the principle of least restrictive alternative with the person and the activities they have chosen to undertake.
- Respect the rights of the customer to determine the range and types of activities they wish to participate in.
- Treat the customer and their family/carer with dignity, courtesy and respect.
- Communicate openly and honestly and in a timely manner and explain things clearly and in a way that you can understand
- Listen to the customer's feedback and work to resolve problems quickly.
- Be responsible for the management, reporting and documentation of supports, payment requests and allocated plan funding.
- Make sure your information is correct, up to date, stored carefully and kept private
- Will provide invoices and statements for your supports and services if requested by you and/or your representative in line with NDIS rules and relevant consumer laws
- At all times comply with all the rules and laws that apply - this includes the National Disability Insurance Scheme Act 2013 and the National Disability Insurance Scheme Terms of Business
- Immediately notify your family/carer or other significant stakeholders of any significant incidents or accidents involving yourself
- Ensure staff involved in your supports are provided with the required training and supervision
- Induct and complete all probity requirements on all employees employed by ConnectAbility.
- Will provide the customer with four (4) weeks notice of intention to cease service provision.
- Assist you to contact your Coordinator of Supports and/or NDIA should you wish to move out of ConnectAbility supports.

Ending this Agreement

Should either party want this agreement to end, both parties agree to give four weeks written notice. If extenuating circumstances present or either party seriously breaches any terms of this Agreement then the requirement of notice will be waived. This will be at the discretion of ConnectAbility.

Conflict of interest & relationships

We acknowledge the potential for a conflict of interest as ConnectAbility provides a range of disability services, including Specialist Disability Accommodation (SDA), Support Independent Living (SIL), Support Coordination and NDIS Core Supports. ConnectAbility will act in the best interests of people receiving service, ensuring they are informed, empowered and able to maximise choice and control. ConnectAbility will not (by act or omission) constrain, influence or direct decision making by a person and/or their family so as to limit that person's access to information, opportunities and choice and control over supports provided.

ConnectAbility will proactively manage perceived and actual conflicts of interest by:

- ensuring organisational or ethical values do not impede a customer's right to choice and control
- managing, documenting and reporting on individual conflicts as they arise, and
- ensuring that advice to a customer about support options is transparent and promotes choice and control.

In the case of this agreement, ConnectAbility is the provider for:

☐ **NDIS Core Supports** ☐ **Support Coordination** ☐ **SIL** ☐ **SDA**

Recording of Supports Provided

ConnectAbility agrees to keep full and accurate accounts and financial records of the supports delivered to you, along with records of service agreements, service care plans, house hold expenses and any complaints which they have received for seven years from the date each record is received.

ConnectAbility confirms that the way they hold these records complies with the NDIS Terms of Business, all relevant statutes, regulations, by-laws and requirements of any Commonwealth, State, Territory or Local Authority.

If you would like to view the records held by ConnectAbility, you can make contact with your Team Leader on 4962 1000.

Cancellation of Supports and 'No-shows':

ConnectAbility reserves the right to claim against your Plan for cancellations and "no shows" as outlined in NDIS pricing rules. To avoid cancellation fees, customer's, or their person responsible must provide notice prior to 3.00p.m the day before the scheduled service (Monday to Friday). This applies Monday to Sunday inclusive.

This must be by phone to 02 4962 1000 Monday – Friday 7am-5pm or weekends to ConnectAbility On-Call (0484 571 929). If ConnectAbility does not receive such notice, as per the NDIS Terms of Business, then ConnectAbility will classify this as a late notice cancellation or late notice change to supports.
In the event of a cancellation of support there will be no charges raised for travel/transport.

Any late notice cancellation or "no show" that is charged will be according to the terms set out in this service agreement between the customer and ConnectAbility and following the NDIA Terms of Business. Where cancellation is received within the specified timeframe no payment request will be made to NDIA.

For further information please see cancellations-policy [insert link] or ask for a copy.

Payment for Services

By signing this Service Agreement, you agree that the services provided will be paid with your NDIS funding, by you or your agent.

Process:

ConnectAbility will first lodge a Service Booking with the NDIA through the NDIA Provider Portal which sets out the services agreed to be delivered in line with your Schedule of Supports. Once services are delivered ConnectAbility will create an invoice and make a claim for payment through the NDIA Portal.

ConnectAbility seeks payment for services after the services are delivered directly from the National Disability Insurance Agency (NDIA), a Plan Manager or from a customer self-managing their NDIS funds.

For customers who have a nominated Plan Manager to manage payments for supports delivered an invoice will be directly provided to the Plan Manager nominated by the customer. Payment must be received from the Plan Manager within 14 days.

For self-managing customers an invoice will be directly provided to the customer. Payment must be received from the customer within 14 days.

Non-payment of Invoices

If payment is not made, ConnectAbility will contact the customer or their Plan Manager to discuss why this has occurred, agree to resolve any dispute you may have as per the Feedback, Complaints and Disputes section and make a limited extended time arrangement and/or a payment plan to pay the debt.

If the customer or their Plan Manager does not comply with any debt payment arrangement or plan negotiated with ConnectAbility, the debt may be handed to a collection agency where collection fees may apply. Delivery of service may also be withdrawn until settlement of the matter.

Goods and Services Tax (GST)

If you receive supports as detailed in an NDIS plan, for the purposes of GST legislation, the Parties confirm that:

- a supply of supports under this Service Agreement is a supply of one or more of the reasonable and necessary supports specified in the statement included, under subsection 33(2) of the *National Disability Insurance Scheme Act 2013* (NDIS Act)
- in the customer t's NDIS plan currently in effect under section 37 of the NDIS Act
- You and/or your representative will immediately notify the Service Provider if your NDIS Plan is replaced by a new plan or you stop being an eligible participant in the NDIS.

Protecting your personal information and privacy

While working with you, we may gain access to personal information about you as a client. We will take all reasonable steps to protect your information and safeguard it from unauthorised disclosure or loss. We will not divulge any information whatsoever relating to you, except in the circumstances where:

- it is within the public domain,
- where disclosure is required by law, or
- if you have given us your consent to do so.

To view the ConnectAbility Privacy Policy (and Easy Read Privacy Policy) please see our Privacy Policy or ask for a copy.

Quality Safeguards

Your records may be viewed by a third party auditor to ensure that ConnectAbility is complying with all funding standards, legislation, and Acts pertaining to disability services.

☐ I do not want my records to be viewed by a third party.

Feedback, Complaint, Disputes

Feedback is an important part of the way we review and assess ourselves and our services, and we take it very seriously. There are several ways you can provide feedback. You can talk to any member of ConnectAbility Staff, or you can provide it in writing and email it to contact@connectabilityaus.org.au ConnectAbility is committed to resolving complaints fairly, equitably and as quickly as possible.

If you wish to make a complaint or have a dispute, you can:

- Talk to the relevant staff member directly; or
- Talk to their manager directly (ask for details), or
- Provide details of your Complaint in writing to contact@connectabilityaus.org.au or in person.

For more details, see our Complaints and Compliments Policy, or ask for a copy. 3. If ConnectAbility cannot fix the matter, then you may contact:

Entire Agreement

This agreement sets out all of the terms of your supports and services with ConnectAbility Australia. This agreement supersedes and replaces all prior representations, contracts and agreements (whether oral or in writing) detailing your supports and services with ConnectAbility. ConnectAbility advises that there may be requirement to amend this document to reflect changes to the scheme as a result of policy change by the Federal Government.

Once you sign this agreement, you are confirming it is complete and no agreed terms are missing. If this agreement is not returned signed ConnectAbility acknowledges this as a working agreement.

Service Agreement attachment - Schedule of supports

Customer: [insert name] **Dated: [insert date]** **NDIS Plan [insert date] to [insert date]**

The supports (including day/hours), their prices and the forecast costs in providing these supports are set out in this Schedule of Supports. Prices charged do not exceed the price level prescribed for that support in the NSW NDIS Pricing Guide. All prices are GST inclusive and include the cost of providing the supports.

Additional expenses (i.e. things that are not included as part of a Participant's NDIS supports) are the responsibility of the customer. These are not included in the hourly price for support set by the NDIA. Examples include service provider travel and transport fees, public transport costs, community venue activity entrance fees, event tickets, meals, etc.

Support Category	Support Item	Pricing and Payment Information	How the support will be provided	Total
Establishment Fee	01_049_0107_1_1	$500 if customer new to NDIS and ConnectAbility $250 if customer has transitioned from other provider in first NDIS Plan DELETE ROW IF NOT APPLICABLE	This applies to all new NDIS customers in their first plan where they receive at least 20 hrs of community access support per month. This payment is to cover non-ongoing costs for ConnectAbility establishing service and assisting you to implement your plan	
Transport Costs ConnectAbility will charge a fixed amount for the provision of travel and transport services. An estimation of your travel and transport usage be implemented as part of your support schedule/service booking. This is to ensure an indicative and reasonable number of kilometres is estimated as part of your schedule of supports. This estimate is intended to act as a guide for the associated costs of the travel and transport component of your ConnectAbility support schedule. **No. of kilometres per support:** **Estimated cost of transport for Plan Period @ $1.00 per klm:**				
Due to the complexity of your support needs we would be required to include shadow shifts to assist with the introduction of new workers, and this is agreed upon by the customer and/or their family/carer, ConnectAbility will claim for up to 6hours of weekday support per year. ***[Insert support item/support item number & price]***				
ConnectAbility will charge up to 4 hours for each plan period to document and review scheduled supports and expected outcomes. ConnectAbility has included 4 hours support, calculated using the Assistance to access Community-based social and recreational activities – ***[Insert support item/support item number & price]***

Matter: AM2018/26

STATEMENT OF ANDREW COLLINS

I, Andrew Collins, of [redacted], affirm as follows:

MY BACKGROUND

1. I am employed by The Benevolent Society (**the Company**) in the role of Executive Director, Ageing.

2. I am based at Glebe, NSW.

3. I have been employed by the Company since January 2014.

4. My role is to support the achievement of the Company's strategic goals through the growth and delivery of innovative, consumer focussed ageing support services. As a community services executive, this role sets and monitors all performance targets and outcomes for the portfolio and direct reports.

5. I started as a Registered Nurse 23 Years ago. Since then I have worked in leadership positions across the Government and NFP sectors including; the Department of Health and Ageing, the Office of the Registrar of Community Housing and Uniting Care NSW ACT.

6. I have a Bachelor of Nursing and a Graduate Diploma in Public Health (Management).

THIS STATEMENT

7. The information in this statement is based on my experience and observations from my roles within the Company and our Ageing Services, and is true to the best of my knowledge.

8. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections.

9. Where I comment on matters that I did not personally observe, I identify the source of that information in this statement.

INFORMATION ABOUT THE BUSINESS

10. The Company has been in operation since 1813 and is a not for profit company limited by guarantee. The Company is registered as a charity.

11. The Company operates in the social, community, home care and disability services industry.

12. Our services operate across NSW, ACT, QLD, and SA from over 70 service locations in metropolitan, regional and rural areas, with a fully mobile workforce. Our service staff have a wide range of expertise, including in the areas of family support, early childhood development, care coordination, in home and community support, and allied health and clinical care for people with disability and older people.

13. The Company brings unique capabilities to services, underpinned by a dedication to working in partnership, investment in robust research, evaluation using strong outcomes framework, consumer engagement and co-design and system advocacy. Our services across the spectrum are aligned with the following approaches: client choice and control, a wellbeing focus, person-centred, strengths-based, trauma-informed and flexibility.

14. The organisation receives funding through multiple sources including block government funding, the National Disability Insurance Scheme, Aged care funding under the Aged Care Act, client fees and philanthropic sources.

INDUSTRIAL ARRANGEMENTS

15. The Organisation has an enterprise agreement in place that covers the majority of staff that operate within our Aged, Carer and Child and Family Portfolios. The enterprise agreement is The Benevolent Society Enterprise Agreement 2016-2019 (**Enterprise Agreement**).

16. Our Disability Service employees are primarily covered under the Crown Employees Award as the majority of those employees transitioned from the employment of the NSW Government to the Company in 2017.

17. The Company typically pays above-Award rates of pay.

THE COMPANY'S WORKFORCE

18. The Company currently employs 1,435 employees. Of these, approximately 167 are employed in our Aged Care Services.

19. The employees in the Company perform a range of roles including clinical health and disability services, family and parenting support, mental health and wellbeing, post-adoption services, foster care, support for carers and early childhood services. Our aged care portfolio employees perform roles including home support and respite services.

20. The table below provides a breakdown of the Company's workforce:

Status	Whole Organisation	Ageing Services
Permanent full-time	812	38
Permanent part-time	417	102
Fixed-term full-time	101	4
Fixed-term part-time	36	0
Casual	69	23
Total	1435	167

21. The organisation's preference is to provide staff secure employment as much as possible. This is the reason that the number of casual employees is considerably less than those employed as permanent part-time employees. In addition to this our Enterprise Agreement provides that casual employees, who have worked on a regular and systematic basis over a period of 26 weeks, are able to make a request to their manager in writing, to convert to full-time or part-time employment on an ongoing basis.

22. Our Ageing Service staffing profile:

(a) Has a turnover rate of 15.85%;

(b) Is 92% female employees and 8% male employees;

(c) Has an age profile that can be broken down into the following age groups and percentages:

(i) 1.2% of employees are less than 25;

(ii) 4.7% of employees are in the 25-34 age bracket;

(iii) 14.2% of employees are in the 35-44 age bracket;

(iv) 28.4% of employees are in the 45-54 age bracket;

(v) 36.7% of employees are in the 55-64 age bracket; and

(vi) 14.8% of employees are over 65.

(d) Has the following lengths of service:

(i) 3% of employees have been employed for less than 3 months;

(ii) 2% of employees have been employed from 3 to 6 months;

(iii) 10% of employees have been employed from 6 to 12 months;

(iv) 8% of employees have been employed from 1 to 2 years;

(v) 16% of employees have been employed from 3 to 4 years;

(vi) 33% of employees have been employed from 5 to 9 years;

(vii) 18% of employees have been employed from 10 to 14 years;

(viii) 8% of employees have been employed from 15 to 19 years; and

(ix) 2% of employees have been employed from 20 to 29 years.

THE NATIONAL DISABILITY INSURANCE SCHEME

23. The Company is a registered service provider with the National Disability Insurance Agency.

24. The current workforce is involved with the provision of specialist services to people with complex disabilities and are primarily covered by the Crown Employees Award. The employees who are not covered by that state instrument are covered by the Enterprise Agreement.

CONSUMER DIRECTED CARE

25. The Company is a service provider under the Aged Care Act for both the Commonwealth Home Support Program and the Home Care Package Program.

26. The implementation of Consumer Directed Care in the Home Care Package environment, as well as the reduction in red tape in becoming an approved provider, has seen an increase in the amount of competition between providers for clients. This has resulted in an increasing downward pressure on the prices that providers charge against packages.

27. This is of particular importance as the move to individualised funding means that providers are solely reliant on revenue that is generated through the charges made against a package for direct service provision.

CLIENT CANCELLATION ISSUES

28. The Company typically experiences 3 to 4 client cancellations each day.

29. Some of the reasons why a client cancels their scheduled services include sudden changes to their circumstances such as illness, hospitalisation and changes to caring responsibilities.

30. When a client cancels a scheduled service prior to 5.00pm on the day before the service, that service is cancelled with no charge to the client's package. In these circumstances, the Company will provide the employee with notice of the change in roster by 5.00pm the day before the employee is due to work. In those circumstances, the employee will not be paid for that shift and the Company does not incur a cost as a result of the cancellation.

31. When a client cancels a service with less notice than 5.00pm the previous evening, the Company will in the first instance attempt to reschedule the service for an appropriate time for the client. If there

there is a not a suitable time that meets the needs of the client and the staff member we will attempt to find another service for the staff member to attend during the same timeframe.

32. If we are unable to find a suitable alternate service for the staff member we will pay the staff member for the minimum specified hours that the employee is rostered to work for that client on that day; or may direct the employee to make-up time equivalent to the cancelled time, in that or the following roster period. This time may be made up working with other clients or in other parts of the business. If an employee has already received a payment for the shift and subsequently performs make-up time, the employee will not be entitled to be paid for the make-up time as they have already been paid for those hours.

33. Client cancellations vary in the amount of notice that is given, there is a large proportion of cancellations that give very little to no notice and on these occasions the total service is charged against the client's package and the staff member is paid for that service. The next most common amount of notice that clients give is within the preceding 24 hour period. This is because clients generally wait to ascertain whether their circumstances will allow for the service to continue, for example, if they have been unwell they may wait to see if they feel better in time for their service. These circumstances are managed as per the above processes.

34. There are very few instances when we are provided with greater than 48 hours' notice of client cancellations.

35. Providers are reliant on the income received from direct service provision to cover the cost of salaries for staff. If there was a 48 hour notice period introduced, the Company would need to introduce cancellation costs to clients for the equivalent period. This would result in limitation of client flexibility and choice.

36. It is common for aged persons to have unforeseen reasons to cancel shifts in less than 48 hours, as I have set out above. If they were required to pay for those cancellations in full, they would lose a considerable amount of services. The other option I can see would be for providers to increase direct service costs to build enough margin to cover the increased staffing costs in preparation for these cancellations. Given the higher costs, the result would be that clients would receive fewer hours of service.

PART-TIME EMPLOYEES

37. The Company employs part-time employees in a variety of roles, including our Ageing direct service staff.

38. When engaging part-time employees for these roles we classify them as Variable Roster Part-Time Employees and analyse demand and staff member availability to determine minimum contracted hours.

39. At the time of engagement of a Variable Roster Part-Time Employee the Company and the employee agree in writing on the following:

    (a) the minimum number of hours to be worked each week;

    (b) which days of the week the employee is available to work; and

    (c) the earliest and latest time the employee is available to work on any particular day.

40. Approximately 80 per cent of our Ageing direct service staff are employed on a part time basis with an average minimum number of 16 hours per week.

41. The Company offers part-time employees work in excess of their contracted hours. We provide the opportunity for staff to advise us where they have additional availability and would like to work further hours, for example during school holidays. Under our enterprise agreement a part-time employee who consistently works more than their specified minimum ordinary hours of work, over a 6 month period, may request an increase to their minimum ordinary hours. The organisation has committed that it will not unreasonably withhold agreement to increase a part-time employee's minimum ordinary hours.

42. A number of staff have had the opportunity to increase their hours under this clause but have chosen not to do so as they prefer the security of having minimum hours with the flexibility to work additional hours when it is suitable to them.

43. If the Company was required to pay overtime to part-time employees who work in excess of their contracted hours, it is my belief that we would have to immediately cease providing opportunities for our employees to work additional hours as the cost of employment would not be matched by the service charge to home care packages. This change would likely result in the Company utilising more casual staff to assist with the management of fluctuating client demand.

MINIMUM ENGAGEMENTS

44. The Company's work is based on client demands and therefore rostering takes place around the preferred times of our clients. These choices for clients are based on their level of need, the availability of family and friends and their own personal circumstances.

45. The ability to meet the needs and choice of clients is key in the delivery of services and central to the success for the Company. Where we are unable to meet the needs of the clients, we either limit their service options which is contrary to the purpose of Consumer Directed Care, or they would choose an alternate provider that could provide services in accordance with their needs.

46. The Company provides services in blocks of 30 minutes because services such as medication prompting etc. do not require a full hour of service. We always attempt to provide rosters that maximise the hours for staff but do need to balance that against the client demand.

47. There are regular occasions where employees are rostered on for 1 hour and these typically relate to services such as evening meal preparation or personal care services on weekends. While we always look to provide longer shift durations this is dependent on client need and choice.

48. If the Company was required to provide a three hour minimum shift to all employees we would be forced to review our ability to provide the flexibility to our clients and possibly not be able to meet their needs. Continuing to provide these flexible one hour services for clients while guaranteeing a minimum engagement of 3 hours would not be financially sustainable for the organisation.

RECALL TO WORK

49. The Company requires employees to be on call and as such we currently have 2 employees that have the primary responsibility for this function. When on call, these employees generally take phone calls while in their own premises and provide advice to clients, provide over the phone support to people who require emergency assistance and undertake urgent roster requests.

50. Employees who are on call are paid an on call allowance in accordance with the Enterprise Agreement.

51. Under our Enterprise Agreement an employee is taken to have been recalled to work if they have left the Company's premises or a client's premises and:

    (a) have to attend work or a client's home; or

(b) are required to work either at home or at work for a combined period of greater than 30 minutes within a two hour period.

52. If an employee is recalled to work after leaving the Company or a client's premises they will be paid for a minimum of two hours' work at the appropriate rate each time the employee is recalled. If the work required is completed in less than two hours the employee will be released from duty.

FAIR WORK COMMISSION
4 Yearly Review of Modern Awards
Social, Community, Home Care and Disability Services Industry Award 2010
Matter: AM2018/26

STATEMENT OF DEB RYAN

I, Deb Ryan, of [redacted] NSW, affirm as follows:

MY BACKGROUND

1. I am employed by Community Care Options Limited (**the Company**) in the role of Chief Executive Officer (CEO).

2. I am based at Coffs Harbour.

3. I have been employed with the Company since September 2007.

4. My role involves the leadership and management of the Company.

5. Prior to working with the Company, I was employed in the Disability sector for the NSW Department of Family and Community Services Ageing Disability and Home Care. I held numerous positions over the time I was there which was 1982 to 2007, with Management experience from 1988.

6. I have the following qualifications:

   (a) Associate Degree of Management & Professional Studies;

   (b) Graduate Certificate in Management (Public Sector Management); and

   (c) Programme Officer;

   (d) Registered Mental Retardation Nurse.

7. I also have significant training, development and experience in change management, leadership, child protection, out of home care, complaints management and people management.

8. In 2016 I was chosen to be NSW Not for Profit Leader of the Year at the Australian Leadership Excellence Awards.

THIS STATEMENT

9. The information in this statement is based on my experience and observations from either working at the Company, or from my experience generally working in the social, community, home care and disability services industry, and is true to the best of my knowledge.

10. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections.

11. Where I comment on matters that I did not personally observe, I identify the source of that information in this statement.

INFORMATION ABOUT THE BUSINESS

12. The Company has been in operation since around 1990 and was originally an auspice of Coffs Harbour City Council. The Company became an Incorporated Association in 1996 with governance via a volunteer Board of Management. The Company then became a Company Limited by Guarantee in June 2017, with a Board of Directors and Members. The Company operates in the social, community, home care and disability services industry.

13. The Company is a not-for-profit organisation limited by guarantee.

14. The Company provides aged care home care packages and NDIS services. All services that are provided are carried out in the home or in the community, the Company does not have premises on which services are carried out.

15. The Company services approximately 2,500 clients per year, and the approximate number of clients that are currently being serviced is 700.

16. The Company's operations include delivering a range of services to Aged Care clients as well as clients who are funded under the National Disability Insurance Scheme (**NDIS**). Services are delivered across the Coffs Harbour, Nambucca Heads and Bellingen Local Government Areas. The Company's primary objective and mission is to support and facilitate improved quality of life and independence for people living within our community.

17. The Company provides a range of services including Domestic Assistance, Personal Care, Social Support, support to clients requiring further home care on discharge from hospital, Transport and Welfare checks/Medication Prompting.

18. Community Care Options receives funding from Individuals funded by the National Disability Scheme (NDIS), Government Funded Aged Care Home Care packages, federal funding for the Commonwealth Home Support Program (CHSP). We also support client's exiting hospital under the Compacks program funded by NSW Health.

THE COMPANY'S WORKFORCE

19. The Company currently employs approximately 170 employees.

20. These employees perform a range of roles including administration duties, program/package oversight, coordination of supports, domestic assistance, medication prompting, meal preparation, personal care, social support, community participation and transport.

21. The Company's workforce consists of:

    (a) approximately 23 full-time employees;

    (b) approximately 82 part-time employees;

    (c) approximately 71 casual employees; and

    (d) approximately 20 independent contractors.

22. The Company has approximately 30 employees in the office, with the remaining 140 or so employees in the field providing services to clients. Those employees in the field are primarily part-time and casual employees.

23. The reason that the employees engaged in the field are primarily part-time and casual is because the Company cannot commit to providing full-time employment to those employees. This is due to the nature of the industry, which requires typically short shifts and has a high level of client cancellations. Clients can also go into respite or hospital which means they do not require services during these periods.

24. We have trialled employing full-time employees in the past but we found that while we were paying them for 38 hours per week, they weren't working for anywhere near that amount of time. This was losing the Company money and therefore we moved away from employing full-time employees.

25. Since reforms in both the aged care and disability sectors have been undertaken, the Company has experienced a shortage of experienced care staff, this has added an additional training burden on

the Company as due to the time lapse between gaining clearance for staff, for example, a Working With Children Check, a criminal history check as well as induction and training of staff and then providing buddy up shifts for the employee to gain experience takes time.

26. Typically in recent years we have been employing people with no previous experience in this industry.

27. There have been occasions where staff have resigned because of the high level of cancelled shifts, inconsistent work patterns or a realisation that the sector is not for them.

28. Employees complain about down time. However, because the sector is now focussed on client choice and control, clients have individual budgets and they determine what they will and will not pay for.

INDUSTRIAL ARRANGEMENTS

29. The Company does not have an enterprise agreement.

30. The Award is the principal industrial instrument applying to employees and the Company typically pays Award rates with the addition of some above award entitlements relating to travel time, admin time and renewal of first aid certificates.

THE NATURE OF THE INDUSTRY GENERALLY

31. Community Care Options use permanent staff where possible to ensure contract hours are met prior to considering casual employees. However, since the commencement of the NDIS and Consumer Directed Care the Company has experienced employees choosing to remain as casual employees rather than taking up offers of permanency, which appears to be because of the varying rates of pay.

32. The Company endeavours to offer casual staff permanency after 12 months of employment. Where possible the Company will try to ensure that a staff member's work pattern is consistent and where possible that any gaps are filled.

33. Where short notice of cancellation or rescheduling occurs it remains challenging across all service areas to ensure or guarantee an employee's hours. Services can change on a daily basis, depending on what is happening for a client. Our fortnightly rosters are the staff's pattern of work. Clients are not required to have the same services every week. Some clients request additional services.

34. The Company's experience to date regarding sector reforms has resulted in the Company investigating whether some services will remain viable into the future given the current payment models/rates along with undertaking a major restructure to ensure that any conflict of interest is actively avoided as well as re-evaluation of staff roles/responsibilities and classification under the award.

35. The Company continues to monitor the impact of reforms and pay structures and changes to the Award as any one of these areas could and would potentially affect the viability of ongoing services being provided in our local community.

36. Following reforms the Company has increased work for less income. For example, we are now required to manage individual client budgets, monthly statements, quotes and pay suppliers. We have not changed our service offerings but have considered making changes such as not providing non-essential services on weekends due to the impact of additional leave payments to staff which we cannot recoup from an individual clients funding.

37. NDIS does not fund things like staff training or buddy shifts requiring more than one employee for complex clients.

38. It is impossible to give all clients what they want, when they want it. Most clients want their services around the same time, for example early in the morning. If we were to provide clients the exact services they request at all times, we would require significantly more staff and most staff would only work for about three hours per day. We encourage clients to fit in with our staffing resources and usually they understand the difficulties we face and are agreeable.

39. We have had to increase our rostering team to assist with rostering services, changing services and cancelling services. A change by one client can impact all clients on a worker's roster for that day. Rostering staff requires consideration of a number of factors, including gender, location, travel time, staff skills, personality issues, car size and others. Not all staff can go to all clients and we have had to take employees off certain clients to utilise that employee for more complex clients.

THE NATIONAL DISABILITY INSURANCE SCHEME

40. The Company is a registered service provider with the National Disability Insurance Agency.

41. Since the introduction of the NDIS the Company has experienced increased work pattern inconsistency and a higher rate of turnover with newer staff due to client services being cancelled, rescheduled and/or a client choosing to move to another service provider.

42. Some of our employees work across a couple of local organisations to try to achieve a stable income and a regular pattern of work. Service provision under the NDIS requires separation of duties for some services delivered and where this is required it means that the organisation is unable to maximise hours for staff on a permanent basis due to fluctuating client demand and funded hours for separate services.

CONSUMER DIRECTED CARE

43. The Company is an approved aged care provider. We provide Consumer Directed Care.

44. The Company has experienced work pattern disruption and a higher rate of turnover with new staff due to client services being cancelled, rescheduled and/or a client choosing to move to another service provider. The Company is unable to maximise hours for staff on a permanent basis due to fluctuating client demand.

45. The difficulties associated with Consumer Directed Care are very similar to those difficulties we face under the NDIS.

CLIENT CANCELLATION ISSUES

46. The Company experiences client cancellations on a very regular basis. We experience client cancellations on at least a daily basis.

47. From 1 April 2019 to 30 June 2019 the Company had clients cancel their services on the same day on 205 separate occasions.

48. Some of the reasons why a client cancels their scheduled services include that they are feeling unwell, that they have people (such as family) visiting and they don't need the service, they have managed to get a doctor's appointment, they don't like the worker that has been rostered with them, or a number of other reasons.

49. When a client cancels a scheduled service, the Company only charges the client if they cancel after 4.00pm on the day before. If it is after 4.00 pm the Company charges the client for one hour maximum (less if their scheduled service was less, for example 30 minutes). We then pay the

employee for the time that we get from the client. For example if the client had a three hour service scheduled, but cancelled the night before, we would charge the client for one hour and pay the employee for one hour's work.

50. If we have other services that we can get the employee to work, we will give them the alternative service, however it is not common that we are able to find the employee alternative work for the time that they were rostered for.

51. It is easier to just pay the employee one hour than attempt to find them a replacement shift. It takes considerable time to track the employees who have had cancelled shifts, given the high number of cancellations we get, and then to attempt to reallocate them a shift.

52. There is no typical notice given by clients cancelling services. Some clients cancel very early and some clients cancel on the day. Some clients will even cancel when the employee gets to the door.

53. If the Company was required to pay the employee for their rostered shift if a client cancelled with less than 48 hours' notice it would have a fairly significant impact on the business. The Company would need to have the clients pay more to cover that cost, as the Company would not have the money to cover the cost. If the Company was to ask the clients to pay more we would be at considerable risk of losing clients' business to providers that could afford not to make the client pay more.

PART-TIME EMPLOYEES

54. The Company employs part-time staff in a variety of roles, including Support Workers, Service Coordinators, Support Coordinators, Assessment Officer, Project Manager and Administration staff.

55. When engaging part-time employees in service delivery we typically employ them on between 15 and 22 hour per week contracts. Other part time employees are employed as per business requirements. Most part-time employees work above their contracted hours. The reason for this is that we can identify that between 15 and 22 hours per week is sustainable, but cannot commit to any more. If clients get sick and go into hospital for extended periods it can be difficult to fill staff contracts.

56. Most part-time employees are offered additional hours of work. Employees are not required to accept the additional work, this is mutually agreed. The majority of our part-time employees work

above their contract hours, with many working in excess of 30 hours per week. There are times however when we pay staff for their contracted hours, and they have not worked that many hours.

57. In the past year, part-time employees have worked 95,000 hours above their contracted hours.

58. If the Company was required to pay overtime to part-time employees who work in excess of their contracted hours, the Company would likely go bankrupt. It would be unsustainable, and we would need to find more staff, but would have trouble doing that. We have no ability to pass overtime costs onto clients, for example, NDIS does not have an overtime item.

59. We have difficulty finding staff with the appropriate skills each time we undergo recruitment. We have recruited three times this year and have had an intake of 4 to 18 employees each time we undergo a recruitment process, but it is not easy to find people.

MINIMUM ENGAGEMENTS

60. The Company's work is based on client demands and therefore rostering takes place around the preferred times of our clients. As our services are provided around client choice it can be challenging at times when there are cancellations and rescheduling of services, change to a different service provider for some or all of a client's services, or there are specific requests regarding the staff providing the direct services. For example, a client may request more services from a specific staff member, or choose not to have services provided by another staff member.

61. Services such as medication prompts, heating of meals, application of TED stockings and some transport services can be provided in as little as 15 minutes. Therefore we roster all services in 15 minute intervals.

62. While we endeavour to ensure that employees have full rosters, the nature of our industry is that employee rosters are susceptible to change as the needs of our complex client base changes.

63. On any given day, a casual employee may be required to provide one off additional support to meet client demands. If that casual employee does not possess the required skill or client familiarity to provide all aspects of the services that client requires, it may not be possible to provide that employee with three hours' work.

64. Our shifts vary between 15 minutes and 12 hours. A typical service for Domestic Assistance may be two to three hours. Personal Care services typically range from 30 minutes to one and a half hours depending on the client's mobility, age, disability, health issues etc.

65. The Company rosters employees in a run of clients to avoid employees having gaps in their day but if clients cancel then sometimes gaps are unavoidable.

66. Most employees work between five and six hours per day. Some of these are broken shifts and some are consecutive.

67. The Company's busiest time is from 6.00am to 10.00am in the morning and from 5.00pm to 11.00pm in the evening. It's difficult to find staff to work on the evening run.

68. If the Company does not provide services in the requested time period the clients will likely leave for another provider that can provide the services in their requested time period.

69. We have experienced clients leaving because we haven't been able to accommodate their needs. We have seen at least two clients leave in the past 12 months. Usually clients understand when you explain to them why you can't provide them a service at their exact rostered time, but sometimes they do not.

70. We try to allocate domestic assistance shifts (such as cleaning etc) to the middle of the day to provide work for our employees from 10.00am onwards. We leave the early mornings and nights for showers, medication and other services that are necessary for clients at those times.

71. If the Company was required to provide a three hour minimum shift to all employees the potential impact on the Company's bottom line would be significant as many services provided by the Company are short shifts.

72. An introduction of a three hour minimum shift would also impact significantly on staff rostering workloads and there would be a certain level of knowledge required across the organisation in relation to employees and what their skill level is and what particular client requirements are and how they interact with employees' skills.

RECALL TO WORK

73. We don't recall employees to the workplace, but we have staff on call. We provide an above award on call allowance.

74. The Company provides an on call service to clients and staff between 6.00am and 8.30am and 4.30pm to 10.00pm Monday to Friday, and from 6.00am to 10.00pm on weekends and public holidays.

75. The person on call only answers the phone, they don't have to go out and attend to anything. We pay $50.00 per day on weekdays and $100.00 per weekend day. Employees are allocated two weeks per year for on call. They work one full week on call in first 6 months and one in second six months. They are paid $450.00 for the week (in addition to their wages) to answer the phone and manage whatever the call requires.

76. Some days the on call person will receive no calls, and some days they could receive 10 calls.

77. If we were required to pay overtime we would have to stop providing the service as we do not charge clients for this. This would be unfortunate as it is a service that makes our business competitive within the market and something that not all providers offer.

78. Reasons that clients use the on call service can be to change their service, to inform us that they are going to hospital and for cancellations. Clients are asked only to use the on call service if the issue is urgent.

79. Employees use the on call service to call in sick or if they need to change their shift. They also use the service if they require support with a client issue. We encourage employees to use it for this purpose as we want our staff to feel well supported. The on call person will assist by amending the roster.

FAIR WORK COMMISSION
4 Yearly Review of Modern Awards
Social, Community, Home Care and Disability Services Industry Award 2010
Matter: AM2018/26

STATEMENT OF JOYCE WANG

I, Joyce Wang, of [redacted], affirm as follows:

MY BACKGROUND

1. I am employed by CASS Care Limited (**the Company**) in the role of Senior Executive Officer of Human Resources Management.

2. I am based at Campsie in the state of New South Wales.

3. I have been employed with the Company since around May 2015.

4. My role involves implementing all HR activities from recruitment to separation, ensuring the compliance with all HR policies and practices, providing advice and assistance to managers of all service units in workforce management and in relation to staff issues.

5. I hold a Master's degree of Human Resources Management.

THIS STATEMENT

6. The information in this statement is based on my experience and observations from either working at the Company, or from my experience generally working in the social, community, home care and disability services industry, and is true to the best of my knowledge.

7. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections.

8. Where I comment on matters that I did not personally observe, I identify the source of that information in this statement.

9. In preparing this statement I have consulted with the Senior Executive Officer of Home Ageing Services and the Senior Executive Officer of Disability Services in relation to matters specific to their areas.

INFORMATION ABOUT THE BUSINESS

10. The Company has been in operation since 2002 and is a subsidiary of Chinese Australian Services Society Limited, which was founded in 1981.

11. The Company operates in multiple industries, including the social, community, home care and disability services industry.

12. The Company is a not-for-profit organisation.

13. The Company provides a comprehensive range of community services and activities in a wide geographical area which currently covers Metropolitan Sydney and Wollongong.

14. We primarily service the Chinese, Korean, Indonesian and Vietnamese community, but we also service other people in the general community as well. At present, over 2,800 families access our services and activities weekly.

15. The Company's mission is to:

    (a) Cultivate a culture of respect and acceptance;

    (b) Assure the provision of qualified and professional services;

    (c) Safeguard open communication and collaboration of all stakeholders;

    (d) Support personal responsibility and empowerment of service users;

    (e) Continue the growth and adaptation to meet the needs of all concerned;

    (f) Adopt person-centred and consumer directed care approaches;

    (g) Respect the rights, privacy, dignity, culture, and beliefs of service users;

    (h) Enhance service innovations and excellence; and

    (i) Sustain team spirit and foster continuous improvement.

16. The Company provides Home Ageing Services, Residential Aged Care Services, Disability Services, Child Care Services, Vocation & Training Services, Settlement and Health Services and Volunteering Services.

17. The Company has the following on-going funding arrangements with Government departments:

(a) Approved provider of residential aged care services subsidised by the Department of Health;

(b) Approved provider of home care package (**HCP**) services subsidised by the Department of Health;

(c) A funding agreement with the Department of Health to provide aged care service under the Commonwealth Home Support Program;

(d) An approved certification with NDIS Quality and Safeguard Commission to deliver services under NDIS; and

(e) A grant agreement with Department of Social Services to provide Settlement Services under the Settlement Service Program.

INDUSTRIAL ARRANGEMENTS

18. We have an Enterprise Agreement titled 'CASS Care Limited Enterprise Agreement (Other Than Children's Services) (NSW) 2018-2021' (**the Enterprise Agreement**). The Enterprise Agreement came into force on 12 February 2019.

19. The Enterprise Agreement has replaced the Award to become the principal industrial instrument applying to eligible employees. The Company pays eligible employees in accordance with the Enterprise Agreement.

THE COMPANY'S WORKFORCE

20. The Company currently employs approximately 350 employees, among which 260 employees were previously covered by SCHCDS Award and are now covered by the Enterprise Agreement.

21. These employees perform a range of roles including Support Worker, Community Worker, Coordinator, Officer, Team Leader, Executive Support Officer and Executive Officer.

22. Of the employees who are covered by the Enterprise Agreement, the workforce consists of:

(a) approximately 21 full-time employees;

(b) approximately 114 part-time employees; and

(c) approximately 125 casual employees.

23. Of all employees covered by the Enterprise Agreement, most of them work in Home Ageing Services or Disability Services, and some of them work in both Home Ageing Services and Disability Services. The Company needs to maintain the flexibility of our workforce due to the nature of these two services and therefore, the majority of our employees are part-time employees and casual employees. The Company cannot employ full-time employees to work in Home Ageing Services and Disability Services because we won't be able to provide them with 38 hours of work each week.

THE NATURE OF THE INDUSTRY GENERALLY

24. The impact of home care reform on the human resources management in our Company includes:

    (a) an increasing demand on the number of trained workers as there is competition in the job market for suitable workers;

    (b) a requirement for a team of support workers who can be more flexible and are trained well; and

    (c) significant pressure on rostering as a result of greater consumer control and decision rights in relation to the day and time that the service is provided and the particular service that they receive.

25. The reforms in the disability industry including the introduction of the NDIS, participant-driven funding and the standardised price guide have resulted in a considerable process shift for the Company. This is particularly in relation to determination of service funding, consideration of overheads, cost of delivery, marketing presence and work efficiency. Employing and releasing staff is based on the continuity of participant's NDIS plan, or the amount of client allocated funds, there is less flexibility in terms of charging financially disadvantaged clients.

26. Both rostering and engagement of new employees are based on the admission and exit of clients. An example is that, if a client who has been accessing 30 hours of service per week, decided to change their service provider to a non-NDIS registered provider, the assigned support worker to this client would face reduction of shift hours and subsequent loss of income, unless the Company receives a new service request. The reason that clients change to non-NDIS registered providers is because they usually yield cheaper prices and are more flexible with the hours they provide services.

27. The NDIS pricing structure does not fit into the existing service model of the Company. When the Company was receiving block funding, permanent support workers could be guaranteed hours of

work and the Company had more flexibility to support clients with very complex needs and/or a sudden increase in support needs. In comparison, with the NDIS, permanent support workers might need to be contracted with very limited weekly hours to allow for the flexibility associated with the NDIS, which the Senior Executive Officer of Disability Services advises me is resulting in support workers working for multiple employers to meet their financial needs to support their families. This trend has also increased the complexity with rostering support workers.

THE NATIONAL DISABILITY INSURANCE SCHEME

28. The Company is a registered service provider with the National Disability Insurance Authority.

29. The Company is currently registered for the following type of services:

(a) Group Centre Activities;

(b) Specialised Disability Accommodation;

(c) Plan Management;

(d) Participant Community;

(e) Assist Prod-Household Tasks;

(f) Household Tasks;

(g) Development Life Skills;

(h) Innovative Community;

(i) Daily Tasks Shared Living;

(j) Assist Travel Transport;

(k) Assist Personal Activities; and

(l) Assist Life Stage transition.

30. Due to the complexity of the claiming and booking system of NDIS, the Company has also been required to spend additional money on new financial and governance systems. For example, the Company has spent money on a new Client Record Management (CRM) and cost of certification to retain the status as an NDIS registered provider.

31. NDIA has the strong emphasis on client choice and control of their individualised funding. There has been an introduction of a self-managed model which the Senior Executive Officer of Disability Services advises me allows clients to choose non-NDIS registered services (for example, private providers and sole traders that charge less than the NDIS price guide).

32. As a result of this, the Company is in competition with these providers and has been losing either entire clients or substantial shift hours to them. For example, of the Company's 61 NDIS Individual Support clients, 12 of them are currently using both the Company and private providers' services. The Senior Executive Officer of Disability Services advises me that based on the move that has already been made towards these non-NDIS providers, there is the potential for these clients to move entirely to private services if they consider that the NDIS pricings are too expensive for them.

CONSUMER DIRECTED CARE

33. The Company is a service provider under the Home Care Package program and Residential Aged Care Services.

34. Consumer Directed Care (**CDC**) is a model of service delivery designed to give more choice and flexibility to consumers. Consumers who receive a Home Care Package have control over the types of care and services they access and the delivery of those services, including who delivers the services and when. From 1 July 2015, all Home Care Packages provided by the Company are delivered in accordance with CDC.

CLIENT CANCELLATION ISSUES

35. For Home Care Services, the Company experiences client cancellations on a regular basis, approximately 40 visits are cancelled per week. In the month of May 2019, there were approximately 180 out of 4,700 visits of all types of service cancelled due to various reasons.

36. For Disability Services, in the month of May 2019 there were 11 cancellations from 6 clients out of 25 attending our day program sessions and there were 5 cancellations from 1 client out of 61 clients using our Individual Supports service.

37. Some of the reasons why a client cancels their scheduled services include social leave, because they are in hospital or casual leave of consumers. Casual leave of consumers refers to the leaves

requested by the clients in general. For example a client may change or stop a service if a friend visits, or if they need to attend a special event, festival celebrations or for medical appointments.

38. When a client cancels a scheduled service, the steps that the Company will take are as follows:

(a) For Home Ageing Services, if a client cancels a scheduled service before 5.00pm for the shift of the following day, the client will not be charged, and the support worker will be informed but not be paid for the rostered shift. The Company tries to arrange another shift for the support worker if there is service request not assigned to other support workers. If the client's cancellation is after 5.00pm, a late cancellation fee of one hour will be charged to the client, and the rostered support worker will receive a one hour shift payment regardless the original length of the shift.

(b) For Disability Services, according to NDIS guidelines, any cancellation by 3pm for the shift of the following day, the provider is not eligible to claim a cancellation fee from client. In these circumstances the assigned support staff will usually get informed immediately and the shift will be cancelled or get rescheduled to another day. If the cancellation happens with less than the required notification, the support staff will still be informed, a two hour cancellation fee will be charged to the client and the assigned staff will receive two hours payment regardless of the original duration of the shift.

39. For Home Ageing Services, we are notified well beforehand if the cancellation is due to the client's scheduled leave, however, the notice of cancellation due to unexpected reasons is usually less than 24 hours. For example a client goes into hospital or one of their close friends or relatives dies.

40. For Disability Services, most of the cancellations happen on our day program and the cancellation notice is usually overnight and less than 24 hours.

41. If the Company was required to pay employees every time a client cancelled and did not provide 48 hours' notice, it would mean that the risk of service cancellation would be solely on the Company if a client cancels before 3.00pm for disability services or before 5.00pm for home care services. This would be unsustainable financially for the Company.

42. This would be a considerable cost to the Company and would be a heavy financial burden. The Company currently has approximately 440 Home Care Package clients, 200 Commonwealth Home Support Program clients and 100 clients in the disability services sector.

PART-TIME EMPLOYEES

43. The Company employs part-time employees in a variety of roles, including Support Worker, Community Worker, Coordinator, Officer, Team Leader and Executive Support Officer.

44. When engaging part-time employees, they are advised of the details of the minimum working hours per week or fortnight and the initial working pattern in their employment contracts.

45. The Company offers part-time employees work in excess of their contracted hours on a regular basis. This is done in order to satisfy the client's needs, including client cancellations or change to the service as requested by the client.

46. For our Home Ageing Services, in the last four weeks between 5 June and 2 July, there have been a total of 1,863 hours offered to part-time employees in excess of their contracted hours. If these hours were to be paid in overtime rates, the cost would be around $42,316 for that four week period.

47. In the past month, about 88 per cent of our permanent part-time support workers in our Home Ageing Services have worked more than their contracted hours. The number of excess hours ranged from 5 hours to 15 hours.

48. In the past month in our Disability Service 100 per cent of permanent part-time support workers have been allocated shift hours that exceeded their contracted hours, and the excess hours ranged from 5 hours to 20 hours.

49. If the Company was required to pay overtime to part-time employees who work in excess of their contracted hours, the Company would need to recruit more casual employees and ensure that part-time employees are only performing their contracted hours and nothing more.

50. In order to control cost and maintain competitiveness in the market, the Company would avoid rostering part-time employees to work overtime. If the Company was to identify that employees may need to work overtime, we would recruit more casual employees in the first instance. If the demand for overtime persisted, we would employ additional permanent part-time staff to provide service in their ordinary hours.

MINIMUM ENGAGEMENTS

51. The Company's work is based on client demands and therefore rostering takes place around the preferred times of our clients.

52. Under the CDC service model, clients have control and choice on the services that they receive. This limits the flexibility of the Company in rostering support workers to provide service to the customers.

53. Under NDIS, one of the elements regarding a provider's code of conduct when delivering services to client states: "To Support people with disability to make decisions", which means people with a disability have the right to make choices and should always be assumed to have the capacity to make those choices, as this is central to their individual rights to freedom of expression and self-determination. Depending of the service nature, the Company will need to make arrangements as per the client's request.

54. As a result, the Company is required to make our workforce as flexible as possible to satisfy the needs of our clients receiving Home Ageing Services or Disability Services.

55. If the Company does not provide services in the requested time period, the clients can leave our service and go to other providers. For Disability Services, aside from choosing another NDIS service provider, the client may choose to self-manage his/her NDIS plan or hire carers that are self-employed through carer hiring platforms like Mable or HireUp. These platforms allow for support workers (as sole traders) to register and upload their qualifications and availability, and clients can view the workers' profiles and choose someone to support their service needs. The hourly rate is usually cheaper and negotiable between the two parties.

56. In relation to client service length, in our Home Ageing Services, shift lengths range from one to five hours. These shifts can be broken down as follows:

    (a) one hour shifts account for 15 per cent of all shifts;

    (b) shifts more than one hour and less than three hours account for 60 per cent of all shifts;

    (c) three hour shifts account for 11 per cent of all shifts;

    (d) four hour shifts account for 7 per cent of all shifts; and

    (e) five hour shifts account for 7 per cent of all shifts.

57. In our Disability Services, shift length ranges from two to ten hours. 15 per cent of these shifts are two hours long, and the remainder of the shifts are longer than two hours. The majority of shifts with longer hours are for employees working in Group Homes, which operate on a 24/7 basis. Whereas for Individual Support services, the hours are much shorter.

Home Care Services

58. Home Care Package customers are classified into four levels. Level 1 is for people with a low care need. Level 2 customers are still low care, but they need more support. Clients who are Level 1 often only need one and a half to two hours of services every week or fortnight, depending on their needs. Clients on Level 2 vary from one and a half hours to four hours per visit.

59. Roughly, 37 per cent of service hours required by the Company's clients are between 1 and 1.5 hours, 38 per cent are between 2 and 2.5 hours and only 25 per cent of the service hours that we provide to clients are 3 hours or more.

60. This means that 75 per cent of our client request service sessions are less than three hours.

Disability Services

61. In the disability support service sector of the business, the percentage of requested service that is less than 3 hours ranges from 11 per cent to 23 per cent.

62. For Group Homes, on a weekly basis, the Company currently rosters four two hour shifts in the morning, for the purpose of transporting clients to attend a day program of work; for other service types, i.e. day program and individual supports, a total of 83 shifts are assigned within a fortnight which are of two hours per shift. The main reasons for these short shifts are the nature of the work (e.g. regular domestic assistance, simple household tasks), the client's choice and the limited funding available under individual NDIS plans.

63. If the Company was required to provide a three-hour minimum shift to all employees there would be a significant impact on the flexibility of our rostering arrangements and there will be a significant increase in costs for the business.

64. In my experience, some employees like short shifts that are less than three hours. In particular, some mothers who need to care for their children like the short shifts because of their caring

responsibilities. In the past, I have had job applicants refused our job offer because the hours we told them were required were too long for them.

BROKEN SHIFTS

65. The Company engages employees to work broken shifts. The reason for this is due to clients' ability to choose how they spend their funding and the fact that this requires our workers to work at a variety of different locations at irregular or unpredictable hours.

66. Of our home care employees, 99 per cent of those workers are working broken shifts. Of our disability services employees, 80 to 90 per cent of the employees work broken shifts.

67. Broken shifts are commonly used in Home Ageing Services because our consumers usually request services of a short time period, ranging from 1.5 to 3 hours in one visit. Support workers normally work for two to three consumers per a working day. Consequently, broken shifts are normally arranged in our service.

Social, Community, Home Care and Disability Services Industry Award 2010
Matter: AM2018/26

STATEMENT OF DARREN MATHEWSON

I, Darren Mathewson, of [redacted] Tasmania, swear as follows:

MY BACKGROUND

1. I am employed by Aged & Community Services Australia (**ACSA**) in the role of Executive Director for NSW, ACT, Tas & Vic and for the national portfolio areas of Member Support, Services & Engagement which include our Employee Relations and Workforce Units.

2. I am based in Tasmania, however my role involves travelling throughout all States and Territories.

3. I have been employed by ACSA since mid 2016 when the state organisation I had been CEO of for over 9 years became part of this new national organisation.

4. My role involves operational and strategic responsibility for the national areas of policy, member information, support and services, employee relations services, workforce and industry development. I also have a geographic responsibility for our operations in Tasmania, Victoria and NSW & ACT with a focus on member engagement, networking and events.

5. I have more than 12 years' experience working in the aged care industry in roles relating to policy, advocacy, employee relations, governance, members services, and workforce development. Prior to working with ACSA, I was Chief Executive Officer of Aged & Community Services Tasmania for over 9 years. Prior to that I had worked for 17 years in the trade union movement as an industrial advocate, union leader and educator/campaigner. This included State Secretary of the Tasmanian Branch of the LHMU (now United Voice), President of Unions Tasmania and Campaigns Coordinator/Educator for Unions Tasmania.

6. I have a Bachelor of Arts from the University of Tasmania.

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

7. The information in this statement is based on my experience and observations from either working at ACSA, or from my experience generally working in the social, community, home care and disability services industry, and is true to the best of my knowledge.

8. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections. Where I comment on matters that I did not personally observe, I identify the source of that information in this statement.

INFORMATION ABOUT ACSA

9. ACSA has been in operation since around July 2016 as a national organisation, registered with the ACNC, and operating as a company limited by Guarantee. Prior to that ACSA had been operating since 1975 as a federated body.

10. ACSA is a leading peak body supporting and representing organisations that provide accommodation and care services to older Australians.

11. ACSA represents members who operate in the aged care industry. ACSA has over 600 members based throughout Australia, including some of the largest aged care service providers in Australia, right through to small family run businesses.

12. ACSA's members operate in the public interest and on the basis of a mission to support older Australians. They work in all communities around Australia, including rural, regional and remote areas, and with a wide variety of people, including disadvantaged groups such as those who are homeless and/or have special needs. Our members include church, charitable, community based, not for profit and mission focused services which provide a diverse range of services from residential aged care, home care and support, respite, day centres, wellbeing programs, palliative care and dementia care, and housing and retirement living.

13. ACSA has physical offices in all states of Australia and national portfolio teams including in policy, employee relations and workforce. These teams are responsible for providing member information, communications & publications, events, training and professional development, member support, programs and advice. They also develop policies and positions and respond to requests for submissions, responses, commentary by Government departments at all levels,

agencies and commissions and a range of other external stakeholders. This work is undertaken in close consultation with members who inform, provide evidence and participate as required.

14. In addition to direct contact through our national contact points, website, communications and state offices we have advisory and input structures in place as follows:

    (a) State Divisional Councils;

    (b) State Advisory Committees and Networks covering the areas of Residential, Home Care, Finance, Workforce and Retirement Living & Housing;

    (c) National Advisory Committees & Networks covering Residential, Home Care, Retirement Living & Housing and Rural, Remote & Regional.

    ACSA also has strong relationships with service providers to the aged care industry in the areas of financing, accounting, legal, technology, insurance and superannuation that provide us with access to external expertise.

15. The combination of the internal and external knowledge and expertise available to ACSA allows us to provide commentary on all key issues to the sector and in particular in relation to funding, workforce and other policy areas.

16. ACSA's vision is 'a strong industry delivering the services Australians want' and ACSA's mission is 'to advocate for, and support, our not-for-profit members to continue to provide high quality services valued by older people.'

17. ACSA supports its members through the following methods:

    (a) the provision of policy and advocacy;

    (b) collective representation;

    (c) the provision of opportunities for collaboration, information, support and advice;

    (d) employee relations;

    (e) access to consultancy services;

    (f) workforce development (including training and professional development);

    (g) events and networking opportunities;

(h) access to external corporate expertise and relationships;

(i) promotion of the sector; and

(j) leadership in the sector.

18. In addition we have a key role to play in fostering constructive working relationships with Government Departments at all levels and other key stakeholders. ACSA is a founder and sponsoring organisation of the National Aged Care Alliance (NACA), a collaborative body of key stakeholder groups (providers, unions, health professionals and consumer groups) focused on achieving a system that allows every older Australian to age and live well, with dignity and independence and as part of their community in the place of their choice whilst receiving quality care, services and support.

THE NATURE OF THE INDUSTRY GENERALLY

19. The National Institute of Labour Studies (2016 National Aged Care Workforce Census and Survey – The Aged Care Workforce) (**NILS Report**) provides the best workforce data set available. In its most recent report on the aged care workforce it found that:

(a) there are 130,263 PAYG workers in home care and home support outlets;

(b) 89% of home care workers are female with a median age of 52 years;

(c) 23% of the workforce are from overseas;

(d) 75% of the workforce are employed on a permanent and part time basis with an additional 14% employed as casual or contract employees (note this is a significant reduction from 41% casual or contract employees in 2012);

(e) 75% of workers engaged in work-related training (mostly mandatory) in the previous 12 months; and

(f) 48% of workers undertook continuing and professional development (CPD).

20. In general in relation to the different workforces, the NILS Report found the following:

(a) the aged care workforce is older than the national average, generally in good health with high levels of post-school education and training;

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

(b) the direct care workforce is relatively stable, with only a small minority indicating an intention to leave the sector within 12 months; and

(c) the residential workforce is getting younger and the home care and home support workforce is getting older.

21. As home care services grow, there is a need for clear strategies and resourcing (e.g. labour market programs) to allow the supply of skilled labour to match the growth of home care services.

22. The NILS Report found that home care and home support workers reported greater job satisfaction, identifying the time available to care for clients and having freedom in their work and less stress and pressure than their residential care counterparts as key factors.

23. Particular issues facing the home care workforce include the impact and management of consumer directed care (**CDC**) on working conditions and employment and balancing that with compliance with the Award and organisational Enterprise Agreements.

24. Reforms since the 2011 Report of the Productivity Commission into Caring for Older Australians have had a significant impact on service provider operations, the workforce and also on consumers and their families/carers. Of particular note for the home care sector are:

(a) Consumers being able to direct their own care and support has meant providers are required to respond to individual needs and requests and therefore have to be able to access services beyond their scope at times or deploy staff at short notice or for shorter periods. For example, if a group of clients all chose to be assisted in showering at different times then managing this in terms of rostering and deployment can be challenging. Previously when the providers controlled the packages they could deploy a single worker with the required skills set over a set period of time to cover multiple client engagements.

(b) Increased competition between providers for both clients and staff.

(c) A new environment in which the client owns the home care package and can change service providers. In addition when a client leaves their package (for example after death) this package then returns to a nationally controlled prioritisation process and can be assigned to another individual (on the national waiting list) anywhere in Australia who then

choses from an available service provider in their area. This means home care organisations are subject to drops in service demand that can be sizeable and fast and subsequently create pressure on the sector in terms of aiming for the ideal arrangement of secure and permanent work. The gains made in moving from casual to permanent employment are challenged by the consumer driven system.

(d) Examination of new business models, use of technologies, introduction of new roles, and job re-design to adapt and respond to the new consumer driven environment. This has also included looking at partnerships and brokerage (sub-contracting to other service providers who can deliver services in a geographical location) arrangements so that home care service providers can offer a diverse range of services and provide the client with a level of continuity and streamlined access.

THE HOME CARE SECTOR

25. The home care sector is still relatively new with various reforms undertaken in the 1980s resulting in the Home & Community Care (**HACC**) Program, now the Commonwealth Home Support Program (**CHSP**), and then in the 1990s packages of care being delivered into people's homes.

26. The Commonwealth Government controls the supply of services and packages, levels of funding, the regulatory framework, administrative infrastructure for payment of subsidies, consumer entry and navigation through the system (**My Aged Care**).

27. The sector has been subject to accelerated change as it moves away from a dependence-based model to a wellness and reablement approach with greater choice and control by consumers through CDC.

28. The focus on the consumer has led to increasing regulatory requirements around quality, safety and pricing and a need to invest in technology and systems to enable greater efficiency, data collection and accountability.

29. As the supply of home care has grown due to both a Government policy shift and consumer preferences we have seen a greater need for Government administration and infrastructure to support the system. These systems have struggled to be user friendly and responsive to

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

consumers in the early stages and home care providers have had to continue to assist aged people and their families with access and navigation.

30. There are various workforce challenges that exist in this sector closely connected with the dispersed nature and indirect supervision of the care and support workforce including access to right fit candidates, skills and qualifications, delivery of education and training, communication and performance management in a regulated environment caring for vulnerable adults. There are however, benefits to the workforce in terms of potentially being able to work close to home and their immediate community.

31. Services in home care are funded by the Commonwealth (approximately 90%), with some consumer contributions (approximately 10%). The Commonwealth funding is subject to an income test plus annual and lifetime caps on care costs. Different fee structures apply between the programs and increasing consumer contributions remain a contentious issue, however the looming demand and demographics and subsequent cost to the Government indicates that a decision to increase these will need to be made soon.

32. The level of regulation has increased in home care as the sector has grown and expectations have increased. The sector has now moved under the Single Quality Standards that apply to all areas of the Commonwealth aged care sector. In addition with the central focus on consumers the sector is required to engage with new and existing clients to present and have them understand their Charter of Rights (for consumers).

33. Greater expectations around pricing have resulted in mandatory requirements for publishing of prices and the form in which they are published on My Aged Care.

34. Providers of Commonwealth subsidised aged care are “Approved Providers” and are subject to screening and an application process. This is the regulated sector. There is a growing group of private providers delivering in home services not subject to the regulatory framework including quality and safety standards.

VARIOUS PROGRAMS IN THE HOME CARE SECTOR

35. There are a number of different home care programs operating in Australia, which are managed by the Commonwealth government or particular departments of the Commonwealth government.

Commonwealth Home Support Program (CHSP)

36. An entry-level program, the CHSP is intended to provide ongoing or short-term care and support services. The 2018 CHSP Manual, developed by the Federal Department of Health to assist in the guidance of service delivery, notes that services delivered are expected to be, in total, lower than the Government subsidised cost for services provided under a Level 1 HCP (less than $8,000 per annum). Higher intensity services should only be provided for a short term.

37. Services include help with housework, home maintenance, personal care, meals and food preparation, transport, shopping, allied health, social support, planned respite and community transport.

38. Support is underpinned by a wellness approach, which is about building on each person's strengths, capacity and goals to help them remain independent and to live safely at home.

39. The CHSP commenced in July 2015 from a combination of former programs including:

    (a) Home and Community Care Program (which had been managed by state and territory governments) with Victoria and Western Australia joining the program, in July 2016 and July 2018 respectively;

    (b) National Respite for Carers Program;

    (c) Assistance with Care and Housing for the Aged Program4 for those who are homeless or at risk of homelessness (**ACH**); and

    (d) Day Therapy Centre (**DTC**) Program.

40. As part of the CHSP being established, Government created Regional Assessment Services (**RAS**) to undertake an independent assessment of eligible individuals.

41. In 2017–18, CHSP provided support to a total of 847,534 aged persons. Of those, 76% received only one or two service types. There is no published demand data for the CHSP.

42. There is a great deal of variation around the country in how CHSP operates in practice and some people receive larger amounts of care than would be expected for an entry level program. The CHSP is also currently filling gaps created by the high unfulfilled demand for HCPs.

43. The CHSP is a grants-based program. Generally, with grants-based programs new funding is offered through funding rounds with providers applying for additional resourcing. Government has recently offered existing CHSP providers additional funds to increase services seen as a priority for growth.

44. There has not been an open funding round for some time and additional funding, with the exception of the provision of indexation, has not been available on an annual basis. There is a lack of transparency on the application and usage of CHSP growth funding by the Government.

45. The current program structure and funding is in place until 2020, with Government considering integrating the CHSP/HCP programs in line with its 2015 Budget statement of intent. Little work appears to have occurred towards this goal with the deadline now quite close. Planning and development of CHSP services is impacted on by this uncertainty.

Home Care Packages (HCPs)

46. HCPs provide a national consistently structured, and more comprehensive package of home-based care support, over four levels of care:

    (a) Level 1—to support people with basic care needs;

    (b) Level 2—to support people with low level care needs;

    (c) Level 3—to support people with intermediate care needs; and

    (d) Level 4—to support people with high care needs.

47. Under the HCP program, a range of personal care, support services, clinical services and other services are tailored to meet the goals and assessed needs of the person. The consumer is

allocated an individual funding package and they determine their coordinated package of care and services, in consultation with the service provider.

48. Since February 2017, HCPs have been assigned directly to the person needing care rather than allocated to providers. This allows people to direct their HCP to the provider of their choice as well as change providers more easily.

49. People assessed by the ACAT as requiring HCP are placed on the National Prioritisation Queue (**NPQ**) based on how long they have been waiting for care and their individual needs and circumstances, regardless of where they live.

50. The overall number of HCPs available is determined through a funding ratio which builds growth into the system based on the number of older people 70 years or older per 1,000 of the population. This means that the supply of aged care places (beds and HCPs) increases in line with growth in the population but it is not based on demand.

51. The Legislated Review of Aged Care 2017 (**Tune Review**) highlights that there is no clear robust measure of demand for aged care. There are currently around 128,000 people waiting for an HCP which highlights that the planning ratio has not provided the number of HCPs required to meet current demand.

52. Governments have altered the balance between home and residential care over time with most of the growth emphasis remaining on residential care while the public demand is for home care. This is starting to shift and beyond 2022 which is when the current forward planning concludes we expect a significant acceleration in the supply of home base care and support services.

Veterans' Programs

53. Veterans' Home Care (**VHC**) is a program designed to assist Eligible Veteran Beneficiaries (**EVBs**) who need a small amount of practical help to continue living independently in their own home. Services include domestic assistance, personal care, respite care, and safety-related home and garden maintenance. It is not designed to meet complex or high-level care needs. EVBs access VHC via the VHC Assessment Agency but can also access CHSP via MAC.

54. The DVA Community Nursing Program is designed to enhance the independence and health outcomes of eligible veterans by avoiding early admission to hospital and/or residential care through access to community nursing services that meet their assessed clinical and/or personal care needs.

55. In 2017–18, 47,449 older veterans were approved for VHC and 17,253 received community nursing services, representing 36% and 13.1% of older eligible veterans respectively.

56. These Programs are administered and funded separately through DVA despite their similarity to other home care and support services.

57. The Programs were created because there were some concerns about whether Veterans were getting adequate access to the services they needed through other available programs.

Short Term Restorative Care

58. Wellness, re-ablement and restorative approaches are emerging as powerful ways to help older people improve their function, independence and quality of life.

59. The Short-Term Restorative Care (**STRC**) Program aims to reverse and/or slow 'functional decline' in older people and improve their wellbeing. People living at home are eligible to use these services.

60. Carers are encouraged to use the Carer Gateway, which helps them access information about services and support in their local area for people who care for someone with disability, chronic illness, dementia, mental illness or who are frail aged. However, to access respite under CHSP, they must also access and be assessed by MAC.

CONSUMER DIRECTED CARE AND OTHER REFORMS IN THE HOME CARE SECTOR

61. Consumer Directed Care (**CDC**) in home care was first piloted in 2010 before being rolled out across all home care packages from July 2015. It is attributable to this that some providers have a matured approach to CDC, whereas other providers are only 12 months into the journey.

62. Prior to the introduction of CDC, home care packages in Australia were provided as a bundled set of services relatively tightly-specified by government. Availability of Commonwealth funding for those services was capped by the allocation of funded 'places' to a limited group of

approved providers (as provided for in the *Aged Care Act 1997* (Cth)), by the funding levels prescribed and by a cap on consumer fees. The result of this funding, was that the market was characterised by:

(a) Limited supply,

(b) Lack of price competition,

(c) Limited scope for competition on quality, and

(d) Limited product differentiation.

63. With the introduction of the CDC, those characteristics are changing.

Supply changes

64. Prior to the CDC, a set planning ratio dictated the number of 'home care places' which were allocated to approved providers for specific geographic regions, meaning that supply was constrained both in total levels and in location.

65. In February 2017 the Aged Care Act 1997 (Cth) was amended to remove reference to 'home care places'. Instead providers are now approved to deliver home care, and consumers are approved as eligible and are prioritised for services. Prioritised consumers are then able to obtain services from any approved provider.

66. The changes have shifted the sector to a more market-based system, with consumers selecting their suppliers and allocation being based on need rather than location. This resulted in packages being lost to some areas as there were consumers of higher need elsewhere.

67. One of the significant challenges that this change presented to providers was that they no longer had a guaranteed number of participants and therefore no guaranteed income.

Product competition

68. Prior to CDC there was limited scope for product competition from providers as prices were regulated by the government.

69. With the introduction of CDC, the participants have greater choice in selecting what they want their home care package to provide, which allows providers to compete on products.

Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

New market entrants

70. There were 693 approved home care package providers in March 2017 with 917 at March 2019. The Home Care Packages Data Report provides information regarding home care packages. The most recent report, titled 'Home Care Packages Program Data Report 3rd Quarter 2018-19' attached and marked '**A**'.

71. The CHSP Program has remained stable as contracts have been rolled over with pre-existing providers.

IMPACT OF REFORMS ON FINANCIAL PERFORMANCE

72. There is a trend decline of financial performance and there are issues relating to unspent funds which is a significant impact.

73. The Aged Care Financing Authority recently published their latest report titled '*Seventh Report on the Funding and Financing of the Aged Care Industry 2019*' which examines developments, issues and challenges facing the aged care industry in Australia. The report includes analysis of the financial data supplied by aged care providers in the 2017-2018 financial year and provides comments on financial developments in 2018-2019. A copy of the report is attached and marked '**B**'.

74. ACSA prepared a summary document of the report which was circulated to members. The summary document includes the key information relevant to providers from the report. A copy of this summary document is attached and marked '**C**'.

HOME CARE PACKAGES PROGRAM

Data Report 3rd Quarter 2018-19

1 January – 31 March 2019

June 2019

Table of Contents

Executive Summary

- At 31 December 2018, there were 93,331 people in a home care package. This represents an annual increase of 15,413 people (19.8 per cent) since 31 December 2017 (77,918) and a quarterly increase of 2,685 people (3.0 per cent) since 30 September 2018 (90,646).
- There were 43,632 people in a high level (level 3 and 4) home care package at 31 December 2018, which was 3,636 (9.1 per cent) more than 30 September 2018 (39,996).
- There were 10,610 new care recipients entering home care in the December 2018 quarter.
- At 31 March 2019, there were 75,739 people waiting on a home care package at their approved level, who had not yet been offered access to a lower level package. Of these people, 94.9 per cent (71,885) had been provided with an approval to access support through the Commonwealth Home Support Program (CHSP).
- The number of people with a level 4 approval who were waiting for a package at their approved level, who had not yet been offered a home care package, fell by 21.7 per cent (3,685) from 30 June 2018 (16,963) to 31 March 2019 (13,278) due to increased investment.
- At 31 March 2019, there were 53,299 people who were waiting for a home care package at their approved level, who had already been offered a lower level package. Of these people, 30,283 chose to take an offered package, 6,355 were deciding on whether to take up a package and 16,661 had not taken up their previous offer(s) of a lower level package.
- As at 31 March 2019, 97.0 per cent of people who were waiting for a home care package at their approved level had been provided with the opportunity to connect to other Commonwealth subsidised aged care support.
- 94,156 (73.0 per cent) of people in the National Prioritisation System (NPS) who were waiting for a home care package at their approved level also had an approval for a permanent place in a residential aged care facility.
- There were 26,486 approvals for a home care package in the March 2019 quarter, an increase of 266 compared to the December 2018 quarter.
- 31,200 home care packages were released during the March 2019 quarter, at an average of 2,400 per week.
- At 31 March 2019, there were 917 approved home care providers with a home care service. This represents an increase of 15 providers (1.7 per cent) since 31 December 2018 (902).

INTRODUCTION

OVERVIEW

The Australian Government recognises that people want to remain living independently in their own homes for as long as possible. To support this, the Government subsidises packages through the Home Care Packages Program (HCPP) to provide home-based care that can improve senior Australians' quality of life and help them to remain active and connected to their communities.

This report provides an update on the operation of the HCPP for the period between 1 January 2019 and 31 March 2019 (referred to as the March 2019 quarter for the remainder of the report).

This report consists of four chapters:

- Chapter 1: assessment for home care and the number of approvals.
- Chapter 2: the delivery of home care services.
- Chapter 3: the prioritisation of people in the National Prioritisation System (NPS).
- Chapter 4: maximum exit amounts.

A Glossary is also provided at the end of the report explaining specific terminology and abbreviations used throughout the report.

Data in this report was collected from information systems and records held by the Department of Health (the department) and the Department of Human Services (DHS). Data was valid on the date of extraction. Data extracted on a different date may vary from that in this report.

Where possible, data is provided for the period between 1 January 2019 and 31 March 2019. Due to a lag in data availability for some indicators, particularly those dependent on receipt of provider claims by DHS, earlier time periods are reported on. Information on the maximum wait time for a home care package by level is provided for 30 April 2019 in recognition that information for this indicator was available at the time of publication.

Table 1 provides a breakdown of the current number of allocated home care packages across the forward estimates.

Table 1: Number of allocated home care packages across the forward estimates

Package level	2018-19	2019-20	2020-21	2021-22	2022-23
1	6,038	11,240	11,915	13,119	13,453
2	53,452	64,630	65,192	66,133	67,161
3	28,189	30,689	31,559	33,578	35,243
4	36,353	38,353	39,501	40,607	41,297
Total	**124,032**	**144,912**	**148,166**	**153,438**	**157,154**

A person may be asked to pay fees when they take up a home care package. They may be asked to pay a basic daily fee of 17.5 per cent of the single basic age pension (currently $10.43 per day as at 1 January 2019).

If a person is assessed as having the capacity to pay more they may be asked to pay an income-tested care fee based on their income. The Government subsidy to the home care provider is reduced by the maximum income-tested care fee. There is an annual cap on income-tested care fees, which is applied on a daily basis, and a lifetime cap after which a person cannot be asked to pay any income or means-tested care fees.

From 1 July 2019, the maximum basic daily fees for home care will reduce by:

- $400 per annum for level 1
- $200 per annum for level 2
- $100 per annum for level 3.

The Government will increase the value of a package by the same amount to maintain the total value of each package level.

Further information on the HCPP, including eligibility, fees and recent reforms can be found at Home Care Packages Program | Ageing and Aged Care.

1. ELIGIBILITY AND ASSESSMENT

DISTRIBUTION OF HOME CARE PACKAGE LEVELS

- There are four levels of home care packages to help meet the different levels of care needs (Table 2), which are determined by the outcome of an aged care assessment.

Table 2: Home care package annual subsidy, by package level at 31 March 2019

Package level	Aged care services for people with:	Annual subsidy amount ($) paid by the Australian Government
1	Basic care needs	8,271
2	Low-level care needs	15,045
3	Intermediate care needs	33,076
4	High-level care needs	50,286

Note: The amounts in the table do not include additional supplements that a provider may be eligible for.

VOLUME OF HOME CARE APPROVALS

- There were 26,486 home care approvals in the March 2019 quarter (Table 3).

Table 3: Number of home care approvals in the March 2019 quarter, by state and territory of assessment, level and priority

State/ territory	Level 1		Level 2		Level 3		Level 4		Total	Share by state/ territory
	High	Medium	High	Medium	High	Medium	High	Medium		
NSW	17	902	176	3,535	406	2,754	470	733	**8,993**	**34.0%**

Total	**1,854**		**9,994**		**9,816**		**4,822**		**26,486**	
Share by level	**7.0%**		**37.7%**		**37.1%**		**18.2%**		**100.0%**	

Key point:

- There were 26,486 approvals for a home care package in the March 2019 quarter.

2. HOME CARE SERVICE DELIVERY

NUMBER OF PEOPLE IN A HOME CARE PACKAGE

- There were 93,331 people in a home care package at 31 December 2018 (Table 4). This represents an annual increase of 15,413 people (19.8 per cent) since 31 December 2017 (Chart 1).
- There were 43,632 people in a high level (level 3 and 4) home care package at 31 December 2018, which was 3,636 (9.1 per cent) more than 30 September 2018 (39,996).

Table 4: Number of people in a home care package by level and state and territory, at 31 December 2018

State	Level 1	Level 2	Level 3	Level 4	Total	Share by state/territory
NSW	1,931	15,200	6,529	7,945	**31,605**	**33.9%**
VIC	1,089	13,677	3,411	5,330	**23,507**	**25.2%**
QLD	884	8,132	3,980	5,851	**18,847**	**20.2%**
WA	276	2,809	1,764	3,334	**8,183**	**8.8%**

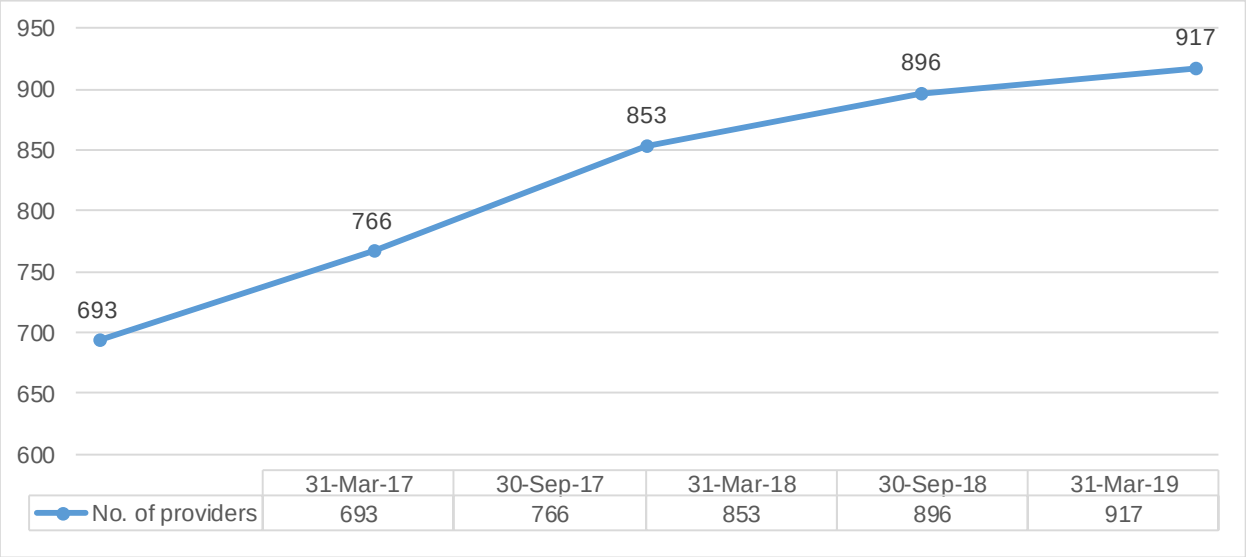
Unknown	1.5%	1.5%	0.2%	0.1%	**0.1%**

Note: Location is based on the address of the person, not the address of their provider.

NUMBER OF APPROVED HOME CARE PROVIDERS

- There continues to be a large number of home care providers in the market, allowing for choice for senior Australians.
- There were 917 approved home care providers at 31 March 2019 (Chart 2).
  This was an increase of 15 providers (1.7 per cent) from 31 December 2018 (902) and an increase of 64 providers (7.5 per cent) since 31 March 2018 (853).

Chart 2: Number of approved providers of home care with home care services at six-monthly intervals since the commencement of the Increasing Choice reforms



Note: Approved provider count is based on the approval effective date.

- Appendix C provides the total number of approved home care providers in each ACPR that have indicated in My Aged Care that they have operational capacity to provide services across all four package levels in that region at 31 March 2019.

Key points

- At 31 December 2018, there were 93,331 people in a home care package. This was an increase of 2,685 people (3.0 per cent) since 30 September 2018 (90,646), and an annual increase of 15,413 people (19.8 per cent) since 31 December 2017.
- There were 43,632 people in a high level (level 3 and 4) home care package at 31 December 2018, which was 3,636 (9.1 per cent) more than 30 September 2018 (39,996).
- There were 10,610 new entries to home care in the December 2018 quarter.
- At 31 March 2019, there were 917 approved home care providers with a home care service, an increase of 15 providers (1.7 per cent) since 31 December 2018.

3. NATIONAL PRIORITISATION SYSTEM

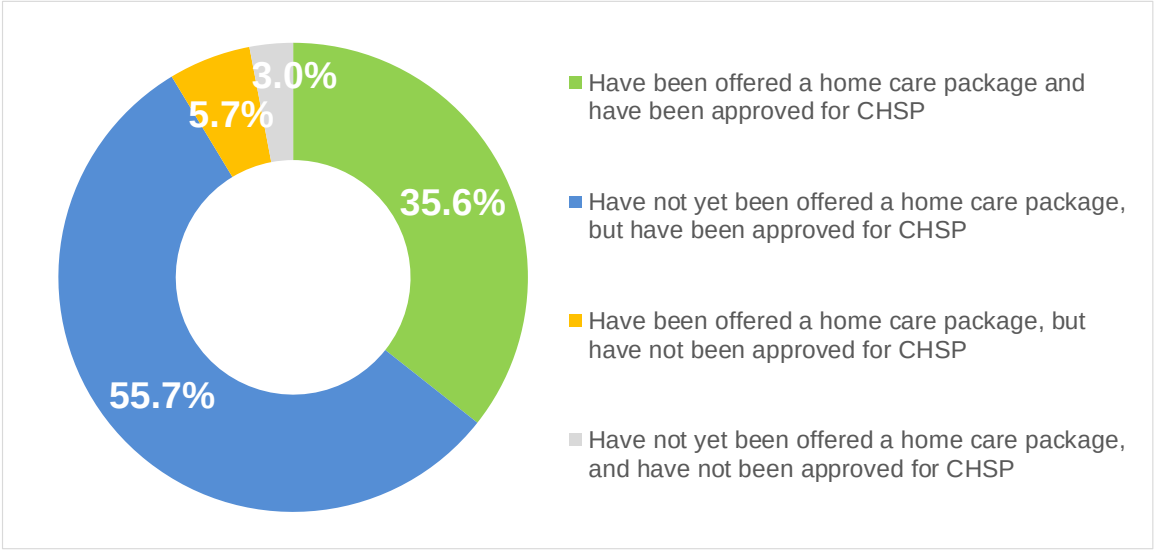
NATIONAL PRIORITISATION SYSTEM

- The National Prioritisation System (NPS) allows for a nationally consistent and equitable process for assigning home care packages based on people's individual needs and circumstances, regardless of where they live.
- The NPS should be considered as more than a single queue. For example, the NPS includes people who have accepted a lower level home care package that allows them to connect with home care services early, as well as others that have not accepted a lower level package. It also includes people that have approvals for other care types such as residential care and CHSP.

ACCESS TO COMMONWEALTH HOME SUPPORT SERVICES

- In addition to receiving an approval for a home care package as an outcome of their assessment, most people are provided with approval to access CHSP to assist with specific care needs identified during the assessment. Assessors provide these approvals to ensure people have options to address care needs, whilst awaiting their approved home care package.
- Over 90 per cent of people on the NPS at 31 March 2019 who were waiting on a home care package at their approved level, have also been approved for access to services through the CHSP.
- Additionally, people retain the option of accessing some specific CHSP services after they are offered a level 1 or 2 home care package when their budget has been expended or where additional short-term episodic care is required. Diagram 1 shows that 97.0 per cent of people in the NPS have been offered a home care package and/or approved for CHSP services.

Diagram 1: Status of people in the National Prioritisation System at 31 March 2018 who are waiting for a home care package at their approved level



PEOPLE WITHOUT A HOME CARE PACKAGE

- At 31 March 2019, there were 75,739 people who were waiting for a home care package at their approved level, who had not yet been offered a home care package (Table 7). Of these people, 94.9 per cent (71,885) had been provided with an approval to access CHSP.
- The number of people with a level 4 approval who were waiting for a package at their approved level, who had not yet been offered a home care package, fell by 21.7 per cent (3,685) from 30 June 2018 (16,963) to 31 March 2019 (13,278).

Table 7: Number and percentage of people without a home care package, who had been approved to access CHSP, by level of approval at 31 March 2019

Approved Level	Number of people in the NPS without an interim Home Care Package	Number of people in the NPS without an interim Home Care Package with CHSP approval	Percentage of people in the NPS without an interim Home Care Package with CHSP approval
Level 1	3,383	3,125	92.4%
Level 2	30,947	29,443	95.1%
Level 3	28,131	27,093	96.3%
Level 4	13,278	12,224	92.1%
Total	**75,739**	**71,885**	**94.9%**

PEOPLE WHO HAVE RECEIVED AN OFFER OF AN INTERIM PACKAGE

- At 31 March 2019, there were 53,299 people who had been offered an interim home care package while they wait for a package at their approved level.
- Those offered an interim package fell into three response categories (Table 8):
  - those who accepted their offer (30,283);
  - those who have not yet accepted their offer but whose offer was still open (i.e. within 56 days of offer) (6,355); and
  - those who did not take up their offer (16,661).

Table 8: Number of people who have been offered a package while they wait for their approved level, by response category and level of approval at 31 March 2019

Approved Level	Number of people in an interim Home Care Package*	Number of people offered an interim Home Care Package, who had not yet accepted their offer	Number of people offered an interim Home Care Package that did not take up their offer
Level 2	3,742	1,804	2,717
Level 3	10,962	2,500	3,824
Level 4	15,579	2,051	10,120
Total	**30,283**	**6,355**	**16,661**

* Counts of people in an interim home care package presented in the table are derived from point-in-time data. Although a count of people in an interim home care package can be derived for 31 March 2019, this Report only records the number of people in a home care package at 31 December 2018 (refer to Chapter 2). This is done to allow for delayed claims to be made by service providers to improve the accuracy of the total count of people in a home care package.

- Of the 16,661 people who had not taken up their previous offer(s) of a package, 81.3 per cent (13,552) had been provided with an approval to access CHSP (Table 9).

Table 9: Number and percentage of people who did not take up an offer of a lower level package, who have been provided approval to access CHSP, by level of approval at 31 March 2019

Approved Level	Number of people who did not take up an offer of an interim Home Care Package	Number of people who did not take up an offer of an interim Home Care Package, that have a CHSP approval	Percentage of people who did not take up an offer of an interim Home Care Package, that have a CHSP approval
Level 2	2,717	2,532	93.2%
Level 3	3,824	3,538	92.5%
Level 4	10,120	7,482	73.9%
Total	**16,661**	**13,552**	**81.3%**

PEOPLE APPROVED FOR RESIDENTIAL CARE

- Aged Care Assessment Teams assess a person's needs and, when making an approval for care, they can approve people for home care packages, residential care, respite care, transitional care, and CHSP, depending on the person's circumstances. Therefore, based on care needs and choice, not everyone with a home care approval will enter home care.

- Many people have approvals for both home and residential aged care, and some will choose to take up a residential care place instead of a home care package.
  At 31 March 2019, there were 94,156 (73.0 per cent) people in the NPS who had dual approvals, having been approved for a permanent place in a residential aged care facility and also currently seeking a home care package at their approved level (Table 10).

Table 10: Number of people awaiting a home care package at their approved level who were also approved for permanent residential care, by level of approval at 31 December 2018

Approved Level	Number of people waiting for a package at their approved level who also have an approval for permanent residential care
Level 1	988
Level 2	22,125
Level 3	34,895
Level 4	36,148
Total	**94,156**

- While many people seek to choose to remain in their own home, this is not always possible. For people with high level care needs, for example, requiring care morning and evening across seven days, they may need to consider the benefits of the level of support offered by residential care.

DISTRIBUTION OF PEOPLE ACROSS STATES

- The distribution of people without a home care package across states and territories largely follows the pattern of population distribution across Australia (Table 11).

Table 11: Number of people awaiting their approved level who have not been offered a lower level package, by state and territory of residence and level of approval at 31 March 2019

State/ territory	Level 1	Level 2	Level 3	Level 4	Total	Share by state/territory
NSW	1,535	9,973	8,542	3,184	**23,234**	30.7%
VIC	773	9,881	7,415	3,944	**22,013**	29.1%
QLD	709	5,587	4,992	1,976	**13,264**	17.5%
WA	71	2,053	2,554	1,901	**6,579**	8.7%
SA	215	2,307	3,278	1,481	**7,281**	9.6%
TAS	63	665	918	496	**2,142**	2.8%
ACT	15	373	331	203	**922**	1.2%
NT	-	88	85	87	**260**	0.3%
Unknown	2	20	16	6	**44**	0.1%
National	**3,383**	**30,947**	**28,131**	**13,278**	**75,739**	**100.0%**
Share by level	**4.5%**	**40.9%**	**37.1%**	**17.5%**	**100.00%**	

Note: A person with an approval at multiple levels is only counted once - at their highest active approved level.

- The number of people without a home care package at their approved level at 31 March 2019, by ACPR, who were not either in, or offered, an interim level package is provided in Appendix D.

WAIT TIMES

- All people approved for a home care package, and seeking services, can access their individual expected wait time to receive their first package, and their approved package level.
- A person's place in the NPS is solely based on date of approval and priority for care. Estimated wait times at 31 March 2019, for a person with a medium priority approval joining the system for a package by level are provided in Table 12.
- People approved for a higher level package have the option of receiving a lower level package to commence receipt of care as early as possible. They may also have the option to access CHSP services, ensuring that the strong majority of people have access to subsidised care while they await a package at their approved level.

Table 12: Estimated wait time for people entering on 31 March 2019, by package level

Package level	First package assignment	Time to first package	Time to approved package
Level 1	Level 1	3-6 months	3-6 months
Level 2	Level 1	3-6 months	12+ months
Level 3	Level 1	3-6 months	12+ months
Level 4	Level 2	12+ months	12+ months

NUMBER OF HOME CARE PACKAGES RELEASED

- The department released 31,200 home care packages during the March 2019 quarter (Table 13), at an average of 2,400 per week.

Table 13: Number of home care packages released in the March 2019 quarter, by state and territory and level

State/territory	Level 1	Level 2	Level 3	Level 4	Total	Share
NSW	2,529	4,817	2,238	1,718	**11,302**	36.2%
VIC	1,203	3,092	1,500	1,059	**6,854**	22.0%
QLD	991	2,752	1,452	1,133	**6,328**	20.3%

ACT	39	209	106	87	**439**	1.4%
NT	7	50	16	17	**90**	0.3%
Unknown	1	15	11	6	**33**	0.1%
Total	**5,700**	**13,530**	**6,890**	**5,080**	**31,200**	**100.0%**

- Of the packages released in the March 2019 quarter:
  - 20.8 per cent (6,497) were offered as upgrades to people who had previously been offered and accepted a lower level interim package.
  - 79.2 per cent (24,703) of packages were offered to people who were not yet in an interim level home care package (Table 14). This included people who were previously offered a package and did not take up the offer, as well as people who were offered a package for the first time.

Table 14: Home care packages released to people in the March 2019 quarter, by level and type of release

	Level 1	Level 2	Level 3	Level 4	Total
New packages	5,700	12,404	4,204	2,395	**24,703**
Upgrades	0	1,126	2,686	2,685	**6,497**
Total	**5,700**	**13,530**	**6,890**	**5,080**	**31,200**
% released that were new	**100.0%**	**91.7%**	**61.0%**	**47.1%**	**79.2%**

- Information on the number of packages released by ACPR and level for the March 2019 quarter can be found at Appendix E.

Key points

- At 31 March 2019, there were 75,739 people who were awaiting their approved level package who had not yet been offered a lower level home care package. Of these people, 94.9 per cent (71,885) had been provided with an approval to access CHSP.
- At 31 March 2019, there were 53,299 people who had been offered an interim home care package while they wait for a package at their approved level.
- 31,200 home care packages were released during the March 2018 quarter with 24,703 (79.2 per cent) being offered to people who were not yet in an interim package.

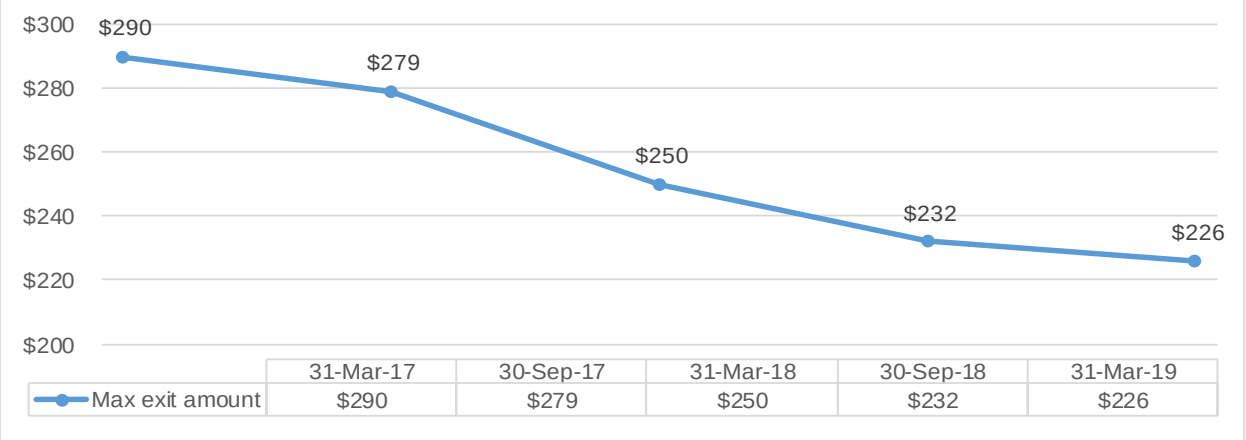
4. MAXIMUM EXIT AMOUNTS

An exit amount is an amount that can be deducted by a home care provider from a person's unspent home care package amount if the person leaves their care. This may happen if the person decides to change their home care provider or when they leave home care altogether.

The maximum exit amount represents the highest dollar value the provider can include in a person's home care agreement and must be published on the My Aged Care website.

- The average published maximum exit amount of all providers at 31 March 2019 was $226 (inclusive of amounts of $0 and where no amount was provided) (Chart 3). This average had decreased by $5 (or 2.2 per cent) since 31 December 2018 ($231) and decreased by $24 (or 9.6 per cent) since 31 March 2018 ($250).

Chart 3: Average maximum exit amount published by home care providers at six-monthly intervals since the commencement of the Increasing Choice reforms



Note: All approved providers, irrespective of whether or not they publish an amount, are included in determining the average.

- 42.3 per cent of approved home care providers had indicated that they would not deduct an exit amount, up from 41.7 per cent at 31 December 2018.
- The number of providers publishing a maximum exit amount of $1,000 or more at 31 March 2019 was 10 (Table 15).

Table 15: Number of approved home care providers with a published maximum exit amount of $1,000 or more

	31-Dec-17	31-Mar-18	30-Jun-18	30-Sep-18	31-Dec-18	31-Mar-19
(A) No. of providers with a published maximum exit amount of more than $1,000	4	5	5	5	4	**4**
(B) No. of providers with a published maximum exit amount of $1,000	11	7	6	6	6	**6**
Combined (A)+(B)	**15**	**12**	**11**	**11**	**10**	**10**

Key points:

- At 31 March 2019, the average published maximum exit amount was $226.
- At 31 March 2019, 42.3 per cent of all approved home care providers indicated that they would not deduct an exit amount.

Glossary

Term	Definition
Aged Care Assessment Teams (ACAT)	ACATs are teams of medical and allied health professionals who assess the physical, psychological, medical, restorative, cultural and social needs of older people and help them and their carers to access appropriate levels of support.
Aged Care Planning Region (ACPR)	The areas marked out in the ACPR maps which can be found on the department's website.
Approved provider	An organisation that has been approved to provide home care under the *Aged Care Act 1997*.
Commonwealth Home Support Programme (CHSP)	Entry-level support at home – Ongoing or short-term care and support services including help with housework, personal care, meals and food preparation, transport, shopping, allied health, social support and planned respite.
Home Care Packages Program	A program that supports older Australians with complex needs to remain living at home through a coordinated package of care and services to meet the individual needs of people.
Interim package	A package at a lower level than a person's approved level, through which they are able to access some home care services while waiting for a higher level package.
My Aged Care	The main entry point to the aged care system in Australia.
National Prioritisation System	The nationally consistent process for allocating home care packages based on peoples' needs and circumstances.
The department	The Department of Health.

Aged Care Financing Authority

Seventh report on the Funding and Financing of the Aged Care Industry

2019

Contents

Foreword

I am pleased to present the Aged Care Financing Authority's (ACFA) 2019 Report on Funding and Financing in the Aged Care Sector. This is ACFA's seventh annual report.

Consistent with past reports, the 2019 report examines developments, issues and challenges confronting the aged care industry in Australia. It includes analysis of the financial data supplied by aged care providers in their 2017-18 Aged Care Financial Reports, supplemented by more recent data sources where available and feedback from significantly enhanced consultations with stakeholders. Drawing on this consultation and other data, the report provides some comments on financial developments in 2018-19. It also provides some observations on the sustainability and viability of the aged care industry.

A number of Government policies are impacting on the financial performance of aged care providers, in particular the changes to the Aged Care Funding Instrument (ACFI) that took effect in 2016 and 2017 and the introduction of home care consumers having choice of services under their packages and choice of the provider who delivers these services. The impact of these changes were evident in the 2017-18 data submitted by providers, which underlies this report, and is continuing to influence the industry in 2018-19.

While the data collected from providers from their Aged Care Financial Reports represents the most comprehensive data set available on financial issues in the Australian aged care industry, in most cases it is a year old at the time of publication of ACFA's annual report. With the industry currently undergoing some significant changes, ACFA has substantially increased its consultations to gain a more contemporaneous assessment of developments. In November 2018, following its July 2018 annual report, ACFA published an additional report it gave to the Government providing an Update on Funding and Financing in the Residential Aged Care Industry. This Update was based on consultations with a broad cross section of aged care providers, financial institutions and analysts during August and September 2018. A similar round of consultations was undertaken in the first half of 2019 as part of the input to the 2019 Annual Report.

2017-18 presented a number of challenges for the aged care industry. After five years of steady improvement, the overall financial performance of residential aged care providers declined in 2017-18, and the number of providers making a net profit fell from 68 per cent in 2016-17 to 56 per cent in 2017-18. The outcome in 2017-18 was significantly influenced by the changes to ACFI and feedback from providers suggests the pressures have continued into 2018-19.

The overall performance of home care providers also declined in 2017-18 and, as with the residential sector, the financial pressures are continuing in 2018-19. The main influence in the home care sector was the increased competition caused by the introduction of consumers being able to choose the provider from whom they receive their services.

ACFA will continue to assess these developments in the aged care industry. There are also a number of other aspects in residential care that warrant careful monitoring, including the gradual decline in overall occupancy rates, along with the apparent shift in residents' accommodation payments from refundable accommodation deposits (RADs) to daily accommodation payments

(DAPs), as well as the decline in providers intention to rebuild or upgrade their facilities and signs that an increasing number of smaller providers are seeking to leave the industry. In home care, particular aspects to monitor include: the impact of increased competition; the prospect of a rationalisation in the number of approved providers; and the implications of the continuing rise in unspent package funds. A significant development that will likely impact on funding and financing in the aged care industry is the Royal Commission into Aged Care Quality and Safety.

Against the background of recent developments, Chapter 9 of this report includes commentary on the challenges presented in obtaining a viable and sustainable aged care industry and, from a funding perspective, identifies some of the characteristics of a sustainable industry.

ACFA will continue to perform its role not only through its annual reports but also through other projects it is commissioned to undertake by the Minister responsible for aged care.

ACFA would like to acknowledge and thank the aged care providers, peak bodies, consumer representatives, financial institutions and other parties it has consulted and for their input and submissions to the range of projects ACFA has undertaken. ACFA continues to participate in a wide range of industry forums and conferences and has held a number of round tables following the publication of its annual reports.

ACFA looks forward to continuing and enhancing its role in advising the Government and informing other stakeholders of the funding and financing issues confronting the aged care industry, and to work towards ensuring its sustainability and viability and better access by consumers to quality aged care.

Mike Callaghan AM PSM

Chairman

Aged Care Financing Authority

Executive Summary

Overview of developments in 2017-18

A significant development in the funding and financing of the aged care sector in 2017-18 was the sizeable decline in the financial performance of both home care and residential care providers. In November 2018, ACFA published an Update on developments in the residential care sector and noted that, based on consultations, most providers indicated that their financial performance had deteriorated in 2017-18 and a number said they were moving into a loss situation. The results from the 2017-18 Aged Care Financial Reports, which are supplied by all providers and is the basis for ACFA's 2019 annual report, confirms that 2017-18 was a difficult year for aged care providers.

The average Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) per resident for residential care providers had improved each year for five years since 2012-13. In 2017-18, however, it fell by 24 per cent, and 44 per cent of residential care providers reported a loss compared with 32 per cent in 2016-17. There was a very significant decline in the financial performance of regional residential care providers in 2017-18 and, on average the performance of not-for-profit providers dropped significantly more than for-profit providers.

There was also a significant deterioration in the financial performance of home care providers in 2017-18. After several years of relatively stable returns, EBITDA per consumer for home care providers fell by over 60 per cent in 2017-18. After significantly outperforming not-for-profit and government providers in the previous three years, for-profit providers reported the largest fall in financial performance in 2017-18.

A number of Government policies had a significant impact on the financial performance of aged care providers in 2017-18.

An important influence on the decline in the performance of residential care providers was the Government's changes to the Aged Care Funding Instrument (ACFI) that took effect in 2016 and 2017 and the pause in ACFI indexation in 2017-18. The Government said these changes were made because real growth in ACFI expenditure per resident per day was considered to be higher than the frailty growth in the population and was higher than what had been in the Budget. Throughout ACFA's consultation with providers, the reasons for the changes to ACFI remained a controversial issue, with providers saying their ACFI claims, which they note may be subject to the Department's audit program, reflected the care needs of residents, although most acknowledged that they took steps to ensure that they were not under-claiming. With ACFI revenue contributing over 60 per cent of the revenue of residential care providers, the changes to ACFI considerably

constrained providers' revenue while their costs, particularly staff costs, continued to rise. In 2017-18, the expenses of residential care providers increased by 5.3 per cent while their income increased by 1.7 per cent.

The financial performance of home care providers was impacted through the introduction of packages following consumers rather than being allocated to providers. This reform allows consumers to direct their care package to the provider of their choice as well as to change providers. These changes have resulted in a very large increase in the number of approved providers (873 in 2017-18 compared with 496 in 2015-16) and in turn greater competition between providers which has resulted in a decline in profit margins. Expenses per consumer for home care providers increased by 7 per cent in 2017-18 while income per consumer decreased by around 1 per cent compared with 2016-17.

Feedback from consultations with residential care providers suggests the financial pressures they experienced in 2017-18 have continued into 2018-19. Providers note that while the pause in ACFI indexation has ended, the indexation rate in 2018-19 (1.4 per cent for the activities of daily living and behaviour domains and 0.7 per cent for complex health) is below the rate of increase in their costs. While in previous years ACFI payments increased significantly more than the indexation rate, few providers are expecting such an outcome in 2018-19. This would appear to be consistent with the Government's projection of real growth in ACFI payments of 1.4 per cent in 2018-19. Providers welcomed the $50 million increase in subsidies from September 2018 to assist in transitioning to the new quality standards and the $320 million one-off increase in subsidies from March to end June 2019, although they noted that because the increases are not ongoing they will not address their underlying financial pressures.

A development impacting on the financial outlook for residential care providers is the steady overall decline in occupancy rates in recent years. The average occupancy rate was 90.3 per cent in 2017-18, down from 91.8 per cent in 2016-17 and 92.4 per cent in 2015-16. The occupancy rate peaked in 2003-04 at 97.1 per cent. The for-profit providers recorded a sizeable decline in their average occupancy rate, from 90 per cent in 2016-17 to 87.9 per cent in 2017-18. Occupancy rates vary across providers and locations, although in the course of consultations a number of providers indicated that they were particularly concerned about trends in their occupancy, noting that only a small decline in occupancy can have a significant impact on their overall financial performance. A few providers said that they have been reducing accommodation prices in an effort to attract new residents.

The application of additional services for a fee is an option for residential care providers seeking to increase their revenue. While there is no data on additional services, it was apparent from consultations that practices vary widely across the industry. Many providers indicated that while they had not introduced a fee for additional services, given current financial pressures, it was an option they were considering. While the socio-economic composition of their residents is an important consideration in terms of capacity to pay, many providers said a major constraint they faced was regulatory uncertainty around what additional services are permitted.

Another development in 2017-18 that has significant potential implications for the residential care sector is the continuing gradual shift in the proportion of people choosing to pay their residential accommodation by a Daily Accommodation Payment/Contribution (DAP/DAC) rather than a Refundable Accommodation Deposit/Contribution (RAD/RAC). From 2014-15 to 2017-18, the proportion of residents paying for their accommodation through a RAD/RAC has fallen from 43 per cent to 37 per cent, while the proportion paying with a DAP/DAC has risen from 33 per cent to 40 per cent. In consultation with providers, a number indicated that the weakness in the housing market and the decline in house prices was impacting on the preference for DAP/DAC, particularly

when the resident was only expected to stay in a facility for a short-time. A continuation in the trend in favour of DAP/DACs and away from RAD/RACs will have significant financial implications for aged care providers. DAP/DACs are recorded in a provider's accounts as revenue, unlike RAD/RACs which are an interest free loan from residents. A shift from RAD/RACs to DAP/DACs will pose cash management issues for providers, who will have to replace interest free debt with debt with an interest charge, and RAD/RACS have been an important source of funding for capital investment by residential care providers. Unlike RAD/RACs, however, DAP/DACs are recorded as revenue for providers and included in their profit and loss accounts.

Feedback from consultations suggests that there appears to be a growing number of smaller providers, particularly in regional and remote areas, facing significant financial stress and seeking to leave the industry. There is also a view that this number will increase because scale is becoming increasingly important in the residential care sector. There has been an ongoing, gradual consolidation of residential care providers, with the number falling from 1,016 in 2013-14 to 886 in 2017-18. This trend is likely to continue.

Home care is in a period of transition and many providers appear to be still in the process of adjusting their processes and business models to be more responsive to meeting the needs of consumers. The reforms have increased costs for providers and the increased competition, including price competition, has significantly squeezed margins. It appears that a substantial amount of the competition is in attracting new consumers who have been allocated a package, and only a small proportion of consumers are moving between providers. While additional packages will be released, given the large increase in the number of providers, it is likely that there will be a shake-out and a process of consolidation. The beneficiaries of the reforms to home care are the consumers, although some concerns have been raised that the increase in competition has resulted in some providers not only reducing their prices but also the quality of their services.

The 2019-20 Budget extended funding arrangements for Commonwealth Home Support (CHSP) providers by a further two years. This means that the Home Care Packages Program and CHSP will continue to operate as separate programs until at least mid-2022. In 2015-16 the Government announced an intention to integrate CHSP and home care into a single program. During ACFA's consultations, a number of providers were seeking guidance as to whether the Government still intended to combine home care and CHSP.

The demand for aged care services will expand with the aging of the population, and consumers may be more demanding in the range of aged care services they are seeking. It is evident that there is currently a significant undersupply of home care services, with 127,748 people as at December 2018 waiting for a home care package or waiting for a package at their assessed package level.

While there are indications, such as the decline in the occupancy rate, suggesting that the overall demand for residential care is currently being met, the future demand for aged care services will depend not only on demographic developments but also the preferences of consumers, technological changes and the interaction between home care, residential care, retirement living and hospitals. Irrespective of how the future demand for aged care services evolves, there will be a need for substantial future investment in order to deliver these services. This investment will have to come from the non-government sector: not-for-profit and for-profit providers. These providers will not invest in the industry, nor will they be able to attract the required staff, unless they generate a sufficient rate of return and they have confidence in the stability of the funding and regulatory environment.

Against this background, a notable development in 2017-18 is the ongoing decline in the number of residential care providers reporting that they planned to rebuild or upgrade their facilities. Feedback from consultations indicated that many providers have curtailed or delayed investment plans because of policy and regulatory uncertainty. Analysts advised that a number of potential new investors in the aged care industry are waiting to see developments regarding the Royal Commission into Aged Care Quality and Safety.

Many of the developments in 2017-18 raise challenges in terms of achieving the objective of a financially viable, stable, efficient, effective, responsive and sustainable industry delivering high quality aged care services. Against this background, ACFA has offered some preliminary observations in this year's annual report regarding the characteristics of a sustainable aged care industry from a funding perspective.

Aged care in Australia

In 2017-18, Government subsidised aged care services were provided to around 1.3 million people. The majority of these (1.2 million) received services through the three major programs discussed in this report: Home support, home care or residential care. It is estimated that by 2020-21 around 1.5 million people will be accessing aged care.

Australian Government expenditure on aged care in 2017-18 was $18.1 billion, up from $17.1 billion in 2016-17. This is projected to increase to $24 billion by 2021-22. The aged care industry makes a significant contribution to the Australian economy, representing 1 per cent of Gross Domestic Product (GDP).

In 2017-18, aged care services were provided by:

- 1,456 Commonwealth Home Support Programme providers, compared with 1,523 in 2016-17;
- 91 providers of HACC in Western Australia (98 in 2016-17);
- 873 home care providers (702 in 2016-17); and
- 886 residential care providers (902 in 2016-17).

Consumer expenditure on aged care was around $4.9 billion in 2017-18 (excluding accommodation deposits).

There are over 366,000 paid workers in aged care with a further 68,000 volunteers.

Access to aged care

In 2017-18 there was a significant increase in the number of home care consumers, up to 116,843 from 97,516 in 2016-17, a 20 per cent increase. The number of consumers of residential care increased from 239,379 in 2016-17 to 241,723 in 2017-18 (an increase of 1 per cent) and the number of consumers of home support in 2017-18 was 847,534, up from 784,927 in 2016-17 (an increase of 8 per cent).

The overall aged care provision target ratio is being adjusted to progressively increase from the target of 113 operational places per 1,000 people aged 70 and over that applied prior to 2012 to 125 by 2021-22. Over the same period the target for home care packages is increasing from 27 to 45, while the residential care target will reduce from 86 to 78. The remaining two places are for the Short Term Restorative Care Programme (STRC).

The proportion of people using home care and residential care at age 85 and over is more than three times that of people aged 70 and over.

During 2017-18, across all residential care, access to services for supported residents (excluding residents receiving extra services) was stable, as has been the case in previous years.

In residential care, the average occupancy continues to fall, down to 90.3 per cent in 2017-18 from 91.8 per cent in 2016-17 and 92.4 per cent in 2015-16.

Home support

In 2017-18 the CHSP provided services to 783,043 older Australians and the Western Australian HACC services provided services to 64,491 older Australians.

Total Australian Government expenditure on home support in 2017-18 was $2.4 billion, comprising $2.2 billion for CHSP and $195 million in payments to the Western Australian government to support the jointly funded HACC program.

In the 2019-20 Budget, the Australian Government extended funding agreements with CHSP providers by a further two years, meaning that the CHSP and Home Care Packages Program will continue to operate as separate programs until at least mid-2022.

The Western Australian HACC program transitioned into the CHSP on 1 July 2018, making home support a national program.

Home care

Australian Government expenditure on home care in 2017-18 was $2.0 billion, up from $1.6 billion in 2016-17. Services were provided to 116,843 consumers, up from 97,516 in 2016-17.

Consumers of home care contributed $122 million toward the cost of their care through basic daily fees and income tested fees.

The home care sector continues to be predominately not-for-profit with 53 per cent of providers from this group, although this is down from 65 per cent in 2016-17. Seventy-six per cent of consumers had their package with a not-for-profit provider at 30 June 2018.

Seventy per cent of home care providers achieved a net profit in 2017-18, down from 75 per cent in 2016-17 and 2015-16. Across the sector, providers achieved an average EBITDA of $1,217 per consumer, a significant decline from $2,989 for 2016-17 and $3,055 in 2015-16. This decline in financial performance is likely due to increased competition resulting from the changes of February 2017 which introduced the assignment of packages to consumers who then could choose their preferred provider to deliver their services.

After significantly outperforming the not-for-profit and government providers in the previous two years, the for-profits reported by far the worst results in 2017-18, recording average EBITDA per consumer of $169, down from $6,767 in 2016-17 and $7,481 in 2015-16.

Unspent funds continue to increase significantly with home care providers holding $539 million at 30 June 2018, an increase of 64 per cent from 2016-17.

Residential care

Australian Government expenditure on residential care in 2017-18 was $12.2 billion, up from $11.9 billion in 2016-17. Services were provided to 241,723 residents (an increase of 1 per cent). At 30 June 2018 there were 207,142 operational places, up from 200,689 at 30 June 2017 (an increase of 3.2 per cent).

In 2017-18, residents contributed over $4.5 billion toward their living expenses, care and accommodation (excluding lump sum accommodation deposits).

As at 30 June 2018, there were 886 residential care providers, down from 902 in 2016-17, continuing the consolidation of recent years, with the number of residential care places increasing while the number of providers gradually decreases. Not-for-profit providers continue to represent the largest proportion of ownership type in residential care, with 56 per cent of providers and 55 per cent of places, but the proportion of places operated by the for-profits continues to gradually increase.

Residential care providers generated total revenue of $18.1 billion in 2017-18, up from $17.8 billion in 2016-17, an increase of 1.7 per cent, equating to revenue of $272.16 per resident per day, an increase of 1 per cent from $269.55 in 2016-17. Total expenses in 2017-18 were $17.6 billion, up from $16.8 billion in 2016-17, an increase of 5.3 per cent, equating to $265.62 per resident per day, compared with $254.29 the previous year, an increase of 4.5 per cent.

Total profit was $435 million in 2017-18, a significant reduction from $1,006 million in 2016-17. Average EBITDA per resident per annum was 24 per cent lower in 2017-18 compared with 2016-17, $8,746 down from $11,481.

Changes to the Aged Care Funding Instrument (ACFI) and the indexation pause impacted on the financial results of residential aged care providers in 2017-18.

Residential care: capital investment

At 30 June 2018, the residential care sector held total assets of $48.4 billion and total liabilities of $36.6 billion. Total liabilities includes $27.5 billion of refundable accommodation deposits, up from $24.8 billion in 2016-17.

Residential care providers recorded an average return on equity of 13.4 per cent in 2017-18, down from 18.3 per cent in 2016-17. The average return on assets was 3.3 per cent in 2017-18, down from 4.6 per cent in 2016-17.

As at 30 June 2018, $4.9 billion of building works were either completed or in-progress compared with $4.7 billion at 30 June 2017, although planned building activity dropped significantly for the second year in a row.

Future demand for aged care

The demand for aged care services will expand with the ageing of the population, although it is not currently possible to accurately measure demand or to reliably establish consumer preference for residential and home care, due to existing supply constraints. Better evidence about unmet need

and consumer preference is, however, gradually being revealed through the introduction of the national prioritisation system for home care packages.

The structural ageing of the Australian population over the next 20 years will see the size of the 70 years and over cohort increase by around 1 million people each decade; this is on a base of 2.7 million people in 2019. Underneath this, the older age groups will more than double over this period; for example, the 85 years and over cohort will increase from just under 500,000 people in 2019 to just over 1 million people by 2039.

At the same time that ageing population is putting pressure on the demand for aged care, the relative supply of informal carers is diminishing.

The Legislated Review of Aged Care 2017 (Tune Review) recommended changes to the aged care target planning ratio. The current ratio denominator (70+ population) is not aligned to the cohort of the population more likely to use aged care services, and results in the observed periods of relative oversupply and undersupply. ACFA supports the Tune Review recommendation to change the denominator in the ratio to the 75+ cohort in 2021-22.

ACFA also recommends that the change in the denominator be accompanied by a change in the target provision ratio formula so that it is based on the number of consumers and not the number of operational places. This will allow comparable reporting and monitoring of the supply of residential and home care places and overall supply against the provision targets, and help inform unmet demand and consumer preference.

The challenge of achieving a sustainable aged care system

Against the background of developments in aged care in recent years and the challenges confronting the industry, ACFA has identified from a funding perspective the following characteristics of a sustainable aged care system.

Confidence and trust: While government is the main source of funding for aged care, the services are primarily delivered by the non-government sector – for-profit and not-for-profit providers. These providers will not invest unless they have confidence in the adequacy and stability of government policies.

Stable, predictable, efficient, equitable and effective arrangements for allocating government funding: The desirable features of a tool in the residential care sector for allocating government funds includes: administrative simplicity, funding assessments external to providers, equitable allocation of funds based on residents and their needs, recognition that many core costs are shared between residents, independent, annual and transparent studies to determine the cost of care and indexation arrangements that adequately reflect movement in costs. The home care funding arrangements should also be based on transparent studies to determine the cost of care.

Appropriate overall funding: Efficient arrangements for the equitable allocation of funding across residential and home care providers is necessary, but it is also important that the overall funding pool for the aged care system is sufficient to support the level and quality of aged care services required by older Australians and provides an incentive for providers to invest in the industry.

Funding that is flexible and adaptable to changing demographics and demands: While the demographics of the Australian population are such that there will be increasing pressure on funding for aged care, demand will change and there will be innovations in the way services are delivered. Funding arrangements have to be responsive to these changes and should not deter but encourage innovation.

Equitable contribution to costs by consumers: Sustainable aged care funding arrangements will require that consumers who can afford to do so make a greater financial contribution to their living and care costs, complemented by greater choice of high quality services.

Effective prudential oversight: Effective prudential oversight of the aged care industry is necessary given that the range of current and prospective reforms and developments are likely to be disruptive to a number of providers. Any adjustment should be as orderly as possible and any impact on consumers minimised.

Sound management and governance arrangements: A sustainable aged care system will require well managed aged care service and providers with sound governance arrangements. The very wide variation in financial performance across the industry suggests there is scope for many providers to pursue greater efficiency and improve their results.

The Aged Care Financing Authority and the 2019 Annual Industry Report

1 This report

1.1 Aged care in Australia

The aged care industry in Australia provides services to around 1.3 million Australians and generates annual revenues totalling around $22.6 billion. The industry makes a significant contribution to the Australian economy, representing 1 per cent of Gross Domestic Product (GDP).

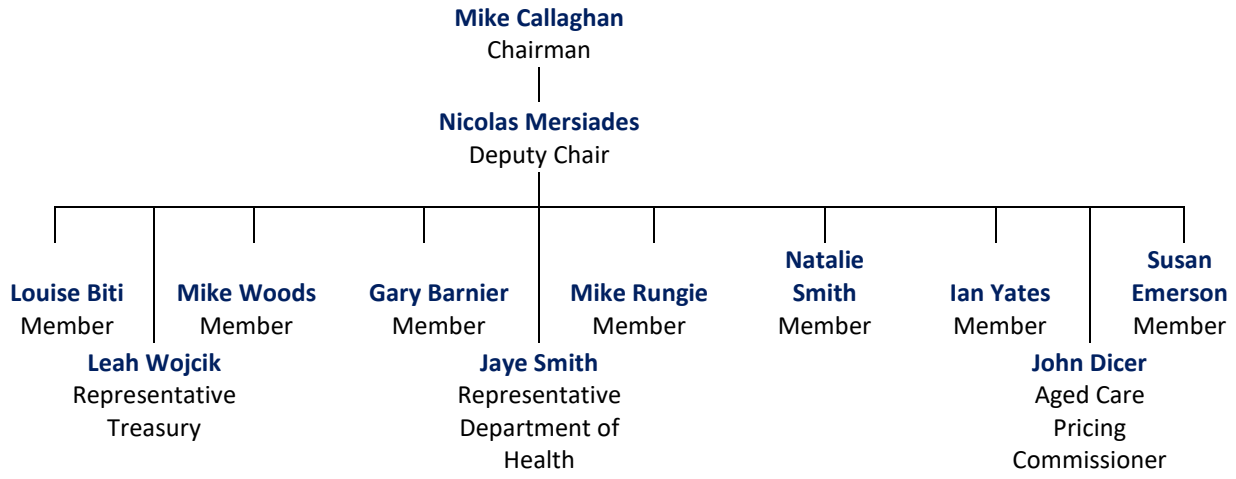
The industry is heavily reliant on taxpayer funding, receiving $18.1 billion in Commonwealth funding in 2017-18, an increase of 5.7 per cent from 2016-17. Almost 70 per cent of total funding ($12.2 billion) was for residential care. Given the amount of taxpayer funding, objective and thorough analysis of the funding and financing of the industry is of central importance to the Government, aged care consumers and providers.

1.2 About the Aged Care Financing Authority

The Aged Care Financing Authority (ACFA) is a statutory committee whose role is to provide independent, transparent advice to the Australian Government on funding and financing issues in the aged care industry. ACFA considers issues in the context of maintaining a viable and sustainable aged care industry and accessible services that balance the needs of consumers, providers, the workforce, taxpayers, investors and financiers.

ACFA is led by an independent Chairman (Mike Callaghan) and Deputy Chair (Nicolas Mersiades) complemented by seven members with aged care or finance industry expertise. Figure 1.1 shows the ACFA membership and structure. Further details about each member are provided in Appendix A. There are three non-voting Australian Government representatives on ACFA.

Figure 1.1: ACFA Membership



1.3 The Annual Report on the Funding and Financing of the Aged Care Industry

Each year ACFA provides the Minister responsible for aged care with a report on the funding and financing of the aged care industry.

Over time, each annual report builds upon the last, producing a substantial body of in-time as well as trend data on the funding and financing of the aged care industry. This is the seventh annual report published.[1]

1.3.1 Methodology

The 2019 annual report mainly presents and analyses 2017-18 data provided by aged care providers and date held by the Department of Health, although this is supplemented by more recent data sources where available along with consultations with industry participants.

The principal data sources are financial and administrative data collected by the Department of Health:

- From Commonwealth Home Support Programme (CHSP) providers (Home and Community Care providers in WA):
  - CHSP Data Exchange; and
  - HACC Minimum Data Set (WA).
- From home care providers:
  - Aged Care Financial Reports (ACFR).
- From residential care providers:
  - Aged Care Financial Reports (ACFR);
  - General Purpose Financial Reports (GPFR);
  - Annual Survey of Aged Care Homes (SACH); and
  - Published aged care accommodation prices (My Aged Care website).
- Other general data:
  - The 2017-18 Report on the Operation of the *Aged Care Act 1997* (ROACA);
  - The 2016 National Aged Care Workforce Census and Survey; and
  - Relevant supplementary information from industry analysts, including StewartBrown.

In addition to these listed data sources, ACFA regularly consults with the sector, relevant financiers and other key stakeholders. The 2019 report is supplemented with feedback from a substantial increase in consultations ACFA has conducted with a cross section of stakeholders in the first half of 2019 to gain an insight into current factors impacting on the industry. This increase in consultation follows the approach undertaken in the preparation of ACFA's *Update on funding and financing issues in the residential aged care sector* that was published in November 2018.

[1] Previous ACFA annual reports can be accessed at https://agedcare.health.gov.au/aged-care-reform/aged-care-financing-authority

When discussing the financial performance of providers in this report, Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) is the main measure used to analyse profitability. This is because EBITDA excludes items such as interest (both income and expense) and tax expenditures, which can vary depending on the financing decisions of an organisation; and non-cash expenses, such as depreciation and amortisation which can vary greatly based on the size and age of facilities and other assets, and on ownership type and depreciation methods.

EBITDA therefore can be used to compare organisations with each other and against industry averages and is a good measure of core profit trends because it eliminates some of the extraneous factors mentioned above. This is particularly important when analysing aged care given the diversity of ownership and capital structures. EBITDA helps to smooth out these factors.

This report also refers to Net Profit Before Tax (NPBT) which also assists in making comparison between organisations subject to different tax treatments.

The financial analysis and commentary in this report does not include National Aboriginal and Torres Strait Islander Flexible Care Program providers, providers operating Multi-Purpose Services or providers under the Short Term Restorative Care Programme.

As discussed in previous annual reports, it is important to be mindful of the industry composition and the varying objectives of providers when interpreting the data. The industry continues to be dominated by not-for-profit providers. Traditional profit-based measures are not always consistent with the mission and objectives of not-for-profit providers.

Considerations and limitations

As reforms in aged care continue, some forms of service delivery, and therefore data collection, are changing. For this reason, analysis is not always directly comparable with analysis contained in previous reports. Where this is the case it is noted.

In 2017-18, as was the case for 2016-17, the Aged Care Financial Reports (ACFR) were used by home care and residential care providers to report financial data to the Department of Health. Providers previously reported their financial information using different methodologies meaning comparisons with 2015-16 and earlier years is not always possible.

The majority of financial data available to ACFA regarding home and residential care is at the approved provider level. Because many providers have services in multiple locations, ACFA is constrained in its ability to analyse performance at facility or service level or the impact of locational factors on funding, financing and financial performance of services.

1.3.2 Navigating the 2019 annual report

The 2019 annual report is structured as follows:

- **Chapter 2 Aged care in Australia:** Provides an overview of the aged care industry in Australia.
- **Chapter 3 Access to aged care:** Discusses the supply of, and access to, subsidised aged care in Australia.
- **Chapter 4 Home support:** Provides an overview of home support through the Commonwealth Home Support Programme and the Home and Community Care program in Western Australia[2].
- **Chapter 5 Home care:** Provides an overview of the Home Care Packages Program and a summary of financial performance of home care providers in 2017-18.
- **Chapter 6 Residential care:** Provides an overview of residential aged care and a summary of financial performance of residential care providers in 2017-18.
- **Chapter 7 Residential care: capital investment:** Provides discussion and analysis of residential care provider balance sheets and capital investments, as well as building trends in the sector.
- **Chapter 8 Future demand for aged care:** Discusses the future demand for aged care in the short, medium and long-term.
- **Chapter 9 The challenge of achieving a sustainable aged care system:** Provides an outline of some of the challenges facing the Government, providers and consumers for Australia to move to a more sustainable aged care system.

Analysis of providers in this report is generally presented in four ways:

- Whole of sector (refers to all providers operating a particular type of care);
- Ownership type (not-for-profit, for-profit or government owned);
- Location (metropolitan, regional[3] or a mix of metropolitan and regional);
- Scale (number of services[4] operated by a home care provider or number of facilities operated by a residential care provider).

When referring to facility 'size' the report is referring to the number of beds operated by a single residential care facility.

When referring to 'government owned', the report is referring to services owned and operated by state, territory and local governments. The Australian Government does not own or operate aged care facilities or services.

[2] HACC for older Australians in Western Australia transitioned to the Commonwealth Home Support Programme on 1 July 2018.

[3] 'regional' refers to all areas outside of major cities.

[4] A home care service is a location to which a consumer goes to interact with an approved home care provider regarding their package of services.

2 Aged care in Australia

This chapter discusses:

- Types of subsidised aged care in Australia;
- providers of aged care;
- the regulation of the supply of subsidised aged care services;
- Commonwealth and consumer expenditure on aged care; and
- the aged care workforce.

This chapter reports that:

- Australian Government total expenditure on aged care was $18.1 billion in 2017-18, up from $17.1 billion in 2016-17;
- total expenditure is expected to be $20.5 billion in 2018-19, and increase to $24.0 billion by 2021-22;
- services were provided to around 1.3 million[5] people in 2017-18; and is estimated to increase to 1.5 million by 2020-21;
- services were provided by:
  - 1,456 Commonwealth Home Support Programme providers, compared with 1,523 in 2016-17;
  - 91 providers of HACC in Western Australia (98 in 2016-17);
  - 873 home care providers (702 in 2016-17); and
  - 886 residential care providers (902 in 2016-17).

2.1 Overview

The aged care system is continuing to undergo reform so that it more effectively and efficiently supports older people to live in their homes and communities for as long as possible, and enables people to make informed decisions about their care, while remaining sustainable for taxpayers and service providers. Older Australians can access a spectrum of aged care, ranging from home based support through to 24 hour care provided in residential settings.

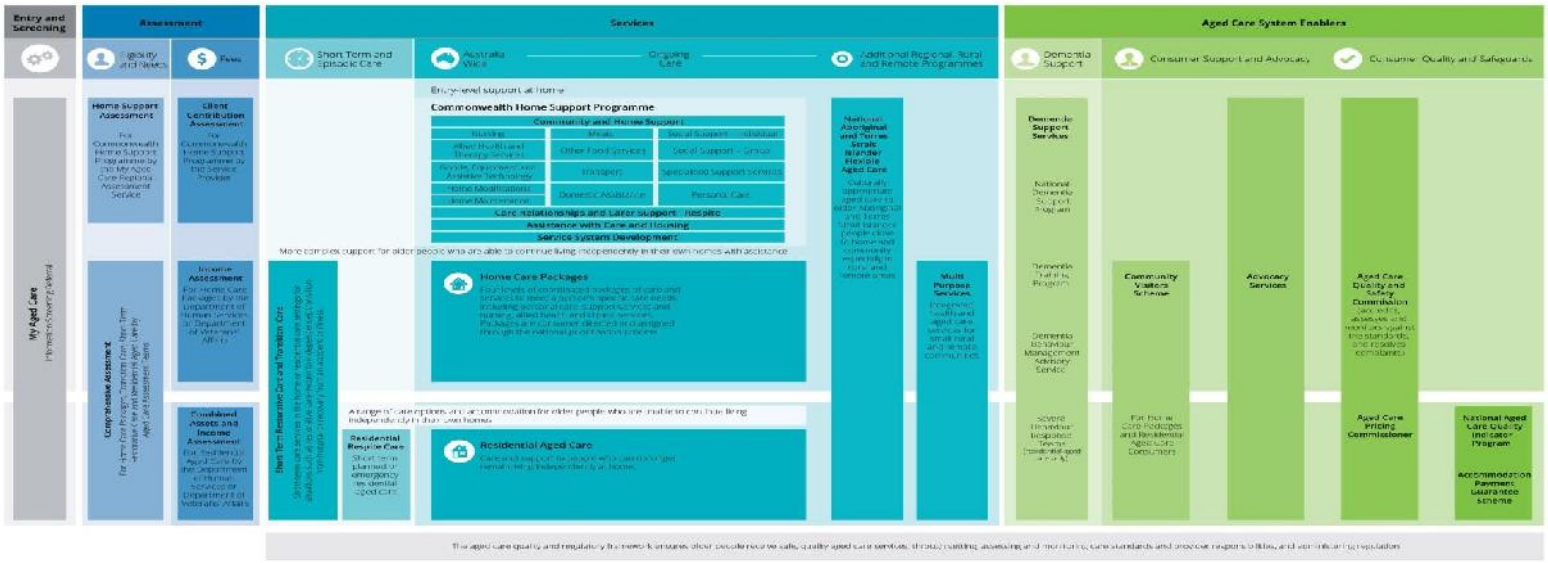
[5] The figure of 1.3 million consumers includes all consumers of Government funded aged care. Much of this report discusses only home support, home care and residential care and therefore total consumers reported may not always match. Consumers of home support, home care and residential care total 1.2 million while consumers of other aged care programs total around 100,000.

Many aged care services are subsidised and regulated by the Australian Government. Figure 2.1 illustrates the Commonwealth subsidised Australian aged care system.

My Aged Care, administered by the Department of Health, is responsible for arranging an assessment of a person's eligibility for Commonwealth subsidised aged care services. The assessment determines the level of care and support for which the individual may be eligible.

Means testing conducted by the Department of Human Services determines whether an individual is required to make a contribution towards the cost of their care and accommodation, and the amount of the contribution.

Figure 2.1: Australian aged care system – guide to Australian Government subsidised aged care services



The Department of Veterans' Affairs also provides Australian Government subsidised aged care services.

1. Current as at February 2019.
2. The Department of Veterans' Affairs also provides Australian Government subsidised aged care services.

2.2 Current aged care

In this report, the aged care industry is discussed in terms of the three main programs:

- **Commonwealth Home Support Programme (CHSP) (Home and Community Care (HACC) in Western Australia):** Provides services for those who require basic services to assist with remaining in their own homes. On 1 July 2015, the CHSP was implemented, combining the previous Commonwealth HACC program[6], the National Respite for Carers Program, Day Therapy Centres and Assistance with Care and Housing for the Aged. On 1 July 2016, the HACC Program in Victoria transitioned to the CHSP and on 1 July 2018 HACC services in Western Australia were also incorporated into the CHSP. All states and territories now operate under the CHSP.
- **Home Care Packages Program:** Provides services for those who have greater care needs and wish to remain living at home. Care and support is provided through a package of home care services.
- **Residential care:** Provides accommodation and 24 hour care for those who have greater care needs and choose or need to be cared for in an aged care facility. Care can be provided on either a temporary (respite) or permanent basis.

Table 2.1 shows the number of providers, services, places, consumers and Commonwealth and consumer funding for each of the three care types for the five years to 2017-18.

In addition there are care types about which, due to a lack of financial data, ACFA does not provide analysis or commentary. These include:

- **Flexible care:** Services in either a residential or home care setting, that, due to difficulties in delivering services in some communities, are delivered using different care approaches than that provided through mainstream residential and home care. Examples of flexible care include Multi-Purpose Services in rural and remote locations and Aboriginal and Torres Strait Islander flexible care.
- **Transition and Restorative care:** Services that focus on enhancing the physical and cognitive function of people who have lost or are at risk of losing condition and independence. The Short-Term Restorative Care (STRC) Programme, which commenced in February 2017, aims to reverse and/or slow 'functional decline' in older people and improve their wellbeing through the delivery of a time-limited, goal-oriented, multi-disciplinary and co-ordinated range of services. The Transition Care Programme seeks to optimise the functioning and independence of older people after a hospital stay, enabling them to return home rather than enter residential care. Unlike the STRC, the Transition Care Programme is a joint Commonwealth-State funded program.
- **Innovative pool:** The Innovative Care Programme supports the development and testing of flexible models of service delivery in areas where mainstream aged care services may not appropriately meet the needs of a location or target group.

[6] The Commonwealth Home and Community Care program was created on 1 July 2012 following agreement to the transfer of all formerly joint Commonwealth-state/territory HACC programs, except Victoria and Western Australia.

Table 2.1: Aged care in Australia 2013-14 to 2017-18

	2013-14			2014-15			2015-16			2016-17			2017-18		
	Home Support	Home care	Residential care	Home support	Home care	Residential care	Home support	Home care	Residential care	Home support	Home care	Residential care	Home support	Home care	Residential care
Number of providers	1,676	504	1,016	1,628	504	972	1,686	496	949	1,621	702	902	1,547	873	886
Number of services/facilities	N/A	2,212	2,688	N/A	2,292	2,681	N/A	2,099	2,669	N/A	2,367	2,672	N/A	2,599	2,695
Number of allocated places	N/A	66,149	189,283	N/A	72,702	192,370	N/A	78,956	195,825	N/A	N/A[1]	200,689	N/A	N/A	207,142
Number of consumers	775,959	83,144	231,515	812,384	83,838	231,255	925,432	88,875	234,931	784,927	97,516	239,379	847,534	116,843	241,723
Commonwealth funding	$1.7b	$1.3b	$9.8b	$1.9b	$1.3b	$10.6b	$2.2b	$1.5b	$11.4b	$2.4b	$1.6b	$11.9b	$2.4b	$2.0b	$12.2b
Consumer contribution	N/A	$87m	$4.0b	N/A	$136m	$4.2b	N/A	$127m	$4.5b	$204m	$128m	$4.5b	$219m	$122m	$4.5b

Notes:

1. This table only shows data for the three main types of Government funded aged care: CHSP (and Vic/WA HACC), home care and residential care. Therefore total consumers of aged care does not match the around 1.3 million stated at the beginning of this chapter as that figure includes all other types of Government funded aged care.
2. Home support for the years 2013-14 to 2014-15 comprises Commonwealth HACC as well as Vic and WA HACC, in 2015-16 comprises CHSP as well as VIC and WA HACC and in 2016-17 and 2017-18 comprises CHSP as well as WA HACC.
3. Commonwealth funding for home support in 2015-16 and 2016-17 includes funding for My Aged Care and Regional Assessment Service (RAS) to support the CHSP ($148 million in 2015-16 and $123 million in 2016-17).
4. The number of consumers of home support in 2015-16 (925,432) includes 285,432 for Vic and WA HACC and an estimate of over 640,000 in the CHSP as accurate data was not available. Due to the lack of accurate data and differences in counting methods the CHSP consumers for 2015-16 are likely overstated.
5. The amounts shown for home care consumer contributions in the 2018 ACFA report ($142m in 2015-16 and $150m in 2016-17) were incorrect.

2.3 Australian Government expenditure on aged care

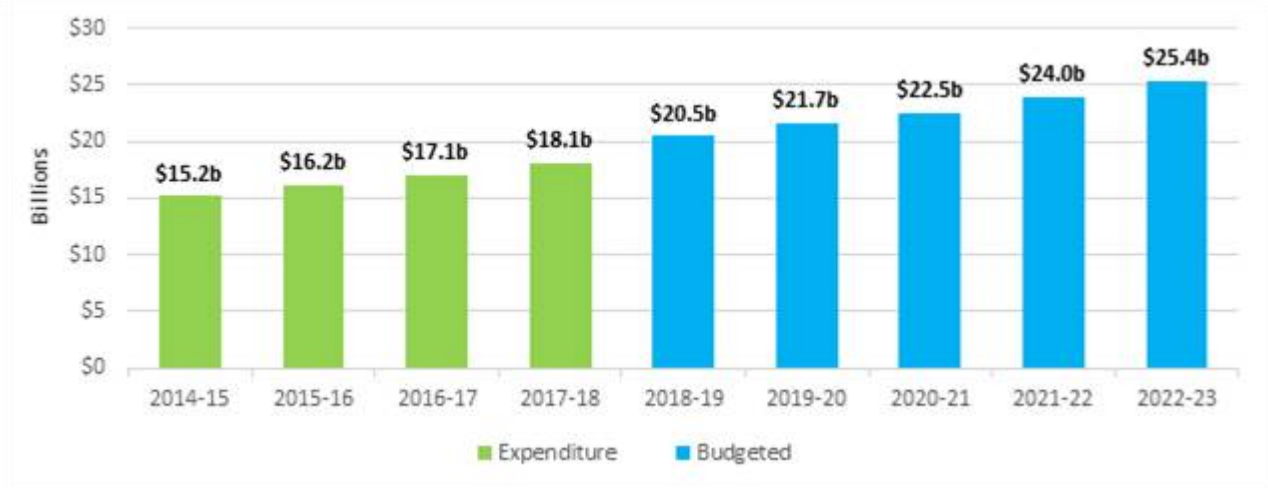
The Australian Government spent $18.1 billion on aged care in 2017-18, up from $17.1 billion in 2016-17. In 2018-19, Australian Government funding is expected to be $20.5 billion with $24 billion budgeted for 2021-2. Chart 2.1 shows Commonwealth funding in aged care since 2013-14 and budgeted expenditure to 2022-23.

More than three quarters of the 5.7 per cent increase in Australian Government funding during 2017-18, ($746.2 million) is attributable to increases in residential and home care expenditure, $300.3 million and $445.9 million respectively. The balance is spread across a mix of programs such as CHSP and flexible aged care programs.

The growth in residential care expenditure can be attributed to a 1.4 per cent increase in the number of days of care provided during the year due to an increase in the number of total residents, and a 1.1 per cent increase in average care subsidy and supplement payments, primarily due to the indexation of the accommodation supplement and more facilities becoming eligible for the higher accommodation supplement.

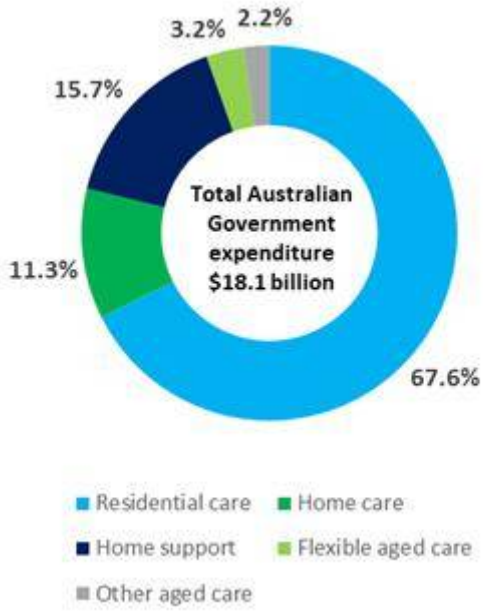
The increase in home care expenditure in 2017-18 is mainly due to a 4.2 per cent increase in the number of days of care provided during the year.

Chart 2.1: Australian Government total aged care expenditure, 2014-15 to 2017-18 and total budgeted aged care expenditure, 2018-19 to 2022-23



Funding for residential care is by far the largest proportion of Commonwealth expenditure at almost 68 per cent. The proportions of Commonwealth expenditure in 2017-18 across the industry are illustrated in Chart 2.2.

Chart 2.2: Australian Government total budgeted aged care expenditure, by major program, 2017-18



Australian Government expenditure on aged care is projected to nearly double as a share of the economy from 1 per cent currently to around 1.7 per cent of GDP by 2055[7]. Costs of care will continue to rise on account of growth in input costs (e.g. wages) and the increasing complexity of chronic health conditions in ageing populations.

ACFA has previously noted that the shift in the balance of care in favour of home care over residential care is expected to improve affordability for taxpayers over the long term. This is because the costs of accommodation associated with residential care are not incurred with home care, and because, on average, higher care subsidies apply in residential care where 24 hour care is provided. As noted in ACFA's annual report last year, there are many home care consumers with higher care needs who are in receipt of a lower level package until a package suitable to their needs becomes available, as well as people with assessed needs who are waiting to be offered a package.

2.4 Consumer contributions

Most aged care consumers contribute to the cost of their care.

In residential care, consumers contribute 85 per cent of the single age pension towards their living expenses (through the Basic Daily Fee) and, subject to means testing, may be required to contribute towards their accommodation and care costs. In 2017-18, residents contributed $3.3 billion towards their living expenses, $780 million towards accommodation costs by those who chose to pay through a Daily Accommodation Payment (which excludes those choosing to pay through a fully refundable lump sum deposit) and $504 million towards care costs. Overall contributions from residents (excluding lump sum deposits) represent 26.6 per cent of total residential care provider revenue.

[7] Department of the Treasury *Intergenerational Report, 2015*.

Consumers of home care packages contributed around $122 million (representing 5.9 per cent of home care provider's revenue) to their care costs in 2017-18, while Commonwealth Home Support Programme consumers contributed $219 million, which represents 9.3 per cent of total expenditure on home support.

Table 2.2 shows the Government and consumer contribution across service types since 2013-14.

Table 2.2: Australian Government expenditure and consumer contribution, by service type, 2013-14 to 2017-18

		2013-14	2014-15	2015-16	2016-17	2017-18
Home care	Government	$1.3b	$1.3b	$1.5b	$1.6b	$2.0b
	Consumer	$87m	$136m	$127m[8]	$126m[9]	$122m
Residential care	Government	$9.8b	$10.6b	$11.4b	$11.9b	$12.2b
	Consumer	$4.0b	$4.2b	$4.5b	$4.5b	$4.5b
Home support	Government	$1.7b	$1.9b	$2.2b	$2.4b	$2.4b
	Consumer[10]	N/A	N/A	N/A	$204m	$219m

Consumers may also choose to pay additional amounts to a provider to access additional levels of care or services (e.g. to 'top-up' funding available under a home care package, or to purchase additional lifestyle-related services in residential care).

ACFA's report *Understanding how consumers plan and finance their aged care* was published in December 2018 and the recommendations in the report are outlined below.

[8] The figure of $142 million in the 2018 ACFA report was incorrect.

[9] The figure of $150 million in the 2018 ACFA report was incorrect.

[10] Cconsumer contributions for home support were not available until 2016-17.

Improving information sources

For consumers to truly understand the range of aged care services available and the cost of these services, and to facilitate both their incentive and capacity to plan for their current and future aged care needs, various information sources need to be improved, including: retirement planning tools; equity release products; My Aged Care website; retirement villages; and fee advice letters issued by DHS; as well as improving the general perception of aged care. ACFA's recommendations included the following themes:

Ensuring retirement planning tools include future aged care needs

Raising the profile of equity release products to assist consumers with funding their aged care costs

Access to information on My Aged Care

Misconceptions regarding retirement villages

Improving fee advice letters from DHS

Improving perceptions of aged care to support increased planning

Aged care fees

ACFA considers that in order to assist consumers in understanding aged care fees, not only is better information required but changes should be made to the aged care fees themselves. ACFA recommends changes to: improve consumer understanding of aged care fees; the fee structures of CHSP and home care; financial hardship for home care packages; residential accommodation payment options; additional service fees; and financial abuse and complaints processes. ACFA's recommendations included the following themes:

Improving consumer understanding of aged care fees

Improving the interface between fees for CHSP and home care packages

Review of financial hardship assistance for home care packages

Improving understanding of residential aged care accommodation payments

Improve understanding of additional service fees for residential aged care

Financial abuse and complaints processes

Financial advisors

ACFA considers that further work is required to encourage financial advisors to more widely upskill and include aged care advice into services, both in the pre-retirement and post-retirement planning phases. ACFA's recommendations included the following themes:

Expansion of Financial Information Service

Ensuring financial planners are skilled to provide advice on aged care

2.5 Aged care providers

In this report, providers of the three main types of Government subsidised aged care in Australia are discussed. These are CHSP (HACC in WA), home care and residential care.

There are over 3,000 providers who provide these services to older Australians. Table 2.3 shows the number of providers over the last five years. The number of home care providers was stable until 2015-16 but has since increased dramatically. By contrast, the number of residential care providers

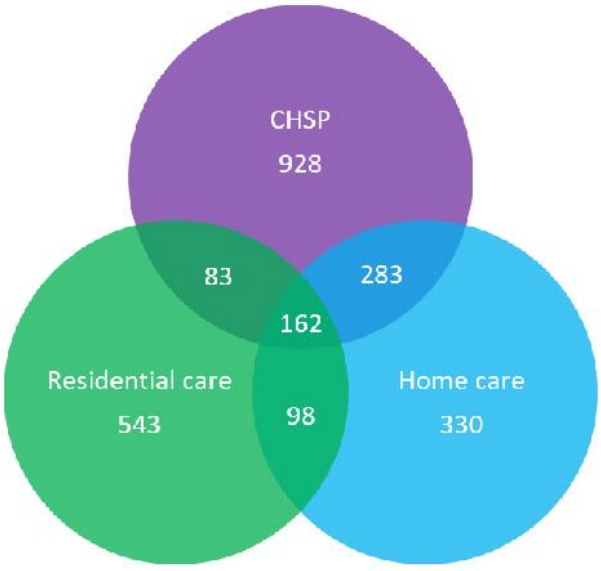
has been steadily declining over the five years. The changing number of home care and residential care providers is discussed in Chapter 3.

Table 2.3: Number of aged care providers, by service type, 2013-14 to 2017-18

	Home support	Home care	Residential care
2013-14	1,676	504	1,016
2014-15	1,628	504	972
2015-16	1,686	496	949
2016-17	1,621	702	902
2017-18	1,547	873	886

While the majority of providers operate only one type of aged care service, some operate two or all three of the major types. Chart 2.3 shows the number of providers providing only one type, two types and all three types of services in 2017-18.[11] As was the case in previous ACFA reports, this analysis excludes Western Australian HACC providers as information on whether these providers also provide residential or home care is not available.

Chart 2.3: Proportion of aged care providers providing more than one type of aged care service, 2017-18



As shown, there appears to be a high degree of specialisation in terms of service types offered by providers. However the proportion of providers who have diversified into more than one type of care is continuing to increase, albeit slowly, as shown in Table 2.4. Of the 162 organisations who provide all three major types of care, only four are for-profit providers. ACFA notes that there

[11] Some aged care providers, particularly not-for-profit providers, also provide disability services and seniors' housing.

would be merit in examining the scope for economies of scale and other benefits from providers engaging in more than one type of service.

Table 2.4: Proportion of aged care providers providing more than one type of service, 2013-14 to 2017-18

	One type of service only	Two types of services	All three types of services
2013-14	85%	13%	2%
2014-15	84%	14%	2%
2015-16	78%	16%	6%
2016-17	76%	17%	7%
2017-18	74%	19%	7%

There may be more occurrences of providers providing more than one type of service than reported here, however separate provider registration in the three different sub-sectors means this is not always apparent, as providers often have different ABNs and different trading names.

2.6 Aged care workforce

The aged care workforce is a shared responsibility between the Australian Government and the aged care industry, with many of the levers to influence the workforce resting with employers/providers. The Australian Government supports the industry through setting policy with appropriate funding that fosters flexibility, responsiveness and innovation, and supporting competitive labour markets. It also supports the industry through funding and regulating the higher education and the vocational education and training systems.

The National Aged Care Workforce Census and Survey[12] is conducted approximately every four years. In its 2017 annual report, ACFA provided a summary of the findings of the 2016 Survey.

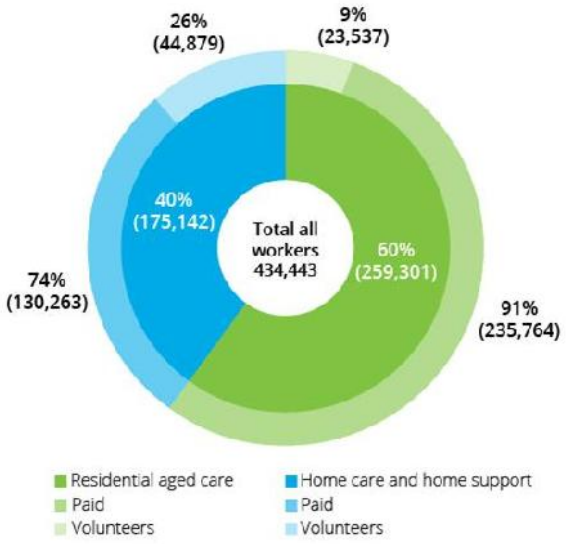
The 2016 census reported the number of paid workers in the aged care industry was around 366,000, with an additional 68,000 volunteers. When the census was conducted in 2012, the number of paid workers was 240,000.

Total paid workers in residential care in 2016 was estimated at 235,764, of whom 153,854 were direct care workers. Total paid workers in home support and home care were estimated at 130,263, of whom 86,463 were in direct care roles.

Of the reported 434,443 people working in aged care in 2016, 60 per cent were in residential care. The remainder of the workforce were in home support and home care. Chart 2.4 shows the composition of the aged care workforce as reported in 2016.

[12] https://agedcare.health.gov.au/news-and-resources/publications/2016-national-aged-care-workforce-census-and-survey-the-aged-care-workforce-2016

Chart 2.4: Aged care workforce composition, 2016



The average age of the residential care workforce decreased from 48 to 46 between 2012 and 2016. In contrast, the average age of the workforce in home support and home care increased from 50 in 2012 to 52 in 2016.

Overseas born workers continue to make up a very significant proportion of the aged care workforce. In 2016, the proportion in residential care was highest with 32 per cent of workers born overseas, while in home support and home care the proportion was 23 per cent. This compares with 35 per cent in residential care and 28 per cent in home support and home care in 2012.

Although aged care remains a female dominated industry, the proportion of males in the workforce is continuing to grow, albeit slowly and from a small base. In residential care, 13 per cent of workers were male (compared with 11 per cent in 2012). In the home support and home care sectors, men represented 11 per cent of all workers (10 per cent in 2012).

More detailed information from the 2016 National Census and Survey is provided in Appendix D. The next census will be conducted around 2020-21.

2.6.1 Aged Care Workforce Strategy

As announced in the 2017–18 Budget, the Australian Government established an industry-led Aged Care Workforce Strategy Taskforce to develop an Aged Care Workforce Strategy. The Taskforce delivered its Strategy to the Minister on 29 June 2018.

In September 2018, the Strategy was released and the Government announced support for industry-led implementation. The Strategy includes 14 actions[13] to grow the professional workforce and attract, train and retain skilled and talented staff to work in aged care services in a variety of settings. A new Aged Care Workforce Industry Council, announced in January 2019, will steward the Strategy and is developing an implementation plan.

[13] https://agedcare.health.gov.au/sites/default/files/documents/09_2018/at_a_glance_-_the_fourteen_strategic_actions_of_the_australias_aged_care_taskforce_strategy.docx

An Aged Services Industry Reference Committee (IRC) has also been established to respond to relevant recommendations in the Aged Care Workforce Strategy and to ensure that the national education and training system is able to deliver an agile workforce that can provide safe and quality care in a variety of settings. This includes addressing the current and future competencies and skill requirements for new workers entering the industry and existing staff needing to upskill in both the vocational education and training (VET) and higher education sectors.

In addition, the Aged Services IRC will establish a number of 'specific interest' advisory committees to provide high-level strategic and policy advice to support the work of the IRC.

2.7 Aged care reforms

The aged care industry has undergone substantial change in recent years with a view to improving the sustainability of aged care services and increasing consumer choice and control. This change includes a suite of reforms that have had a phased implementation as part of a ten-year transition strategy announced in April 2012 and further reform announcements in subsequent years.

The reforms since 2012 are summarised below according to the care type they relate to, that is, CHSP, home care, residential care or cross-program.

Commonwealth Home Support Programme (CHSP)

- From 1 July 2015, the CHSP commenced by combining the former Commonwealth-State Home and Community Care (HACC) programs in all states and territories except Victoria and Western Australia, and the Commonwealth National Respite for Carers, Day Therapy Centres and Assistance with Care and Housing for the Aged programs;
- Victoria transitioned their HACC services to the CHSP on 1 July 2016 and Western Australia transitioned to the CHSP on 1 July 2018; and
- Regional Assessment Services established in 2015 to assess eligibility for CHSP services.

Home care

- New home care packages (levels 1-4) commenced from 1 August 2013;
- income testing with subsidy reduction, including annual and lifetime caps, commenced on 1 July 2014;
- all packages required to be CDC, with individualised budgets, from 1 July 2015;
- from 27 February 2017:
  - creation of a consistent National Prioritisation System to assign home care packages; and
  - home care packages assigned to the consumer rather than allocated to the provider;
- home care providers required to publish their current pricing information on the My Aged Care Service Finder, from 30 November 2018;
- 6,000 additional higher level home care packages in 2017-18 announced in the 2017-18 MYEFO;
- 14,000 additional higher level home care packages announced in the 2018-19 Budget;
- 10,000 higher level home care packages in 2018-19 announced in the 2018-19 MYEFO;
- 10,000 home care packages across all levels in 2019-20 announced as part of the 2019-20 Budget; and

- home care providers required to publish their pricing information in a new standardised schedule from 1 July 2019.

Residential care

- New means testing (combining income and assets test), including annual and lifetime caps, commenced on 1 July 2014;
- new accommodation payment arrangements from 1 July 2014 which allow market-based accommodation prices for all non-supported residents, accompanied by consumer choice to pay by lump sum, daily payment or a combination of both;
- requirements for providers to publish the maximum price they charge for accommodation and extra services, from 1 July 2014;
- higher accommodation supplement payable for supported residents in residential care facilities that were newly built or significantly refurbished since 20 April 2012;
- creation of an Aged Care Pricing Commissioner position in October 2013; and
- rental income from the former home became assessable for all residents who enter care from 1 July 2016 (formerly exempt for residents who made a daily payment for their accommodation).

Cross-program

- Overall target provision ratio for Government subsidised aged care places to increase from 113 places for every 1,000 people aged 70+ to 125 places between 2012-13 and 2021-22;
- creation of a single budget item for home care packages and residential care places from 1 July 2018 that allows flexibility for the Government to direct available funding to home care or residential care in response to consumer preferences;
- establishing the Aged Care Quality and Safety Commission from January 2019 and the commencement of a single set of quality standards across all aged care from 1 July 2019;
- from 1 July 2019, all Commonwealth subsidised residential care facilities must collect and provide clinical quality indicator data to the Department of Health through the National Aged Care Quality Indicator Program. The program had initially started in 2016 as a voluntary program;
- from 1 July 2019, the new Charter of Aged Care Rights will provide the same rights to all consumers, regardless of the type of Commonwealth subsided care and services they receive; and
- further improvements to My Aged Care in 2018-19 and 2019-20.

2.7.1 2017 Legislated Review

The Legislated Review of Aged Care 2017 (the Review), led by David Tune AO PSM, considered the impacts and effectiveness of reforms implemented over the previous five years and included 38 recommendations for future reforms.

The recommendations are designed to move aged care further towards a consumer-focused demand-driven system and to trigger changes that are prerequisites for a fully consumer-driven aged care system. Some do this by targeting better consumer access through better understanding of, and response to, demand, some by improving information and assessment, some by improving sustainability, and others by supporting greater equity in consumer contributions. The latter

includes greater consistency of fee arrangements within and across care types and improved equity in the treatment of different forms of income and assets.

While decisions on some recommendations have already been taken by Government, other recommendations particularly those related to the long-term sustainability of the system, are being considered within the context of long term structural reforms.

In terms of aged care pricing and fees, the Government announced in September 2017 that it does not support recommendations 13 and 15, but did announce in the 2018-19 MYEFO that it will partially implement recommendation 12 by moving towards greater proportionality in home care fees, resulting in a gradual decrease in fees paid by home care recipients with package levels 1, 2 and 3.

To improve the transparency of fees and charges for care recipients, an important element in a consumer driven competitive system, the Government has introduced price publishing requirements for home care providers as per recommendation 11.

2.8 Royal Commission into Aged Care Quality and Safety

In October 2018, a Royal Commission into Aged Care Quality and Safety was established by the Governor-General with Terms of Reference[14] announced by Government. The Royal Commission is looking at the quality of aged care services in Australia, and the future challenges and opportunities for delivering accessible, affordable and high quality aged care services that are person-centred, including through allowing people to exercise greater choice, control and independence in relation to their care.

In December 2018 individuals and organisations were invited to make submissions. The Commission has advised it will accept submissions until at least September 2019 (a date for the closing of submissions will be announced in the second half of 2019). The Royal Commission hearings began in January 2019 and are currently scheduled up until December 2019. An interim report is due by 31 October 2019 and a final report with the Commission's recommendations is to be provided to the Governor-General by 30 April 2020.

In April 2019 ACFA provided a submission to the Royal Commission. ACFA's submission can be found at https://agedcare.health.gov.au/reform/acfas-submission-to-the-royal-commission-into-aged-care-quality-and-safety.

[14] https://agedcare.royalcommission.gov.au/Pages/Terms-of-reference.aspx

3 Access to aged care

This chapter discusses:

- Access to subsidised aged care for older Australians;
- the supply of subsidised aged care; and
- usage of aged care and impacts of a changing population.

This chapter reports that:

- The number of consumers of home care increased from 97,516 in 2016-17 to 116,843 in 2017-18;
- the number of consumers of residential care increased from 239,379 in 2016-17 to 241,723 in 2017-18;
- average occupancy in residential care continues to fall; 90.3 per cent in 2017-18, down from 91.8 per cent in 2016-17 and 92.4 per cent in 2015-16; and
- the proportion of people using home care and residential care at age 85 and over is more than three times that of people aged 70 and over.

3.1 Supply of subsidised aged care

Ensuring access to appropriate quality care remains a fundamental policy objective for the Australian Government in the funding and financing of aged care. However, access to care services needs to be balanced with affordability for both consumers and taxpayers.

The Government regulates the supply of services offered through the Commonwealth Home Support Programme (CHSP) through a capped funding amount that is indexed annually. Similarly, the Commonwealth contribution toward the joint Commonwealth-state funded Western Australian Home and Community Care (HACC) program was also capped and indexed. The Western Australian HACC program transitioned to the CHSP from 1 July 2018 making CHSP a national program. The funding for CHSP and HACC is discussed in Chapter 4.

The Australian Government regulates the supply of home care packages and residential aged care places it funds by specifying targets. These targets, known as the aged care target provision ratios, are based on the number of people aged 70 and over.

The overall aged care target provision ratio was first set in 1985 at 100 operational residential care places per 1,000 people aged 70 and over. The overall provision ratio was increased to 108 in 2004,

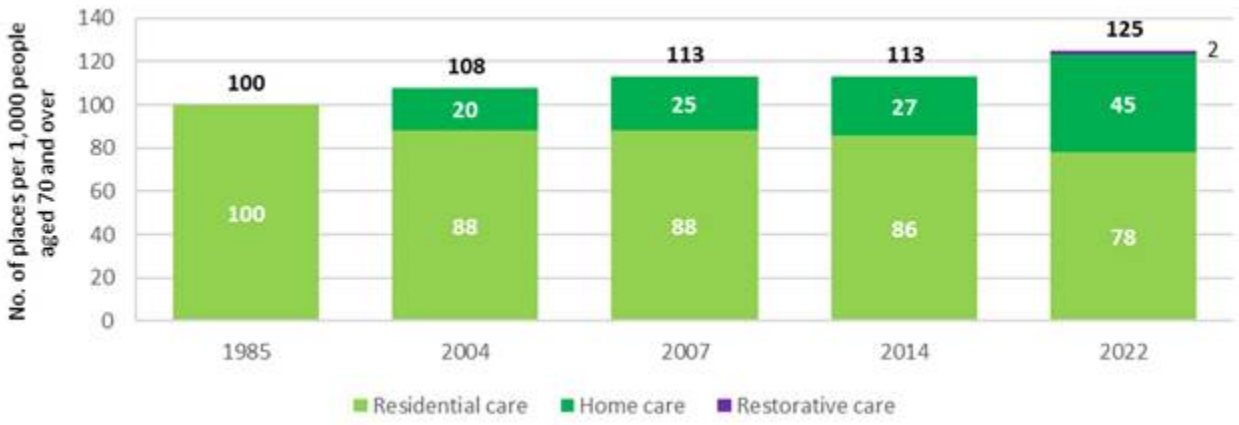
further increased to 113 in 2007, and in 2012 was adjusted to increase progressively to 125 operational places by 2022. Home care packages were first introduced into the ratio in the early 1990s and since then successive Governments have gradually increased home care as a proportion of the overall target provision ratio.

This population-based target provision formula is designed to allow the overall supply of services to increase in line with the ageing of the population, while also defining the total number of places/packages and, thereby, helping control the Commonwealth's expenditure on aged care.

As set in 2012, within the current overall target provision ratio of 125, the mix of home care and residential care is being significantly altered. Over the period 2012 to 2022 the target for home care is increasing from 27 to 45 operational places, while the residential care target is to reduce from 86 to 78. The remaining two places are for the Short Term Restorative Care Programme (STRC).

Chart 3.1 shows the changes in the target ratios since 1985 and the planned increase through to 2022.

Chart 3.1: Increase in target provision ratios, 1985-2022



Implementation of the current target provision ratio will continue to see an overall increase in the supply of home care packages and residential care places. However, the changes result in the number of home care packages increasing at a faster rate than residential care places, which reflects the Government's response to the increasing number of consumers wishing to remain in their own homes.

Up until and including 2015-16, the Department published achieved ratios for the overall provision target and for both home care and residential care in a consistent and comparable way, based on the number of operational places (operational places included allocated places that are vacant). The calculation of this ratio on this basis is still possible in residential care, but no longer possible for home care since February 2017 when packages were directly assigned to consumers. As a result, last year's ACFA report did not include achieved ratios for either the overall target provision ratio or the home care target ratio.

The Department has since calculated and published achieved ratios for home care for 2016-17 and 2017-18 based on the number of consumers in a package, plus the number of consumers who have been offered a package but who have not yet accepted the offer and whose offer still remains open (i.e. within 56 days of offer). The latter effectively substitutes for formerly vacant packages. While not directly comparable to previous years, it can be used to broadly monitor progress towards the achievement of the overall provision target ratio and home care ratio.

Chart 3.2 shows the achieved overall provision ratio and the achieved home care and residential care ratios for the 10 years to 30 June 2018. The chart also shows the target of 45 for home care and 78 for residential care to be reached by 2022.

Chart 3.2: Home care and residential care achieved ratios, 2007 to 2018, and target ratios 2022

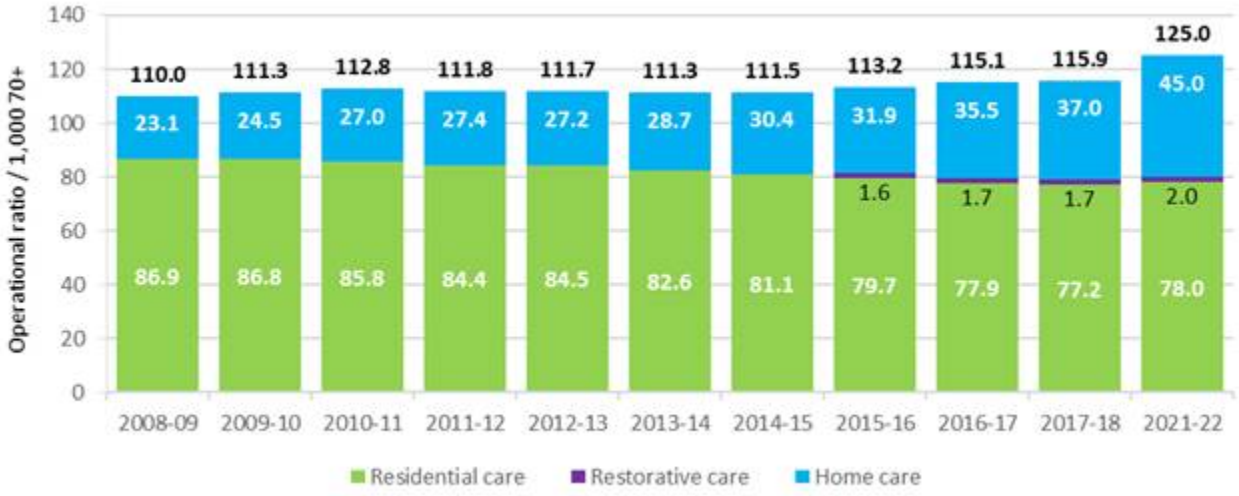


Chart 3.3 shows the number of consumers with a home care package as at 30 June for each of the previous six years, as well as the target number of packages to 2022-23 published in the Department of Health's 2019-20 Portfolio Budget Statement. While the historical and forward estimates numbers are not directly comparable, the chart gives some indication of the increase in home care packages that is planned to be released.

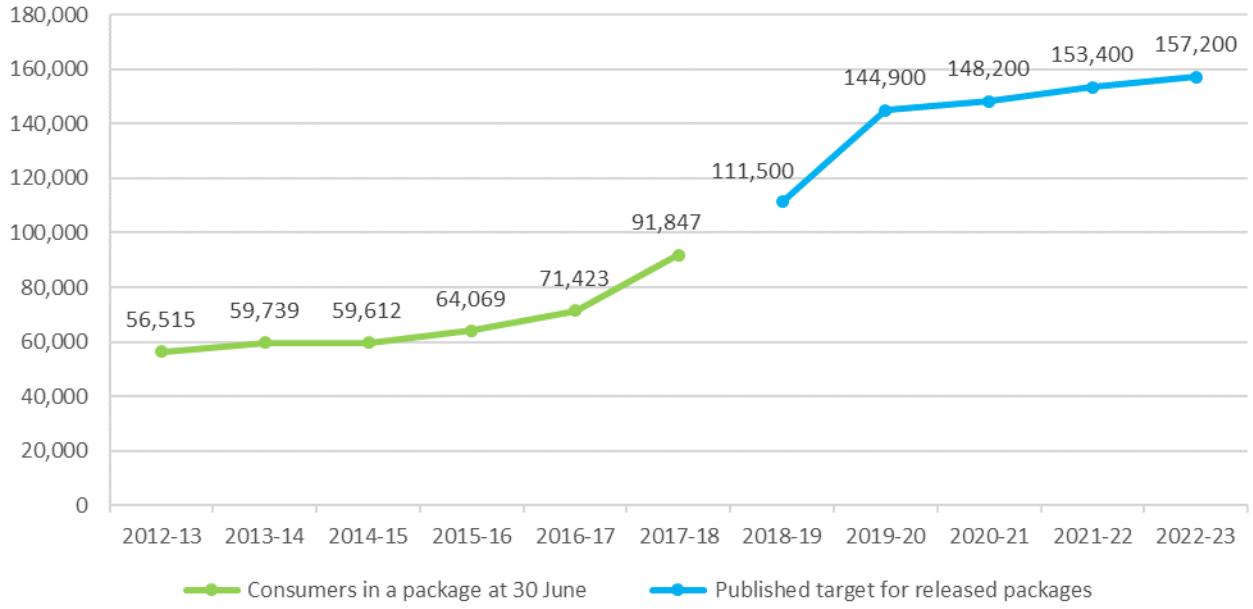
Chart 3.3: Home care consumers, 2012-13 to 2017-18 and published target packages to be released, 2018-19 to 2022-23



The target ratio approach applied to home care packages and residential care places does not apply to the supply of care through the CHSP. Instead, CHSP funding is subject to an annual capped funding allocation, and CHSP providers are grant funded to provide contracted home support services. Consumers who are assessed as eligible through their Regional Assessment Service (RAS) to receive CHSP services can then access those services through a provider who delivers the services for which they have been assessed.

The CHSP is discussed in Chapter 4.

3.2 Aged Care Approvals Round

Unlike home care packages, new residential care places are still allocated to providers through a competitive Aged Care Approvals Round (ACAR).

The Australian Government announced the results of the 2018-19 ACAR[15] on 5 March 2019. Through this ACAR, 13,500 new residential care places were allocated. These places have an estimated annual recurrent funding value of $907 million. This represents an increase of 36 per cent on the 9,911 ACAR places allocated in 2016–17. The 2018-19 ACAR is the largest ACAR, although with no ACAR conducted in 2017-18, the 2018-19 ACAR is effectively allocating more than one years' worth of places. A breakdown of the allocated places by state and territory is in Table 3.1.

A small proportion of the 13,500 residential care places initially made available for allocation were not allocated in the advertised state/territory due to insufficient suitable applications from the Northern Territory, Australian Capital Territory and Tasmania.

- 99 places were not allocated in the Northern Territory from a total of 149 available.
- 158 places were not allocated in the Australian Capital Territory from a total of 360 available.
- 51 places were not allocated in Tasmania from a total of 212 available.

This is similar to what occurred in the 2016-17 ACAR. The 308 unallocated residential care places were re-allocated to New South Wales, Victoria and South Australia.

The 2018-19 ACAR saw the continuation of the trend for a majority of places to be allocated to for-profit providers, with 66 per cent of available places allocated to for-profits. This trend in recent ACARs is reflected in a gradual increase in the proportion of operational places held by for-profit providers, which has increased from 36 per cent in 2012 to 40.5 per cent at 30 June 2018.

The 2018-19 ACAR saw $60 million in capital grants allocated (through the Rural, Regional and Other Special Needs Building Fund) to help aged care providers to construct new or upgrade existing residential care facilities. The capital grants were approved for 28 projects involving 286 new places. The grants targeted services for rural and remote, Indigenous, financially and socially disadvantaged and CALD communities, with the bulk of the funding going to non-metropolitan areas.

In addition to the ACAR, through a separate measure announced in the 2018-19 Budget, $40 million was allocated for infrastructure investment in both residential and home care through The Aged Care Regional, Rural and Remote Infrastructure Grant. This funding is being paid during

[15] https://agedcare.health.gov.au/funding/aged-care-approvals-round-acar/2018-19-aged-care-approvals-round/results

2018-19 and 2019-20 and was designed to target funding in regional, rural and remote regions where services may not have access to infrastructure funding.

The Government also announced the successful applicants for the 775 new STRC places through the 2018-19 ACAR.

The demand for residential care places in the 2018-19 ACAR was not as strong as in recent ACARs. There were 2.8 applications for every available place compared with 4.5 for the 2016-17 ACAR.

Table 3.1: 2018-19 ACAR results summary

State/territory	Residential care places	Estimated annual recurrent funding ($m)	Capital grants ($m)
New South Wales	3,485	$234.2	$14.0
Victoria	1,521	$102.2	$9.9
Queensland	4,289	$288.2	$11.1
Western Australia	3,295*	$221.4	$10.1
South Australia	497	$33.4	$10.7
Tasmania	161	$10.8	$4.2
Australian Capital Territory	202	$13.5	-
Northern Territory	50	$3.4	-
Australia	**13,500**	**$907.1m**	**$60m**

*As at 5 March 2019, the above places include deferred allocations for 244 residential care places in Western Australia, in respect of applicants who are awaiting the required approved provider status.

3.3 Access to aged care

In 2017-18 around 1.3 million older Australians accessed some form of Government subsidised aged care. Table 3.2 shows the number of consumers of the three types of aged care that this report mainly discusses (home support, home care and residential care) since 2013-14.

Table 3.2: Aged care in Australia, number of consumers, 2013-14 to 2017-18

	2013-14	2014-15	2015-16	2016-17	2017-18
Home support	775,959	812,384	925,432[16]	784,927	847,534
Home care	83,144	83,838	88,875	97,516	116,843
Residential care	231,515	231,255	234,931	239,379	241,723

[16] The number of consumers of home support in 2015-16 (925,432) includes 285,432 for Vic and WA HACC and an estimate of over 640,000 in the CHSP as accurate data was not available. Due to the lack of accurate data and differences in counting methods the CHSP consumers for 2015-16 are likely overstated.

.

3.4 Access to home care

The number of older Australians who received home care during 2017-18 was 116,843, an increase of 20 per cent from 97,516 in 2016-17. As at 30 June 2018 there were 91,847 consumers in a package, up from 71,423 as at 30 June 2017. Chart 3.4 shows the significant increase in consumer numbers, particularly in 2017-18. Chart 3.5 shows the increase in consumers, by package levels, since 2014-15.

Chart 3.4: Number of home care consumers in a package, 30 June 2013 to 30 June 2018

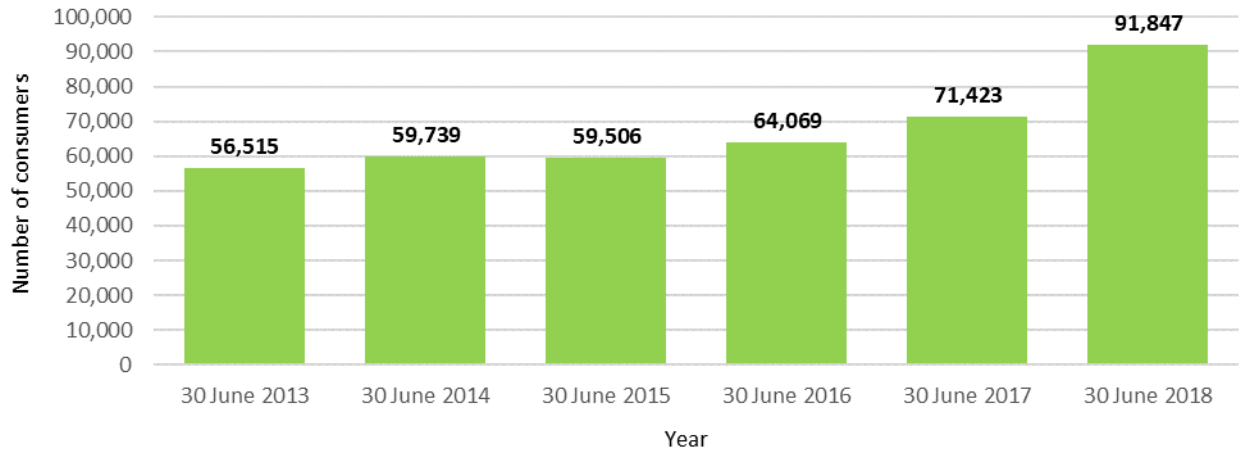


Chart 3.5: Number of home care consumers, by package level, 2014-15 to 2017-18

3.4.1 Release of home care packages

Since February 2017, home care packages have been assigned directly to consumers rather than allocated to providers. This allows consumers to direct their package to the provider of their choice as well as change providers.

Older Australians assessed as requiring home care are placed on the National Prioritisation System based on how long they have been waiting for care and their individual needs and circumstances, regardless of where they live. Packages are periodically released and assigned directly to consumers by the Department of Health within My Aged Care. Packages are assigned to consumers according to when they were approved for home care and urgency of need.

The number of packages released at each level takes into account the number of new packages that are available (having regard to the phased increase in the target home care provision ratio), the number of packages that consumers have exited or not accepted in previous weeks, as well as the amount of unspent Commonwealth funds that have been returned when consumers leave home care. While the total number of packages will increase each year, the number of packages at each funding level will continue to be capped in line with the aged care target provision ratio and the available budget.

3.4.2 Demand for home care packages

ACFA has previously noted that unmet demand for home care is long standing, but was not able to be quantified until the implementation of the National Prioritisation System for assigning packages directly to consumers. The number of people waiting for a package has been increasing since the changes were implemented in February 2017.

Data from the Department of Health shows that as at 31 December 2018 there was a total of 127,748 people waiting for a package. This is an increase of approximately 6,000 in the six months since 30 June 2018. There were 26,220 approvals for home care in the three months to 31 December 2018, of which 56 per cent were for higher level (3 and 4) packages. Although around 75 per cent of the 127,748 people waiting for a package, also had approval for permanent residential care, declining occupancy rates in residential care illustrates the preference of older people for home-based aged care services.

At 31 December 2018, there were 73,978 people waiting on a home care package at their approved level, who had not yet been offered access to a lower level package. Of these people, 93.9 per cent (69,476) had been provided with an approval to access support through the Commonwealth Home Support Program (CHSP).

At 31 December 2018, there were 53,770 people who were waiting for a home care package at their approved level, who had already been offered a lower level package. Of these people, 29,858 were receiving care through a lower level package, 6,270 were deciding on whether to take up a package and 17,642 had not taken up their previous offer(s) of a lower level package.

Information from the Department of Health indicates that waiting times for people to access a package vary depending on package level. People approved for a level 4 package are waiting in excess of 12 months to be assigned a package at any level. People approved for a level 3 package can wait up to six months for an interim package at level 1, but still wait more than 12 months for their assigned package level.

In the 2018-19 Budget, the Government announced a re-profiling of home care packages that will see 14,000 additional higher level packages being released sooner than originally planned.

Since this Budget announcement there have been two additional changes to future home care package releases, aimed at further re-profiling of package releases.

In the 2018-19 Mid-Year Economic and Fiscal Outlook (MYEFO) the Government announced an additional 10,000 higher level packages to be funded in 2018-19, followed by a further 10,000 packages (including 4,500 higher level packages) included in the 2019-20 Budget for release in 2018-19 and 2019-20.

ACFA notes that while the overall effect of these re-profiling changes is to increase the proportion of higher level packages earlier than originally budgeted for (at significant cost to the Budget) and achieve an approximately 50/50 split of higher and lower level packages by 2021-22, the planned growth in total packages numbers by 2021-22 (to 153,437 packages) is broadly in line with the target set in 2012 when the target provision ratio was set at 45 packages per 1,000 people aged 70 and over.

The creation in the 2018-19 Budget of a single budget item for home care packages and residential care places may provide some flexibility to direct available funds to meet the emerging demand for home care packages if demand for residential care reduces.

3.4.3 Length of stay in home care

Length of stay in home care differs between package levels.

For people who entered care in 2015-16, around half the recipients of level 2 packages stayed at their package level for about 15 months and around a quarter stayed over 40 months. By contrast, for those people entering a level 4 package, around half leave care within 13 months and a quarter remain in care for up to 30 months.

For people that entered home care in 2016-17, around half the recipients of level 2 packages stayed at their package level at least 18 months. By contrast, for those people entering a level 4 package, around half leave care within 14 months. This suggests that length of stay in home care is slightly increasing in recent years irrespective of care level.

However, given that many consumers first enter care accessing a package lower than their assessed need and the end of cross subsidisation since the creation of individual budgets, care is needed in how length of stay data is interpreted.

3.5 Access to residential care

The number of older Australians who received permanent residential care during 2017-18 was 241,723, up from 239,379 in 2016-17, an increase of 1 per cent. At 30 June 2018 there were 180,923 residents in care.

As has been the case in recent years, the number of people accessing residential respite care is increasing proportionally faster than those accessing permanent residential care. The number of people who accessed respite care in 2017-18 was 61,993, an increase of 4.4 per cent from 59,228 in 2016-17. Residential respite care usage is discussed later in this chapter.

3.5.1 Occupancy in residential care

Occupancy is measured as the total number of days an allocated place is occupied by a resident, divided by the total number of days an allocated place was available to be occupied. Occupancy rates reflect both demand and the number of places available. In 2017-18, the average occupancy rate across all residential care places was 90.3 per cent, down from 91.8 per cent in 2016-17 and 92.4 per cent in 2015-16. This decline over the last two years follows relative stability for several years at above 92 per cent.

The occupancy rate is comprised of both a numerator and a denominator. The numerator is the number of care days provided and the denominator is the number of bed days that providers had available (based on operational places).

The 1.5 percentage point decline in the occupancy rate in 2017-18 was contributed to by the growth in the number of bed days available (3.0 per cent) which grew at twice the rate of the growth in care days provided (1.4 per cent). Both the for-profit and not-for-profit sectors had faster growth in the available bed days compared with days of care provided (Table 3.3).

Table 3.3: Growth in residential care claims and growth in available beds between 2016-17 and 2017-18

Provider type	Claim day growth	Bed day growth
Not-for-profit	0.9%	1.9%
For-profit	2.5%	5.1%
Government	-2.3%	-2.3%
All providers	1.4%	3.0%

The overall average occupancy rate in residential care peaked at 97.1 per cent in 2003-04.

In terms of ownership type, not-for-profit providers continue to have the highest occupancy at an average of 92.1 per cent in 2017-18, down from 93.0 in 2016-17 and 94.0 per cent in 2015-16 (Table 3.4). For-profit providers recorded a significant decline from 90 per cent for 2016-17 to 87.9 per cent in 2017-18.

Table 3.4: Occupancy rates, by organisation type, 2013-14 to 2017-18

Provider type	2013-14	2014-15	2015-16	2016-17	2017-18
Not-for-profit	94.6%	94.0%	94.0%	93.0%	92.1%
For-profit	91.0%	91.0%	91.0%	90.0%	87.9%
Government	90.0%	89.0%	90.0%	90.0%	90.3%
All providers	**93.0%**	**92.5%**	**92.4%**	**91.8%**	**90.3%**

There are also variations in occupancy by state and territory, as has been the case in previous years. The Northern Territory continues to have the highest occupancy with 94.4 per cent (95.4 per cent in

2016-17) while Queensland recorded the lowest with 89.1 per cent after being relatively high in recent years. Table 3.5 shows occupancy by state and territory for the last five years.

Table 3.5: Occupancy in residential care, by state and territory, 2013-14 to 2017-18

State/territory	2013-14	2014-15	2015-16	2016-17	2017-18
New South Wales	93.1%	92.5%	92.3%	91.1%	89.5%
Victoria	92.5%	91.6%	91.7%	91.1%	90.2%
Queensland	92.8%	92.7%	92.2%	92.3%	89.1%
Western Australia	94.5%	94.4%	94.5%	93.8%	93.2%
South Australia	93.9%	92.3%	93.7%	93.5%	93.4%
Tasmania	92.1%	90.6%	91.0%	91.2%	90.2%
Australian Capital Territory	95.5%	94.5%	88.6%	90.1%	91.0%
Northern Territory	86.0%	92.8%	95.0%	95.4%	94.4%
Australia	**93.0%**	**92.5%**	**92.4%**	**91.8%**	**90.3%**

There remains sizable variation in occupancy rates by remoteness location. In 2017-18 the occupancy in very remote areas was significantly less than in all other locations, as was the case in previous years. The occupancy in remote areas is also around 2-3 per cent lower than in the cities and regional areas.

Table 3.6 shows occupancy in residential care by location over the last five years.

Table 3.6: Occupancy in residential care, by location, 2013-14 to 2017-18

Provider location	2013-14	2014-15	2015-16	2016-17	2017-18
Major cities	93.2%	92.6%	92.4%	91.4%	90.0%
Inner regional	92.9%	92.4%	92.5%	92.7%	91.4%
Outer regional	92.4%	92.1%	92.0%	92.2%	90.8%
Remote	88.6%	86.5%	89.7%	91.7%	88.4%
Very remote	84.4%	84.8%	80.0%	77.4%	77.1%
Australia	**93.0%**	**92.5%**	**92.4%**	**91.8%**	**90.3%**

In ACFA's consultation with the sector, some providers have expressed concern that falling occupancy rates will put pressure on the viability of some residential aged care facilities. This could be a growing issue in future years. The Government has announced in-principle support to the proposal to transition the allocation of residential care places from the current Aged Care Approvals Round (ACAR) approach to alternative arrangements that provide greater choice for

older Australians. The Centre for Health Economics Research and Evaluation (CHERE) at the University of Technology Sydney, in collaboration with aged care accounting and business advisory firm StewartBrown and the Department of Health, are undertaking an impact analysis looking at potential alternative arrangements[17]. One of the options would be to move to a model, similar to home care, where the consumer is assigned a residential care place. This would create greater competition for consumer custom, potentially putting further pressure on occupancy rates for some providers.

3.5.2 Admissions to residential care

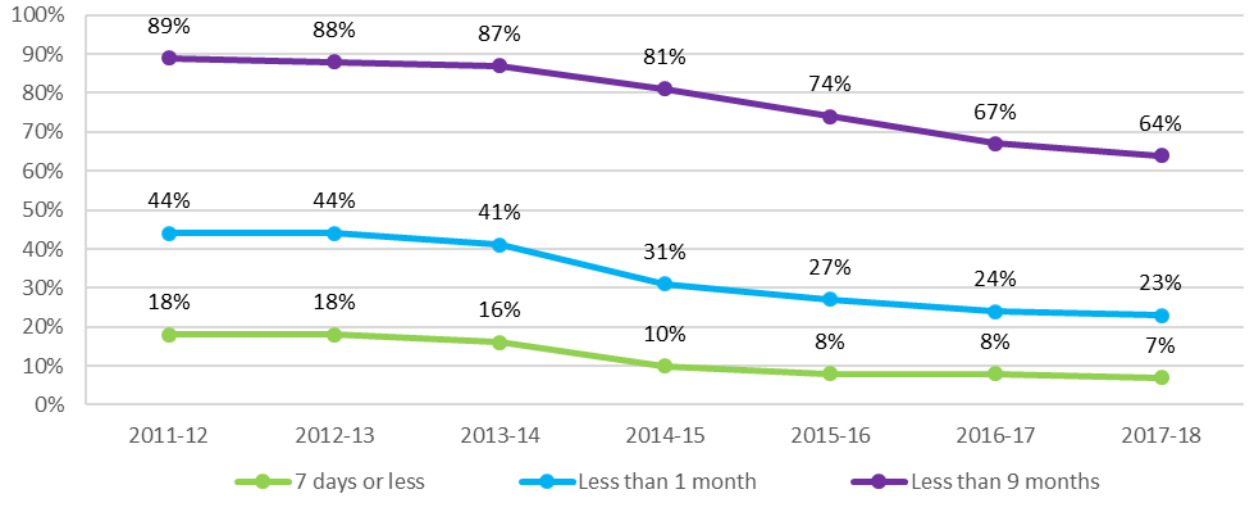
Elapsed time between when a resident is assessed as eligible for residential care and entering permanent care continues to increase (Chart 3.6). This trend has been evident since 2011-12 however has been more obvious since 2013-14. In 2017-18:

- 7 per cent of people entering care did so within one week of being assessed by an ACAT (18 per cent in 2011-12);
- 23 per cent did so within one month (44 per cent in 2011-12); and
- 64 per cent did so within nine months (89 per cent in 2011-12).

However, as ACFA has previously noted, the delay between an assessment of eligibility and a person entering care could be due to consumer choice and not necessarily delays in the system.

The increasing availability of and preference for home care and the increased usage of residential respite care could also be contributing to the longer time between assessment and entering permanent care.

Chart 3.6: Elapsed time between assessment and entering permanent residential care, 2011-12 to 2017-18 (%)



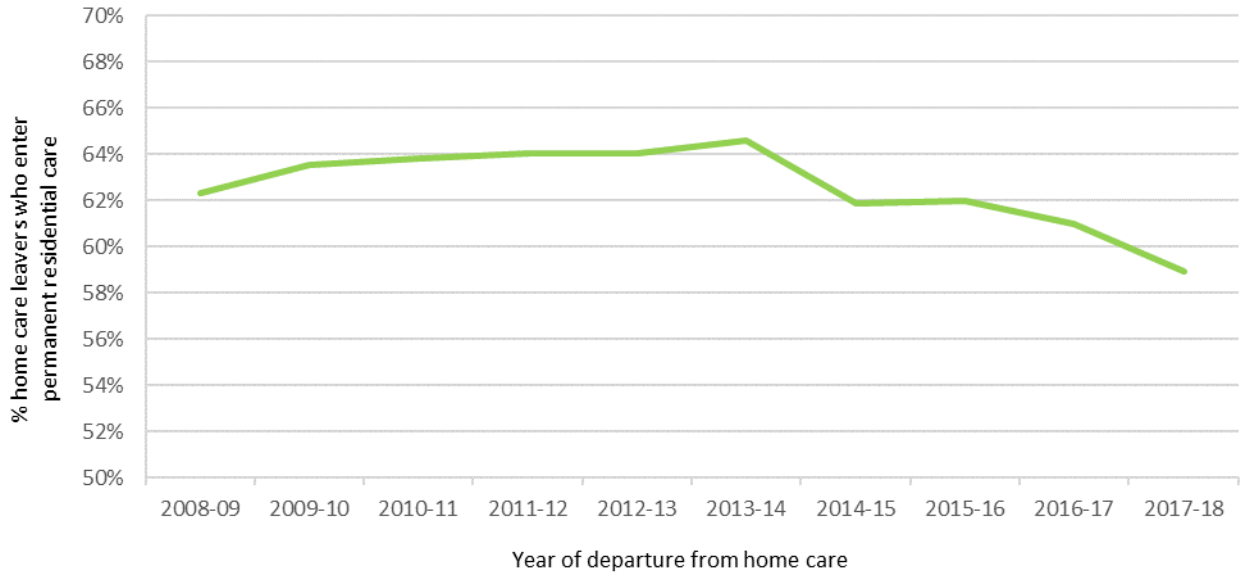
[17] https://agedcare.health.gov.au/funding/impact-analysis-of-alternative-arrangements-for-allocating-residential-aged-care-places

Consumers transitioning from home care to residential care

Chart 3.7 shows the proportion of consumers who enter permanent residential care after leaving home care. The proportion entering residential care was relatively stable at around 60 per cent for the years leading up to the introduction of the Aged Care Funding Instrument (ACFI) in 2008, when it increased to around 63 per cent. Since the start of the major reforms in 2014, the proportion has dropped to below 60 per cent and continued to decrease to below 59 per cent in 2017-18.

This could be partly explained by the increased availability of higher level home care packages, and home care packages overall, which may impact on the proportion of package holders transferring to residential care. ACFA will monitor trends in transfers over the next few years during which a significant increase in the number of packages and the proportion of higher level packages is planned.

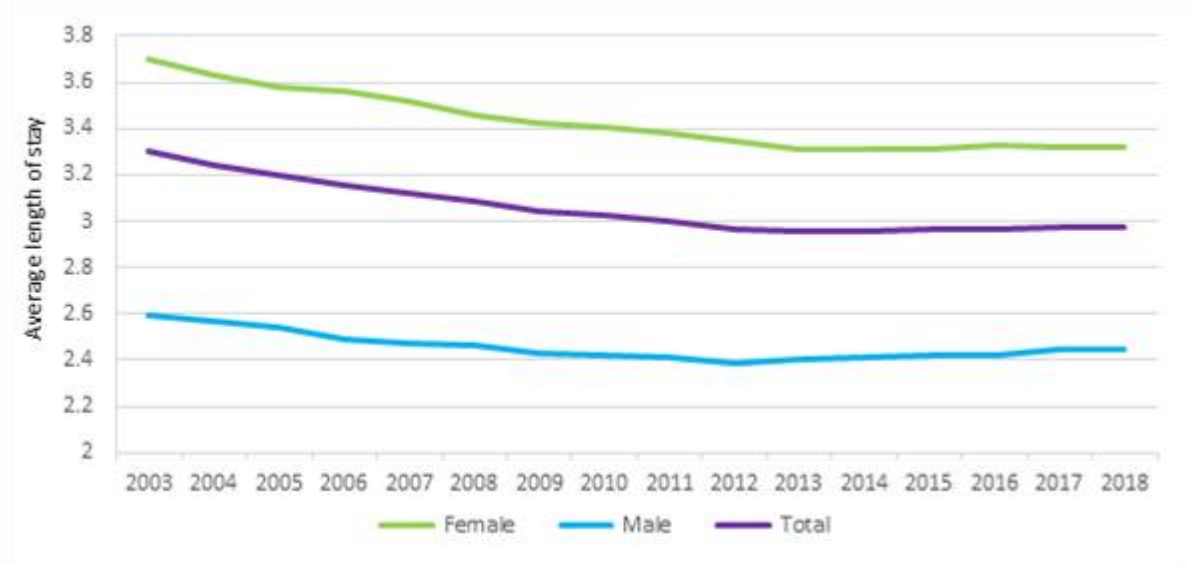
Chart 3.7: Proportion of consumers entering permanent residential care after leaving home care, 2008-09 to 2017-18



3.5.3 Length of stay in residential care

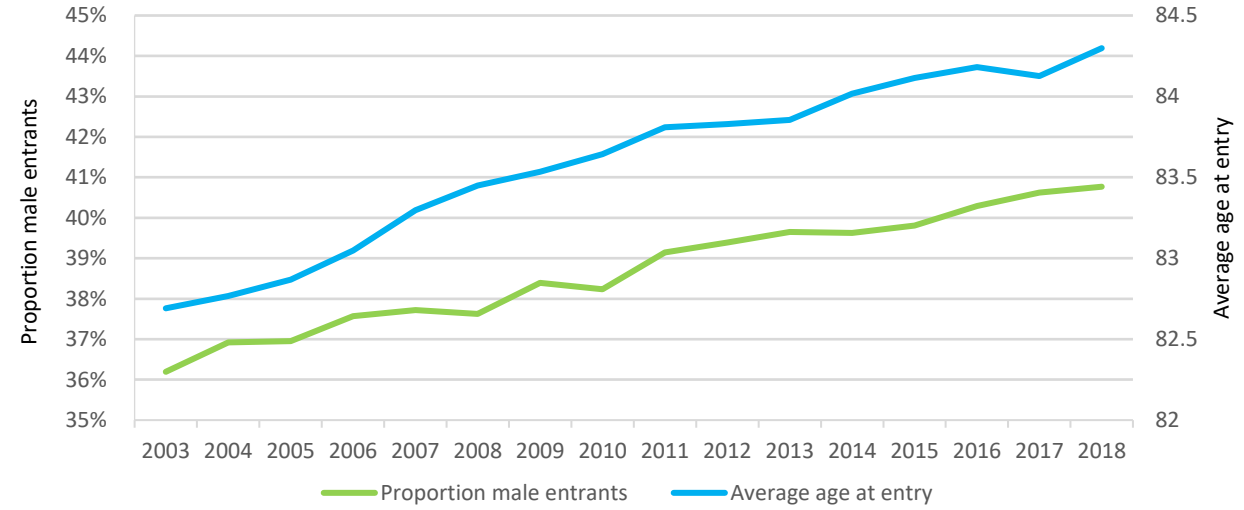
The average length of time between first admission into permanent residential care, and final discharge, was decreasing gradually from around 3.3 years in 2003 to just below 3 years in 2012. Since then it has stabilized and in 2018 the average length of stay (LOS) of those leaving residential care was 2.97 years. There remains a very significant difference between males and females, with females staying in care, on average, 10 months longer than males (Chart 3.8).

Chart 3.8: Average length of stay in residential care, by gender and year of entry, 2003 to 2018



Two drivers of this decrease in LOS have been an increasing average age of entry (both male and female) and an increasing proportion of male residents. Older residents and male residents have shorter average LOS, so increasing proportions of these residents result in a shorter average LOS. Chart 3.9 shows both of these indicators, with the proportion of male entrants increasing from 36 per cent in 2003 to 41 per cent in 2018, and the average age of entry increasing from 82.7 to 84.3 over the same period.

Chart 3.9: Changes in age and gender distribution, 2003 to 2018



The proportion of permanent residents that leave within three, six or 12 months of first entry increased from 2003-04 to 2013-14 (Chart 3.10), which is in line with a decreasing average LOS. However, since 1 July 2014, this proportion has tended to decrease, which will likely have an upwards impact on average LOS. However 2016-17 saw people leaving within 12 months increase slightly.

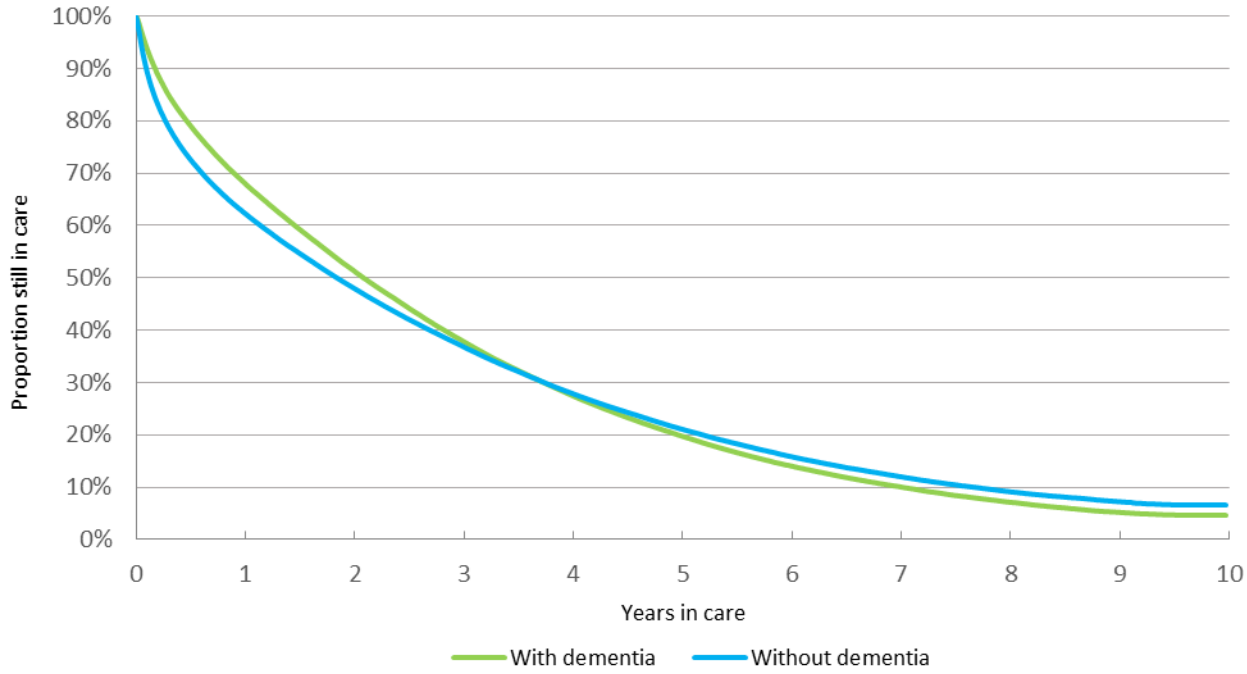
Chart 3.10: Proportion of permanent residents that leave within 3, 6 or 12 months of first entry, 2003-04 to 2017-18

Dementia

Since 2008-09, the proportion of people entering residential care with a diagnosis of dementia has been consistently between around 43 per cent and 45 per cent of all permanent residents entering care, and the average age at admission for people with dementia was around six months older than for those without a diagnosis of dementia.

Chart 3.11 shows the proportion of people still in care over time by dementia status (diagnosis of dementia recorded within first 28 days of admission). It shows that half of the people entering without a dementia diagnosis died or left care within 22 months; compared with around 25 months for people entering care with an initial diagnosis of dementia. People with dementia are less likely to die or leave care in the initial period after entry, however in the longer-term, proportionally fewer people with dementia have longer lengths of stays when compared with those that do not.

Chart 3.11: Proportion of residents in care over time, with and without dementia



3.6 Residential respite care

Residential respite care is short-term care delivered within an aged care facility[18] on either a planned or emergency basis. People are assessed for eligibility by an Aged Care Assessment Team (ACAT), who will approve someone for low care respite or high care respite. The distinction between high and low care was not removed from respite care when it was removed from permanent residential care on 1 July 2014. A consumer can access residential respite for up to 63 days per financial year, with extensions possible when an ACAT considers it necessary.

As noted previously, a significant difference in respite care compared with permanent residential care is that respite residents do not make any means-tested accommodation or care contributions. They can however be asked to pay the basic daily fee for living expenses, which is at the same rate as permanent residents. Respite residents can also purchase additional services, in the same manner as a permanent resident.

Residential care providers have a proportion of their allocated residential care places which may be used for the provision of respite care, and it is up to each provider what mix of permanent and respite care that they provide. Providers can vary this proportion, however currently they have to contact the Department of Health to seek approval.

Access to respite services will depend on a person's need/choice to access this type of care and on an approved provider's willingness and ability to provide respite care.

In its 2017 annual report ACFA discussed the increasing usage of residential respite care since 1 July 2014. Although there were no changes made to the operation of residential respite care, since 1 July 2014 the rate of increase in consumers of respite care is more than triple that of the increase of permanent residents. Following a request from the Minister for Aged Care, ACFA prepared a report on the increasing use and appropriateness of respite care. ACFA provided its

[18] Other types of respite care can be accessed through the CHSP or through a home care package.

Report on respite for aged care recipients[19] to Government in October 2018. ACFA made 19 recommendations concerning key issues around access, funding, consumer fees, administrative processes, and the availability of respite care.

Recommendations from ACFA's report on respite for aged care recipients.

1. Recognising respite care as a vital component of aged care services and, that the Government should implement policies to facilitate a sufficient supply of the different types of respite services to meet care recipient and carer needs and preferences.
2. Ensuring the needs of carers, as well as care recipients, are recognised when assessing access to respite care.
3. Establishing funding arrangements that are neutral between respite residents and permanent residents, and not act as a disincentive to respite care.
4. Ensuring access to, and suitability of, care for special needs groups, including people with dementia, needing bariatric care, and from CALD communities.
5. Recognising that consumers should make an appropriate contribution towards the cost of their respite care and accommodation where they can afford to do so, with appropriate support from the Government where consumers are not able to contribute.
6. Ensuring consistency with other potential reforms, including that consumer fees for respite care be considered in conjunction with wider changes to consumer care fees, such as better integration of fees more broadly in the residential, home care and CHSP sectors as recommended by the Legislated Review.
7. Facilitating care recipients' and carers' easy access to information on respite care options (through CHSP, home care, residential and other DSS services) and in doing so help care recipients and carers readily obtain care when and where they need it.
8. Ensuring Government agencies adopt a co-ordinated approach to the delivery of, and information dissemination around, respite care, including working with providers to establish real time information on the availability of respite care.
9. Recognising that the use of respite care for purposes other than supporting people to live at home for as long as possible and their carers can be responding to a market demand for other uses of respite, but that this should not be crowding out consumers with genuine respite care needs.
10. Examining the need for specific arrangements that facilitate the transition of a resident into permanent care, particularly in the context of the current review of residential aged care funding models following the RUCS exercise.

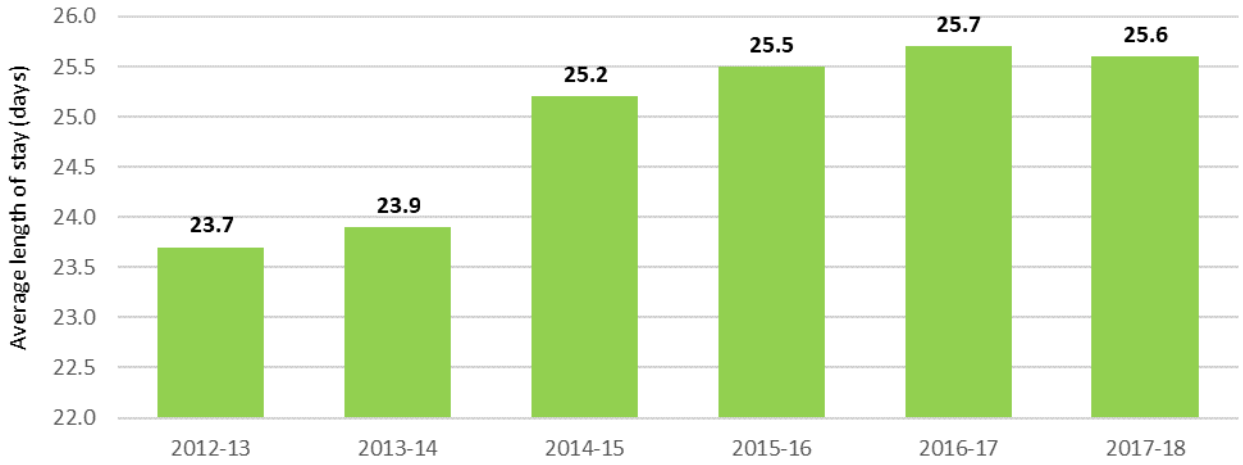
[19] https://agedcare.health.gov.au/acfas-report-on-respite-for-aged-care-recipients

11. Allowing the market to respond to consumer demand and in turn the numbers of respite places that providers offer based on funding arrangements that do not act as a disincentive or incentive to the provision of respite care. Given that respite care is central to the aged care system, there should be an expectation that all providers be prepared to offer respite care.
12. If neutrality in the funding of respite and permanent residential care is achieved, the Government should remove the minimum and maximum allocation rules for respite care and allow providers respond to consumer demand for respite, subject to appropriate transitional arrangements and monitoring of the impacts of such as change on respite availability.
13. Renaming the current respite care supplement as the respite care accommodation supplement to reduce confusion as to its purpose and paying the supplement irrespective of whether a person has been assessed as low or high level care, with rates aligned with those that apply for permanent residents .
14. Reviewing the respite incentive supplement in the context of the outcomes of the University of Wollongong work on broader residential care funding reform. If the relative rates of funding between respite residents and permanent residents are set appropriately, there may not be a need for a separate incentive supplement with all the associated administrative red tape that it brings.
15. Recognising that if the incentive supplement is to continue, the administrative processes that support the incentive supplement are inefficient and should be changed. The current process whereby some providers have a minimum respite allocation and others a maximum allocation is highly confusing and likely contributes to some providers missing out on respite subsidy they should receive.
16. Reconsidering the limitation of 63 days per year per respite client in residential care because it imposes administration burdens on providers, consumers and the Government, and is not readily tracked. ACFA recommends keeping a cap on respite care, but suggests that consideration be given to whether it be less than 63 days and to introducing some form of means testing after a specified period of respite use. The latter would address concerns that other uses of respite care may crowd out respite for supporting people wishing to live at home for as long as possible (and their carers).
17. ACFA does not see the need for any changes to how home care packages can be used to access respite care. While there are issues around different fee structures which should be considered, the purchasing of respite care should remain an appropriate use of home care packages.
18. Similarly, noting that other than in relation to fee contributions, ACFA does not consider there is a need for any major changes to how CHSP respite services are offered.
19. Recognising that cottage respite is in effect another type of short-term residential respite care, when considering neutrality of funding settings following the RUCS study, consideration be given to whether the current funding model for cottage respite is appropriate.

3.6.1 Length and frequency of stay in residential respite care

During 2017-18, 61,993 people received residential respite care. Of these, on average, each person had 1.4 respite care stays[20] with each stay being an average of about 26 days. Until 2014-15 the average stay had been stable at just below 24 days however it has since risen to be between 25 and 26 days, as shown in Chart 3.12. For home care package consumers who access residential respite care, the average length of stay is shorter, at around 22 days and has remained stable since 2014-15.

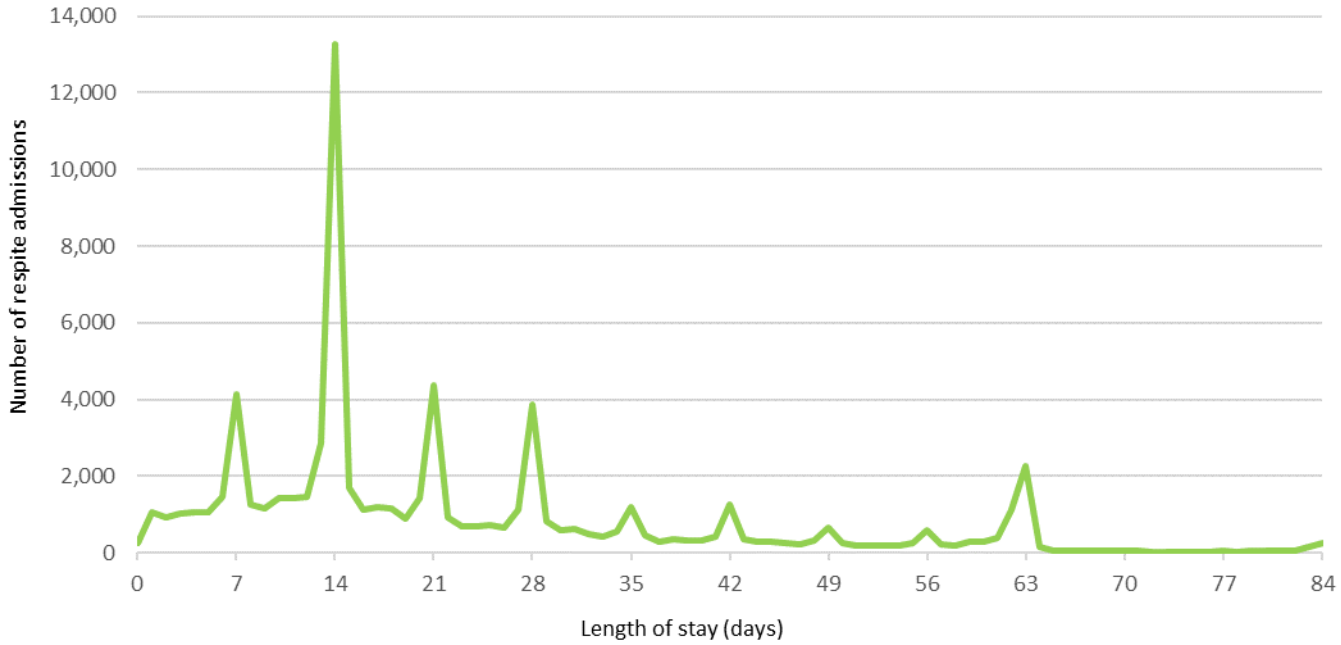
Chart 3.12: Average length of stay (days) in residential respite care, 2012-13 to 2017-18



As has been the case in previous years, a clear pattern of respite care usage in 2017-18 was that it was usually for stays of whole weeks at a time (Chart 3.13). A fortnight is by far the most common residential respite care length of stay. One, three and four weeks are the next most common lengths of stay. Around 4 per cent used the maximum of 63 days in one stay. These usage trends have been stable in recent years.

[20] A residential respite 'stay' refers to a single stay and is from when they enter to when they exit, no matter the duration.

Chart 3.13: Frequency of length of respite care stays, 2017-18

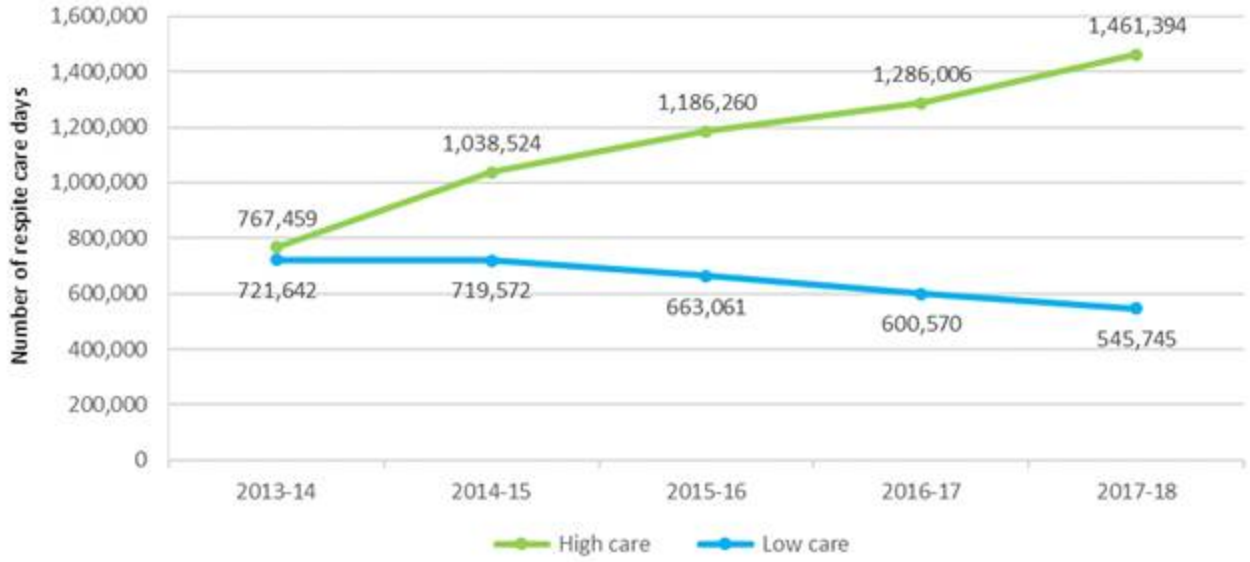


ACFA noted in its report on respite care that, in general, this pattern of respite use is provider driven, primarily due to the relatively high cost of the admission process in residential care. Feedback through consultation was that for many providers offering respite care, providing less than two weeks of residential respite is financially unviable. The feedback from consultation with consumers, however, suggested they would prefer access to shorter periods of respite care.

3.6.2 High and low residential respite care

A trend that has been emerging since 2014-15 and continued in 2017-18 is that the number of respite consumers accessing high level respite care is increasing while the number accessing low level respite care is decreasing (Chart 3.14). This was also discussed in ACFA's report on respite care with ACFA noting the significant difference in funding for providers between high and low care was potentially serving as a disincentive to providers taking respite consumers who had only been approved for low level care. As can be seen, the number of days of high and low level respite care provided were almost the same in 2013-14, whereas in 2017-18, 73 per cent of respite days were for high care consumers.

Chart 3.14: Number of residential respite care days, by level, 2013-14 to 2017-18



One of the recommendations from the 2018 Respite care report was that funding for respite care should be neutral between respite care and permanent residential care and also neutral between high and low care respite consumers, so that providers did not face a financial disincentive to provide respite care. As discussed in Chapter 6, ACFA suggests there would be merit in introducing changes to respite care at the same time as changes are made to broader funding arrangements.

3.7 Supported residents

The Australian Government supports access to permanent residential care by consumers who are assessed as not being able to meet all or part of their own accommodation costs by paying providers an accommodation supplement on their behalf. These residents are known as supported (or low-means) residents.

Since the aged care reforms of 1 July 2014, eligibility for a full or partial accommodation supplement is determined by a combined assessment of an individual's income and assets (the means test).

The amount of accommodation supplement received by a provider on behalf of a supported resident depends on:

- the outcome of the resident's means test assessment;
- whether the residential care facility has been built or significantly refurbished since 20 April 2012; and
- whether the facility provides more than 40 per cent of its care days to supported residents.

Providers have discretion to determine the proportion of supported residents in their facilities. However providers with 40 per cent or fewer supported residents in a facility (excluding those residents receiving extra services) have the accommodation supplement they receive for all supported residents in that facility reduced by 25 per cent.

As shown in Table 3.7 and Table 3.8 the proportion of supported residents was relatively stable in 2017-18 compared with 2016-17. The trend evident in recent years of a higher proportion of supported residents in regional and remote locations compared with metropolitan areas has continued in 2017-18. Also not-for-profit providers continue to have a higher proportion of supported residents compared with for-profit providers.

The analysis used in Table 3.7 and Table 3.8 is based on claims submitted by providers on behalf of their residents.

Table 3.7: Proportion of claims for supported residents, by location, 2014-15 to 2017-18

Location	2014-15	2015-16	2016-17	2017-18
Metropolitan	48.6%	49.6%	48.2%	47.3%
Regional	52.6%	53.4%	52.2%	51.2%
Remote	66.0%	67.9%	67.8%	65.5%
Australia	**50.0%**	**51.0%**	**49.7%**	**48.7%**

Table 3.8: Proportion of claims for supported residents, by ownership type, 2014-15 to 2017-18

Ownership type	2014-15	2015-16	2016-17	2017-18
Not-for-profit	52.4%	53.1%	51.8%	50.6%
For-profit	46.3%	47.6%	46.6%	46.1%
Government	48.6%	49.0%	47.0%	45.5%
All providers	**50.0%**	**51.0%**	**49.7%**	**48.7%**

The relative stability in recent years in the number of supported residents in care seems to indicate that the incentive of the higher accommodation supplement for having a resident profile with more than 40 per cent supported residents, along with the higher accommodation supplement payment for facilities newly built or significantly refurbished, are combining to ensure access to care continues for this cohort of older Australians.

3.8 Age profile across care types

As consumers of aged care get older, the types of care they access changes. Chart 3.15 shows the proportion of older Australians using home support, home care and residential care in 2017-18. The proportion using home care and residential care increases more than three-fold in the 85 and over bracket compared with those aged 70 and over.

Chart 3.15: Proportion of the population 70+ and 85+ accessing aged care, at 30 June 2018

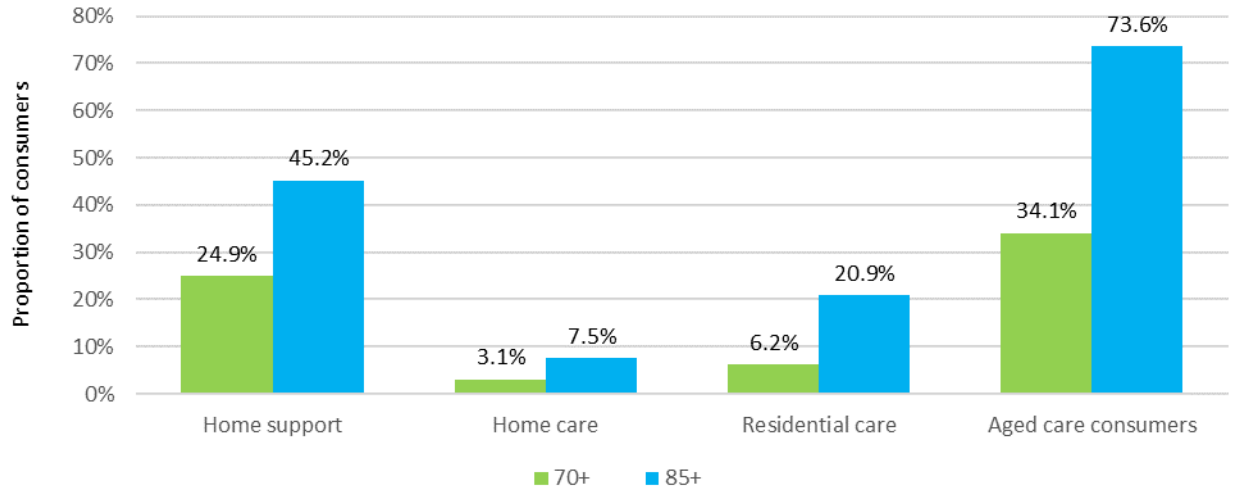


Chart 3.16 shows the age profile for consumers of home care over the five years to 30 June 2018. The proportion of those aged 65-74 has been increasing since 2014-15 and the proportion of those aged 75-84 increased noticeably in 2017-18, as it did in 2016-17, likely reflecting the expansion of home care packages in recent years. The proportion of those aged 85 and over decreased slightly for the third year in a row.

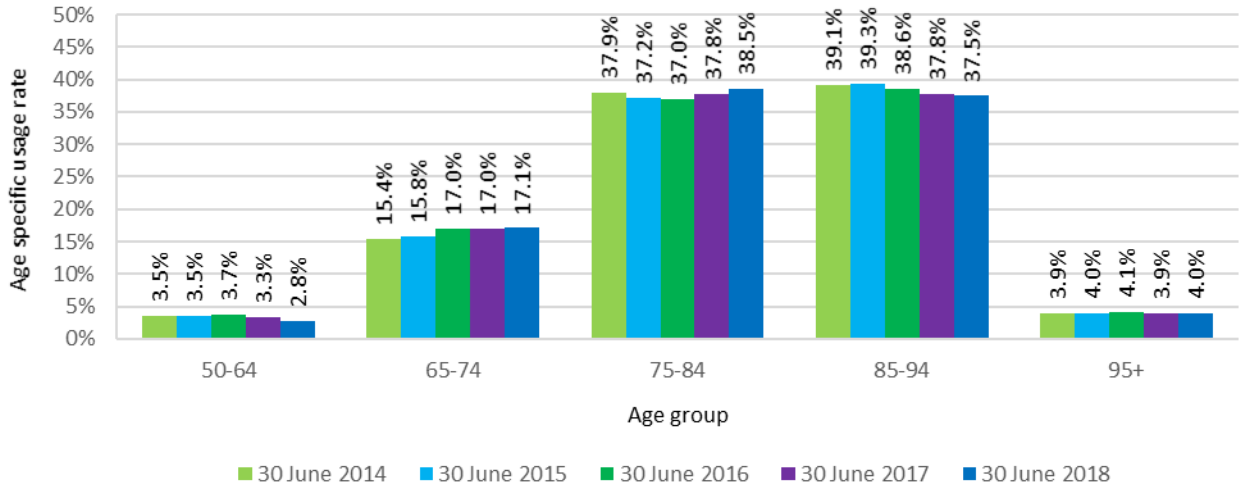
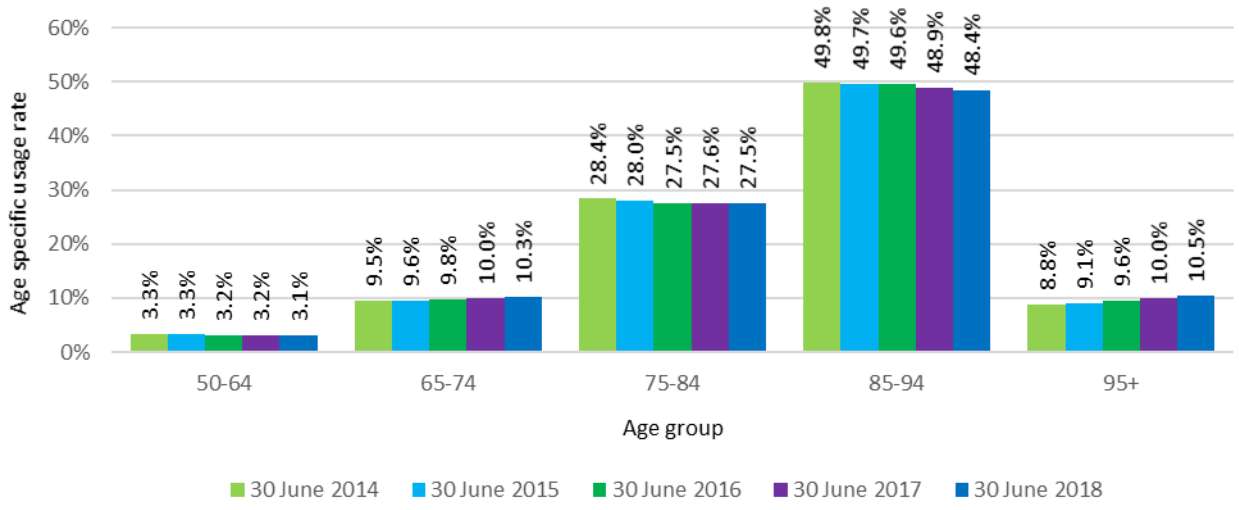
Chart 3.16: Age profile of people in home care, 30 June 2014 to 30 June 2018



In residential care, the trends of recent years generally continued in 2017-18 (Chart 3.17). The proportion of people aged 65-74 in residential care has slowly increased over the five years while the proportions of those aged 75-84 and 85-94 have fallen. The proportion of those aged 95 and over has increased every year over the five years.

Chart 3.17: Age profile of people in residential care, 30 June 2014 to 30 June 2018



Detailed data regarding the age of consumers in CHSP is not readily available for the same level of analysis as it is for home and residential care. However the overall average age of consumers in CHSP in 2017-18 was 79.1 years compared with 79.6 in 2016-17.

3.9 Access by Culturally and Linguistically Diverse and Indigenous Australians

3.9.1 Culturally and Linguistically Diverse Australians

There is significant cultural diversity among Australians and many people from culturally and linguistically diverse (CALD)[21] backgrounds are seeking culturally appropriate aged care. This is an area where aged care is changing and will continue to change as providers respond to the cultural needs of consumers.

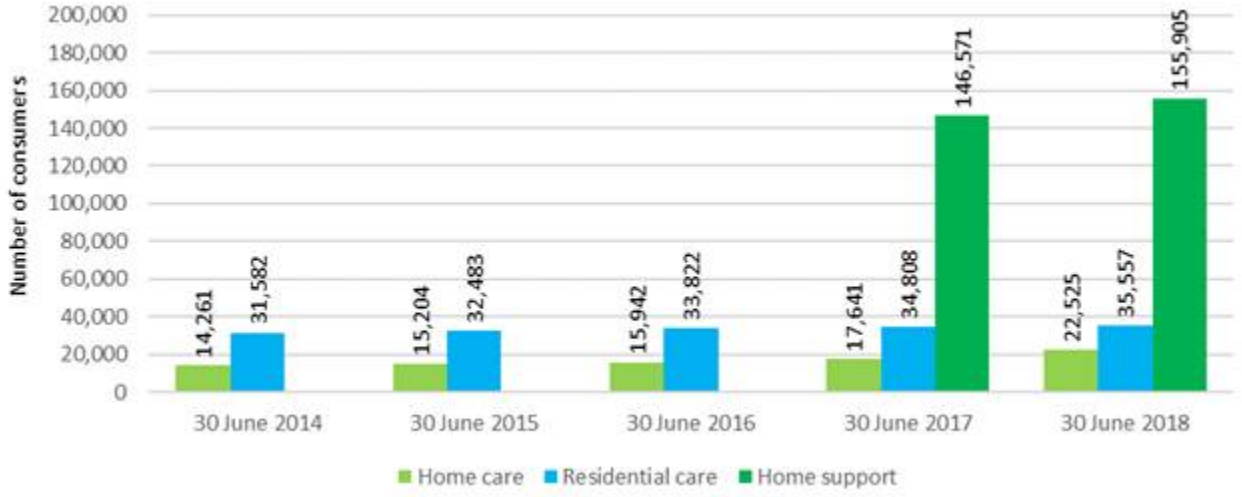
To assist this, the Australian Government provides aged care website information for people who do not speak English, or for whom English is a second language. The My Aged Care website provides translated material in 18 languages. In 2017-18, there were 22,812 visits to the translation pages.

Chart 3.18 shows the number of CALD home care and residential care consumers over the last five years as well as the number of CALD consumers of the CHSP for the last two years (as previous years data was not available).

There were 22,525 older Australians from CALD backgrounds in a home care package as at 30 June 2018, representing around 25 per cent of total home care consumers. This has been stable over recent years. In residential care, as at 30 June 2018, there were 35,557 older Australians from CALD backgrounds in permanent or respite care, which represents around 19 per cent of all residents. As with home care this proportion has been stable in recent years. In 2017-18, 155,905 consumers from a CALD background accessed home support, up from 146,571 in 2016-17.

[21] CALD status is derived from self-reported information provided by consumers.

Chart 3.18: CALD consumers in aged care, 30 June 2014 to 30 June 2018

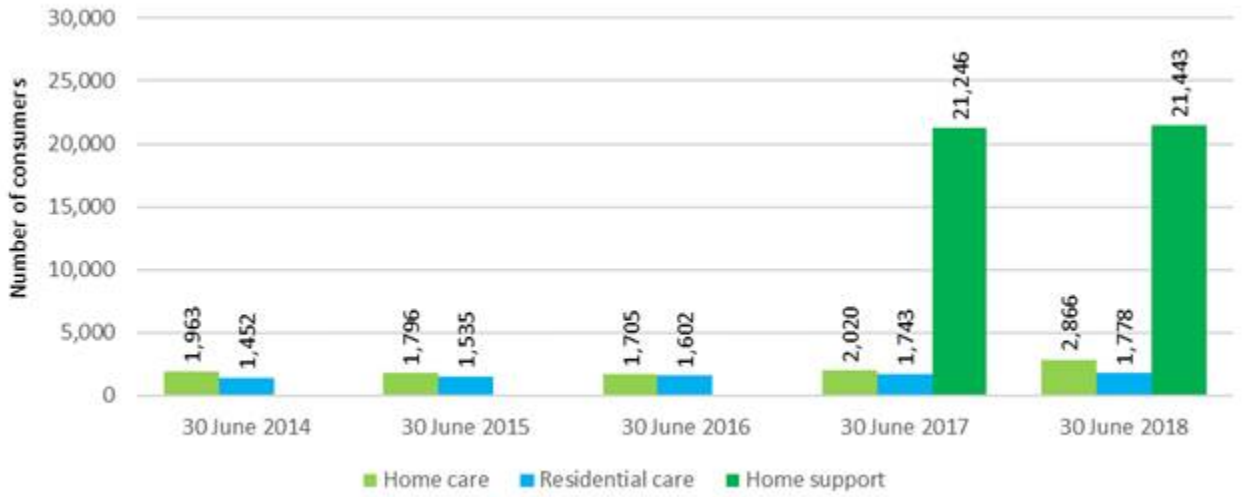


3.9.2 Indigenous Australians

Chart 3.19 shows the number of Indigenous Australians accessing home care and residential care over the last five years, and the number accessing home support in 2016-17 and 2017-18 (as previous years are not available).

The number of Indigenous Australians accessing home care increased by 42 per cent from 2016-17 to 2017-18. The number of Indigenous Australians accessing residential care and home support were relatively stable from 30 June 2017.

Chart 3.19: Indigenous Australians in aged care, 30 June 2014 to 30 June 2018



4 Home support

This chapter discusses:

- The operation of the CHSP;
- the supply and usage of CHSP and the Western Australian HACC; and
- the funding of CHSP and the Western Australian HACC.

This chapter reports that in 2017-18:

- The Commonwealth funded 1,547 providers to deliver CHSP and HACC services (1,456 CHSP providers and 91 HACC providers in Western Australia);
- the CHSP provided services to 783,043 older Australians (722,838 in 2016-17);;
- the Western Australian HACC services provided services to 64,491 older Australians (62,089 in 2016-17); and
- the total number of older Australians that received home support services was 847,534.

The Australian Government contributed $2.4 billion to home support in 2017-18 comprising:

- $2.2 billion for CHSP($2.1 billion in 2016-17); and
- $195 million in payments to the Western Australian government to support the jointly funded HACC program ($188 million in 2016-17).

4.1 Introduction

Home support generally provides small amounts of services (entry-level services) designed to help older Australians continue living in their own homes for as long as they can and wish to do so, and delay the need for higher level care, including home care packages and residential care, through early intervention. The home support programs discussed in this chapter are the Commonwealth Home Support Programme (CHSP) and the Home and Community Care (HACC) program in Western Australia.

4.2 Commonwealth Home Support Programme

The Commonwealth Home Support Programme (CHSP) provides entry-level support services for frail, older people aged 65 years and older (or 50 years and older for Aboriginal and Torres Strait Islander people) who need assistance to keep living independently at home and in their community. CHSP entry level support is underpinned by a 'wellness approach', which is about

building on older people's strengths, capacity and goals to help them remain independent and to live safely at home.

The CHSP also supports homeless people, or people at risk of homelessness, to access care and housing. To be eligible for assistance with care and housing services through the CHSP, a person must be: prematurely aged; 50 years and over (45 years and over for Aboriginal and Torres Strait Islander people); on a low income; and be homeless or at risk of homelessness as a result of experiencing housing stress or not having secure accommodation.

My Aged Care is the Australian Government's single entry point for aged care services. Access to CHSP services is coordinated through My Aged Care and Regional Assessment Services.

Table 4.1 sets out the types of services that may be accessed through the CHSP. Around 54 per cent of CHSP consumers receive one type of service, 41 per cent receive between two and four types of service and the remainder access five or more types of services through the CHSP. On average, CHSP consumers received services to the value of $2,762 per annum in 2017-18, compared with $2,882 for 2016-17. However, there can be significant variation in funding between consumers. Accurate data regarding the range of funding provided for individual consumers through the CHSP is not currently available.

Table 4.1: CHSP services: by sub-program and service type

Sub-program	Community and home support	Care relationships and carer support	Assistance with care and housing	Service system development
Objective	To provide entry-level support services to assist frail, older people to live independently at home and in the community.	To support and maintain care relationships between carers and consumers, through providing good quality respite care for frail, older people so that regular carers can take a break.	To support those who are homeless or at risk of homelessness, to access appropriate and sustainable housing as well as community care and other support services, specifically targeted at avoiding homelessness or reducing the impact of homelessness.	To support the development of the community aged care service system in a way that meets the aims of the CHSP and broader aged care system.

Service types funded	• Meals • Other food services • Transport • Domestic assistance • Personal care • Home maintenance • Home modifications • Social support-individual • Social support-group (formerly centre-based day care) • Nursing • Allied health and therapy services • Goods, equipment and assistive technology • Specialised support services	Flexible respite: • In-home day respite • In-home overnight respite • Community access – individual respite • Host family day respite • Host family overnight respite • Mobile respite • Other planned respite Centre-based respite: • Centre based day respite • Residential day respite • Community access-group respite • Cottage respite (overnight community)	Assistance with care and housing (a person must be: prematurely aged; 50 years and over (45 years and over for Aboriginal and Torres Strait Islander people); on a low income; and be homeless or at risk of homelessness as a result of experiencing housing stress or not having secure accommodation).	Sector support and development activities.

Overall expenditure in 2017-18 on each of the sub-programs detailed above is as follows:

- Community and home support: $1.76 billion
- Care relationships and carer support: $0.26 billion
- Assistance with care and housing: $0.12 billion
- Service system development: $0.51 billion

4.3 Home and Community Care — Western Australia

In 2017-18 the HACC program in Western Australia provided similar services for older people to those provided under the CHSP, but also provided support for younger people with a disability.

During 2017-18, Western Australian HACC services were delivered through the jointly funded HACC program under the *HACC Review Agreement 2007*. Consumers continued to be assessed for HACC services through the HACC program assessment arrangements.

From 1 July 2018 the Western Australian HACC services for older people aged 65 years and over (and 50 years and over for Aboriginal and Torres Strait Islander people) transitioned to the CHSP which means that from 1 July 2018 the CHSP was a national program.

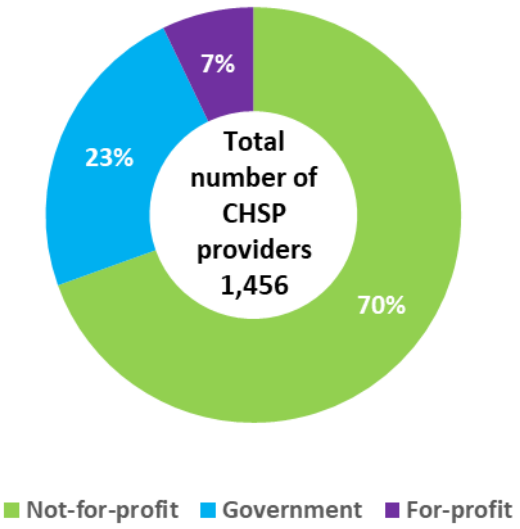
4.4 Sector overview

4.4.1 Providers of home support

In 2017-18, there were 1,456 providers of CHSP and 91 providers of HACC in Western Australia. This compares with 1,523 CHSP providers and 98 HACC providers in Western Australia in 2016-17.

CHSP services are predominately provided by not-for-profit organisations (70 per cent in 2017-18), as shown in Chart 4.1. This has been the case since the inception of the CHSP in 2015-16, and was the case for the former programs that combined to create the CHSP.

Chart 4.1: CHSP providers by ownership type, 2017-18



4.5 Funding for CHSP and HACC

In 2017-18, the Commonwealth contributed funding of $2.2 billion to the CHSP, as well as providing a further $194.9 million to the Western Australian Government for the joint Commonwealth-state funded HACC program in Western Australia, bringing the total Commonwealth expenditure on home support in 2017-18 to $2.4 billion.

Chart 4.2 shows total expenditure on home support since the introduction of the CHSP in 2015-16, along with budgeted expenditure to 2021-22.

Chart 4.2: Government expenditure and budgeted expenditure of CHSP[22] and Victorian and Western Australian HACC programs, 2015-16 to 2021-22

Chart 4.3 shows Commonwealth expenditure for home support (including Western Australian HACC) in 2017-18, by state and territory.

Chart 4.3: Commonwealth expenditure on CHSP and WA HACC services, by state and territory[23], 2017-18

As part of the 2014-15 Budget, the Australian Government announced a reduction in the annual real rate of growth for the CHSP from 6 per cent to 2.8 per cent in 2015-16, 1.5 per cent in 2016-17 and 2.4 per cent in 2017-18. In 2018-19 the growth rate became 3.5 per cent which aligns with the annual growth in the population aged 65 and over. Real growth is in addition to annual indexation. Growth funding enables the CHSP to respond to the changing needs of CHSP consumers and to align with the growth in Australia's aged population. Grants under the CHSP are indexed each year by WCI-3[24] (1.3 per cent in 2018-19).

[22] CHSP expenditure shown here excludes the expenditure on RAS and My Aged Care support services of $148 million in 2015-16 and $123 million in 2016-17 as they were not for services to consumers.

[23] The former non-HACC components of the CHSP all transferred to the CHSP from 2015-16. The $25.5 million identified under the CHSP in 2017-18 for Western Australia relates to the non-HACC components.

[24] WCI-3 is a composite index constructed by the Department of Finance that comprises a wage cost component (weighted at 60 per cent) and a non-wage cost component (weighted at 40 per cent).For all Wage Cost Indices the value of the wage cost component is based on the dollar increase

Table 4.2 shows a breakdown of the size of grants provided through the CHSP in 2017-18 by organisation type. Results from 2017-18 are similar to those in previous years. The vast majority (75 per cent) of providers receive less than $1 million and of those, almost 78 per cent receive less than $500,000.

Table 4.2: CHSP grants, by size of grant and ownership, 2017-18

Grant size	Not-for-profit	For-profit	Government	Total
Less than $500,000	660	59	126	845
$500,000 - $1 million	138	22	84	244
$1-10 million	195	21	120	336
$10-50 million	16	1	9	26
Over $50 million	3	1	1	5

4.5.1 Consumer contributions

The *Client Contribution Framework* and the *National Guide to the CHSP Client Contribution Framework* set out principles to guide CHSP providers in setting and implementing their own consumer contribution policy.

The principles are designed to introduce fairness and consistency, with a view to ensuring that those who can afford to contribute do so, whilst protecting the most vulnerable.

Recommendation 16 of the *Legislated Review of Aged Care 2017* recommended that mandatory consumer contributions based on an individual's financial capacity be introduced for services under the CHSP. This would bring the CHSP fees policy more in line with those under other aged care programs. The Government has not yet responded to this recommendation.

In 2017-18, consumer contributions totalled $219 million which represents around 10 per cent of total CHSP funding. This is stable from 2016-17.

4.6 Looking forward

In the 2019-20 Budget, the Australian Government extended funding agreements with CHSP providers by a further two years, after a similar two year extension in the 2017-18 Budget. This means the CHSP and Home Care Packages Program will continue to operate as separate programs until at least mid-2022. In the 2015-16 Budget, the Australian Government had announced an intention to integrate CHSP and home care into a single home care and support program by July 2018.

in the national minimum wage (as determined annually by the Fair Work Commission) expressed as a percentage of the latest available estimate of average weekly ordinary time earnings (AWOTE) published by the Australian Bureau of Statistics as at November of each year. The value of the non-wage cost component of WCI-3 is based on changes in the Consumer Price Index between March quarters each year.

While no decisions have been made about broader reform of care at home beyond 2022, extending the CHSP by two years will enable the Government to further refine the CHSP to better meet the entry level needs and preferences of older Australians. This includes further embedding wellness and reablement practices within the CHSP and simplifying consumer access to home-based care by combining the current RASs and ACATs into a single assessment and referral process across CHSP and home care.

Following the establishment of the CHSP as a program with full national coverage in 2018, the Department of Health issued a new Program Manual that sets out service providers' responsibilities, including a new emphasis on wellness and reablement. CHSP providers are now required to submit an annual report outlining service level information regarding the implementation of a wellness approach within their organisation. These reports will be used to measure overall progress towards embedding wellness and reablement in CHSP service delivery.

In addition, the 2018-19 Budget provided $29.2 million over two years to 30 June 2020 to trial reablement-based assessment for the CHSP. Under the trial, consumers are asked by the Regional Assessment Services to actively demonstrate how they undertake certain tasks as part of the assessment process to better understand their abilities and limitations. The assessment model being trialled provides a time-limited reablement period, usually between six to eight weeks, prior to being referred for ongoing services. The focus is to build on the individual's confidence and physical or cognitive skills to achieve their own goals.

5 Home care

This chapter discusses:

- The operation of the Home Care Packages Program;
- the funding of the sector; and
- the financial performance of home care providers in 2017-18.

The chapter reports that:

- There were 873 home care providers as at 30 June 2018, up from 702 at 30 June 2017;
- the sector continues to be predominately not-for-profit with 53 per cent of providers (although this is down from 65 per cent in 2016-17) and 76 per cent of consumers; and
- services were provided to 116,843 consumers, up from 97,516 in 2016-17.

Key findings on financial performance in 2017-18 compared with 2016-17:

- home care providers received an estimated $2.07 billion in revenue in 2017-18, paid $1.99 billion in expenses and generated $74 million in profit;
- 70 per cent of home care package providers achieved a net profit in 2017-18, down from 75 per cent in 2016-17 and 2015-16;
- average EBITDA was $1,217 per consumer, a significant decline from $2,989 for 2016-17 and $3,055 in 2015-16;
- EBITDA margin was 4.6 per cent, down from 11.3 per cent in 2016-17; and
- as at 30 June 2018 home care providers held $539 million in unspent funds, an increase of 64 per cent over 30 June 2017.

5.1 Overview of the sector

5.1.1 The Home Care Packages Program

The Home Care Packages Program commenced on 1 August 2013, replacing the former home care programs – Community Aged Care Packages (CACPs), Extended Aged Care at Home (EACH) packages and Extended Aged Care at Home Dementia (EACH-D) packages.

Home care packages allow consumers to purchase a range of services and equipment which assist them living in their own home. Packages are delivered on a Consumer Directed Care (CDC) basis with consumers having an individualised budget which allows them to decide what type of care and services they purchase and who delivers the services.

In February 2017, an important change occurred in home care in that packages began being assigned directly to the consumer, rather than allocated to the provider. This means that consumers now have choice of provider to deliver their services and can opt to change providers. This has implications for both consumers and providers which are discussed further in this chapter.

Home care consumers may use their package funds to purchase the following:

- **Personal services.** Examples include help with showering or bathing, dressing and mobility;
- **Support services.** Examples include help with washing and ironing, house cleaning, gardening, basic home maintenance, home modifications related to care needs, transport to help with shopping, doctor visits or attending social activities;
- **Clinical care.** Examples include nursing and other health support including physiotherapy (exercise, mobility, strength and balance), services of a dietitian (nutrition assessment, food and nutrition advice, dietary changes) and hearing and vision services; and
- **Care management.** Coordinating care and services that will help consumers achieve the goals identified in their care plan.

In addition, providers may charge consumers a package management fee, which covers regulatory-related costs such as issuing monthly financial statements and managing unspent package funds on behalf of consumers.

For many consumers, home care packages offer an opportunity to remain living at home instead of entering residential care. Packages are categorised into four levels with level 1 being for people with basic care needs through to level 4 which supports people with higher care needs.

To obtain access to a home care package, individuals are first assessed by an Aged Care Assessment Team (ACAT) which determines eligibility for a home care package. Many people assessed as eligible to receive a package are also assessed as eligible for residential care. Once assessed as eligible for home care, an individual is placed on the National Prioritisation System and is offered a package when one becomes available. The National Prioritisation System is discussed later in this chapter.

5.1.2 Providers of home care

Chart 5.1 shows overall home care provider numbers, as well as the proportion by ownership, over the six years to June 2018. There has been a significant increase in home care providers since the February 2017 changes that assigned home care packages directly to consumers rather than to providers. Many new providers have entered the market seeking to compete for consumers.

Chart 5.1: Number of home care providers, by proportion of ownership type, 30 June 2013 to 30 June 2018

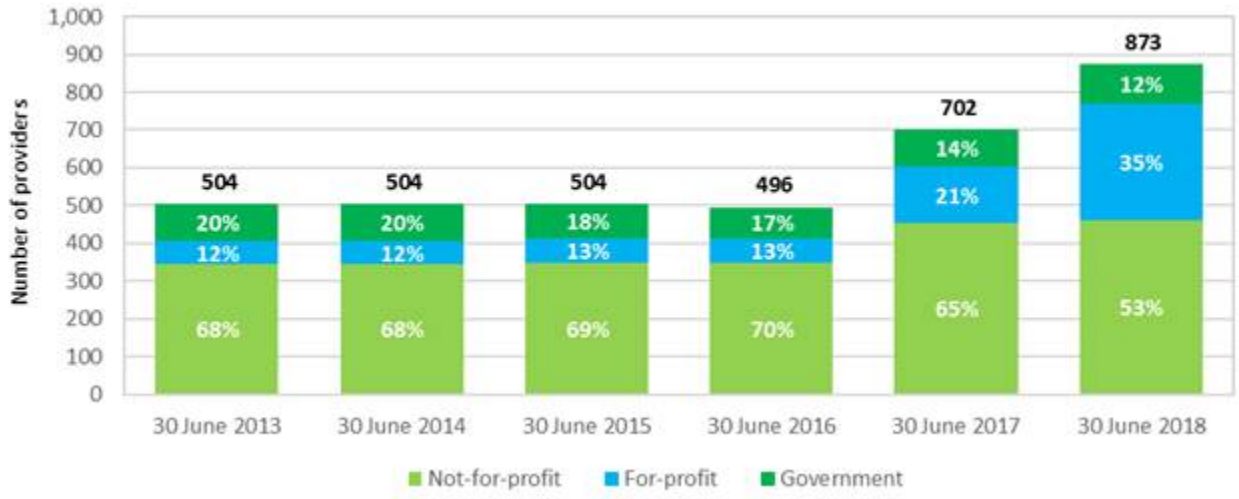


Table 5.1 presents a breakdown of home care providers by ownership type, location and scale in 2017-18.

Table 5.1: Provider numbers, number of services and number of consumers, at 30 June 2018

			Ownership type			Location			Scale		
	30 June 2017	30 June 2018	Not-for-profit	For-profit	Government	Metropolitan	Regional	Metropolitan & regional	Single service	Two to six services	Seven or more services
Number of providers	702	873	461	309	103	482	314	77	619	176	78
			53%	35%	12%	55%	36%	9%	71%	20%	9%
Numbers of services	2,367	2,599	1,860	539	200	1,577	1022	N/A	619	544	1,436
			71%	21%	8%	61%	39%		24%	21%	55%
Number of consumers	71,423	91,847	69,944	15,545	6,358	61,676	30,171	N/A	16,220	20,833	54,736
			76%	17%	7%	67%	33%		18%	22%	60%

As shown in Table 5.2, the mix of provider ownership has significantly altered since the changes of February 2017, along with a significant increase in the number of providers. The for-profits now represent 35 per cent of the sector, up from 21 per cent in 2016-17 and 13 per cent in 2015-16. In contrast, the proportion represented by not-for-profit providers declined to 53 per cent (65 per cent in 2016-17 and 70 per cent in 2015-16).

Table 5.2: Change in number of providers and ownership, 30 June 2016 to 30 June 2018

	30 June 2016	Proportion of total	30 June 2017	Proportion of total	30 June 2018	Proportion of total
Not-for-profit	347	70%	407	65%	461	53%
For-profit	65	13%	200	21%	309	35%

Government	84	17%	95	14%	103	12%
Total	**496**	**100%**	**702**	**100%**	**873**	**100%**

At 30 June 2018 there were 91,847 consumers in home care, compared with 71,423 at 30 June 2017. The number of services operated by all providers also increased in 2017-18 compared with 2016-17 (2,599 up from 2,099). As was the case in 2016-17, the vast majority of the increase in services was due to new single service providers entering the market. At 30 June 2018 there were 619 single service providers (71 per cent of all providers) compared with 55 per cent at 30 June 2017.

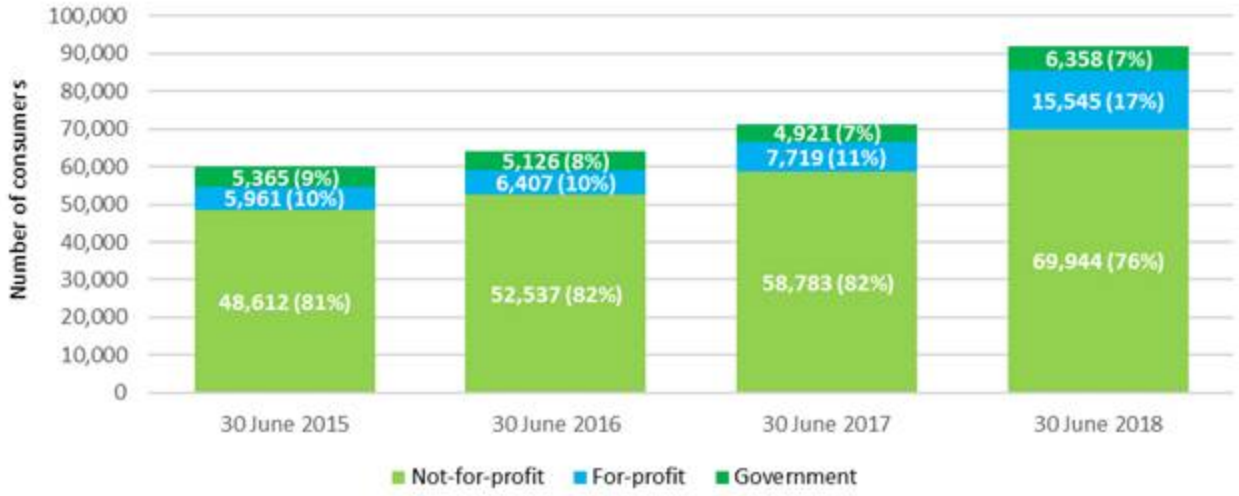
Throughout 2017-18, 116,843 older Australians were in receipt of a home care package at some time (up from 97,516 in 2016-17). In 2016-17, 68 per cent of home care packages were level 1 and 2. In 2017-18 this proportion has decreased to 61 per cent reflecting the trend of more consumers requiring higher level packages and Government decisions to increase gradually the proportion of higher level packages in response to demand (Table 5.3).

Table 5.3: Home care consumers, by package level and ownership, at 30 June 2018

	Not-for-profit	For-profit	Government	Total
Level 1	3,353	1,135	353	4,841
Level 2	39,203	8,183	4,110	51,496
Level 3	9,637	2,281	775	12,693
Level 4	17,751	3,946	1,120	22,817
Total	**69,944**	**15,545**	**6,358**	**91,847**

The recent increase in the proportion of for-profit providers has not resulted in a similar change in the proportion of consumers by provider ownership with not-for-profit providers continuing to provide the majority of home care packages (Chart 5.2).

Chart 5.2: Home care consumers, by ownership type, 30 June 2015 to 30 June 2018



Across Australia, around 67 per cent of home care consumers are in major cities, around 25 per cent in inner regional locations, around 7 per cent of consumers are in outer regional locations, and the remaining 1 per cent are in remote and very remote areas. These proportions have been relatively steady in recent years.

5.2 Operational performance

5.2.1 Methodology

The discussion of financial performance in this chapter predominantly relates to Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA). As discussed in Chapter 1, EBITDA is the commonly used metric for analysis and comparison of the profitability of providers and the sector. Net Profit Before Tax (NPBT), which takes interest, depreciation and amortisation into the calculation, is also used.

Financial information reported in this chapter has been collected through the Aged Care Financial Report (ACFR). The Accountability Principles 2014, made under Section 96-1 of the *Aged Care Act 1997*, require each home care provider to submit a financial report in a form approved by the Secretary of the Department of Health. The ACFR submitted by home care providers is not required to be audited and should not be considered a General Purpose Financial Report.

Until last year's annual report, financial performance of home care providers was largely summarised on a 'per package' basis as the packages were previously allocated to approved providers after a competitive tender through an ACAR. Analysis on this basis included the provider's packages that were not fully utilised for whatever reason in a financial year. The reform changes of February 2017 have resulted in packages being assigned to consumers and as a result, the analysis is now calculated on a 'per consumer' basis. EBITDA calculated on a 'per consumer' basis is generally higher when compared with EBITDA calculated on a 'per package' basis as unutilised packages are excluded. When trend data is analysed, previous years have been re-calculated on the 'per-consumer' basis to allow for direct comparison between years.

5.2.2 Analysis of 2017-18 financial performance of home care providers

2017-18 saw a very significant decline in the overall financial performance of home care providers compared with recent years. Average EBITDA per consumer across the sector was $1,217 after being stable at around or just below $3,000 for three years.

Chart 5.3 shows the whole of sector average EBITDA per consumer for all home care providers since 2014-15.

Chart 5.3: Home care providers average EBITDA per consumer per year, 2014-15 to 2017-18

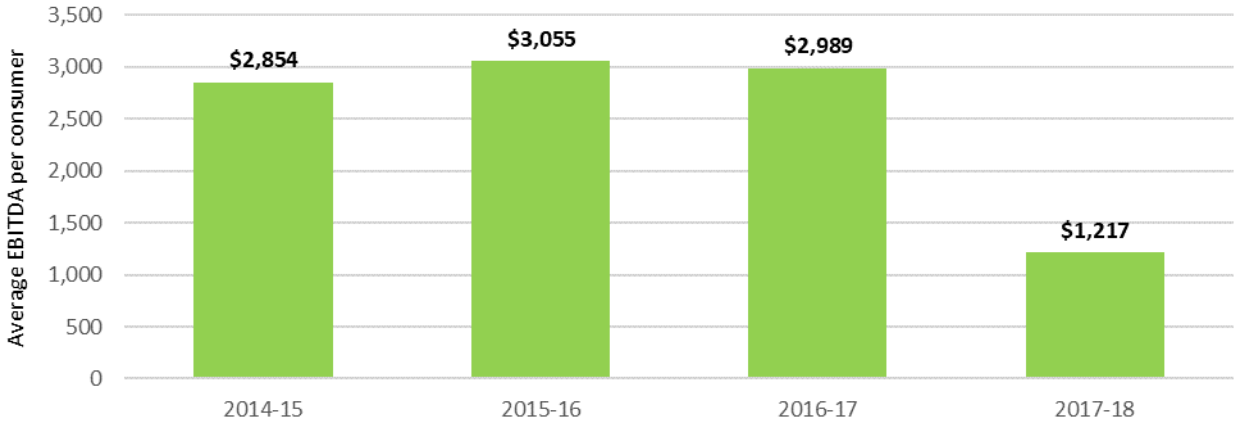


Table 5.4 provides an overview of the 2017-18 financial performance of home care providers, including a breakdown by ownership type, location and scale.

Table 5.4: Summary of financial performance of home care providers, 2017-18

	All providers 2016-17	All providers 2017-18	Not-for-profit	For-profit	Government	Metropolitan	Regional	Metropolitan & regional	Single service	Two to six services	Seven or more services
Total revenue ($m)	$1,733.6	$2,065.5	$1,567.3	$381.5	$116.7	$1,229.4	$321.9	$514.2	$283.0	$406.2	$1,376.3
Total expenses ($m)	$1,548.4	$1,991.1	$1,494.0	$389.7	$107.5	$1,190.3	$304.0	$496.8	$271.2	$383.2	$1,336.8
Profit ($m)	$185.1	$74.4	$73.3	-$8.2	$9.3	$39.1	$17.9	$17.4	$11.8	$23.1	$39.5
EBITDA ($m)	$195.2	$95.6	$84.2	$1.9	$9.5	$53.7	$21.0	$20.9	$14.2	$27.2	$54.2
Average EBITDA per consumer	$2,989	$1,217	$1,358	$169	$1,791	$1,202	$1,555	$1,026	$1,758	$1,680	$999
Average NPBT per consumer	$2,832	$947	$1,183	-$729	$1,741	$876	$1,321	$855	$1,463	$1,423	$728
EBITDA margin	11.3%	4.6%	5.4%	0.5%	8.2%	4.4%	6.5%	4.1%	5.0%	6.7%	3.9%
NPBT margin	10.7%	3.6%	4.7%	-2.1%	7.9%	3.2%	5.6%	3.4%	4.2%	5.7%	2.9%

5.2.3 Revenue

Home care revenue consists of Commonwealth contributions in the form of subsidies and supplements, and a lessor contribution from consumers (the basic daily fee and income tested fees). Total revenue can also include other revenue sources (such as consumer contributions for non-home care related services, interest income and state and territory government payments).

In 2017-18, total Commonwealth expenditure on home care subsidies and supplements was $2.0 billion, up from $1.6 billion in 2016-17.

The basic subsidy for home care is indexed annually based on Wage Cost Index 9 (WCI-9), the same index as applies for the care subsidy in residential care. WCI-9 is a composite index constructed by the Department of Finance that comprises a wage cost component (weighted at 75 per cent) and a non-wage cost component (weighted at 25 per cent). For all Wage Cost Indices, the value of the wage cost component is based on the dollar increase in the national minimum wage (as determined annually by the Fair Work Commission) expressed as a percentage of the latest available estimate of average weekly ordinary time earnings (AWOTE) published by the Australian Bureau of Statistics as at November of each year. The value of the non-wage cost component of WCI-9 is based on changes in the Consumer Price Index (CPI) between March quarters each year.

Some home care supplements are also indexed by WCI-9, including the dementia and cognition and Veterans' supplements, while the remainder, such as the oxygen and enteral feeding supplements, are indexed annually using the Consumer Price Index (CPI).

Commonwealth funding (subsidies and supplements)

Commonwealth funding is determined per consumer based on the level of package accessed. It is calculated on a daily basis and paid monthly in advance[25]. Each package level has a fixed maximum amount of annual funding set by the Commonwealth (Table 5.5). Supplements can also be paid in circumstances where the consumer requires additional care and/or services.

Table 5.5: Maximum home care basic subsidy payments per annum, 2018-19

Package level	annualised subsidy
Level 1	$8,270
Level 2	$15,045
Level 3	$33,076
Level 4	$50,286

Supplements in home care are paid in addition to the amount of basic subsidy applicable at each package level. Supplements are paid if a consumer is eligible due to a specific care need or circumstance. The supplements that apply to home care are at Appendix K. All supplements payable are included in the consumer's individualised budget.

Consumer contributions

Consumers may be asked to pay a basic daily fee up to 17.5 per cent of the single basic age pension ($10.54 a day/$3,847 per annum as at 20 March 2019[26]). The basic daily fee is not subject to an income or asset test and all consumers can be asked to pay unless they prove financial hardship, in which case the Commonwealth pays the provider on their behalf. The basic daily fee, when charged by the service provider, must be included in the individualised budget for the consumer.

Additionally, consumers may be asked to make a contribution towards the cost of their care through an income tested fee. The package amount paid by the Commonwealth on behalf of a consumer is reduced by the amount of the income tested fee regardless of whether the fee is collected by the provider or not.

Consumer contributions in 2017-18 reported by providers totalled around $122 million, compared with $128 million for 2016-17 and $127 million in 2015-16. In 2017-18 the revenue from the basic daily fee was $78 million down from $101 million in 2016-17. This reported reduction in basic daily fees was largely offset by increased revenue from the income tested fee and other consumer fees. Feedback from consultations suggest some providers foregoing charging their consumers, many of whom are pensioners, the basic daily fee, or reducing that fee. As discussed in Section 5.3, this is likely due to the increase in competition in the home care market in response to recent reforms.

[25] In the 2019-20 Budget the Government announced its intention to move to a payment in arrears arrangement based on services delivered.

[26] As of 1 July 2019 the basic daily fee will reduce for level one packages ($400 per annum), level two packages ($200 per annum) and level three packages ($100 per annum) with a commensurate increase in the basic subsidy paid by the Commonwealth.

Unspent funds

Prior to the changes that occurred in February 2017, when home care consumers moved between home care providers or exited care (often to enter residential care), unspent package funds could be retained by their former provider. As part of the changes introduced in February 2017, unspent package funds now follow the consumer to their new provider or are returned to the Commonwealth and the consumer (based on their respective proportions paid) when the consumer leaves home care.

The unspent home care amount is the total amount of each consumer's individual budget (comprising home care subsidy, supplements and home care fees) that has not been spent or committed for the consumer's care, less any agreed exit amount. Unspent package funds will not generally, and should not, be recognised as income by the provider until the funds have been spent or are committed for the consumer's care.

Unspent funds are discussed in more detail at 5.2.6.

Total revenue

In 2017-18, total sector revenue for all home care providers was $2.07 billion, up from $1.85 billion in 2016-17, an increase of 12 per cent. Commonwealth contributions represent more than 90 per cent of the total revenue received by home care providers. As noted unspent funds held by providers ($539 million at 30 June 2018) cannot be treated as revenue.

The average income per consumer per day in 2017-18 for home care providers was $72.04 ($26,295 per annum), down slightly from $72.71 ($26,539 per annum 2016-17). Table 5.6 shows provider income per consumer per day since 2015-16, split by the major types of income. ACFA is not able to compare these results with 2014-15 as some providers operated on a CDC basis, while others did not, which resulted in differences in the treatment of some revenue items.

As shown, there continues to be a significant amount charged for management and administration costs. However these have reduced slightly which may indicate providers responding to an increase in competition following consumers having the ability to choose their provider and the influx of new providers into the market.

Some providers have indicated that the relatively high proportion of income derived from management and administration (30 per cent) reflects the increased costs for providers as part of CDC, including regulatory-related costs such as providers being required to provide consumers with full transparency regarding their packages, negotiating an individualised budget, providing monthly itemised expenditure statements, and having to administer unspent funds in a prudentially appropriate way.

Under the comparative pricing schedule that is required to be published on My Aged Care from July 2019, providers will be required to distinguish between care management fees and package management fees. Normal business overheads will be required to be included in the fees set for services.

Table 5.6: Home care provider income per consumer per day, 2015-16 to 2017-18

Income type	2015-16	% of total	2016-17	% of total	2017-18	% of total

Provision of care / service charged to consumers	$47.15	61.5	$44.71	61.5	$47.94	66.5
Management fees charged to consumers	$11.12	14.5	$10.27	14.1	$9.72	13.5
Administration of packages charged to consumers	$13.63	17.8	$12.88	17.7	$12.10	16.8
Unspent funds and exit amounts deducted	$3.64	4.7	$2.98	4.1	$0.16	0.2
Other revenue	$1.16	1.5	$1.87	2.6	$2.11	2.9
Total	**$76.70**	**100**	**$72.71**	**100**	**$72.04**	**100**

1. Provision of care/services charged to consumers includes income recognised from consumers' packages and private home care consumers as care and services are provided. This amount will include Government subsidies and supplements, consumer contributions in the form of the basic daily fee, income tested care fees, top-ups and private contributions.
2. Management fees charged to consumers is the amount of income recognised for on-going management and coordination of the consumers' packages and care requirements.
3. Administration fees charged to consumers is the amount of income recognised for on-going administration of consumers' packages.
4. Unspent package funds reflect income remaining from a consumer's care package when a consumer leaves the home care service (prior to the February 2017 changes). Exit amounts deducted by the approved provider when ceasing to provide home care to a consumer may also be charged after this date.
5. Other revenue includes other sources of income generated from running the home care services such as state and territory payments, consumer payments for non-home care services, trust distribution, donations and bequests, interest earned on investments, insurance and gains from the sale of assets.
6. The unspent and exit amounts reported in 2017-18 reflects only the exit fees reported by providers as the February 2017 changes in home care provide for the return of funds to the consumer or the Government when a consumers transfers or leaves care. Comparative exit amounts deducted in 2016-17 were $0.12, an increased to $0.16 in 2017-18.

5.2.4 Expenditure

Total sector expenditure in 2017-18 was $1.99 billion, up from $1.65 billion in 2016-17.

The average expenditure per consumer per day in 2017-18 was $69.45 ($25,349 per annum), an increase of 6.9 per cent from $64.94 in 2016-17. While expenses per consumer increased by almost 7 per cent, income received per consumer (as noted above) decreased slightly (1 per cent) from 2016-17 to 2017-18.

As Table 5.7 shows, the increase in expenses in 2017-18 over 2016-17 was driven by a 5.7 per cent ($2.53 per consumer per day) increase in total care costs and a 9.8 per cent ($1.98 per consumer per day) increase in total administration costs.

Within the increase in total care costs in 2017-18, there was an increase in care-related expenses of 23 per cent and an increase in care staff costs of 4 per cent. In terms of the increase in total administration costs, the main driver was a 16 per cent increase in administration staff costs.

Table 5.7: Home care expenditure per consumer per day, 2014-15 to 2017-18

Expenses	2014-15	2015-16	2016-17	2017-18
Care costs				
Wages and salaries - care staff	$29.08	$31.98	$28.78	$29.99
Subcontracted or brokered customer services	$7.07	$9.44	$10.30	$10.32
Care related expenses	$4.43	$5.01	$5.64	$6.94

Total care costs	**$40.58**	**$46.43**	**$44.72**	**$47.25**
Administration costs				
Wages and salaries - administration staff	$7.10	$8.77	$8.00	$9.26
Administration costs and management fees	$10.08	$10.55	$10.18	$10.26
Depreciation and interest costs	$0.54	$0.55	$0.42	$0.74
Other expenses	$1.53	$2.57	$1.62	$1.94
Total administration costs	**$19.25**	**$22.44**	**$20.22**	**$22.20**
Total costs	**$59.83**	**$68.87**	**$64.94**	**$69.45**

Care related expenses represent 68 per cent of total expenses per consumer per day. Administration costs represent 32 per cent of total costs which is significant.

Table 5.8 provides a breakdown of expenditure according to ownership type, location and scale. Overall, there are some notable differences.

In terms of ownership, government providers continue to incur the lowest level of expense per consumer per day with $55.33, compared with $94.97 for the for-profit providers and $66.03 for the not-for-profit providers. The main driver behind these significant differences in total expenses is the care related staff costs. For-profit providers reported care related staff costs of $64.29 per consumer per day compared with $35.98 for the not-for-profits and $24.51 for government providers.

Provider expense per consumer is also influenced to a lesser extent by location. Similar to last year, regional providers had the lowest expenses per day on average with $61.59 per consumer per day compared with providers who operate in metropolitan areas who reported $73.04 per consumer per day.

In terms of scale, single service home care providers seem to suffer from diseconomies of scale, recording expenses on average of $92.28 per consumer per day compared with providers operating two to six services ($64.76) and those operating more than 6 services ($67.46).

Table 5.8: Home care expenditure per consumer per day, by ownership type, location and scale, 2017-18

	Care related salaries	Admin and Mgmt fees	Other care related expenses	Other expenses and non-direct costs	Total
Ownership					
Not-for-profit	$35.98	$10.43	$17.47	$2.16	$66.03
For-profit	$64.29	$10.90	$13.72	$6.06	$94.97
Government	$24.51	$6.97	$22.32	$1.54	$55.33
Location					
Metropolitan	$40.45	$10.72	$19.13	$2.74	$73.04
Regional	$35.78	$7.53	$14.73	$3.55	$61.59
Metropolitan & regional	$38.92	$11.08	$14.84	$1.96	$66.79
Scale					
Single service	$60.50	$11.45	$14.69	$5.64	$92.28
Two to six services	$38.01	$8.27	$15.43	$3.04	$64.76
Seven or more services	$36.47	$10.68	$18.18	$2.13	$67.46
Total sector	**$39.25**	**$10.26**	**$17.26**	**$2.68**	**$69.45**

5.2.5 Profit

In 2017-18, home care providers generated $74 million in profit, down from $201 million in 2016-17.

In terms of profit per consumer, both EBITDA and NPBT saw significant declines (Table 5.9). Average EBITDA per consumer dropped to $1,217 from around $3,000 for the previous three years. Average NPBT per consumer saw an even greater decline down to $947 from $2,832 in 2016-17.

Table 5.9: Summary of financial performance of home care providers, per consumer per year, 2014-15 to 2017-18

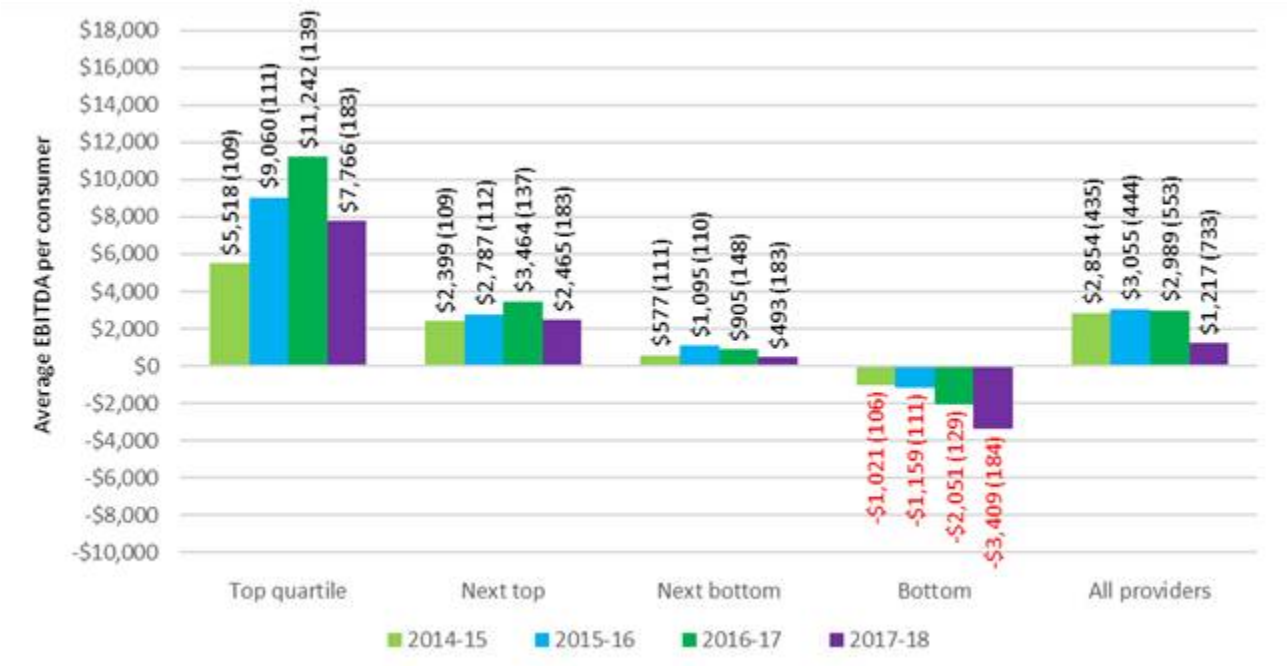
	2014-15	2015-16	2016-17	2017-18
Average EBITDA per consumer	$2,854	$3,055	$2,989	$1,217
Average NPBT per consumer	$2,657	$2,854	$2,832	$947

Approximately 70 per cent of home care providers achieved a profit in 2017-18, down from 75 per cent in 2016-17 and 2015-16.

Chart 5.4 shows average EBITDA per consumer by quartile. As has been the case previously, EBITDA varies considerably across the sector with the top quartile of providers (although still reporting a

decline from 2016-17) performing substantially better than the rest of the home care sector. The average EBITDA per consumer per year for the top quartile was $7,766 compared with the next top quartile returning $2,465.

Chart 5.4: Home care average EBITDA per consumer, by quartile (number of providers in parentheses), 2014-15 to 2017-18



The following analysis examines home care profit based on ownership type, location and scale.

After significantly outperforming the not-for-profits and government providers in the previous two years, the for-profits reported by far the worst results in 2017-18 (Chart 5.5 and Chart 5.6). The for-profit providers recorded average EBITDA per consumer of $169 after reporting $6,767 in 2016-17 and $7,481 in 2015-16. For-profit providers reported average expenses per consumer of almost $95 per day in 2017-18 compared with $80.93 per day in 2016-17.

For the top quartile of for-profit providers, total expenses increased by more than $113.68 per day however this was somewhat offset by increased income of $103.42 per day. For the next top quartile of for-profit providers, total expenses declined by $7.49 per day in 2017-18 to $76.32, however total income fell over the same period by $8.97 to $82.51, down from $91.48 in 2016-17. Total income also fell for the next quartile of provider by $10.90 per day to $62.92, compared with 2016-17 with total expenses falling by $8.74 over the same period. The most noticeable difference was for the bottom quartile of for-profit providers. Total income increased by $0.87 per day to $65.54 and total expenses increased by more than $10 per day to $84.49 in 2017-18.

Not-for-profit providers also showed a significant decline in 2017-18, recording EBITDA per consumer of $1,358 compared with $2,621 for 2016-17. In the top quartile of not-for-profit providers, there was a negligible increase in income per day of $0.09 to $80.48 per day, yet expenses increased by more than $8 to $63.29 per day. For the next top quartile, income declined by $3.31 to $68.81 per day in 2017-18 while expenses only fell by $0.53 to $62.55 per day. For the next bottom quartile of not-for-profit providers, income increased by $2.48 to $66.91 per day, with

expenses increasing by $3.81 to $66.09 in 2017-18. For the bottom quartile of not-for-profit providers, total income decreased by $4.51 to $67.36 in 2017-18, with expenses decreasing by only $3.12 per day.

Despite the overall poor results of for-profit providers, the 76 for-profit providers in the top quartile recorded average EBITDA of $14,493 (Chart 5.5) which was well above that of the top quartile not-for-profit providers ($6,477). However the overall significant decline in the profitability of for-profit providers likely reflects that the influx of new providers were largely for-profit and it could be expected that new entrants into a market may make a loss as they seek to establish market presence. ACFA notes that 30 per cent of all for-profit providers are in the bottom quartile (22 per cent in 2016-17) and they reported, on average, EBITDA of negative $5,624.

Chart 5.5: Home care average EBITDA per consumer per year, by quartile and ownership type, 2017-18 (number of providers in parentheses)

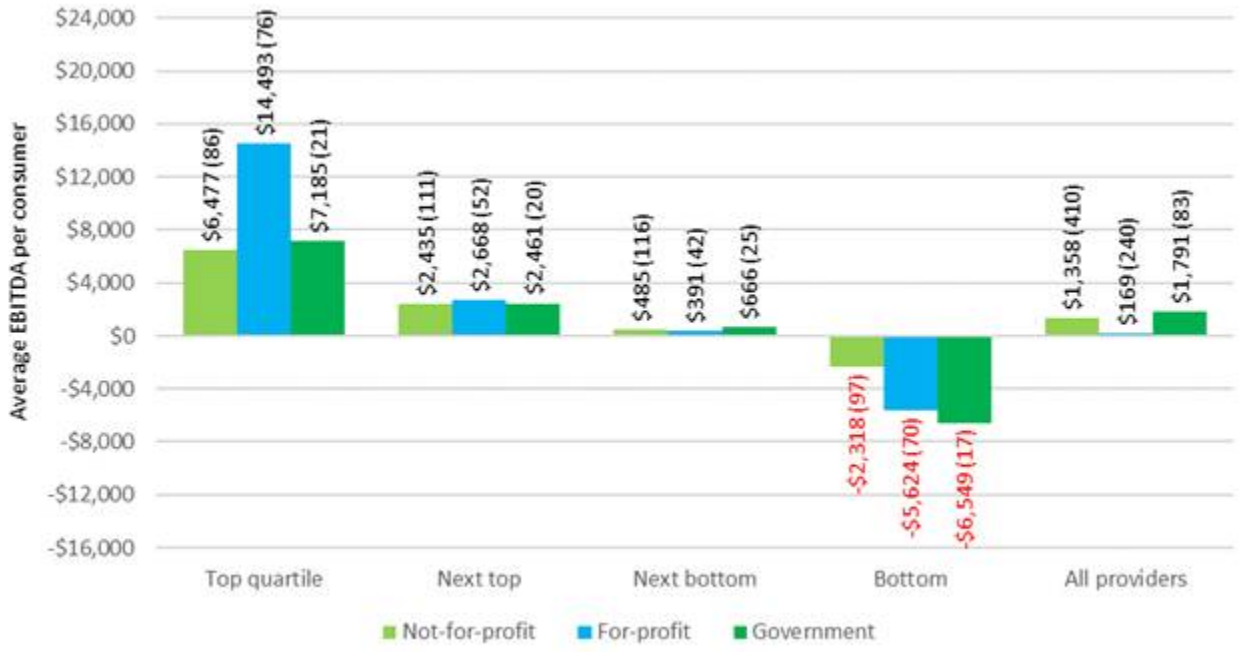


Chart 5.6: Home care average EBITDA per consumer per year, by ownership type, 2014-15 to 2017-18

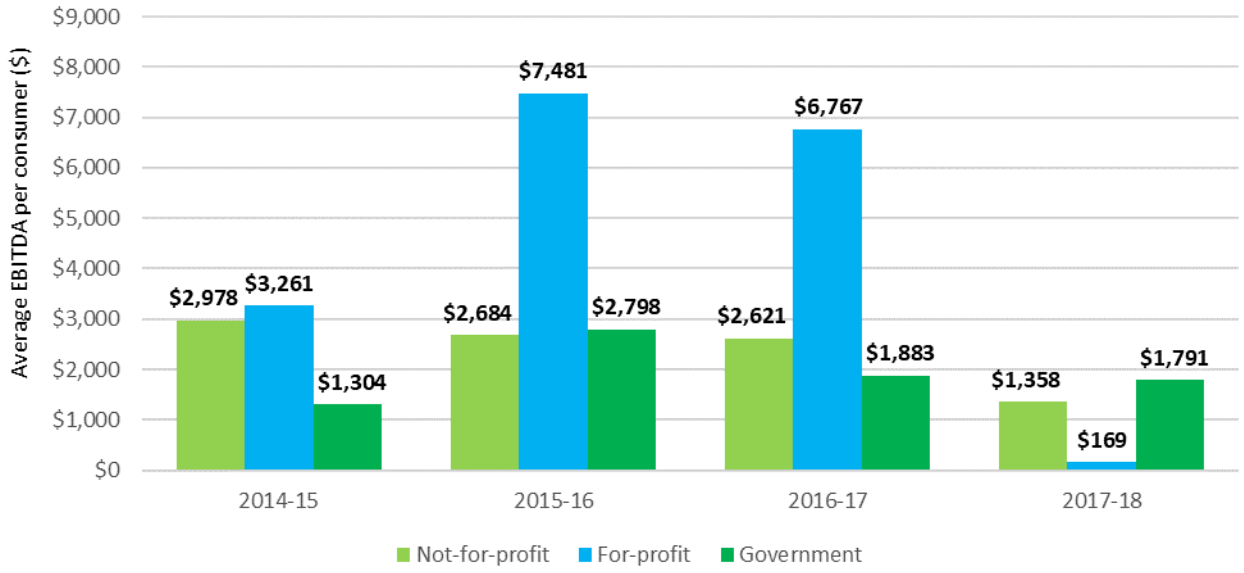

When performance is considered by location, providers in regional and metropolitan areas reported relatively similar levels of EBITDA per consumer in 2017-18. In contrast, in 2016-17 metropolitan providers were the strongest performers (Chart 5.8).

In terms of quartile analysis (Chart 5.7), metropolitan providers in the top quartile slightly outperformed the regional providers, however metropolitan providers were by far the worst performers in the bottom quartile. Apart from this, the average EBITDA's across the other quartiles remained relatively similar across locations.

Chart 5.7: Home care average EBITDA per consumer per year, by quartile and provider location, 2017-18 (number of providers in parentheses)

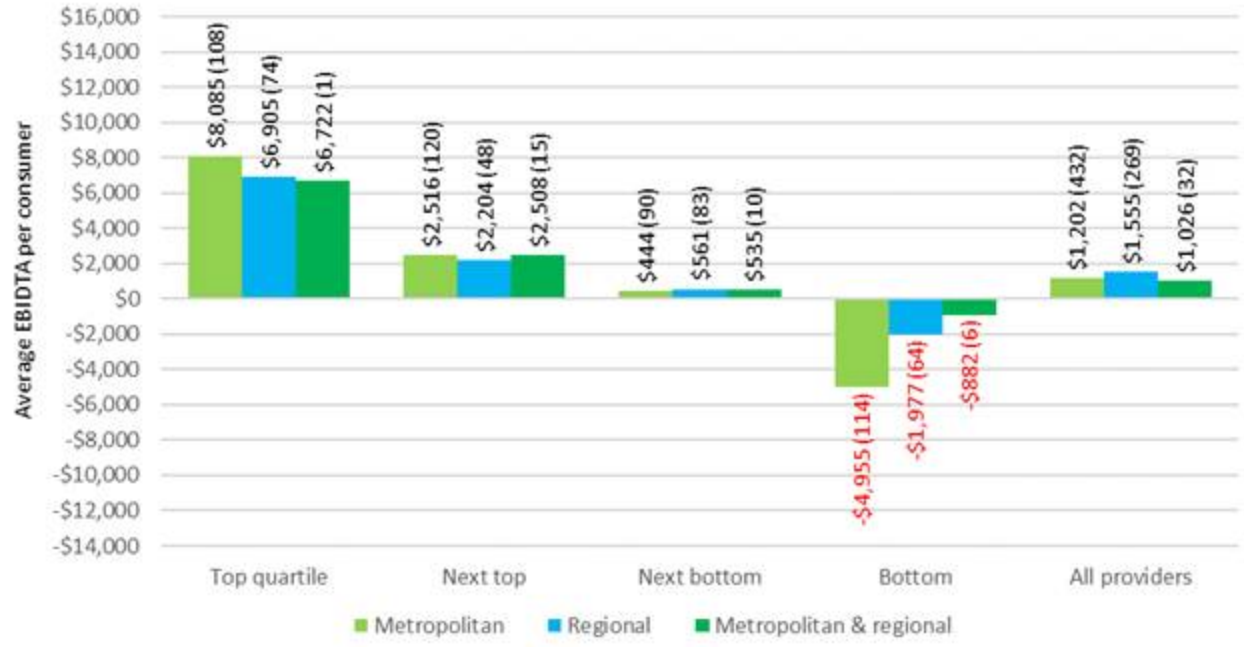

Chart 5.8: Home care average EBITDA per consumer, by provider location, 2014-15 to 2017-18

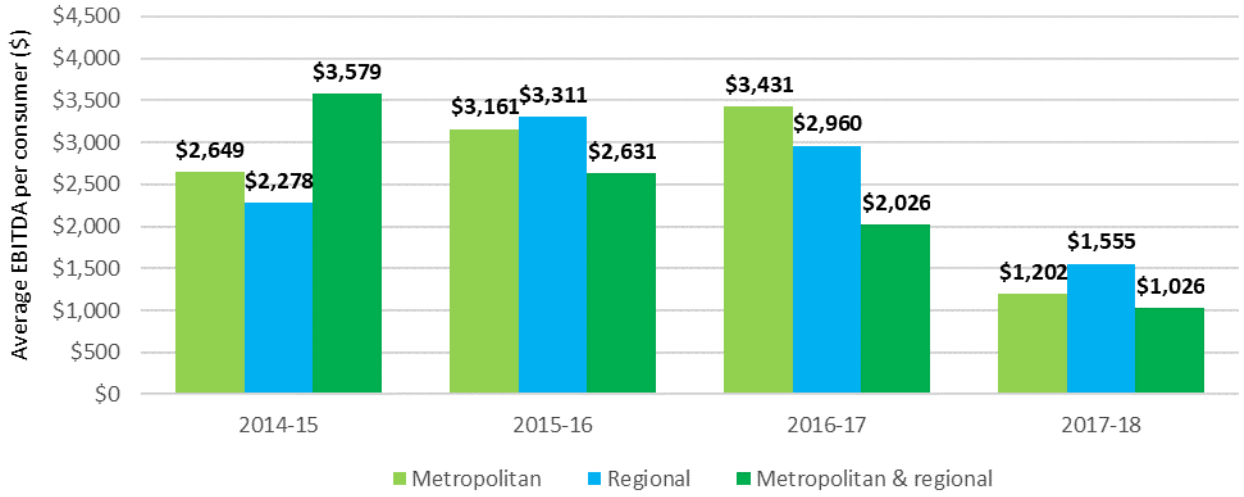

When performance is considered by scale, up to and including 2016-17, providers who operated multiple services (2-6 and 7 or more) had performed significantly better than single service providers in terms of average EBITDA per consumer (Chart 5.10). However in 2017-18 this trend has reversed with single service providers outperforming their larger counterparts, albeit in a year where providers of all scale reported a significant decline in financial performance. This is despite single service providers reporting significantly higher expenses as noted earlier. Interestingly, when analysed by quartiles, the single service providers were by far the best performers in the top quartile (EBITDA of $10,913) but conversely were the worst performers in the bottom quartile with negative EBITDA of $11,143 per consumer per year compared with larger providers (2-6 services and 7 or more services) reporting negative $4,513 and negative $2,353 respectively (Chart 5.9).

Chart 5.9: Home care average EBITDA per consumer per annum, 2017-18, by quartile and provider scale (number of providers in parentheses)

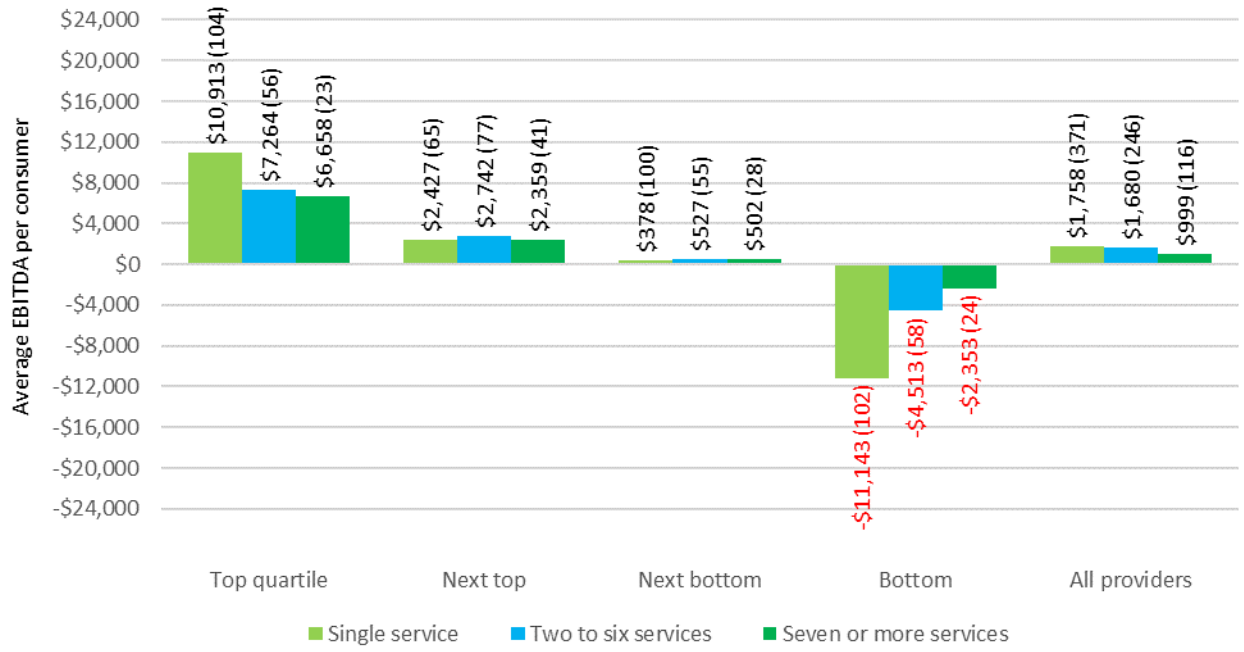

Chart 5.10: Home care average EBITDA per consumer per annum, by provider scale, 2014-15 to 2017-18

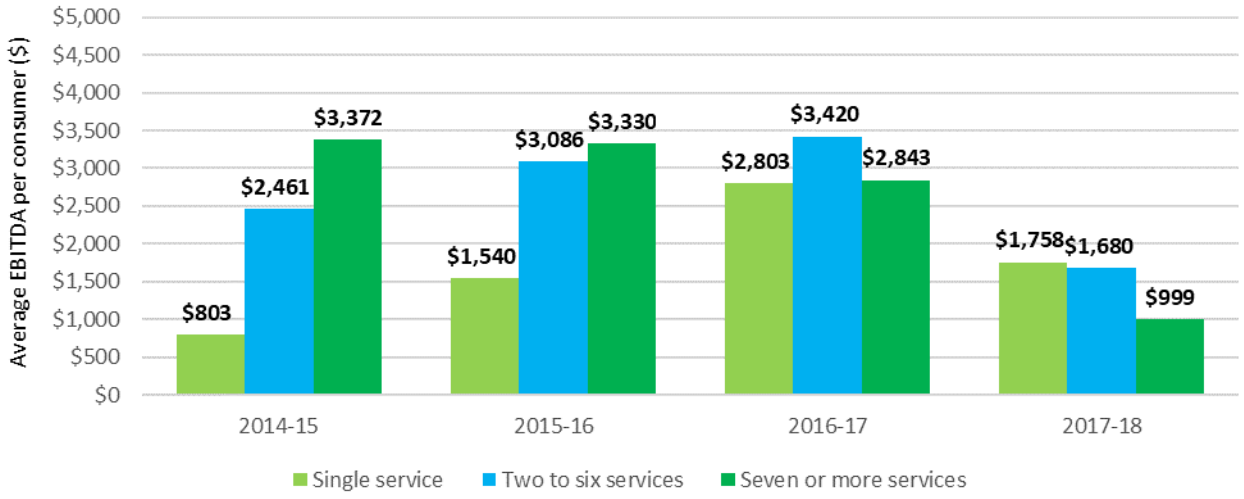


5.2.6 Unspent funds

In the last two annual reports, ACFA noted the significant amount of unspent package funds held by providers on behalf of consumers. The amount held has been increasing at a significant rate over the last three years. At 30 June 2018, home care providers reported holding unspent funds of $539 million. This is up from $329 million at 30 June 2017. The level of unspent funds being held at 30 June 2018 equates to holding average unspent funds per consumer of $5,898, up from $4,613 as at 30 June 2017 and $3,667 per consumer at 30 June 2016.

Unspent funds may accumulate for a variety of reasons, including that consumers wish to save a proportion of their budget for future events; the services that the consumer wants are not available; the consumer is reluctant to allow people into their home; misconceptions that the

money not spent under the package belongs to the consumer; or because the consumer does not require all the funds allocated to them. ACFA commented previously that if the consumer does not need all the funds they have been allocated, these funds could be used more effectively elsewhere, including meeting unmet demand. Unspent package funds also raises prudential issues since these funds held by providers need to be available should the consumer leave their care (either transferring to another provider or leaving home care).

The Department of Health does take into account unspent Commonwealth funds that are returned when a consumer leaves home care as an input in determining the number of new home care packages to be released.

In the 2019-20 Budget the Government announced that payment arrangements in home care to be changed from payment in-advance to payment upon delivery of service. This change is intended to avoid Commonwealth subsidies and supplements funding being held as unspent funds by providers. Consumers would still be able to access any unspent funds from the Commonwealth

5.3 Feedback from consultations and developments in 2018-19

After several years of relatively stable overall financial performance among home care providers (although there was always a significant difference in performance across providers), there was a large overall decline in the financial results of the sector in 2017-18.

Feedback from providers, which is confirmed by an analysis of the 2017-18 results, suggests this decline in performance was mainly the consequence of the greater competition resulting from the introduction, in February 2017, of home care packages being assigned directly to consumers and consumers having choice of which provider delivers their services. It was noted in ACFA's annual report last year that only the initial impact of this reform would be influencing the 2016-17 financial results. It is evident that the 2017-18 results have been significantly impacted by the introduction of consumer choice.

Feedback from providers indicates that the reforms have put downward pressure on their revenue and has increased their costs. Among the factors attributed to increasing costs includes having to introduce itemised accounts for consumers and changing business structures to put a greater emphasis on advertising and marketing services along with establishing long term relationships with consumers given the time between when a potential consumer joins the National Prioritisation System and when a consumer is assigned a package. Providers indicated that the introduction of the changes in February 2017 often required attracting staff with new skill sets. As noted previously, there was a significant increase in administration costs for providers in 2017-18.

As regards the impact of the reforms to home care on provider income, accompanying the change that allowed consumers to choose which provider will provide them their services, has been a very substantial increase in the number of approved providers. The result has been a significant increase in the level of competition in the home care sector which has resulted in a decrease in the price of many services, along with providers offering a range of incentives in an effort to attract consumers.

In addition, providers consulted indicate that that they are reducing management and administrative fees charged to consumers as a result of greater competition, notwithstanding that their administration costs have increased. Similarly, and as noted previously, many providers are foregoing charging their consumers the basic daily fee, or are reducing that fee, in an effort to attract consumers. Providers advise that the competition as a result of the home care reforms is not

primarily directed at attracting existing consumers from another provider, and there is limited movement of existing consumers between providers, but is focused on attracting individuals who are waiting or have recently been offered a package. As a result of the increase in the number of providers and greater competition, a number of established home care providers have advised that they have lost market share.

The beneficiary of the home care reforms and the increase in competition in the sector is the consumer. There is downward pressure on prices and fees and pressure on providers to establish relationships with consumers and offer the range of services the consumer is seeking. However in the course of ACFA consultations, a number of established home care providers have suggested that some of the new entrants to the sector are not only reducing prices but also the quality of the services they are providing and that this will be at the detriment of the consumer. The aged care measures announced by the Government in February 2019 included $7.7 million to enhance safety, quality and integrity of home care packages.

A significant development following the introduction of the home care reforms has been the rise of unspent funds – the amount of each consumer's individual budget that the consumer has not spent and now must be held by providers. Previously, a provider could have directed unspent package funds to other consumers. As noted in section 5.2.6, there are a number of possible factors influencing the increase in unspent funds and in some cases consumers may not be receiving all the care they need. From the provider's perspective, unspent funds represent foregone business. Several providers have indicated that they are developing and implementing strategies to reduce unspent funds. To the extent that this involves providers adjusting and introducing services that are more in line with what consumers are seeking and their aged care needs, consumers will be the beneficiary.

Feedback from providers suggests that the competitive pressures evident in 2017-18 have continued in 2018-19. While not directly comparable with the data in this report, the StewartBrown Aged Care Financial Performance Survey suggests some stabilisation in the profitability of home care providers in the six months to December 2018. In the course of consultations, many providers observed that the sector is still in a process of transition and they considered that the current number of approved providers is not sustainable, irrespective of the further release of home care packages. It is also evident that a number of providers still have to adjust their operations so that they are more responsive to meeting consumer preferences. The general feeling appeared to be that a degree of rationalisation in the number of providers would take place. In keeping with this assessment, a few of the providers consulted said that they were reviewing whether they would continue to offer home care packages given the competitive pressure and low returns. In a different vein, but related, some other providers said that they were positioning themselves to take advantage of opportunities that may arise from a shake-out in the number of home care providers.

There are a range of factors influencing the home care sector as a result of the introduction of consumer choice and ACFA notes that it would be opportune to review developments, consider lessons to be learnt from the changes, including possible policy refinements.

6 Residential care

This chapter discusses:

- The operation of residential care;
- the ownership, locational and scale characteristics of residential care providers;
- the funding arrangements in residential care; and
- the financial performance of residential care providers in 2017-18.

This chapter reports that:

- At 30 June 2018 there were 207,142 operational places, up from 200,689 at 30 June 2017;
- during 2017-18 residential care was provided to 241,723 older Australians, up from 239,379 in 2016-17;
- at 30 June 2018 there were 886 providers, down from 902 in 2016-17, continuing the consolidation of recent years with the number of residential care places increasing while the number of providers continues to gradually decrease; and
- not-for-profit providers continue to represent the largest proportion of ownership type in residential care, with 56 per cent of providers and 55 per cent of places, but the proportion of places operated by the for-profits continues to gradually increase.

Key findings on financial performance in 2017-18 compared with 2016-17:

- Total revenue of $18.1 billion, up from $17.8 billion, an increase of 1.7 per cent, equating to revenue of $272.16 per resident per day, an increase of 1.0 per cent from $269.55;
- other income of $955 million down from $980 million;
- total expenses of $17.6 billion, up from $16.8 billion, an increase of 5.3 per cent, equating to $265.62 per resident per day, compared with $254.29, an increase of 4.5 per cent;
- average EBITDA per resident per annum of $8,746 compared with $11,481, a decrease of 24 per cent;
- total profit of $435 million compared with $1,006 million, a decrease of 57 per cent; and
- 56 per cent of providers achieved a net profit compared with 68 per cent.

6.1 Overview of the sector

6.1.1 Supply of residential care

The Australian Government uses a population based planning ratio (target provision ratio) to determine the number of subsidised operational residential care places. This is outlined in Chapter 3.

Table 6.1 shows the number of providers, facilities[27], places and residents since 2013-14. The number of providers continues to decrease each year through consolidation, while the number of places and residents continues to increase. The number of facilities has increased gradually.

Table 6.1 also shows the achieved provision ratio in residential care, as well as provisionally allocated places and respite residents.

The number of allocated residential care places was less at 30 June 2018 (246,536) than it was at 30 June 2017 (247,907), while the number of operational places increased by 6,453 as provisional allocations and offline places came online. The overall reduction in allocated places was due to no new places being allocated during 2017-18 (as there was no ACAR) and 1,371 provisionally allocated places were either surrendered by providers or revoked by the Department. This is discussed in section 6.1.7.

Table 6.1: Number of residential care providers, facilities, places and residents, 30 June 2014 to 30 June 2018

	30 June 2014	30 June 2015	30 June 2016	30 June 2017	30 June 2018
Providers	1,016	972	949	902	886
Facilities	2,688	2,681	2,669	2,672	2,695
Allocated places	217,006	228,024	238,843	247,907	246,536
Operational places	189,283	192,370	195,825	200,689	207,142
Achieved residential care ratio	82.6	81.1	79.7	77.9	77.2
Provisionally allocated places	21,047	28,000	35,124	39,294	31,603
Provisionally allocated places as proportion of allocated places	9.7%	12.4%	14.7%	15.9%	12.8%
Occupancy	93.0%	92.5%	92.4%	91.8%	90.3%
Total residents	176,816	177,820	181,048	184,077	186,597
- Permanent residents	173,974	172,828	175,989	178,713	180,923
- Respite residents	2,842	4,992	5,059	5,364	5,674

1. This table excludes flexible care places.

[27] In residential care, a 'facility' also refers to an aged care home or service.

Table 6.2 shows a breakdown of residential care providers as at 30 June 2018, presented by ownership type, location and scale.

Table 6.2: Number of providers, facilities, places and residents in residential care, by ownership, location and scale, 2017-18

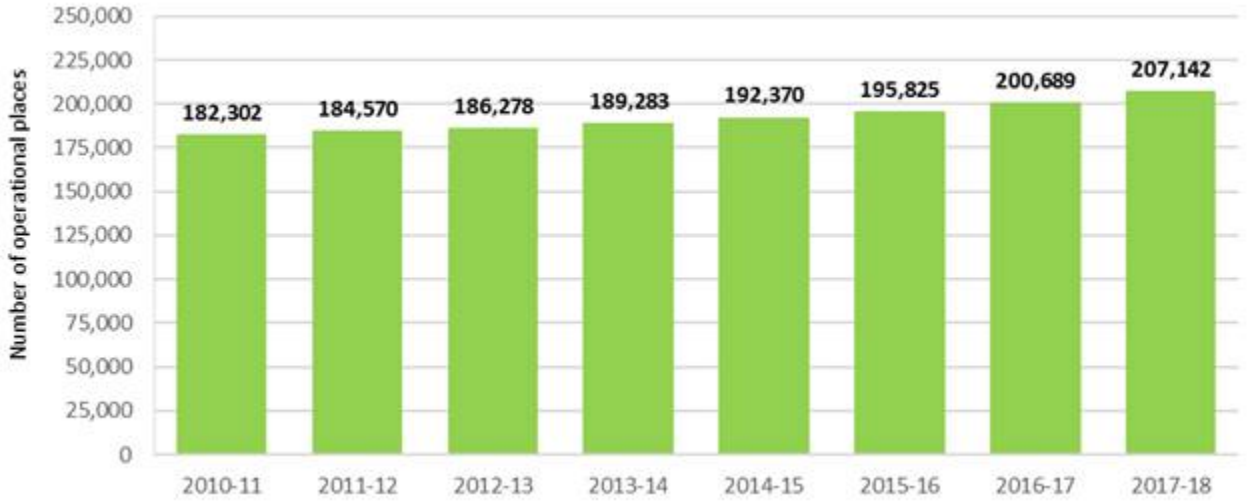
			Ownership type			Location			Scale			
	Total sector 2016-17	Total sector 2017-18	Not-for-profit	For-profit	Government	Metropolitan	Regional	Metropolitan & regional	Single facilities	Two to six facilities	Seven to 19 facilities	20 or more facilities
Providers	902	886	497	294	95	453	343	90	560	246	59	21
Facilities	2,672	2,695	1,549	906	240	739	1,956	N/A	560	694	641	800
Operational places	200,689	207,142	114,463	84,011	8,668	63,305	29,838	113,999	43,001	48,382	50,966	64,793
Occupancy	91.8%	90.3%	92%	88%	90%	89%	92%	91%	90%	90%	91%	91%
Total residents	184,077	186,597	105,308	73,554	7,735	130,611	55,986	N/A	38,377	42,930	46,325	58,965
-Permanent residents	178,713	180,923	102,539	70,856	7,528	126,813	54,110	N/A	36,921	41,593	45,135	57,274
- Respite residents	5,364	5,674	2,769	2,698	207	3,798	1,876	N/A	1,456	1,337	1,190	1,691

6.1.2 Residential care providers

At 30 June 2018, there were 886 residential care providers operating 207,142 residential care places in Australia. This compares with 902 providers operating 200,689 places at 30 June 2017. As has been the case in recent years some providers are continuing to expand the scale of their businesses. As a result there has been a consolidation of residential care providers over a number of years. Chart 6.1 and Chart 6.2 show the decreasing provider numbers but increasing operational places since 2010-11.

Chart 6.1: Number of residential care providers, 2010-11 to 2017-18

Chart 6.2: Number of operational residential care places, 2011-12 to 2017-18



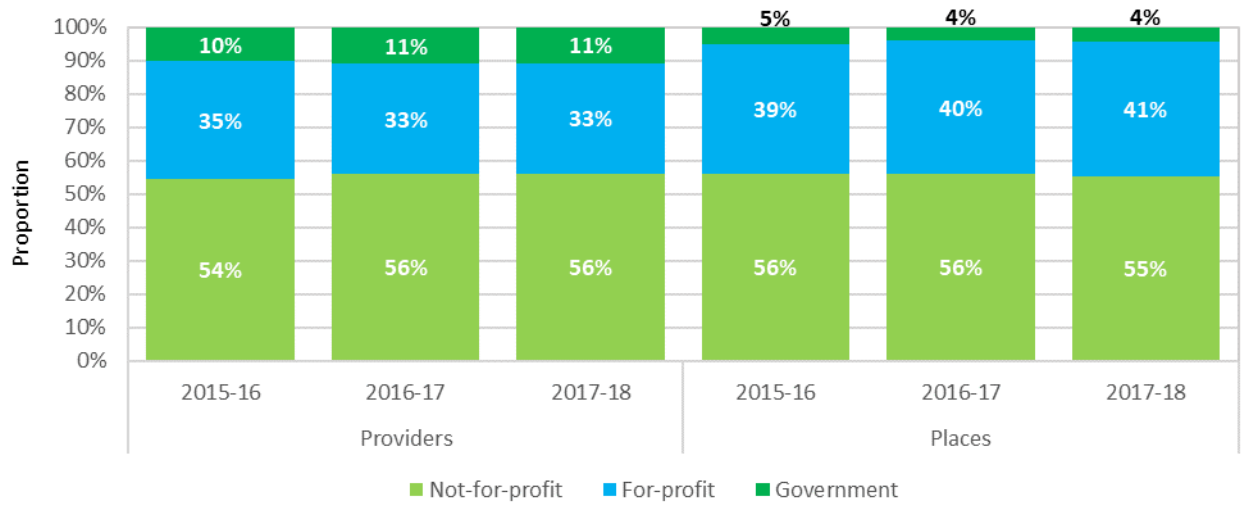
6.1.3 Ownership type

As shown in Chart 6.3, the largest provider group remains the not-for-profit group (religious, charitable and community-based organisations). They represent 56 per cent of providers and operate 55 per cent of all residential aged care places. For-profit providers account for 33 per cent of providers and 41 per cent of places. The remaining providers and places are state and territory and local government-owned providers.

The proportion of providers across ownership types has remained relatively stable. However, as shown, the proportion of operational residential care places held by for-profit providers is continuing to increase gradually. This reflects for-profit providers seeking to increase the scale of their operations through both acquisitions and greater success at gaining new allocations through the Aged Care Approvals Rounds (ACAR).

Not-for-profit providers continue to operate proportionally more of the residential care places in rural and regional areas compared with the for-profits. As at 30 June 2018, not-for-profits (55 per cent of all places) were operating 66 per cent of all regional places. Conversely, and also similar to previous years, for-profit providers operated 41 per cent of all places and only 24 per cent of regional places. Government providers operated the remaining 11 per cent of regional residential care places.

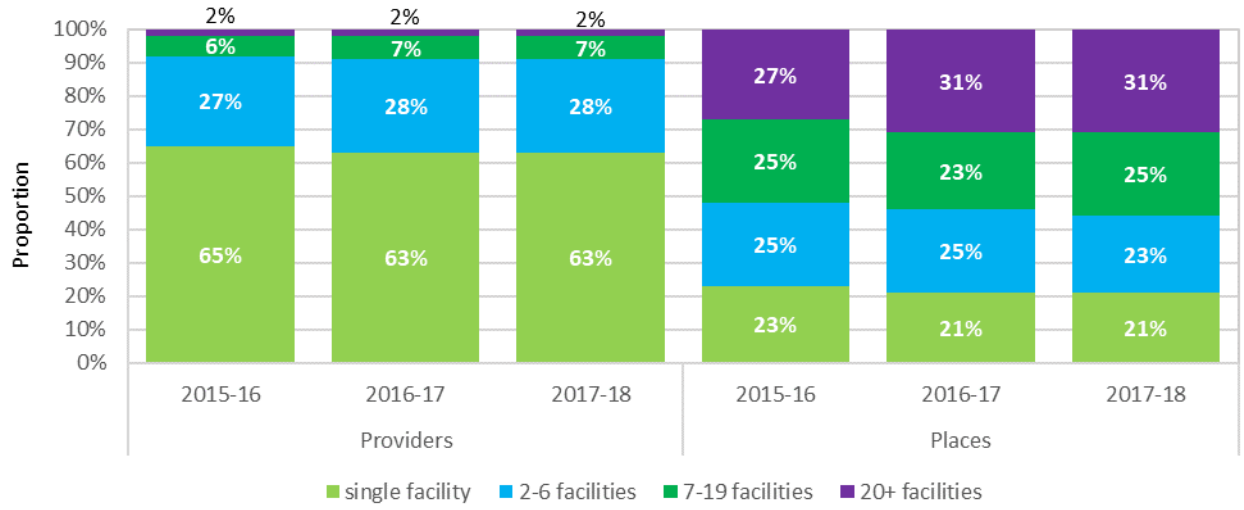
Chart 6.3: Residential care provider and operational places by ownership type, 2015-16 to 2017-18



6.1.4 Provider scale

The majority of residential care providers (63 per cent) operate only one residential care facility (Chart 6.4). These single aged care facility providers account for 21 per cent of all operational residential care places. Conversely, 2 per cent (21 providers in total) operate more than 20 facilities, but they account for 31 per cent of operational places.

Chart 6.4: Residential care provider and operational places by provider scale, 2015-16 to 2017-18



As shown in Table 6.3, for-profit and not-for-profit providers have, on average, around three facilities per provider. However within those facilities, for-profit providers, on average, operate 93 residential care places per facility, compared with not-for-profit providers who operate 74 places per facility. This likely reflects both some for-profit providers expanding their facilities and also reflecting the not-for-profit's bigger presence in regional locations where facility size is usually smaller.

Table 6.3: Number of residential care facilities per provider, by ownership type, 30 June 2018

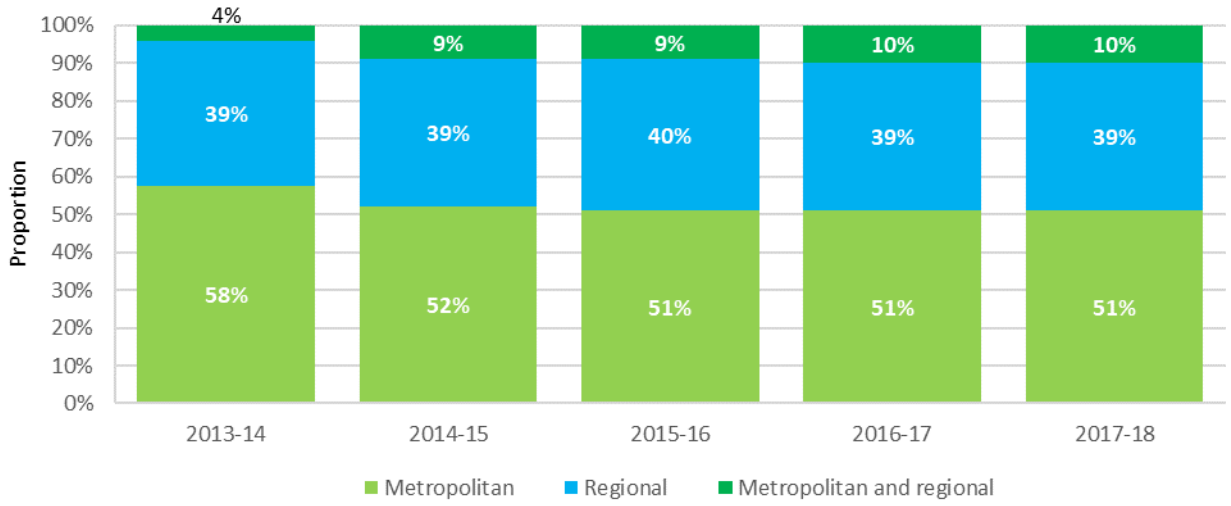
Organisation type	Number of providers	Number of facilities	Average facilities per provider	Total operational places	Average places per provider	Average places per facility
Not-for-profit	497	1,549	3.12	114,463	230	74
For-profit	294	906	3.08	84,011	286	93
Government	95	240	2.53	8,668	91	36

6.1.5 Provider location

ACFA generally categorises residential care providers as those operating only in metropolitan areas, those operating only in regional[28] areas, and those who have facilities in both metropolitan and regional areas. A provider is categorised as being regional if more than 70 per cent of their residents are in facilities in regional areas.

Chart 6.5 shows that 51 per cent of providers operate only in metropolitan areas. However, this number has decreased from 58 per cent in 2013-14 as more providers who previously only operated facilities in metropolitan areas expanded into regional areas. Conversely, 10 per cent of providers operate facilities in both metropolitan and regional areas, up from 4 per cent in 2013-14. The remaining 39 per cent of providers operate in regional areas only.

Chart 6.5: Residential care providers, by location, 2013-14 to 2017-18



6.1.6 Residential care facility size and room configuration

The average size of residential care facilities has been increasing over the last 10 years (Table 6.4). In 2008, 60 per cent of facilities had over 60 places. This has increased to 75 per cent in 2018. By contrast, the proportion of facilities with 40 places or less has decreased from 15 per cent in 2008 to below 9 per cent in 2018. This trend seems particularly evident in the for-profit sector, as

[28] In the aged care context, 'regional' includes rural and remote aged care areas.

discussed in Section 6.1.3, with for-profit providers having, on average, almost 20 more places per facility than the not-for-profits.

Table 6.4: Size of residential care facilities, 2008 to 2018

Number of places	June 2008	June 2009	June 2010	June 2011	June 2012	June 2013	June 2014	June 2015	June 2016	June 2017	June 2018
	Proportion of facilities (%)										
1–20 places	1.6	1.4	1.4	1.4	1.3	1.2	1.1	1.1	1.1	1.0	0.9
21–40 places	13.2	10.7	9.9	10.1	9.4	9.2	8.5	8.1	7.6	7.2	6.8
41–60 places	25.2	22.4	21.4	21.9	20.4	19.6	18.1	17.4	16.4	15.4	14.2
61+ places	59.9	65.5	67.3	66.6	68.9	69.9	72.2	73.3	74.9	76.4	78.0

The predominant room configuration for residential care facilities is a single-bed room with an ensuite. It is estimated that around 80 per cent (77 per cent in 2016-17) of rooms are single-bed rooms with an ensuite and around 3 per cent (5 per cent in 2016-17) are shared rooms with an ensuite. Around 14 per cent of residents are in rooms that could be considered 'ward style' which are shared and have a common shared bathroom (18 per cent in 2016-17).

6.1.7 Provisionally allocated places

The Commonwealth releases residential care places through the ACAR. After a place is allocated to an approved provider, there is usually a period during which the place is considered 'provisional' while the provider constructs the facility or extends the current facility. Once the place is available to be occupied by a resident, it becomes 'operational'. The average time it takes providers to bring places online is around four years.

At 30 June 2018, there were 31,603 provisional residential care places reflecting the carryover of allocated places from previous ACARs which are yet to become operational. This represents around 13 per cent of all allocated places, which compares with 16 per cent at 30 June 2017 and 14 per cent at 30 June 2014. The absence of an ACAR during 2017-18 would largely account for the proportionate reduction in provisional places compared with 2016-17. The provisional allocations are held by around 16 per cent of all facilities.

As was the case last year, Queensland, Western Australia and the ACT have the highest proportion of provisionally allocated places. South Australia and Tasmania have once again the lowest with 3 and 4 per cent respectively (Table 6.5).

Not-for-profit providers, who have 55 per cent of operational places, have only 35 per cent of provisionally allocated places, whereas the for-profit providers, who have 41 per cent of operational places, have 65 per cent of the provisionally allocated places. This is similar to previous years.

In addition, there were also 7,802 formerly operational places at 30 June 2018 that were offline at 30 June 2018 pending refurbishment or redevelopment, or pending sale to another provider.

Table 6.5: Provisionally allocated residential care places, by state and territory, at 30 June 2018

State/territory	Provisionally allocated places	All allocated places	Proportion
New South Wales	8,806	82,169	10.7%
Victoria	8,416	65,366	12.9%
Queensland	8,170	48,502	16.8%
Western Australia	4,638	22,121	21.0%
South Australia	633	18,926	3.3%
Tasmania	208	5,357	3.9%
Australian Capital Territory	647	3,425	18.9%
Northern Territory	85	670	12.7%
Australia	**31,603**	**246,536**	**12.8%**

Changes introduced in 2016 were designed to encourage providers to operationalise their provisional places in a timely manner. The changes limit the provisional allocation period to four years (noting that up to two extensions of 12 months each may be granted by the Department of Health, and further extensions in exceptional circumstances). At the end of this time, the provisional allocations lapse and the places return to the Department for redistribution in a future ACAR.

As noted earlier 1,371 provisionally allocated places were either surrendered by providers or revoked by the Department during 2017-18. The majority (1,083) of these provisionally allocated places were surrendered by providers or lapsed as the six years expired and the provider did not apply for an extension. The remaining 298 provisionally allocated places were revoked by the Department because the providers were not able to meet the exceptional circumstances test for a further extension after six years.

Table 6.6 and Table 6.7 show the distribution of the age of provisionally allocated places by location and state and territory.

Table 6.6: Provisionally allocated residential care places by location and year of distribution, at 30 June 2018

	<1 year old	1-2 years old	2-4 years old	4-6 years old	6-8 years old	8-10 years old	10+ years	Total

Transferring residential care places

Residential aged care places (both provisionally allocated and operational) may be transferred between providers. A transfer of places commonly occurs as the result of a business transaction between two approved providers where a decision has been made by the transferor to sell all or some of their residential care places. Transfers of places need to be approved by the Department of Health.

As a general rule, when places transfer between providers, the planning region in respect of which the places are allocated does not change. This rule, and the need for approval by the Department of Health, are designed to discourage attempts to subvert the competitive allocation process and to maintain care delivery in the region where the places were originally allocated.

Data from the Department of Health shows that in 2017-18 there were 64 transactions involving the transfer of around 4,400 operational places and 45 transactions involving the transfer of around 2,400 provisionally allocated places.

Data on the number of places being transferred between providers is an indicator of consolidation within the sector. Given increasing reports of providers looking to leave the sector, ACFA will continue to monitor this data on the transfer of residential care places.

6.1.8 Extra service

Providers with extra service status are able to charge an extra service fee for residents occupying an extra service place for the duration of their stay. Extra service status involves the provision of a higher than average standard of services, including accommodation, range and quality of food, and non-care services such as recreational and personal interest activities.

To be eligible for extra service status, providers must first seek approval from the Department. Providers that have been granted extra service status apply to the Aged Care Pricing Commissioner for approval of their proposed extra service fees, including proposed increases to current extra service fees.

For extra service status places that are occupied by a resident who was in care prior to 1 July 2014 and who is covered under the pre-reform fee arrangements, the care subsidy is reduced by 25 per cent of the approved extra service fee for that place. This is known as the Extra Service Subsidy Reduction. The provider can charge a continuing care recipient an amount equal to the extra service fee plus the extra service reduction for receiving extra service. Extra service subsidy reduction does not apply to residents entering care on or after 1 July 2014.

There was a significant decrease in 2014-15 and 2015-16 in the number of places with extra service status (Chart 6.6). This was likely because changes made to accommodation pricing on 1 July 2014 reduced the need and motivation for providers to have extra service status, partly because:

- lump sum accommodation payments can now be made for all care types – previously they were restricted to low care or high care with extra service;
- market-based prices determined by the provider apply for all new non-supported residents; and
- providers can offer additional care and services for additional fees outside the extra service framework.

This led some providers to reconsider their extra service status, with many offering residents 'additional service' arrangements instead. However, as shown, the number of extra service places has stabilised over the last two years.

Chart 6.6: Number of active extra service residential care places, 30 June 2014 to 30 June 2018

6.1.9 Additional services

Additional services are care and services that aged care providers can make available to consumers above those that they are legislatively required to provide under the Schedule of specified care and services for residential care services. Additional services vary greatly but may include items such as the provision of pay TV, hairdressing, additional beverage offerings (e.g. wine and beer) and access to a gym. Additional services may be offered individually or as part of a bundle of services. These services attract an additional fee for consumers.

An additional service fee can only be charged for services that have been agreed to by the resident, that are over and above those paid for by the Commonwealth, and from which aged care residents receive a direct and tangible benefit.

There is very limited data available on additional services, however, anecdotal evidence is that this is an area that is receiving increasing attention from providers. The department is working with the sector to provide additional clarity and transparency for both providers and residents on the operation of additional services. It is anticipated that additional data will be available in future years to enable analysis.

6.2 Residential care funding sources

6.2.1 Operational funding

Funding for residential care is made up of operational funding and capital financing.

Operational funding supports day-to-day services such as nursing and personal care, living expenses and accommodation expenses. Capital financing supports the construction of new residential care facilities and the refurbishment of existing facilities. Capital financing is discussed in Chapter 7.

A combination of Australian Government and resident contributions provides the operational funding for residential care. Figure 6.1 shows the different funding types from the Commonwealth and residents for operational funding.

Figure 6.1 Residential care services

The Commonwealth determines its contributions on behalf of permanent residents in residential care by setting:

- A basic care subsidy for personal and nursing care;
- the rates of supplements paid to support aspects of residential care that incur higher costs to deliver; and
- the maximum rate of accommodation supplement.

With regard to respite care, the Commonwealth sets the basic respite care subsidy at two levels (low or high) depending on the level of respite care the consumer is approved for by the Aged Care Assessment Team (ACAT).

The Commonwealth also sets the maximum levels for contributions made by residents for the following:

- the maximum rate of the basic daily fee for living expenses (permanent and respite); and
- the maximum means tested care fee that may be charged by providers (permanent only).

6.2.2 Commonwealth operational funding

Commonwealth payments for residential care in 2017-18 can be classified as:

- basic care subsidies
- respite care subsidies and supplements
- accommodation supplements
- viability supplements
- other supplements

A full list of subsidies and supplements is at Appendix G.

Commonwealth subsidies and supplements are generally indexed either biannually (accommodation related) or annually (care related).

The indexation applied to the basic subsidy for residential care is the Wage Cost Index 9 (WCI-9), which is a composite index constructed by the Department of Finance that comprises a wage cost component (weighted at 75 per cent) and a non-wage cost component (weighted at 25 per cent). For all Wage Cost Indices the value of the wage cost component is based on the dollar increase in the national minimum wage (as determined annually by the Fair Work Commission) expressed as a percentage of the latest available estimate of average weekly ordinary time earnings (AWOTE) published by the Australian Bureau of Statistics as at November of each year. The value of the non-wage cost component of WCI-9 is based on changes in the Consumer Price Index between the March quarters each year.

Accommodation related supplements are indexed using the Consumer Price Index (CPI) and are indexed twice a year in line with the aged pension.

6.2.3 Basic care subsidies

- **The basic care subsidy** is a payment to support the costs of providing personal and nursing services for permanent residents. It is calculated based on the assessed need of each permanent resident as determined by the provider by applying the Aged Care Funding Instrument (ACFI). The Commonwealth determines the level of payments on behalf of residents by setting the prices and rules for claiming ACFI care subsidies.
- **The residential respite subsidy** is a payment to support the costs of providing personal and nursing services for respite consumers. Respite consumers are assessed by an ACAT as requiring either low or high level respite care, with payment amounts for each set by the Commonwealth.

The Aged Care Funding Instrument (ACFI)

The ACFI is the funding allocation tool currently used to determine the amount of funding paid to a provider on behalf of a resident for their care. It assesses the care needs of permanent residents as a basis for allocating care funding by focusing the funding allocation around the main areas that differentiate relative care needs and costs among residents.

The ACFI consists of 12 questions about assessed care needs, each having four ratings (A, B, C or D) and two diagnostic sections. ACFI is self-assessed by providers, but is subject to audits by the Department of Health.

As discussed in last year's report, during 2015-16, real growth of expenditure per resident per day through the ACFI was 5.2 per cent, compared with a Government budgeted growth of 3.2 per cent. This resulted in an increase to the Government's forecast expenditure over four years of $3.8 billion.

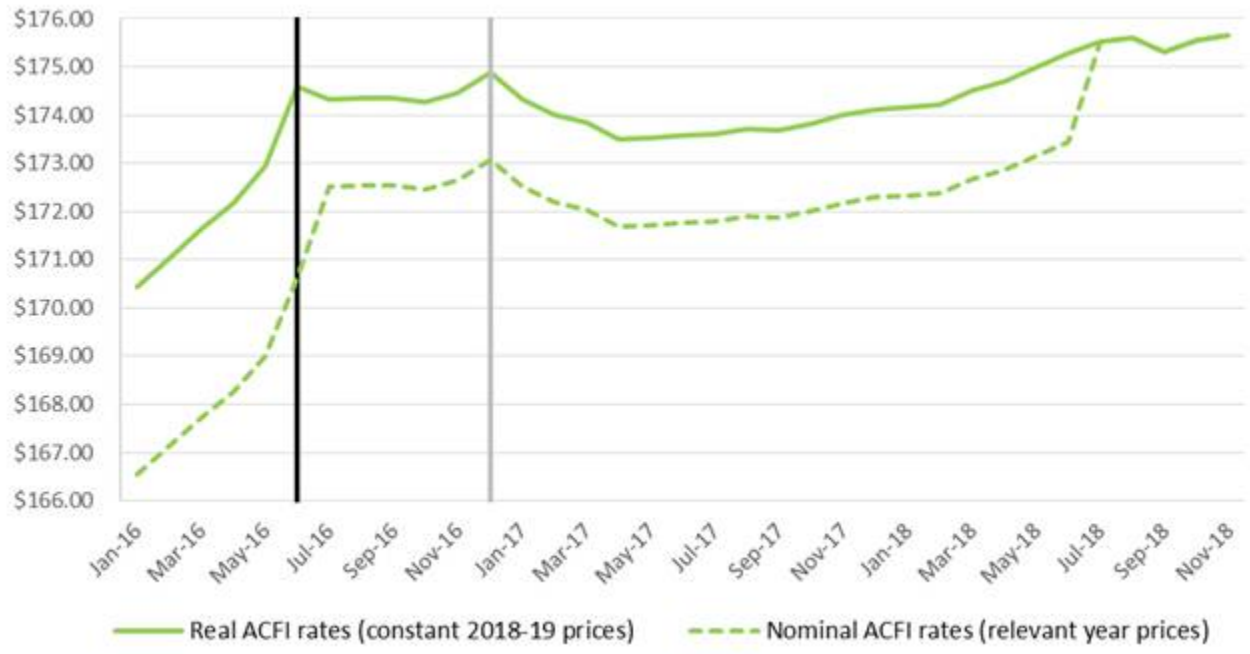
The Government responded by announcing changes to the ACFI and indexation. These changes took effect on 1 July 2016 and 1 January 2017. The changes to ACFI included a new matrix reducing the rating categories for medication under Question 11 of the Complex Health Care domain and changes to the scoring and eligibility requirements for certain Complex Health Care procedures. The changes were complemented by an indexation pause on all ACFI domains in 2017-18 and a partial indexation pause in 2018-19.

Annual growth in the daily average ACFI expenditure for 2017-18 was forecast to be around 2.4 per cent; the actual growth for the year was 0.0 per cent.

For 2018-19, annual real growth in ACFI is forecast to be 1.4 per cent. Real growth up to November 2018 was 1.0 per cent. Real growth refers to growth in the average ACFI above that which can be attributed to the indexation applied to ACFI rates on 1 July 2018. Separate to the annual indexation increases, the government announced two measures that will impact average subsidies paid to providers in 2018-19. These are the $50 million in ACFI funding from September 2018 to assist providers in transitioning to the new Quality Standards, and the $320 million increase in ACFI funding from March to end June 2019. These increases are for the 2018-19 year only.

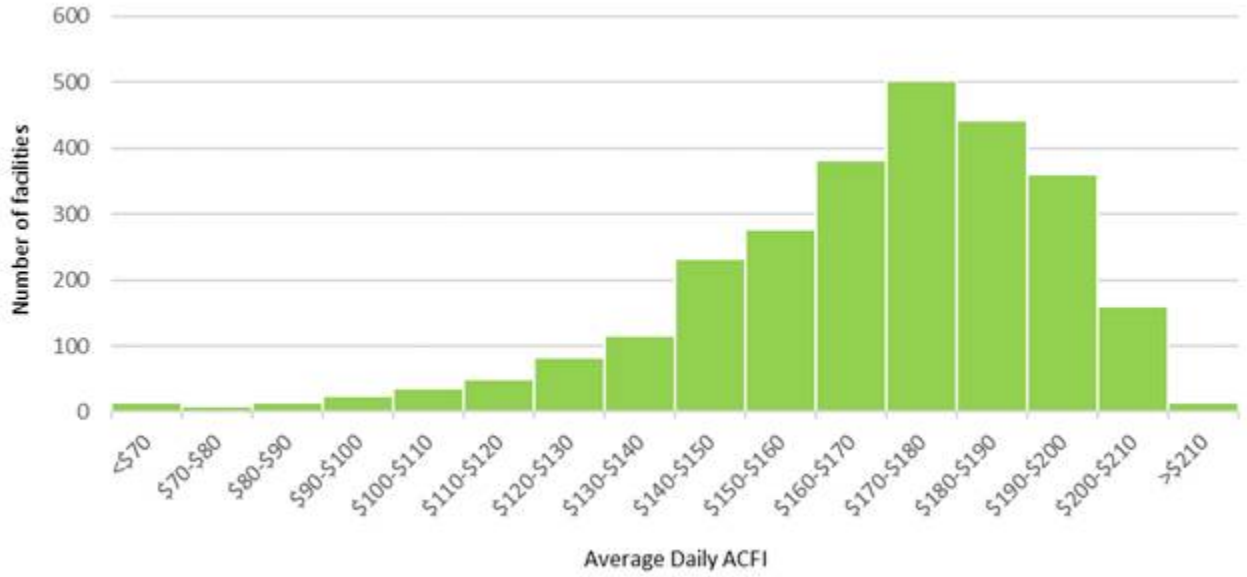
The Department of Health produces monthly reports regarding actual ACFI expenditure compared with Budget estimates. These reports can be found at https://agedcare.health.gov.au/tools-and-resources/aged-care-funding-instrument-acfi-reports.

Chart 6.7: Average monthly ACFI payments (real and nominal), January 2016 to November 2018



The average ACFI claim per resident per day can vary across facilities, reflecting variations in resident profile and the claiming behaviour of providers. A number of providers indicated during consultations that they were 'under claiming' ACFI relative to the care needs of residents and were seeking to improve their ACFI claims process. Chart 6.8 shows the range of claims for 2017-18 with some facilities averaging less than $70 per day while some average over $210 per day.

Chart 6.8: Number of residential care facilities in each range of ACFI claims per resident per day, 2017-18



As noted last year, the Government commissioned a study on the relative costs of providing care for residents with differing care needs and has been consulting with the sector on long-term reform options for residential aged care funding. Reports from the Resource Utilisation and Classification Study (RUCS) were released in March 2019 and include evidence on the drivers of costs of care in residential care facilities as well as a proposed new funding model to replace the ACFI. The Government is consulting with the sector on the recommendations in the reports.

The RUCS suggests that ACFI does not adequately distinguish between the fixed costs of providing residential aged care and the variable costs per resident based on individual care needs. As part of the RUCS, a new assessment and funding model has been proposed, known as the Australian National Aged Care Classification (AN-ACC) system. The system includes a funding assessment tool for use by external assessors, a casemix classification system with 13 classes and a system of base care tariffs that reflects the differences in shared costs faced by providers with different care specialities and locations. Under the proposed model providers would receive a payment that consists of a base care tariff for shared costs, a payment for each resident based on their AN-ACC class and a one-off adjustment payment for each new resident that enters care.

The ACFI does not apply for residential respite care. Instead, respite care funding is paid at either a low or high rate depending on the level of care for which the consumer is approved by the ACAT.

Additionally, providers who use 70 per cent or more of their respite allocation over a 12-month period receive a higher payment[29].

6.2.4 Residential care supplements

Residential care supplements are payments in addition to the basic daily subsidy (ACFI). There are two types of supplements:

- primary supplements, which provide additional funds to meet specific care needs. These include the oxygen supplement and enteral feeding supplement;
- other supplements, which are accommodation-based and assist providers with costs related to the operation of a residential care facility. Other supplements include accommodation supplements, the viability supplement and homeless supplement.

The types and amounts of supplements that a residential care facility will receive depends on the provider and/or residents meeting the eligibility requirements for those supplements.

The major supplements are summarised below and a full list of supplements, including rates and expenditure over the last 3 years are included at Appendices G and H.

Accommodation supplements

Accommodation supplements are paid by the Commonwealth to assist with the accommodation costs of permanent residents who do not have the means to meet all of that cost themselves (supported residents). These supplements include both the current accommodation supplement and grand-parented supplements under previous policies. Accommodation supplements (or accommodation payments) do not apply for consumers accessing residential respite care.

The Commonwealth determines the amount of accommodation supplement payable by setting the maximum rate of accommodation supplement and determining the share paid by residents based on a means test.

Two significant reforms from 1 July 2014 affected accommodation payments. A new means test that combined the formerly separate income and assets tests was introduced for residents entering residential care after 1 July 2014, and the accommodation supplement paid by the Commonwealth to a provider on behalf of supported residents living in aged care facilities that have been built or significantly refurbished since 20 April 2012 was significantly increased.

Viability supplement

The Viability supplement aims to improve the financial position of smaller, rural and remote residential care facilities that incur additional costs due to their location and are constrained in their ability to realise economies of scale due to smaller numbers of beds. In addition, the Viability supplement also supports providers who specialise in aged care services for Indigenous people, or people who are homeless or who are at risk of becoming homeless, in recognition of the often higher costs associated with providing these services.

The supplement is available to residential care facilities, home care services, Multi-Purpose Services and Aboriginal and Torres Strait Islander Flexible services. In 2017-18, on average, the Viability

[29] An additional amount is paid to residential care providers if they use an average of 70 per cent or more of their respite care allocation during the 12 months up to and including the month providing respite care. If the 70 per cent target is met, a payment is made at the end of the month for each of the high care respite days provided during that month.

supplement provided around $10,000 per resident per annum for residential care facilities in remote and very remote areas, directly improving their financial results.

A 30 per cent increase to the rate of the Viability supplement was announced by Government in December 2018, taking effect from March 2019.

Homeless supplement

A Homeless supplement is paid to providers for each resident of an eligible aged care facility. Eligibility for the supplement is based on the facility having more than 50 per cent of its residents who are identified as being homeless, or at risk of being homeless. The supplement is in addition to the funding provided under the Viability supplement.

In 2017-18 the Homeless supplement was paid in respect of around 1,500 residents. During 2017-18 $8.6 million in Homeless supplement was paid to providers.

A 30 per cent increase to the rate of the Homeless supplement was announced by Government in December 2018, taking effect from March 2019.

6.2.5 Payments for residential respite care

The Australian Government pays the provider a residential respite subsidy and a respite supplement for each eligible respite resident.

The subsidy and supplement are paid at either a low or high rate depending on the level of respite care the consumer is approved for by the ACAT. Additionally, facilities that use 70 per cent or more of their respite allocation over a 12 month period receive a higher daily respite supplement rate per eligible high care recipient. Respite subsidies are indexed on 1 July each year. Respite supplements are indexed on 20 March and 20 September each year in line with pension indexation. Table 6.8 shows the residential care respite rates applicable as at 20 March 2019.

A one-off increase in the respite subsidy rates for both high and low level respite care was made on 20 March 2019 as part of the Government's Mid-Year Economic and Fiscal Outlook for 2018-19. This increase will cease on 30 June 2019, and indexation will occur on 1 July 2019 based on the basic subsidy amount less the one-off increase.

Table 6.8: Residential respite care subsidies and supplement rates, at 20 March 2019

	Daily subsidy	Daily supplement	Total paid per day
Low level respite care	$51.17	$39.15	$90.32
High level respite care	$143.47	$54.87	$198.34
High level respite care when a facility uses 70% or more of respite allocation	$143.05	$93.36	$236.83

In addition, residential respite consumers can be eligible for other supplements, such as oxygen supplement, where there is a need.

Chart 6.9 shows total Commonwealth payments for residential respite care since 2011-12.

Chart 6.9: Total residential respite care expenditure, 2011-12 to 2017-18 ($m)

6.2.6 Resident operational funding

Contributions by permanent residents in 2017-18 for operational funding were made up of:

- **A basic daily fee,** which is a contribution towards living expenses such as meals, laundry services, utilities and toiletries. The price is set by the Commonwealth, and is currently set at a maximum of 85 per cent of the single basic age pension.
- **A means tested care fee,** which is a contribution some residents make towards their care costs (personal and nursing) based on their assessable income and assets. Annual and lifetime caps on care contributions apply as a consumer protection. As at 20 March 2019 the annual cap for a means tested care fee was $27,532.59, with a lifetime cap of $66,078.27 also applying.
- **Accommodation payments,** which are daily payments for accommodation in an aged care facility. Lump sum accommodation deposits are not treated as revenue, but as capital financing, discussed in Chapter 7.
- **Extra service fees,** which residents in aged care facilities with extra service status may be asked to pay for significantly higher standards of accommodation, food and non-care services. These vary from facility to facility.
- **Additional services fees,** which are for care and services in non-extra service facilities that are over and above those that providers are required to deliver under the Specified Care and Services Schedule of the *Aged Care Act 1997*, and must be agreed between the resident and provider. These vary from facility to facility, and are not payable at all facilities.

6.3 Operational performance in 2017-18

6.3.1 Revenue

ACFA broadly describes revenue for residential care providers in four categories: care related, living expenses, accommodation and other. Table 6.9 provides a breakdown of the revenue reported by residential care providers in 2017-18 compared with the previous two years.

Table 6.9: Revenue sources for residential care providers, by care, accommodation, living and 'other', 2015-16 to 2017-18 ($m)

Revenue sources	2015-16 ($million)	2016-17 ($million)	Change (%)	2017-18 ($million)	Change (%)
Care related					
Basic care subsidy (ACFI)	$9,991.3	$10,741.7	7.5%	$10,812.3	0.7%
Respite subsidy	$287.7	$301.4	4.8%	$346.9	15.1%
Other supplements	$72.8	$89.3	22.7%	$84.5	-5.4%
Resident means tested care fees	$456.0	$468.9	2.8%	$504.0	7.5%
Resident other care fees	$0	$61.2	N/A	$48.7	-20.4%
Total care revenue	**$10,807.8**	**$11,662.5**	**7.9%**	**$11,796.4**	**1.1%**
Living related					
Resident basic daily fee	$3,088.9	$3,186.7	3.2%	$3,253.4	2.1%
Extra service fees	$146.9	$157.5	7.2%	$119.3	-24.3%
Additional services fees	$0.0	$0.0	N/A	$96.7	N/A
Total living related revenue	**$3,235.8**	**$3,344.2**	**3.4%**	**$3,469.4**	**3.7%**
Accommodation related					
Accommodation supplement	$941.6	$929.7	-1.3%	$1,008.1	8.4%
Accommodation payments from residents	$850.8	$778.4	-8.5%	$781.0	0.3%
Capital grants	$0.0	$61.7	N/A	$56.5	-8.4%
Total accommodation related revenue	**$1,792.4**	**$1,769.8**	**-1.3%**	**$1,845.6**	**4.3%**
Other income					
Interest	$0.0	$313.8	N/A	$326.2	4.0%
Donations and fundraising	$0.0	$32.3	N/A	$29.0	-10.2%
Gain on sale of assets	$0.0	$29.1	N/A	$23.2	-20.3%
Revaluation of assets	$0.0	$130.4	N/A	$37.9	-70.9%
Other	$1,335.8	$474.4	-64.5%	$538.6	13.5%
Total other revenue	**$1,335.8**	**$980.0**	**-26.6%**	**$954.9**	**-2.6%**
Total residential care provider revenue	**$17,171.8**	**$17,756.5**	**3.4%**	**$18,066.3**	**1.7%**

1. The inclusion of a line item for additional services fees has resulted in a decrease in extra services fees, resident other care fees, and comparative decrease in accommodation payments from residents. I.e. providers allocated their revenue from additional service fees across these categories last year. This was mentioned in the note under the table last year.

2. Fees and charges received from a resident in respect of occasional care services like consultation, medication, treatment or procedures provided in addition to services required to be delivered under Schedule 1 of the *Aged Care Act 1997*.

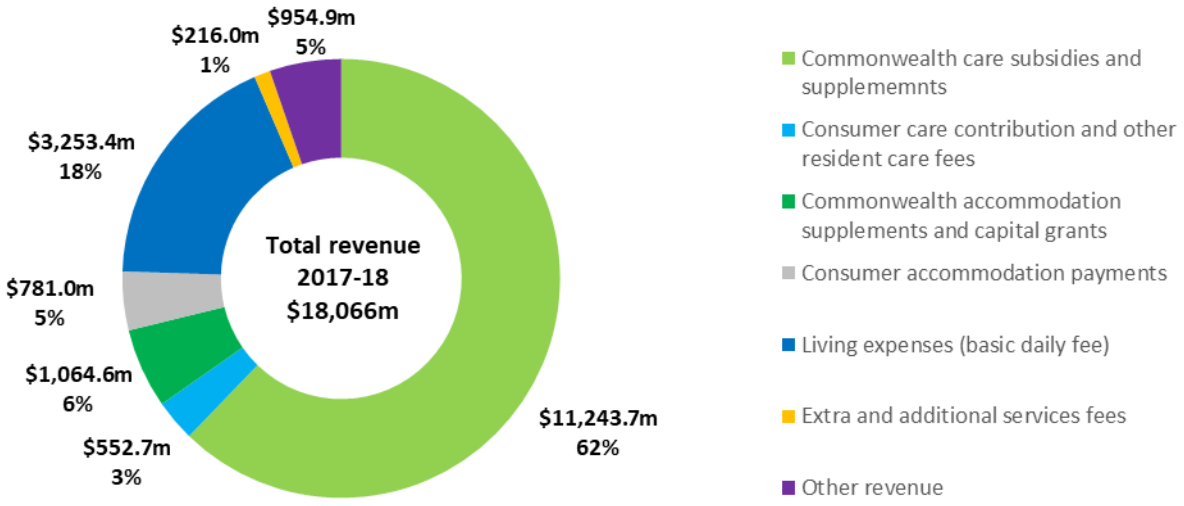
In 2017-18, care related revenue formed the majority (65.2 per cent) of total revenue earned by residential care providers ($11.8 billion), similar to 2016-17. Living related revenue received from residents, which includes the basic daily fee, extra services fees and additional service fees, accounted for 19.2 per cent ($3.5 billion) of total revenue, again similar to 2016-17.

Accommodation payments, consisting of accommodation supplements paid by the Government and daily accommodation payments paid by residents, accounted for 10.2 per cent ($1.8 billion) of total provider revenue in 2017-18, compared with 9.6 per cent in 2016-17.

Other income of $955 million made up the remaining 5.3 per cent of total residential care revenue in 2017-18. Interest revenue, which makes up over a third of total 'other' income may include interest earned on lump sum deposits less any interest payments made on borrowings (providers may show these separately in their balance sheets or may combine them as 'net').

Chart 6.10 shows the proportions of all revenue sources for residential care providers in 2017-18.

Chart 6.10: Proportions of total residential care provider revenue, 2017-18 ($m)



ACFA also analyses revenue sources in terms of those sources provided by the Commonwealth compared with those provided by residents. Table 6.10 shows provider revenue sources for 2016-17 and 2017-18, split by Commonwealth, resident and other.

Table 6.10: Revenue sources for residential care providers, Commonwealth, resident and 'other', 2016-17 and 2017-18 ($m)

Revenue sources	2016-17 ($million)	2017-18 ($million)	Change ($million)	Change (%)
Commonwealth				

Basic care subsidy (ACFI)	$10,741.70	$10,812.30	$70.60	0.7%
Respite subsidy	$301.40	$346.90	$45.50	15.1%
Other supplements	$89.30	$84.50	-$4.80	-5.4%
Accommodation supplements	$929.70	$1,008.10	$78.40	8.4%
Capital grants	$61.70	$56.50	-$5.20	-8.4%
Commonwealth funding sources	**$12,123.80**	**$12,308.30**	**$184.50**	**1.5%**
Resident				
Basic daily fee	$3,186.70	$3,253.40	$66.70	2.1%
Means tested care fees	$468.90	$504.00	$35.10	7.5%
Resident care fees - other	$61.20	$48.70	-$12.50	-20.4%
Accommodation payments	$778.40	$781.00	$2.60	0.3%
Extra services fee	$157.50	$119.30	-$38.20	-24.3%
Additional services fee	N/A	$96.70	$96.70	N/A
Resident funding sources	**$4,652.70**	**$4,803.10**	**$150.40**	**3.2%**
Other income				
Interest	$313.80	$326.20	$12.40	4.0%
Donations and fundraising	$32.30	$29.00	-$3.30	-10.2%
Gain on sale of assets	$29.10	$23.20	-$5.90	-20.3%
Revaluation of assets	$130.40	$37.90	-$92.50	-70.9%
Other	$474.40	$538.60	$64.20	13.5%
Other funding sources	**$980.00**	**$954.90**	**-$25.10**	**-2.6%**
Total revenue	**$17,756.50**	**$18,066.30**	**$309.80**	**1.7%**

1: Extra service subsidy reduction does not apply to new residents entering care from 1 July 2014, however it still applies to residents in ESS places who were in care prior to 1 July 2014.
2: Additional services fees were not reported for 2016-17 so no comparison is possible.

Overall in 2017-18, the Commonwealth contributed 68.1 per cent of total provider funding ($12.3 billion). Residents contributed 26.6 per cent ($4.8 billion) while income from other sources comprised the remaining 5.3 per cent ($955 million). This compares with 2016-17 where the Commonwealth share was 68.3 per cent, residents contributed 26.2 per cent and other income was 5.5 per cent.

Chart 6.11 shows the proportion of revenue that residential care providers received in 2017-18 from the Commonwealth. Basic subsidies (ACFI) comprised by far the greatest share at 88 per cent.

Chart 6.11: Proportions of provider revenue from the Commonwealth, 2017-18 ($m)

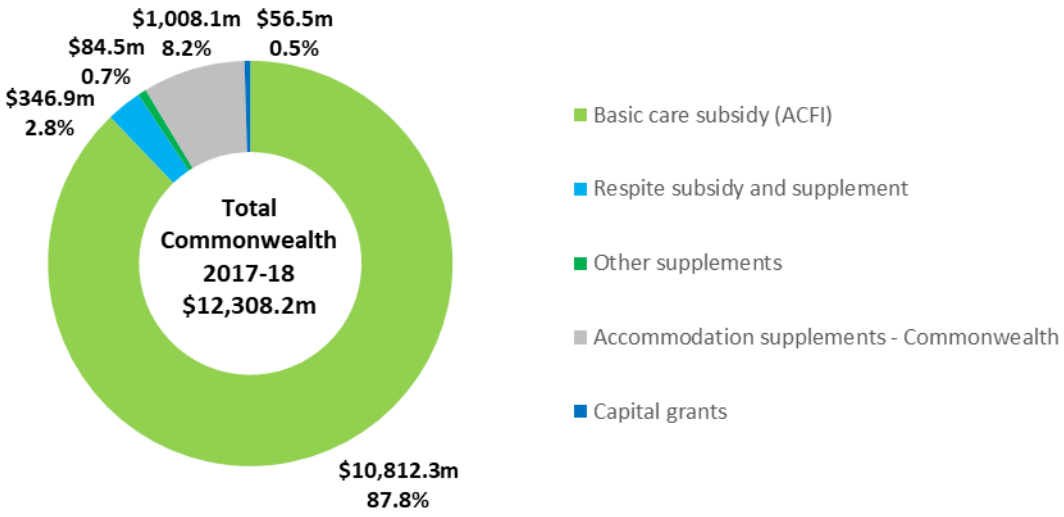


Chart 6.12 shows the proportion of total revenue that residential care providers receive from residents. The basic daily fee forms the greatest share (68 per cent). Means tested care fees formed a further 16 per cent of the revenue received.

Chart 6.12: Proportions of residential care provider revenue from residents, 2017-18 ($m)

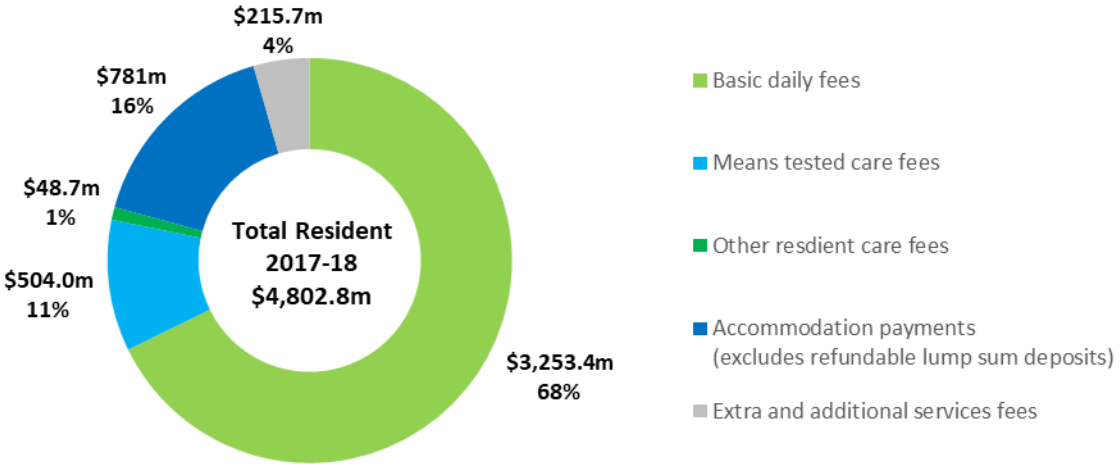

Table 6.11 shows total revenue per resident per day in 2017-18 compared with 2016-17. Total revenue per resident was $272.16, an increase of 1.0 per cent from 2016-17 ($269.58).

Table 6.11: Residential care provider revenue sources per resident per day, 2016-17 and 2017-18

	2016-17	2017-18	Change ($ p.r.p.d.)	Change (%)
Commonwealth revenue sources				
ACFI	$163.07	$162.88	-$0.19	-0.1%

Respite care subsidies and supplements	$4.58	$5.23	$0.65	14.2%
Other supplements	$1.36	$1.27	-$0.09	-6.6%
Accommodation supplements	$14.11	$15.19	$1.08	7.7%
Commonwealth capital grants	$0.94	$0.85	-$0.09	-9.6%
Total Commonwealth revenue	**$184.06**	**$185.42**	**$1.36**	**0.7%**
Resident revenue sources				
Means tested care fees	$7.12	$7.59	$0.47	6.6%
Accommodation payments	$11.82	$11.77	-$0.05	-0.4%
Basic daily fees	$48.38	$49.01	$0.63	1.3%
Extra services fee	$2.39	$1.80	-$0.59	-24.7%
Additional services fees	$0.00	$1.46	$1.46	N/A
Resident care fees - other	$0.93	$0.73	-$0.20	-21.5%
Total resident revenue	**$70.64**	**$72.36**	**$1.72**	**2.4%**
Other				
Other income	$14.88	$14.38	-$0.50	-3.4%
Total revenue	**$269.58**	**$272.16**	**$2.58**	**1.0%**

1. Extra service subsidy reduction does not apply to new residents entering care from 1 July 2014, however it still applies to residents in ESS places who were in care prior to 1 July 2014.
2. The amount shown for ACFI includes a small number of residents who are grand parented under the former 'Resident Classification Scale,' which was the funding instrument in place prior to the ACFI being introduced in 2008.

6.3.2 Expenses

Total expenditure in 2017-18, for residential care providers was $17.63 billion, up 5.3 per cent from $16.75 billion in 2016-17. Chart 6.13 shows total expenses for the six years to 2017-18. While expenses increased by 5.3 per cent in 2017-18 compared with 2016-17 revenue only increased by 1.7 per cent.

Chart 6.13: Total expenses, residential care providers, 2012-13 to 2017-18 ($b)

Table 6.12 shows the expenses for residential care providers in 2017-18 compared with 2016-17 and Chart 6.14 presents the expenses for 2017-18 as a proportion of total expenses.

Table 6.12: Summary of expenses, residential care providers, 2016-17 and 2017-18 ($m)

Expenses	2016-17 ($m)	2017-18 ($m)	Change ($m)	Change (%)
Employee	$11,792.1	$12,426.7	$634.6	5.4%
Depreciation	$895.3	$968.9	$73.6	8.2%
Interest	$171.1	$186.7	$15.6	9.1%
Other expenses	$3,892.3	$4,048.8	$156.5	4.0%
Total expenses	**$16,750.8**	**$17,631.1**	**$880.3**	**5.3%**

Employee costs represent 70 per cent of the total expenses incurred by providers and these increased by 5.4 per cent from 2016-17.

'Other' expenses represented 23 per cent of total costs, stable from 2016-17. 'Other' expenses include building repairs and maintenance expenses, rent, utilities and costs associated with employment support activities, cleaning and administration. Depreciation and interest costs account for the remaining 5 per cent and 1 per cent respectively, the same as in 2016-17.

Chart 6.14: Proportion of residential care provider total expenses, 2017-18 ($m)

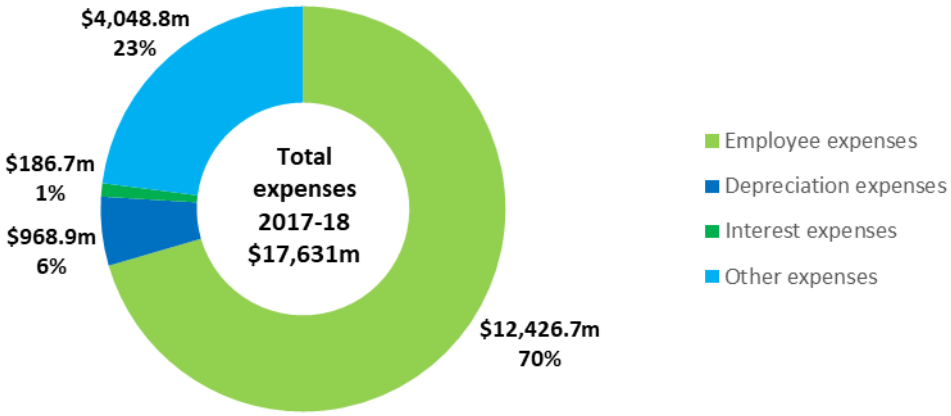

Table 6.13 shows the major expense types for providers, per resident per day, for the six years to 2017-18. Total expenses per resident per day have generally increased each year by around 4-5 per cent.

Table 6.13: Summary of residential care provider expenses, per resident per day, 2012-13 to 2017-18

Expenses	2012-13	2013-14	2014-15	2015-16	2016-17	2017-18
Employee	$142.92	$148.81	$157.68	$166.84	$179.01	$187.21
Depreciation	$11.59	$11.56	$11.49	$11.87	$13.59	$14.60
Interest	$2.57	$2.34	$2.21	$2.30	$2.60	$2.81
Other	$58.24	$62.81	$63.67	$66.57	$59.09	$61.00
Total expenses	**$215.32**	**$225.52**	**$235.05**	**$247.58**	**$254.29**	**$265.62**

As noted earlier, since 2016-17, a different breakdown of expenditure data was collected through the introduction of the ACFR. The new format has enabled the collection of more detailed expenditure information from 2016-17 onwards. Table 6.14 shows provider expenditure in 2017-18, compared with 2016-17, using the new categories collected through the ACFR.

Table 6.14: Breakdown of residential care provider expenses, 2016-17 and 2017-18 ($m)

	2016-17 ($m)	2017-18 ($m)	Change ($m)	Change (%)
Care

Care expenditure relates to the direct costs incurred in providing care for residents within residential care facilities. Care related employee expenses make up 94 per cent of total care expenses, and 51 per cent of total expenditure, making it the largest single expense for providers. Employee expenses include payments made to doctors, nursing, therapists, nutritionists, case managers, health assistants and support staff.

Other care expenses include items such as resident medication, oxygen and related equipment, treatments and procedures, incontinence aids, items that assist mobility, recreation and social activities, rehabilitation support, personal grooming and specific cultural and social events.

Accommodation expenditure (which represents 9 per cent of total expenses) relates to the costs incurred in providing accommodation to residents. Within accommodation, employee expenses as a proportion of total accommodation related expenses decreased from 22.3 per cent in 2016-17 to 17.5 per cent in 2017-18. This perhaps reflects providers trying to reduce costs on non-care related

areas. Repairs and maintenance make up 30 per cent of accommodation related expenses and facility rental (22 per cent), and other (31 per cent) make up the remainder.

Other accommodation expenses include property rates and taxes, bed licence fees/allocation certification fees, utilities and waste disposal.

Hotel expenditure (which represents 16 per cent of total expenses) relates to the costs incurred in the provision of everyday living expenses to residents. Within hotel, expenses relate to employees (57 per cent), contracted services (18 per cent) and other (26 per cent).

Contracted services are payments made to external providers or internal divisions for the provision of catering, cleaning or laundry. Other expenses consist of expenses such as meals, refreshments, other food consumables, bedding materials, toiletry and sanitary goods, cleaning items and laundry items.

Financing expenditure relates to depreciation incurred on property, plant and equipment, amortisation of intangible assets, and interest paid on borrowing used to fund the capital requirements of facilities. Financing accounted for 6.6 per cent of total expenditure in 2017-18.

Other expenses relate to expenditure not covered in any of the above categories.

6.3.3 Financial results

The financial performance of residential care providers is affected by variations in both revenue and expenditure. It can also vary depending on the location in which care is delivered.

Chart 6.15 shows the average EBITDA per resident per annum for all residential care providers since 2010-11. Overall, residential care providers performed significantly worse in 2017-18 compared with recent years. The average EBITDA per resident had improved for five years in a row since 2012-13 before dropping by 24 per cent from $11,481 in 2016-17 to $8,746 in 2017-18.

Chart 6.15: Residential care provider average EBITDA per resident per annum, 2010-11 to 2017-18

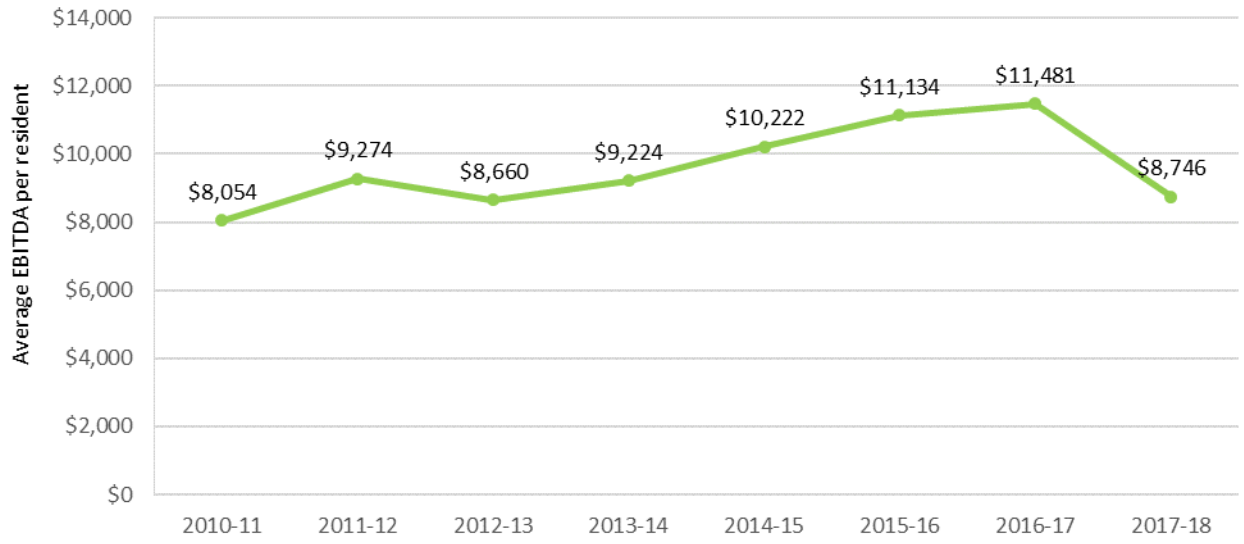

Table 6.15 shows a summary of the overall financial performance of residential care providers since 2012-13.

Table 6.15: Summary of financial performance of residential care providers, 2012-13 to 2017-18 ($m)

	2012-13	2013-14	2014-15	2015-16	2016-17	2017-18

Table 6.16 shows the financial performance of providers in 2017-18 by ownership type, location and scale. In general terms, for-profit providers outperformed not-for-profit providers and metropolitan providers significantly outperformed regional and rural providers. More detailed discussion of performance based on ownership, location and scale is included later in this section.

Table 6.16: Summary of financial performance of residential care providers, 2017-18

			Ownership type			Location			Scale			
	Total sector 2016-17	Total sector 2017-18	Not-for-profit	For-profit	Government	Metropolitan	Regional	Metropolitan & regional	Single facility	Two to six facilities	Seven to 19 facilities	20 or more facilities
Revenue ($m)	$17,757	$18,066	$9,885	$7,288	$893	$11,997	$2,739	$3,330	$3,605	$4,150	$4,670	$5,641

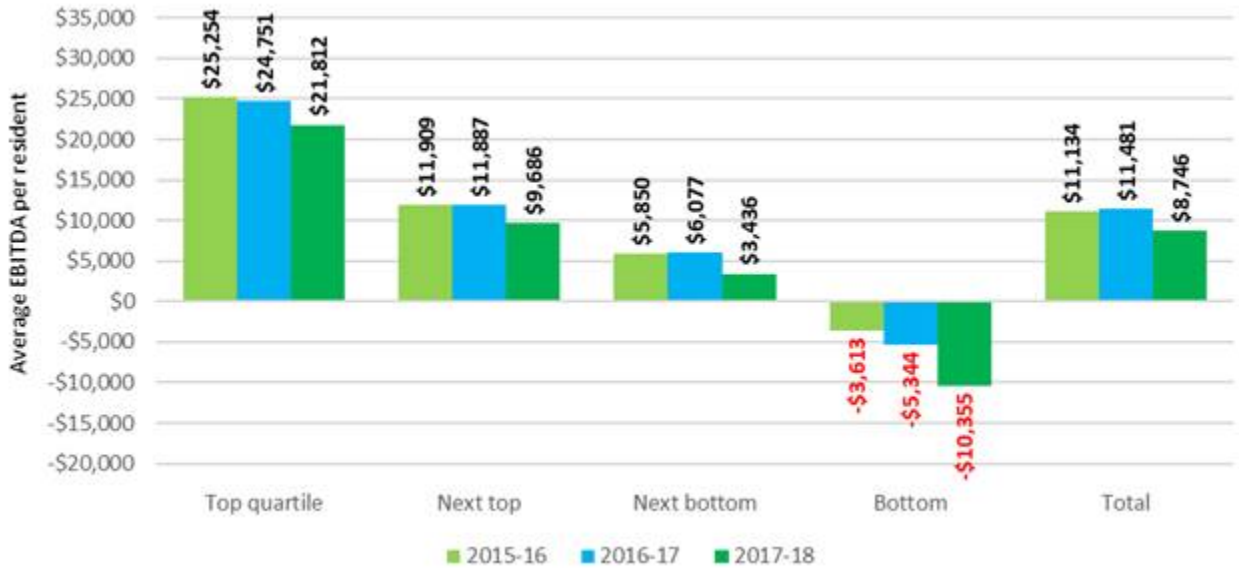
NPBT margin	5.7%	2.4%	1.2%	5.7%	-11.4%	3.4%	-3.2%	3.3%	1.6%	0.0%	2.7%	4.4%

As noted, the residential care sector overall reported a significant decline in financial performance in 2017-18 compared with 2016-17. Providers reported an average EBITDA per resident of $8,746 down from $11,481 in 2016-17. This follows five years of improving financial performance since 2012-13. Fifty-six per cent of residential care providers reported a net profit in 2017-18, a noticeable decline from 68 per cent in 2016-17 and 69 per cent in 2015-16.

The EBITDA margin also decreased to 8.8 per cent after improving each of the previous five years (11.7 per cent in 2016-17). The NPBT margin declined significantly to 2.4 per cent from 5.7 per cent in 2016-17.

Chart 6.16 presents the EBITDA per resident for 2015-16 to 2017-18 by provider performance quartiles. As shown, the average EBITDA dropped noticeably in all four quartiles.

Chart 6.16: Residential care provider comparative EBITDA per resident per annum, 2015-16 to 2017-18



Operating performance has traditionally varied across provider ownership type, location and scale. The following commentary provides analysis across the segments of providers.

By provider ownership type

For-profit providers, like the rest of the sector, derived a noticeable decline in 2017-18 compared with 2016-17. The for-profits recorded EBITDA per resident per annum of $11,634, down from $13,316 in 2016-17. However the not-for-profit providers dropped significantly more by comparison, falling to $7,916 in 2017-18 from $11,408 in 2016-17.

The trend of for-profit providers outperforming not-for-profit providers has been evident for quite some time, as shown in

Chart 6.17.

However, this variable needs to be considered carefully because providers in the not-for-profit and government sectors often have different business motives, business models and funding sources and often operate in areas affected by the impacts of remoteness and facility size.

ACFA has previously noted commentary from the not-for-profit sector that the generally lower operating financial results may be consistent with their community or religious missions. They may fulfil their charters in a range of ways that might be difficult or inappropriate in a more commercial environment where investors are seeking returns.

Specifically, not-for-profit providers may choose to invest in or expend funds on amenities and services for which they are not funded through regulated sources. Not-for-profit providers may be assisted to do this through a range of funding pathways and tax benefits, including payroll tax

relief, income tax exemptions and tax deductible donations. However, where these costs are not covered by such incremental revenue, the comparatively lower EBITDA for many not-for-profit providers may be the product of the delivery of additional "community benefits" or "social impacts" or returns which are not recognised in the annual financial accounts.

Chart 6.17: Residential care provider operating performance ratios, by ownership type, 2015-16 to 2017-18

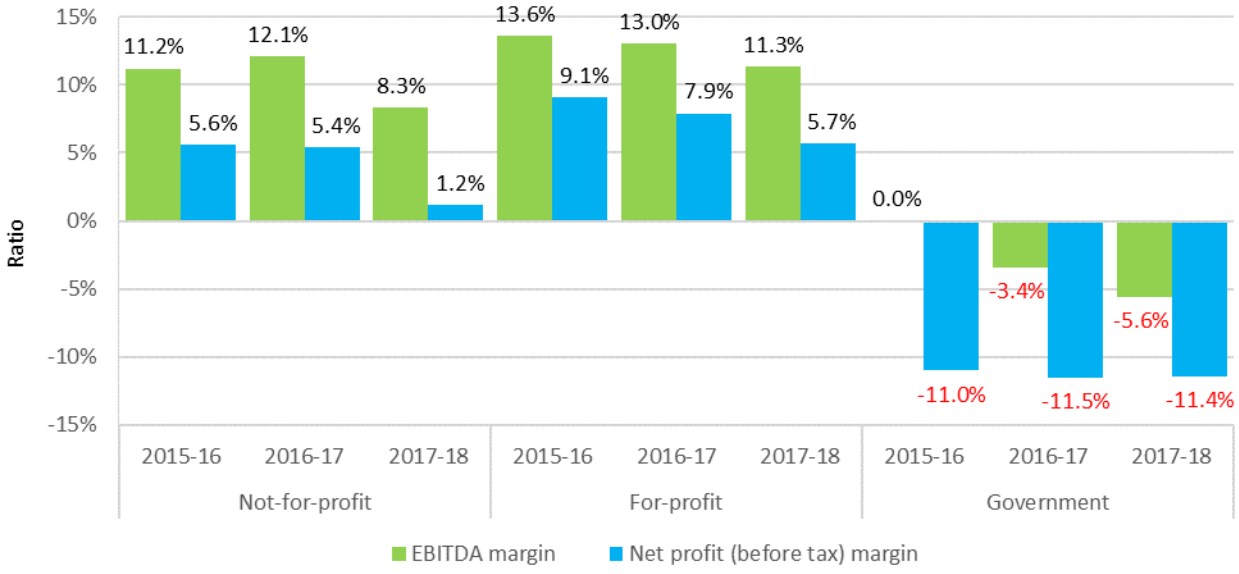


Chart 6.18 shows the average EBITDA for the four years to 2017-18 by ownership type. While the not-for-profits had improved in each of the years previously they declined by almost 31 per cent in 2017-18.

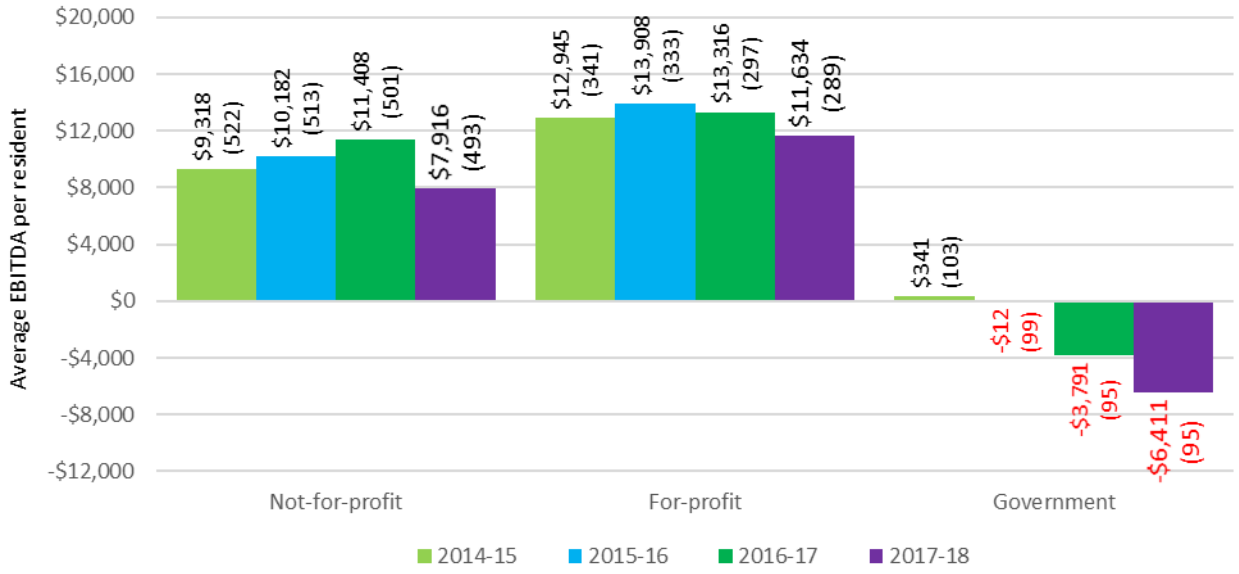
Chart 6.18: EBITDA per resident, by ownership type, 2014-15 to 2017-18



As has been the case in recent years, a significantly higher proportion (33 per cent) of for-profit providers were present in the top quartile of EBITDA performance per resident (Chart 6.19 and

Chart 6.20), compared with not-for-profit (22 per cent) and government (16 per cent) providers. The 94 for-profit providers who are present in the top quartile recorded an average EBITDA per resident per annum of $23,286 compared with the 110 not-for-profit providers in the top quartile who recorded $19,380.

As has been the case with all previous years, there is some representation of all ownership types in each quartile.

Chart 6.19: Residential care provider average EBITDA per resident per annum, by quartile (number of providers in parentheses) – by ownership type, 2017-18

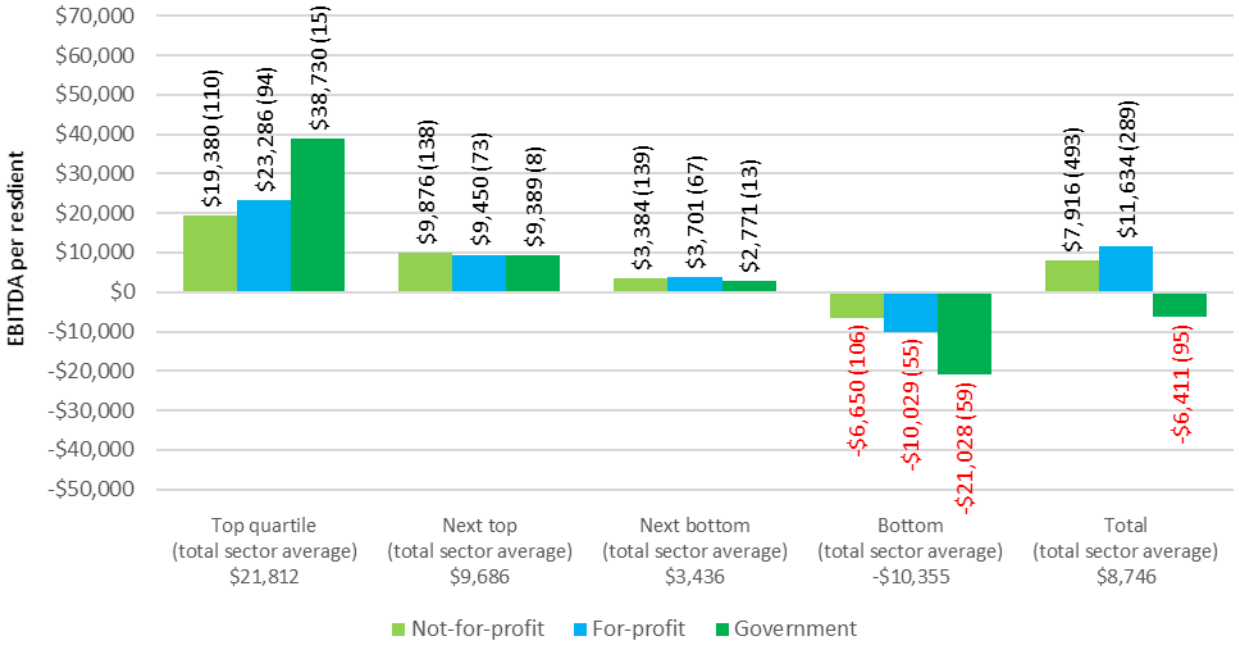


Chart 6.20: Residential care provider distribution between quartile of average EBITDA per resident per annum – by provider ownership type, 2017-18

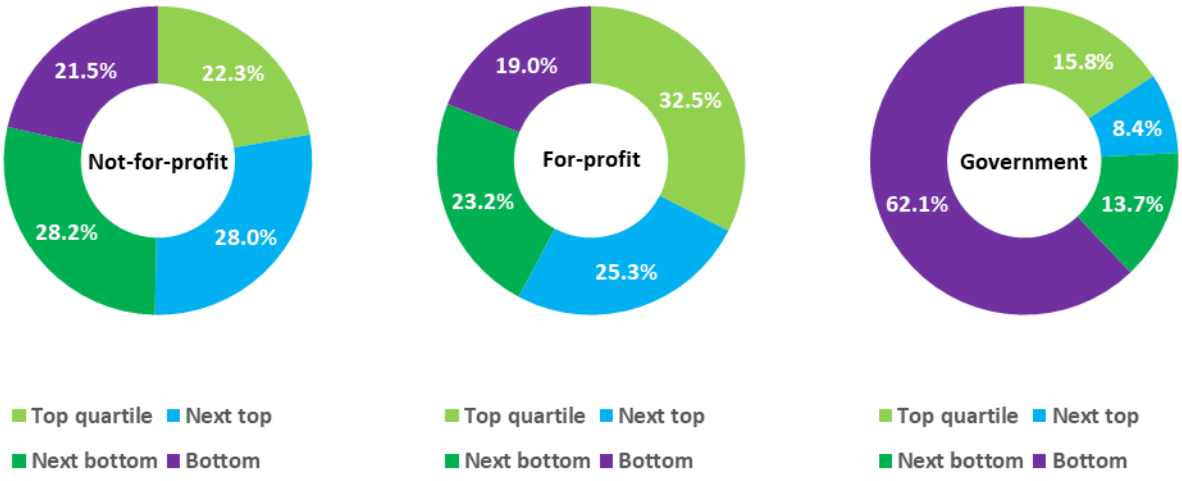
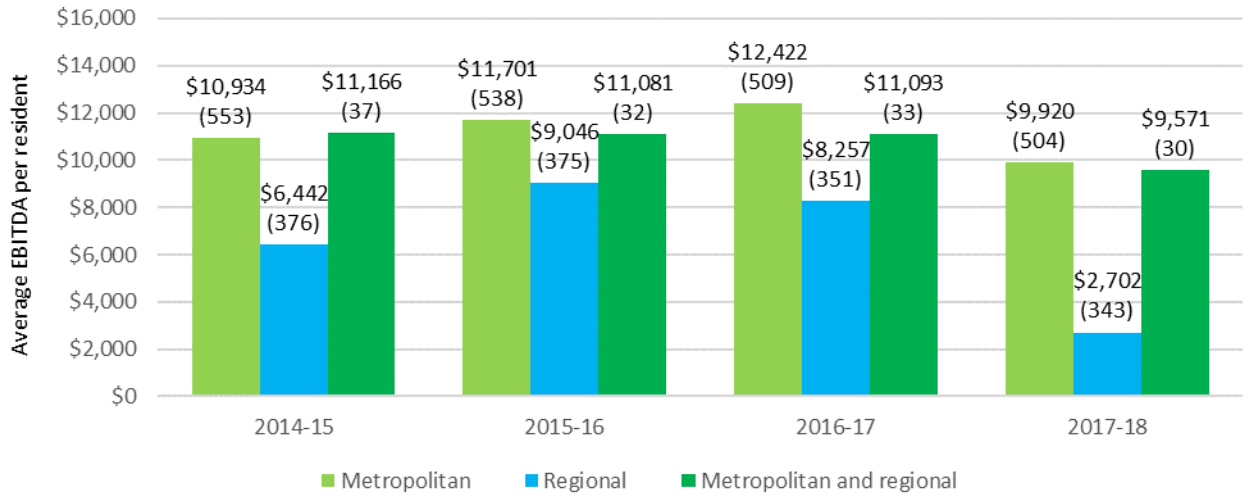


By provider location

As shown in Chart 6.21, the EBITDA per resident per annum for metropolitan providers improved over the three years to 2016-17 before declining 20 per cent to $9,920 in 2017-18. For regional providers, after relatively strong results in 2015-16 ($9,046 per resident per annum) and in 2016-17 ($8,257) they recorded a very significant decline to $2,702 in 2017-18.

Chart 6.21: Residential care provider EBITDA per resident, by provider location, 2014-15 to 2017-18



As with previous years, a higher proportion (29 per cent) of metropolitan providers are present in the top quartile of ranking by EBITDA per resident compared with regional providers (19 per cent), as shown in Chart 6.22 and Chart 6.23. Conversely, a significantly higher proportion of regional providers (33 per cent) were represented in the bottom quartile.

As was the case with analysis based on ownership type, providers from all locations are present in each quartile.

Chart 6.22: Residential care provider average EBITDA per resident per annum, by quartile (number of providers in parentheses) – by location, 2017-18

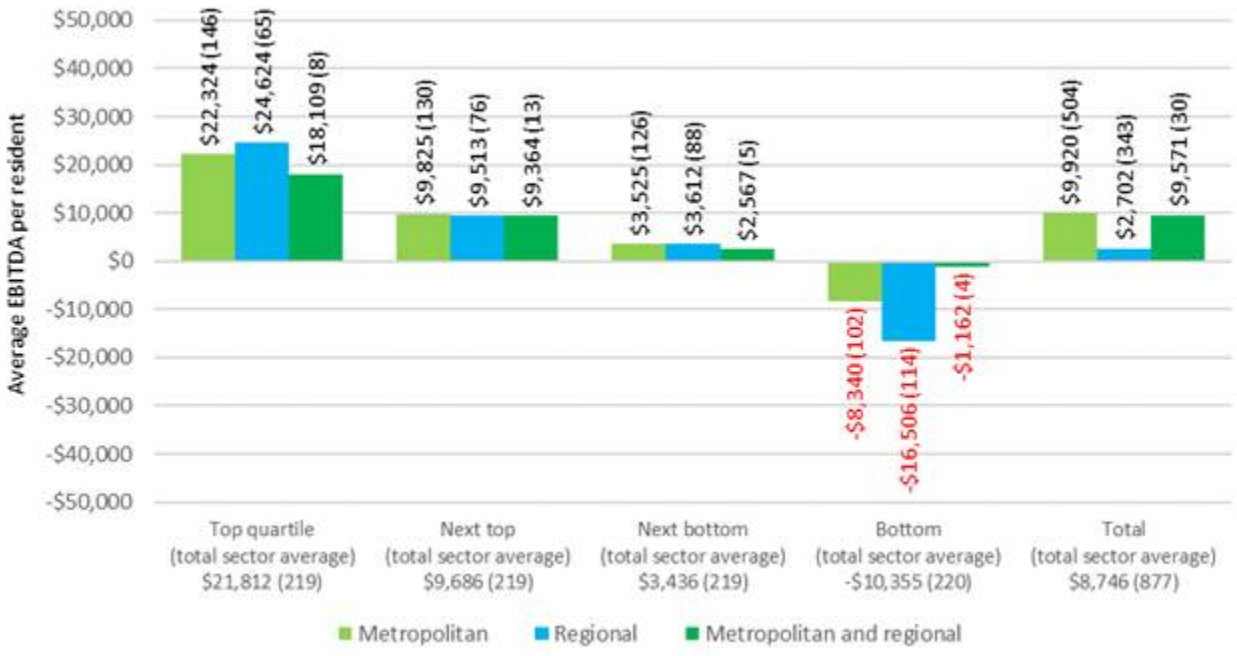


Chart 6.23: Residential care provider distribution between quartile of average EBITDA per resident per annum – by location, 2017-18

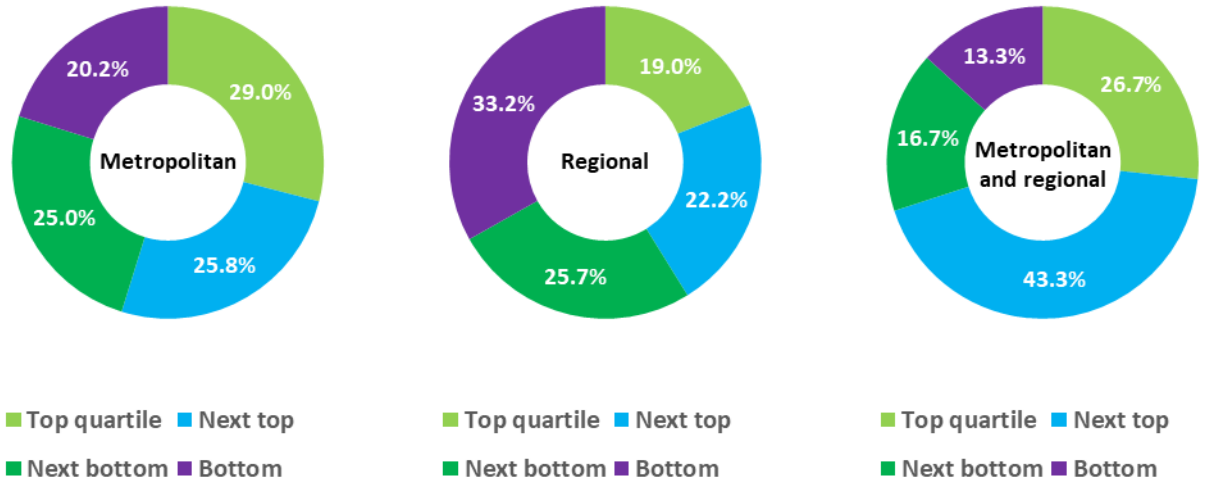
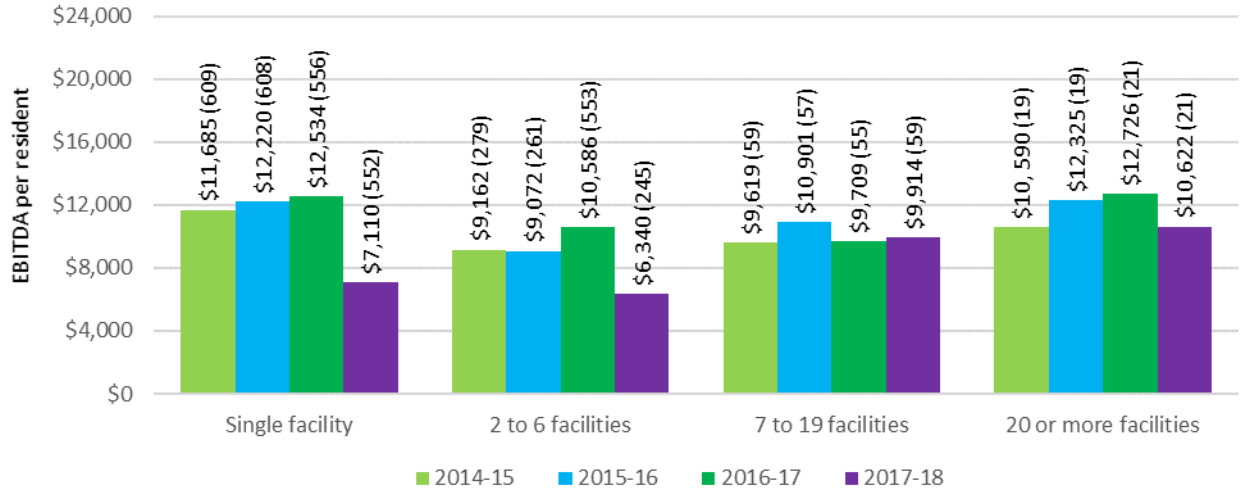


By provider scale

In 2017-18, larger providers (7 and more facilities) clearly outperformed their smaller counterparts (Chart 6.24). Single facility providers recorded average EBITDA per resident per annum of $7,110, after generating higher results of more than $11,000 for the three years previously. The case is similar for providers of 2 to 6 facilities who recorded $6,340 in 2017-18 after deriving more than $9,000 for three years. In contrast, providers operating 7 to 19 facilities improved their performance from $9,709 in 2016-17 to $9,914 in 2017-18. The largest providers, those operating 20 or more

facilities once again recorded the strongest results with average EBITDA of $10,622, despite experiencing a decline of 17 per cent from 2016-17.

Chart 6.24: Residential care provider EBITDA per resident per day, by provider scale, 2014-15 to 2017-18



In 2017-18, 17 of the 21 providers who own more than 20 facilities are in the top two quartiles of ranking by EBITDA per resident per annum (Chart 6.25 and Chart 6.26). This high proportion of the larger scale providers being in the top quartiles has also been the case in previous years. This suggests that the largest providers are benefitting from economies of scale.

As was the case in previous years, providers from all the scale classifications are represented in four quartiles.

Chart 6.25: Residential care provider average EBITDA per resident per annum, by quartile (number of providers in parentheses), by provider scale, 2017-18

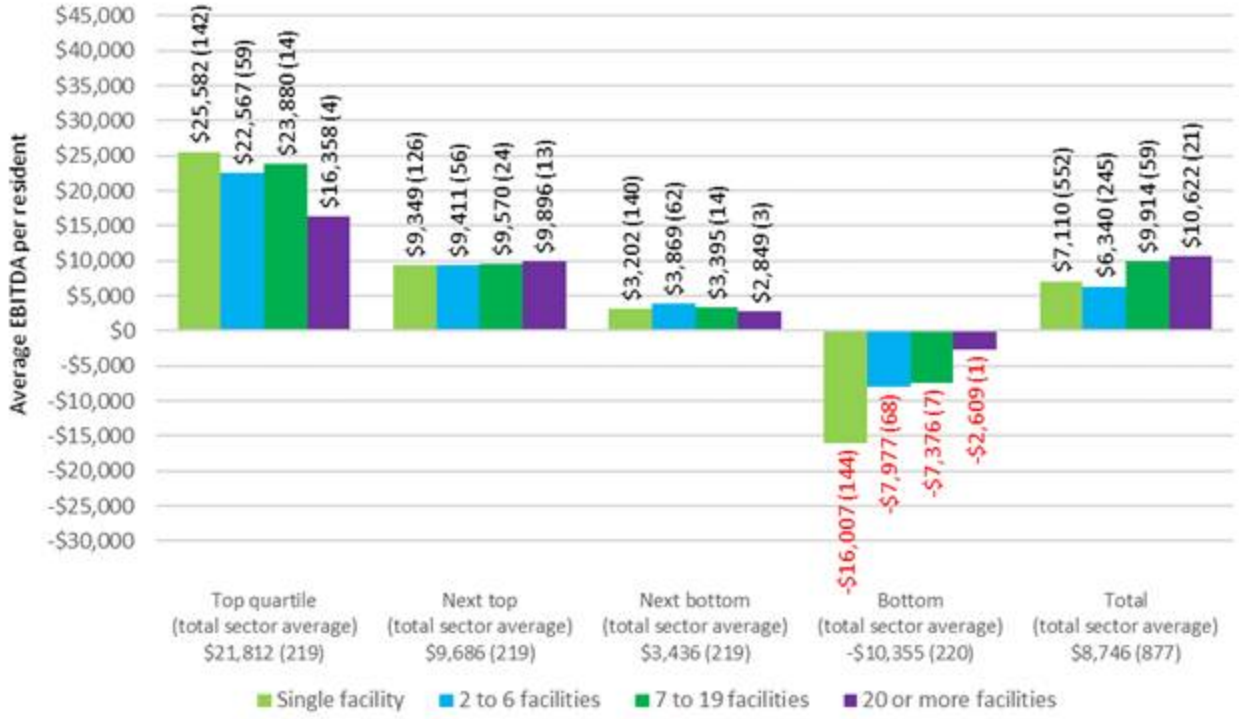


Chart 6.26: Residential care provider distribution between quartile of average EBITDA per resident per annum – by provider scale, 2017-18

6.3.4 Feedback from consultations and developments in 2018-19

2017-18 was a challenging year for the residential aged care sector. After five years of improving financial performance, there was a significant decline in 2017-18.

All providers consulted said that 2017-18 was a difficult year with growth in revenue constrained by the Government's decision to change the scoring arrangements for ACFI and pause indexation, while costs continued to grow, particularly wage costs. As outlined previously, Commonwealth care

subsidies and supplements on behalf of residents represent around 60 per cent of the revenue of providers while employee expenses contribute around 70 percent of their total expenses. The changes to ACFI arrangements significantly contributed to providers' revenue increasing by just 1.7 per cent in 2017-18, while the growth in providers' expenses was over 5 per cent. Problems with the ACFI funding tool for care payments were regularly raised in ACFA's consultations with providers.

All providers said that they took action to constrain costs in response to the compression in margins. With staff costs representing a very large proportion of expenditure, many providers reviewed staff rosters in an effort to reduce staff hours. Some indicated that they identified savings by decentralising their roster arrangements and improving flexibility and some initiated redundancies in response to these reviews. Many providers said they had targeted savings in ancillary and administrative staff rather than care staff.

Many providers referred to the tension they faced in constraining staff costs while the pressure from increased quality audit activity, along with community expectations, was to increase staff hours and skill levels.

As to wages, most providers said their Enterprise Bargaining Agreements (EBA) provided for wage increases of between two to three percent. A few providers consulted said their EBA had expired and they had advised staff that because of financial pressures there would be a pause in wage increases. They noted the difficulties this posed in their quest to attract and retain staff.

ACFA's consultations with providers suggest that the margin pressure felt in 2017-18 has continued in 2018-19. The StewartBrown Aged Care Financial Performance Survey for the six months to December 2018 indicates a further deterioration in the financial performance of the sector. The StewartBrown survey is not directly comparable to the data in this report, but it does give a guide as to developments in the sector. While ACFI indexation has been restored in 2018-19 (1.4 per cent for activities of daily living and behaviour domains and 0.7 per cent in the complex health care domain), providers say that this is still well below the rate of increase in their costs. StewartBrown observed in their survey for the six months ended December 2018 that the gap between direct care costs and ACFI subsidy revenue continued to grow, meaning that ACFI is not keeping pace with associated care costs.

Many providers consulted indicated that they were also experiencing lower occupancy rates and this was adding to pressure on their margins. A number noted that their occupancy rates were also becoming more volatile which added additional challenges in managing their business. All providers consulted welcomed the Government's announcement on 10 February 2019 of a $320 million one-off increase in ACFI funding in 2018-19. While some noted the increase in the aged care subsidy was limited to 2018-19 and did not address the longer-term pressures they were facing, others interpreted the Government's announcement as recognition of the financial pressures facing providers.

In ACFA's Update on funding and financing issues in the residential aged care sector which was provided to the Government in September 2018, it was noted that there were a range of practices among aged care providers in the provision of additional services (that is services over and above those required to be provided under the *Aged Care Act 1997*) for a fee. The application of additional services is an option for providers to boost their revenue and profits. As noted in the Update, many providers indicated that while they had not offered additional services, given financial pressures this was an avenue they were considering, although the scope to introduce additional services was significantly influenced by the socio-economic area in which a facility was located. However many providers also reported that a major constraint they faced was the imprecision around which additional services were allowed. More recent consultations with

providers indicate that the reservations over what additional services are permitted are continuing to constrain some providers to introduce additional services. A number of not-for-profit providers are also concerned about discriminating between the level of service offered to residents while others indicated that they provided the additional services to all residents but only charged the fee to those residents who could afford to pay.

Consistent with what was noted in ACFA's update, recent consultations suggest that there appears to be a growing number of smaller providers, particularly in regional and remote areas, facing significant financial stress. Some providers, mainly not-for-profit providers, said they were receiving an increasing number of approaches from smaller providers who were facing difficulties and were seeking to sell their operations. The providers receiving the approaches said they had declined most of the offers because of difficulties in turning around facilities that were facing not only financial but in many cases quality problems. In addition many of the facilities, but not all of them, consisted of older residential stock.

While many of the aged care providers in regional and remote areas will benefit from the 30 per cent increase in the viability supplement that was announced in the 2018 MYEFO, it appears from recent consultations that the number of providers facing financial pressure and seeking to exit the sector remains significant. There is also a view among some providers that this number is likely to increase as scale is increasingly important, and many of the smaller providers will likely face difficulties in implementing the strengthening in the prudential framework for the residential sector which was announced by the Government in the 2018-19 Budget. The Department of Health is consulting on the detail of the strengthened framework.

Overall there are a number of aspects of the aged care residential sector that warrant close monitoring given the range of financial pressures which impacted on the sector in 2017-18 and are continuing in 2018-19.

7 Residential care: capital investment

This chapter discusses:

- The sources of capital financing for the residential care sector, including the role of Refundable Accommodation Deposits[30];
- key balance sheet metrics for residential care providers for 2017-18; and
- current building and investment trends in the residential care sector.

On 30 June 2018, compared with 30 June 2017, the residential care sector as a whole had:

- Total assets of $48.4 billion, up from $45.0 billion, which includes:
  - $14.1 billion of current assets, an increase of $1.0 billion; and
  - $34.3 billion of non-current assets.
- Total liabilities of $36.6 billion, up from $33.7 billion. This includes $27.5 billion of accommodation deposits held by the sector, up from $24.8 billion;
- Net assets of $11.8 billion, an increase of $500 million;
- average return on equity was 13.4 per cent, down from 18.3 per cent; and
- average return on assets was 3.3 per cent, down from 4.6 per cent.

ACFA Notes:

- $4.9 billion of building works were either completed or in-progress as at 30 June 2018 compared with $4.7 billion at 30 June 2017; and
- planned building activity dropped significantly for the second year in a row.

7.1 Capital financing

Capital for residential care providers is comprised of:

- equity, including retained earnings;
- loans from financial or other institutions;
- interest free loans from residents in the form of lump sum Refundable Accommodation Deposits (bonds pre 1 July 2014);

[30] Includes bonds prior to 1 July 2014

- capital investment support from Government by way of capital grants for eligible projects; and
- capital endowments.

7.1.1 Residents as a source capital

Lump sum accommodation payments by residents is a significant source of funding for capital investment in residential care. Refundable Accommodation Deposits (RAD) act as an interest free loan to providers, paid by residents. At 30 June 2018, a total of $27.5 billion of accommodation deposits were held by providers. The investment of accommodation deposits held by providers is a source of interest income that is included in the other income reported by providers in their operating statement.

As an alternative to RADs, residents can choose to a pay a Daily Accommodation Payment (DAP) or a combination of a RAD and DAP.

Partially supported residents contribute towards accommodation as a Refundable Accommodation Contribution (RAC) or Daily Accommodation Contribution (DAC). In this report, references to RADs also include RACs and references to DAPs include DACs.

7.1.2 Commonwealth as a source of capital

The Australian Government makes capital grants available through the ACAR (via the Rural, Regional and Other Special Needs Building Fund) for services that target communities and geographic areas where there may be insufficient access to capital from other sources.

The 2018-19 ACAR allocated $60 million in capital grants under the Fund to successful approved providers, following a competitive application process. In addition to the ACAR, through a separate announcement in the 2018-19 Budget, one-off funding of $40 million was allocated for infrastructure investment through The Aged Care Regional, Rural and Remote Infrastructure Grant.

Additionally, the higher accommodation supplement, payable where a facility has been built or significantly refurbished since 20 April 2012, is encouraging investment in residential care. Although not strictly a form of capital for providers, it provides an increased rate of return on the capital invested.

The higher accommodation supplement is $57.14 per eligible resident per day compared with $37.24 for the standard accommodation supplement (20 March 2019 rates). As at 31 December 2018, 1,395 facilities (986 at 31 December 2017) or 48 per cent of all facilities qualified for the higher accommodation supplement. Of these, 1,214 were significantly refurbished and 181 were newly built facilities.

7.1.3 Other sources of capital finance

Residential care providers also obtain capital finance from investors, loans from financial and other institutions and donations/endowments. ACFA does not have data across the sector on debt and equity financing, other than that reported in the aggregated balance sheets, which are discussed in this chapter.

7.2 Accommodation deposits

At 30 June 2018, refundable accommodation deposits (including bonds) of residential care providers totalled $27.5 billion and comprised 56 per cent of total assets of $48.4 billion and 75 per cent of liabilities ($36.6 billion).

At 30 June 2018, there were 90,899 refundable accommodation deposits held by providers (86,853 in 2016-17), with an average value of $303,000 ($283,000 in 2016-17). As shown in Table 7.1 the average value of accommodation deposits has steadily increased over the last five years.

Table 7.1: Average value of refundable accommodation deposits held by providers, 2013-14 to 2017-18

2013-14	2014-15	2015-16	2016-17	2017-18
$229,000	$248,000	$267,000	$283,000	$303,000

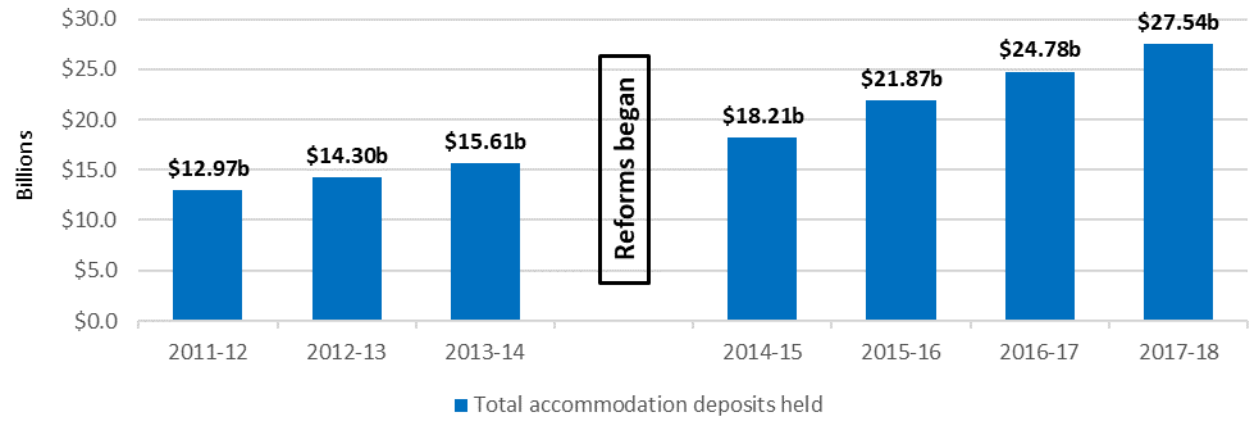
Residents who are assessed as having low financial capacity are eligible for Commonwealth assistance with their accommodation costs as either a partially supported or fully supported resident. Partially supported residents may be asked to contribute towards the cost of accommodation, depending on their means. They can choose to pay their accommodation contribution by a lump sum refundable accommodation contribution (RAC), a daily accommodation contribution (DAC), or a combination of the two. Fully supported residents cannot be asked to make a contribution and have their accommodation costs met in full by Government.

Residents who are not eligible for Commonwealth assistance with their accommodation costs pay the accommodation price they agree with their provider before they enter care and can choose (within 28 days of admission) to pay by a lump sum refundable accommodation deposit (RAD), a daily accommodation payment (DAP) or a combination of the two. The maximum permissible interest rate (MPIR) is used to maintain equivalence between daily payments and lump sums[31].

Error! Reference source not found. shows the total pool of accommodation deposits held by providers since 2011-12

[31] The lump sum RAD amount, which is agreed between the provider and the resident, is multiplied by the MPIR and divided by 365 days to calculate the daily DAP. Conversely, a daily DAC amount, which is advised by the Department of Human Services, is divided by the MPIR and multiplied by 365 days to calculate the lump sum RAC. The MPIR is determined quarterly in accordance with Section 6 of the *Fees and Payments Principles 2014 (No. 2).* Current and historic rates of the MPIR are available on the Department of Health website.

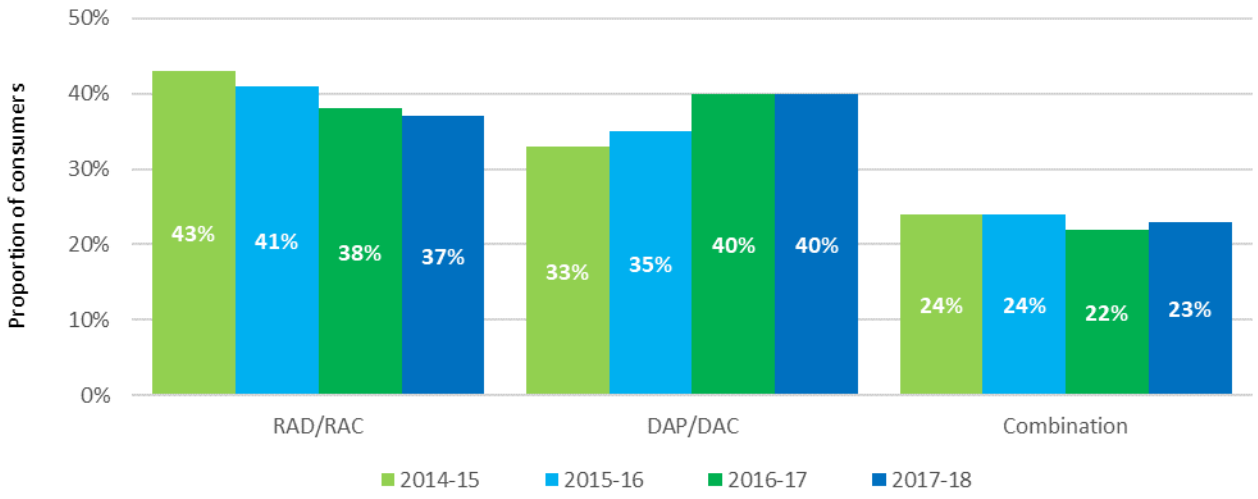
Chart 7.1: Total pool of accommodation deposits held, 2011-12 to 2017-18 ($b)



While the pool of accommodation deposits continues to grow, there is a trend emerging of a move away from RADs in favour of DAPs. Chart 7.2 shows that in 2017-18, as was the case in 2016–17, DAP/DACs were slightly more popular than lump sum RAD/RACs. The proportion of people choosing RAD/RACs has dropped every year, albeit slightly, since 2014-15. The proportion of residents choosing DAP/DACs has gradually increased over the four years from 33 per cent in 2014–15 to 40 per cent in 2017-18.

While the overall shift away from RADs is modest, feedback from consultations suggest that this is a concern for some providers, (including the cash flow implications of a shift away from RADS), and a few providers said that it has resulted in them delaying some investment plans. Other providers noted that they welcomed a move towards DAPs. A sustained shift away from RADs to DAPs would significantly impact on the business model of some providers who have relied significantly on continuing growth in RADs. This is an area that requires close monitoring, including in relation to the potential impact of the recently extended scope of the Commonwealth's Pension Loan Scheme, which could further add to the increase in daily payments over lump sum deposits.

Chart 7.2: Resident method of accommodation payment, 2014-15 to 2017-18



ACFA has previously noted there are several factors that a consumer might take into consideration when determining how to pay the accommodation payment, including in its report *Understanding how consumers plan and finance aged care*[32]. These include; the rate of the MPIR, (if interest rates fall, equivalent daily payments will fall and vice versa), expected length of stay (if shorter then more likely to pay by daily payment), personal financial circumstances and the length of time it takes to sell the family home.

Additionally, feedback from recent consultations suggest that the movement in house prices and conditions in the housing market are contributing factors in the apparent shift towards daily payments.

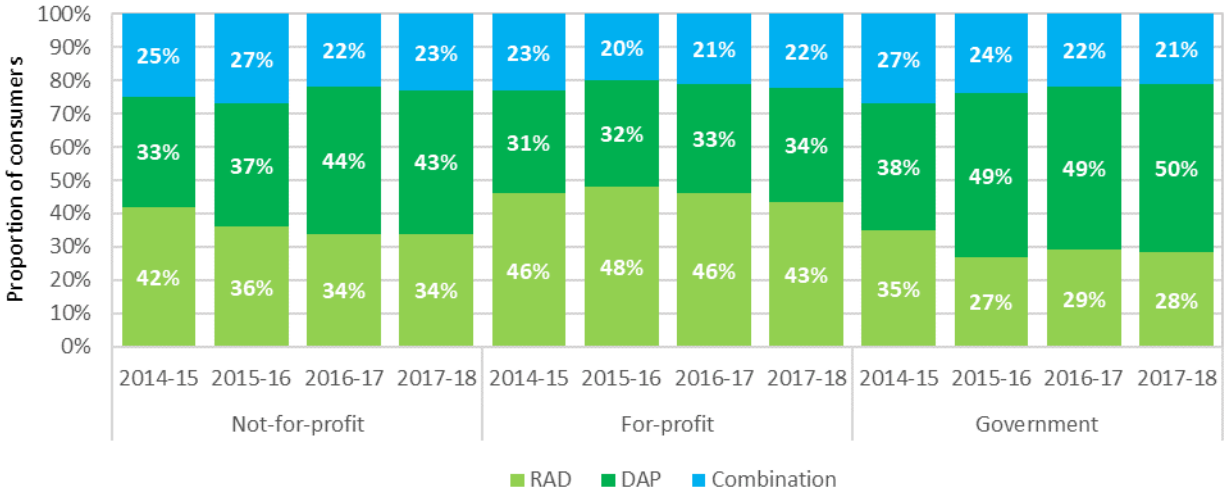
In terms of the MPIR influencing decisions on accommodation payments in aged care, there is the potential for movement from lump sums to daily payments if the equivalence rate is set too low. If all other things are equal, and consumers can achieve a better return, they may be inclined to invest the lump sum and pay the daily payment out of investment earnings. On the other hand, some residents see daily payments as interest charged on the outstanding lump sum. From this perspective, residents see the MPIR as a punitively high rate of interest.

For a full discussion on the MPIR and its impact on residents and providers see page 46 of ACFA's *Report to inform the 2016-17 review of amendments to the Aged Care Act 1997*. In that report ACFA advised that on balance the MPIR is an appropriate rate to determine equivalence between refundable deposits and daily payments.

Part of the reduction in the proportion of residents paying by lump sum could also be transitional and may reflect a greater understanding by consumers of their ability to choose how to pay for their accommodation as was intended by the reforms implemented in 2014.

The decrease in the proportion of RAD/RACs has been most noticeable in for-profit providers, who dropped from 46 per cent in 2016-17 to 43 per cent in 2017-18. This followed a drop from 48 per cent the year before (Chart 7.3). For the not-for-profit providers the proportion of residents choosing RAD/RACs was stable in 2017-18 at 34 per cent.

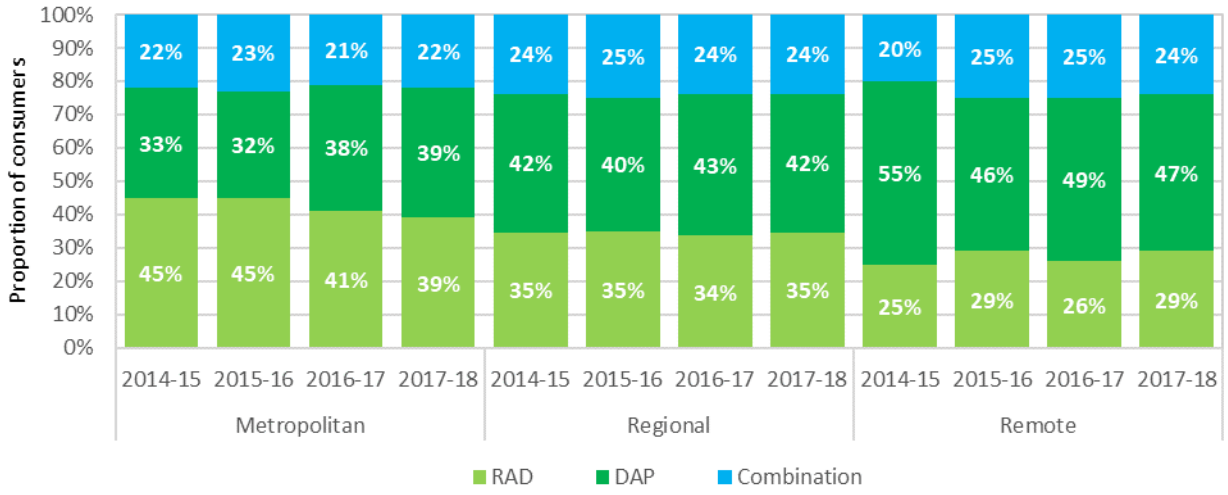
Chart 7.3: Resident choice of payment method, by ownership, 2014-15 to 2017-18



[32] https://agedcare.health.gov.au/reform/acfas-report-on-understanding-how-consumers-plan-and-finance-aged-care

When analysed in terms of location, lump sum payments continued to drop in metropolitan areas to 39 per cent in 2017-18 after dropping from 45 per cent to 41 per cent the year before (Chart 7.4). In contrast, in remote areas the proportion of residents choosing RAD/RACs increased to 29 per cent in 2017-18, up from 26 per cent.

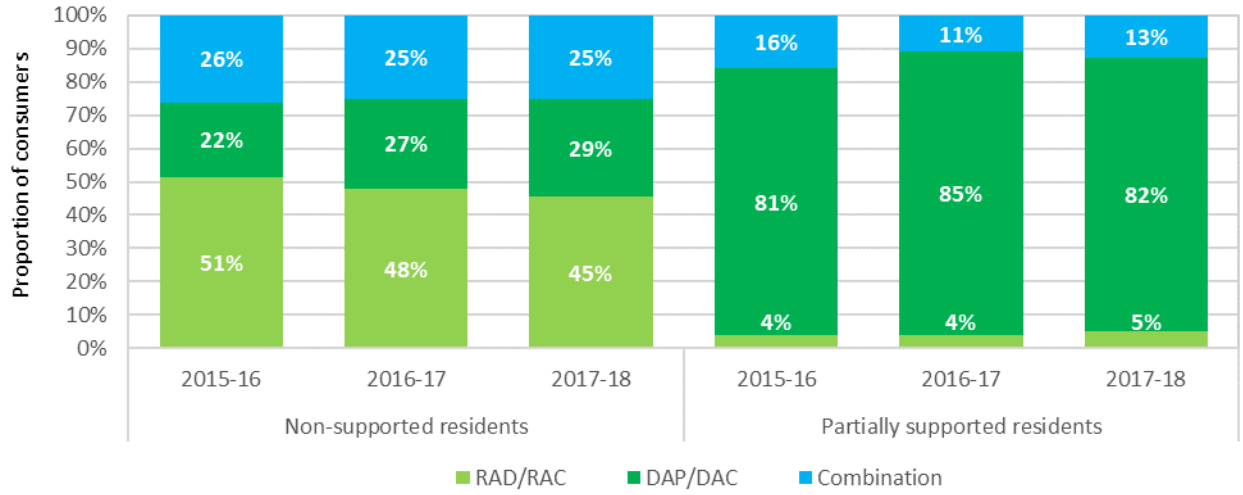
Chart 7.4: Resident choice of payment method, by location, 2014-15 to 2017-18



As noted previously in consultations with providers, a number indicated that a decline in the housing market is contributing to a shift away from RADs to DAPs, particularly where the individual entering residential care is very frail and the expected stay is short. The feedback is that many families are not prepared to sell a house when prices are falling.

In the last two annual reports ACFA reported the very significant difference in choice of payment between non-supported residents and partially supported residents. This trend continued in 2017-18, as shown in Chart 7.5. Forty-five per cent of non-supported residents chose to pay their accommodation payment by a RAD whereas only 5 per cent of partially supported residents chose this option, although the proportion of non-supported residents paying a RAD has also been decreasing, down from 48 per cent in 2016-17 and 51 per cent in 2015-16. The proportion of residents paying by lump sum may include residents who had commenced to pay full or partial daily payments, and then paid a lump sum during the year. Similarly, residents paying a daily payment may subsequently pay a lump sum (e.g. once their house is sold).

Chart 7.5: Resident choice of payment method, by partially supported and non-supported residents, 2015-16 to 2017-18



7.2.1 Accommodation deposit prices

On 1 July 2014, new accommodation pricing arrangements came into effect. The changes were:

- Lump sum accommodation payments became known as Refundable Accommodation Deposits (RADs) instead of Accommodation Bonds;
- providers were able to charge a RAD to any eligible resident whereas they had previously only been able to charge an Accommodation Bond for low care residents, or a high care resident in Extra Service facilities.
- providers were no longer able to deduct a retention amount from the RAD;
- residents became able to, at their discretion, choose to pay a RAD, a Daily Accommodation payment (DAP) or any combination of RAD and DAP; and
- providers were required to publish the maximum price for their rooms, or part of a room, in their aged care facilities. Residents may negotiate a lower price (known as the agreed price) but cannot be asked to pay more than the published price.

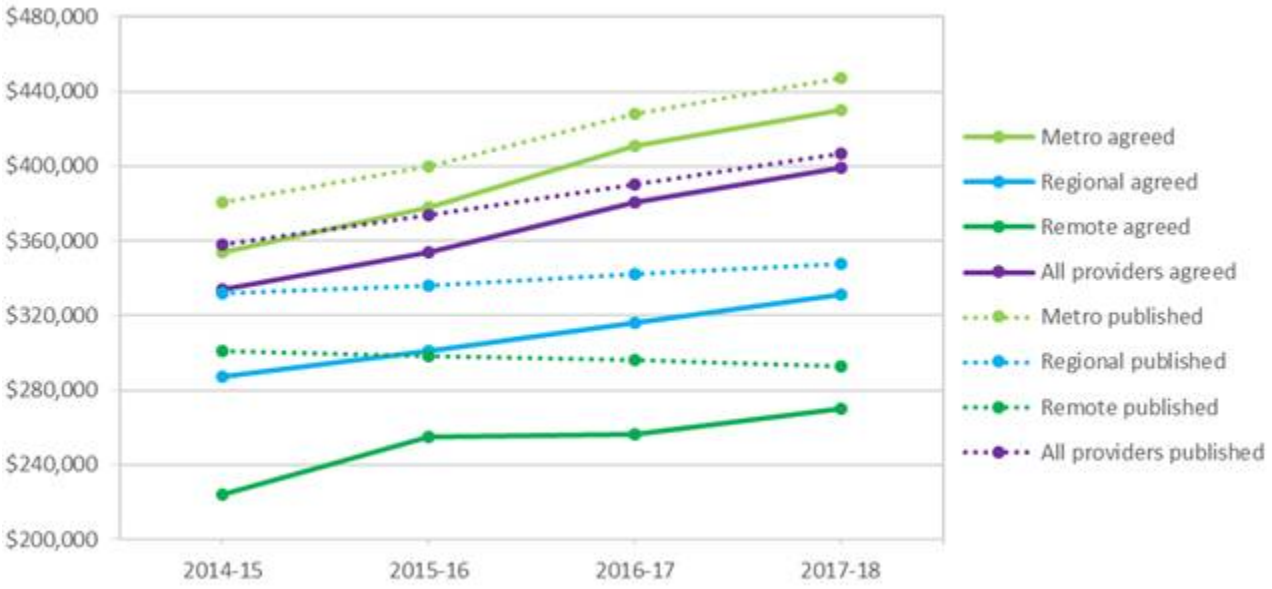
Charts 7.6 and 7.7 show the average published and agreed accommodation prices since 1 July 2014, presented by provider ownership type and location. This data includes RADs, DAPs and combination payments and covers the price of a residential care room, not the method of payment.

In terms of provider ownership (Chart 7.6), the for-profit providers have average published prices around $38,000 higher than the not-for-profit providers. Since 2014-15 the average published price by for-profit providers has increased by around $30,000 each year whereas the average published price for not-for-profit providers only increased by around $8,500 each year. Similarly, agreed prices for the for-profit providers have continued to increase year on year faster than the average agreed price for the not-for-profits. The average agreed price is less than the average published price residents may negotiate a lower price.

Chart 7.6: Average agreed and published accommodation prices (lump sum equivalent), by ownership, 2014-15 to 2017-18

In terms of location (Chart 7.7), as has been the case in previous years, the average published price in metropolitan areas was significantly higher ($447,000) than in regional areas ($348,000) and remote areas ($293,000). This is to be expected given the difference in house prices across these areas. It is a similar case with agreed prices with the metropolitan areas recording an average agreed price almost $100,000 higher than regional areas and $160,000 higher than remote areas.

Chart 7.7: Average agreed and published accommodation prices (lump sum equivalent), by location, 2014-15 to 2017-18



7.3 Financing status - balance sheet

This section focuses on the balance sheet of the residential care sector, showing the liabilities, assets and net assets.

In 2016-17 the Department of Health began collecting financial data from providers via the Aged Care Financial Report (ACFR). This allows greater disaggregation of the total assets and liabilities compared with earlier years. Some analysis contained in this section therefore is restricted to 2016-17 and 2017-18 only whereas other longer term trends are presented at the higher aggregate level.

Table 7.2: Balance sheet of residential care providers, 2016-17 and 2017-18

Assets/Liabilities	2016-17 ($m)	2017-18 ($m)	Change ($m)	Change (%)
Current assets	$13,138	$14,101	$963	7.33%
Fixed assets	$22,963	$24,061	$1,098	4.78%
Other non-current assets	$8,916	$10,238	$1,322	14.83%
Total assets	**$45,017**	**$48,400**	**$3,383**	**7.52%**
Accommodation deposits	$24,710	$27,523	$2,813	11.39%
Other liabilities	$8,981	$9,050	$69	0.76%
Total liabilities	**$33,691**	**$36,573**	**$2,882**	**8.55%**
Net worth/equity	**$11,326**	**$11,827**	**$501**	**4.42%**

At 30 June 2018, the sector as a whole had total assets of $48.4 billion (an increase of $3.4 billion since 30 June 2017). Current assets increased by 7.3 per cent while accommodation deposits increased by 11.4 per cent.

Total liabilities were $36.6 billion (compared with $33.7 billion in 2016-17). This includes the $27.5 billion of accommodation deposits held by the sector). Since 2013-14, the growth in liabilities has exceeded the growth in assets. In 2017-18, liabilities grew by 8.6 per cent while the growth in total assets was 7.5 per cent. Liabilities as a proportion of total assets is a measure that indicates an organisation's leverage and shows the proportion of total assets financed through borrowings.

Overall, net worth/total equity in the sector was $11.8 billion in 2017-18, up from $11.3 billion in 2016-17.

As shown in

accommodation deposits as a proportion of total assets has been increasing gradually over the last five years from 46 per cent in 2013-14 to 57 per cent in 2017-18, increasing the rate of leveraging.

Other liabilities, which include secured bank and related party lenders, creditors and provisions, represent 19 per cent of total asset financing. This has been relatively stable over the last five years.

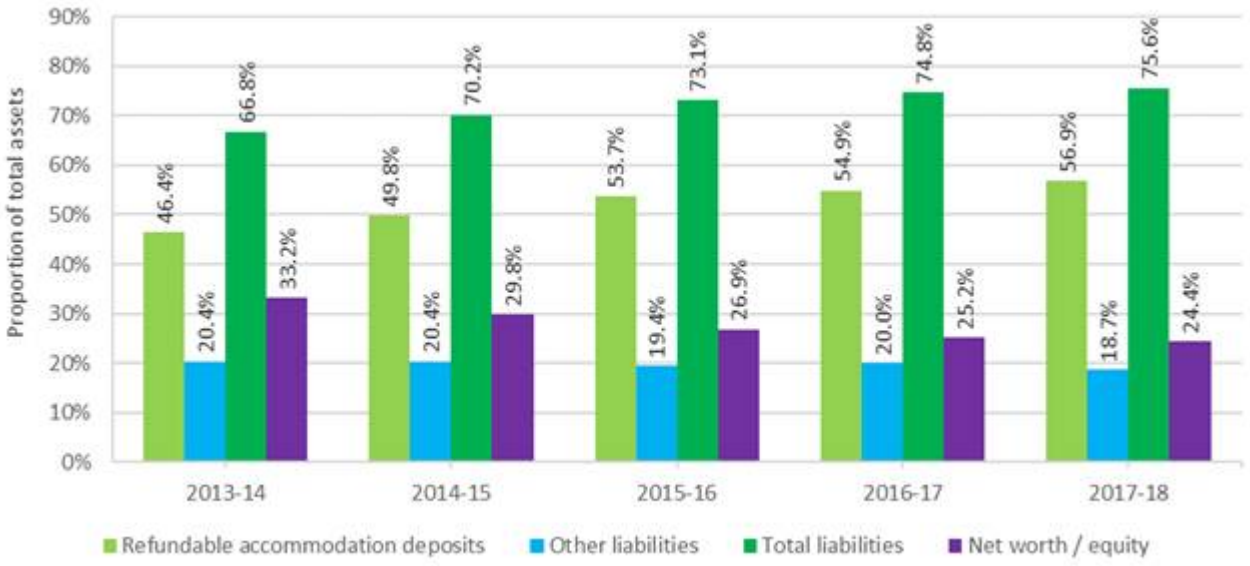
Net worth/total equity as a proportion of assets is a measure of the share of an organisation which is contributed by and held beneficially by the owners/shareholders. Despite the fact that the overall net worth/total equity has increased in 2017-18 ($11.8 billion compared with $11.3 billion in 2016-17), it has continued to fall as a proportion of total assets (Chart 7.8). Over the last five years there has been a gradual decline from 33 per cent in 2013-14 to 24 per cent in 2017-18 (

).

Table 7.3: Balance sheet of residential care providers 2013-14 to 2017-18 ($m)

Assets/liabilities	2013-14 ($m)	2014-15 ($m)	2015-16 ($m)	2016-17 ($m)	2017-18 ($m)
Financial assets	$3,558	$5,170	$5,611	$8,199	$9,047
Fixed assets	$10,238	$10,674	$11,455	$22,963	$24,061
Other assets	$19,866	$20,742	$23,629	$13,855	$15,292
Total assets	**$33,662**	**$36,586**	**$40,695**	**$45,017**	**$48,400**
Refundable accommodation deposits	$15,611	$18,213	$21,872	$24,710	$27,523
Other liabilities	$6,883	$7,472	$7,878	$8,981	$9,050
Total liabilities	**$22,494**	**$25,685**	**$29,750**	**$33,691**	**$36,573**
Net worth/equity	**$11,168**	**$10,901**	**$10,945**	**$11,326**	**$11,827**

Chart 7.8: Residential care provider liability types as a proportion of total assets, 2013-14 to 2017-18



7.3.1 Balance sheet analysis by ownership type

Assets and liabilities have been analysed by ownership type in order to identify differences between not-for-profit, for-profit and government providers. Table 7.4 shows liabilities and net worth/equity as a proportion of total assets by ownership type, while Chart 7.9 shows the same metric for the past three years.

At 30 June 2018, the not-for-profit providers (who hold 56 per cent of places in the sector) had total assets of $26.2 billion (54 per cent of total sector assets). This is the same as in 2016-17. The for-profit providers (who hold 41 per cent of places in the sector) held a slightly higher proportion of total assets of $20.5 billion which represents 42.5 per cent of the total sector assets.

As has been the case in previous years, the for-profit sector had the highest proportion of liabilities, with their total liabilities being 91 per cent (89 per cent in 2016-17) of their total assets, compared with the not-for-profit providers with 66 per cent (same as 2016-17). This significant difference is representative of the way the for-profits operate in terms of higher leveraging.

Net worth has decreased as a proportion of total assets for all provider types over the past three years. Government providers again had by far the highest net worth/equity as a proportion of assets with 57 per cent (61 per cent in 2016-17), followed by the not-for-profit providers (unchanged with 34 per cent). For-profit providers had the lowest net worth/equity as a proportion of assets with 9 per cent (11 per cent in 2016-17), which reflects both a higher proportion of accommodation deposits, greater use of debt to fund investment and greater distribution of profits. These different financing characteristics affect the ratios discussed in the rest of this section.

Table 7.4: Balance sheet, by ownership type, at 30 June 2018 ($m)

	Not-for-profit ($m)	For-profit ($m)	Government ($m)	Total sector ($m)
Total assets funded by:	**$26,168**	**$20,581**	**$1,652**	**$48,400**
Refundable accommodation deposits	$14,077	$12,837	$610	$27,523
Other liabilities	$3,137	$5,812	$101	$9,050
Total liabilities	**$17,214**	**$18,648**	**$711**	**$36,573**
Net worth/equity	**$8,954**	**$1,932**	**$940**	**$11,827**
As a % of total assets				
Refundable accommodation deposits	53.8%	62.4%	36.9%	56.9%
Other liabilities	12.0%	28.2%	6.1%	18.7%
Total liabilities	**66%**	**91%**	**43%**	**76%**
Net worth/equity	**34.2%**	**9.4%**	**56.9%**	**24.4%**

Chart 7.9: Liabilities and net worth as a proportion of total assets, by provider ownership type, 2015-16 to 2017-18

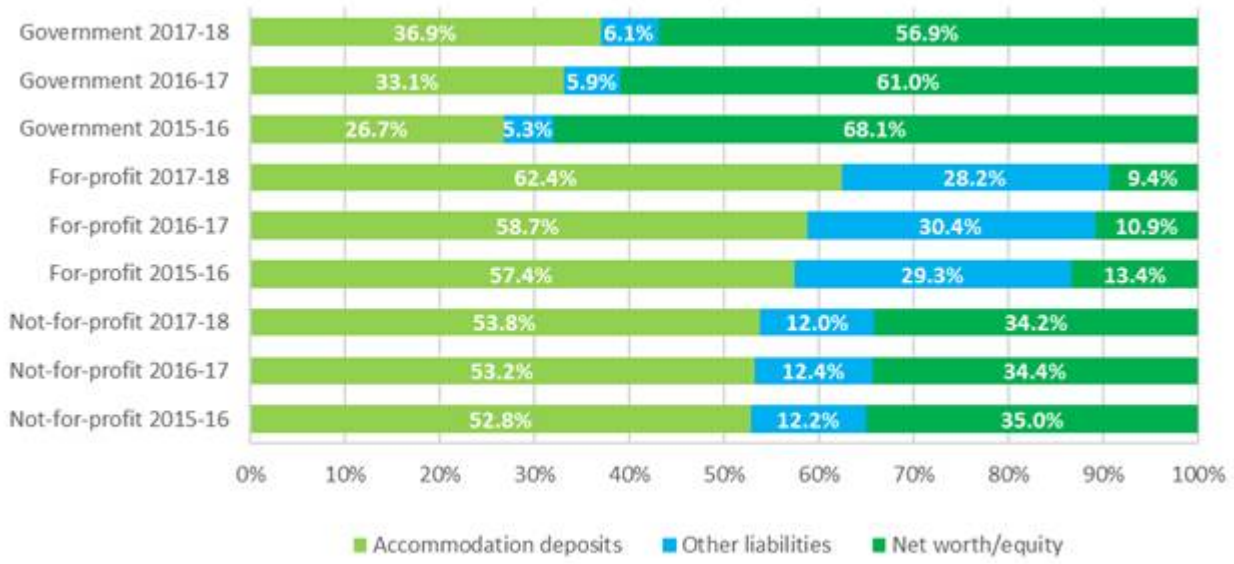


Table 7.5 presents the consolidated balance sheet at segment and organisation level for 2017-18, with the exception of government providers as the disaggregated data is not available to the same level.

Table 7.5: Disaggregated balance sheet by provider ownership type, at 30 June 2018 ($m)

	Not-for-profit ($m)	For-profit ($m)	Government ($m)	All providers ($m)
Assets				
Current assets				
Cash	$4,128	$1,832	$119	$6,078
Financial assets	$2,092	$162	$0	$2,253
Trade receivables	$330	$299	$0	$629
RADs & RACs receivable	$688	$416	$0	$1,104
Related party loans	$236	$2,455	$0	$2,691
Work in progress	$146	$2	$0	$148
Other current assets	$490	$266	$441	$1,197
Total currents	**$8,110**	**$5,431**	**$560**	**$14,101**
Non-current assets				
Financial assets	$503	$212	$0	$715
Related party loans	$166	$1,885	$0	$2,051
Work in progress	$909	$463	$0	$1,372
Intangibles - bed licences	$971	$2,025	$0	$2,996
Intangibles - other	$281	$2,056	$0	$2,337

Fixed assets	$15,033	$8,028	$1,000	$24,061
Other non-current assets	$195	$480	$92	$767
Total non-current assets	**$18,058**	**$15,149**	**$1,092**	**$34,300**
Total assets	**$26,168**	**$20,581**	**$1,652**	**$48,400**
Liabilities				
Current liabilities				
Accommodation deposits (incl. bonds)	$14,077	$12,837	$610	$27,523
Bank borrowings	$194	$319	$0	$514
Related party loans	$95	$1,193	$0	$1,288
Employee provisions	$784	$422	$0	$1,206
Other current liabilities	$1,275	$1,327	$56	$2,658
Total current liabilities	**$16,425**	**$16,098**	**$666**	**$33,189**
Non-current liabilities				
Bank borrowings	$409	$1,306	$0	$1,715
Related party loans	$107	$747	$0	$854
Employee provisions	$129	$89	$0	$217
Other non-current liabilities	$144	$408	$46	$599
Total non-current liabilities	**$789**	**$2,550**	**$46**	**$3,385**
Total liabilities	**$17,214**	**$18,648**	**$712**	**$36,574**
Net assets	**$8,954**	**$1,932**	**$941**	**$11,827**

As shown in Table 7.5, fixed assets – predominantly residential aged care facilities are the single largest asset category held by providers ($24 billion or 48 per cent of total assets). It is also the largest asset category based on ownership type, although for not-for-profit providers, fixed assets represent 57 per cent of total assets whereas for the for-profit providers it represents 39 per cent. The significant difference is likely explained in part by providers in the for-profit sector being more likely to rent the facilities in which they provide residential services, often under arrangements where the facilities are rented from related party entities.

Cash ($6.1 billion) and financial assets ($2.3 billion current and $0.7 billion non-current) represent $9.0 billion (18.7 per cent) of total assets, and $8.3 billion (59 per cent) of current assets. Not-for-profit providers hold 77 per cent, or $6.2 billion of current assets in cash and financial assets, while for-profit providers hold 37 per cent, or $2.0 billion. For-profit providers are more active in placing their funds in other categories of assets, including related parties entities.

Intangible assets make up 11 per cent, or $5.3 billion of total sector assets. Of the $5.3 billion, bed licences make up 56 per cent, or $3.0 billion, and other intangibles of $2.1 billion, consisting mostly of goodwill held by the for-profit sector, makes up the remainder. For-profit providers hold 77 per cent ($4.1 billion) of the intangibles balance for the sector. Whilst for-profit providers hold 41 per cent of residential operational places, they account for 68 per cent of the value attributed to bed licences.

Fifty-eight per cent of for-profit providers have recognised the value of bed licences. In contrast, only 28 per cent of not-for-profit providers have recognised the value of their bed licences.

As noted previously, the Government announced in the 2018-19 Budget that it will fund an impact analysis of allocating residential aged care places to consumers instead of providers. It is important there is a comprehensive assessment of the potential benefits and impacts – for consumers, providers and the whole sector – of a possible alternative allocation model. ACFA notes that if there are changes to the ACAR then this may have some bearing on the valuations currently attributed to bed licences (intangible) in the future.

Another significant asset type is related party loans. Related party loans make up 10 per cent ($4.7 billion) of total assets, and for-profit providers hold $4.3 billion (92 per cent) of this balance. Some of this might be explained by residential facilities being held by related parties as although 57 per cent ($2.5 billion) of related party loans are classified as current assets (receivable within 12 months), and fixed assets are non-current in nature, only a portion can be attributable to facilities being held by related parties. The for-profit providers would have a negative equity position if not for net related party loans ($2.4 billion), and/or intangible assets (bed licences and other).

Given the regulated permitted uses of RADs and bonds, the build-up of categories of assets other than fixed assets is noteworthy. A formal review of the use of RADs and bond financing is part of the annual focus of the Department of Health in their examination of Annual Prudential Compliance Statements. It is important that as RADs and their related investments continue to grow, the Department and Health similarly increases its oversight to ensure it keeps pace with this expanding sector.

In terms of total liabilities, RADs (including bonds) make up 75 per cent ($27.5 billion) of the capital funding of the sector. Fifty-one per cent of RADs are held by not-for-profit providers, 47 per cent by for-profit providers and 2 per cent by government providers. With 41 per cent of places held in the sector, the for-profit providers have the greater exposure to RADs and bonds.

Conversely the not-for-profit providers have proportionally significantly less RADs exposure as they hold 55 per cent of places.

Other capital funding sources include:

- Bank borrowings make up 6 per cent, or $2.2 billion of total liabilities. The for-profit sector hold 73 per cent of bank borrowings, or $1.6 billion, while not-for-profit providers have borrowed 27 per cent, or $0.6 billion; and
- Related party loans make up 6 per cent, or $2.1 billion of total liabilities. The for-profit sector holds the majority of this funding with 91 per cent, or $1.9 billion of borrowings. It is of note that the for-profit providers have a net asset balance, indicating they loan more funding out than they receive.

Other liabilities make up 17 per cent, or $6.0 billion of total liabilities. These include balances that have not been disaggregated from data submitted from providers. Other liabilities include, but not limited to, deferred revenue, trade and other payables, income tax payable, deferred tax liabilities, financial instruments such as interest rate swaps, other financial liabilities such as lease arrangements, and non-employee related provisions.

7.3.2 Balance sheet performance ratios

Balance sheet ratios provide a guide as to the financial health of providers through an analysis of their profitability, liquidity and efficiency as well as their net worth.

Balance sheet performance ratios – definitions
Current Ratio

Current ratio is a measure of an organisation's ability to meet its short term obligations (current liabilities) from its current assets. The current ratio measures an organisation's liquidity and provides an indication of risk that the organisation may not be able to meet its short term obligations as and when they fall due. It is calculated by dividing current assets of an organisation by its current liabilities.

Generally, a current ratio of at least 1.0, shows that an organisation has sufficient current assets to meet its short term obligations. However the requirement to categorise accommodation deposits as current liabilities[33] on the balance sheet of providers means that the current ratio needs to be treated with some caution and considered in conjunction with other financial indicators of liquidity for aged care organisations. For example, although refundable accommodation deposits (RADs) are required to be repaid when a resident leaves care, they are more often than not, repaid after a stay of longer than one year. The average length of stay for residents is currently just over three years.

Cash as a proportion of accommodation deposits

Cash and cash equivalents in the form of financial assets, as a proportion of refundable accommodation deposit balances provides an indication of an organisation's capacity to repay the accommodation deposit balances with liquid resources.

Net Assets Value

The net assets value provides an indication of the value of an organisation. The net assets value is determined by taking the total assets of an organisation and subtracting total liabilities. A low net assets value or a decrease in the value over time indicates higher levels of financial risk for lenders and consumers.

Debt Ratio

The debt ratio is calculated by dividing an organisation's total liabilities by its total assets and provides an indication of the degree of financing of an organisation. Within the aged care sector, total liabilities will consist of an organisation's refundable accommodation deposits as well as other secured and unsecured debt balances. An organisation's total assets will include cash and asset balances to which the refundable accommodation deposits may have been applied. As total liabilities increase as a proportion of total assets, the higher levels of debt could reflect the use of additional borrowings used to fund an organisation's improvements and expansions.

EBITDA to total assets ratio

The EBITDA to total assets ratio measures the operating return generated from an organisation's total assets. The ratio is a measure of financial performance and is calculated by taking the earnings, before interest, tax, depreciation and amortisation (EBITDA) and dividing this by the organisation's total assets. Generally, the higher the EBITDA to total assets ratio, the better the level of return generated from the organisation's total assets.

Equity to total assets ratio

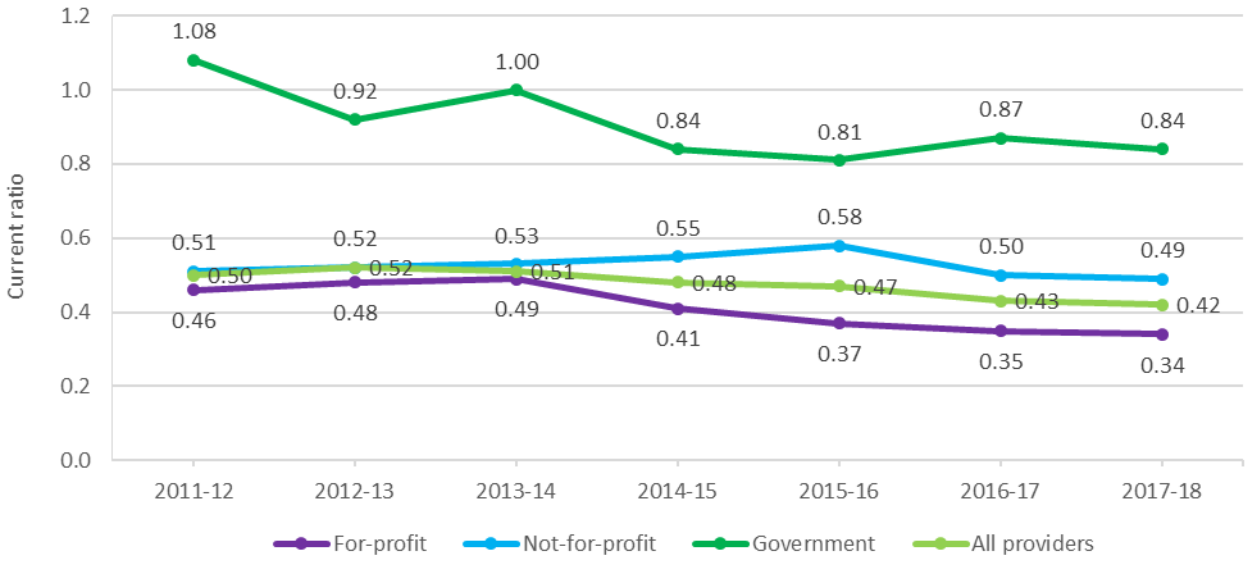
[33] The requirements for the presentation of financial statements is set out in AASB 101 and paragraph 69(d) relates to liabilities where there is no right to defer settlement of the liability for at least 12 months after the reporting period. The average length of stay of a resident is three years and as a result, the liability for repayment of an accommodation deposit can extend beyond 12 months after year end if the resident is still in care.

Net worth/total equity as a proportion of total assets provides an indication of solvency. For the for-profit providers, it shows the proportion of an organisation's assets which have been contributed by the owners/shareholders. For the not-for-profit and government providers, equity typically consists of retained earnings and revaluation reserves. The lower the ratio suggests that an organisation has used more debt to fund its asset balances.

As shown in Chart 7.10 the current ratio for the whole sector continued to decrease to 0.42 from 0.43 in 2016-17 and 0.47 in 2015-16. The decrease indicates a slight increase in the risk that organisations may not be able to meet their current liabilities from the current asset balances.

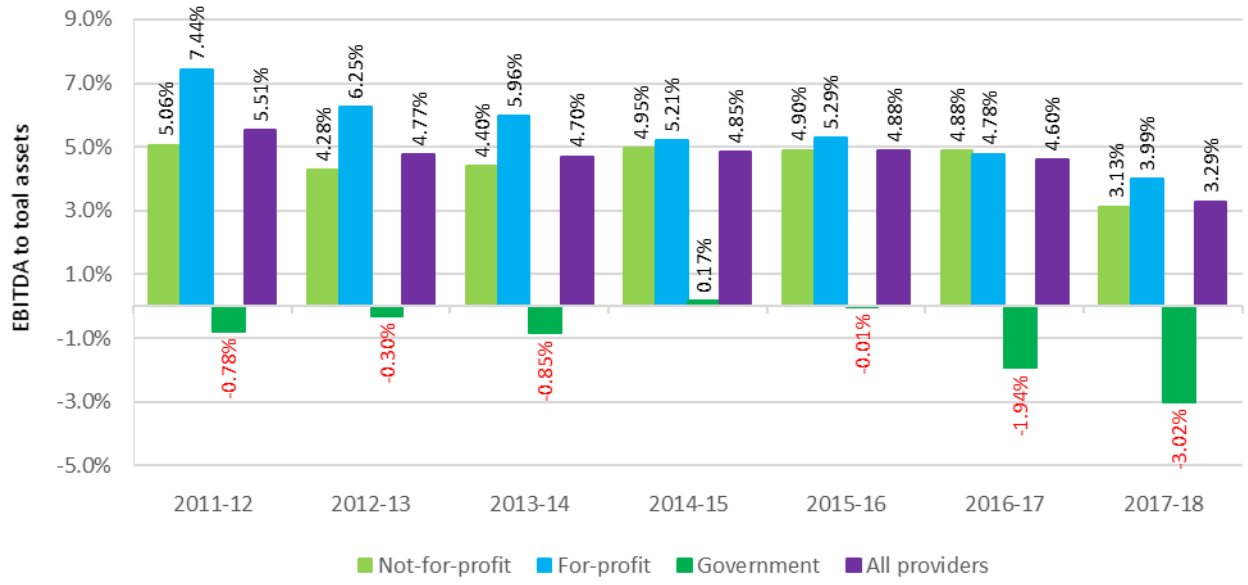
In terms of ownership type, in 2017-18, the current ratio for not-for-profit providers decreased to 0.49 compared with 0.50 in 2016-17. As has been the case in recent years, the current ratio for the not-for-profits was higher than the current ratio achieved by the for-profit providers which decreased slightly to 0.34 from 0.35 in 2016-17. As noted, a current ratio of less than 1.0 ordinarily indicates an organisation has insufficient assets to meet their obligations when they become due and payable. However, although refundable accommodation deposits can become repayable at any time and are classified as current liabilities, in practice, the repayment period for accommodation deposit balances will vary in line with each resident's tenure. This means that the current ratio result should be used with some caution and considered with other financial indicators in the residential aged care sector.

Chart 7.10: Current ratio, by provider ownership, 2011-12 to 2017-18



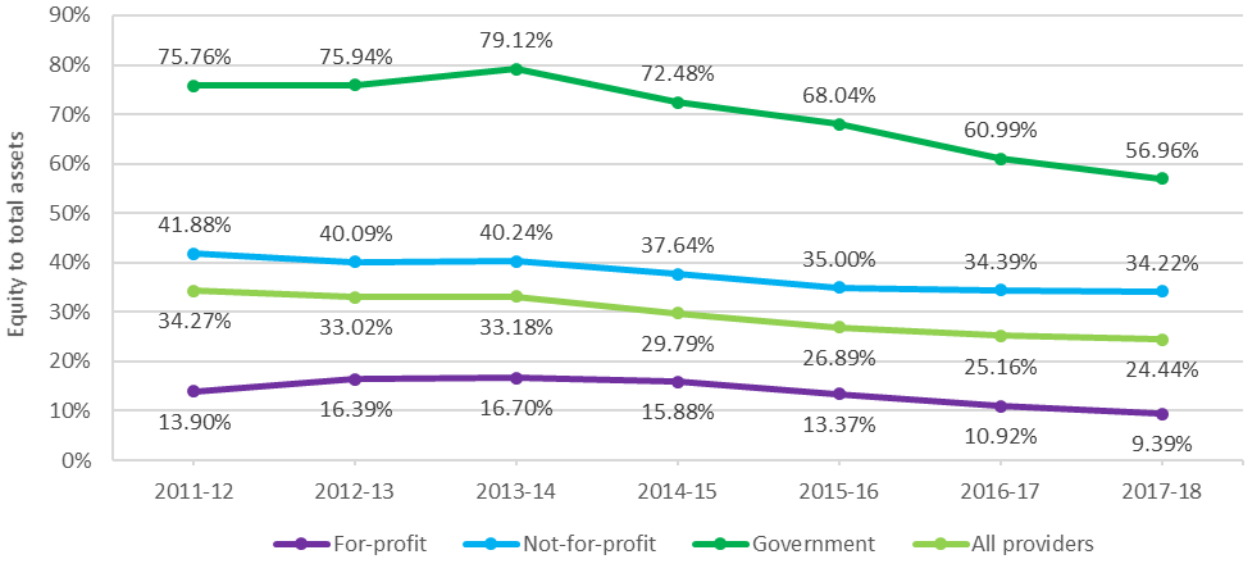
As shown in Chart 7.11 the EBITDA to total assets has been trending downwards since 2011-12. In 2017-18 it was almost the same for the not-for-profit providers (3.1 per cent) as it was for the for-profit providers (4.0 per cent). The EBITDA to total assets ratio measures the operating return generated from an organisation's total assets.

Chart 7.11: EBITDA to total assets, by provider ownership, 2011-12 to 2017-18



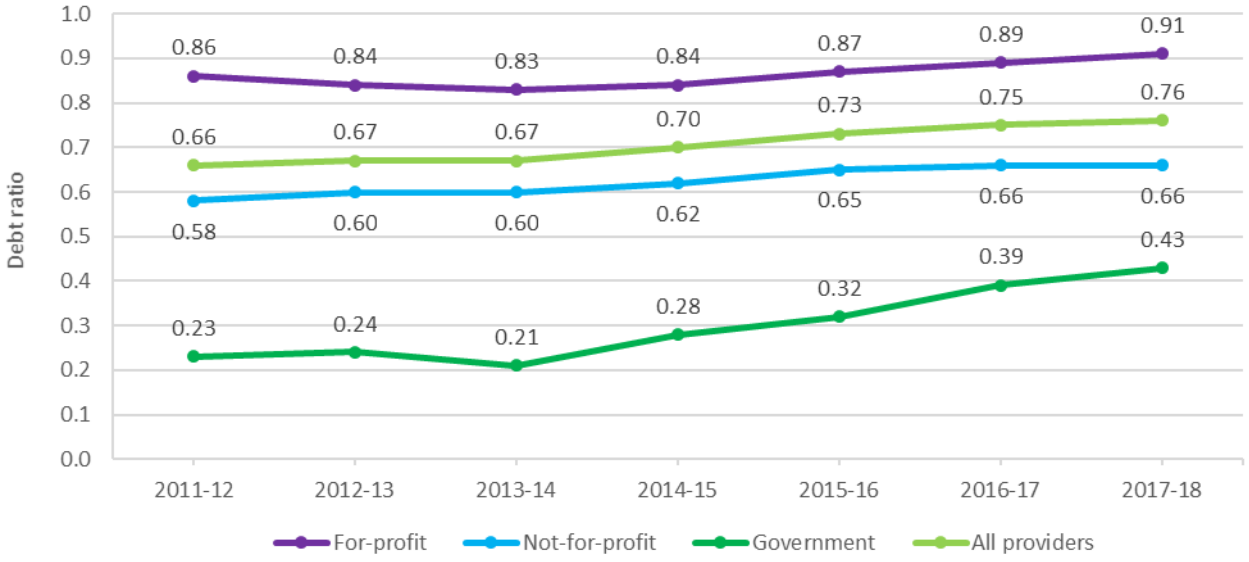
There was a significant difference between the results for provider types when looking at the results for the equity to total assets ratio as shown in Chart 7.12. Not-for-profit providers achieved a higher result of 34 per cent whereas the for-profit providers decreased by 1.5 per cent to 9.4 per cent in 2017-18. The results for all provider types have continued to decrease since 2013-14 suggesting a preference for debt to fund the growth in assets.

Chart 7.12: Equity to total assets, by provider ownership, 2011-12 to 2017-18



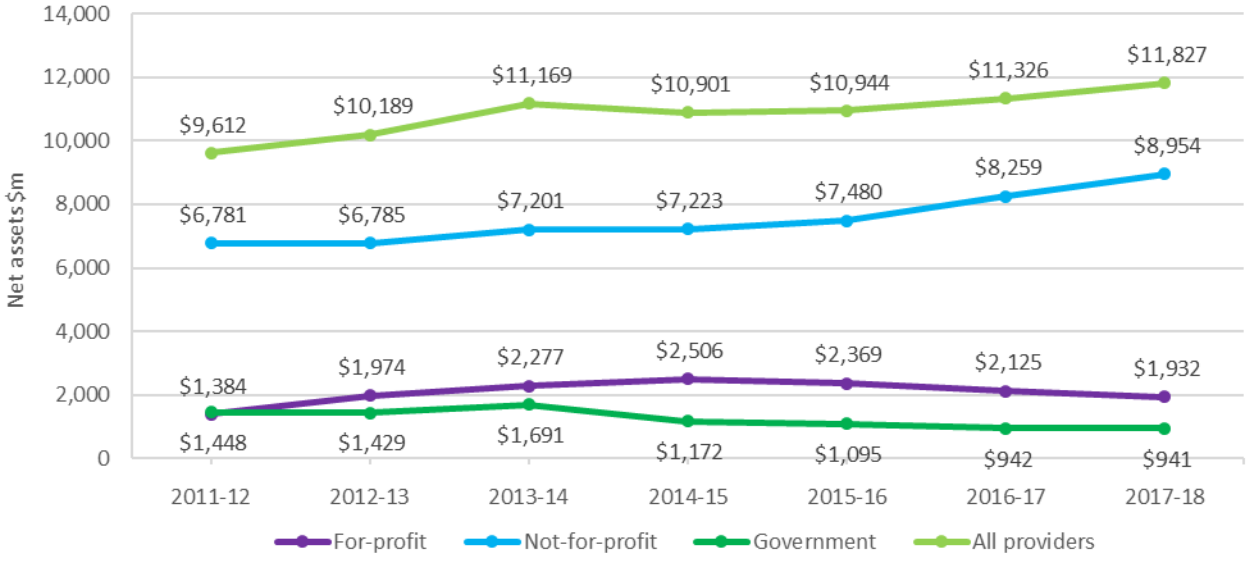
The average debt ratio across the sector again increased slightly with all three ownership types recording an increase compared with 2016-17 (Chart 7.13). The average debt ratio shows the proportion of organisational assets that are financed through debt. A ratio of more than 1.0 indicates that an organisation has a higher debt level than the value of its assets. The debt ratio for all provider types has been increasing since 2013-14.

Chart 7.13: Average debt ratio, by provider ownership, 2011-12 to 2017-18



The net asset position increased across the sector for the not-for-profit providers, increasing by $695 million to $8.9 billion in 2017-18 (Chart 7.14). The net asset position decreased slightly for both the for-profit providers and government providers to $1.9 billion and $941 million respectively. The net asset position of the sector as a whole has been increasing since 2014-15.

Chart 7.14: Net assets, by provider ownership, 2011-12 to 2017-18



Whilst the net asset balances of the sector has increased during 2017-18, the levels of cash and cash equivalents held by not-for-profit providers and government providers has decreased in 2017-18 (Chart 7.15). The levels of cash and cash equivalents held by the for-profit providers increased marginally during this same period, however the for–profit providers held the lowest levels of cash and cash equivalents, as a proportion of refundable accommodation deposit

balances at 15.5 per cent. Cash held as a percentage of accommodation balances received provides an indication of an organisation's capacity to repay the accommodation deposit balances from liquid resources

Chart 7.15: Cash held as percentage of accommodation deposit balances, by provider ownership, 2016-17 and 2017-18

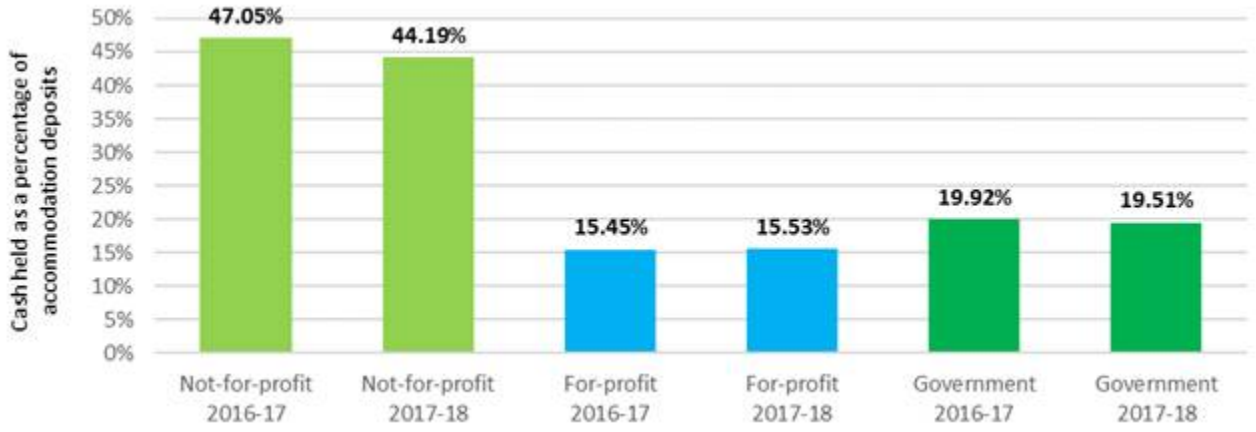


Chart 7.16 shows total assets, net worth/equity and average accommodation deposit value per resident, by ownership type in 2017-18, compared with 2016-17. For the whole of sector, the average for all accommodation deposits held increased to $303,107 per resident from $283,499 in 2016-17, an increase of 7 per cent. This metric measures the average value of all bonds (pre 1 July 2014) and accommodation deposits (post 1 July 2014) that providers hold.

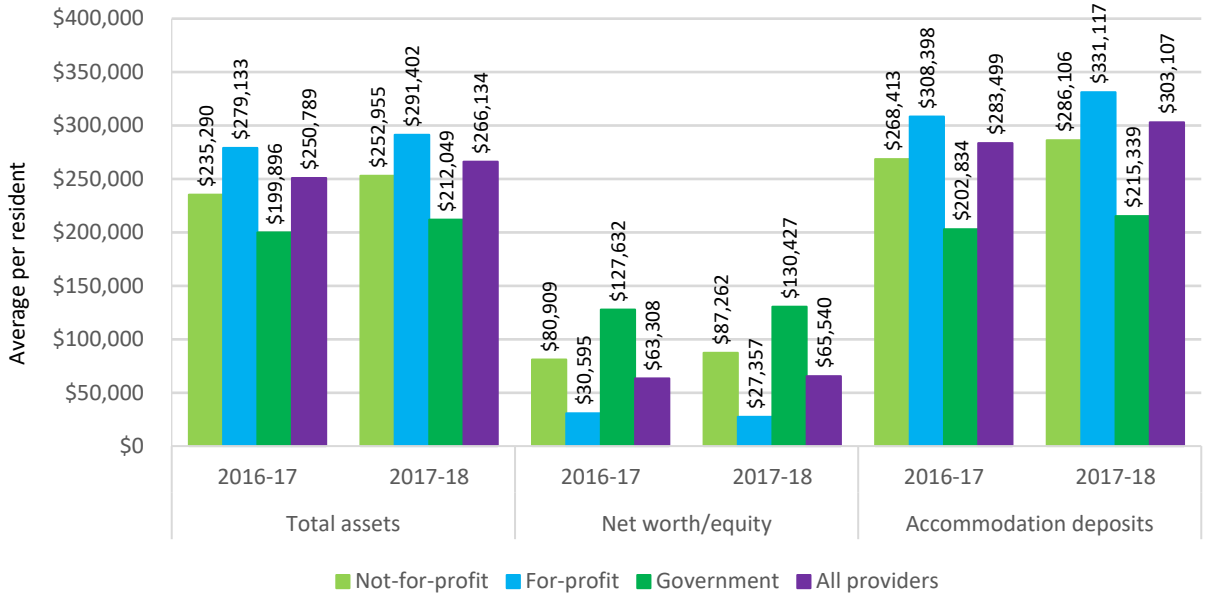
In terms of net worth/equity, for-profit providers recorded a decrease of $3,238 per resident (10.6 per cent) which follows a decrease the year before of around $5,000 (15.7 per cent). In contrast, the not-for-profits recorded an increase for the second year in a row, increasing to $87,262 from $80,909 in 2016-17.

Chart 7.16 total assets, net worth/equity and average accommodation deposit value per resident, by ownership type, 2017-18 and 2016-17



7.3.3 Recent trends in building and investment in the residential care sector

In 2017-18 the total completed or in-progress work was $4.9 billion compared with $4.7 billion in 2016-17 (Chart 7.17).

However, following on from the decline reported in last year's report, in 2017-18, there was a further significant decline in providers reporting they were planning to rebuild or upgrade their facilities (Chart 7.18). In 2015-16 the proportion of facilities planning to rebuild or upgrade were 5 per cent and 14 per cent respectively. In 2017-18, following two years of declining intentions, only 2 per cent of facilities are reporting they are planning rebuilding works and 5 per cent planning to upgrade.

Feedback from consultations with providers indicated that many had curtailed or delayed investment plans in the residential care sector, citing depressed returns and policy and regulatory uncertainty along with the potential impact of increased home care packages. A large number of providers, both for-profit and not-for-profit, said their immediate plans would be directed to retirement living rather than residential care. Factors cited in influencing this decision included: the considerable policy and regulatory uncertainty in the aged care sector; the desirability of diversifying income streams given the volatility in residential aged care; and the advantages of establishing an integrated aged care operation that involved retirement living, home care and residential aged care. Many for-profit providers emphasised that the current return on capital employed in aged care was below the cost of capital and, in the absence of any change, this would curtail additional investment in the sector.

Chart 7.17: Residential care building activity (completed or in-progress), 2012-13 to 2017-18

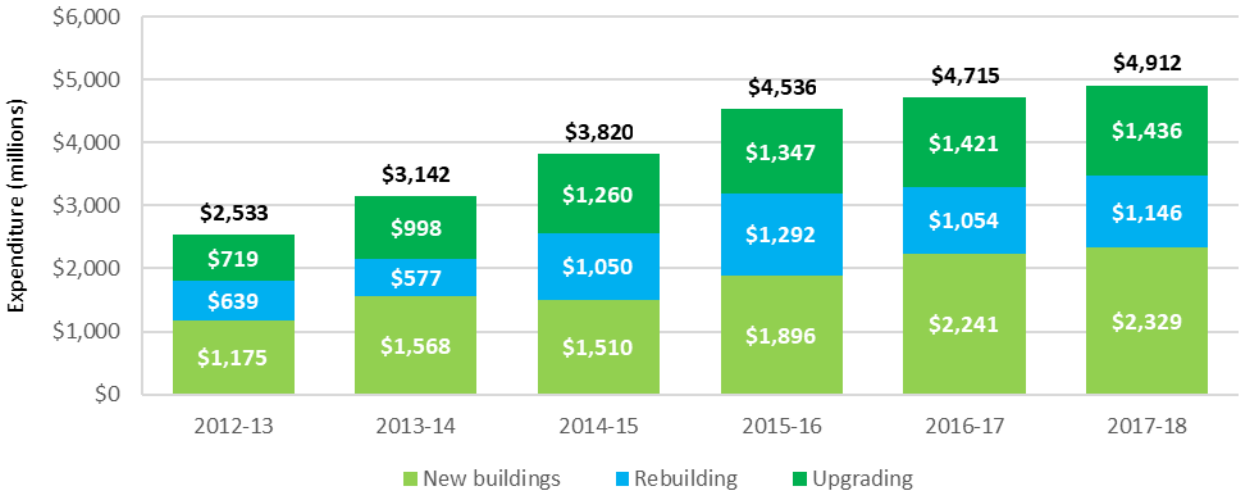


Chart 7.18: Proportion of facilities planning to either upgrade or rebuild, 2013-14 to 2017-18

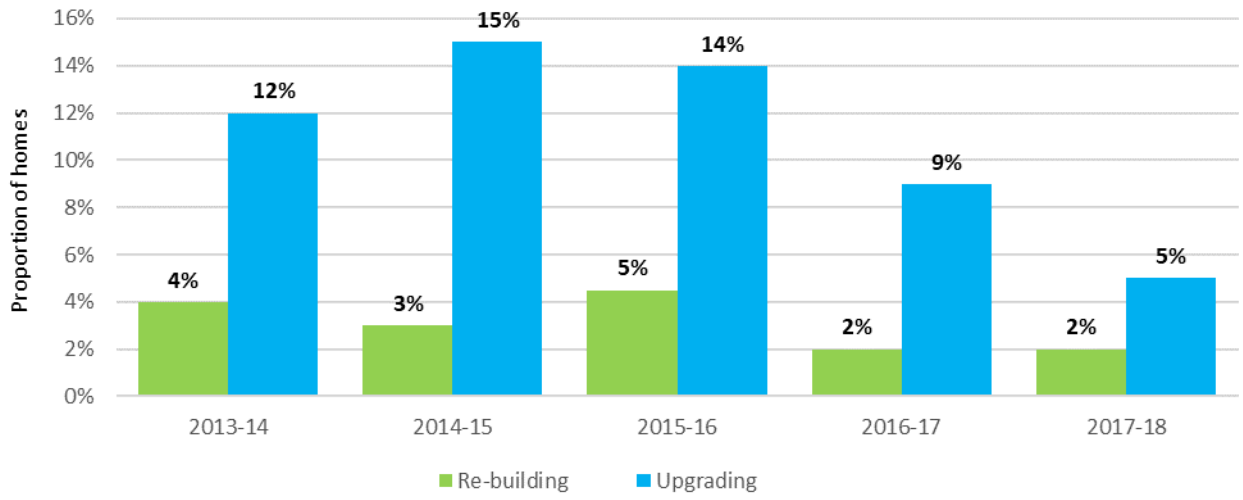
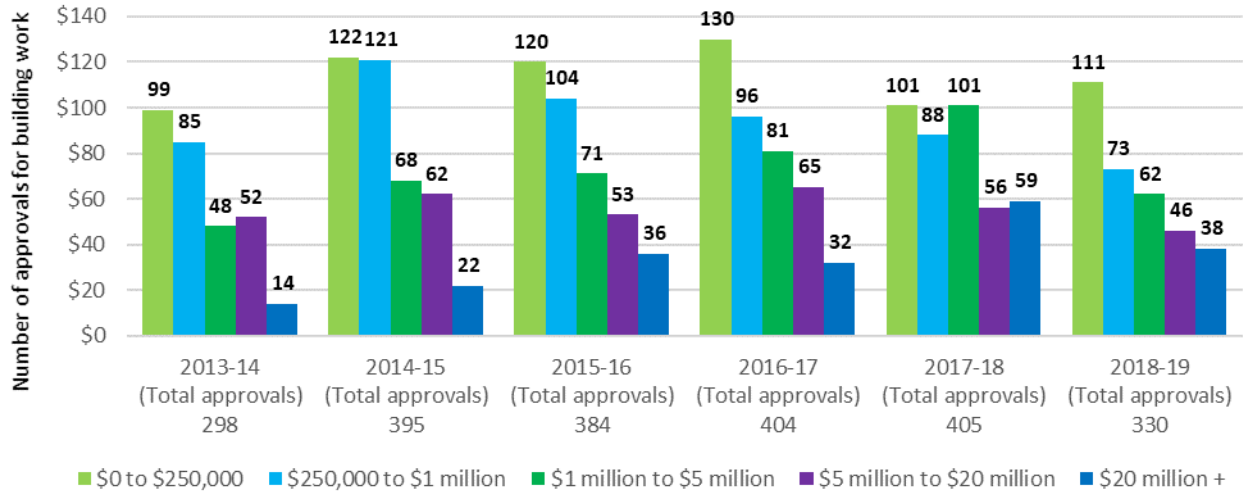


The decline in planned building activity discussed above is also evident, albeit less significantly, in data regarding aged care building approvals from the Australian Bureau of Statistics. There were 330 building approvals for aged care facilities in the 12 months up to the end of February 2019, compared with 405 for the same period up to February 2017 (Chart 7.19) and similar approval levels in the two years prior to that.

Also, as noted in Chapter 3, there was a dampening in demand for new residential care places in the 2018-19 ACAR with 2.8 applications for every available place, compared with 4.5 for the 2016-17 ACAR.

Chart 7.19: Number of building approvals, by value of building work, 2013-14 to 2017-18



Note: Data is March to February each year.

8 Future demand for aged care

This chapter discusses:

- The factors that affect demand for aged care;
- demand for the different types of subsidised aged care;
- changing population of older Australians requiring aged care; and
- changing preferences of consumers seeking aged care.

8.1 Future demand for aged care services

The demand for aged care services will expand with the ageing of the population. This chapter examines the factors that affect demand for the relevant aged care types, how this is likely to look in the future, and the investment that is needed to ensure the aged care system can adequately cater for the expected future requirements of the population.

An investigation into demand and supply of aged care services was undertaken by David Tune AO PSM in the *Legislated Review of Aged Care 2017*. The Review concluded that there was insufficient data available and that "robust measures of demand and unmet demand in aged care are a significant way off". The Review also noted however that there is no doubt that demographic factors will lead to significant growth in service provision and expenditure requirements.

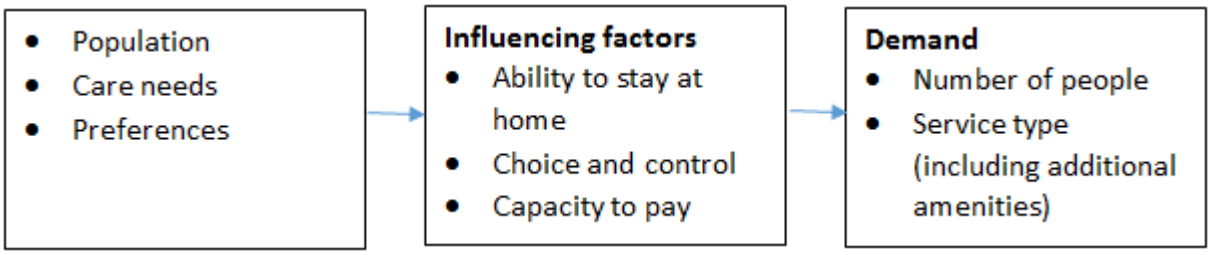
It is also currently not possible to establish consumer preference for residential and home care, due to existing supply constraints. Better evidence about unmet need and consumer preference is however, gradually being revealed as the overall provision target and the proportion of home care packages (including at higher levels) continues to increase, and through the introduction of the national prioritisation system for home care packages. The introduction of flexibility to switch funding across care types in response to consumer demand will also help to inform consumer preferences. The other variable is how providers might respond to increased consumer choice, such as innovation in accommodation options for older people and innovation is service delivery models.

With these limitations in mind, the analysis contained in this chapter focuses on projections based on current use of aged care and population growth, and should not be treated as forecasts of what is likely to happen in terms of future demand for types of aged care.

8.1.1 Determinants of demand

Demand for aged care services is complex and dependent on a range of demographic, service need, and economic factors. The Productivity Commission noted in its 2011 report, *Caring for Older Australians*, that "The demand for aged care services depends on the number of older people needing care and support. However, care needs are not homogenous and the nature and location of aged care services demanded will depend on the physical and mental health of older people, their capacity and willingness to pay, their preferences, and the availability of informal carers."

Figure 8.1: Factors affecting the extent and type of aged care service demand

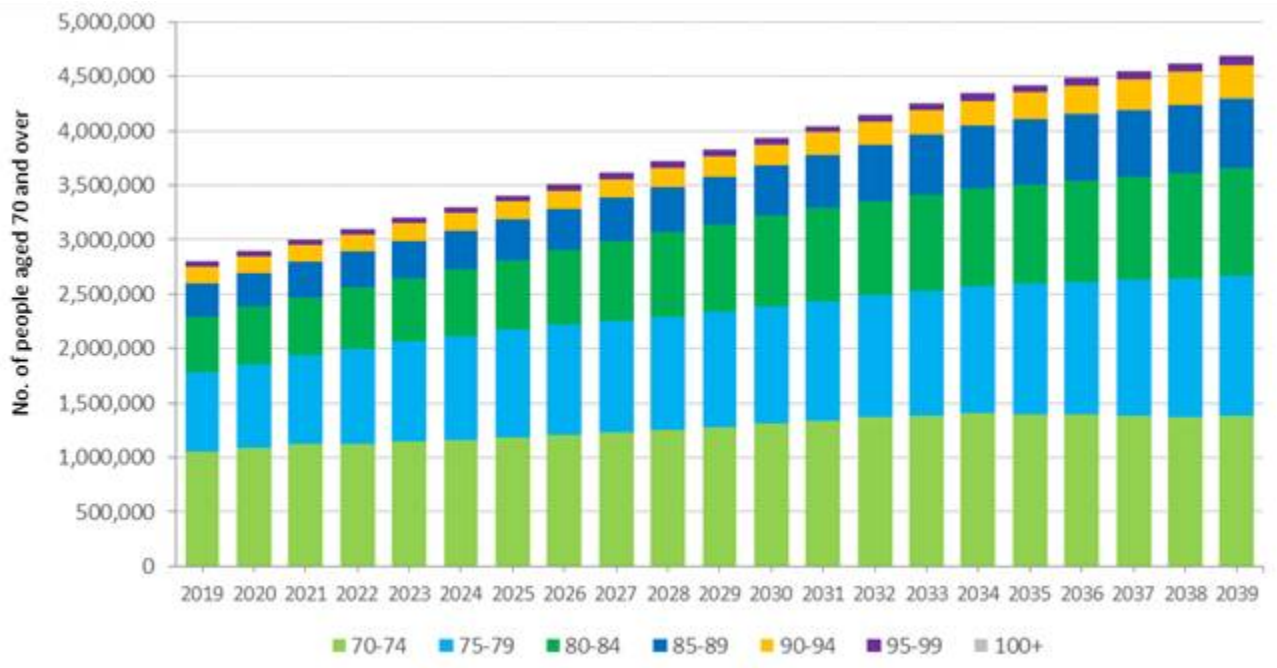


Source: adapted from *Caring for older Australians* (Productivity Commission, 2011)

8.1.2 An ageing population – older people demand more aged care

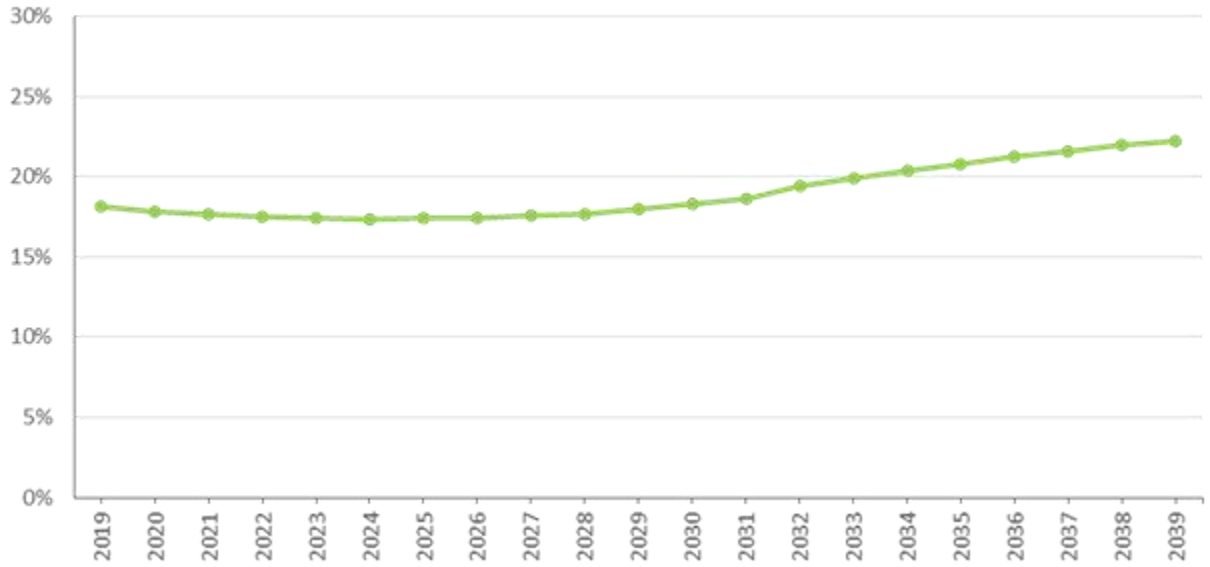
The structural ageing of the Australian population over the next 20 years will see the size of the 70 years and over cohort increase by around 1 million people each decade; this is on a base of 2.7 million people in 2019. Underneath this, the older age groups will more than double over this period; for example, the 85 years and over cohort will increase from just under 500,000 people in 2019 to just over 1 million people by 2039.

Chart 8.1: Number of people aged 70 years and over, by 5 year age cohort, 2019 to 2039



Because the baby boomers are such a large group compared with the pre-war generation, the proportion of the 70 and over population who are aged 85 and over will actually reduce over the next decade before subsequently increasing, as shown in Chart 8.2. This implies that the challenge of ensuring there is sufficient aged care supply to meet demand arising from the baby boomer generation is likely to be most strongly felt in 10–15 years (from the late 2020s) rather than over the next decade.

Chart 8.2: Proportion of 70 years and over age group who are aged 85 and over, 2019 to 2039



8.1.3 Consumer preference

A key characteristic of the baby boomer generation is that they are wealthier than previous generations[34]. The bulk of the people likely to be demanding care in the next two decades have benefitted from high growth in property prices while paying down their mortgage, and are the first generation to have compulsory superannuation. It is reasonable to assume that they will both expect and be able to afford higher standards of residential accommodation, lifestyle amenities and quality of life than previous generations have been willing to accept. Like the current generation, however, baby boomers can be expected to prefer to remain living in their own home for as long as possible as they age.

The consequences of these trends are that while the demand for aged care will grow with the ageing of the population, consumers may be more demanding in the range and quality of aged care services they are seeking, along with having a greater capacity to pay for these services. Nevertheless, maintaining equity in access to aged care services will continue to be important and a robust safety net will continue to be necessary.

To compete in this environment, however, providers will need to be more responsive in meeting consumer needs, including in particular the desire to stay at home for as long as possible, and this may require the introduction of new business models and changes in the interaction between retirement living, home care and residential care. The aged care regulatory system will also need to adapt to enable providers greater flexibility to pursue new business models and innovation.

[34] ABS, *Household Income and Wealth 2015-16* (Cat no. 6253.0)

8.1.4 Availability of alternative care types

According to the Survey of Disability, Ageing, and Carers[35], around 1 in 9 Australians, or 2.7 million people, were informal carers. Almost all carers cared for a family member. The assistance provided by informal carers can avoid or delay entry into residential care, including with the support of home-based care, and is also an important source of support for those in residential care.

At the same time that ageing population structures (discussed earlier) are putting pressures on the demand for care, the relative supply of informal carers is diminishing. This is due to increased participation of women in the workforce, and changing family structures with fewer children being born per family (1.7 babies per woman in 2017 compared with nearly 3 in 1970[36]), generational differences in marriage and divorce rates. And more people living alone.

All else equal, this will increase the demand for formal aged care for older people.

In terms of demand for specific types of aged care, the relative availability of places within each care type under current regulated supply arrangements will also affect the rates at which people access them and to the extent they are not available, redirect demand across care types. As previously outlined in this report, the Government is gradually changing the mix of residential and home care over time through adjustments to the provisional target ratios, and has implemented mechanisms whereby funding for unused residential care places can be redirected into home care where, at least over the short term, demand is expected to be more acute.

In addition, a key objective of the *Legislated Review of Aged Care 2017* was "to trigger changes that are prerequisites for a fully consumer-driven system", and outlined recommendations that were "intended as the next steps on the road to consumer-driven care". Most of the Legislated Review's recommendations in this regard have not been acted upon.

The unknown, therefore, is related to uncertainty about government policy and the extent to which the modes of delivering care may develop in the future in response to consumer preferences, such as further relaxation or removal of supply constraints, the availability of more higher level home care packages and closer integration between retirement living and home care. New ways of service delivery and innovation may widen the scope of aged care services available, which in turn may result in significant shifts in the types of services demand.

8.1.5 Economic factors

The demand for different types of care, and the way consumers distinguish between services in the same type of care, is affected by the price they can be asked to pay and the perceived value of that contribution.

Consumers of residential and home care are currently required to make a co-contribution to the cost of their care (and residential accommodation) if they can afford to do so. However the amount and proportion of contribution required to be made by a consumer varies between residential care and home care, including in relation to capacity to pay. Such anomalies have the potential to distort the demand for types of care or additional services.

Nevertheless a challenge remains for governments to establish funding policies that ensure access to aged care services for all needing aged care and support that meet community quality of life expectation, irrespective of their means and social and cultural circumstances. Incentives in funding

[35] ABS, *2015 Survey of Disability, Ageing and Carers, Australia* (Cat no. 4430.0)

[36] ABS, *Births, Australia, 2017* (Cat no. 3301.0)

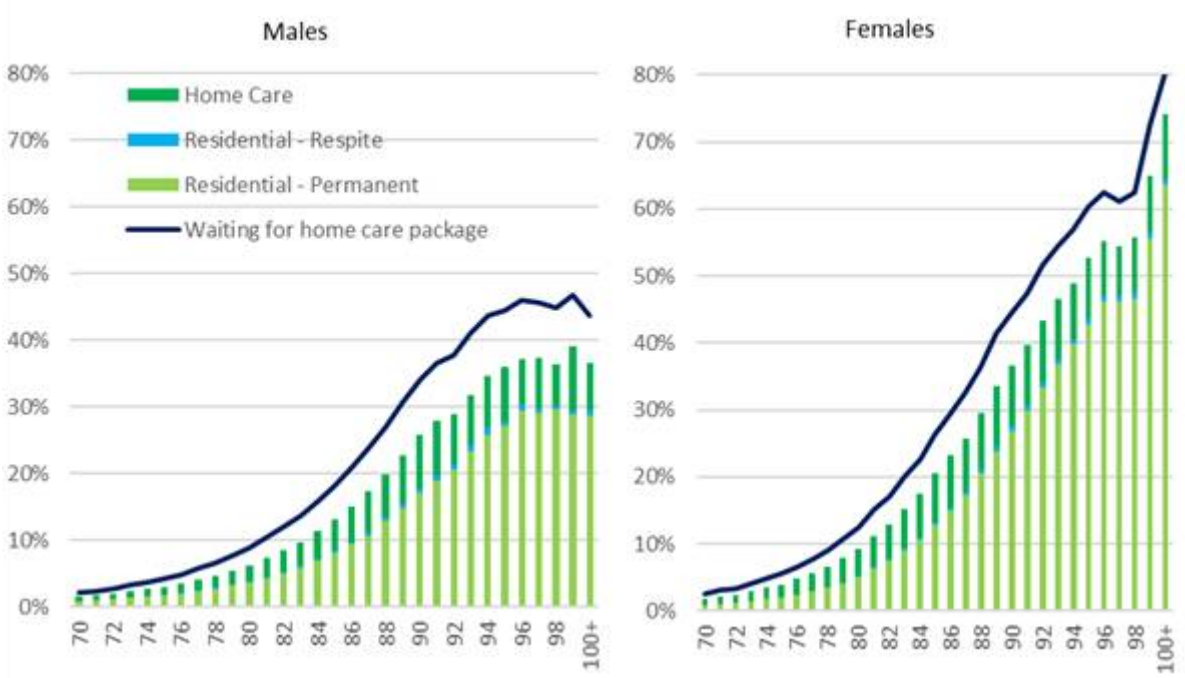
arrangements are also important in influencing the type of care supplied, for example if funding arrangements have no incentive for reablement services and a provider loses funding if there is an improvement in the level of acuity of a consumer, then there will be limited supply of services promoting reablement.

8.2 Current demand for aged care

An understanding of the current profile of aged care usage is helpful for undertaking projections of future demand.

As shown in Chart 8.3 the proportion of each age group who use residential and home care package services increases dramatically with age. By age 80, the proportion of people using either permanent residential care or a home care package is around 7 per cent; this doubles by aged 85; and more than doubles again by age 90.

Chart 8.3: Proportion of people of each age using residential care and home care, by gender and age, 30 June 2018



Note: Home care consumers receiving care in an interim level package are counted as using home care. People waiting for a home care package are only those consumers who do not have a package at any level.

This projection is based on current usage, which may well not reflect the extent to which consumers are having their needs and preferences met by current regulated supply. True demand is much harder to measure given the current highly regulated supply system.

8.2.1 Residential care

There are indicators to suggest that overall the demand for residential care is currently being met. The occupancy rate in 2017-18 was 90.3 per cent, down from 91.8 per cent in 2016-17 and 92.4 per cent in 2015-16. The overall average occupancy rate in residential care peaked at 97.1 per cent in 2003-04. There may, nevertheless, be pockets or regions of the country where

people are waiting to access residential care. The Tune Review asked stakeholders about the level of unmet demand and received little feedback to suggest that there is significant unmet demand.

Residential care usage may, however, be artificially high as result of people entering residential care prematurely as an alternative to waiting on the allocation of a home care package. Current usage also does not reflect the potential for residential care services in a more competitive and flexible system to offer a more attractive service that includes more opportunities for higher quality and meaningful life delivered in a secure environment.

8.2.2 Home care

There is evidence of unmet demand for home care. As noted in section 3.4.2, at December 2018 there were 127,748 people waiting for a home care package (including those already receiving lower level home care) through the National Prioritisation System.

8.3 Projecting demand into the future

Previous ACFA reports have contained a projection of demand for residential care over the next 20 years based on current age-specific use and the current residential aged care target provision ratio which is based on the number of people aged 70 years and over.

A projection on this basis suggests that the projected number of operational places is likely to exceed demand for residential care to 2027. This is because places are linked to growth in the 70+ population, which due to baby boomers entering their 70s, is growing at a faster rate than people who currently are using residential care, who are the 80 plus cohort of the population. Following 2027, as the baby boomers enter their 80s, demand for care is expected to rise faster than the release of places in line with the provision target ratio.

Care is needed in interpreting such projections because they are limited to residential care and do not take into account changes in consumer preferences and changes in modes of delivery of aged care. In particular, no account is taken for substitution of residential care for home care as the number of home care packages continue to expand.

8.3.1 Substitution of residential care and home care

One of the key factors that has to be taken into account in projecting demand for aged care is the potential substitutability of service types. The introduction of the National Prioritisation System indicates there is significant unmet demand for home care services. It is also possible that some people have entered residential care because a home care place at a suitable level was not available.

The proportion of people in each age group (age-specific use) who are in either residential care or home care has remained stable (Chart 8.4, first column) over a long period of time. However, the amount of home care packages available has increased significantly as a share of these two care types (Chart 8.4, second column). As the amount of home care has expanded there has been a clear reduction in the age-specific use of residential care (Chart 8.4, third column and Chart 8.5 which gives a cross-section of Chart 8.4). This would indicate that home care is substituting for residential care.

It is not known what the level of home care availability is that would be needed before all people who wish to remain in their home with a home care package can do so, and do not have to enter

residential care. In addition, the substitutability between residential and home care will also change if, for example, the government were to introduce a new higher level package as recommended by The Tune Review (Recommendation 7). It is possible that the introduction of higher level home care packages could see the age-specific use of residential care potentially reduce. Similarly, other possible policy changes, such as consumer contribution policies and support available for informal carers (such as improved respite services), could influence value for money and consumer choice.

Chart 8.4: Utilisation of residential care and home care, 2000 to 2018

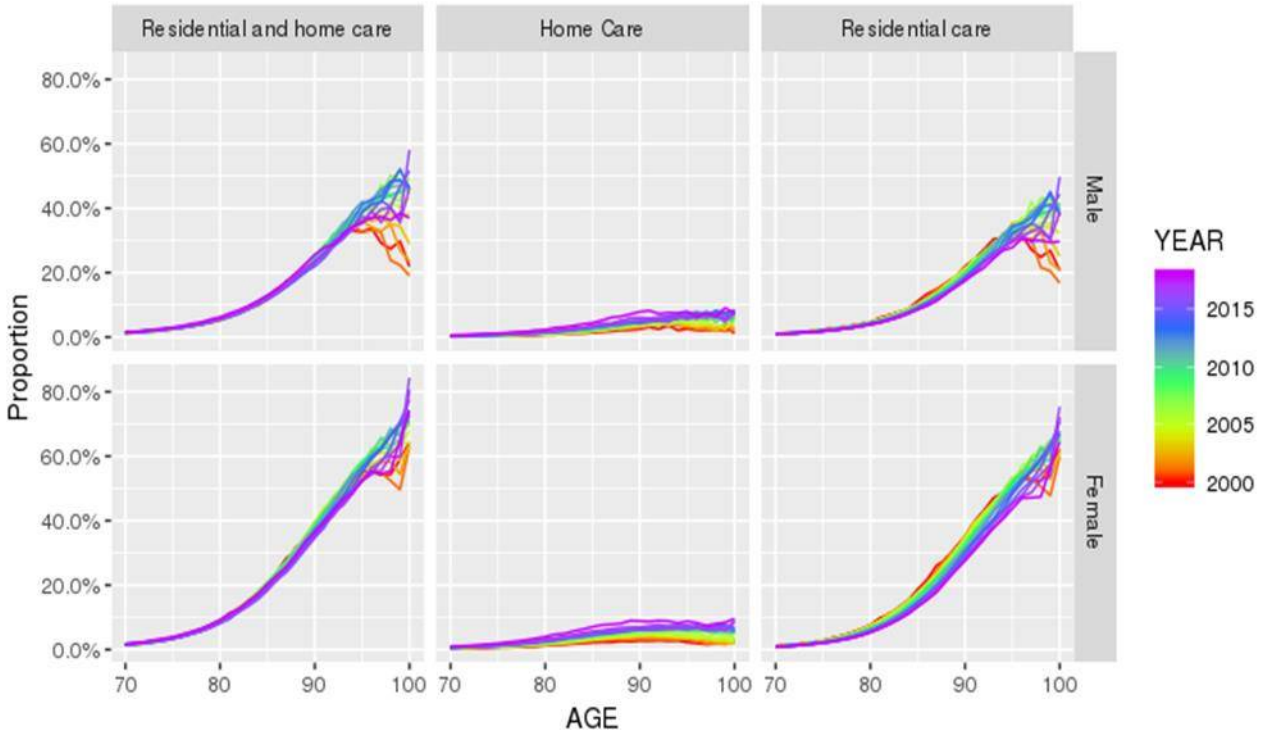


Chart 8.5: Utilisation of residential care and home care for 85-89 year olds, 2000 to 2018

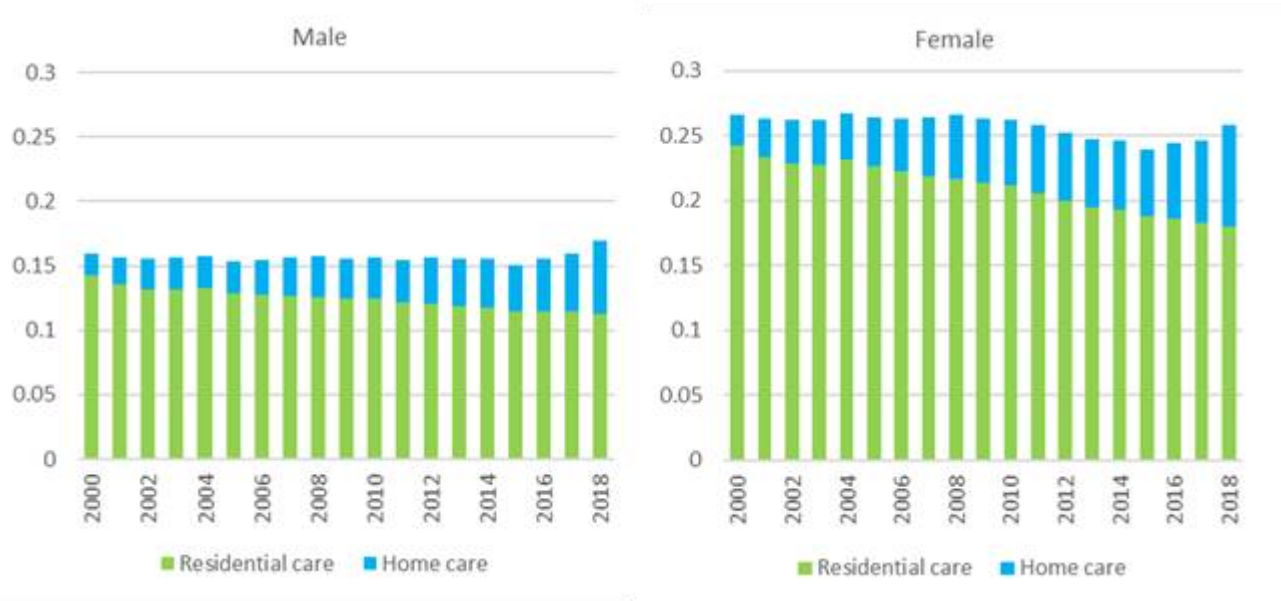


The expansion of home care is likely to not only divert people from entering residential care for longer or at all, but it will also have an impact on people receiving care from informal carers and through other programs such as the Commonwealth Home Support Program (CHSP). It is estimated that 93.9 per cent of people waiting for a home care package as at the end of December 2018 had been provided with approval to access support through CHSP.

8.3.2 Updated projections

The projected demand from the current age-sex specific usage of residential care is one approach to projecting future demand for residential aged care. However, with the expansion of the home care program and the concomitant fall in the usage of residential care in all age groups (Chart 8.4 and Chart 8.5), such projections may over estimate demand for residential care. Chart 8.6 grows the number of people using residential care proportional to growth in the population (using ABS single-year-age and sex population projections).

It is evident from Chart 8.6 that, if the growth in the number of residential care places grows in line with the current target provision ratio (purple line) and not impacted by any other factors, occupancy rates will continue to fall over the 2020s, before rising in the 2030s.

Chart 8.6: Projected demand for and supply of residential care places, 2018 to 2039

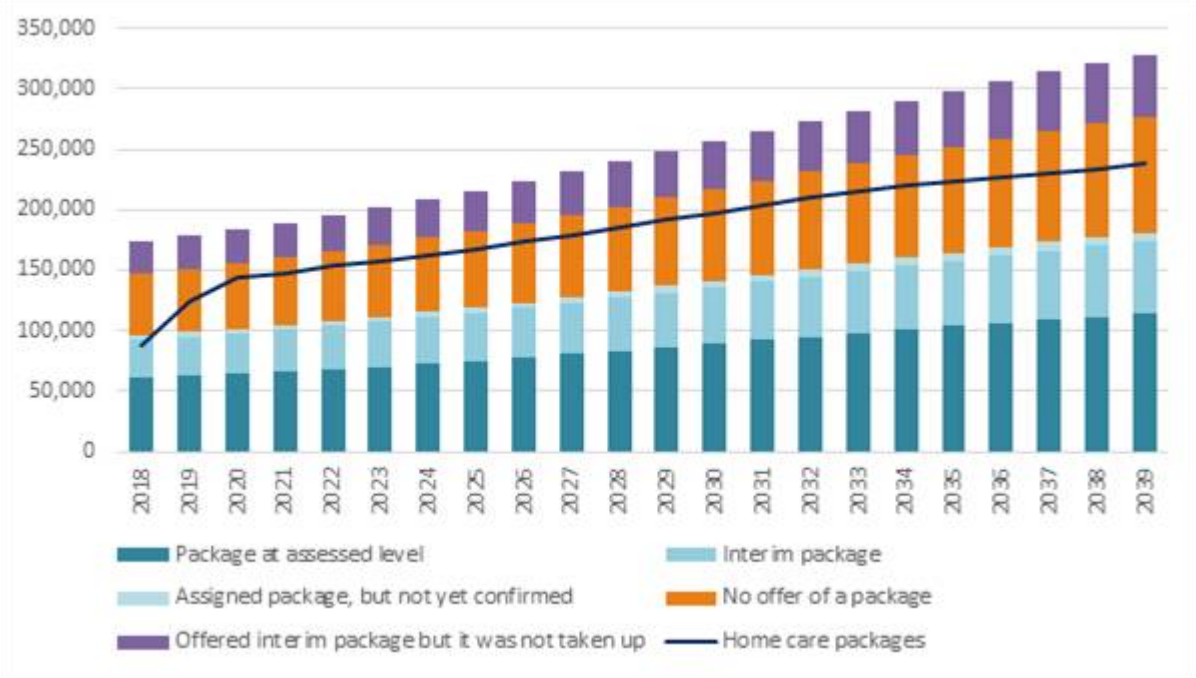
There is currently excess demand for home care. Consequently, projections based on the current usage of home care, which is constrained by current supply, are not going to give a meaningful guide as to future demand. In addition, the current profile of assessment for home care could be influenced by the number of people waiting for home care through the National Prioritisation System and prospect of long wait times.

With this in mind, Chart 8.7 grows the number of people in the home care system at 30 June 2018 - with a package (blue series) or waiting for a package to be offered (orange series) – proportional to growth in the population using the ABS single-year-age and sex population projections. These series have been broken down into sub-components:

- the 'with a package' series (blue) is further sub-divided into those receiving a package at their assessed level, those receiving an interim package and those who have been offered a package and are in the process of deciding whether to take up the offered package;
- the 'waiting for package to be offered' series (orange) is further sub-divided into those who have not been offered any package and those who have been offered an interim package but have not taken this up.

It is evident from this chart that the growth in the number of packages (black line) as the provision target of 45 by 2020 is achieved will, in the short-term, significantly reduce the number of people waiting for home care through the National Prioritisation System who have not yet been offered a package. However, there will still be a significant number of people without a package and over time the number of people waiting will grow again. It needs to be kept in the mind that those people who have declined the offer of an interim package have indicated they are actively seeking care and are awaiting an offer of a higher level package.

Chart 8.7: Projected demand for and supply of home care packages, 2018 to 2038



8.3.3 Planning for the supply of aged care

As noted previously, if residential care places increased in line with the current target provision ratio and current age-specific use rates continued, there would be an excess supply of residential care over most of the 2020s. As the baby boomers start to enter their 80s in the 2030s, this demand could start to put pressure on the sector and its ability to ensure there is adequate supply of residential care. This has been flagged in previous ACFA reports and in the Tune Review.

There is excess demand for home care, and this is likely to remain the pressure point in the supply of aged care over the projection period. At least part of this undersupply can be met through a reduction in residential care places as currently provided for in the target provision ratio.

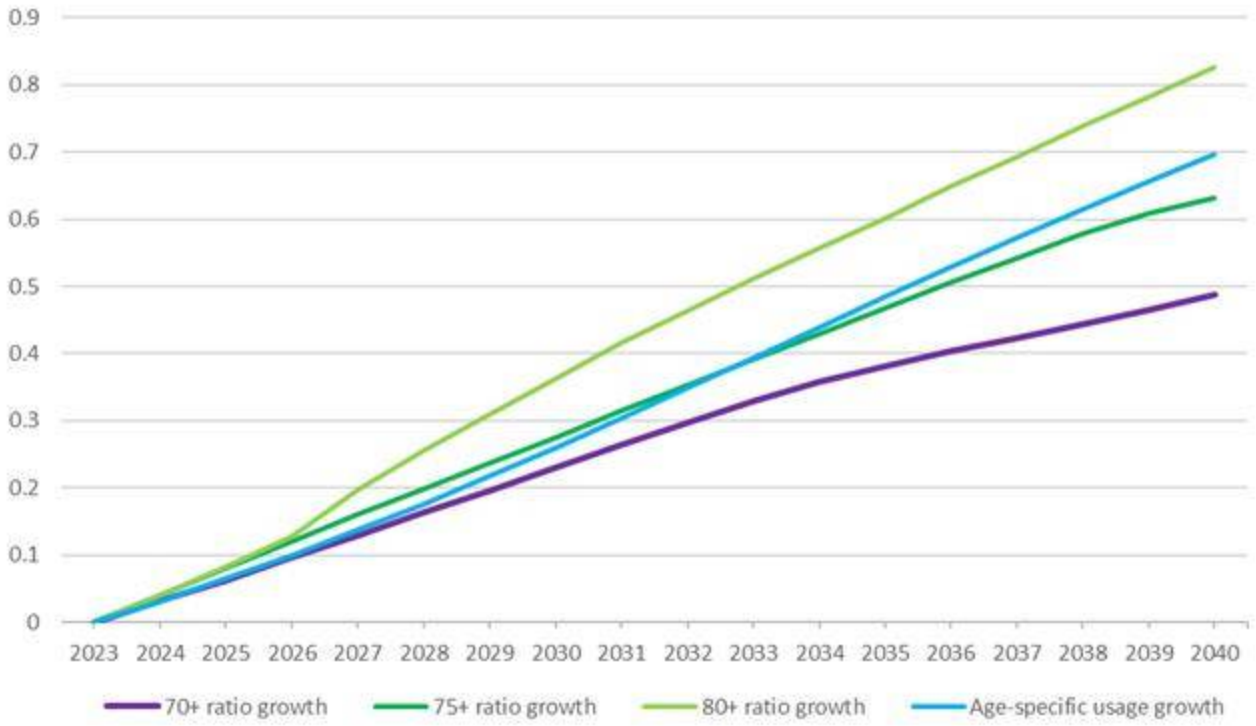
The Tune Review report recommended changes to the target planning ratio. The current ratio denominator of the 70+ population is not aligned to the cohort of the population more likely to use aged care services, and results in the observed periods of relative oversupply and undersupply. ACFA supports the Tune Review recommendation to change the denominator in the ratio to the 75+ cohort of the population following the achievement of the 125 ratio in 2021-22.

ACFA also recommends that the change in the denominator be accompanied by a change in the target provision ratio formula so that it is based on the number of consumers and not the number of operational places. This will allow comparable reporting and monitoring of the supply of

residential and home care places against the provision targets, and help inform unmet demand and consumer preference.

The following analysis shows the supply of aged care places under the 70+ population and 80+ population. The equivalent rates (converted as at 30 June 2023) are 194 per 1,000 people aged 75+ and 351 per 1,000 people aged 80+. As can be seen in Chart 8.8 the expected growth in the number of consumers (blue line) more closely follows the 75+ population growth over the medium term to the mid 2030's.

Chart 8.8: Cumulative growth in aged care places, 2023 to 2040

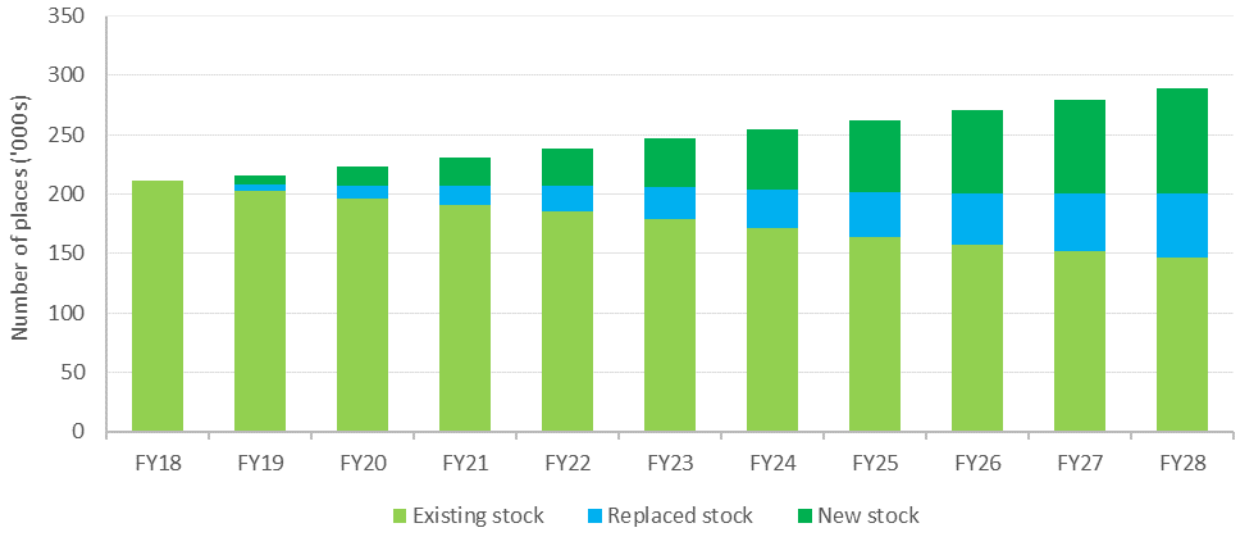


8.4 Investment requirements for residential care

As noted above, there are many variables that will influence the future demand for residential aged care. Nevertheless, it is evident given the ageing of the population, along with increasing consumer expectations, that there will need to be significant future investment in the residential sector to both build new facilities and to refurbish existing facilities.

Using only the current target provision ratio to project the future supply of residential aged care, and not taking into account the impact of increased home care on the demand for residential care, the sector would need to build over 88,000 places over the next decade. At the same time, the sector would need to rebuild or refurbish a substantial proportion of the current stock of aged care facilities. It is assumed that over the next decade around a quarter of the existing stock of buildings, covering around 54,000 places, would need to be rebuilt or refurbished (at an even rate over the period).

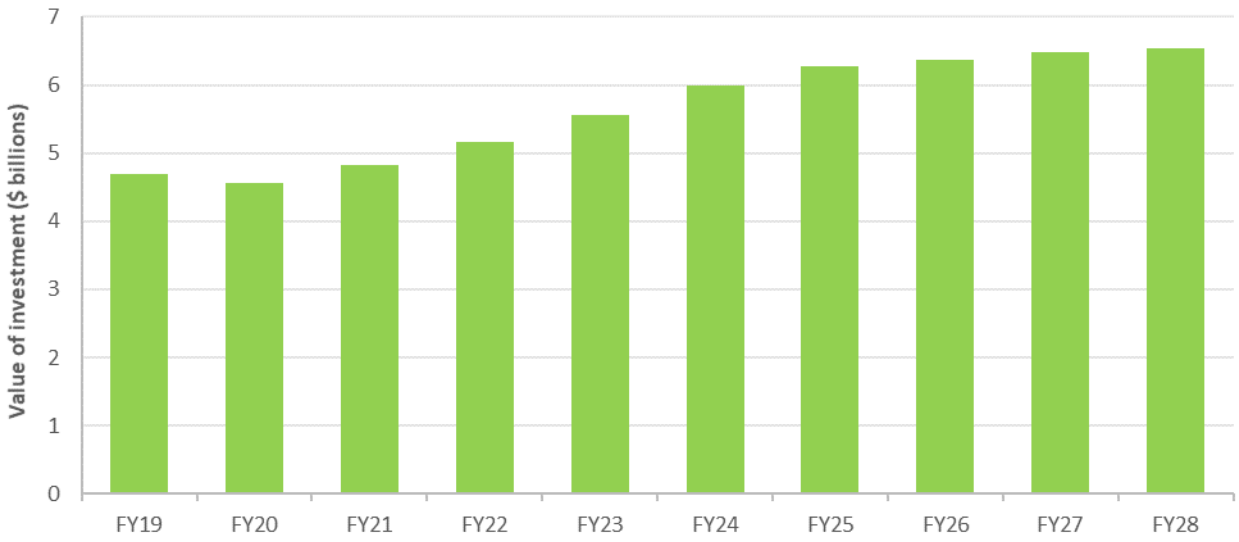
Chart 8.9: Number of operational residential aged care places required 2017-18 to 2027-28



On the basis of the above assumptions, the combined total investment for new and rebuilt places over the next decade would be around $55 billion. The net present value, of this estimate is approximately $50 billion. This compares with an estimate of around $18 billion (in present value) in building and upgrade work completed between 2009 and 2018. As previously noted, however, these projections are based on particular assumptions and should be treated with care.

While the total number of residential care places increased from 174,700 to 210,800 over the last 10 years, the number of mainstream facilities decreased from 2,783 to 2,695. This means that, on average, the investment in new places was primarily through expansion of existing facilities. There is a limit to how big existing facilities can expand and future investment to increase the supply of residential care places may have to be increasingly through greenfield projects.

Chart 8.10: Future annual investment requirement, 2018–19 to 2027–28



The model used to determine the investment requirements was developed for the Department in 2018 by Deloitte Access Economics. The assumptions behind the analysis are:

- Total place requirements (i.e. the total of all new and rebuilt stock) that is estimated to be operational at each point in the future is based on the Department's projections which take into account the current stock of provisionally allocated places; the historical rate of building; and the expected number of flexible residential care places that also contribute to the overall residential care target.
- The share of places that are rebuilt each year is estimated using a flat rate assumption of 2.5 per cent of the stock in that year, i.e. a 40 year average building lifetime.
- The cost of construction differs by region. The base construction costs in 2018-19 of $260,700 per new place, $221,200 per rebuild, and $27,700 per upgrade (from the Survey of Aged Care Homes) have been adjusted by using indices that scale up costs in regional areas relative to the nearest capital city.
- The cost of construction is indexed over time using a 10 year average of Rawlinson's Building Cost Index for each state's metropolitan and regional areas (averaging out at 2.4 per cent per annum nationally).
- The cost of land is sourced from ABS land price data for each state's metropolitan areas and again adjusted using the relevant regional index for that state.
- The cost of land is indexed over time using a flat rate of 4.4 per cent per annum for all areas based on ABS residential property price data.

The value of building work completed and in progress during 2017-18, and other indicators of construction and investment in the sector is discussed in detail in Chapter 7.

8.5 The investment environment

Chapter 9 outlines some of the characteristics of a sustainable aged care industry. This is against the background that the significant capital investment needed to meet the future demand for aged care services will largely come from the non-government sector, both for-profit and not-for-profit sectors.

The challenge facing the Government is to ensure that the funding and regulatory arrangements in the aged care sector are such that it provides the ongoing environment that facilitates the needed investment. A key requirement in this regard is that the non-government sector has confidence in the direction and stability of Government policies and those providers receive a return such that it will attract the necessary capital and labour resources. The funding arrangements will also need to be flexible so that providers can respond and adapt to changes in consumers' preferences for aged care services as well as innovate and embrace new technologies.

8.5.1 Access to capital

Capital investment in the residential aged care industry is required to expand and refurbish existing facilities, as well as building to meet future capacity. To attract investment the industry needs to generate consistent rates of return that are appropriate for the risk involved and are competitive with returns in other sectors that have similar attributes.

Viable and well-run providers are best placed to attract the financial capital, experienced management and quality staff required to deliver long term industry sustainability and growth. Key ingredients of well-run providers include the exercise of good governance that oversees the implementation of strategic investment plans and the ability to successfully monitor their operational performance against those plans.

To be viable, a provider, whether not-for-profit, for-profit or government owned, must have access to sufficient funds to repair and replace their capital stock, be able to maintain working capital to support their operations, and use capital efficiently relative to the other purposes to which it could be deployed. These outcomes are underpinned by sound financial management that effectively manages costs, sets appropriate pricing strategies to derive the revenue stream to support sustainable capital returns.

Investment activity requires equity investor and debt provider confidence in the capacity of providers to deliver sustainable returns on capital and of the sector overall. The amount of (and change in) invested capital is one key metric of sustainability.

In order to attract future investment the industry needs to generate consistent rates of return on capital that are appropriate for the risk involved and are competitive with returns in other sectors that have similar attributes.

Capital investment in the residential sector can include: equity injections or retained earnings; loans from financial institutions or investors which require sufficient profits to be generated to meet the interest costs and repayment amounts; and interest-free loans from residents in the form of lump sum accommodation payments. Where providers are unable to meet the whole cost of essential capital works, limited capital grant funding is available from the Government-funded Rural, Regional and Other Special Needs Building Fund.

Viable and well-run providers are best placed to attract the financial capital, experienced management and quality staff required to deliver long-term industry sustainability and growth. Therefore, key ingredients include the exercise of good governance that oversees the implementation of strategic investment plans and the ability to successfully monitor their operational performance against those plans.

9 The Challenge of achieving a sustainable aged care system

This chapter discusses:

- funding and financing challenges in the aged care industry now and in the future; and
- the characteristics of a viable and sustainable aged care system.

9.1 Funding and financing challenges in the aged care industry

To provide the level and quality of aged care services that older Australians require now and into the future, including to secure a skilled workforce, it is essential that the aged care industry is financially viable, stable, efficient, effective, responsive and sustainable. It is evident from developments in the industry over recent years that it faces many hurdles in achieving this objective. Among them include:

- ACFI has not provided a stable and effective care funding tool for both the Government and providers. The Government has been concerned that the growth in ACFI payments has exceeded the underlying growth in the acuity of the Australian population and subsequent changes it has made to ACFI arrangements have had a significant impact on the financial performance of residential aged care providers. A sizeable proportion of residential care providers are currently making a loss and a number of smaller providers are seeking to leave the sector while many are concerned about their ongoing viability if current financial trends are maintained. Overall, under the ACFI funding tool, there have been cycles of high growth followed by low or no growth causing uncertainty for providers, investors and Governments. Moreover, the current ACFI arrangements cannot satisfactorily resolve the extent to which residents' care needs have been increasing over time compared with the extent to which providers have maximised the potential to use the ACFI tool to increase revenue growth (including in response to low indexation). ACFI is also administratively complex for both providers and the Government and has resulted in the sector diverting resources away from delivering care. In addition, ACFI has some perverse incentives that may encourage outdated modes and types of care and lead to inefficiencies with providers focusing on ACFI claiming rather than on the needs of residents.

- Volatility, uncertainty and margin pressures have resulted in many residential care providers putting investment projects on hold while they assess the future direction of the market and reforms. In addition, a number of providers are investing in activities other than residential aged care in order to diversify their revenue sources and reduce their exposure to the volatility in the residential aged care sector. These developments are not consistent with establishing the environment necessary for facilitating the investment needed to meet the needs of an ageing population.

- The Government continues to fund the bulk of the cost of aged care notwithstanding the Living Longer Living Better reforms which introduced changes to means testing. As noted in ACFA's *Report to inform the 2016–17 review of amendments to the Aged Care Act 1997,* in the case of residential care the Government's share of the overall average cost per resident per year only reduced to 65.6 per cent under the post-reform means test compared with 68.3 if the pre-reform arrangements were applied. The Tune Review observed that given the demand for, and costs of aged care will increase significantly in the future, it is likely to be unsustainable for the Government to continue to cover two-thirds of the cost of residential aged care and there is a strong case to increase the proportion of costs that are met by consumers.

- The contribution aged care residents make to the cost of their everyday living expenses (such as food, linen, utilities) is capped at 85 per cent of the single pension. StewartBrown estimates that this is nearly an average of $8 per bed per day below the cost of providing these services. One area where providers can boost their revenue, and the level of services available to residents, is through the provision of additional services for a fee. However there remains considerable uncertainty as to what additional service fees are permitted and this is precluding a number of providers charging additional service fees to residents who can afford to do so, even where the providers are already providing the additional services.

- There is a wide diversity in the financial performance of providers in both the residential and home care sectors. There are providers, irrespective of size, ownership type and location, who are achieving good returns (albeit somewhat lower than in previous years) under current funding arrangements. While a range of factors would be affecting the individual performance of providers, including in particular the demands facing providers operating in rural and remote areas, the magnitude of the variance in financial results suggests there is scope for many providers to improve their operations and performance.

- The introduction of home care packages following consumers has increased competition in the home care market and compressed providers' returns. Given the large increase in the number of approved home care providers, there is likely to be some rationalisation of providers in the future which could cause some disruption for consumers. A major development is the rise in unspent funds, which may mean that some consumers are not receiving all the care they require and is forgone business for providers. It may also indicate that some consumers could have been assessed as requiring more funding than they actually need. There are also prudential considerations in ensuring that the unspent funds being held by providers is available to be spent on consumers when required or returned to the Government and the consumer when the consumer leaves the provider. Providers also

have to be more flexible in adjusting their procedures and processes so they are more responsive to what consumers are seeking.

9.2 Characteristics of a viable and sustainable aged care system

One of ACFA's functions is to provide advice on the impact of funding and financing arrangements on the viability and sustainability of the aged care system. In pursuing this task, and against the background of developments in the aged care industry in recent years, ACFA has identified from a funding perspective a number of characteristics of a viable and sustainable aged care system.

Confidence and trust

The overriding challenge facing the Government is maintaining confidence and trust in the quality of aged care services and the funding and financing arrangements for the industry.

Towards achieving trust, the regulatory and funding arrangements have to be stable, understood, and transparent. Trust is essential because while the Government is the main source of funding for aged care, the services are primarily delivered by the non-government sector: for-profit and not-for- profit providers. These providers will not invest in the industry, nor will they be able to attract the required staff, unless they understand the basis of regulation, the Government's approach to the funding of the industry, and they have confidence in the adequacy and stability of Government policies.

From the consumer perspective, there needs to be trust in the quality of care people will receive from the aged care system for this will influence the preparedness of consumers and their families to seek the support that they need.

Stable, predictable, efficient, equitable and effective arrangements for allocating Government funding

There needs to be a stable, efficient and effective residential aged care funding tool which provides financial stability to both aged care providers and the Government. The Government also has the challenge of ensuring that the funding tool is consistent with achieving ongoing equity of access for all consumers and that it does not incentivise outmoded or inefficient care practices and use of resources.

The current review of alternative residential care funding arrangements and the Resource Utilisation and Classification Study (RUCS) is an important exercise. Desirable features of a new funding tool include: administrative simplicity, funding assessments external to the provider, equitable allocation of funds based on the mix of residents and their needs, recognition that many care costs are shared between residents, transparent studies to determine the cost of care and indexation arrangements that adequately reflect movement in costs. In introducing a new funding model, it will be important to ensure that providers have confidence in the new arrangements. The new system needs to be transparent, robust and evidence based to achieve this objective.

Similarly, there needs to be stable and efficient funding arrangements for home care that ensure that targeted care is available for all consumers. The home care funding arrangements should also be based on transparent studies to determine the cost of care.

Appropriate overall funding

Efficient arrangements for equitably allocating funding across residential care providers and home care consumers are necessary, but it is also important that the overall funding pool for the aged care system is adequate and sustainable. The funding has to be sufficient to meet the level and quality of aged care needs of current and prospective Australians and in doing so provide the incentive for providers to invest in the industry. The level of funding provided by the Government has to support the delivery of quality aged care services required by Australians. But it should not support inefficient or poorly managed providers nor should it provide higher than necessary funding.

The Government needs to ensure that the Budget forecasts of aged care spending are as realistic as possible. Aged care is a sizeable and growing component of the Commonwealth's Budget and its importance will grow in line with the ageing of the Australian population. An overshooting of aged care expenditure can cause problems for the management of the Government's accounts and bring into question its fiscal sustainability. It is not, however, a simple matter to determine the appropriate amount of funding for the aged care industry, although it is an issue that requires careful consideration. The industry is very diverse and the financial results of providers vary depending on business structures, financing arrangements, and motivations, including those who are mission based. In addition, the Government has to take into account the range of aged care services sought by the community, along with the extent to which consumers will contribute to the cost of their aged care.

It is important to ensure that the Government's contribution to care costs reflects the growth in these costs over time, although the indexation methodology should also make allowance for achievable productivity improvements. While the indexation rate for ACFI has been markedly lower than the rate of growth in the costs of providers, particularly wages, if the new funding model reduces the capacity of providers to boost their revenue through claiming behaviour, it will be important that the new indexation arrangements adequately reflect the growth in costs (while providing an incentive for productivity gains). It may take around two years before a new aged care funding tool is introduced. In the meantime the Government will need to ensure that the indexation of ACFI rates is appropriate and address the financial pressure confronting the industry.

Funding that is flexible and adaptable to changing demographics and demands

The demographics of the Australian population are such that there will be increasing pressure on funding for aged care, both residential and home care. Demand will change and there will be innovations in the way services are delivered and the interaction between aged care and other sectors, such as retirement living and hospitals. The funding arrangements have to be responsive to these changes and should not deter but rather encourage innovation.

Currently the provision of residential aged care places and home care packages is determined by the Aged Care Provision Ratio (the Ratio). The Tune Review concluded that while it would ultimately be desirable for the supply of aged care to be uncapped, significant work needed to be done before government could safely remove supply controls while ensuring the system was fiscally sustainable for government and equitable for consumers. Specifically, before uncapping supply there needs to be: an accurate understanding of underlying demand; equitable and sufficient contributions by consumers to their cost of care; a robust system for assessing eligibility for subsidised services; and provisions for ensuring equitable and continuing supply of aged care services in places where there are higher costs of service delivery limited choice and competition.

There has been progress on some of these requirements, but before they are all met the Tune Review made a number of recommendations to improve the flexibility of current arrangements, including to change the population cohort on which the target provision ratio is based, from people aged 70 years and over to people aged 75 years and over, which would allow the overall supply of aged care to better match the key demand driver in aged care, namely the ageing of the population. At the same time, the provision target ratio formula should be changed from operational places to consumers in order to enable comparable reporting and monitoring of supply and assist with assessing the level of unmet need. All these measures are consistent with ensuring the sustainability of an aged care system based on greater consumer choice and competition in service provision.

Equitable contribution to costs by consumers

Sustainable aged care funding arrangements will require consumers who can afford to do so to make a greater financial contribution towards their residential everyday living expenses and care costs, complemented by a greater choice of higher quality services. This would involve stronger means testing arrangements for care fees, which would reduce pressure on Government expenditure, and uncapping the basic daily fee in residential care, both in line with the recommendations of the Tune Review.

In addition, uncapping the basic daily fee for residential care for consumers who can afford to pay would boost the revenue of residential care providers and for some may provide the opportunity of dispensing with charging fees for the provision of additional services. There is currently uncertainty over what are permissible additional services that aged care providers can offer residents for a fee.

Another recommendation by the Tune Review which should be pursued is requiring that providers charge the income-tested care fee in home care and that the value of the basic daily fee is proportionate to the value of the home care package, although noting the measure to slightly reduce the basic daily fee for lower level care packages that was announced as part of the 2018-19 MYEFO in November 2019 was a step in this direction. There is also a need to improve consumer understanding of the fees they may be asked to pay so that they can more effectively plan for their aged care.

Effective prudential oversight

Effective prudential oversight of the aged care industry is necessary given that the range of current and prospective reforms and developments are likely to be disruptive to a number of providers. The current tight operating conditions will likely be accelerating the trend towards greater consolidation in the residential aged care market. There is also evidence that some providers are thinly capitalised (relatively higher proportion of liabilities to assets) and as a result are more exposed to financial and economic risk events. After a period of very strong growth in home care providers, it is likely that this will be followed by a reduction in the number of providers. In both residential and home care, there will always be a role for smaller operators, but the current tight conditions will likely put pressure on less efficient providers and those unable to achieve economies of scale.

An increasing number of marginal providers will likely need to sell or merge with other providers. Such a trend will lead to a more efficient and resilient aged care industry, however the adjustment should be orderly and any impact on consumers should be minimised. Towards the end, the Government should be proactive in identifying providers facing difficulties, providing advice and

support to such providers, and if necessary facilitate the sale or transfer of facilities or operations to another provider. This may require the Government contributing to meet the costs associated with a provider taking over another facing significant financial and likely quality, difficulties.

Sound management and governance arrangements

A sustainable aged care system will require well managed aged care providers with sound governance arrangements. It will also require adequate sources of financing to support the level of investment required to meet current and future demand for aged care services.

Providers need to look at their internal operations to ensure they are delivering care in the most efficient and effective way. The changes taking place in the sector as it moves towards a more consumer driven and market based system will continue to challenge traditional business and workforce models.

Providers have to take the lead in shaping the aged care workforce to take the industry into the future by implementing in full the recommendations of the Aged Care Work Force Strategy Taskforce. Providers will need to be increasingly responsive and flexible. For some providers this may include adjusting their business models to deal with an apparent shift from RADs to DAPs.

Under the current funding system there are very diverse financial outcomes, with the top quartile of providers in terms of profit continuing to achieve significantly better results than the lowest quartile. The very wide variation in financial performance across the sector suggests there is scope for many providers to pursue greater efficiencies and improve their results. Towards this objective, all providers should seek to ensure that their governance arrangements and management capabilities are best practice.

Appendices

Appendix A. ACFA Membership

Members

ACFA position	Name	Organisation
Chairman	Mr Mike Callaghan AM PSM	Economic consultant
Deputy chair	Mr Nicolas Mersiades	Director Aged Care, Catholic Health Australia
Member	Mr Ian Yates AM	Chief Executive, COTA Australia
Member	Mr Gary Barnier	Former aged care executive, independent advisor
Member	Mrs Natalie Smith	Head of Business Execution, Business and Private Bank, ANZ
Member	Prof Michael Woods	Professor, Centre for Health Economics Research and Evaluation, UTS Business School
Member	Dr Mike Rungie	Former CEO, Aged Care Housing Group
Member	Ms Susan Emerson	General Manager Equip for living and Leef Independent Living Solutions SA/NT
Member	Ms Louise Biti	Director, Aged Care Steps

Government representatives

Representative	Mr Jaye Smith	First Assistant Secretary, Ageing and Aged Care Group, Department of Health
Representative	Mr John Dicer	Aged Care Pricing Commissioner
Representative	Ms Leah Wojcik	Manager, Health and Disability Social Policy Division, Department of the Treasury

Appendix B. Work completed by ACFA to date

Work	Date of completion
ACFA's report on understanding how consumers plan and finance aged care	Published 24 December 2018.
ACFA's report on respite for aged care recipients	Published 28 November 2018.
ACFA's Update on Funding and Financing issues in residential aged care industry	Published 5 November 2018.
2018 ACFA Annual Report on Funding and Financing of the Aged Care Sector	Published 28 August 2018.
2017 Annual Report on Funding and Financing of the Aged Care Sector	Published in August 2017.
Application of the Base Interest Rate	Published in June 2017.
Bond Guarantee Scheme	Published in May 2017.
Report to Inform the 2016-17 Review of Amendments to the *Aged Care Act 1997*	Published in June 2017.
Access to Residential Care by Supported residents	Published in February 2017.
2016 Annual Report on Funding and Financing of the Aged Care Sector	Published in August 2016.
Report on Issues Affecting the Financial Performance of Rural and Remote Providers, Residential and Home Care	Published in February 2016.
2015 Annual Report on Funding and Financing of the Aged Care Sector	Published in August 2016.
Report on Factors Influencing the Financial Performance of Residential Aged Care Providers	Published in June 2015.
Report on Improving the Collection of Financial Data from Aged Care Providers	Published in October 2014.
Reports on the Impact of Financial Reforms on the Aged Care Sector	Monthly reports – August 2014 to April 2015 Quarterly reports – September 2015 to June 2016.
2014 Annual Report on the Funding and Financing of the Aged Care Sector	Published in August 2014.
Supported Residents Data Book	Published in May 2014.
Interim advice to the Minister on Improving the Collection of Financial Data from Aged Care Providers	Published in August 2013.
First Annual Report (2013) on the Funding and Financing of the Aged Care Sector	Published in July 2013.

Work	Date of completion
Estimation of the possible impacts on revenue and balance sheet funding from changes to accommodation payment arrangements	ACFA's advice and KPMG modelling published in May 2013.
The framework for setting accommodation payments in residential aged care	Final ACFA advice provided to Minister in November 2012. Government announced its position in December 2012. Further advice on the method for determining a RAD and a DAP using a MPIR provided to Minister on 17 May 2013. Government announced its position on 23 May 2013.

Appendix C. ACFA's stakeholder engagement

ACFA holds meetings and forums with representatives from the investment and financing industries, providers and consumers. This engagement is critical to ACFA's understanding of the key issues, developments and challenges facing the industry. Since July 2018, ACFA's consultations with the sector have increased significantly as noted in Chapter 1.

After publishing the Sixth report on the Funding and Financing of the Aged Care Sector, ACFA undertook to provide the Minister for Aged Care with an update of its assessment of the funding and financing issues currently impacting on the residential aged care sector. In August and September 2018, ACFA held over 40 consultations with a cross-section of residential care providers, financial institutions and analysts prior to the submission of the update in October 2018. The providers consulted included: profit and not-for-profit; metropolitan, regional and remote; and those operating one or a few facilities along with those operating a substantial number of facilities.

In preparation for its 2019 annual report, ACFA has once again consulted heavily with the sector, with consultations held in March and April 2019. Consultations once again included a wide range of aged care providers, financial institutions and analysts but this time also included home care providers in metropolitan and regional areas. The additional consultation this year has allowed ACFA to present an updated view of both the home care and residential care sectors in 2018-19.

ACFA Roundtables

In September and November 2018, ACFA held Roundtables in Sydney and Melbourne with members of the investment and financing community to share the findings of its 2018 annual report and to hear their views on key issues facing the sector.

Over 50 representatives from various organisations participated in the roundtables and a diverse range of issues and views were discussed regarding current and future investment in aged care, workforce issues and the availability of land and the challenges in developing that land into aged care facilities.

Presentations

Since its last annual report, ACFA has presented at the various forums:

- Aged Care Workforce Summit
- Council on the Ageing Criterion Conference on Post Budget Aged Care Reform
- Council on the Ageing Financial Sustainability in Aged Care Conference
- StewartBrown 2018 Aged Care Finance Forum
- Aged & Community Services Australia SA Finance & Aged Care Sector
- Aged & Community Services Australia NSW Finance & Aged Care Sector
- Aged & Community Services Australia TAS Finance & Aged Care Sector
- Estia Board Meeting

- Leading Age Services Australia State of the Industry Breakfast

Appendix D. Aged care workforce

Table D.1: Full-time equivalent (FTE) direct care employees in the residential aged care workforce, by occupation: 2003, 2007, 2012 and 2016 (estimated FTE and per cent)

Occupation	2003	2007	2012	2016
Nurse practitioner	n/a	n/a	190	293
Registered nurse	16,265	13,247	13,939	14,564
Enrolled nurse	10,945	9,856	10,999	9,126
Personal care attendant	42,943	50,542	64,669	69,983
Allied health professional	5,776	5,204	1,612	1,092
Allied health assistant			3,414	2,862
Total number of employees (FTE)	**76,006**	**78,849**	**94,823**	**97,920**
As a % of total employees				
Nurse practitioner	n/a	n/a	0.2%	0.3%
Registered nurse	21.4%	16.8%	14.7%	14.9%
Enrolled nurse	14.4%	12.5%	11.6%	9.3%
Personal care attendant	56.5%	64.1%	68.2%	71.5%
Allied health professional	7.6%	6.6%	1.7%	1.1%
Allied health assistant			3.6%	2.9%

Table D.2: Size of the home support and home care workforce, all PAYG employees and direct care employees: 2007, 2012 and 2016

Occupation	2007	2012	2016
All PAYG employees	87,478	149,801	130,263
Direct care employees	74,067	93,359	86,463

Table D.3: Direct care employees in the home support and home care workforce, by occupation: 2007, 2012 and 2016 (estimated FTE and per cent)

Occupation	2007	2012	2016
Nurse practitioner	n/a	55	41
Registered nurse	6,079	6,544	4,651
Enrolled nurse	1,197	2,345	1,143
Community care worker	35,832	41,394	34,712
Allied health professional	2,948	2,618	2,785
Allied health assistant		1,581	755
Total number of employees (FTE)	**46,056**	**54,537**	**44,087**
As a % of total employees			
Nurse practitioner	n/a	0.1%	0.1%
Registered nurse	13.2%	12.0%	10.5%
Enrolled nurse	2.6%	4.3%	2.6%
Community care worker	77.8%	75.9%	78.7%
Allied health professional	6.4%	4.8%	6.3%
Allied health assistant		2.9%	1.7%

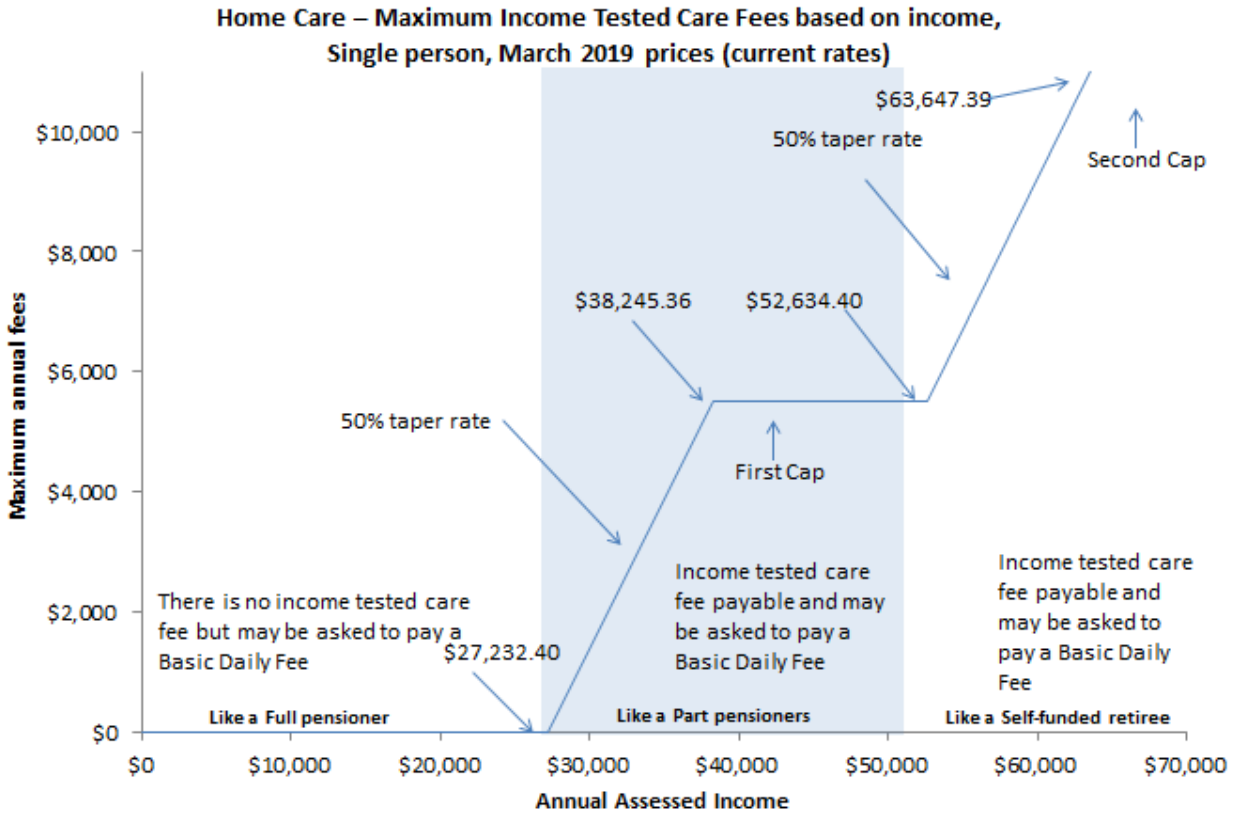
Appendix E. Means testing arrangements

Home care

In addition to the basic daily fee, an income-tested care fee was introduced in home care from 1 July 2014. Unlike the arrangements for the basic daily fee, the Commonwealth payment received by the provider is reduced by the amount of the income-tested care fee. Accordingly, to receive an amount equivalent to the full subsidy the provider needs to charge the appropriate income-tested care fee.

Annual income-tested care fees in home care are currently capped at $5,506.48 for part-pensioners and $11,012.99 for non-pensioners (March 2019 rate). A lifetime cap of $66,078.27 per consumer currently applies for care contributions across home care and residential care (March 2019 rate). Full pensioners are not required to contribute to their care costs and may only be required to pay the basic daily fee.

Figure E.1 Current income testing for home care (post 1 July 2014)



Residential care

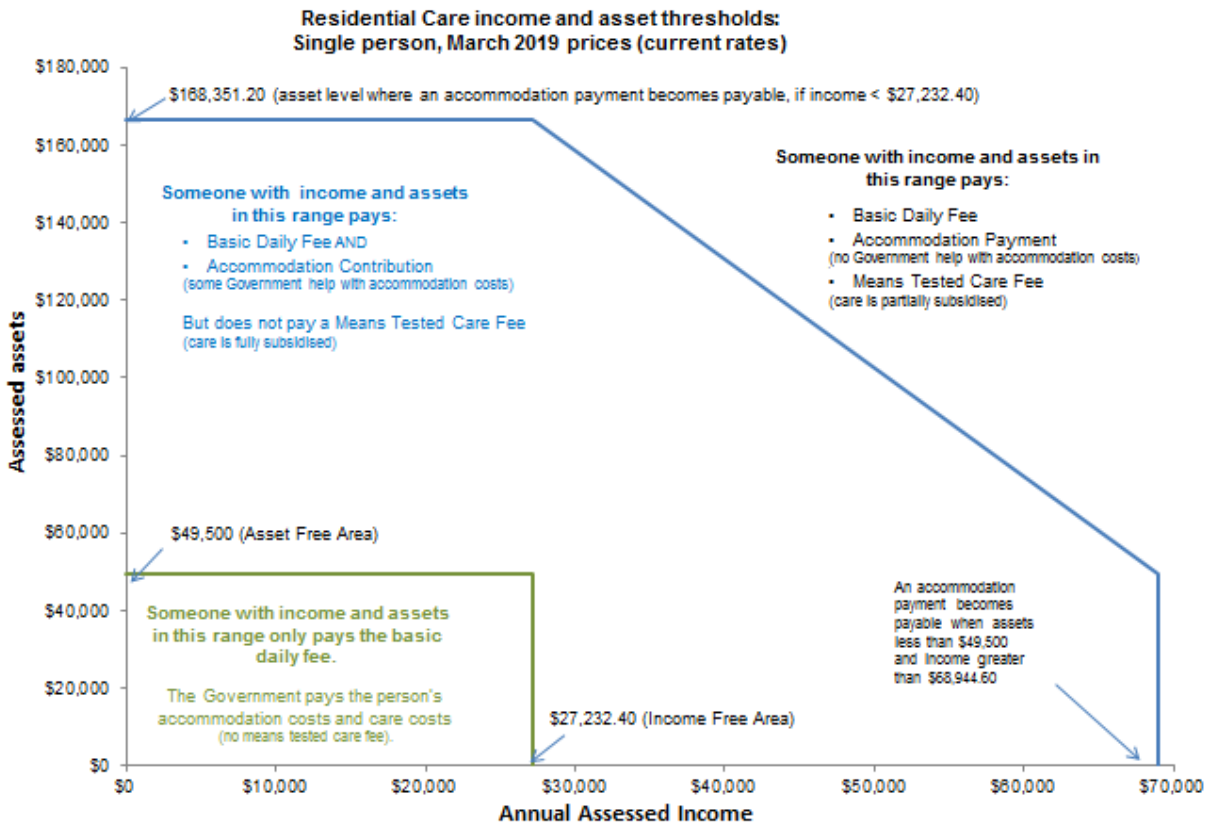
Changes to residential care from 1 July 2014 introduced more comprehensive means testing arrangements by way of a combined assets and income assessment and a new fees structure.

Annual and lifetime caps were also introduced, with an annual cap of $27,532.59 applying to the means-tested care fee and a lifetime cap of $66,078.27 for care contributions (March 2019 rate).

Figure E.2 demonstrates how the means testing arrangements created three tiers of consumer contributions in residential care:

- consumers with low means, who are required to pay only the basic daily fee (85 per cent of the single basic age pension) as a contribution towards their daily living expenses, while their accommodation and care costs are funded by the Australian Government;
- consumers with moderate means, who in addition to contributing towards their daily living expenses by paying the basic daily fee, also make a capped contribution towards their accommodation costs; and
- consumers with greater means, who in addition to contributing towards their daily living expenses, also pay the basic daily fee for their accommodation costs in full and make a capped contribution towards their care costs.

Figure E.2 Current means testing for residential care (post 1 July 2014)



Appendix F. Financial ratios by provider ownership type

Table F.1: Financial ratios of total sector by provider type, 2017-18

	Not-for-profit	For-profit	Government	Total sector

NPBT margin	14.5%	4.1%	0.5%	-16.5%	5.7%
Occupancy	88.3%	90.1%	85.8%	75.4%	87.7%
%EBITDA to T. Assets	7.1%	3.6%	1.5%	-2.5%	4.0%
%EBITDA to Net Worth	89.3%	28.5%	14.6%	Note 1	42.5%
RADs Asset Cover (T.A.)	1.7 times	1.7 times	1.0 times	1.7 times	1.6 times

Note 1 - The bottom quartile of the for-profit sector has been distorted by a number of providers who have significant deficits in their net assets, which has resulted in the total net assets of that quartile being negative. The %EBITDA to Net Worth calculation does not return a useful amount, and therefore has not been published.

Appendix G. Residential aged care subsidies and supplements

Table G.1: Total expenditure for subsidies and supplements in residential care, 2015-16 to 2017-18

	2015-16	2016-17	2017-18
Basic Care subsidies	**$M**	**$M**	**$M**
Permanent	10,507.7	11,024.2	11,163.5
Respite	264.4	280.6	312.3
Primary care supplements	**$M**	**$M**	**$M**
Oxygen	16.5	17.5	18.3
Enteral feeding	6.3	5.9	5.9
Respite incentive	29.0	30.1	34.6
Hardship	**$M**	**$M**	**$M**
Hardship	5.2	4.9	4.0
Accommodation supplements	**$M**	**$M**	**$M**
Accommodation supplement	845.7	907.5	1,029.6
Hardship accommodation	3.6	2.9	2.6
Transitional accommodation Supplement	22.3	15.5	10.7

Accommodation charge top-up	2.1	1.4	1.0
Pensioner supplement	36.3	27.2	20.7
Viability Supplement	**$M**	**$M**	**$M**
Viability	35.6	43.2	55.8
Supplements relating to grand parenting	**$M**	**$M**	**$M**
Transitional	6.0	4.8	3.8
Charge exempt	3.8	2.0	1.8
Basic daily fee	0.6	0.4	0.3
Other supplements	**$M**	**$M**	**$M**
Veterans'	1.8	1.1	1.6
Homeless	7.6	8.3	8.6
Reductions	**$M**	**$M**	**$M**
Means testing reduction	-455.7	-560.8	-564.0
Other	-31.5	31.5	42.0
TOTAL	**11,372.3**	**11,903.8**	**12,204.2**

Appendix H. Residential care subsidy and supplements rates

Table H.1: ACFI rates ($ per day), 2016-17 to 2018-19

ACFI	2016-17	2017-18	2018-19
Activities of daily living (ADL)			
Low	$36.65	$36.65	$37.16
Medium	$79.80	$79.80	$80.92
High	$110.55	$110.55	$112.10
Behaviour (BEH)			
Low	$8.37	$8.37	$8.49
Medium	$17.36	$17.36	$17.60
High	$36.19	$36.19	$36.70
Complex Health Care (CHC)			
Low	$16.37	$16.37	$16.48
Medium	$46.62	$46.62	$46.95
High	$67.32	$67.32	$67.79
Interim rate for new residents pending ACFI assessment	$56.22	$56.22	$57.01

Daily residential respite subsidy rates	2016-17	2017-18	2018-19
Low	$45.45	$46.09	$51.17
High	$127.46	$129.24	$143.47

Table H.2 Residential care supplements table, 2016-17 to 2018-19

Residential care	2016-17	2017-18	2018-19
Oxygen supplement*	$11.12	$11.35	$11.57
Enteral Feeding supplement – Bolus*	$17.62	$17.99	$18.33
Enteral Feeding supplement – Non-bolus*	$19.79	$20.21	$20.59
Adjusted Subsidy Reduction	$12.85	$13.03	$13.21
Veterans' supplement	$6.88	$6.98	$7.08
Homeless supplement	$15.72	$15.94	$21.01

*These supplements are payable in respect of eligible residential respite care recipients.

Table H.3: Residential care supplements (accommodation and hotel related)

Residential care	20/03/17	20/09/17	20/03/18
Higher accommodation supplement - newly built or significantly refurbished facilities	$55.09	$55.44	$57.14

Residential care	20/03/17	20/09/17	20/03/18
Accommodation supplement - facilities that are not newly built or significantly refurbished but do meet set building requirements	$35.90	$36.13	$37.24
Accommodation supplement – facilities that are not newly built or significantly refurbished and don't meet set building requirements	$30.17	$30.36	$31.29
Concessional resident supplement (concessional and assisted residents) - newly built or significantly refurbished facilities	$55.09	$55.44	$57.14
Concessional resident supplement (concessional residents) – facilities that are not newly built or refurbished	$21.95	$22.09	$22.77
Concessional resident supplement (assisted residents) - facilities that are not newly built or significantly refurbished	$9.03	$9.09	$9.36
After 19 March 2008 and before 20 September 2010	$8.22	$8.27	$8.52
After 19 September 2010 and before 20 March 2011	$5.48	$5.51	$5.68
After 19 March 2011 and before 20 September 2011	$2.74	$2.76	$2.84
Transitional supplement	$21.95	$22.09	$22.77
Basic Daily Fee supplement	$0.57	$0.58	$0.60
Respite supplement – high level is equal to or greater than 70% of the specified proportion of respite care for the approved provider	$90.01	$90.59	$93.36
Respite supplement – high level is less than 70% of the specified proportion of respite care for the approved provider	$52.90	$53.24	$54.87
Respite supplement – low level	$37.74	$37.98	$39.15

Table H.4: Residential aged care viability supplement

Residential care viability supplement*	2016-17	2017-18	2018-19
2017 Scheme Services			
Eligibility score of 100	$53.22	$56.09	$73.94
Eligibility score of 95	$47.17	$49.95	$65.85
Eligibility score of 90	$42.35	$45.06	$59.40
Eligibility score of 85	$36.31	$38.94	$51.34
Eligibility score of 80	$30.22	$32.76	$43.19
Eligibility score of 75	$23.03	$25.47	$33.58
Eligibility score of 70	$16.74	$19.09	$25.17
Eligibility score of 65	$11.47	$13.75	$18.12
Eligibility score of 60	$9.38	$11.63	$15.33
Eligibility score of 55	$6.27	$8.48	$11.18
Eligibility score of 50	$4.18	$6.36	$8.39
Eligibility score of 45 #	$0.00	$0.00	$0.00
Eligibility score of 40 #	$0.00	$0.00	$0.00
Less than a score of 40	$0.00	$0.00	$0.00

Note: the Modified Monash Model classification scale was implemented on 1 January 2017

*These supplements are payable in respect of eligible residential respite care recipients.

Table K.3: Summary of Australian Government payments of subsidies and supplements of home care, 2015-16 to 2017-18

Supplement	2015-16	2016-17	2017-18
Dementia and cognition supplement	$21.7m	$24.7m	$29.3m
Veterans' supplement	$0.2m	$0.2m	$0.3m
Oxygen supplement	$1.8 m	$2.4m	$3.1m
Enteral feeding supplement	$0.5m	$0.7m	$0.9m
Viability supplement	$7.2m	$11.4m	$16.0m
Hardship supplement	$0.2m	$0.2m	$0.3m

Supplements in home care:

Dementia and Cognition supplement: provides additional funding in recognition of the extra costs of caring for people with cognitive impairment associated with dementia and other conditions. This supplement is available across all levels of home care packages. The supplement is payable at a rate of 10 per cent of the basic subsidy payable for the level of home care package.

Veterans' supplement: provides additional funding for veterans with a mental health condition accepted by the Department of Veterans' Affairs (DVA) as related to their service.

Oxygen supplement: provides additional funding for consumers who have a specified medical need for the continual administration of oxygen.

Enteral Feeding supplement: provides additional funding for care recipients with a specified medical need for enteral feeding.

Viability supplement: is paid in recognition of the higher costs of providing services in rural and remote areas.

Hardship supplement: is available to home care consumers who are having difficulty paying their aged care fees for reasons beyond their control.

Appendix L. Residential care and home care financial data

- Residential care and home care providers financial data is obtained from Aged Care Financial Reports (ACFRs) required to be prepared and submitted by providers of residential aged care under the *Accountability Principles 2014 (Section 35, 35A, 36, 37 and 37A) made under Section 96-1 of the Aged Care Act 1997*.
- Residential and home care financial data and analysis given in this report includes financial information for only those services that were operational from 01 July 2017 to 30 June 2018 and whose financial information is received by the Department of Health.
- Approximately 99 per cent of residential aged care providers and 97 per cent of the home care providers submitted their ACFRs.
- Financial information contained in ACFRs varies from provider to provider. Accounting standards are subject to interpretation and it is possible that interpretations may differ between providers. The Department has not verified provider's interpretation and application of the accounting standards.
- The information in the ACFR is not audited. It is however tested for reasonableness to the Approved Provider's audited General Purpose Financial Report which is also submitted annually. Whilst some verification of data is undertaken by the department, a significant portion of data submitted through the ACFR has not been independently verified.
- Analysis of financial data may be affected by incomplete, aggregated data provided in ACFRs. As a result, averages stated in the report may not fully represent the sector.
- Discrepancies occur in the ACFR home care income statement which can impact the overall average results of the sector. For example, there are instances where the details of the expenses are aggregated to other expenses or total expenses. There are also instances where income and expenditure through brokered services are not disclosed in their entirety thus understating revenue and expenditure. These instances result in inconsistency and limitations in deriving various metrics and measurements.
- The ACFR home care income and expenses are aggregated for Commonwealth Government funded packaged consumers and private consumerss. Therefore, the analysis used in this report is not interpretable for any particular group of clients who are receiving/paying any particular funding type.
- Assets and liabilities reported in the residential aged care balance sheet contain, where not already fully verifiable, some proportional allocations based on the historical and sector trends from other sources within provider ACFRs and GPFRs. These allocations have not been verified.

Glossary

Term	Definition
Accommodation supplement	The accommodation supplement is payable on behalf of residents receiving permanent residential aged care who do not have the capacity to contribute to all or part of the cost of their accommodation.
Aged and Community Services Australia (ACSA)	A national peak body for not-for-profit providers of aged and community care in Australia.
***Aged Care Act 1997* (the Act)**	The primary legislation governing the provision of aged care services.
Aged Care Approvals Round (ACAR)	A competitive application process that enables prospective and existing approved providers of residential aged care to apply for a range of new Australian Government funded aged care places and financial assistance in the form of a capital grant.
Aged Care Assessment Team (ACAT)	ACATs are teams of medical and allied health professionals who assess the physical, psychological, medical, restorative, cultural and social needs of frail older people and help them and their carers to access appropriate levels of support.
Aged Care Financial Report (ACFR)	A reporting template introduced for the 2016-17 reporting year that consolidates prudential and financial reporting information that was previously separately reported. The ACFR consolidates information previously reported through the Annual Prudential Compliance Statement, the Survey of Aged Care Homes, the Home Care Financial Report and the Short Term Restorative Care Financial Report.
Aged Care Financing Authority (ACFA)	ACFA is a statutory committee that provides independent advice to the Australian Government on funding and financing issues, informed by consultation with consumers, and the aged care and finance sectors.
Aged Care Funding Instrument (ACFI)	The classification instrument used to calculate subsidies to residential aged care facilities.
Aged Care Pricing Commissioner	The Aged Care Pricing Commissioner is an independent, statutory office holder appointed under the *Aged Care Act 1997* and reports to the Minister for Aged Care.
Aged Care Sector Committee (ACSC)	The ACSC is a representative committee of the aged care sector appointed by the Minister for Aged Care that provides advice to Government on aged care policy development and implementation and helps to guide future reform of the aged care system.
Agreed accommodation price	Accommodation prices agreed between providers and prospective residents prior to entry, as reported by providers through the Aged Care Entry Record.

Approved provider	An approved provider of aged care is an organisation that has been approved by the Secretary of the Department of Health to provide residential care, home care or flexible care under the *Aged Care Act 1997*.
Assistance with Care and Housing for the Aged (ACHA)	ACHA is a program which provides a range of supports for eligible clients, who are at risk of becoming homeless or are homeless, to remain in the community through accessing appropriate, sustainable and affordable housing and linking them to community care. From 1 July 2015 the ACHA program was incorporated into the new Commonwealth Home Support Programme.
Australian Bureau of Statistics (ABS)	The Government agency responsible for the production and dissemination of statistics in a range of key areas.
Bed days	The number of days for which a residential care place was available to be occupied by care recipients.
Bond Asset Cover	Provides an indication of the extent to which the accommodation bond liability is covered by assets. It is calculated as Total Assets/Total Accommodation Bonds.
Brownfield site	Site where an extension to an existing aged care operation is possible.
Care days	The number of days for which care was actually provided to a care recipient in an aged care place.
Commonwealth Home Support Programme (CHSP)	This program provides entry-level support services designed to help frail older people stay in their homes. It was introduced on 1 July 2015, consolidating four former programs: Commonwealth Home and Community Care (HACC); the National Respite for Carers Program (NRCP); Day Therapy Centres (DTC); and Assistance with Care and Housing for the Aged (ACHA).
Community Aged Care Package (CACP)	A package of services provided to a person in their own home. This type of care was replaced on 1 August 2013 when the new home care package levels 1-4 were introduced. A CACP package is generally consistent with the level of care provided in a level 2 home care package.
Consumer Directed Care (CDC)	Consumer Directed Care in home care gives consumers greater choice over their own lives by allowing them to decide what types of care and services they access and how those services are delivered.
Consumer Price Index (CPI)	CPI measures the changes in the price of a fixed basket of goods and services, acquired by household consumers who are resident in the eight state and territory capital cities.
Culturally and Linguistically Diverse (CALD)	Consumers who have particular cultural or linguistic affiliations due to their: • place of birth or ethnic origin; • main language other than English spoken at home; or • proficiency in spoken English.

Current Ratio	Represents the ability to meet short term debt through current assets. A current ratio of more than one indicates that an organisation's current assets exceed its current liabilities. It is calculated as Current Assets/Current Liabilities. In the aged care context, current ratio needs to be interpreted with caution given all accommodation deposits (bonds pre 1 July 2014) held by providers are treated as current liabilities.
Daily Accommodation Contribution (DAC)	An amount paid by a partially supported resident as a contribution toward their accommodation costs in a residential aged care facility, calculated on a daily basis and paid periodically.
Daily Accommodation Payment (DAP)	An amount paid by a non-supported resident towards their accommodation costs in a residential aged care facility calculated on a daily basis and paid periodically.
Day Therapy Centres Program (DTC)	The DTC program provides a wide range of therapy and services to eligible frail, aged people living in the community and to residents in Commonwealth funded residential aged care facilities. It assists them to regain or maintain physical and cognitive abilities which support them to either maintain or recover a level of independence. As of 1 July 2015 the DTC program became part of the new Commonwealth Home Support Programme.
Department of Health	The department that administers the *Aged Care Act 1997* and regulates the aged care industry on behalf of the Commonwealth.
Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA)	Net profit after tax with interest, tax, depreciation, and amortisation added back to it, and can be used to analyse and compare profitability between companies and industries because it eliminates the effects of financing and accounting decisions.
EBITDA margin	EBITDA margin shows the average net profit after tax (with interest, taxes, depreciation and amortisation added back into it) generated for each $1 of revenue earned. It's calculated as EBITDA/total revenue.
Extended Aged Care at Home (EACH)	Services previously provided to a person in their own home, who required a high level of care. This type of care was replaced on 1 August 2013 when the new home care package levels 1-4 were introduced. An EACH package was generally consistent with the level of care provided in a level 4 home care package.
Extended Aged Care at Home Dementia (EACH-D)	Services previously provided to a person in their own home, with dementia, who required a high level of care. This type of care was replaced on 1 August 2013 when the new home care package levels 1-4 were introduced. An EACH-D package was generally consistent with the level of care provided in a level 4 home care package, with the additional Dementia and Cognition supplement also being paid.
Facility	A residential aged care facility, approved under the *Aged Care Act 1997* to provide government subsidised accommodation and care.
Financial Accountability Reports (FARs)	FARs were non-audited financial statements submitted by approved providers of home care services up until 2014-15 when they were replaced by the new Home Care Packages financial reports. In 2016-17 the Home Care Packages financial reports were subsequently replaced by the Aged Care Financial Reports.

Flexible care	For those in either a residential or home care setting, that may require a different care approach than that provided through mainstream residential and home care.
General Purpose Financial Report (GPFR)	An audited financial report that is submitted by providers with their unaudited Aged Care Financial Report (ACFR). While the ACFR provides a greater level of detail the GPFR is the only audited report and is used to verify information provided.
Government provider	In the context of this report, the term references a provider that is owned by a local, state or territory government.
Greenfield site	Site where an aged care operation is built for the first time.
Gross Domestic Product (GDP)	GDP is the market value of all officially recognised final goods and services produced within a country in a year, or over a given period of time.
High care facility	A facility where over 80 per cent of residents were classified as 'high care'. The distinction between high care and low care in permanent residential care was removed from 1 July 2014.
Higher accommodation supplement	A higher maximum accommodation supplement was introduced on 1 July 2014 for aged care facilities that have been built or significantly refurbished since 20 April 2012.
Home and Community Care (HACC)	A previous program that provided basic support and maintenance to people living at home to help avoid premature or inappropriate admission to long-term residential care (WA only in 2016-17). Note: the former Commonwealth HACC program was consolidated into the new CHSP from 1 July 2015.
Home care	Home based care provided through a home care package to help older Australians to remain in their own homes. Home care is provided through the Home Care Packages Program.
Home care package	A package of services, delivered though the Home Care Packages Program, tailored to meet the care needs of a person living at home. The package is coordinated by an approved home care provider, with funding provided by the Australian Government (with some contributions from the consumer). Home care packages range from level 1 to 4 depending on the care needs of the consumer.
Home Care Packages Program	An Australian Government funded program which has as its objectives to assist people to remain living at home and enable consumers to have choice and flexibility in the way that care and support is provided at home. The Home Care Packages Program commenced on 1 August 2013.
Homeless supplement	A supplement paid to better support aged care facilities that specialise in caring for people with a history of, or at risk of, homelessness. This funding is in addition to the funding provided under the viability supplement.

Increasing choice in home care	From 27 February 2017, funding for a home care package followed the consumer, replacing the former system where home care places were allocated to individual approved providers to deliver services in a particular location or region. A consistent national approach to assigning home care packages, which allowed for a more equitable and flexible distribution of home care packages. A streamlined process for organisations seeking to become approved providers under the Aged Care Act 1997.
Interest Coverage	Shows the number of times that EBITDA will cover interest expense. Indicates an organisation's ability to service the interest on its debt. It is calculated as EBITDA/Interest Expense.
Leading Age Services Australia (LASA)	LASA is a peak body for aged service providers.
Location	Indicates where a provider, service or consumer is located based on whether they are metropolitan or regional areas. Metropolitan is all major cities and regional is any area outside of a major city. A provider is classified as metropolitan if more than 70 per cent of its services are located in metropolitan areas and similarly classified as regional if more than 70 per cent of its services are located in regional areas.
Low care facility	A facility where over 80 per cent of residents were classified as 'low care'. The distinction between high care and low care was removed from 1 July 2014.
Maximum accommodation price	Maximum accommodation prices set by residential care providers for a room (or bed in a shared room) and published on My Aged Care. These are maximum prices (providers and residents may agree lower amounts), that apply to residents who are not eligible for support with their accommodation costs.
Maximum Permissible Interest Rate (MPIR)	The MPIR is the rate used to calculate the equivalent daily payment of a Refundable Accommodation Deposit (RAD). The RAD is multiplied by the MPIR and divided by 365 days. The MPIR is determined in accordance with Section 6 of the *Fees and Payments Principles 2014 (No. 2)*.The MPIR is available on the Department of Health website and is updated every three months.
Mixed care facility	A facility where less than 80 per cent of residents were high care residents and more than 20 per cent were low care residents. The distinction between high care and low care was removed in permanent residential care from 1 July 2014.
My Aged Care	The main entry point to the aged care system in Australia. My Aged Care aims to make it easier for older people, their families, and carers to access information on ageing and aged care, have their needs assessed and be supported to find and access services.
National Disability Insurance Scheme (NDIS)	The NDIS offers support for Australians who are under 65 years of age with a significant and permanent disability, their families and their carers.

National Respite for Carers Program (NRCP)	The NRCP aims to support caring relationships between carers and their dependent family members or friends by facilitating access to information, respite care and other support appropriate to their individual needs and circumstances and those of the people for whom they care. The NRCP was integrated into the CHSP from 1 July 2015.
National Prioritisation System	People who have been approved for home care and have indicated they are actively seeking services are placed in the National Prioritisation System, with each person's place in the system based on the time and date of their approval for home care and their priority for service (medium or high).
Net Profit Before Tax (NPBT)	The NPBT is determined by revenue minus expenses for the period except for taxes.
Net Profit (Before Tax) Margin	Shows the average profitability generated on each $1 of total revenue. It is calculated as Net Profit Before Tax / total revenue.
Non-supported residents	Residents who have been assessed (based on a means test) as able to pay the full cost of their accommodation and contribute toward their care costs. Non-supported residents pay a basic daily fee, accommodation payment and means-tested care fee (may still receive some assistance with care costs).
Offline residential care places	Previously operational places that are currently not being used due to renovations or rebuilding of facilities or pending sale to other providers. Providers do not receive Australian Government subsidies while places are offline.
Operational places	Operational place refers to a residential care place that was allocated to a provider and has since become available for a person to receive care.
Partially supported residents	Residents who have been assessed (based on a means test) as eligible for full government assistance with their care costs, but able to make a part contribution to their accommodation costs. Partially-supported residents pay a basic daily fee and accommodation contribution.
Pay as you go (PAYG)	Pay as you go (PAYG) instalments is a system for making regular payments towards an employee's expected annual income tax liability.
Per consumer per annum (pcpa)	An annual average financial figure relating to home care consumers.
Per consumer per day (pcpd)	A daily average financial figure relating to home care consumers.
Per resident per annum (prpa)	An annual average financial figure relating to residential aged care residents that converts service financial data to daily amount per resident.
Per resident per day (prpd)	A daily average financial figure relating to residential aged care residents.
Provisionally allocated places (PA)	Residential care places allocated through Aged Care Approval Rounds that are not yet operational.
Refundable Accommodation Contribution (RAC)	An amount paid as a lump sum by a partially supported resident as a contribution toward their accommodation costs in a residential aged care facility.
Refundable Accommodation Deposit (RAD)	An amount paid as a lump sum by a non-supported resident for their accommodation costs in a residential aged care facility.

Regional	Geographic region outside of a major city and classified by the Australian Bureau of Statistics as inner regional, outer regional, remote and very remote.
Regional Assessment Services (RAS)	RAS provides in home, face to face assessments of new and existing clients/carers to assess their eligibility to access CHSP services.
Report on the Operations of the *Aged Care Act 1997* (ROACA)	A legal requirement under the Act, the ROACA is tabled in Parliament in November each year and presents an annual snapshot of facts and figures on Commonwealth funded aged care services in Australia.
Resident Classification Scale (RCS)	The basic tool for residential aged care funding prior to 20 March 2008, when it was replaced by the ACFI. A very small number of residents who entered care before 20 March 2008 are still classified using the RCS through grand-parenting arrangements.
Residential aged care	A program that provides a range of care options and accommodation for older people who choose not to continue living in their own homes.
Restorative care	Care focusing on enhancing the physical and cognitive function of people who have lost or are at risk of losing condition and independence. The Short-Term Restorative Care (STRC) Programme, which commenced in February 2017, is a flexible care program to provide restorative care to older people to improve their capacity to stay independent and living in their own homes.
Retained earnings	Refers to the percentage of net earnings not paid out as dividends, but retained by the company to be reinvested in its core business, or to pay debt. This is recorded under shareholders' equity on the balance sheet.
Retention amounts	An amount that an approved provider is allowed to deduct per month from an accommodation bond for up to five years. The maximum retention amount is set by the Australian Government. Retentions are no longer permitted for residents entering residential aged care on or after 1 July 2014.
Return on Assets	Indicates the productivity of assets employed in the organisation. It is calculated as EBITDA/total assets.
Return on Equity/ Return on Net Worth	Indicates the productivity of equity/net worth employed in the organisation. It is calculated as EBITDA/net worth.
Scale (providers)	Refers to the number of services operated by a provider.
Size (providers)	Refers to the number of beds operated by a specific residential aged care service.
Supported residents	Residents who have been assessed (based on a means test) as eligible for full government assistance with their care and accommodation costs. Supported residents only pay a basic daily fee.
Survey of Aged Care Homes (SACH)	Each year SACH seeks information on accommodation payments and planned and actual building activity during the previous financial year for each operating residential aged care service.
Target provision ratio	The Australian Government target of subsidised operational aged care places. These targets are based on the number of persons for every 1,000 people aged 70 years or over. The population-based provision formula ensures that the supply of services increases in line with the ageing of the population.

Transition care	For those requiring time-limited, goal-oriented and therapy-focused packages of services after a hospital stay.
Viability supplement	The viability supplement aims to improve the financial position of smaller, rural and remote aged care services that incur additional costs due to their location and are constrained in their ability to realise economies of scale due to smaller numbers of care recipients. The viability supplement also provides additional funding for residential care providers who specialise in services to Indigenous people, or people who are homeless or who are at risk of becoming homeless, in recognition of the often higher costs associated with providing care to these people.
Working Capital	Defined as current assets less current liabilities.

Seventh report on the Funding and Financing of the Aged Care Sector – summation and commentary

July 2019

OVERVIEW

The Aged Care Financing Authority (ACFA) released its seventh report on the Funding and Financing of the Aged Care Sector (the Report) for the 2017-18 year, see here.

The Report's *Forward* contains several key observations, these include:

- Government Policies[1] impacting on financial performance of aged care providers:
  - Changes to the ACFI instrument (from 2016 and 2017)
  - Introduction of home care consumers having choice of services under their packages, including choice of provider;

- The report notes that 'after five years of steady improvement, the overall financial performance of residential aged care providers declined in 2017-18' noting:
  - The number of providers making a net profit fell from 68 percent in 2016-17 to 56 per cent in 2017-18
  - The above decline in numbers of providers making a net profit relates in large part to the changes made to ACFI, and that these pressures have continued into the 2018-19 year[2];

- The Report notes there are a number of aspects of residential care that warrant careful monitoring, these being:
  - Declining overall occupancy rates
  - A shift in resident payments from refundable accommodation deposits (RADs) to daily accommodation payments (DAPs)
  - A decline in providers intention to rebuild or upgrade their facilities and
  - Signs that an 'increasing number of smaller providers are seeking to leave the industry'[3];

- The overall performance of home care providers has also declined in 2017-18, and again as for residential aged care providers, these pressures are continuing on into the 2018-19 financial year, the main influence being:
  - Increased competition 'caused by the introduction of consumers being able to choose the provider from whom they receive their services'[4];

---

[1] Seventh report on the Funding and Financing of the Aged Care Industry 2019, Aged Care Financing Authority, Australian Government, 2019, p1
[2] Ibid, p1
[3] Ibid, pp1-2
[4] Ibid, p1

- Again, in relation to home care the report identifies the following as warranting monitoring:
  - The impact of increased competition
  - The prospect of a rationalisation in the number of approved providers, and
  - The implications of the continuing rise in unspent package funds; and

- That the Royal Commission into Aged Care Quality and Safety is likely to be a significant influence on funding and financing in the aged care industry[5].

The Report Executive Summary identifies a range of characteristics that are required for a 'sustainable aged care system[6], these being:

- *Confidence and trust* – approved providers will not invest unless they have confidence in the adequacy and stability of government policies;
- *Stable, predictable, efficient, equitable and effective arrangements for allocating government funding* – being the 'desirable' features of a funding tool;
- *Appropriate overall funding* – that the overall funding pool for aged care is sufficient to support the level and quality of aged care services required by older Australians;
- *Funding that is flexible and adaptable to changing demographics and demands* – funding arrangements needs to be responsive to changes in service demand and they should not deter but encourage innovation;
- *Equitable contribution to costs by consumers* – sustainable aged care funding will require that consumers who can afford to do so make a greater contribution to their living and care costs;
- *Effective prudential oversight* – effective prudential oversight is necessary for the sector; and
- *Sound management and governance arrangements* – a sustainable aged care system will require well managed aged care services and providers with sound governance arrangements.

ACFA acknowledges the time-lag in the data that is presented in its reports. To address this, they undertook an additional report which it provided to the Government providing an update on the funding and financing of the aged care sector, a copy of that November 2018 report can be found here. ACFA's submission to the Royal Commission into Aged Care can be found here.

ACSA commentary

[5] Ibid, p2
[6] Ibid, p9-10

The Report highlights deterioration in the financial position of home care and residential care providers for the 2017-18 financial year, with the expectation that the financial difficulties being experienced by the sector will continue into the 2018-19 year.

The deterioration in key financial metrics as highlighted in Section One below are broadly consistent with data from other sector analysts, such as StewartBrown, see here.

At a high level:

- In residential care:
  - Income grew by around 1.7 per cent in 2017-18, whilst costs rose by around 5.3 per cent, with the number of residential providers making a net profit declining
  - There are declining occupancy rates
  - There is a shift to DAPs away from RADs
  - A decline in providers intending to rebuild or upgrade their facilities, and
  - There being signs of a number of smaller providers looking to exit the sector.
- In home care:
  - Expenses per customer increased by around 7 per cent in 2017-18 whilst over the same period income per provider decreased by around 1 per cent,
  - There are impacts on the viability of home care providers in relation to increased competition resulting in declining margins,
  - Unspent funds are continuing to grow, and
  - EBITDA is falling year on year;

Indexation is simply not keeping up with the growth in expenses. In our submission to the Royal Commission into Aged Care Quality and Safety[7], we argue that it is in the interest of the community, which has a growing number of older people, that there is a healthy, viable and sustainable residential aged care sector. It is in no-one's interest to have a sector where:

- Indexation does not keep pace with the growth in expenses;
- Direct care costs in residential care are outstripping income;
- Long term trends over time show disturbing trends on a per bed day basis; and
- The overall effect of income and expenditure pressures result in 42.3 per cent of residential aged care facilities operating at a loss, with this rising to 61 per cent for regional, rural and remote (RRR) facilities[8].

Separately, in our response to the proposed new funding model in residential aged care[9], we argue that it is the quantum of funding available to the sector that is the primary concern,

[8] Aged Care Financial Sector Survey (Six months ended December 2018), StewartBrown, February 2019, p17

[9] Proposal for a New Residential Aged Care Funding Model: Consultation Paper, Aged & Community Services Australia Submission, June 2019, p4

simply put the sector is experiencing the effect of inadequate base level funding compounded by inadequate indexation.

This ongoing inadequate indexation is compounded again for the coming 19-20FY with the recently announced indexation figure of 1.4 per cent.

The Report observes that whilst residential care providers welcomed the temporary boost in funding from Government ($50 million to assist in transitioning to the new Aged Care Quality Standards and the $320 million General Subsidy boost), both of which ceased 30 June this year, providers noted 'that because the increases are not ongoing they will not address their underlying financial pressures'[10]. This observation is consistent with feedback that ACSA has received from many of its members.

ACSA continues to lobby the Minister for Aged Care and Senior Australians and the Government for the extension of the 9.5 per cent general Subsidy boost for the 2019-20 year, and for indexation to be lifted for all aged care programs.

The Report references a consolidation in the number of residential aged care providers, see Table Four below. Separately in the report there is a reference to there being evidence of smaller providers looking to exit the sector (p2). It is vital to understand that where providers are looking to exit we understand the location of where this is occurring, and the impact on these communities, i.e. is it occurring in 'thin markets' where these services are unlikely to be replaced. In our submission to the Royal Commission we discuss the challenges faced by RRR providers, noting that pressures on these communities are mounting and putting their ongoing sustainability at risk[11].

We note the Report's description of the ongoing move away from RADs to DAPs over time. There is a view that this is related to the weakness in the housing market and the decline in house prices, impacting on the preference for a DAP (over a RAD), particularly if it was expected that the resident would be in care for only a short period[12]. The Report indicates that over time this will have significant financial implications for providers as a reduction in RAD/RAC payments will reduce the availability of these funds as a source of 'interest free loans' for re/development works and a provider will consequentially need to source 'debt with interest'. The impact of this on the ability of the sector to rebuild and develop new building stock needs to be considered.

[10] Seventh report on the Funding and Financing of the Aged Care Industry 2019, Aged Care Financing Authority, Australian Government, 2019, p4

[11] Royal Commission into Aged Care Quality and Safety, Residential Care Submission, Aged & Community Services Australia, May 2019, p25

[12] Seventh report on the Funding and Financing of the Aged Care Industry 2019, Aged Care Financing Authority, Australian Government, 2019, pp4-5

The Report makes some salient points regarding the need for ongoing investment into the sector, and that this investment is going to come from the non-government sector (both for profit (FP) and not for profit (NFP)) but that this investment is not going to occur if there is not a sufficient rate of return nor confidence in the stability of the funding and regulatory environment[13]. The report goes on to note that against this background:

- Is a decline in the number of providers who report that they are planning to rebuild or upgrade their facilities;
- That many providers have delayed or curtailed investment plans because of policy and regulatory uncertainty; and
- That a number of potential new investors into the sector are waiting to see developments regarding the Royal Commission into Aged Care Quality and Safety.

Previous ACFA Reports have provided an estimate that over the next decade there will need to be an additional 88,000 residential places with an estimated investment requirement of $54 billion[14]. Confidence in the sector is vital going forward for investors.

In relation to home care there are some interesting observations to be gleaned from the Report.

- That whilst the number of clients increased from 97,516 in 2016-17 to 116, 843 in 2017-18, and the number of home care services increased from 2,367 to 2,599 over the same period, client contributions fell from $128 million to $122 million over the same period. So proportionally client contributions would appear to be declining in real terms, this needs to be addressed over the longer term if the sector is to be sustainable, particularly when we consider the commentary made in the 'Tune Review', in relation to sustainability of the sector and client contributions, see here.
- In home care the EBTDA results of for profit providers have taken a considerable fall, with an EBITDA result in 2017-18 of only $169 down from $6,767 the previous year (the for profit sector having previously 'outperformed' the not for profit providers). This is a significant decline in EBITDA results over the space of one year and warrants exploration of why this occurred, to what extent is it related to the rapid growth in the number of new home care providers, the increased competition being experienced in the home care market, and most significantly should this EBTDA be considered some sort of 'bell weather' warning for the home care market?

Also of concern to ACSA is a comment in the Executive Summary in relation to Home Care Package providers which notes that whilst the beneficiaries of home care reforms are the consumers themselves there are some concerns 'that the increase in competition has resulted

---

[13] Ibid, p5

[14] Sixth Report on the Funding and Financing of the Aged Care Sector – summation and commentary, Aged & Community Services Australia, August 2018, p3

in some providers not only reducing their price but also the quality of their services'[15]. There are some commentators in the sector that have cautioned against 'a race to be bottom' in relation to the setting of home care fees, that it is not in the sector's, or consumer's interest, to have a sector that is not financially viable over time.

A significant undersupply in home care packages is also noted, despite a 20 per cent rise in the number of home care consumers over the last year with the Report quoting that at December 2018 there were 127,748[16] people waiting for a home care package or waiting for a package at their assessed package level. ACSA continues to lobby for the immediate release of an additional 40,000 high level home Care packages to ease this undersupply.

General Summary

1. Overview of Developments

Residential:

- Most providers indicated a decline in financial performance, and a number indicated they were moving into a loss situation[17]
- Australian Government expenditure on residential aged care in 2017-18 was $12.2 billion, up from $11.9 billion the previous year
- Services were provided to 241,723 residents
- At 30 June 2018 there were 207,142 operational places, up from 200,689 the previous year (an increase of 3.2 per cent)
- Residents contributed over $14.5 billion towards their living expenses, care and accommodation (excluding lump sum accommodation deposits)
- As at 30 June 2018 there were 886 residential care providers, down from 902 the previous year

Table One: Providers - Total Revenue verses Total Expenses Residential Care 2016-17 to 2017-18

Year	*Total Provider Revenue*	*Provider Revenue per Resident per Day*	*Total Provider Expenses*	*Provider Expenses per Resident per Day*
2016-17	$17.1 billion	$269.55	$16.8 billion	$254.29
2017-18	$18.1 billion	$272.16	$17.6 billion	$265.62

- Not for profit providers represent 56 per cent of providers and 55 per cent of places, the proportion of for profit providers continues to gradually increase
- The 2017-18 '*Aged Care Financial Reports*' confirms that 2017-18 was a' difficult year' for aged care providers
- Whilst the pause is ACFI indexation has ceased the indexation rate in 2018-19 (1.4 per cent for Activities of daily living and behavior domains and 0.7 per cent for complex health care) was below re rate of increase in costs.
- Average Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) per resident had improved each year for five years since 2012-13, however in 2017-18 it fell by 24 per cent
- 44 per cent of residential providers reported a loss compared with 32 per cent in 2016-17

[17] Ibid, p3

- There was a 'significant decline' in the financial performance of regional residential care providers in 2017-18[18]
- On average the performance of NFP providers dropped significantly more than for-profit providers
- In 2017-18 residential care providers expenses increased by 5.3 per cent whilst their income increased by 1.7 percent
- There continues to be a steady decline in occupancy in residential care, see table two

Table Two: Average occupancy Residential Care 2003-04 to 2017-18

Ave occupancy Residential 2003-04	*Ave occupancy Residential 2015-16*	*Ave occupancy Residential 2016-17*	*Ave occupancy Residential 2017-18*
97.1%	92.4%	91.8%	90.3%

- There is also an ongoing shift away from Refundable Accommodation Deposits (RADs) to Daily Accommodation Payment/Contributions (DAPs & DACs). From 2014-15 to 2017-18 the proportion of residents paying for their accommodation through a RAD/RAC has fallen from 43 per cent to 37 per cent while the proportion paying with DAP/DAC has risen from 33 per cent to 40 per cent

Home Care:

- Home care providers also experienced a deterioration in financial performance for 2017-18
- Australian Government expenditure was $2.0 billion in 2017-18, and services were provided to 116,843 consumers
- Consumers contributed $122 million toward the cost of their care through basic daily fees and income tested fees
- Unspent funds continue to increase with home care providers holding $539 million at 30 June 2018, an increase of 64 per cent from 2016-17
- Sector continues to be dominated by NFP providers (at 53 per cent) although this is down from 65 per cent in 2016-17
- Seventy six per cent of consumers had their package with a NFP provider at 30 June 2018
- Seventy per cent of home care providers achieved a net profit in 2017-18, compared to 75 per cent the previous year
- EBITDA – across the sector providers achieved an average of $1,217 per consumer, see table three

[18] Ibid, p3

- ***Table Three: Average EBITDA per consumer 2015-16 to 2017-18***

Average EBITDA 2015-16	*Average EBITDA 2016-17*	*Average EBITDA 2017-18*
$3,055	$2,989	$1,217

- After several years of relatively stable returns, EBITDA per consumer for home care providers fell by over 60% in 2017-18
- For Profit (FP) providers experienced the biggest fall in EBIDA outcomes, with an average EBITDA of $169 in 2017-18, down from $6,767 in 2016-17
- After significantly out-performing NFP and government providers over recent years, for-profit providers of home care packages reported the largest fall in financial performance in 2017-18
- Reform changes (where packages follow consumers) have resulted in a 'very large' increase in the number of approved providers, 873 in 2017-18 compared with 496 in 2015-16
- Greater competition between providers (as a result of the above growth in provider numbers) has resulted in a decline in profit margins[19]
- Expenses per customer increased by 7 per cent in 2017-18 whilst income per provider decreased by around 1 per cent compared with 2016-17

Unspent funds are accumulating, being $539 million at 30 June 2018, up from $329 the previous year, this represents 64% growth in one year

Home Support (CHSP):

- In 2017-18 CHSP provided services to 783,043 older Australians, the Western Australia HACC services provided services to 64,491 older Australians
- Total government expenditure on home support in 2017-18 was $2.4 billion, comprising $2.2 billion for CHSP and $195 million for WA jointly funded HACC services
- In the 2019-20 Budget the Australian Government extended funding agreements with CHSP providers by a further two years, meaning the CHSP and Home Care Packages program will continue to operate as two programs until at least mid-2022
- The Western Australian HACC program transitioned into the CHSP on 1 July 2018 making Home Support a national program

[19] Ibid, p4

2. Aged care in Australia

- The aged care sector provides services to over 1.3 million Australians, and makes up approximately 1 per cent of Gross Domestic Product (GDP).
- Total Australian Government expenditure on aged care in 2017-18 was $18.1 billion (up from $17.1 billion in 2016-17), including:
- Consumer expenditure on aged care was $4.9 billion in 2017-18, up from $4.8 billion in 2016-17
- There are over 366,000 paid workers in aged care with a further 68,000 volunteers

Table Four: Aged care in Australia 2016-17 to 2017-18

	Home Support 2016-17	*Home Support 2017-18*	*Home Care 2016-17*	*Home Care 2017-18*	*Residential Care 2016-17*	*Residential Care 2017-18*
Number of providers	1,621	1,547	702	873	902	886
Number of services	N/A	N/A	2,367	2,599	2,672	2,695
Number of places	N/A	N/A	N/A	N/A	200,689	207, 142
Number of consumers	784,927	847,534	97,516	116,843	239,379	241,723
Commonwealth funding	$2.4 b	$2.4 b	$1.6 b	$2.0 b	$11.9 b	$12.2 b
Consumer contribution	$204 m	$219 m	$128 m	$122 m	$4.5 b	$4.5 b
Other income	N/A	N/A	$140 m	N/A	$1.3 b	N/A

The aged care sector provides services to over 1.3 million Australians, with the Australian Government expending $18.1 billion on aged care in 2017-18

3. Aged Care workforce

From the National Aged Care Workforce Census the following is quoted in the Report:

- There are over 366,000 paid workers in 2016[20], this is up from 240,000 in in 2012
- There are 68,000 volunteers in aged care
- The total number of paid workers in in residential care in 2016 was estimated to be 235,764, of whom 153, 854 were direct care workers
- The total number of paid workers in home support and home care were estimated at 130,263, of whom 86,463 were in direct care roles

There are over 366,000 paid workers and 68,000 volunteers in aged care

4. Access to aged care

- The number of consumers of home care increased from 97,516 in 2016-17 to 116,843 in 2017-18
- The number of consumers of residential care increased from 239,379 in 2016-17 to 241,723 in 2017-18
- Average occupancy in residential care continues to fall; 90.3 per cent in 2017-18, down from 91.8 per cent in 2016-17 and 92.4 per cent in 2015-16; and
- The proportion of people using home care and residential care aged 85 and over is more than three times that of people aged 70 and over

[20] The figures quotes in this section are from the 2012 and 2016 National Aged Care Workforce Census and Survey which is conducted approximately every four years

Table Five: 2018-19 ACAR results summary

State/Territory	*Residential care places*	*Estimated annual recurrent funding ($m)*	*Capital grants ($m)*
New South Wales	3,485	$234.2	$14.0
Victoria	1,521	$102.2	$9.9
Queensland	4,289	$288.2	$11.1
Western Australia	3,295	$221.4	$10.1
South Australia	497	$33.4	$10.7
Tasmania	161	$10.8	$4.2
ACT	202	$13.5	-
Northern Territory	50	$3.4	-
Australia	13,500	$907.1m	$60m

(ACFA 2019 Report p35)

5. Residential aged care – capital investment

- As at 30 June 2018 the residential aged care sector held total assets of $48.4 billion and total liabilities of $36.6 billion.
- Total liabilities includes $27.5 billion of refundable accommodation deposits, up from $24.8 billion in 2016-17
- In 2017-18 – compared to 2016-17:
  - Ave return on equity was 13.4 per cent, down from 18.3 per cent
  - Ave return on assets was 3.3 per cent, down from 4.6 per cent

Table Six: New construction work completed or in progress

	2016-17	*2017-18*
$ Value	$4.7 billion	$4.9 billion

- The 2019 Report indicates 'planned building activity' dropped significantly for the second year in a row (p8)

Table Seven: Liabilities and net worth as a proportion of total assets by provider type 2017-18

Type	*Accommodation deposits*	*Other liabilities*	*Net worth/equity*
Government	36.9%	6.1%	56.9%
For profit	62.4%	28.2%	9.4%
Not for profit	53.8%	12%	34.2%

(ACFA 2019 Report p128)

Table Eight: Balance sheet of residential care providers, 2016-17 and 2017-18 ($m)

	2015-16 ($m)	*2016-17 ($m)*	*2017-18 ($m)*
Total assets	$40,695	$45,017	$48,400
Refundable Accommodation Deposits	$21,872	$24,710	$27,523
Total liabilities	$29,750	$33,691	$36,573
Net worth/equity	$10,945	$11,326	$11,827

(ACFA 2019 Report p126)

It is estimated the residential aged care sector will need to build an additional 88,110 places over the next decade with an estimated investment requirement of $54 billion

FAIR WORK COMMISSION
4 Yearly Review of Modern Awards
Social, Community, Home Care and Disability Services Industry Award 2010
Matter: AM2018/26

STATEMENT OF JEFFERY WRIGHT

I, Jeffrey Wright, of [redacted], affirm as follows:

MY BACKGROUND

1. I am employed by HammondCare (**the Company**) in the role of People Services Operations Manager.

2. I am based at Hammondville, New South Wales.

3. I have been employed by the Company since around June 2011.

4. My role involves supporting the People Services Team and Operations Team in matters relating to Industrial Relations, matters before the Fair Work Commission, contracts of employment and policy. The People Services Team consists of 16 people.

5. Prior to working with the Company, I was employed with another not-for-profit provider in the aged care sector for 9 years.

THIS STATEMENT

6. The information in this statement is based on my experience and observations from either working at the Company, or from my experience generally working in the social, community, home care and disability services industry, and is true to the best of my knowledge.

7. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections.

8. Where I comment on matters that I did not personally observe, I identify the source of that information in this statement.

INFORMATION ABOUT THE BUSINESS

9. The Company has been in operation since 6 April 1933 and is a registered charity.

10. The Company operates in the social, community, home care and disability services industry through HammondCare At Home.

11. The Company is an independent Christian charity that exists to improve quality of life for people in need. We specialise in aged and dementia care, palliative care, rehabilitation, mental health services for older people, and other related health and aged care services. The Company seeks to embed evidence-based best practice in its services and we provide these services through home care, sub-acute hospitals and residential aged care. Bringing these health, hospital and aged care services together, the Company has been able to develop innovative, flexible care models designed to serve people with complex health or aged care needs, regardless of their circumstances.

HAMMONDCARE'S WORKFORCE

12. The Company currently employs approximately 4,000 employees.

13. These employees perform a range of roles including frontline care, clinical, support/enabling and management roles.

14. The Company's workforce consists of:

    (a) approximately 798 full-time employees;

    (b) approximately 2,350 part-time employees; and

    (c) approximately 632 casual employees.

15. The majority of the front line care staff are part-time and meet various shifts across the sites/locations.

INDUSTRIAL ARRANGEMENTS

16. For our Residential and Home Care Services, the coverage for frontline care and clinical staff is the HammondCare Residential Care and HammondCare At Home Enterprise Agreement 2018 (**Enterprise Agreement**).

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

THE NATURE OF THE INDUSTRY GENERALLY

17. Under Consumer Directed Care, clients in the community are able to choose how they use their hours and the funding under their package. This can be a multitude of services under the Quality of Care principles 2014 including care services, clinical services, allied health services, home modifications, transport, respite, socialisation and domestic assistance. Having part-time employees allows the Company to meet the variable care needs of clients, provide continuity of care to clients and allows certainty of hours for our employees. Typically, our care employees are often working around their own commitments, for example, study or school aged children, and part time hours allows them the flexibility they need.

18. As clients have choice and control over their visit times, visits typically follow peak patterns. 55 per cent of visits take place between 7.00am and 12.00pm and the other 45 per cent span a nine hour period to 9.00pm.

CONSUMER DIRECTED CARE

19. The Company is an approved service provider under the *Aged Care Act 1997* (Cth).

20. The Company operates nationally with our HammondCare At Home services operating in NSW, ACT, Queensland and Victoria.

21. Funding arrangements for HammondCare At Home are through the Commonwealth Government for Home Care Packages. Commonwealth Home Support Program funding is also supplied via Health for Compacs and Transpac packages.

22. The number of home care packages fluctuate from week to week depending on intakes and discharges and combined with the clients' needs and choices, employees are rostered to meet those client needs. All these variables impact on how the business operates as it seeks to balance the industrial requirements against the quality care of clients in an ever changing environment.

23. Packages are assigned through the My Aged Care National Prioritisation System, and funding is provided through Medicare. Packages are distributed across 4 levels with varied levels of funding, and it should be noted that clients are usually assigned a lower level of package and funding as an interim measure, whilst waiting on the queue for their higher level package. As the funding that clients receive is usually lower than what they have been approved for, clients seek to maximise

their funding across as many visits as their individual budget will allow, meaning that they will often choose to have shorter duration visits.

24. Home care providers have no way of predicting how many packages will be assigned within their operational areas from the National Prioritisation System, or how many of those assigned within the area will choose them as a provider. It is because of these variables that the Company requires systems that are nimble and able to be flexible according to demand.

CLIENT CANCELLATION ISSUES

25. HammondCare At Home experiences client cancellations on a frequent basis.

26. During May 2019, there were 2,708 cancellations out of 47,704 scheduled visits. That is almost 6 per cent of scheduled services being cancelled in one month alone.

27. Some of the reasons why a client cancels their scheduled services include death, hospitalisation, change of circumstances, family arrangements and other reasons. Clients also have the option under Consumer Directed Care to change or cancel their visits purely to accommodate their convenience and choice.

28. When a client cancels a scheduled service, HammondCare At Home endeavours to reschedule staff to other clients, other parts of the business or make a minimum engagement payment.

29. The vast majority of client cancellations are within 0 to 6 hours of the scheduled commencement time of the service.

30. HammondCare At Home is able to charge the client for the cancellation if less than 24 hours notice is provided by the client. The amount that HammondCare is able to charge is up to 100% of the cost of the change for short notice cancellation and this is determined on a case by case basis.

31. If we were required to pay the employee for the rostered shift if the client cancels with less than 48 hours' notice, this would have significant impact on the business. We would not be able to charge clients for any services cancelled with between 24 and 48 hours' notice and the requirement of such extensive notice is contrary to client choice, supporting the needs of clients and service flexibility as required under Consumer Directed Care.

PART-TIME EMPLOYEES

32. The Company has a predominantly part-time workforce of frontline care staff to ensure resident/client familiarity and continuity of care and certainty of hours.

33. The Company employs part-time employees in a variety of roles, including Home Care Workers. In HammondCare At Home, part-time employees comprise 76% of the workforce and casual employees are 7% of Home Care employees.

34. When engaging part-time employees, they are offered a part-time contract for hours within their agreed availability. There is an agreed minimum within their contract, but we also ask their availability to enable us to offer them additional hours in excess of the minimum hours in their contract.

35. The Company offers part-time employees work in excess of their contracted hours as agreed. The Company does not want to limit part time employees who are seeking additional work and has provided in excess of 14,000 additional hours above contract hours during May 2019. If the Company was required to pay for these hours at overtime it would be unsustainable for the Company.

36. If the Company was required to pay overtime to part-time employees who work in excess of their contracted hours, we would be required to explore other options instead of providing additional hours and have part-time employees only work their contracted hours. This would have a number of negative impacts, including:

    (a) a decrease in operational flexibility which assists us in meeting ever-changing client demands and needs;

    (b) disadvantaging part-time staff seeking additional hours above their contract hours; and

    (c) may lead to an increase in casual staff in place of part-time employees.

MINIMUM ENGAGEMENTS

37. The work of HammondCare At Home is based on client demands and therefore rostering takes place around the preferred times of our clients as is required by Consumer Directed Care.

38. Rostering also has to take into account employee absences to ensure continuity of care for our clients. Rostering is driven by the clients and their needs, for example, a client may have funding for a number of hours per week and may choose to have them in one block on one day or split into smaller blocks over a number of days, all at their convenience. The provider has no control over their choice, but we need to accommodate it nonetheless. Clients also request specific employees to meet their needs which can be difficult for rostering.

39. During May 2019, client visits that were scheduled for less than one hour comprised 64% of scheduled visits. In the same month, 28% of scheduled visits were for less than 2 hours. Those statistics mean that only 8% of services provided in the month of May 2019 were for more than 2 hours.

40. Visits are usually not less than 30 minutes. The minimum visit duration that the Company has is 30 minutes which is a benefit for client choice as it meets clients' needs for short durations, for example, medication and showers, without having to pay a minimum of one hour. It also enables clients to have more or multiple visits or hours per week.

41. Home Care employees are scheduled to meet client needs and typically there are peak times at mornings, lunch and evening meal times. Given the percentages provided above at paragraph 39 it is difficult to provide some employees with shifts longer than 2 hours, but efforts are made by the Company to provide employees with continuing client visits or runs if possible.

42. If the Company was required to provide a three hour minimum shift to all employees this would remove a significant amount of flexibility and would result in an increase in makeup time where client preferences change and cancellation of services occur.

43. The Company is currently working to ensure a minimum of 2 hours work per day for our part-time community care staff. In the month of May 2019 this division incurred make up hours of 142 hours because of client cancellations. If we were required to provide a three hour minimum engagement it may also lead to clients not being able to access 30 minute visits.

BROKEN SHIFTS

44. HammondCare At Home engages employees to work broken shifts. The reason for this is to meet client needs. Schedules are driven by client, the requirement to meet their needs and continuity of

care. For staff, scheduling aims to meet their contract hours and provide regular work in a day (a run). Broken shifts are inevitable with ever changing client needs and staff absences. During May 2019 there were 4,216 broken shifts and includes more than one broken shift in a day.

45. There are very few shifts that exceed two portions per day, however with client cancellations, sometimes they are necessary.

46. For each engagement on either side of a broken shift the Company pays a minimum engagement of one hour, with an overall daily minimum engagement of two hours. A broken shift allowance is also paid for each break.

STATEMENT OF WENDY MASON

I, Wendy Mason, of [redacted] in the State of New South Wales, affirm as follows:

MY BACKGROUND

1. I am employed by BaptistCare NSW & ACT (**the Company**) in the role of Operations Group Manager for the Home Services (*BaptistCare at Home)* Division.

2. I am based at Level 2, 22 Brookhollow Avenue, Baulkham Hills, New South Wales.

3. I have been employed with BaptistCare since June 2011.

4. My role involves oversight of 11 site managers across the Home Service division ensuring the effective delivery of high quality services to over 9000 clients in compliance with Aged Care legislation and Aged Care Quality Standards.

5. Prior to working with the Company I was employed in senior management roles across the Home Care sector within a number of large providers. I have worked in the Home Care sector for 23 years and have a strong operational management background.

6. I hold an Advanced Diploma in Business Management.

THIS STATEMENT

7. The information in this statement is based on my experience and observations from either working at BaptistCare, or from my experience generally working in the social, community, home care and disability services industry, and is true to the best of my knowledge.

8. Where I depose particular conversations, I provide either the exact words used or the substance of the conversation to the best of my recollections.

9. Where I comment on matters that I did not personally observe, I identify the source of that information in this statement.

Lodged by:	Australian Business Industrial NSW Business Chamber Ltd Aged & Community Services Australia Leading Age Services Australia	**Telephone:** (02) 4989 1004
Address:	Australian Business Lawyers & Advisors Pty Limited Lvl 15, 140 Arthur Street, North Sydney NSW 2060	**Email:** madeleine.tiedeman@ablawyers.com.au

INFORMATION ABOUT THE BUSINESS

10. The Company has been in operation since 1944 and is a public company limited by guarantee.

11. BaptistCare is an aged care provider and operates in both the aged care industry and the social, community, and home care services industries.

12. BaptistCare is a not-for-profit organisation.

13. BaptistCare is one of the largest providers of aged care services in NSW and the ACT. The key operating Divisions are:

    (a) Residential Services Division (17 aged care facilities across NSW and the ACT);

    (b) Home Services (BaptistCare at home) Division (12 Home Service Centres from Canberra in the ACT to Alstonville in the Far North Coast of NSW);

    (c) Housing & Retirement Living Division (7 retirement villages plus Safe & Affordable Housing complexes);

    (d) Community Services Division; and

    (e) Support Services (including Governance & Legal, Property Development, Financial Services, Business & Technology (IT), Chaplaincy, People & Culture, Marketing & Communications, and Research & Policy).

14. The Home Services Division *(BaptistCare at home)* supports older people to remain living independently at home through the Home Care Package (**HCP**), Commonwealth Home Support (**CHSP**) and Transitional Care (**TC**) programs. The services provided under these packages include Personal Care, Domestic Assistance, Medication Assistance, Meal Preparation, Transport, Social Support, Clinical Care, Allied Health, Wellbeing Programs and Palliative Care.

15. Approximately 75 per cent of BaptistCare's home care services are provided outside the metropolitan areas of Sydney and Canberra. Non-Metropolitan Home Service Centres include regional locations at:

    (a) Alstonville – Far North Coast;

    (b) Goulburn;

    (c) Forster;

(d) Wagga Wagga;

(e) Morisset; and

(f) Dubbo/Parkes/Cowra.

16. All programs delivered by BaptistCare at home are funded by the Commonwealth Government under the Home Care Package program, Commonwealth Home Support Program and Transitional Care Program.

BAPTISTCARE'S WORKFORCE

17. As at 30 June 2019 the Company employed 3,605 employees across all Operations and Support Services Divisions of the organisation.

18. In Home Services specifically roles include: personal care, domestic assistance, medication assistance, meal preparation, transport, social support, clinical care, allied health and palliative care.

19. The Company's total workforce has the following demographics:

(a) Approximately 555 full-time employees;

(b) Approximately 2,515 part-time employees;

(c) Approximately 535 casual employees; and

(d) Approximately 1,000 volunteers.

20. Approximately 1,182 home care employees and management/staff are engaged in the Home Services (*BaptistCare at home)* Division. A breakdown of employment numbers in this home care sector that are included in the Item 19 totals above is as follows:

(a) Approximately 176 full-time employees (15%);

(b) Approximately 888 part-time employees (75%); and

(c) Approximately 118 casual employees (10%).

21. The Company employs predominantly part-time employees in its aged care operations. Together with the 10% casual proportion of the workforce (in *BaptistCare at home*) this workforce mix enables increased flexibility to better meet the changing needs of clients, to meet the needs of client preferences for services and service times, to account for the loss or gain of home care

clients and to cover staff absences. Casuals represent an important labour contingency to support the above flexibility within the Company.

22. Relatively high turnover of staff creates difficulties in terms of continuity of services, and staff replacement resources and costs. The staff turnover rate for permanent staff (full time and part time) in the Home Services division was 22% as at end June 2019.

INDUSTRIAL ARRANGEMENTS

23. The majority of the Company's aged care employees are covered by an Enterprise Agreement, the *BaptistCare NSW & ACT Aged Care Enterprise Agreement 2017* (**the Enterprise Agreement**). The Enterprise Agreement covers approximately 2,900 of the Company's aged care employees who are engaged in:

    (a) Residential facilities in the Residential Services Division;

    (b) Retirement villages in the Housing & Retirement Living Division; and

    (c) Home care employees in the Home Services (*BaptistCare at Home*) Division.

24. The Enterprise Agreement is the principal industrial instrument that applies to the Company's employees. It is underpinned by four modern awards:

    (a) *Aged Care Award 2010*;

    (b) *Nurses Award 2010*;

    (c) *Social, Community, Home Care and Disability Services Industry Award 2010*;

    (d) *Health Professionals and Support Services Award 2010*.

25. Of the total of 1,182 staff engaged in the Home Services Division, approximately 980 are covered under the terms and conditions of the Enterprise Agreement and classifications that would otherwise be covered by the terms and conditions of the Award.

26. The Company typically pays above the relevant modern Award rates of pay, and provides considerably more favourable terms and conditions of employment to employees who are covered by the Enterprise Agreement.

27. A further 35 employees in the Community Services Division are engaged directly under the terms and conditions of the Award. These Community Services Division employees operate outside of the aged care industry and provide a range of services that include social work, counselling, homelessness, housing, safe and affordable tenancy services, family and domestic violence services, community and neighbourhood services and provision of nil-interest and low-interest loans to the vulnerable and financially disadvantaged.

THE NATIONAL DISABILITY INSURANCE SCHEME

28. The Company is a registered service provider with the National Disability Insurance Authority.

29. The Company made the decision in 2018 to withdraw from NDIS services as it was not financially viable. The program was operating at a loss.

30. The Company have remained a registered provider to continue to offer services to NDIS participants through our Home Modifications program, however this is a very small part of the Company's services.

CONSUMER DIRECTED CARE

31. The Company is a service provider under the Commonwealth Home Care Package Program.

32. HCP funding constitutes nearly 60 per cent of our funding base. As of 1 July 2019 the Company delivers in excess of 2100 Home Care Packages. The Company believes that the delivery of person-centred home care services is fundamental to the wellbeing and independence of clients.

33. Paramount to person-centred care is the ability to provide flexible services that meet the individual needs of each person. By the very nature of our clients fragility the hours of service provided and therefore rostered changes constantly on a daily, weekly and monthly basis.

34. The nature of the aged care industry is such that operations are required in many areas on a 24 hours per day, seven days per week basis. Since the introduction of the consumer directed care model in Home Care in 2015 clients are increasingly requesting services outside the ordinary hours of work. This includes evening services that extend to 10.00pm, sleepovers and service provision on Saturdays, Sundays and Public Holidays. Consequently, the Company is seeking to recruit care service employees that are willing and available to work evening and weekend hours.

35. In 2015 an individualised funding model was introduced under the HCP program resulting in any operating costs incurred by a provider being passed onto the client.

36. The whole premise of consumer directed care is to put control back in the hands of the client. Clients have more choice regarding how they choose to spend their funds and when they will receive their services. The impact for providers is that we can no longer anticipate the number of hours of work for direct care staff based on the number of packages provided and therefore effectively plan staff resources.

37. Following the move to an open market in March 2017, providers no longer have guaranteed minimum home care package numbers or a cap on the maximum number of home care packages they can deliver. Providers have no control over the number of home care packages released or the level of home care packages allocated, and as a consequence the fluctuating number of service hours delivered, nor the distribution of home care packages in any area. To meet the demand of service provision there is a strong need for a flexible workforce, both around the availability of hours and in relation to geography to meet client need.

38. The move to a national waiting list means providers are unable to plan where packages will be allocated or in what numbers. Providers have no control over the number of packages released in a region. Prior to March 2017 packages were allocated to a region and a provider knew that if a client withdrew from a package it could be replaced with another client located within the same geographical area allowing them to sustain the hours for the workforce in that area. Given this level of uncertainty, it is challenging to maintain staff rosters with this changing client base.

39. Long wait times to access funding are resulting in clients being allocated packages below their assessed level of need. Providers are supporting clients to remain at home on inadequate funding to meet their needs. Clients are unable to fully fund the level of services they have been assessed as requiring, and any increase in costs will potentially force those clients into Residential Care.

CLIENT CANCELLATIONS

40. The Company experiences a high proportion of client cancellations on a very regular basis.

41. For example in the calendar month of May 2019, The Company's Home Services section scheduled a total of 35,083 client services across all of its NSW and ACT operations. Of these scheduled

services for the month 5,140 were cancelled transactions by the client. This represents almost 15 per cent of services planned for May 2019. From my personal experience this is not an abnormal outcome.

42. The reasons why a client cancels their scheduled services typically include the client being unavailable at short notice due to an admission to hospital, clients being discharged from hospital and not requiring (or being able) to undertake a scheduled service for a specified period post-discharge, client illness or death, the client has an unscheduled medical appointment, the client's family visit, the client has a social appointment or the client refuses to have the replacement worker due to their scheduled staff being absent that day (for example on personal leave).

43. When a client cancels a scheduled service, the Company is required to ensure that the employee's minimum contracted hours are paid for the fortnightly roster/pay period. The Enterprise Agreement provides that the Company '*may direct the employee to make-up time equivalent to the cancelled time, in that or the subsequent fortnightly period*.'

44. In the case of cancelled shifts the options are as follows:

    (a) the employee is scheduled to alternative work with other clients;

    (b) contact is made with subsequent clients to move their service forward if possible;

    (c) the employee is provided with administrative work;

    (d) the employee is scheduled to attend online training; or

    (e) replacement hours may be provided on a subsequent day in the current or succeeding roster period.

45. The notice for cancellation varies depending on the client and the circumstance. Notice can be weeks or days ahead in respect of things like family visits or medical appointments, or on the day of service or even when the care worker arrives at the front door in the event of illness and other unforeseen circumstances. In addition to those reasons listed, there are a number of other reasons clients cancel their scheduled services.

46. Providers are dealing with an aged and vulnerable client group whose needs and status change very quickly. In many instances clients are simply unable to provide 48 hours' notice as they are unaware their situation will change.

47. Under an individualised funding model costs incurred by a provider must be passed onto the client. Clients will not be accepting of being charged for a cancelled service that in many instances was not within their control.

48. Implementation of a 48 hour notice period required to be given to employees regarding cancelled shifts in many instances will impact more than one cancelled service. If a client dies or is admitted to hospital and is receipt of 3 services per day this would leave providers liable for paying for up to 6 services within that 48 hour period.

PART-TIME EMPLOYEES

49. The Company employs part-time employees in a variety of roles. In the Home Care division these roles include care service employees at three incremental grading levels, a Care Services supervisory/medication role, administration, allied health and clinical facilitators.

50. When engaging part-time employees, the Company provides a contract of employment guaranteeing the employee a minimum specified (contracted) number of hours per fortnight. Client requirements in terms of timing of services vary from region to region, however, employees are advised at commencement of employment that services will normally be required between specified times of the day Monday to Friday (usually 6.00am/7.00am until around 8.00pm) and whether the particular regional area in which they are based has clients that require weekend services.

51. Home care employees are also requested to provide written details of their preferences for days and times that they prefer to work, and their overall availability – this information is formally confirmed with the new employee during the orientation process and may be amended by the employee from time to time on a 'Change of Preference Form'.

52. The Company is regularly required to offer part-time employees work in excess of their contracted hours in order to be able to effectively meet client needs. This necessity arises for a number of reasons, including client service changes at short notice, new clients that commence within one of the programs during the roster fortnight, scheduled staff absences due to planned leave and unscheduled staff absences including occasions when rostered staff take personal or carers leave, for example. Additional hours are offered to employees where the employee has indicated in

writing that they are available for additional hours if they arise. Employees on the 'Availability List' are offered additional hours and only work such hours by agreement.

53. A recent Staff Satisfaction Survey demonstrated that many of our home care employees are desirous of being provided with extra hours in addition to their contracted hours within their current roster period. I understand from conversations with home care staff that they are happy to accept additional hours to either supplement their income or to enable them to seek an upgrade in their contracted hours under the six-monthly "*Review of Hours for Part Time Employees*" clause of the Enterprise Agreement

54. The payment of overtime for part-timers would have a significant economic impact on the business through increased wage costs and would make the cost of impacted consumer services prohibitive. In many of these cases the Company would either lose the client service or have to absorb the added overtime wage cost into our '*Staff Costs*', which would need to be recouped in overall higher prices for clients.

MINIMUM ENGAGEMENTS

55. The Company's home care activities are based on client demand and therefore rostering takes place around the preferred times of our clients. The imposition of a minimum engagement of three hours, for example, would severely limit consumer choice and would potentially over-extend the individual service budget for the client. The additional cost of having to charge clients for service times that are significantly in excess of the actual service duration will ultimately need to be passed on to the consumer, potentially making the service cost prohibitive. Clients will likely choose to go without rather than paying more than they should be for a service, risking their ability to be supported safely at home.

56. The proposed minimum engagement would also place a restriction on out-of-hours services such as those evening services (for example evening medications and meal services) that are unable to be coupled into a minimum three hour shift.

57. In particular it will have a more significant impact in rural and remote areas – particularly in those circumstances where a client requires more than one service a day in order to remain living at home.

58. For example, in rural areas it is not uncommon for a care worker who lives locally to finish work for the day at 5.00pm and be rostered to go out again at 8.00pm to provide medication assistance, meal preparation and/or support to assist the client to bed. In a small town there may be no other clients requiring a service at this time. The client's funding may not extend to paying 3 hours for a 30 min or one hour duration service.

59. To meet customer preferences providers need to have the flexibility to schedule stand-alone services, short shifts and broken shifts. This becomes even more significant in rural areas where it often is not an option to couple services together to create a minimum service of three hours.

60. When rostering employees there is a fine balance between the Company's policy of providing as many hours as possible to part-time employees in order to enhance engagement and retention, versus the need for flexibility and contingencies around loss of home care clients.

61. It is often difficult to provide some employees with shifts longer than two hours due to regular and frequent changes that are initiated by the consumer themselves e.g. admission to hospital, discharge from hospital, death, illness, or a change in service needs.

62. Unplanned staff absences or personal leave that is not notified in advance also contributes to changes in rosters where services need to be rescheduled to another worker. The impact of applying overtime rates would mean that the services may not be rescheduled to another worker to avoid incurring overtime rates.

63. The majority of our shifts are less than three hours. Of the 35,083 total services scheduled across the Home Services Division operations during the calendar month of May 2019 shift lengths are depicted in the following table:

Duration of Client Service	Number of Services	% of Services
1 hour or less	23,021	65.6%
Between 1 and 2 hours	8,934	25.5%
Between 2 and 3 hours	1,659	4.7%
Over 3 hours	1,469	4.2%
Total All Services May 2019	35,083	100%
(Includes Cancelled Transactions)	*(5,140)*	*(14.7%)*

64. From the table above, it is evident that of the services that the Company provided to clients in May 2019, 95.8 per cent were less than 3 hours in duration, and 65.6 per cent were of one hour's duration or less.

65. If the Company was required to provide a three hour minimum shift to all employees it would have a serious impact on the financial viability of our home care operations.

BROKEN SHIFTS

66. The Company engages employees to work broken shifts. Broken shifts are an essential rostering mechanism in order to be able to effectively meet client requirements in relation to, for example, specified or preferred times for particular services under Consumer Directed Care. Certain services are often inflexible in terms of service time including the administration of or assistance with prescribed medications; early morning preparations for assistance with meals, showering and dressing; and evening preparations for bed which could include a brief service up until 9.00pm or 10.00pm at night.

67. In the month of May 2019 a total of 1,591 broken shifts were worked by the Company's home care employees. These shifts are necessary in order to offer clients the flexible services that they request. Without the broken shifts, we would have significant difficulty providing the services our clients request.

68. The requirement for employees to be available to work broken shifts is particularly the case in regional and remote areas.

69. The Enterprise Agreement only requires employees to be available to work broken shifts following "*consultation and agreement*".

70. Additionally, the Company's Home Services rostering guidelines and procedures aim to minimise the number of breaks (and hence work periods) during the broken shift. This intent is enshrined as a commitment in the Enterprise Agreement which further prescribes at clause 12.4(c) that *'where the number of breaks exceeds two (2) breaks within a single broken shift, this will be by mutual agreement.'*

71. Rostering and scheduling procedures are undertaken with the objective of scheduling home care employees with "blocks" of work wherever possible. These "blocks" will vary from 2 hours to

possibly 5 hours depending, amongst other things, on the regional location, the distance to travel between clients, the availability of care staff, and the flexibility or otherwise of clients in setting service times.

72. Employees will only be scheduled to work more than two portions (or work periods) during the broken shift where no other option exists. Such circumstances may arise due to a client requiring a service in the morning, followed by a (short duration) evening service, and often where such events are in a regional location. Unplanned absences or employees not notifying of their absence until the day of the planned service also create a need to schedule employees who have already worked for periods on the same shift to fill these vacancies at short notice. It is these types of circumstances that lead to us rostering employees in excess of two periods of a broken shift; it is usually out of necessity to meet our clients' needs.

1 Introduction

One of the principal objectives of the National Disability Insurance Scheme (NDIS) is for people with disability to exercise choice and control over how, and with which providers, they spend their available budgets. The role of pricing in the NDIS is therefore very important. Prices, or more precisely participants' choices in response to the prices they face in the market, reflect the preferences and relative values that different participants place on different types of supports. The aggregation of these individual responses in turn signals to providers the quantity and mix of supports to supply. Prices also affect the purchasing power of participants. Higher prices reduce the supports participants can purchase within a given support budget. Prices also affect the total costs of the NDIS and therefore its financial sustainability, and the allocation of resources to the NDIS (and therefore possible production), relative to other sectors. Pricing can also affect providers' choices, including by providing incentives: for entering the market; for upskilling and right-skilling; for innovation; and for improvements in service quality and outcomes.

As the markets for disability goods and services develop and operate more effectively, it is expected that the National Disability Insurance Agency (NDIA), as market steward for the NDIS, will be less interventional. However, deregulation will necessarily occur at different points in time for different markets and may not be feasible in some cases. Currently, the NDIA varies its approach to the regulation of prices between:

- **No regulation** (deregulated markets): this is typically used in cases where markets are highly competitive – for example, transport.
- **The imposition of price limits**: these represent a maximum allowable price payable by participants for types of supports. This approach is used in a significant number of markets, which are still developing and growing, such as those for attendant care.
- **Quotable supports**: in which participants are expected to obtain quotations from suppliers to provide to the NDIA as part of verifying that prices are fair and reasonable. This approach is typically used in the case of highly specialised, differentiated supports that may not have a high level of competition – for example, assistive technology. They are also used in cases, such as supported independent living, where a bundle of supports or quasi-outcome is being purchased. In these situations, providers have greater flexibility to adjust how they achieve the required outcomes in response to the input costs they face.

The purpose of this document is to set out the Efficient Cost Model (ECM) that the NDIA uses to inform its pricing decisions for those supports delivered by Disability Support Workers (DSWs) on which it imposes price limits.

The methodology used to inform the NDIA's pricing decisions for those supports delivered by therapists on which it imposes price limits are set out in the *Review of Therapy Pricing Arrangements*.

2 Disability Support Worker Efficient Cost Model

This Chapter sets out the assumptions and methodology of the Efficient Cost Model (ECM) that the NDIA uses to estimate the costs to disability service providers of employing Disability Support Workers (DSWs) to deliver supports through the NDIS. The ECM estimates the cost of delivering a billable hour of support taking into account all of the costs associated with every billable hour, including: base pay; shift loadings; holiday pay; salary on costs; supervision costs; utilisation (non-billable activities); corporate overheads and margin.

The NDIA recognises that providers have to employ DSWs with different skill levels and levels of experience to meet the different needs of participants. It therefore has different sets of cost assumptions for three types of workers, referred to as:

- Standard or Level 1 DSWs;
- High Intensity or Level 2 DSWs; and
- Very High intensity or Level 3 DSWs.

2.1 Applicable Industrial Award

The national award for DSWs is the *Social, Community, Home Care and Disability Services Industry Award 2010*.[1] The NDIA recognises that some DSWs are employed under Enterprise Bargaining Agreements (EBAs). However, these EBAs have to leave the worker no worse off overall than they would be under the relevant Award and, in general, any additional benefits offered by EBAs over the Award have been voluntarily agreed to by providers and are often offset by productivity gains. The NDIA therefore considers the conditions set out in the SCHADS Award to be the appropriate foundation for the ECM.

Note: the nomenclature of Level 1 DSW, Level 2 DSW and Level 3 DSW used in the ECM should not be confused with the classification of workers under the SCHADS Award.

2.2 Base Pay

Table 1 sets out the ECMs assumptions with respect to the base pay of DSWs.[2]

Table 1: NDIS DSW Levels, Assumed SCHADS Classifications and Pay Rates

	Assumed SCHADS Classification	Award pay 1 December 2018
Level 1 (Standard) DSW	2.3	$27.61
Level 2 (High Intensity) DSW	2.4/3.1	$28.63
Level 4 (Very High Intensity) DSW	3.2	$29.74

1 http://awardviewer.fwo.gov.au/award/show/MA000100

2 https://www.fairwork.gov.au/ArticleDocuments/872/social-community-home-care-and-disability-services-industry-award-ma000100-pay-guide.pdf.aspx

2.3 Shift Loadings

Table 2 sets out the ECM's assumptions with respect to shift loadings. These assumptions are in line with the SCHADS Award and are applied to all DSWs and supervisors in the ECM. In line with SCHADS Award, the ECM also provides a 17.5% loading for annual leave to compensate workers for the shifts they would have otherwise taken. The ECM does not provide for any other allowances payable to DSWs.

Table 2: SCHADS Shift Loadings

Shift	Permanent Loading	Casual Loading	Difference
Weekday	0.0%	25.0%	25.0%
Saturday	50.0%	50.0%	0.0%
Sunday	100.0%	100.0%	0.0%
Public Holiday	150.0%	175.0%	25.0%
Afternoon Shift	12.5%	37.5%	25.0%
Night Shift	15.0%	40.0%	25.0%

2.4 Days Worked Versus Days Paid

The ECM recognises that a permanent worker works on 220 days a year, but is also paid for:

- 20 days of annual leave and 10 days of public holidays;
- Up to 10 days of personal leave – the ECM assumes all workers utilise all of their personal leave entitlement each year;
- 4⅓ days of long service leave (if they have qualifying service) – the ECM assumes 18% of permanent workers and 10% of casual workers qualify for long service leave. [3]

As Table 3 shows, leave costs increase the costs per billable hour of a permanent DSW on a weekday by 20.1% over the base salary rate.

Table 3: Impact of Leave on the Cost per Billable Hour of a Permanent DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Standard Hourly Rate	**$27.61**	**$28.63**	**$29.74**
Allowance for Annual leave			
a. No. hours leave in a year (hrs/yr)	152	152	152
b. Loading	17.5%	17.5%	17.5%
c. Proportion of leave taken	100.0%	100.0%	100.0%
Cost	**$2.95**	**$3.06**	**$3.18**
Allowance for Personal leave			
a. No. hours leave in a year (hrs/yr)	76	76	76
b. Loading	0.0%	0.0%	0.0%
c. Proportion of leave taken	100.0%	100.0%	100.0%
Cost	**$1.26**	**$1.30**	**$1.35**

[3] Australian Bureau of Statistics. (2019). *Participation, Job Search and Mobility, Australia, Feb 2019.*

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Allowance for Public Holiday leave			
a. No. hours leave in a year (hrs/yr)	76	76	76
b. Loading	0.0%	0.0%	0.0%
c. Proportion of leave taken	100.0%	100.0%	100.0%
Cost	**$1.26**	**$1.30**	**$1.35**
Allowance for Long Service leave			
a. No. hours leave in a year (hrs/yr)	32.93	32.93	32.93
b. Loading	0.0%	0.0%	0.0%
c. Proportion of leave taken	18.0%	18.0%	18.0%
Cost	**$0.10**	**$0.10**	**$0.10**
Cumulative cost per hour, after leave costs	**$33.17**	**$34.39**	**$35.73**
Increase from permanent standard hourly rate	20.1%	20.1%	20.1%

Note: Columns may not sum due to rounding.

2.5 Salary On-costs

The ECM recognises that providers incur other costs related to the salaries, including:

- Superannuation at the statutory 9.5% of base salary, including leave;[4] and
- Workers compensation insurance at 3% of base salary, including leave, which is higher than the national average for the Health and Community Services Sector of 1.5%[5].

The ECM does not provide for payroll tax as most jurisdictions exempt not for profit and smaller organisations from payroll tax.

As Table 4 shows, salary on-costs and the costs discussed above increase the costs per billable hour of a permanent DSW on a weekday by 35.1% over the base salary rate.

Table 4: Impact of Salary On-costs on the Cost per Billable Hour of a Permanent DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Cumulative cost per hour, before on-costs	**$33.17**	**$34.39**	**$35.73**
Superannuation			
Superannuation Rate (%)	9.5%	9.5%	9.5%
Superannuation ($)	$3.15	$3.27	$3.39
Workers Compensation			
Premium Rate (%)	3.0%	3.0%	3.0%
Premium Cost ($)	$1.00	$1.03	$1.07
Cumulative cost per hour, after on-costs	**$37.31**	**$38.69**	**$40.19**
Cumulative increase from permanent standard hourly rate	35.1%	35.1%	35.1%

[4] https://www.ato.gov.au/Business/Super-for-employers/How-much-to-pay/

[5] Safe Work Australia: www.safeworkaustralia.gov.au/workers-compensation/comparing-workers-compensation-scheme-performance

2.6 Supervision costs

The ECM recognises that DSWs require support and supervision and assumes that supervisors have the same shift loadings, leave entitlements and salary on-costs as the workers they manage, and that higher skilled workers require higher skilled supervisors. The ECM also assumes a span of control (ratio of workers per supervisor) of 11 to 1. The average for the sector is reported in the most recent AbleInsight Benchmarking Survey as 9.5 to 1.[6]

As Table 5 illustrates, supervision costs together with the costs discussed above increase the costs per billable hour of a permanent Standard (Level 1) DSW on a weekday by 48.4% over the base salary rate.

Table 5: Impact of Supervision on Cost per Billable Hour of a Permanent DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Cumulative cost per hour, before supervision	**$37.31**	**$38.69**	**$40.19**
Supervisor			
Level of supervisor (SCHADS Equivalent)	3.2	4.2	4.2
Base Salary	$29.74	$33.92	$33.92
Leave costs	$5.99	$6.83	$6.83
Salary-on costs	$4.47	$5.09	$5.09
Span of control			
Span of control	11	11	11
Cost of supervision ($)	$3.65	$4.17	$4.17
Cumulative cost per hour, after supervision	**$40.97**	**$42.86**	**$44.36**
Cumulative increase from permanent standard hourly rate	48.4%	49.7%	49.2%

Note: Columns may not sum due to rounding.

2.7 Permanent v Casual Workers

The ECM assumes that 80% of the DSW workforce is permanently employed. As Table 6 illustrates, casual loadings and the other costs discussed above increase the costs per billable hour of employing a Standard DSW on a weekday by 49.5% over the base salary rate. The impact is slightly higher for a Level 2 (High Intensity) DSW at 50.9% and for a Level 3 (Very high Intensity) DSW at 50.3%.

Table 6: Impact of Casual Loading on the Cost per Billable Hour of a DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Cumulative cost per hour, at 100% permanent	**$40.97**	**$42.86**	**$44.36**
Cumulative cost per hour, at 80% permanent	$41.28	$43.19	$44.70
Effect of casual loading	**0.8%**	**0.8%**	**0.8%**
Cumulative increase from permanent standard hourly rate	49.5%	50.9%	50.3%

[6] AbleInsight. (2019). *Sector Summary Report: National Disability Service Providers Benchmarking Survey – Collection 3 (2017/18).*

2.8 Utilisation

The ECM recognises that not all working hours are billable. For example, the SCHADS Award provides that a DSW should have a ten minute paid break from work every four hours. DSWs also need to undertake training and attend to other issues. The ECM assumes that higher skilled workers with more responsibilities may require more non-billable hours, to maintain their skills and deal with other issues.

The ECM assumes that supervisors have the same rate of non-billable hours as DSWs.

As Table 7 illustrates, utilisation costs together with the costs discussed above increase the costs of employing a permanent Standard DSW on a weekday by 62.5% over the base salary rate. The impact is higher for a Level 2 (High Intensity) DSW at 69.5% and for a Level 3 (Very High Intensity) DSW at 71.4%.

Table 7: Impact of Utilisation on the Cost per Billable Hour of a DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Cumulative cost per hour, before utilisation adjustment	**$41.28**	**$43.19**	**$44.70**
Utilisation rates			
Breaks	4.17%	4.17%	4.17%
Training	3.29%	6.58%	7.89%
Other	0.54%	0.25%	0.24%
Total Utilisation (%)	92.0%	89.0%	87.7%
Cost of utilisation ($)	$3.59	$5.34	$6.27
Cumulative cost per hour, after utilisation	**$44.87**	**$48.53**	**$50.97**
Cumulative increase from permanent standard hourly rate	62.5%	69.5%	71.4%

Note: Columns may not sum due to rounding.

2.9 Overheads

The ECM assumes that corporate overheads are 10.5% of direct costs (all those above).

As Table 8 illustrates, overhead costs together with the costs discussed above increase the costs of employing a permanent Standard DSW on a weekday by 79.6% over the base salary rate. The impact is higher for a Level 2 (High Intensity) DSW at 87.3% and for a Level 3 (Very High Intensity) DSW at 89.4%.

Table 8: Impact of Overheads on the Cost per Billable Hour of a DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Cumulative cost per hour, before overheads	**$44.87**	**$48.53**	**$50.97**
Overhead			
Overheads as a share of direct costs (%)	10.5%	10.5%	10.5%
Cost of overheads ($)	$4.71	$5.09	$5.35
Cumulative cost per hour, after overheads	**$49.58**	**$53.62**	**$56.32**
Cumulative increase from permanent standard hourly rate	79.6%	87.3%	89.4%

Note: Columns may not sum due to rounding.

2.10 Margins

The ECM currently assumes a 2% margin on other costs. This equates to a rate of return of 8% against working capital equivalent to three month's wages and entitlements.

As Table 9 illustrates, margin costs together with the costs discussed above increase the costs of employing a permanent Standard DSW on a weekday by 83.2% over the base salary rate. The impact is higher for a Level 2 (High Intensity) DSW at 91.0% and for a Level 3 (Very High Intensity) DSW at 93.2%.

Table 9: Impact of Margins on the Cost per Billable Hour of a DSW

	Level 1 DSW	Level 2 DSW	Level 3 DSW
Cumulative cost per hour, before margin	**$49.58**	**$53.62**	**$56.32**
Margin			
Margin as a share of other costs (%)	2.0%	2.0%	2.0%
Cost of margin ($)	$0.99	$1.07	$1.13
Cumulative cost per hour, after margin	**$50.57**	**$54.69**	**$57.45**
Cumulative increase from permanent standard hourly rate	83.2%	91.0%	93.2%

3 Pricing Model

In order to set price limits for 2019-20, the NDIA indexed the results of the Efficient Cost Model for costs on 30 June 2019 for the expected results of wage inflation over 2019-20.

The assumptions underpinning this indexation are set out in Table 10.

Table 10: Indexation arrangements

Component	Value
Labour costs	
Fair Work Commission Increase to Minimum Wage (1 July 2019)	3.0%
Equal Remuneration Order (1 December 2019)	2.2%
Total expected increase to labour costs	**5.3%**
Capital costs	
CPI	1.3%
Labour Share of costs	**80%**
Total indexation (weighted average)	**4.5%**

Table 11 shows the ECM results for the cost of supports by each DSW level and shift, and the indexed price limits for 2019-20 (without the Temporary Transformation Payment).

Table 11: Indexed Price Limits

Shift	DSW Level	Efficient Cost 2018-19	Indexed Base Price Limit 2019-20
Weekday	Level 1	$50.57	$52.85
Saturday	Level 1	$69.56	$72.69

Aged Care Financial Performance Survey

Sector Report

(2018 Financial Year)

The StewartBrown June 2018 *Aged Care Financial Performance Survey* incorporates detailed financial and supporting data from over 974 residential care facilities and over 24,952 home care packages (455 home care programs) across Australia. The quarterly survey is the largest benchmark within the aged care sector and provides invaluable insight into the trends and drivers of financial performance at the sector level and at the facility or program level.

Survey Analytics

Subscribers to the Survey include some of the largest providers nationally, independent stand-alone providers, faith-based and community providers, culturally specific providers, as well as government bodies including the Department of Health (DOH) and Aged Care Financing Authority (ACFA), and aged services sector peak bodies and other service providers to the sector.

The Survey covers residential care, home care packages and retirement villages involving a detailed analysis of the 2018 operating income and expenses of participants including a review of assets and funding engaged in providing aged care facilities. The Survey covered the following participation:-

- 180 approved provider organisations
- 974 residential facilities *(28 additional facilities were excluded due to their operational circumstances)*
- 24,952 home care packages
- Comparisons with 3 listed aged care entities (Estia/Japara/Regis)

In respect of residential care, participants to the Survey represent approximately 40% of facilities within Australia. The profile of the residential care participants, based on the geographical spread, is:-

StewartBrown Aged Care Reports

StewartBrown issues various detailed financial reports and analysis involving the aged care sector, including the following:-

- Residential and Home Care Sector Reports (quarterly)
- Provider Organisation Report (bi-annual)
- Listed Provider Analysis Report (bi-annual)
- Corporate Administration Report (every second year)

Copies of these reports are located at http://www.stewartbrown.com.au/

2. EXECUTIVE SUMMARY

Abstract

This Sector Report provides an overview of the financial performance of the aged care sector in Australia based on the results of the StewartBrown *Aged Care Financial Performance Survey* for the financial year ended 30 June 2018. This Report is focused at the organisation level of providers in the aged care sector and the average performance achieved by participants to the Survey, whereas the individual participants receive specific comparative data relevant to their location, size and specific facilities within their organisation, including access to an inter-active website.

What the Survey highlights is that the financial performance of the aged care sector is experiencing significant challenges due to a continued decline in profitability in both the residential care and home care segments and this creates challenges for the long-term financial sustainability of the sector. Similar funding challenges exist in the provision of services involving the Commonwealth Home Support Program (CHSP) and Veterans Home Care program (VHC).

FY18 Survey Results Summary

The financial performance of the aged care sector, and specifically the residential care and home care package segments has experienced a significant deterioration in the operating results for FY18. A continuation of this decline or even just maintaining the FY18 results will potentially place a number of residential care facilities in a financially vulnerable position which could impact on the organisation's sustainability.

Following is a summary of the key financial performance results and indicators by segment from participants in the FY18 *Aged Care Financial Performance Survey*.

Organisation (Approved Provider)

- Operating EBT Result (*) (average by organisation) reduced by $1,275k to a deficit of $52k
- Operating EBITDA reduced by $831k to $3,326k surplus
- Operating Result expressed as a return on assets employed has reduced from 0.5% positive to negative 0.02%. ACFA total residential care sector FY17 return on assets was 0.8% and is also expected to decline for FY18
- Operating EBITDA (cash surplus) return on assets has reduced by 0.44% to 1.44% (FY17 1.9%)
- Liquid cash and financial assets as a percentage of debt (RADs and external) has reduced by 2.7% to 38.1% (FY17 40.8%). The listed entity ratio reduced by 1.5% to 1.7% (FY17 3.2%)
  **Operating result excludes non-recurrent revenues and expenses (revaluations/donations/impairment etc)*

Residential Care

- Average ACFI per bed day (pbd) for survey participants was neutral ($172.57 pbd)
- Occupancy levels for survey participants remained neutral (94.3% average occupancy)
- Total care hours per resident per day increased by 0.15 hours to 3.06 hours (FY17 2.91 hours)
- Direct care costs increased by 4.3% ($140.24 pbd)
- Costs for providing everyday living services exceeded revenue by $7.85 pbd
- Average Earnings Before Tax (EBT) for residential facilities reduced by $2,420 per bed per annum (pbpa) to $816 pbpa (FY17 $3,236 pbpa)
- Average EBITDAR for residential facilities reduced by $2,069 pbpa to $6,760 pbpa (FY17 $8,829 pbpa)
- 45.1% of residential facilities recorded a negative Operating Result (EBT) (33.9% for FY17)
- 21.2% of residential facilities recorded a negative EBITDA (16.1% for FY17*) (representing a cash loss)*
- 63.5% of outer regional, rural and remote facilities recorded an EBT loss *(37.5% recorded a cash loss)*

Home Care Packages

- Revenue per client day (pcd) average for survey participants reduced by 6.1% (being $4.48 pcd)
- Operating Result (EBT) surplus average per client day for survey participants reduced by $1.60 pcd to $3.77 pcd (FY17 $5.37 pcd)
- Direct service costs increased by $1.30 pcd (60.9% of total revenue)
- Revenue utilisation (average unspent funds) has deteriorated by 8.3%
- Unspent funds average per client has increased by $1,729 per client (to average $5,984 per client)
- Staff hours per client per week reduced by 0.47 hours (average 6.69 hours per week)
- 45% of clients transitioned to residential care (30% in FY17)
- 9% of clients transferred to another provider (4% in FY17) - the majority being due to change of place of residence

Commentary

The FY18 financial results for the sector indicate clearly that the current funding model is under significant strain. Both residential care and home care experienced declines in financial performance, interestingly though, for somewhat unrelated reasons.

The residential care financial performance decline was revenue related, largely due to the combination of the COPE indexation freeze on AFCI subsidy, amendments to the ACFI scoring matrix, ACFI downgrades and increased costs. Costs rose as would expected due to Enterprise Agreement staff rate increases, CPI increases for other expenses except for electricity which was well above the underlying inflation rate.

Average ACFI subsidy revenue has remained relatively neutral at $172.57 per bed day (an increase of $0.40 per bed day). The last few years have seen ACFI funding plateauing, and this is consistent with the acuity (assessed care) of residents remaining at the same level for the last 2-3 years.

The resultant financial effect is that it is likely that when a resident exit a residential facility they are replaced by an incoming resident with lower assessed needs and therefore, a lower daily ACFI subsidy (often between $20 - $30 per day lower). The cost structure of residential facilities means that it is difficult to defray the subsidy reduction by a compensating cost reduction, so the profitability is immediately affected.

The impact of the regulatory changes and funding pressures has resulted in the disturbing statistic that 45.1% of residential facilities reported an EBT operating deficit for FY18, and even more disconcerting is that 21.2% of facilities had negative EBITDA (indicating a cash loss from operations). All geographic locations reported a decline, however, the outer regional, rural and remote locations have significant financial concerns.

Direct care staffing hours per resident per day increased from 2.91 hours to 3.06 hours, with no additional funding revenue to compensate for these increased staffing hours.

Average Earnings Before Tax (EBT) for FY18 for residential care was $816 per bed per annum, which equates to an unsustainable amount of $15.69 per bed per week.

Occupancy levels in residential care facilities remained steady at 94.3% average occupancy, however the concern is that any facility closures due to financial stress may impact the vulnerable aged requiring high care accommodation.

Capital equity injection and use of existing capital for necessary rebuild and refurbishment of facilities has noticeably slowed, a contributing reason being due to legislative and regulatory uncertainty in addition to the low financial returns. The average EBT return on assets employed (ROA) was a mere 0.5% and after excluding non-recurrent revenue streams such as revaluations and fair value gains on property and investments, the ROA represented a negative return of 0.02%

The financial viability of outer regional, rural and remote aged care providers is reaching a pivotal point. Over 63% of residential facilities in these geographic locations are operating at a loss, with more than 37% now operating at a cash deficiency. There are few opportunities for existing providers to merge or sell their facilities to larger providers, meaning that remedial funding will be essential in our opinion.

Accommodation pricing for residential care (Refundable Accommodation Deposits and Daily Accommodation Payments) have not translated into a major equity pipeline. This is due to the number of supported residents (over 45% nationally) and consumer reluctance to pay high accommodation prices commensurate with the average housing prices.

For FY18 the average surplus from accommodation revenue and accommodation costs (by majority being depreciation and refurbishment) equated to $3,837 per bed per annum. Assuming a new residential bed costs around $300,000 to build and the depreciated bed value (WDV) is currently around $185,000 this is, in itself, not a sustainable return, being less than 2.07% pa for existing facilities and 1.28% for new builds.

However, it should be noted that this surplus is partly due to generally low depreciation charges (buildings being depreciated over 40+ years with little to no refurbishment factored in). If buildings were depreciated at 4% pa (ie 25 years effective life) which is more realistic, then this would create a reported deficit rather than a surplus.

Whilst residential care has attracted significant community and media interest, in-home care has also experienced a financial performance decline with revenues reducing by an average of 6.1% underpinning an overall reduction in profitability of 29.8%. This may explain the reduction in staffing hours delivered to clients.

Since June 2016 the number of approved providers in home care has increased nationally by 373 (75.2% increase), however the number of funding packages has only increased by 17.57% (from 72,272 packages to 84,971 packages) since deregulation in February 2017.

In conclusion, the aged care sector requires significant investment given that the home care national prioritisation queue (consumers assessed for funding but not yet allocated full funding) has increased by over 32,500 since June 2017 to now being over 121,400, coupled with the estimated 83,000 plus new residential beds being required over the next 10 years to meet the ageing population demands.

For this investment to occur the sector must be financially sustainable which will require all stakeholders to engage in exploring sustainable and robust solutions to the funding and operational business models.

Future Financial Sustainability

In ***Chapter 5*** of this report we have prepared a FY19 financial projection for residential care based on a series of assumptions. Our FY19 forecast Facility Result based on the current funding levels projects an operating deficit of $0.20 per bed day for the sector average.

We also identify the following specific issues that we feel need to be considered in relation to improving financial performance and long-term sustainability of the aged care sector.

Residential Care

- ACFI funding - greater annual inflation (COPE) subsidy increases
- Additional subsidy funding for Behaviour (BEH) and Complex Health Care (CHC) domains within ACFI
- Rural, remote and very remote - additional viability supplements
- Workforce strategies and initiatives funding
- Extra and optional fees - deregulation and clearer regulatory guidance
- Accommodation Pricing - increase pricing

Home Care

- National prioritisation queue and waiting lists - increased home care package funding
- Pricing transparency - successful implementation for both consumers and providers
- Pricing and service delivery - more clarity and flexibility in relation to provision of service guidelines
- Quality audits - enhanced monitoring and appropriate responses to non-conformance
- Unspent funds - clearer definition around use of unspent funds
- Consumer education - greater focus on providing increased consumer (and provider) education
- Integration of CHSP and HCP programs (as appropriate)

General

- My Aged Care - enhancement of functionality and portability
- Legislative and regulatory environment - improved clarity and certainty
- Innovation - to be supported and encouraged at regulatory and legislative level
- Consumer education - targeted to include the continuity of care for each segment
- Greater level of congruence between State regulatory environment for Retirement Villages and to provide an easier transition from senior's housing to residential care
- Education and guidance on Governance for aged care providers

3. ORGANISATION ANALYSIS

This section provides a summary of the FY18 financial performance of aged care providers at an organisational level rather than at individual segment or facility level. For the purposes of this analysis, we have included the detailed information provided by 130 organisations who are representative of all states and demographics.

The same provider organisations were used to compare their operating performance for FY18, FY17 and FY16.

Operating Results for year ended 30 June 2018

The following table represents the Survey organisation (approved provider) summary revenue and expenses for the financial years ended 2016 to 2018. The amounts expressed are the average of the 130 organisations for ease of comparison. The ACFA comparisons are for the 2016 and 2017 financial years and include the residential segment only for the approved providers.

Table 2: Income & Expenditure Comparison (average by organisation)

	Survey FY18 (Average)	Survey FY17 (Average)	Survey FY16 (Average)	ACFA FY17 (Residential)	ACFA FY16 (Residential)	Listed Entities FY18 (Average)	Listed Entities FY17 (Average)
Income & Expenditure	**$'000**	**$'000**	**$'000**	**$'000**	**$'000**	**$'000**	**$'000**
Revenue							
Operating revenue	70,217	65,246	57,085	18,600	17,460	500,816	477,816
Investment income	2,126	2,109	1,824	348	634	136	194
Other income	1,360	3,030	1,252	738		4,408	6,438
Total revenue	73,703	70,385	60,161	19,686	18,094	505,360	484,448
Expenses							
Employee expenses	47,900	44,009	37,650	13,073	11,439	338,871	314,715
Depreciation and amortisation	5,021	4,572	3,863	993	814	23,578	20,873
Finance expenses	483	470	309	190	158	6,774	6,645
Other expenses	18,991	17,080	15,035	4,315	4,564	81,596	79,090
Total expenses	72,395	66,131	56,857	18,571	16,975	450,819	421,323
Surplus (EBT)	**1,308**	**4,254**	**3,304**	**1,115**	**1,119**	**54,541**	**63,125**
Operating Result - Surplus (Deficit)	**(52)**	**1,224**	**2,052**	**377**	**485**	**50,133**	**56,687**
Operating EBITDA	**3,326**	**4,157**	**4,400**	**1,212**	**1,192**	**80,349**	**84,011**

Brief Commentary

- The Operating Result includes Investment Income and excludes non recurrent Other Income (eg fair value revaluations, donations, fundraising etc). Non-recurrent expenses (such as impairment) have been offset against other income
- The operating result has declined each year since 2016 and was an average deficit by organisation of $52k for FY18
- The operating result *excluding* investment income was a deficit by organisation of $2,178k for FY18 ($885k for FY17)
- ACFA income and expenditure is for the residential care segment only and shows a similar decline for the FY16 and FY17 periods and it is likely the FY18 results will also show a significant deterioration

Balance Sheet Summary as at 30 June 2018

A summary of the balance sheet (organisation average) for the 2016 to 2018 financial years is included in the below table.

Table 3: Summary Balance Sheet Comparison (average by organisation)

	Survey FY18 (Average)	Survey FY17 (Average)	Survey FY16 (Average)	ACFA FY17 (Residential)	ACFA FY16 (Residential)	Listed Entities FY18 (Average)	Listed Entities FY17 (Average)

Other liabilities	18,536	16,755	11,976	4,987	4,344	150,640	140,178
Total liabilities	151,632	138,917	117,098	37,351	31,349	1,125,158	986,024
Net Assets	**88,019**	**84,292**	**70,159**	**12,557**	**11,534**	**491,904**	**493,589**
Net Tangible Assets	**79,369**	**76,730**	**63,883**	**6,432**	**7,951**	**(176,624)**	**(154,938)**

Brief Commentary

- Net assets and net tangible assets has increased for the Survey organisations but decreased for the listed entities (Estia/Japara/Regis)
- ACFA net assets for the residential care segment has increased in FY17 due to significant bed licence (intangible assets) acquisitions by the for-profit sector. The majority of not-for-profit organisations do not include bed licences as an intangible asset
- The results of the sector indicate that the Operating Result expressed as a Return on Assets employed by organisations is not financially sustainable under the current funding model (refer following page Snapshot)

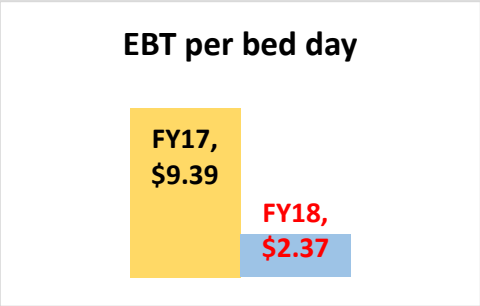
4. RESIDENTIAL CARE ANALYSIS

Overview

The residential care sector has experienced a significant decline in Facility Result (EBT) mainly due to expenses increasing at a much higher rate (4.7%) than revenue (1.7%). The Facility Result as shown to the right has decreased from $9.39 per bed day (pbd) in FY17 to $2.37 pbd in FY18.



Revenue

- Increase in ACFI revenue by $0.49 pbd - in real terms we are seeing stabilisation of acuity (care) levels. There has only been a slight movement in the proportion of facilities from "low-care" bands to higher care bands - average ACFI subsidy per bed day increased marginally from $172.08 to $172.89
- Increase in Every Day Living revenue by $1.30 pbd mostly due to CPI increase in the Basic Daily Fee
- Increase in Accommodation revenue by $2.41 pbd due to:
  - Resident - $0.63 pbd (due to increase in DAPs ratio as compared to RADs)
  - Subsidy - $1.77 pbd (due to increase in Significant Refurbishment subsidy)

Expenses

- Increase in total care labour costs of $5.64 pbd and increase of roughly 9 minutes per resident per day in total care hours (total direct care hours - 3.06 per resident per day)
- Increase in hotel services $0.96 pbd
- Increase in utilities of $0.59 pbd (mostly due to increase in electricity $0.42 pbd)
- Increase in administration of $2.25 pbd mostly due to increase in corporate recharges
- Increase in accommodation expenditure by $1.20 pbd due to higher depreciation charge

Additional Trends

- Occupancy - slight decrease from 94.6% to 94.3%
- Increase in supported resident ratio
- Increase in average Refundable Accommodation Deposit held and received during the year
- Increasing preference for DAPs over RADs - split is now 31% RAD, 45% DAP and 24% Combination

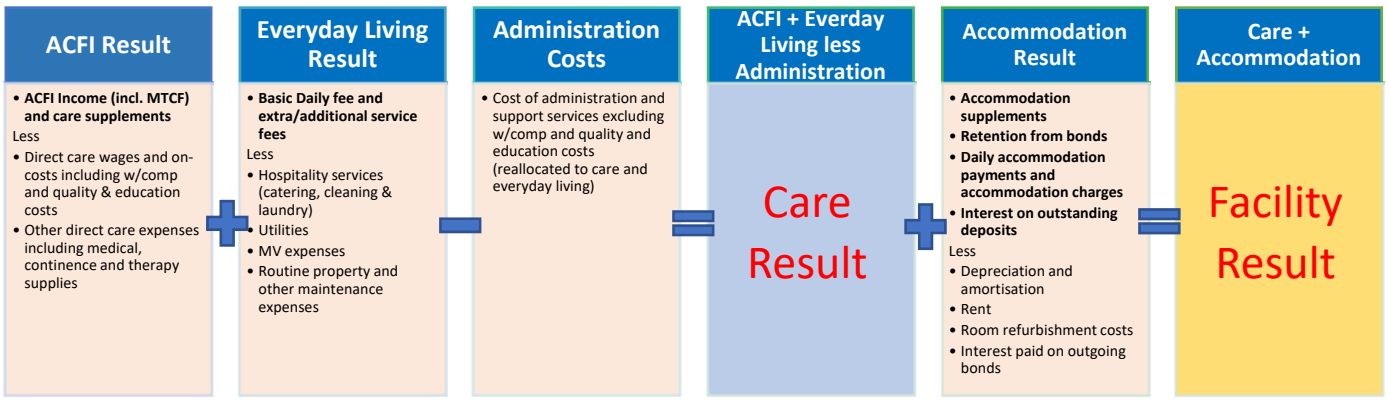
Table 5: Summary Results for FY18 Survey

	FY18 974 Facilities	FY17 957 Facilities		Difference
Facility Result (EBT) $ per bed day	$2.37	$9.39	↓	($7.02)
Facility EBT $ per bed per annum (pbpa)	$816	$3,236	↓	($2,420)
Facility EBITDAR $pbpa	$6,760	$8,821	↓	($2,061)
Average Occupancy	94.3%	94.6%	↓	(0.4%)
Average ACFI per bed day	$172.57	$172.08	↑	$0.49
Direct care hours per resident per day	3.06	2.91	↑	0.15
Care labour costs as % of ACFI	80.7%	77.5%	↑	3.2%
Supported ratio	45.5%	45.4%	↑	0.1%
Average Bond/RAD held	$295,209	$279,513	↑	$15,696
Average RAD taken during period	$321,350	$320,220	↑	$1,130

Definitions

The Facility Result comprises the below components. The Care Result is a derivative of the resident acuity (care) needs whilst the Accommodation Result is derived from revenue streams not directly related to resident acuity but the resident's financial ability to pay for residential accommodation.

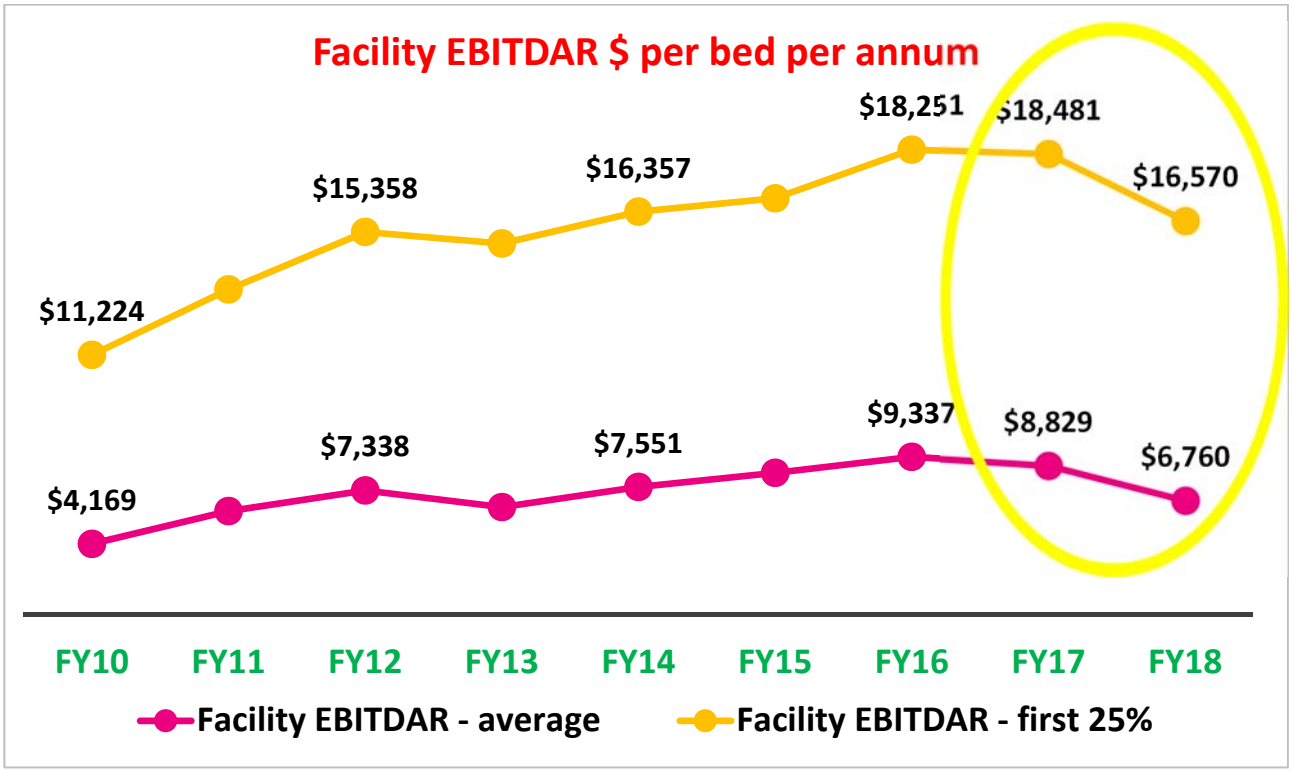
Figure 1: Facility Result Definition



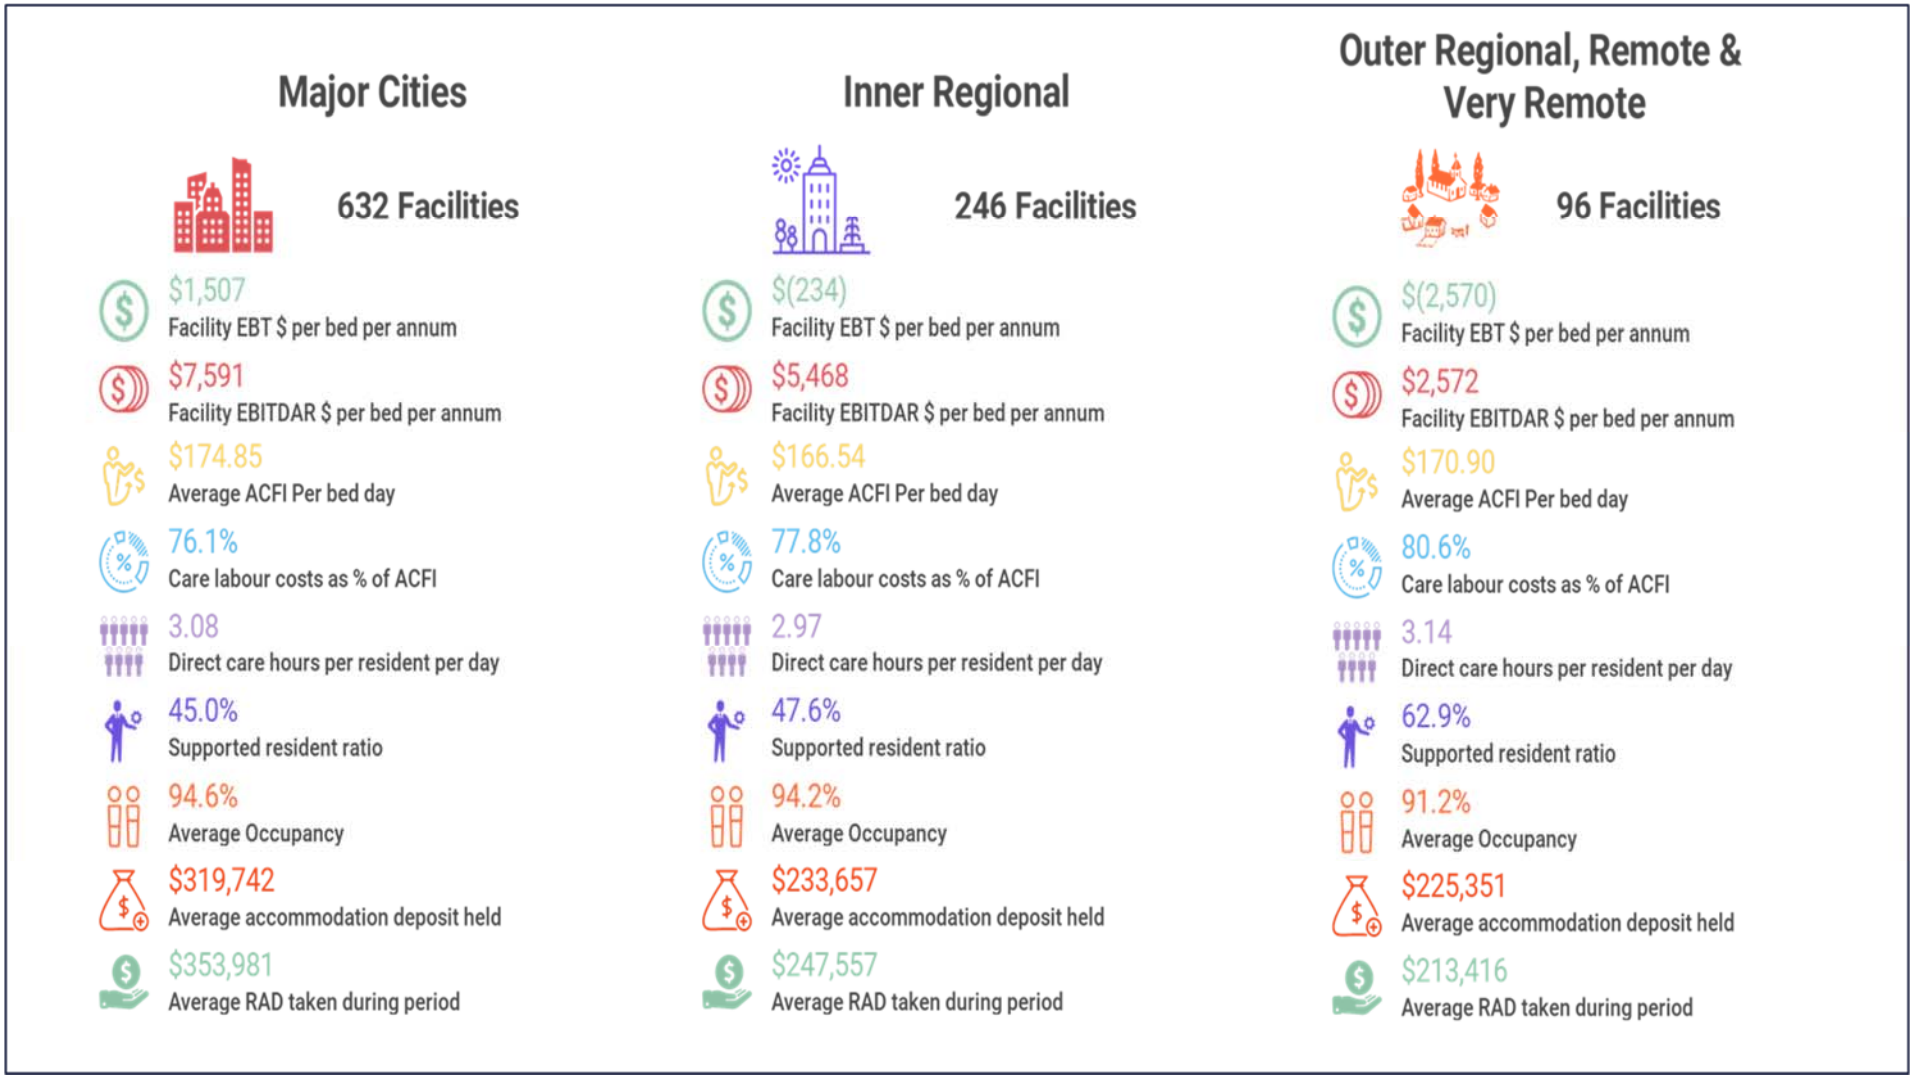
Facility Result Trend

The below graph shows the Facitity EBITDAR (Earnings Before Interest, Taxation, Depreciation, Amortisation and Rent) trend from FY10 to FY18. At the *Average* facility level it is becoming increasingly difficult to remain financially sustainable.

Figure 2: Facility EBITDA trend



Snapshot - FY18 Facility Results By ABS Region



Aged Care Financial Performance Survey
Sector Report *(FY18)*

Impact of FY18 Performance - Number of Facilities with Negative Facility Result (EBT)

Please note that the following analysis is based on the financial operating performance at residential facility level - not at the organisation level.

The total percentage of facilities making an EBITDAR loss (Earnings Before Interest, Taxation, Depreciation, Amortisation and Rent) has increased by 7.0%, from 14.0% to 21.0% of 974 facilities participating in the Survey. In addition to this a further 28 facilities were excluded due to being outside the acceptable range.

The total percentage of facilities making an EBT loss has increased by 11.2%, from 33.9% to 45.1%.

Figure 3: Analysis of Facilities making EBT and EBITDAR losses in total Survey

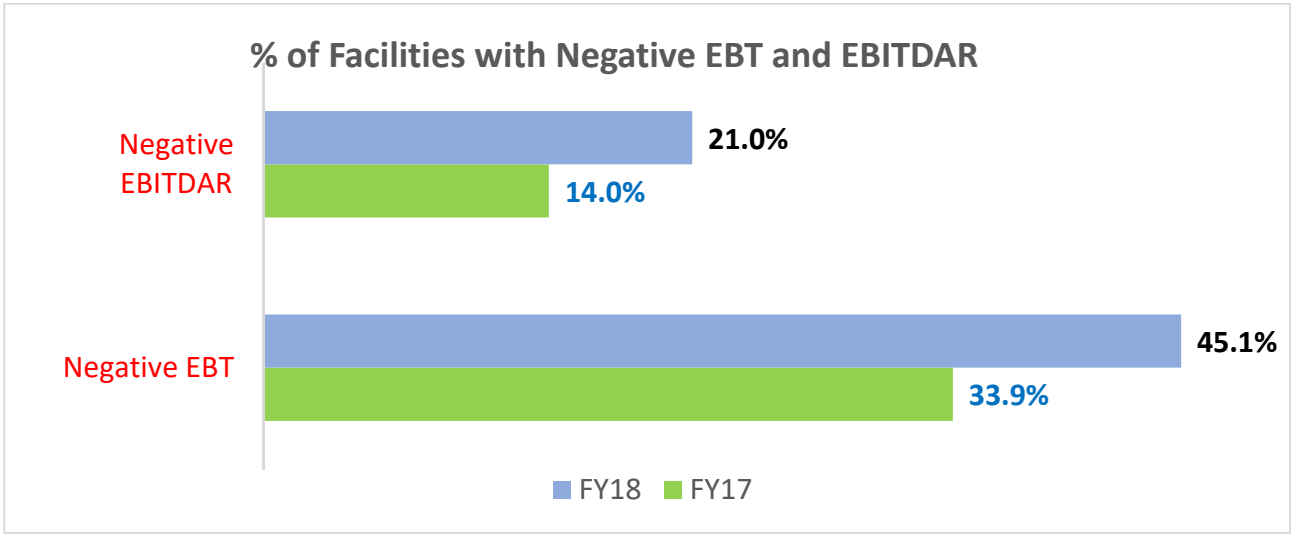


Figure 4: Analysis of Facilities making EBT losses (by remoteness) in total Survey

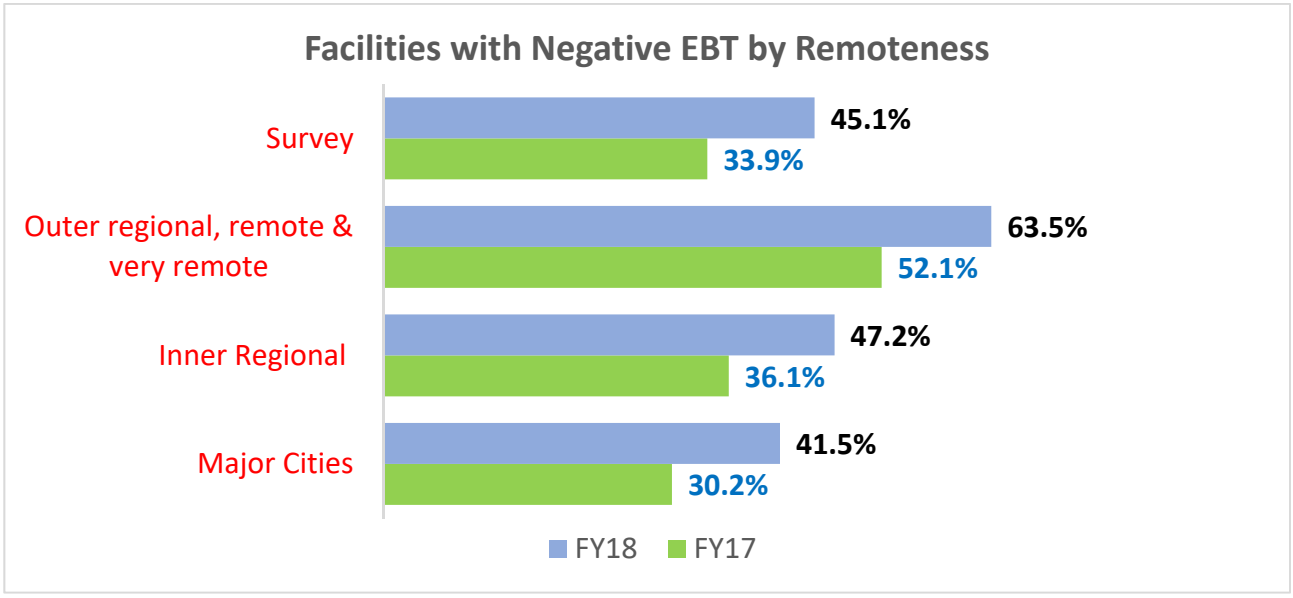

Figure 5: Analysis of Facilities making EBITDAR losses (by remoteness) in total Survey

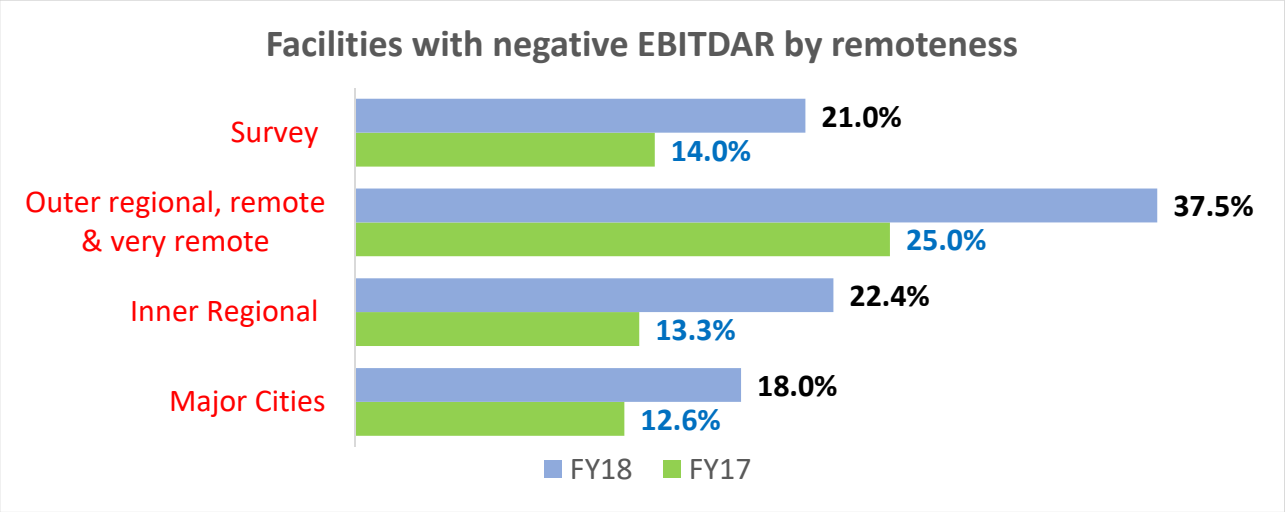


Brief commentary

Figures 4 and 5 above graph the number of facilities making an EBT and EBITDAR loss as a percentage of total number of facilities in their respective geographic location (remoteness). For each location the number of facilities reporting a loss for FY18 is significant, as follows:-

- Outer regional/remote/very remote facilities - 63.5% of facilities in this geographic area made an EBT loss and 37.5% made an EBITDAR loss
- Inner regional facilities - 47.2% made an EBT loss and 22.4% made an EBITDAR loss
- Similarly, of the facilities located in major cities, some 41.5% made an EBT loss and 18.0% made an EBITDAR loss

Direct Care Staffing Hours

Direct Care staffing metrics include care staff costs and care staff hours. Improvement in the financial performance of a facility are directly related to appropriately aligning staffing hours and levels to the funding and ensuring that the design of the facility is operationally efficient.

A summary of the direct care staff hours by category per resident per day for the Survey *Average* and Survey *First 25%* is included in the table below.

Table 6: Direct Care staffing metrics for Survey Average and Survey First 25%

	Average			*First 25%*		
	FY18	***FY17***		***FY18***	***FY17***	
Hours by Staff Category - hours worked per resident per day						
Care management	0.12	0.12	-	0.11	0.10	↑
Registered nurses	0.37	0.37	-	0.31	0.29	↑
Enrolled & licensed nurses	0.30	0.26	↑	0.24	0.22	↑
Other unlicensed nurses & personal care staff	2.10	2.02	↑	1.93	1.82	↑
Allied health & lifestyle	0.15	0.12	↑	0.15	0.11	↑
Imputed agency care hours implied	0.02	0.02	-	0.02	0.02	-
Total Care Hours	**3.06**	**2.91**	↑	**2.76**	**2.56**	↑

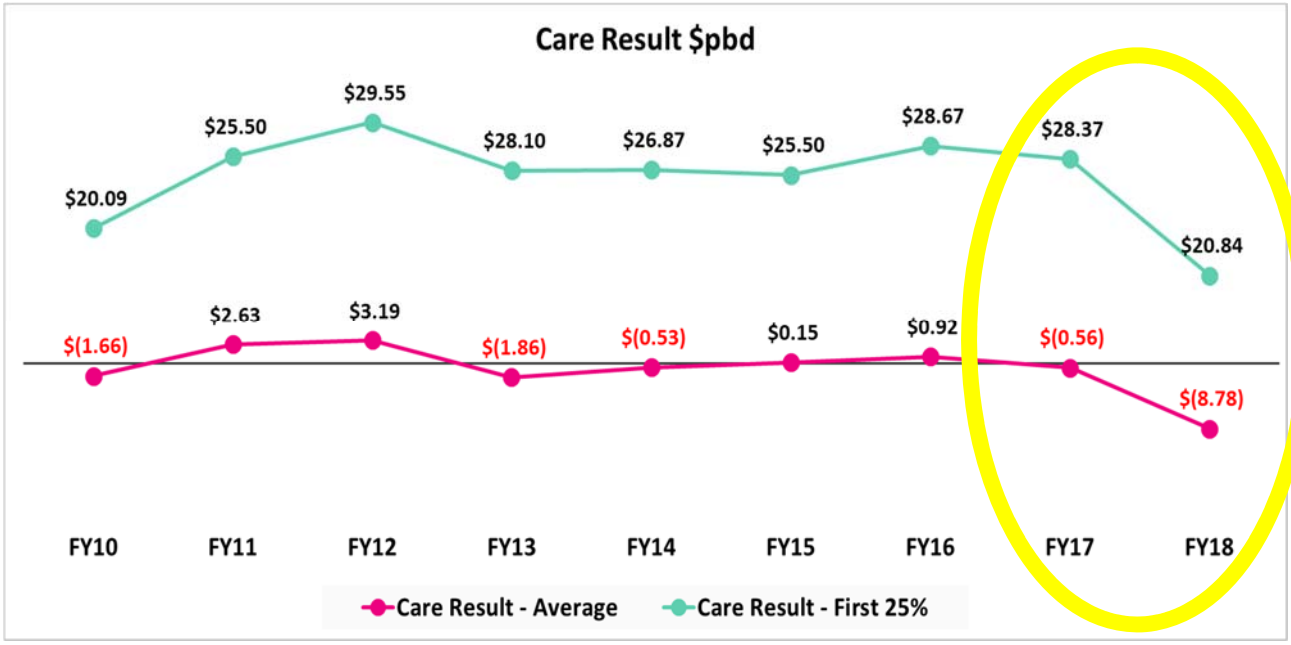
Brief commentary

- The category allocations are consistent with that used by the Nurses and Midwifery Board of Australia, and accordingly AIN and TAFE qualified staff have been included under the "Other unlicensed nurses & personal care staff" classification
- Total labour costs have increased for both the Survey *Average* and *First 25%* since June 2017 by 4.4% and 6.6% respectively
- Total care hours have increased for both the Survey *Average* and for the *First 25%* by 5.2% and 7.6% respectively, and are now at 3.06 hours and 2.76 hours worked per resident per day respectively
- Initial feedback from providers in relation to an explanation for the increase in care hours in the first half of FY18 was that it may be partially due to the impact of influenza and gastro outbreaks, however it is noted that the care hours have not reduced but instead remained at that level

Care Result Trend

The Care Result (ACFI + Everyday Living + Administration) trend is shown in the below graph. The FY18 Facility Care result is a deficit of $8.78 per bed day (FY17 $0.56 pbd deficit). This represents an unstainable operating performance unless additional revenue (subsidy and resident) is achieved.

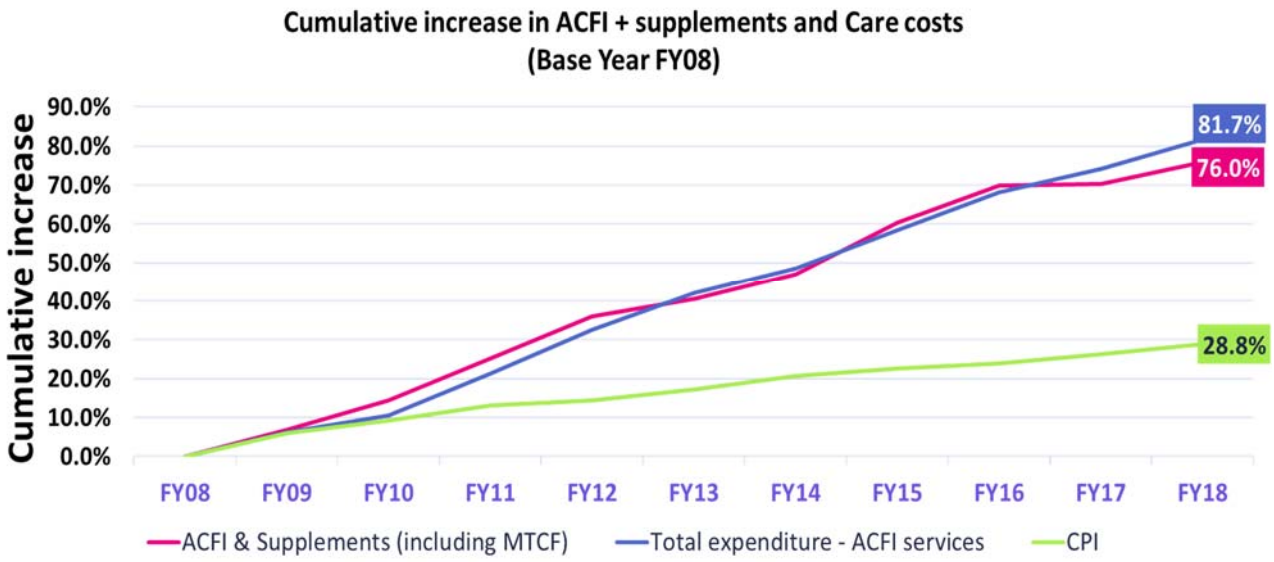
Figure 6: Care Result Trend for Survey Average and Survey First 25%



ACFI Revenue and Direct Care Costs Trend

The relationship between ACFI subsidy received (based on resident assessed acuity) and direct care costs is important in maintaining a sustainable operating financial model. The graph below indicates that the direct care costs are now rising at a greater rate than the corresponding ACFI subsidy, and this gap is likely to increase as staff cost increases (average of 3.0% annually) are greater than ACFI COPE (inflation) increases (1.17% for FY18).

Figure 7: Cumulative increases in ACFI subsidy, Direct Care costs as compared to CPI



Everyday Living Result

The recoupment of everyday living costs is again highlighted as an area of concern for approved providers. Whilst opportunities exist to charge additional optional services to residents, several challenges exist in this regard. A major issue is in relation to supported residents who, by majority, do not have the financial means to pay for additional services, or indeed pay a higher Basic Daily Fee (85% of the single pension).

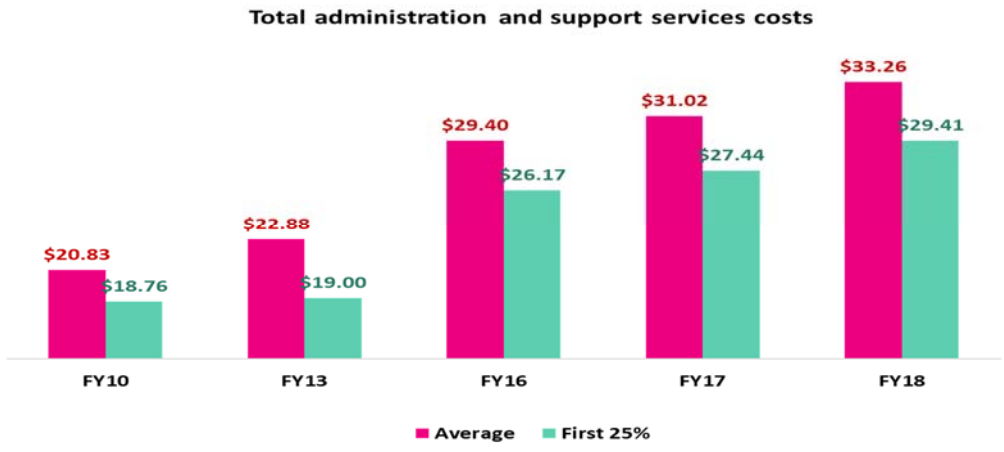
Many providers are also very conscious to not introduce a tiered system whereby some residents are able to access additional services based on their ability to pay whilst others do not receive such additional services due to the inability to pay a higher charge.

For FY18 the costs of providing everyday living services exceeded the revenue by $7.85 pbd (FY17 $7.16 pbd). Refer to the Everyday Living snapshot (next page) for a summary of the various components.

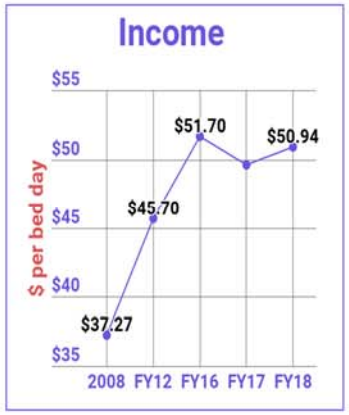
Administration Costs

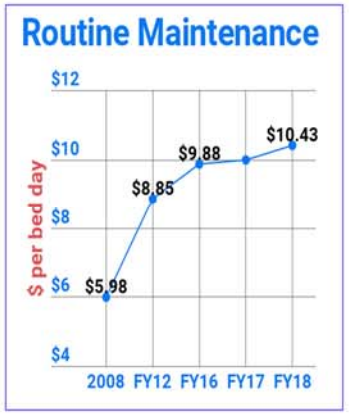
Administration costs have continued to increase at a rate higher than CPI. One of the main drivers for this is the increasing compliance requirements.

Figure 8: Administration Costs FY18 and FY17 ($ per bed day)



Snapshot - Everyday Living Metrics





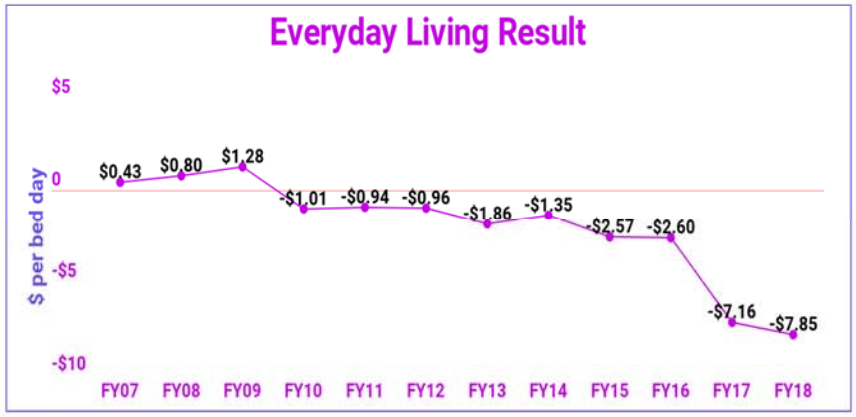
Income increased by an average of $13.67 per bed day or 36.7%

Hotel services costs increased by an average of $14.16 per bed day or 52.0%

Utility costs increased by an average of $3.54 per bed day or 108.6%

Routine Maintenance costs increased by an average of $4.45 per bed day or 74.4%

Total Everyday Living Expenses have increased by an average of $21.75 per bed day or 58.7% during the same period that income increased by only $13.67 per bed day



The Everyday Living Result has declined over the past 10 years by an average of $8.28 per bed day and by $9.13 per bed day from the peak result.

It is clear that the increase in the basic daily fee has not kept pace with cost increases, particularly in catering, cleaning and laundry costs.

Providers, particularly in the not-for-profit sector have not readily embraced extra or additional services to overcome this shortfall so that these costs are being subsidised by other income streams.

Accommodation Result

It is important that facilities achieve a surplus from the accommodation result as this funding is essential to maintain the building and surroundings at a level commensurate with consumer expectations. Discussions with providers, coupled with data collected from participants, indicate that a major internal refurbishment policy of every 8 - 10 years is required, even for new builds.

The accommodation surplus for FY18 was $11.15 per bed day (FY17 $9.95 pbd) which represents $3,837 per room per annum. This result is achieved after an average depreciation expense of $5,566 pa. However, given the necessity to upgrade facilities regularly, a depreciation rate of 4% (i.e. 25 year write-off period for residential care buildings) should be adopted by providers as it is highly probable that this equates to the effective (useful) operational life of a residential facility in an increasing "retail" style accommodation market.

A further relevant consideration is that currently the surplus from the accommodation result is being used to offset the loss from the care result. In FY18 the Care Result was a deficit of $8.78 per bed day which, if funded from the accommodation result, impacts on the ability of organisations to fund future refurbishment of a facility. This not only affects the accommodation revenue (accommodation pricing) but does not allow for efficiency gains to be achieved through building design modifications.

Table 7: Residential Care Accommodation Result

	Survey *Average*			Survey *First 25%*	
	FY18	**FY17**		**FY18**	**FY17**
	$ pbd	$ pbd		$ pbd	$ pbd
Accommodation Revenue	**29.85**	**27.45**		**27.91**	**25.42**
Depreciation	16.18	14.94		16.51	14.55
Refurbishment	1.10	1.23		0.44	0.72
Other accommodation costs	1.42	1.33		1.54	1.33
Accommodation Expense	**18.70**	**17.50**		**18.49**	**16.60**
Accommodation Result	**$11.15**	**$9.95**		**$9.42**	**$8.82**
Accommodation Result $pbpa	**$3,837**	**$3,436**		**$3,306**	**$3,096**
Depreciation charge $pbpa	**$5,566**	**$5,161**		**$5,795**	**$5,111**

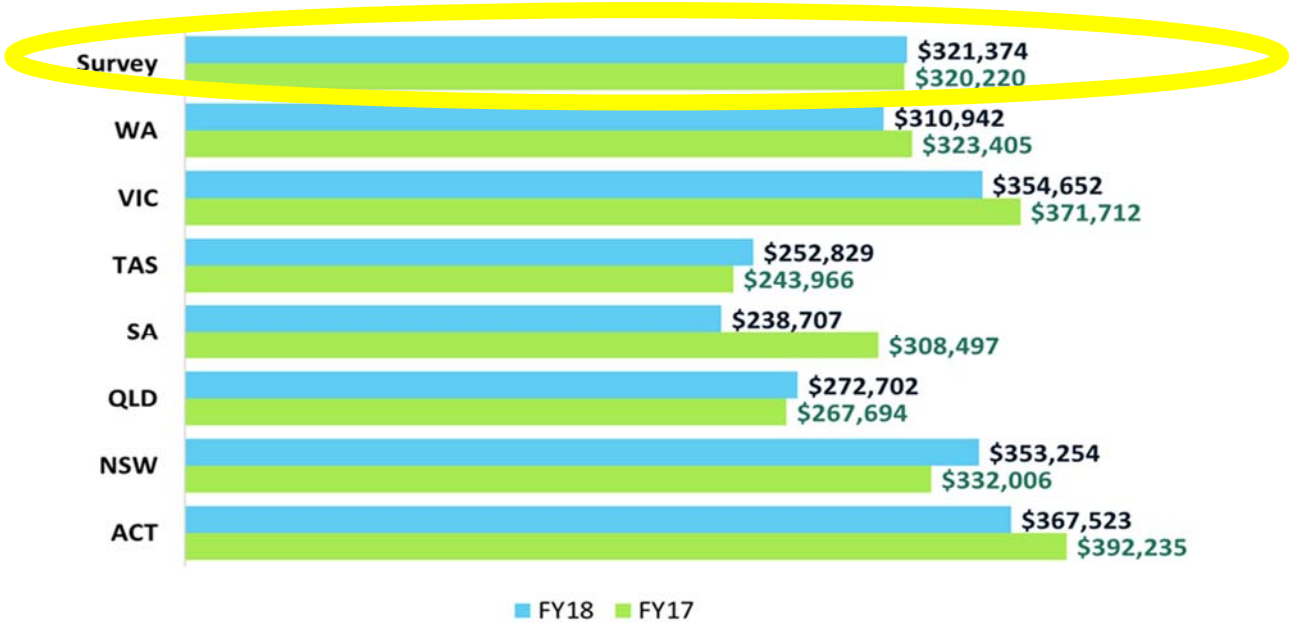
Depreciation charge $pbpa for WDV of $200,000 per bed at 4%	**$8,000**
Depreciation charge $pbpa for new build of $325,000 per bed at 4%	**$13,000**

Accommodation Pricing

There has been a marginal increase in accommodation pricing for FY18. The amount of Refundable Accommodation Deposits (RADs) received during the period increased by a national average of $1,130 (0.35%). The increase in the percentage of new residents paying a Daily Accommodation Payment (DAP) rather than a RAD has been a contributing factor.

Accommodation pricing is an important component for the sustainability of a residential facility. It is a revenue benefit (DAP) or a capital benefit (RAD) depending upon the equity position of the organisation.

Figure 9 : Average Refundable Accommodation Deposits Received for FY18 and FY17

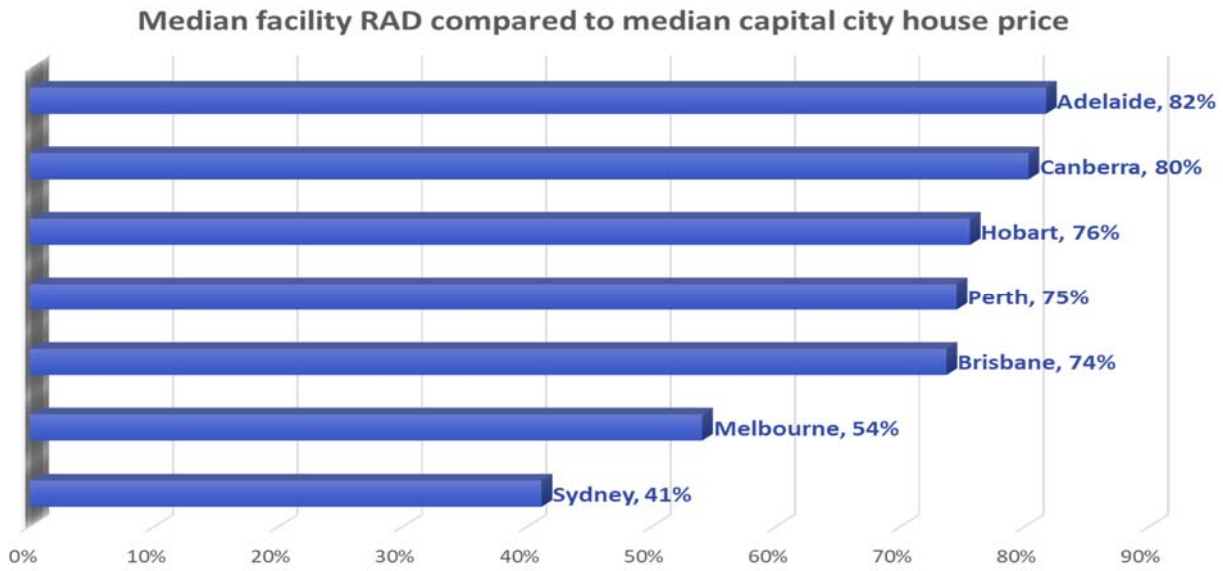


It seems likely that there is still confusion from a consumer perspective in relation to accommodation pricing and this has resulted in providers not having an effective accommodation pricing strategy. The acuity (care needs) of a resident is directly related to the ACFI funding and expenditure. Everyday living expenses are offset against the Basic Daily Fee and additional services (if charged).

Accommodation pricing is not assessed on care needs but on the standard of accommodation and the financial ability of an incoming resident to meet the price through either a RAD, DAP or a combination of both. The consumer expectation that the standard of accommodation, and accordingly, the pricing is relative to direct care provided is somewhat misconstrued. A higher accommodation price does not equate to a higher standard of direct care.

Accommodation pricing strategies should be more targeted to the local house or unit prices in the geographic area. The table below indicates that there is a disparity in this relationship, particularly in Sydney and Melbourne.

Figure 10: Median Advertised RAD compared to Median House Price

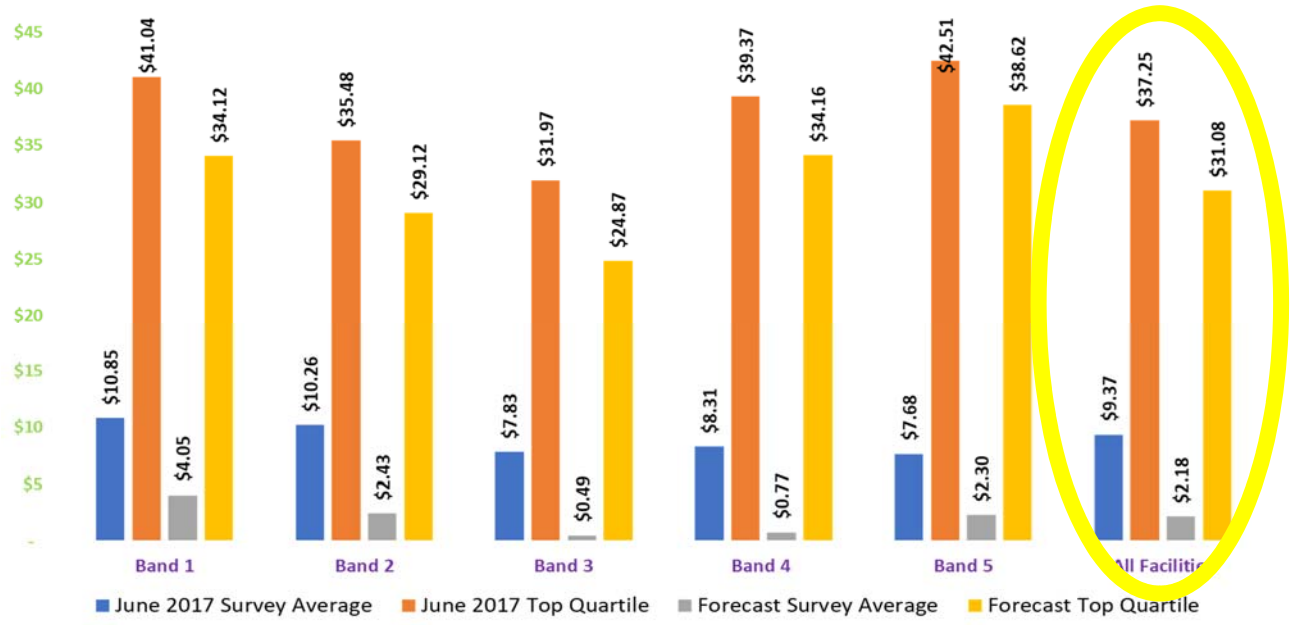


5. RESIDENT CARE - FINANCIAL SUSTAINABILITY

Recap - FY18 Forecast

As background, StewartBrown performed a forecast of the FY18 facility results In October 2017 based on the COPE freeze of ACFI funding, changes in the ACFI assessment and a similar set of assumptions as now used for the FY19 forecast. An extract from the FY18 forecast is below:-

Figure 11: FY18 Residential Care Forecast (Facility Result)



Commentary

The FY18 forecast for the Survey *Average* was $2.18 per bed day (actual FY18 $2.37 pbd) and for the Survey *First 25%* was $31.08 pbd (actual FY18 $30.26 pbd).

This suggests that whilst it was clear early in the FY18 fiscal year that the operating performance was going to deteriorate because of underlying funding and cost increase pressures, the ability of facilities (in all revenue domains and geographic locations) to adjust their business models to minimise this financial effect was negligible. Similar implications will exist in the FY19 financial results.

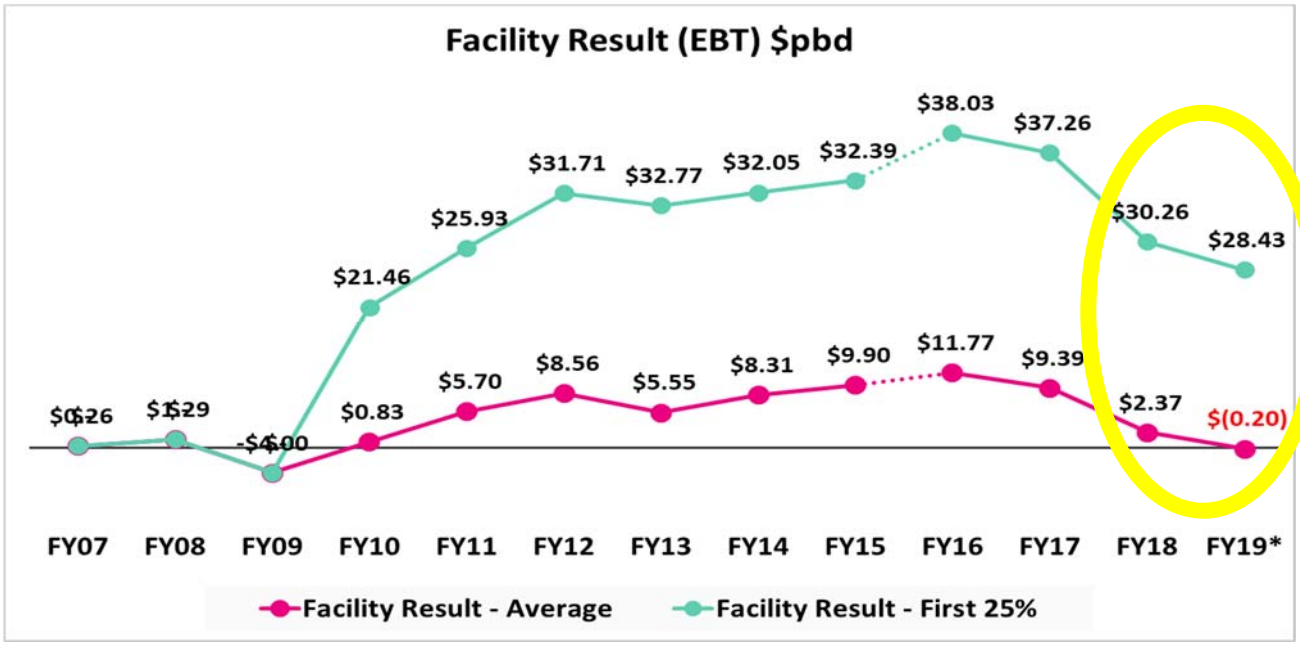
FY19 Residential Care Forecast

Forecast Assumptions

We have calculated the projected Facility Results for FY19 using the following assumptions:

- ✓ Based on FY18 actual Facility Results
- ✓ Adjusted for ACFI inflation of 1.17% on average *(1.4% ADL; 1.4% BEH and 0.7% CHC)*
- ✓ Adjusted for increase of $0.35 per bed day (average) for additional optional services
- ✓ Adjusted for other revenue increases in line with pension/ CPI increase
- ✓ Adjusted for Wage increases of 3.0%
- ✓ Depreciation assumed to remain stable
- ✓ Adjusted for other expenditure increases at CPI of 2.1%

Figure 12: FY19 Residential Care Forecast (Facility Result)



Commentary

As at FY18 the EBITDAR pbpa for the Survey *Average* was $6,760, therefore, the impact of a facility operating deficit of $0.20 per bed day (keeping all else constant) is:-

- A reduction of Facility EBT per bed per annum from $816 to a deficit of $69 per bed per annum and;
- A reduction of Facility EBITDAR from $6,760 per bed per annum to $5,491 per bed per annum

If the above FY19 projections become a reality, then the financial viability of a considerable number of residential care facilities will come under scrutiny. This may necessitate the review of the effective life of assets resulting in asset impairment charges and/or higher depreciation charges in the financial statements of organisations with the effect of reducing the carrying value of the asset base thus increasing losses.

Impact of FY19 Projections - Increase in Number of Facilities with Negative Results

The below table projects the number of facilities that could transition into having EBT and EBITDAR losses should the FY19 projections be realised. A comparison to FY17 and FY18 is included.

Table 8: FY19 Projection Number of Facilities with EBT and EBITDAR deficits

	FY17 %	FY18 %	FY19* %		FY17 No.	FY18 No.	FY19* No.
% of facilities with negative facility EBT by remoteness							
Major Cities	30.2%	41.5%	45.3%		187	262	286
Inner Regional	36.1%	47.2%	52.8%		87	116	130
Outer regional, remote & very remote	52.1%	63.5%	65.6%		50	61	63
Survey	**33.9%**	**45.1%**	**49.2%**		**324**	**439**	**479**
% of facilities with negative facility EBITDAR by remoteness							
Major Cities	12.6%	18.0%	21.8%		78	114	138
Inner Regional	13.3%	22.4%	28.0%		32	55	69
Outer regional, remote & very remote	25.0%	37.5%	42.7%		24	36	41
Survey	**14.0%**	**21.0%**	**25.5%**		**134**	**205**	**248**

Future Financial Sustainability

A number of significant issues need to be considered when assessing the future funding model that is required to meet the requirements of a sector that is experiencing considerable resource pressures.

Whilst residential care has some clear financing issues that should be addressed as a priority, it should be noted that the Home Care Packages Program (HCP), Commonwealth Home Support Programme (CHSP) and Veterans Home Care Program (VHC) amongst a number of similar community programmes must also be considered in relation to the future funding models.

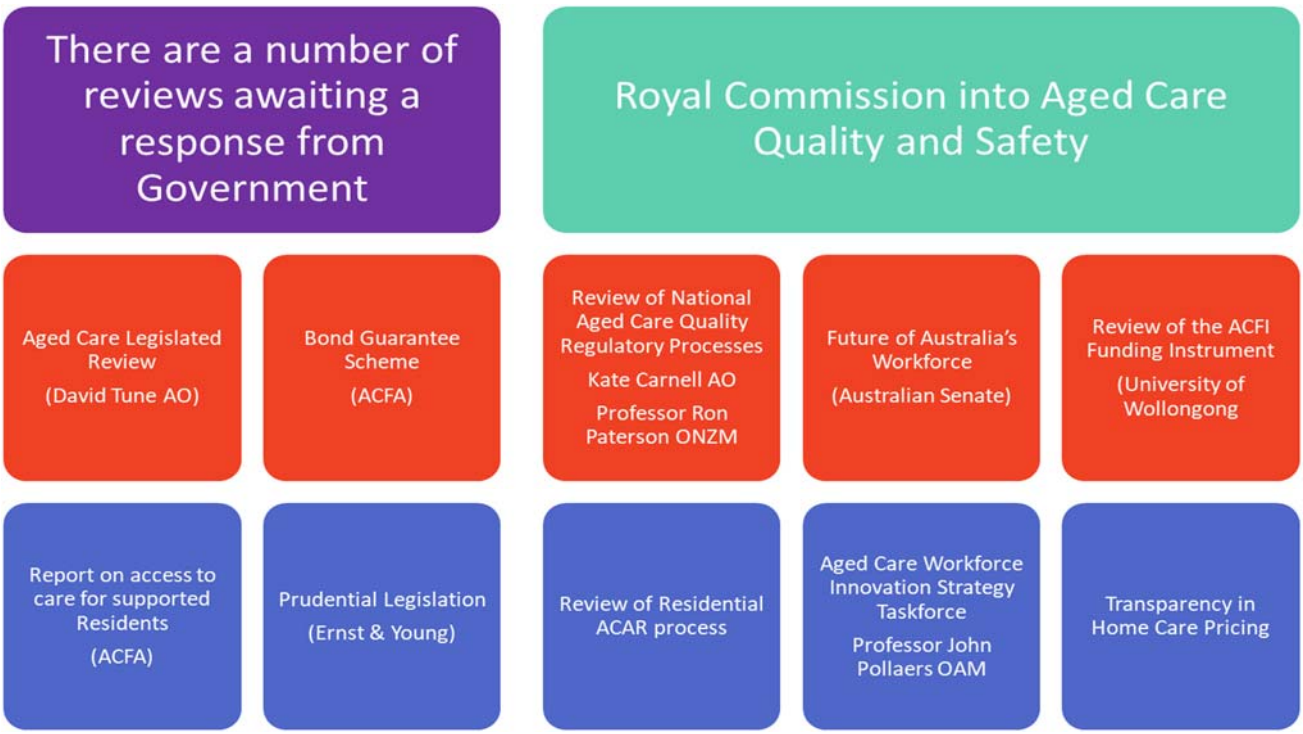
For the purpose of this brief analysis we are making specific comment on the Residential Care and HCP segments.

Current Reforms

The future sustainability of the sector will be dependent upon the impact of impending reforms and initiatives.

The graphic below summarises the current reforms that are progressing within the sector. Individually each reform has considerable importance and support, however, the sector has undergone considerable reforms dating back to 1997 (*Aged Care Act*) which have compounded the administrative and governance burden and affect strategic decisions due to uncertainty.

Figure 13: Summary of Current Aged Care Sector Reforms



Issues to be Considered

Specific areas that will need to be considered in developing a financially sustainable aged care sector include:-

Residential Care

- ACFI Funding - review the quantum of inflation (COPE) increases together with a stronger relationship between the funding instrument and actual resident care needs
- Additional funding is required for the Behaviour (BEH) and Complex Health Care (CHC) CFI domains due to the increased number of residents with dementia or other behaviour attributes, and with greater numbers of residents requiring palliative care and having almost sub-acute health conditions
- Rural, Remote and Very Remote facilities will require a range of specific funding initiatives and support
- Workforce strategies, including retention, career development, staffing levels, remuneration and conditions
- Additional and Optional Service Fees - clearer regulatory guidance, move toward the deregulation of Basic Daily Fee and targeted funding for supported residents
- Accommodation Pricing - consumer education as to what is included in accommodation pricing, providers to increase the pricing and with an emphasis on a receiving a greater percentage of combination (RAD and DAP) receipts
- Innovation to be supported and encouraged at regulatory and legislative level
- Enhancement of My Aged Care functionality and portability
- Clearer and defined legislative and regulatory environment

Home Care

- National Prioritisation Queue and waiting lists - funding initiatives to reduce the size of the prioritisation queue and reduce the length of time from consumer funding approval to the funding being provided
- Pricing Transparency - ensure that it does not disadvantage providers or consumers and allows for care and business model innovation
- Pricing and Service Delivery - more clarity and flexibility in relation to provision of service guidelines
- Quality Audits - enhanced monitoring and appropriate responses to non-conformance
- Unspent Funds - clearer definition around use of unspent funds and possible redistribution of underutilised funds to other consumers on wait lists (dependent on assessment of composition of unspent funds)
- Consumer Education - greater focus on providing increased consumer (and provider) education
- Enhancement of My Aged Care functionality and portability
- Clearer and defined legislative and regulatory environment
- Integration of CHSP and HCP programs (as appropriate)

General

- Better targeted consumer education on the journey through the aged care system from seniors housing, through funded services
- Greater level of congruence between State regulatory environment for Retirement Villages and to provide an easier transition from senior's housing to residential care
- Education and guidance on Governance for aged care providers

6. HOME CARE ANALYSIS

Overview

The home care packages (HCP) sector has also experienced a significant decline in profitability with revenue and overall EBT per client day declining in both the Survey *Average* and Survey *First 25%* quartile. This result was compounded by an increase in unspent funds (revenue utilisation) per client and in aggregate.

The overall Survey *Average* EBT result was a surplus of $3.77 per client day (FY17 $5.37 pcd) with Band 4 (highest acuity mix) have the greatest decline from $12.51 pcd to $8.29 pcd. The Survey *First 25%* also had a reduction in surplus to $17.17 pcd (FY17: $25.03 pcd).

Revenue

- Decreased by 6.1%
- Pricing pressure due to increased competition
- Lower revenue utilisation
- Higher unspent funds

Expenses

- Decreased by 4.2%
- Direct service costs increased by $1.39 pcd
- Cost of direct service and brokered/sub-contracted as a percentage of total income has increased to 61% from 55% (FY17)
- Decrease in case management and advisory $1.32 pcd (reduction in staff costs)
- Decrease in administration costs of $2.98 (mostly reduction in corporate recharge and staff costs)

For both the Survey *Average* and *First 25%* the profitability declines were in Bands 3 and 4, whilst Bands 1 and 2 had slight increases. The majority of the programs in the Survey are in Band 3 (52%).

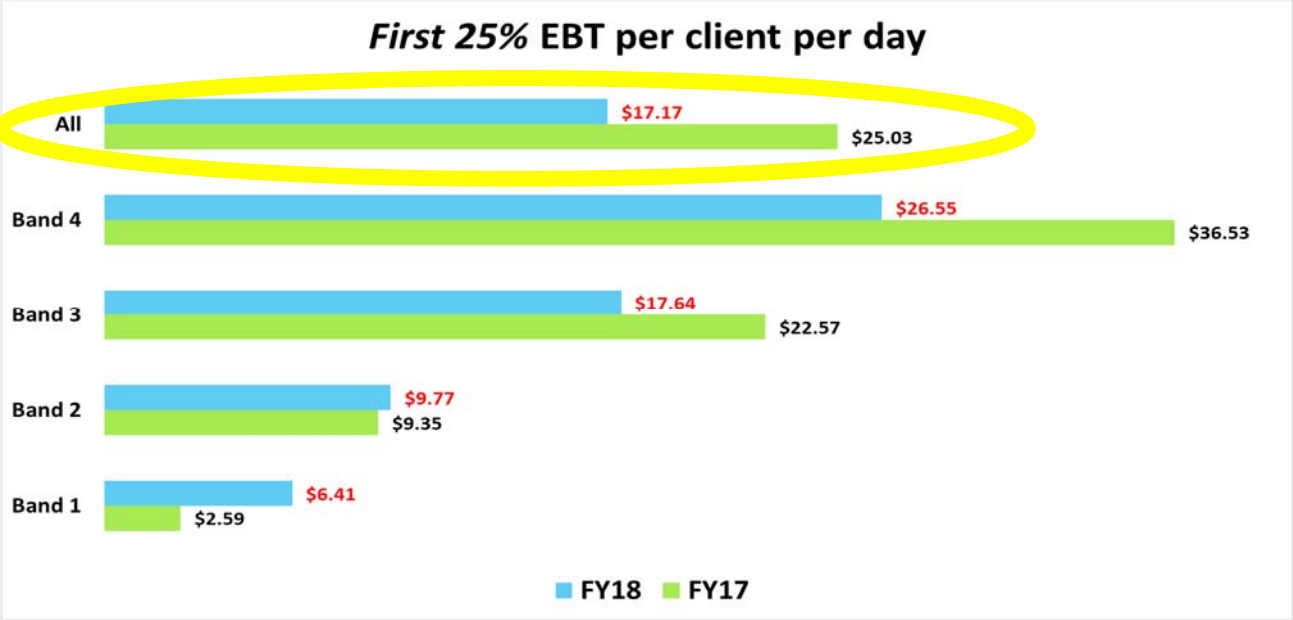
EBT for Survey *First 25%*

The EBT performance of the Survey *First 25%* for FY18 declined to an even greater extent than the Survey *Average* with the effects of the reduced prices, revenue utilisation and increased administration costs being the predominant reasons.

Figure 15: Comparison of Survey First 25% EBT (operating surplus) FY18 and FY17



Sector Data (GEN)

- Additional 373 approved home care providers since Jun-16 (869 in total as at 30 June 2018)
- Post deregulation - growth since Mar-17 to Mar-18 is 23% (176 providers)
- Additional 20,902 consumers since Jun-16 (at Mar-18 is 84,971 consumers)
- Post deregulation - growth since Mar-17 to Mar-18 is 20% (14,392 consumers)
  - More than 7,000 home care consumers in the Dec-17 to Mar-18 quarter!
- 64,688 queued either in or assigned a lower level package and 56,750 not in or assigned a lower level package as at 30 June 2018 (121,438 in total in national prioritisation queue)

Figure 16: Number of Home Care Providers

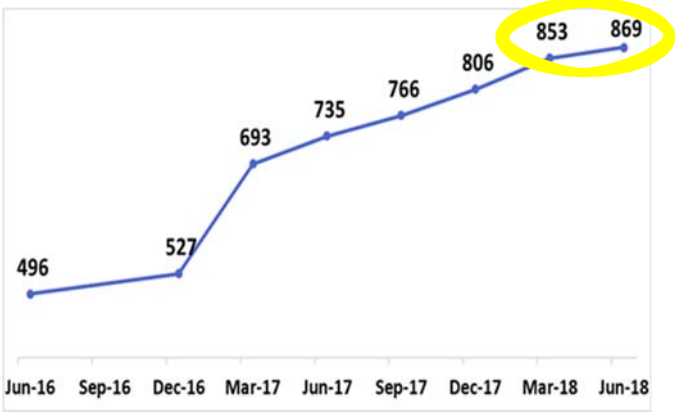


Figure 17: Number of Home Care Consumers

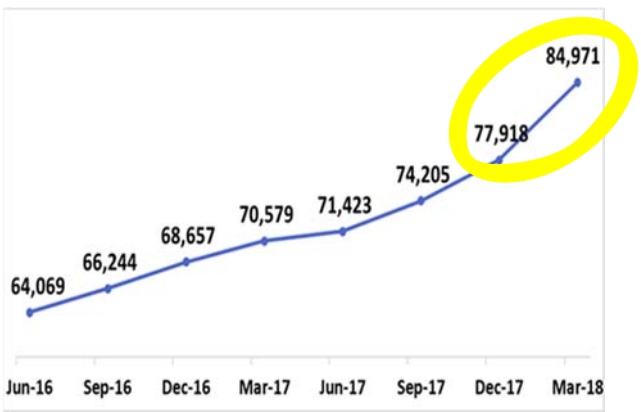
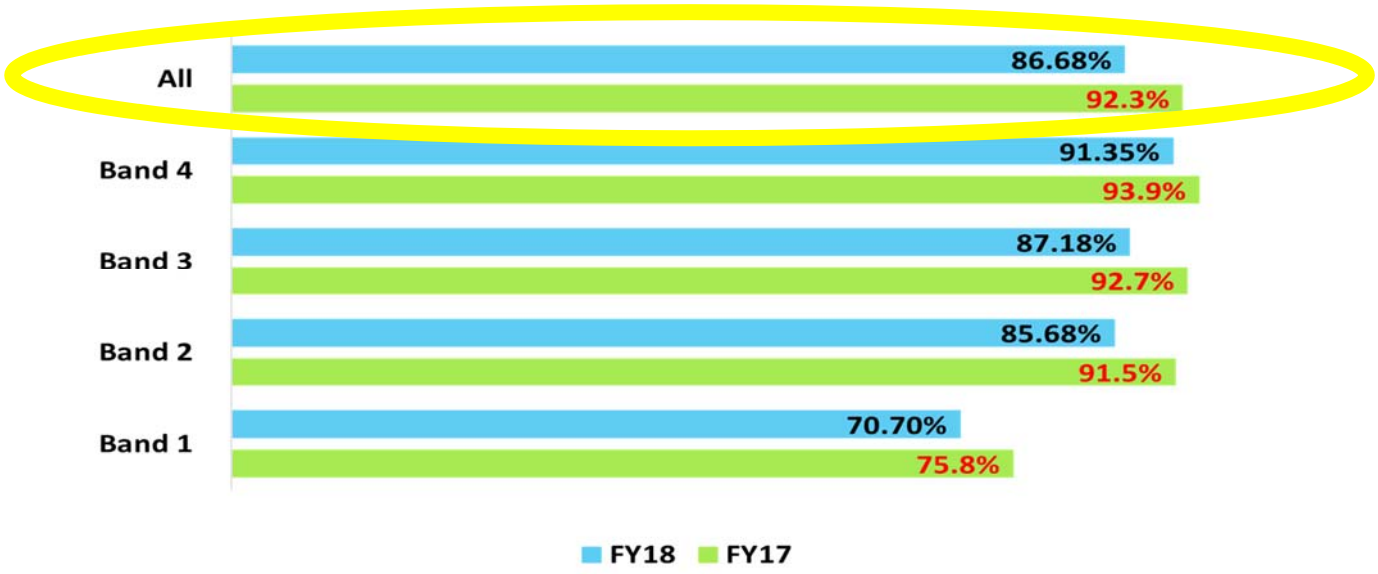


Revenue Utilisation

There has been a considerable decrease in revenue utilisation during the year. This has affected the profitability as the fixed costs have been spread over lower revenues and some of the variable (staff costs) are difficult to defray in a short time period. The improvement in revenue utilisation must be a major priority for FY19.

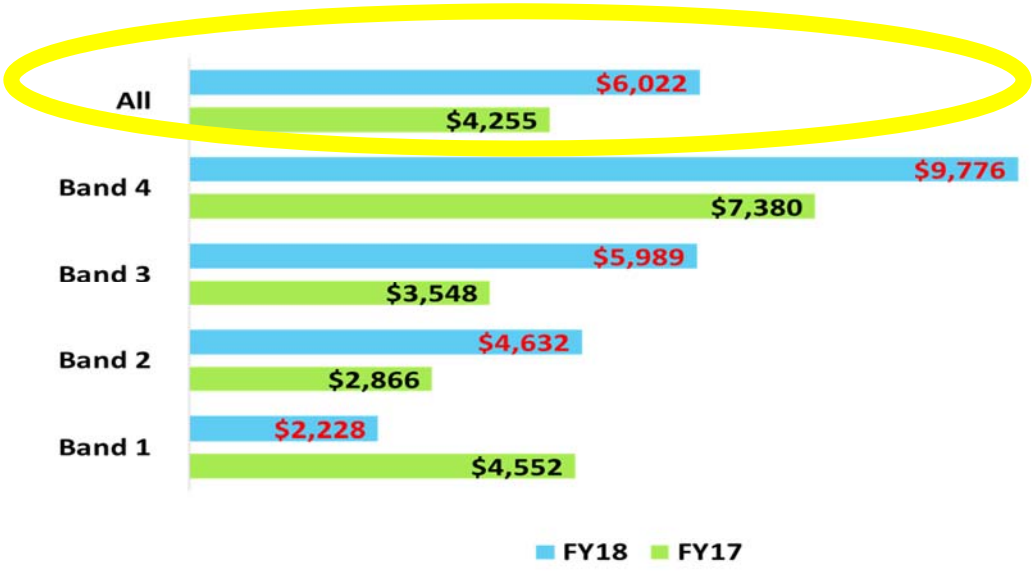
Figure 18: Revenue Utilisation comparison for FY18 and FY17



Unspent Funds

The resultant effect of decreased revenue utilisation is the increase of unspent funds for each client. ACFA estimated the unspent funds liability for FY17 to be $319 million and this is likely to be over $400 million as at FY18 year-end. This represents subsidy funds, by majority, that if not being utilised for direct care delivery could be diverted into those consumers on the national prioritisation queue that do not yet have funding provided.

Figure 19: Average Unspent Funds per Client



Staff Hours Worked per Client

The average direct care hours per client per week have declined from the levels in FY17. This is partly due to lower available package revenue as a direct result of the increased unspent funds.

Notably, there is a decrease in administration and support service hours. Many providers are making a concerted effort to improve efficiencies in this area to reduce costs.

Table 9: Home Care Staff Hours per Client per Day

	Average			First 25%		
	FY18	**FY17**		**FY18**	**FY17**	
Direct service provision	5.15	5.31	↓	6.31	7.48	↓

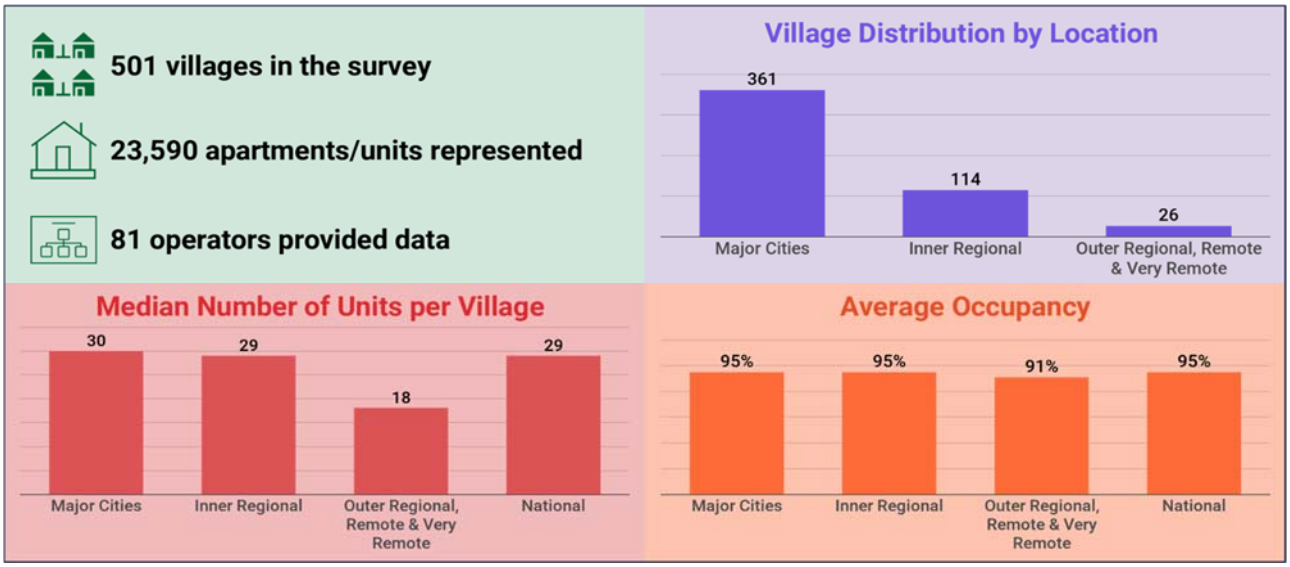
Total Staff Hours	**6.69**	**7.16**	↓	**8.44**	**9.66**	↓

7. RETIREMENT VILLAGES

Snapshot

The FY18 Survey was expanded to now include data collection in relation to the Retirement Village (Seniors Housing) segment. Seniors housing is merging into the aged care sector due to the average age of entry increasing and the corresponding requirement for residents to have access to domestic and care services when required.

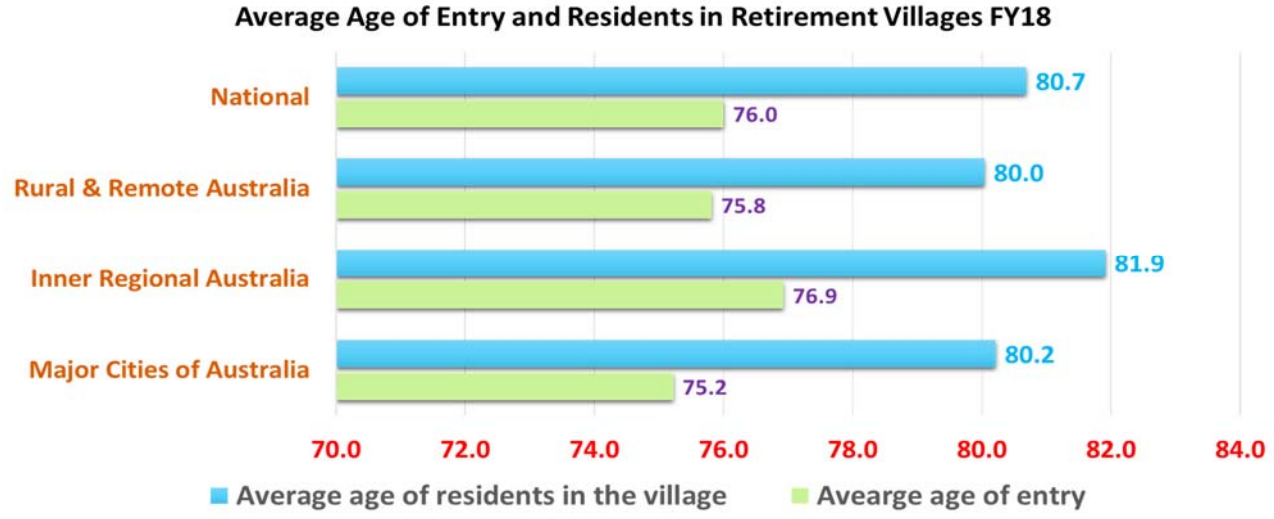
Figure 20: Retirement Village Survey Data Analytics



Average Age of Entry

Retirement villages were established as "over 55's housing" and many providers offered "lifestyle" retirement accommodation. The average age of entry has been progressively increasing over time which has changed the service offering provided. The figure below shows the average age of entry and current residents.

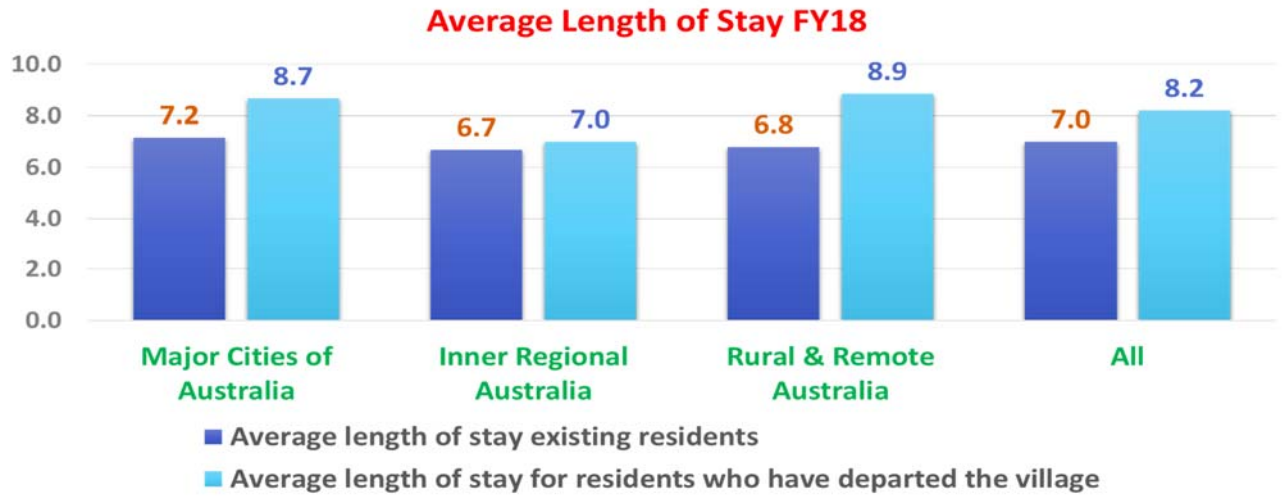
Figure 21: Average Age of Entry and Average Current Age of Retirement Village residents



Average Length of Stay

As would be expected with the increasing average age of entry, the average length of stay has decreased. The graphic below shows the average length of stay for existing and departed residents in the FY18 Survey.

Figure 22: Average Length of Stay for Existing and Departed residents



8. APPENDIX A - GLOSSARY

Accommodation Result
Accommodation Result is the net result of accommodation revenue (DAPs/DACs/Accommodation supplements) and expenses related to capital items such as depreciation, property rental and refurbishment costs. It no longer includes costs associated with recurrent repairs and maintenance and motor vehicles.

ACFA
Aged Care Financing Authority - the statutory authority which provides independent advice to the government on funding and financing issues, informed by consultation with consumers, and the aged care and finance sectors.

ACFI revenue
Aged Care Funding Instrument (ACFI) revenue includes the subsidy received from the Commonwealth and the means-tested care fee component levied to the resident. ACFI revenue includes the additional care supplement subsidies and some specific grant (not capital) funding.

ACFI Result
ACFI Result represents the net result from revenue and expenses directly associated with care. It includes ACFI and Supplements (including means-tested care fee) revenue less total care expenditure, and this includes an allocation of workers compensation and quality and education costs.

Administration Costs
Administration Costs includes the direct costs related to administration and support services and excludes the allocation of workers compensation and quality and education costs to ACFI and Everyday Living.

Averages
For residential care all *averages* are calculated using the total of the raw data submitted for any one-line item and then dividing that total by the total occupied bed days for the facilities in the group. For example, the average for contract catering across all facilities would be the total amount submitted for that line item divided by the total occupied bed days for all facilities in the survey.

For home care all *averages* are calculated using the total of the raw data submitted for any one-line item and then dividing that total by the total client days for the programs in the group. For example, the average for sub-contracted and brokerage costs across all programs would be the total amount submitted for that line item divided by the total client days for all programs in the survey.

***Average* by line item**
This measure is *average*d across only those facilities that provide data for that line item. All other measures are *average*d across all the facilities in the particular group. The *average* by line item is particularly useful for line items such as contract catering, cleaning and laundry, property rental, extra service revenue and administration fees as these items are not included by everyone

Bed day
The number of days that a residential care place is occupied in the Survey period. Usually represents the days for which an ACFI subsidy or equivalent respite subsidy has been received.

Benchmark
We consider the benchmark to be the average of the *First 25%* in the group of programs being examined. For example, if we are examining the results for facilities/ programs in Band 4, then the benchmark would be the average of the *First 25%* of the facilities/ programs in Band 4.

Care Result
This is the element of the facility result that includes the direct care expenses and everyday living costs and administration and support costs. It is calculated as ACFI Result *plus* Everyday Living Result *minus* Administration Costs.

Dollars per bed day
This is the common measure used to compare items across facilities. The denominator used in this measure is the number of occupied bed days for any facility or group of facilities.

Dollars per client day
This is the common measure used to compare items across programs. The denominator used in this measure is the number of client days for any programs or group of programs.

EBIT
Earnings Before Interest (including investment revenue) and taxation. This is a measure that excludes those variables relating to the tax status and financial position of an entity but recognises the consumption of capital in the form of depreciation and amortisation.

EBITDAR
This measure represents earnings before interest (including investment revenue), taxation, depreciation, amortisation and rent. The calculation excludes interest (and investment) revenue as well as interest expense on borrowings.

The main reason for this is to achieve some consistency in the calculation. Different organisations allocate interest and investment revenue differently at the "facility level". To ensure that the measure is consistent across all organisations we exclude these revenue and expense items.

EBITDAR per bed per annum

Calculation of the overall Facility EBITDAR for the financial year divided by the number of operational beds in the facility.

EBT
Earnings before tax. This may also be referred to as the net result or, in the residential facility analysis, as the facility result.

Facility EBITDAR
The starting point for this calculation is the Facility Result which is the combination of the Care and Accommodation results. It excludes all "provider revenue and expenditure" including fundraising revenue, revaluations, donations, capital grants and sundry revenue. It also excludes those items excluded from the EBITDAR calculation above. This measure is more consistent across the facilities because it excludes all those items which are generally allocated at the facility level on an inconsistent and arbitrary basis depending on the policies of the individual provider.

*** The previous metric of Provider EBITDA is no longer included in the reporting as it is not considered to be a key indicator of facility performance.*

Everyday Living Result
Revenue from Basic Daily Fee plus Extra or Optional Service fees less Hotel Services (catering, cleaning, laundry), Utilities, Motor Vehicles and regular Property & Maintenance (includes allocation of workers compensation premium and quality and education costs to hotel services staff)

Facility Result
Combination of the Care and Accommodation Results. It excludes revenue from fundraising, investments, sundry revenue and fair value adjustments.

***First 25%* - Residential Care and Home Care Packages (HCP)**
The Residential Care and Home Care results (EBT) are distributed for the Survey period from highest to lowest in terms of $ per bed/client per day ($pd). This is then divided into four quartiles - the first 25%, second 25%, third 25%, fourth 25% and the average of each quartile is reported. The *First 25%* represents the quartile of programs with the highest EBIT $pd, the second 25% represents the quartile with the second highest EBIT $pd, the third 25% represents the quartile with the third highest EBIT $pd, whilst the fourth 25% represents the quartile of programs with the lowest (fourth highest) EBIT $pd.

Location - City
Facilities have been designated as being city based according to the designation by the Department of Health in their listing of aged care services. Those that were designated as being a “Major City of Australia” have been designated City.

Location - Regional
Facilities have been designated as being regionally based according to the designation by the Department of Health in their listing of aged care services. Those that were designated as being an “Inner Regional”, “Outer Regional” or “Remote” have been designated as Regional.

Survey
Survey is the abbreviation used in relation to the *Aged Care Financial Performance Survey*.

Integrity + Quality + Clarity

Aged Care Financial Performance Survey

Sector Report

(Six months ended December 2018)

The StewartBrown December 2018 *Aged Care Financial Performance Survey* incorporates detailed financial and supporting data from over 965 residential care facilities and over 27,164 home care packages (503 home care programs) across Australia. The quarterly survey is the largest benchmark within the aged care sector and provides invaluable insight into the trends and drivers of financial performance at the sector level and at the facility or program level.

Survey Analytics

Subscribers to the *Aged Care Financial Performance Survey* (Survey) include some of the largest providers nationally, independent stand-alone providers, faith-based and community providers, culturally specific providers, as well as government bodies including the Department of Health (DOH) and Aged Care Financing Authority (ACFA), and aged services sector peak bodies and other service providers to the sector.

The December Survey encompasses residential care and home care packages including a detailed analysis of the operating income and expenses of participants and a review of the financial position of organisations providing aged care services. The Survey covered the following participation:-

- 175 approved provider organisations
- 965 residential facilities *(41 additional facilities were excluded due to their operational circumstances)*
- 27,164 home care packages
- Comparisons with 3 listed aged care entities (Estia/Japara/Regis)

In respect of residential care, participants to the Survey represent approximately 40% of facilities within Australia. The profile of the residential care participants, based on the geographical spread, is:-

2. EXECUTIVE SUMMARY

Abstract

This Sector Report provides an overview of the financial performance of the aged care sector in Australia based on the results of the StewartBrown *Aged Care Financial Performance Survey* for the six months to 31 December 2018. This Report is focused at the organisation level of providers in the aged care sector and the average performance achieved by participants to the Survey. Supplementary reports on the Residential and Home Care results are also issued to participant and they include greater granularity in analysis from a benchmarking viewpoint. Individual participants also receive specific comparative data relevant to their location, size and specific facilities within their organisation, including access to an inter-active website.

What the Survey highlights is that the financial performance of the aged care sector continues to experience significant challenges due to a continued decline in profitability in both the residential care and home care segments and this creates challenges for the long-term financial sustainability of the sector. Similar funding challenges exist in the provision of services involving the Commonwealth Home Support Program (CHSP) and Veterans Home Care program (VHC).

To some degree, this has been acknowledged by the Government by a $320 million one-off funding boost that will be received by residential care providers in the period 20 March 2019 to 30 June 2019. ACFI and other basic subsidies will be increased by approximately 9.5% for that period. Subsidy rates will revert back to the pre-20 March levels for COPE indexing purposes from 1 July 2019. While this will be welcomed by all residential care providers, it will not repair the underlying issues relating to the viability of residential care facilities in the future periods unless the funding model (government and consumer) is enhanced.

Dec-18 Survey Results Summary

The financial performance of the residential care and home care package segments has continued to see a deterioration in their results year on year. A continuation of this decline which began in the 2017 financial year will potentially place a number of residential care facilities in a financially vulnerable position which could impact on the provider organisation's sustainability.

Following is a summary of the key financial performance results and indicators by segment from participants in the Dec-18 *Aged Care Financial Performance Survey*. Comparisons are generally year-on-year (Dec-17) with some analysis against the FY18 results.

Organisation (Approved Provider) - Dec-18 compared to FY18

- Operating EBT Result (*) (average by organisation) reduced by $55k to a deficit of $356k
- Operating EBITDA reduced by $1,449k to an average of $1,000 surplus
- Operating Result expressed as a return on assets employed (ROA) has further reduced from negative 0.14% to negative 0.36%. ACFA total residential care sector FY17 return on assets was 0.8% and is also expected to decline for FY18
- Operating EBITDA (cash surplus) return on assets has further reduced by 0.18% to 1.02% (FY18 1.2%)
- Liquid cash and financial assets as a percentage of debt (RADs and external) has increased by 0.6% to 36.3% (FY18 35.7%). The listed entity ratio increased by 1.6% to 3.2% (FY18 1.7%) (prior to dividends)
  **Operating result excludes non-recurrent revenues and expenses (revaluations/donations/impairment etc)*

Residential Care

- Average ACFI per bed day (pbd) for survey participants has increased by 3.1% to $177.68 pbd (Dec-17 $172.36 pbd
- Occupancy levels for Survey participants remained neutral (94.9% average occupancy)

- Total care hours per resident per day increased by 0.10 hours to 3.16 hours (Dec-17 3.06 hours)
- Direct care costs increased by 4.5% ($144.69 pbd)
- Costs for providing everyday living services exceeded contribution revenue by $7.38 pbd
- *Average* Earnings Before Tax (EBT) for residential facilities reduced by $508 per bed per annum (pbpa) to $1,109 pbpa (Dec-17 $1,617 pbpa)
- *Average* EBITDAR for residential facilities reduced by $75 pbpa to $7,391 pbpa (Dec-17 $7,466 pbpa)
- 42.3% of residential facilities recorded a negative Operating Result (EBT) (41.3% for Dec-17)
- 19.5% of residential facilities recorded a negative EBITDA (19.8% for Dec-17*) (representing a cash loss)*
- 61% of outer regional, rural and remote facilities recorded an EBT loss *(37% recorded a cash loss)*

Home Care Packages

- Revenue per client day (pcd) average for Survey participants increased by 9.6% (being $6.70 pcd)
- Operating Result (EBT) surplus *Average* per client day for Survey participants increased by $0.09 pcd to $3.33 pcd (Dec-17 $3.24 pcd)
- Direct service costs increased by $2.78 pcd (51.0% of total revenue)
- Revenue utilisation (average unspent funds) has improved marginally to 88.9%
- Unspent funds average per client has increased by $1,414 per client (to average $6,827 per client)
- Staff hours per client per week reduced by 0.45 hours (average 6.69 hours per week)
- 46% of clients transitioned to residential care (45% in FY18)
- 12% of clients transferred to another provider (9% in FY18) - the majority being due to change of place of residence

Commentary

The Dec-18 financial results for the sector indicate clearly that the current funding model remains under significant strain. While there have been seasonal improvements in results since FY18, the underlying year-on-year results of both residential care and home care indicates declining financial performance

The residential care financial performance decline continues to be largely revenue related, largely due to the combination of a partial COPE indexation freeze on the CHC domain, the average COPE (inflation) increase of 1.17% not matching CPI, ongoing effects of the amendments to the ACFI scoring matrix, ACFI downgrades and increased costs. Costs have risen as would expected due to Enterprise Agreement staff rate increases, CPI increases for other expenses except for electricity which was well above the underlying inflation rate.

Average ACFI subsidy revenue has increased by $5.32 pbd to $177.68 pbd since Dec-17 mainly as a result of the average COPE increase of 1.17% since June 2018. The last few years have seen ACFI funding plateauing, and this is consistent with the acuity (assessed care) of residents remaining at the same level for the last 2-3 years.

The resultant financial effect is that it is likely that when a resident exits a residential facility they are replaced by an incoming resident with lower assessed needs and, therefore, a lower daily ACFI subsidy (often between $20 - $30 per day lower). The cost structure of residential facilities, which are largely fixed in nature, means that it is difficult to defray the subsidy reduction by a compensating cost reduction, so the profitability is immediately affected.

The impact of the regulatory changes and funding pressures has resulted in the disturbing statistic that 42.3% of residential facilities reported an EBT operating deficit for the six months to Dec-18, and even more disconcerting is that 19.5% of facilities had negative EBITDA (indicating a cash loss from operations). All geographic locations reported a decline, however, the outer regional, rural and remote locations have significant financial concerns.

Direct care staffing hours per resident per day increased from 3.06 hours (Dec-17) to 3.16 hours. Staff costs have risen by $5.57 per bed day since Dec-17. This increase alone is in excess of the average rise of ACFI revenue of $5.32 per bed day. It is clear that the revenue base of residential aged care providers is not keeping pace with the rising costs.

Earnings Before Tax (EBT) for FY18 for residential care averaged $1,109 per bed per annum, which equates to an unsustainable amount of $21.33 per bed per week. This is not sufficient to generate future growth or asset replacement and renewal.

Occupancy levels in residential care facilities increased marginally to 94.9% average occupancy, however the concern is that any facility closures due to financial stress may impact the vulnerable aged requiring high care accommodation.

At an organisational level the *Average* EBT return on assets employed (ROA) was a negative 0.02%. After excluding non-recurrent revenue streams such as revaluations, fair value gains on property and investments, and non-recurrent revenues including donations, the ROA represented a negative return of 0.36%.

The financial viability of outer regional, rural and remote aged care providers is reaching a pivotal point. Over 61% of residential facilities in these geographic locations are operating at a loss, with more than 37% now operating at a cash deficiency. There are few opportunities for existing providers to merge or sell their facilities to larger providers, meaning that remedial funding would be essential in our opinion. This need has been recognised with a substantial increase of 30% to the viability supplement for qualifying facilities.

Accommodation pricing for residential care (Refundable Accommodation Deposits and Daily Accommodation Payments) have not translated into a major equity pipeline. This is due to the number of supported residents (over 47% nationally) and consumer reluctance to pay higher accommodation prices commensurate with the average housing prices. Consumer education in relation to accommodation as distinct from care is required.

For Dec-18 the *Average* surplus from accommodation revenue and accommodation costs (by majority being depreciation and refurbishment) equated to $3,983 per bed per annum. Assuming a new residential bed costs around $300,000 to build and the depreciated bed value (WDV) is currently around $185,000 this is, in itself, not a sustainable return, being less than 2.2% pa for existing facilities and 1.3% for new builds.

However, it should be noted that this accommodation surplus is partly due to generally low depreciation charges (buildings being depreciated over 40+ years with little to no refurbishment factored in). If buildings were depreciated at 4% pa (ie 25 years effective life) which is more realistic, then this would create a reported accommodation deficit rather than a surplus.

In-home care had also experienced a financial performance decline in FY18 with revenues reducing by an average of 6.1% underpinning an overall reduction in profitability of 29.8%. The decline appears to have been somewhat stabilised in the current financial year with the results for the six months to Dec-18 showing a $0.09 increase in the result from Dec-17 to $3.33 per client per day.

Since June 2016 the number of approved providers in home care has increased nationally by 400 (80.6% increase), however the number of funding packages has only increased by 43.4% (from 64,069 packages to 91,847 packages) in the same period.

In conclusion, the aged care sector requires significant investment given that the home care national prioritisation queue (consumers assessed for funding but not yet allocated full funding) has increased by over 32,500 since June 2017 to now being over 121,400, coupled with the estimated 83,000 plus new residential beds being required over the next 10 years to meet the ageing population demands.

For this investment to occur the sector must be financially sustainable which will require all stakeholders to engage in exploring sustainable and robust solutions to the funding and operational business models.

3. ORGANISATION ANALYSIS

This section provides a summary of the six months to Dec-18 financial performance of aged care providers at an organisational level rather than at individual segment or facility level. For the purposes of this analysis, we have included the detailed information provided by 122 organisations who are representative of all states and demographics.

The same provider organisations were used to compare their operating performance for FY18 and FY17.

Operating Results for six months ended 31 December 2018

The following table represents the Survey organisation (approved provider) summary revenue and expenses for the six months ended 31 December 2018 and financial years ended 2017 and 2018. The amounts expressed are the average of the 122 organisations for ease of comparison. The ACFA comparisons are for the 2016 and 2017 financial years and include the residential segment only for the approved providers.

Depreciation as % of property assets	*2.6%*	*2.7%*	*2.8%*	*3.8%*	*3.3%*	*2.7%*	*2.6%*

Brief Commentary

- The Operating Result includes Investment Income and excludes non recurrent Other Income (eg fair value revaluations, donations, fundraising etc). Non-recurrent expenses (such as impairment) have been offset against other income
- The operating result has declined each year since 2016 and was an average deficit by organisation of $356k for the six months ending Dec-18
- The operating result *excluding* investment income was a deficit by organisation of $1,007k for six months ending Dec-18 ($2,118k for FY18)
- ACFA income and expenditure is for the residential care segment only and shows a similar decline for the FY16 and FY17 periods and it is likely the FY18 results will also show a further significant deterioration

Balance Sheet Summary as at 31 December 2018

Brief Commentary

- Net assets and net tangible assets has decreased for the Survey organisations and the listed entities (Estia/Japara/Regis)
- Liquidity percentage (cash + financial assets as a percentage of debt) remains high and indicates a conservative approach to capital reinvestment. *This business model varies significantly from the listed entities where cash and financial assets at 31 December was $32.2m before declared dividend payments (March/April) of $52.7m. This would bring the notional percentage to be negative.*
- The results of the sector indicate that the Operating Result expressed as a Return on Assets employed by organisations is not financially sustainable under the current funding model (refer following page Snapshot)

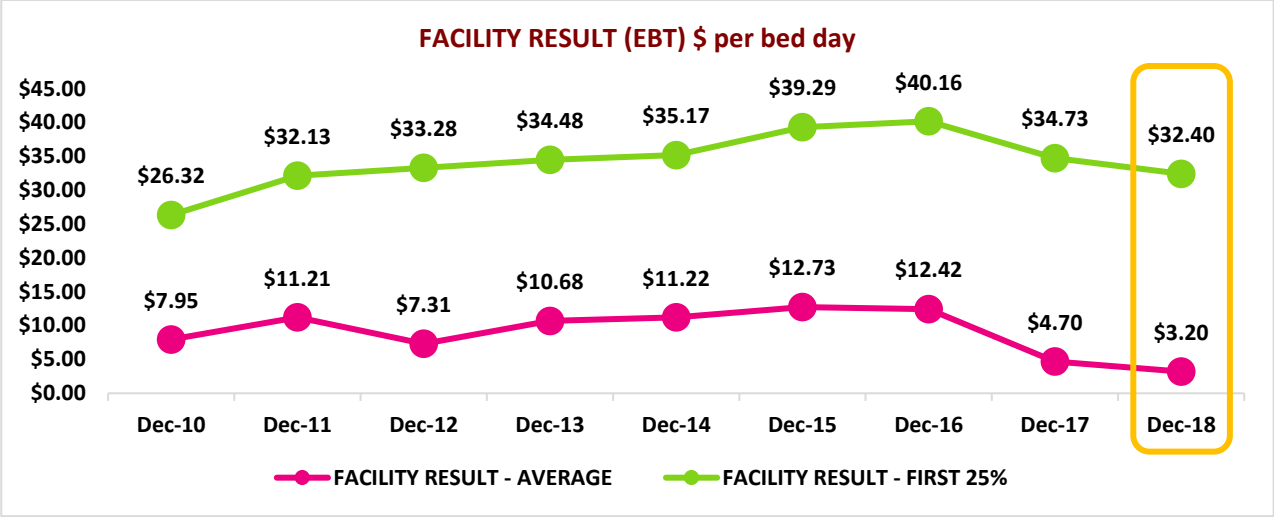
4. RESIDENTIAL CARE ANALYSIS

Facility Result Trend

The residential care sector has experienced a significant decline in Facility Result (EBT) mainly due to care expenses increasing at a much higher rate (4.5%) than revenue (3.1%). The Facility Result as shown to the right has decreased from $4.70 per bed day (pbd) in the period to Dec-17 to $3.20 pbd in the six months to Dec-18.

Figure 1: Facility Result (EBT)



Revenue

- Increase in ACFI revenue by $5.32 pbd - in real terms we are seeing stabilisation of acuity (care) levels. There has only been a slight movement in the proportion of facilities from "low-care" bands to higher care bands - average ACFI subsidy per bed day increased from $172.36 to $177.68 largely as a result of the COPE (inflation) subsidy rate increases
- Increase in Every Day Living revenue by $1.53 pbd mostly due to CPI increase in the Basic Daily Fee
- Increase in Accommodation revenue by $2.09 pbd due to:
  - Resident - $0.41 pbd (due to increase in DAPs ratio as compared to RADs)
  - Subsidy - $1.68 pbd (due to increase in Significant Refurbishment subsidy)

Expenses

- Increase in total care labour costs of $5.57 pbd and increase of roughly 6 minutes per resident per day in total care hours (total direct care hours - 3.16 per resident per day).
- Increase in hotel services $1.09 pbd (2.7%)
- Increase in utilities of $0.49 pbd (mostly due to increase in electricity $0.45 pbd)
- Increase in administration of $1.20 pbd mostly due to increase in corporate increased compliance costs
- Increase in accommodation expenditure by $1.25 pbd (6.8%)

Additional Trends

- Occupancy - slight increase from 94.3% to 94.9%
- Increase in supported resident ratio from 46.2% to 46.9%
- Increase in average Refundable Accommodation Deposit held and received during the year
- Increasing preference for DAPs over RADs - split is now 24.1% RAD, 57.4% DAP and 18.5% Combination

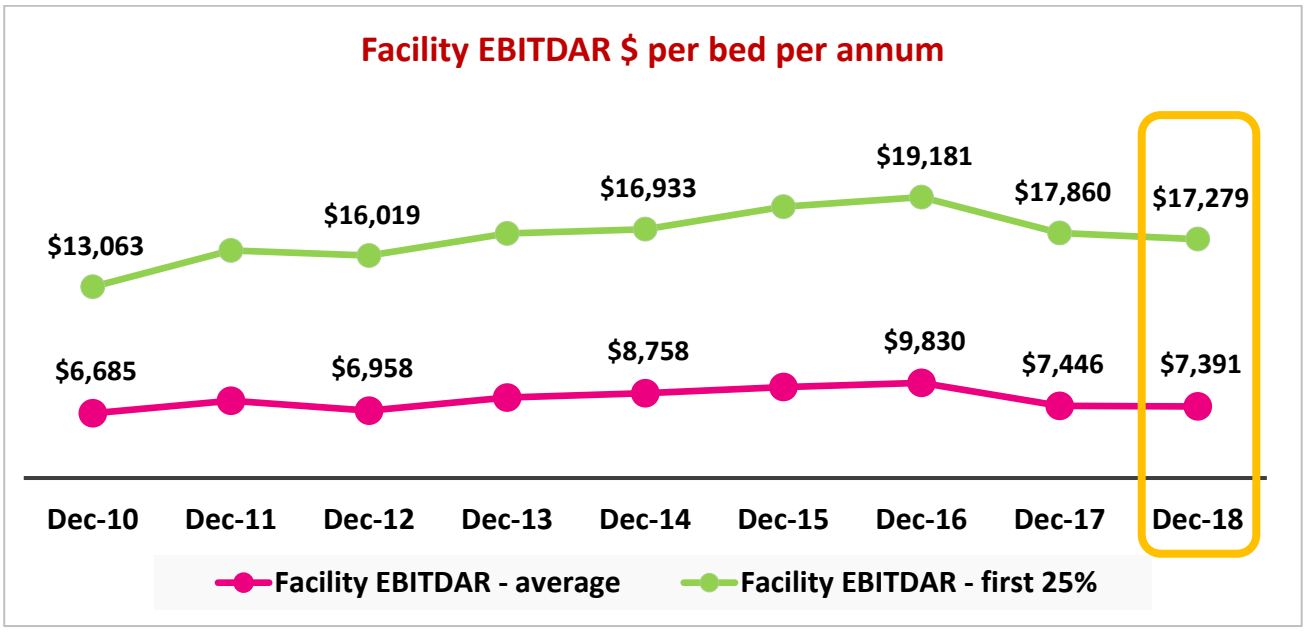
Table 5: Summary Results for Dec-18 Survey

	Dec-18 965 Facilities	Dec-17 915 Facilities		Difference
Facility Result (EBT) $ per bed day	$3.20	$4.70	↓	($1.50)
Facility EBT $ per bed per annum (pbpa)	$1,109	$1,617	↓	($508)
Facility EBITDAR $pbpa	$7,391	$7,466	↓	($75)
Average Occupancy	94.92%	94.37%	↑	0.55%
Average ACFI per bed day	$177.68	$172.36	↑	$5.32
Direct care hours per resident per day	3.16	3.06	↑	0.10
ACFI direct service costs as % of ACFI	81.43%	80.31%	↑	1.12%
Supported ratio	46.90%	46.23%	↑	0.67%
Average Bond/RAD held	$310,680	$284,588	↑	$26,092
Average RAD taken during period	$328,088	$323,849	↑	$4,240

Facility EBITDAR Trend

The below graph shows the Facitity EBITDAR (Earnings Before Interest, Taxation, Depreciation, Amortisation and Rent) trend year on year since 2010 for the December survey period . At the *Average* facility level it is becoming increasingly difficult to remain financially sustainable. A return of $7,391 per bed per annum is unlikely to be sufficient to refurbish or replace infrastructure when the time comes, nor to attract the necessary capital to grow the sector.

Figure 2: Facility EBITDAR trend



At a regional level these results deteriorate further where the average EBITDAR for a facility in outer regional, remote or very remote areas was $3,939 for the half year to Dec-18. We note that the Government has announced an increase in the viability supplements for those facilities that qualify for it, but this will not address the underlying issues facing these facilities, which includes staff shortages, higher costs of goods and services, lower accommodation prices and lower occupancy rates.

Snapshot: Dec-18 Facility Results By ABS Region

Major Cities

626 Facilities

- $1,868 — Facility EBT $ per bed per annum
- $8,308 — Facility EBITDAR $ per bed per annum
- $180.23 — Average ACFI Per bed day
- 80.8% — ACFI services costs as a % of ACFI
- 3.19 — Direct care hours per resident per day
- 45.6% — Supported resident ratio
- 95.1% — Average Occupancy
- $336,739 — Average accommodation deposit held
- $356,910 — Average RAD taken during period

Inner Regional

245 Facilities

- $(171) — Facility EBT $ per bed per annum
- $5,828 — Facility EBITDAR $ per bed per annum
- $171.30 — Average ACFI Per bed day
- 82.6% — ACFI services costs as a % of ACFI
- 3.06 — Direct care hours per resident per day
- 47.3% — Supported resident ratio
- 95.1% — Average Occupancy
- $249,904 — Average accommodation deposit held
- $260,555 — Average RAD taken during period

Outer Regional, Remote & Very Remote

94 Facilities

- $(1,786) — Facility EBT $ per bed per annum
- $3,939 — Facility EBITDAR $ per bed per annum
- $175.05 — Average ACFI Per bed day
- 83.9% — ACFI services costs as a % of ACFI
- 3.24 — Direct care hours per resident per day
- 53.8% — Supported resident ratio
- 92.2% — Average Occupancy
- $237,373 — Average accommodation deposit held
- $256,175 — Average RAD taken during period

Impact of Dec-18 Performance - Number of Facilities with Negative Facility Result (EBT)

Please note that the following analysis is based on the financial operating performance at residential facility level - not at the organisation level.

The total percentage of facilities making an EBT loss has increased from 41.3% to 42.3%. The results have historically declined for the second six months so we would anticipate the percentage to increase further from a recurrent trend perspective. *Please note that the recently announced one-off subsidy will improve the overall results, however our opinion is that this should be discounted when considering the forecast trends.*

The total percentage of facilities making an EBITDAR (cash) loss is 19.5% of the 965 facilities participating in the Survey. In addition to this a further 41 facilities were excluded from the Survey due to being outside the acceptable range.

Figure 3: Analysis of Facilities making EBT and EBITDAR losses in total Survey

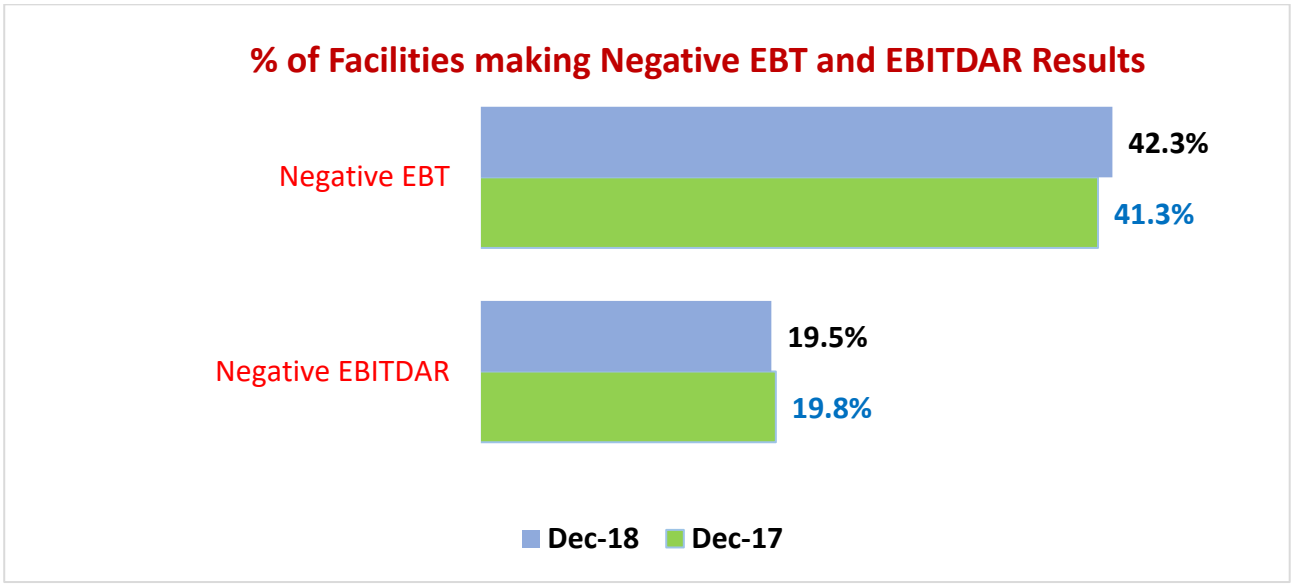


Figure 4: Analysis of Facilities making EBT losses (by remoteness) in total Survey

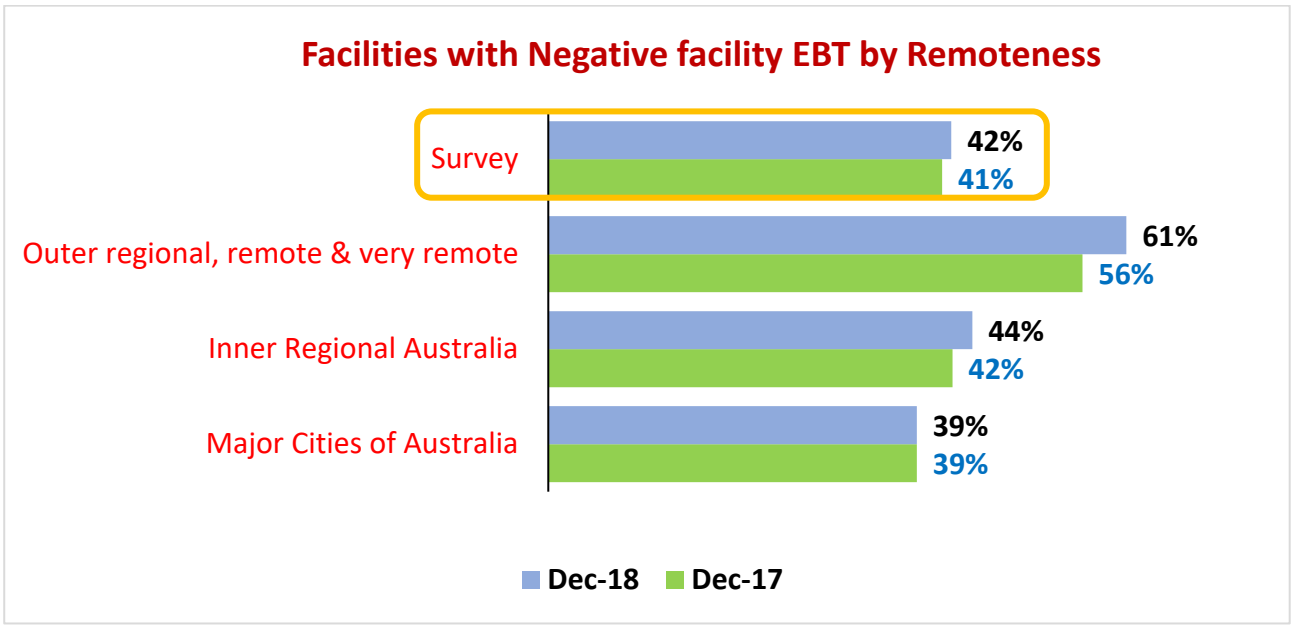

Figure 5: Analysis of Facilities making EBITDAR losses (by remoteness) in total Survey

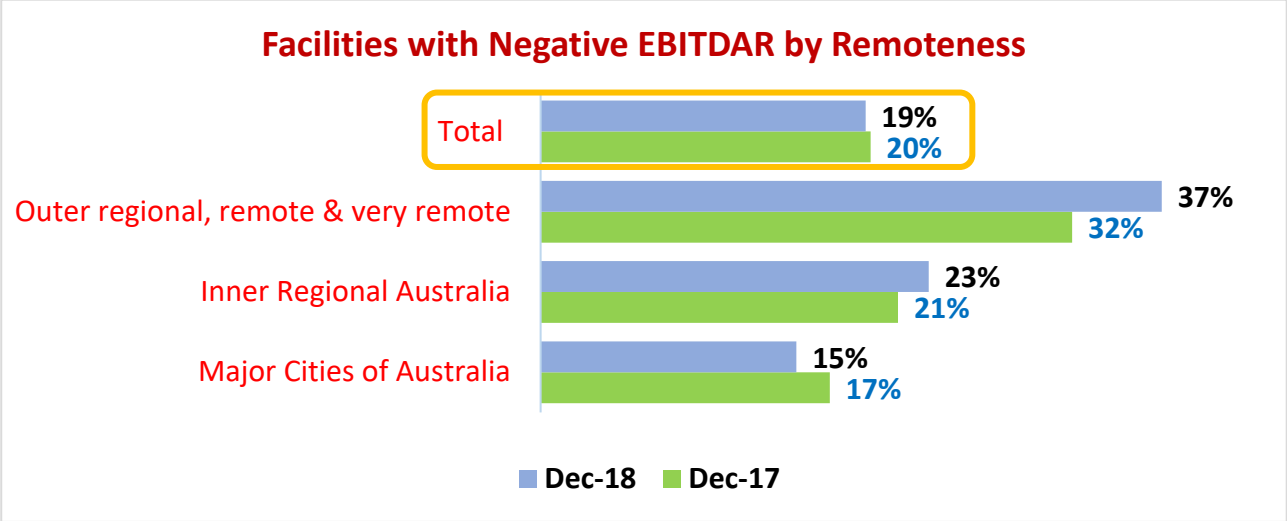


Brief commentary

Figures 4 and 5 above graph the number of facilities making an EBT and EBITDAR loss as a percentage of total number of facilities in their respective geographic location (remoteness). For each location the number of facilities reporting a loss for the six months ending Dec-18 is significant, as follows:-

- Outer regional/remote/very remote facilities - 61% of facilities in this geographic area made an EBT loss and 37% made an EBITDAR loss
- Inner regional facilities - 44% made an EBT loss and 23% made an EBITDAR loss
- Similarly, of the facilities located in major cities, some 39% made an EBT loss and 15% made an EBITDAR loss

Direct Care Staffing Hours

Direct Care staffing metrics include care staff costs and care staff hours. Improvement in the financial performance of a facility are directly related to appropriately aligning staffing hours and levels to the funding and ensuring that the design of the facility is operationally efficient.

A summary of the direct care staff hours by category per resident per day for the Survey *Average* and Survey *First 25%* is included in the table below.

Table 6: Direct Care staffing metrics for Survey Average and Survey First 25%

	Average			*First 25%*		
	Dec-18	***Dec-17***		***Dec-18***	***Dec-17***	
Hours by Staff Category - hours worked per resident per day						
Care management	0.12	0.12	-	0.10	0.10	-
Registered nurses	0.38	0.38	-	0.33	0.33	-
Enrolled & licensed nurses	0.34	0.29	↑	0.40	0.24	↑
Other unlicensed nurses & personal care staff	2.15	2.11	↑	1.84	1.93	↓
Allied health & lifestyle	0.17	0.15	↑	0.17	0.13	↑
Imputed agency care hours implied	0.02	0.01	↑	0.02	0.02	-
Total Care Hours	**3.16**	**3.06**	↑	**2.87**	**2.74**	↑

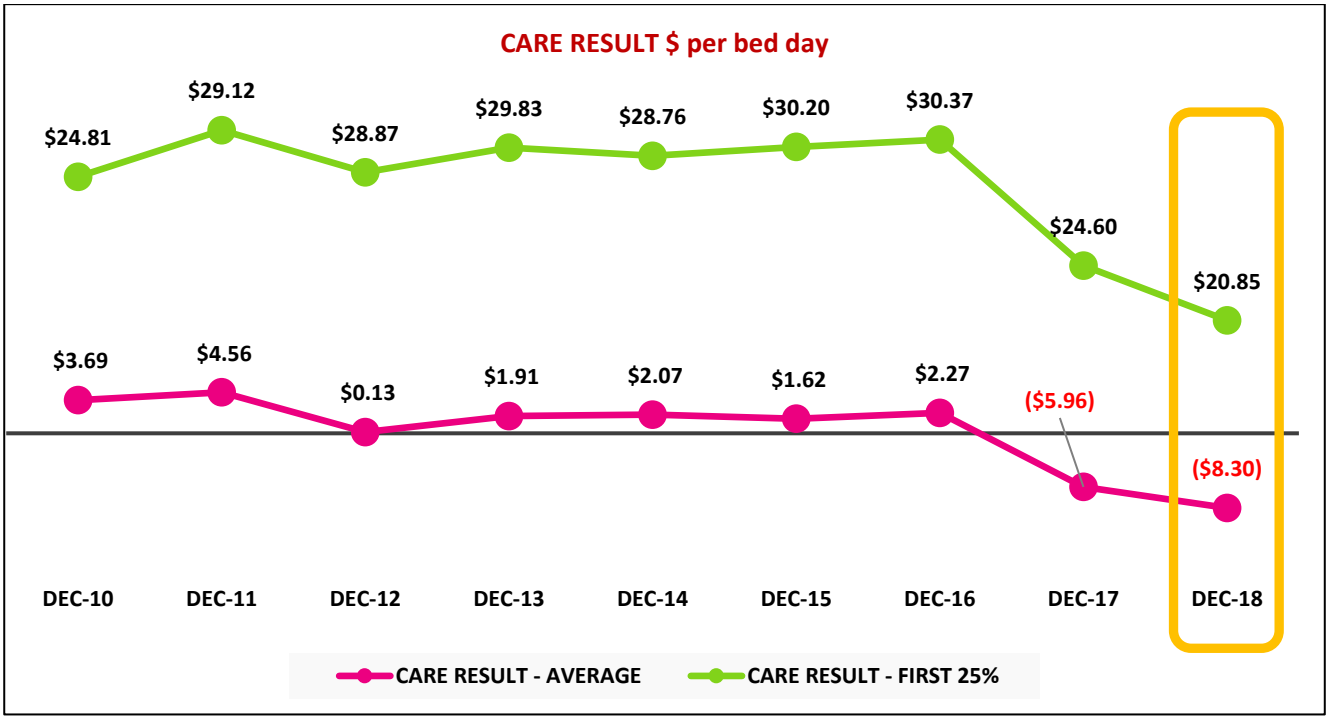
Brief commentary

- The category allocations are consistent with that used by the Nurses and Midwifery Board of Australia, and accordingly AIN and TAFE qualified staff have been included under the "Other unlicensed nurses & personal care staff" classification
- Total labour costs have increased for both the Survey *Average* and *First 25%* since June 2017 by 4.4% and 6.6% respectively
- Total care hours have increased for both the Survey *Average* and for the *First 25%* by 3.2% and 4.6% respectively, and are now at 3.16 hours and 2.87 hours worked per resident per day respectively
- Initial feedback from providers in relation to an explanation for the increase in care hours in the first half of FY18 was that it may be partially due to the impact of influenza and gastro outbreaks, however it is noted that the care hours have not reduced but instead remained at that level

Care Result Trend

The Care Result (ACFI + Everyday Living + Administration) trend is shown in the below graph. The Dec-18 Facility Care result is a deficit of $8.30 per bed day (Dec-17 $5.96 pbd deficit). This represents an unstainable operating performance unless additional revenue (subsidy and resident) is achieved.

Figure 6: Care Result Trend for Survey Average and Survey First 25%



ACFI Revenue and Direct Care Costs Trend

The relationship between ACFI subsidy received (based on resident assessed acuity) and direct care costs remains a key driver for maintaining a sustainable operating financial model. The graph below indicates that the direct care costs are now rising at a greater rate than the corresponding ACFI subsidy, and this gap is likely to increase as staff cost increases (average of 3.0% annually) are greater than ACFI COPE (inflation) increases (1.17% for FY19).

Figure 7: Cumulative increases in ACFI subsidy and Direct Care costs as compared to CPI

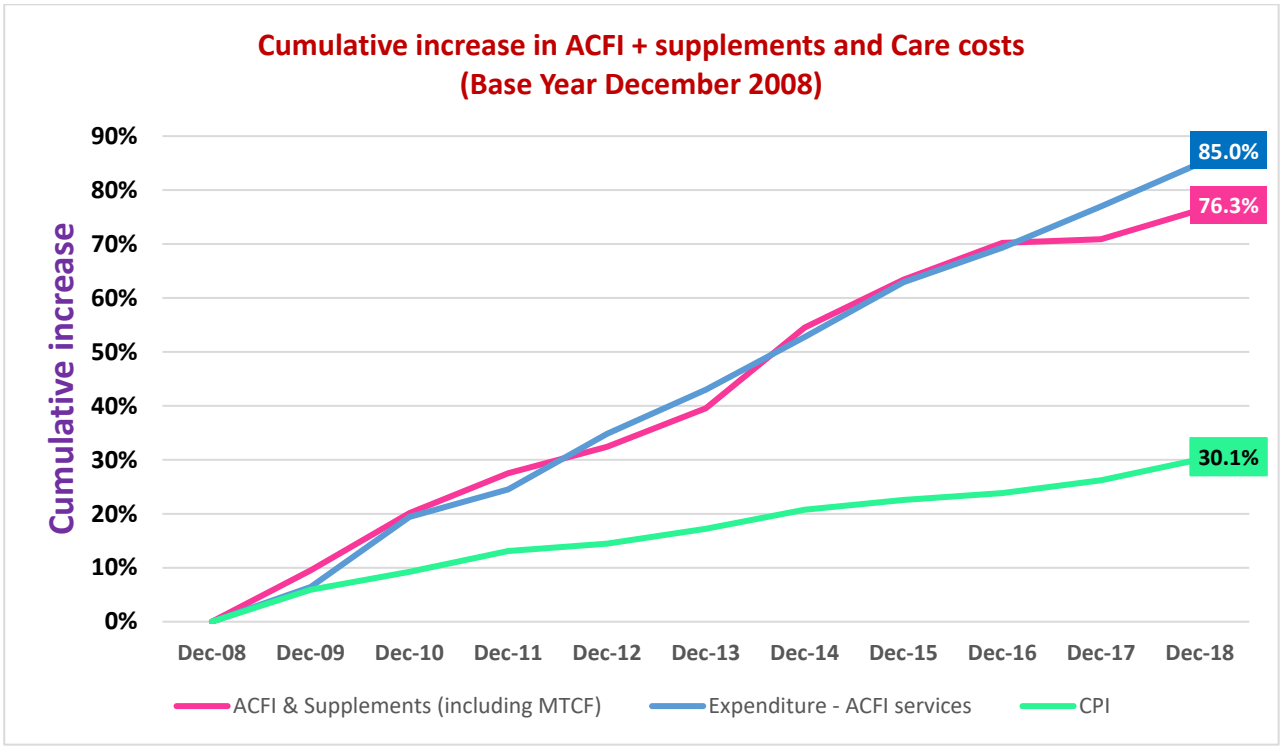


Table 7: ACFI Revenue and Expenditure Trend Points

	Dec-08	Dec-17	Dec-18	Cumulative increase since Dec-08
ACFI & Supplements (including MTCF)	$100.55	171.84	$177.30	76.3%
Expenditure - ACFI services	$78.23	138.43	$144.69	85.0%

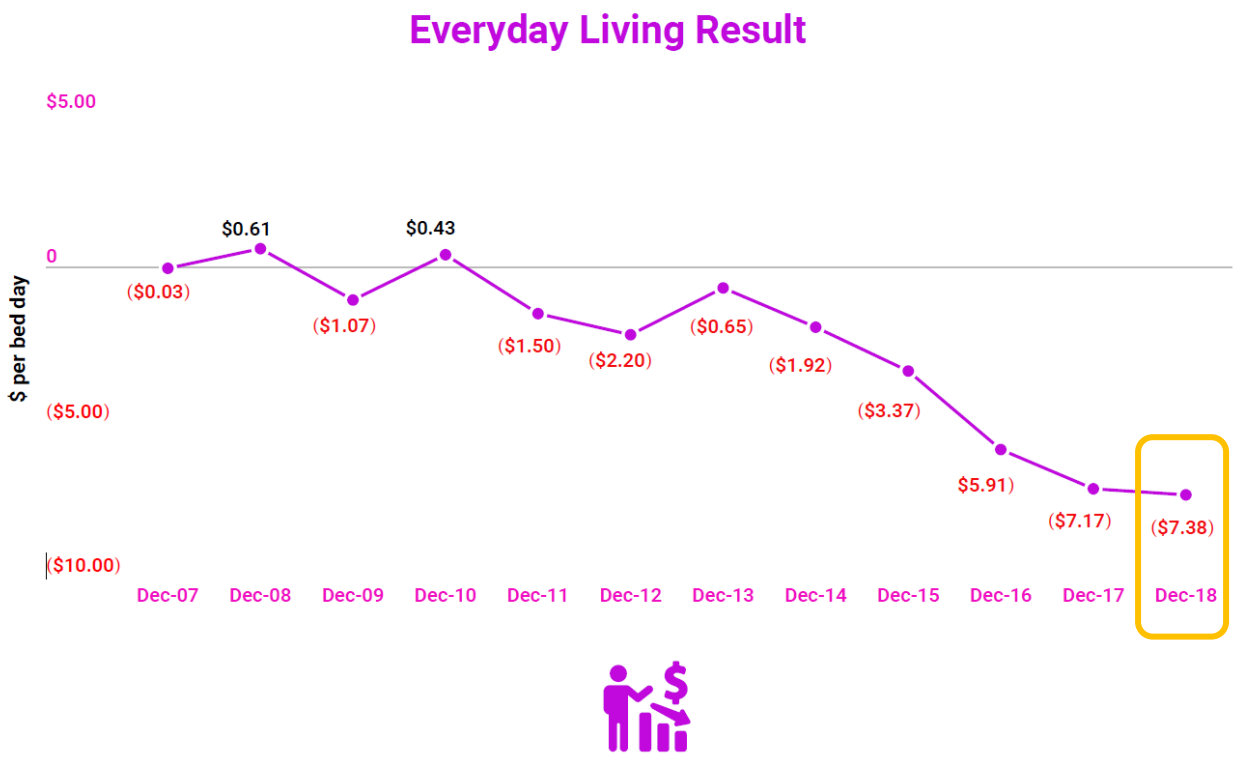
Everyday Living Result

The recoupment of everyday living costs continues to be an area of concern for approved providers. Whilst opportunities exist to charge additional optional services to residents, several challenges exist in this regard. A major issue is in relation to supported residents who, by majority, do not have the financial means to pay for additional services, or indeed pay a higher Basic Daily Fee (85% of the single pension).

Many providers are also very conscious to not introduce a tiered system whereby some residents are able to access additional services based on their ability to pay whilst others do not receive such additional services due to the inability to pay a higher charge.

With a supported resident ratio averaging in excess of 45% across all aged care facilities, this will continue to be an issue for providers in addressing the introduction of additional services.

For the six months to Dec-18 the costs of providing everyday living services exceeded the revenue by $7.38 pbd (Dec-17 $7.17 pbd). Refer to the Everyday Living snapshot (next page) for a summary of the various components.

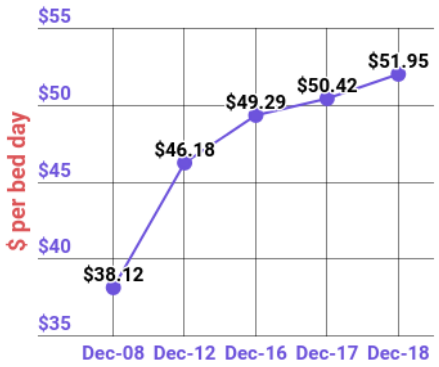


The Everyday Living Result has declined over the past 11 years by an average of **$7.35** per bed day and by **$7.99** per bed day from the peak result (Dec-08). In the past 12 months, the Everyday Living Result has declined by an average of **$0.21** per bed day.

It is clear that the increase in the Basic Daily Fee has not kept pace with cost increases, particularly in catering, cleaning and laundry costs. As noted above, providers have had difficulty in introducing effective additional services to overcome this shortfall so that these costs are being subsidised by other income streams.

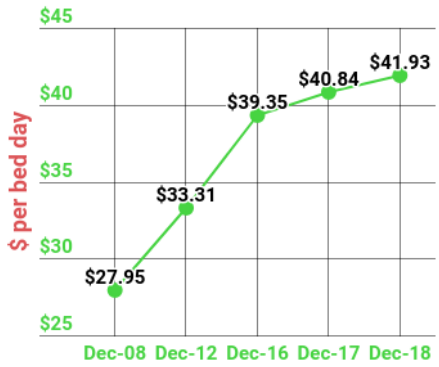
StewartBrown recommends that consideration be given to increasing the Basic Daily Fee base amount by $10 per bed day. Supported residents should be funded by additional subsidy to ensure equity. Such an increase in the base amount will improve the financial sustainability of the residential aged care significantly.

Everyday Living Revenue



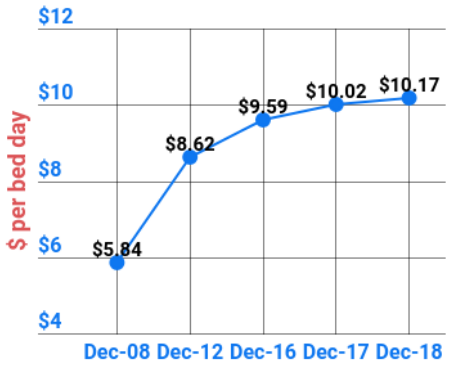
Since Dec-08 Everyday Living Revenue increased by an average of $13.83 per bed day or 36.3%

Hotel Services



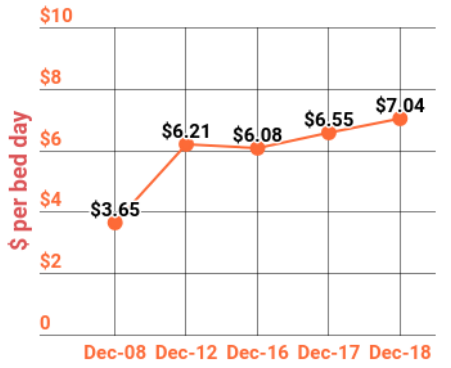
Hotel services costs increased by an average of $13.98 per bed day or 50.0%

Routine Maintenance



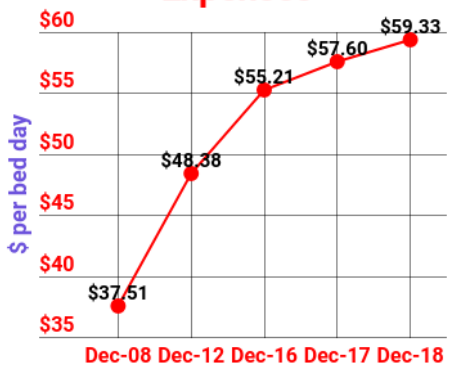
Routine Maintenance costs increased by an average of $4.33 per bed day or 74.1%

Utilities



Utility costs increased by an average of $3.39 per bed day or 93.0%

Everyday Living Expenses

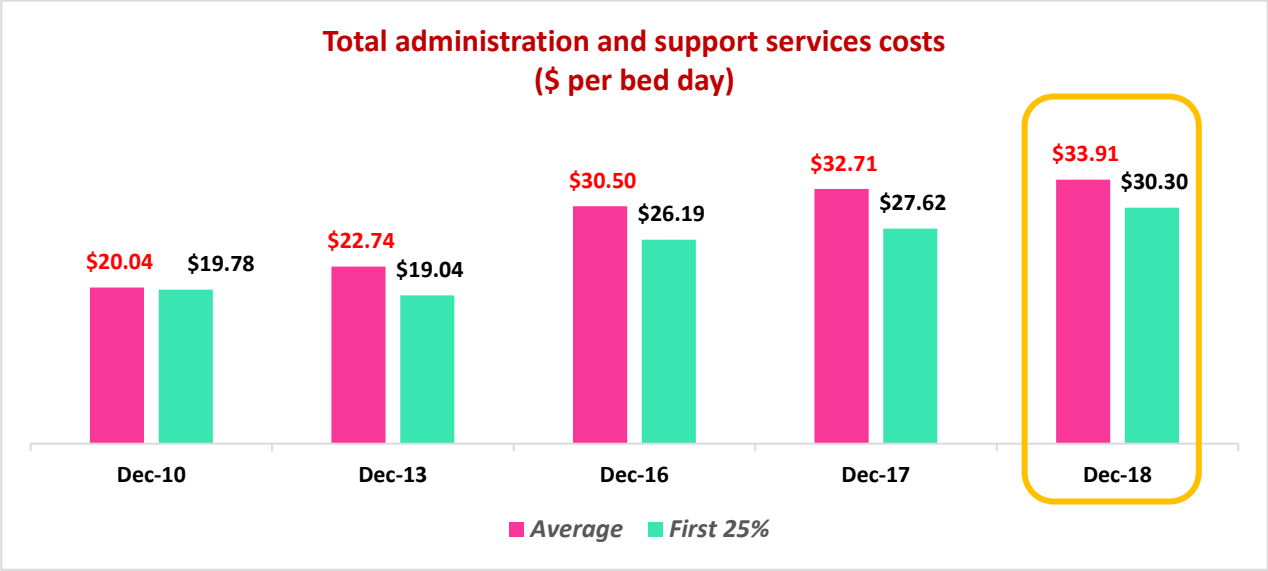


Total Everyday Living Expenses have increased by an average of $21.81 per bed day or 58.1% during the same period that revenue increased by only $13.83 per bed day

Administration Costs

Administration costs have continued to increase at a rate higher than CPI. One of the main drivers for this is increasing compliance requirements and this has now been exacerbated by costs associated with fulfilling information requests in relation to the Royal Commission. In its December half year report to the ASX, Estia stated that the external direct costs associated with preparing for and making submissions to the Royal Commission amounted to $914,000 during that reporting period. While the majority of providers will not be incurring this level of cost, they will be incurring additional costs to meet their obligations to the Commission. It is likely that administration costs will increase again in the second half of this financial year as a result.

Figure 8: Administration Costs Trend ($ per bed day)



Accommodation Result

It is important that facilities achieve a surplus from the Accommodation Result as this funding is essential to maintain the building and surroundings at a level commensurate with consumer expectations. Discussions with providers, coupled with data collected from participants, indicate that a major internal refurbishment policy of every 8 - 10 years is required, even for new builds.

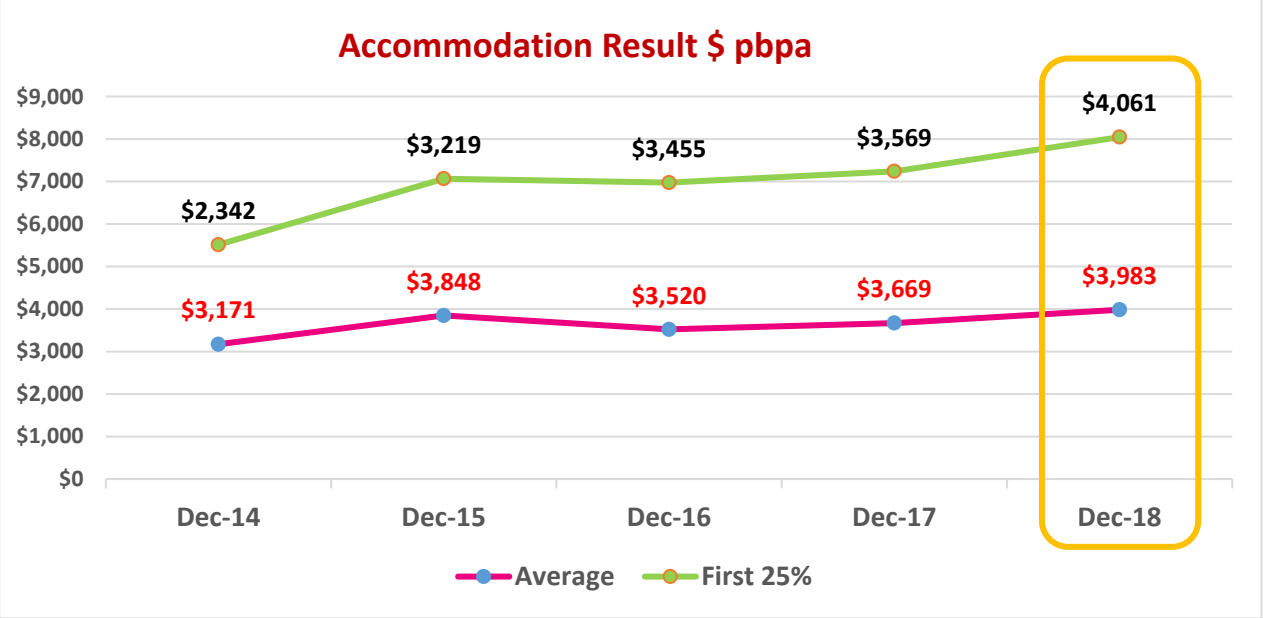
The Accommodation Surplus for Dec-18 was $11.50 per bed day (Dec-17 $10.65 pbd) which represents $3,983 per room per annum. The increase in the percentage of new residents paying a Daily Accommodation Payment (DAP) rather than a RAD has been a contributing factor. This result is achieved after an average depreciation expense of $5,854 pa. However, given the necessity to upgrade facilities regularly, a depreciation rate of 4% (i.e. 25 year write-off period for residential care buildings) should be adopted by providers as it is highly probable that this equates to the effective (useful) operational life of a residential facility in an increasing “retail” style accommodation market.

A further relevant consideration is that currently the surplus from the Accommodation Result is being used to offset the loss from the Care Result. In the six months to Dec-18 the Care Result was a deficit of $8.30 per bed day which, if funded from the Accommodation Result, impacts on the ability of organisations to fund future refurbishment of a facility. This not only affects the accommodation revenue (accommodation pricing) but does not allow for efficiency gains to be achieved through building design modifications.

Table 8: Residential Care Accommodation Result for Survey Average and First 25% for Dec-18 and Dec-17

	Survey *Average*			Survey *First 25%*		
	Dec-18	Dec-17		Dec-18	Dec-17	
	$ pbd	$ pbd		$ pbd	$ pbd	
Accommodation Revenue	**31.12**	**29.03**	↑	**29.70**	**27.59**	↑
Depreciation	16.90	15.83	↑	16.21	15.47	↑
Refurbishment	0.21	0.28	↓	0.19	0.39	↓
Other accommodation costs	2.52	2.26	↑	1.74	1.60	↑
Accommodation Expenses	**19.62**	**18.37**	↑	**18.14**	**17.46**	↑
Accommodation Result	**$11.50**	**$10.65**	↑	**$11.56**	**$10.13**	↑
Accommodation Result $pbpa	**$3,983**	**$3,669**	↑	**$4,061**	**$3,569**	↑
Depreciation charge $pbpa	**$5,854**	**$5,454**	↑	**$5,697**	**$5,450**	↑
Depreciation charge $pbpa for WDV of $200,000 per bed at 4%						**$8,000**
Depreciation charge $pbpa for new build of $325,000 per bed at 4%						**$13,000**

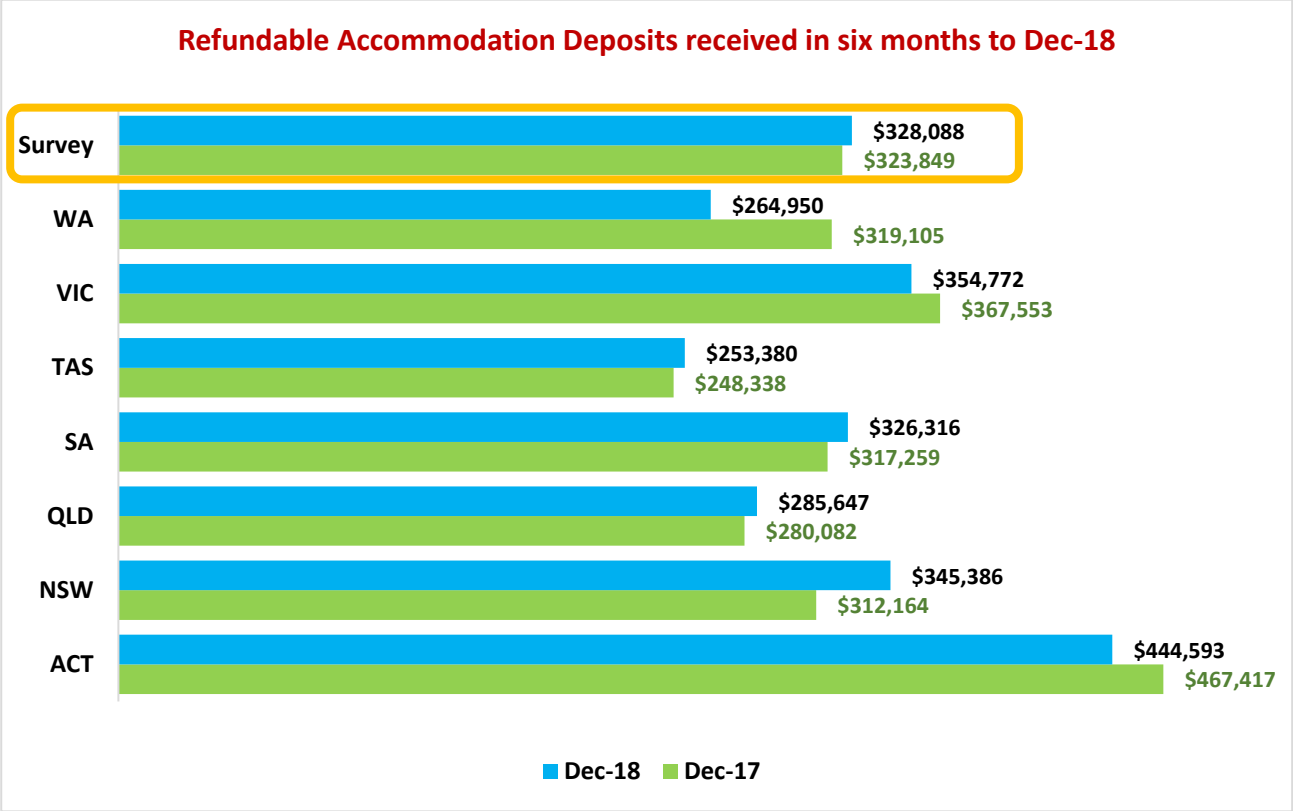
Figure 9: Residential Care Accommodation Result Trend



Accommodation Pricing

There has been a increase in the average published accommodation prices during the year to Dec-18 and this has resulted in the amount of Refundable Accommodation Deposits (RADs) received during the period increasing by a national average of $4,239 (1.3%). Accommodation pricing is an important component for the sustainability of a residential facility. It is a revenue benefit (DAP) or a capital benefit (RAD) depending upon the equity position of the organisation.

Figure 10: Average Refundable Accommodation Deposits Received for Dec-18 and Dec-17



It does appear likely that, from a consumer perspective, there remains some confusion in relation to accommodation pricing and this has resulted in providers not having an effective accommodation pricing strategy.

The acuity (care needs) of a resident is directly related to the ACFI funding and expenditure. Everyday living expenses are offset against the Basic Daily Fee and additional services (if charged).

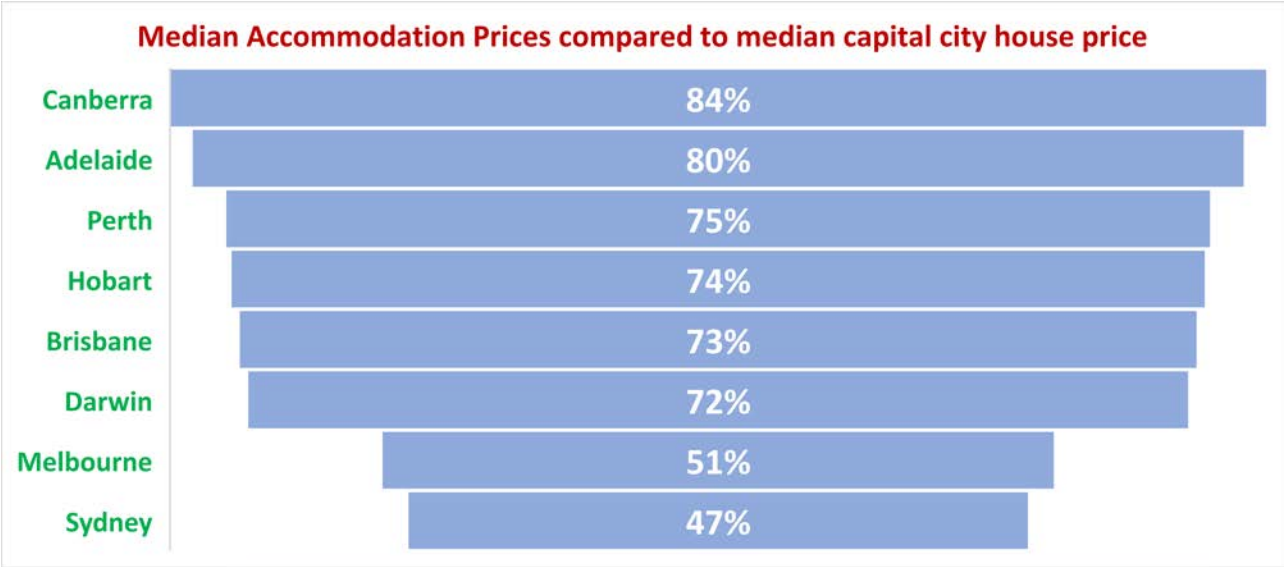
Accommodation pricing **is not** assessed on care needs but on the standard of accommodation and the financial ability of an incoming resident to meet the price through either a RAD, DAP or a combination of both. The consumer expectation that the standard of accommodation, and accordingly, the pricing is relative to direct care provided is somewhat misconstrued. A higher accommodation price does not equate to a higher standard of direct care.

Accommodation pricing strategies should be more targeted to the local house or unit prices in the geographic area. The pricing strategy should also consider other factors such as:

- Amenity and general standard of accommodation offered
- Target market
- Common areas and other facilities available to residents and their families
- Cost to build in the construction of the facility, the standard of accommodation

The figure below indicates that there is a disparity in this relationship, particularly in Sydney and Melbourne.

Figure 11: Median Published RAD compared to Median House Price



Occupancy

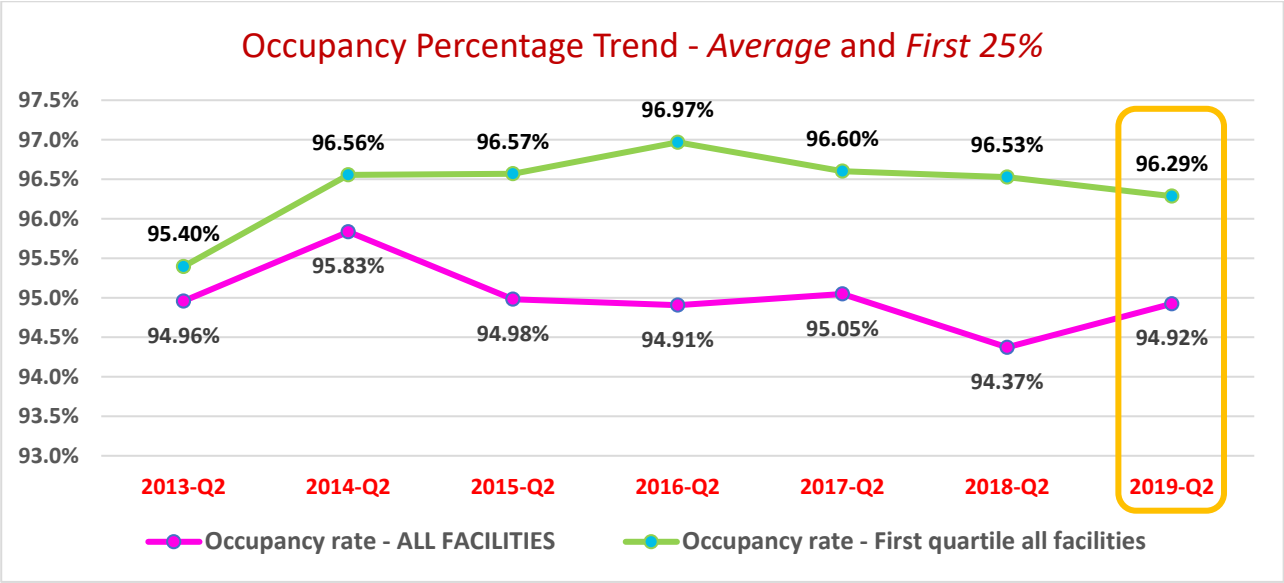
The occupancy percentage overall remains steady at 94.92% nationally (94.37% at Dec-17) with the *First 25%* of providers (based on Facility Result) having and average occupancy of 96.29% (96.53% at Dec-17).

It should be recalled that the occupancy levels dropped in the Dec-17 six months due to a severe influenza outbreak and an expected correction has now largely occurred.

Please note that the DOH calculates occupancy on approved places (and as advised by providers) whereas StewartBrown calculates the occupancy based on number of operational places which exclude off-line places due to refurbishment or other strategic reasons. Additionally, StewartBrown do not include State or local government occupancy levels as these are often unreliable.

A tend analysis of occupancy levels is included in the below figure.

Figure 12: Occupancy Percentage Trend Analysis



5. RESIDENTIAL CARE - FINANCIAL FORECAST

Recap - FY18 Forecast

As background, StewartBrown performed a forecast of the FY18 facility results In October 2017 based on the COPE freeze of ACFI funding, changes in the ACFI assessment and a similar set of assumptions as now used for the FY19 forecast.

The FY18 forecast for the Survey *Average* was $2.18 per bed day (actual FY18 result was $2.37 pbd) and for the Survey *First 25%* was $31.08 pbd (actual FY18 result was $30.26 pbd).

This suggests that whilst it was clear early in the FY18 fiscal year that the operating performance was going to deteriorate because of underlying funding and cost increase pressures, the ability of facilities (in all revenue domains and geographic locations) to adjust their business models to minimise this financial effect was negligible. Similar implications will exist in the FY19 financial results.

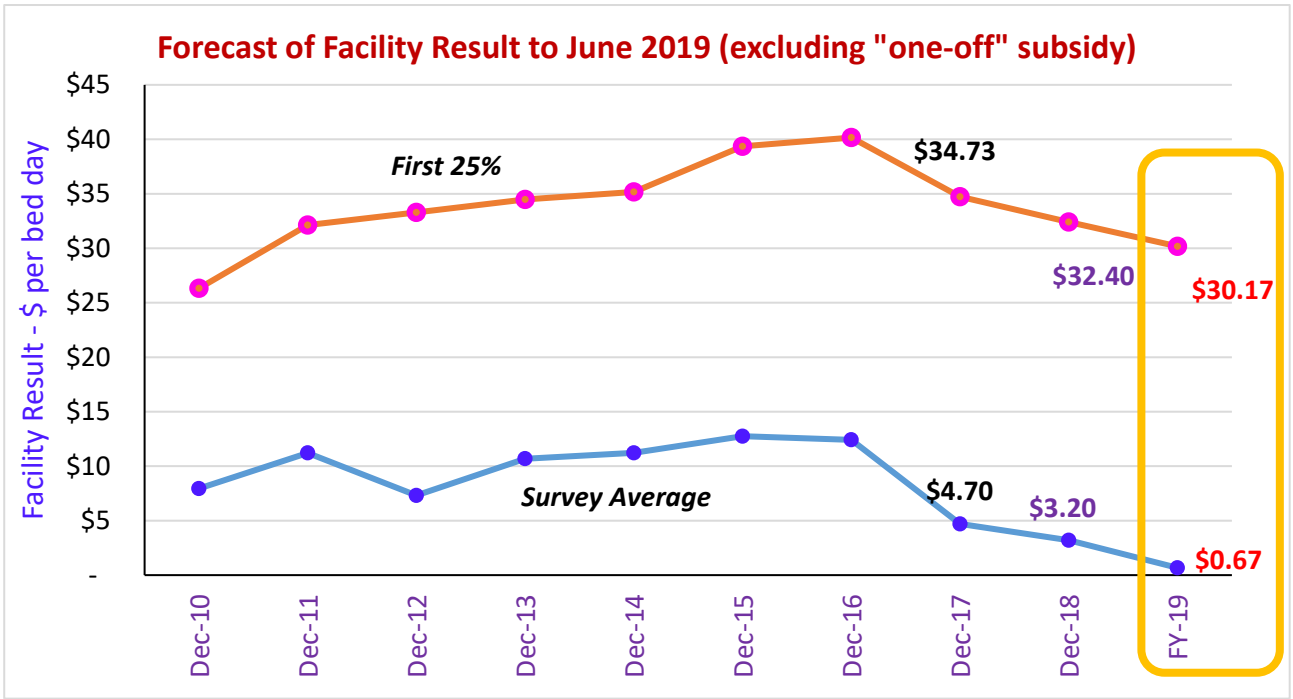
FY19 Residential Care Forecast

Forecast Assumptions

We have calculated the projected Facility Results for FY19 using the following assumptions:

- ✓ Based on Dec-18 actual Facility Results
- ✓ Adjusted for the "one-off" 9.5% increase in subsidy funding effective 20 March, 2019 (refer below)
- ✓ Adjusted for other revenue increases in line with pension/ CPI increase
- ✓ Adjusted for Wage increases of 3.0% pa
- ✓ Depreciation assumed to remain stable
- ✓ Adjusted for other expenditure increases at CPI of 2.1% pa and Utilities at 5.0% pa

Figure 13: FY19 Residential Care Forecast (Facility Result) (excluding "one-off" 9.5% subsidy increase)



Commentary

As at Dec-18 the EBITDAR pbpa for the Survey *Average* was $7,391, therefore, the impact of a facility operating surplus of $0.67 per bed day (keeping all else constant) and excluding the "one-off" 9.5% subsidy increase is:-

- A reduction of Facility EBT per bed per annum from $1,109 to $175 per bed per annum and;
- A reduction of Facility EBITDAR from $7,391 per bed per annum to $6,518 per bed per annum

Additional Funding Support

Background

The Prime Minister announced on 10 February 2019 an additional funding package for residential aged care. The announcement stated "The $320 million residential aged care component equates to approximately $1,800 per permanent resident and will provide additional support to the sector over the next 18 months, to deliver quality aged care services while the Government considers longer-term reform funding options".

Application

The Department of Health have advised how the additional $320 million residential aged care general subsidy will be applied:-

- It will be an effective (non-discriminatory) 9.5% increase on the basic ACFI, RCS and respite subsidies for the period 20 March 2019 to 30 June 2019
- Providers will not be required to acquit the additional funding (ie justify additional expenditure in addition to their current expenditure levels)
- From 1 July 2019, ACFI will revert back to the pre 9.5% level (ie current ACFI level)
- The COPE increase (if approved) from 1 July 2019 will be based on the pre 9.5% level
- Whilst the announcement refers the additional subsidy support effectively covering an 18 month period, the fact that the subsidy will be fully paid up to 30 June 2019 with no requirement to acquit means that in accordance with Australian Accounting Standards *AASB 15 Revenue from Contracts with Customers* (new) or *AABS 118 Revenue* (existing) we are of the opinion the additional subsidy should be fully disclosed in the 2019 financial year (ie no future apportionment in FY20)

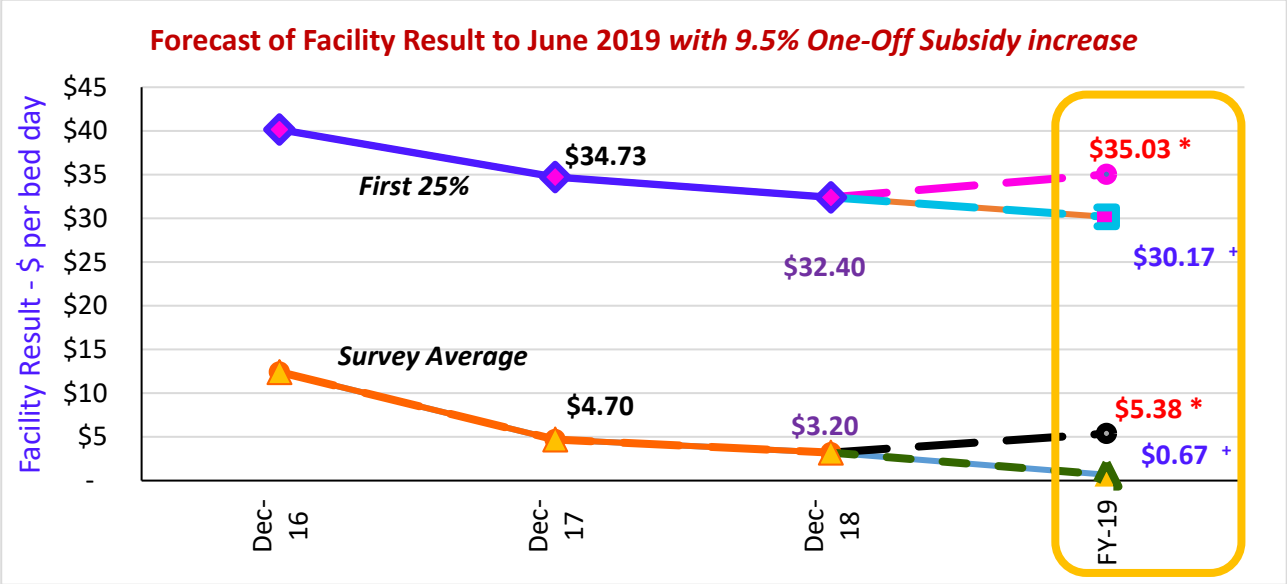
Impact

The additional subsidy will positively impact on the FY19 financial performance for residential aged care providers, however will not impact on FY20 forecasts due to it being a "one-off" subsidy that will be fully remitted by 30 June 2019.

From an trend analysis perspective, StewartBrown will show both the results with the additional subsidy and without the additional subsidy, with the latter trend being of greater importance for forecasting and analysis purposes.

The additional funding support will provide a facility with an average ACFI of $177.30 with approximately $1,720 per bed by June 30. The effect on the forecast results are shown in the graph below.

Figure 14: FY19 Forecast facility Result showing the likely effect of the 9.5% one-off subsidy funding boost



Impact of FY19 Projections - Increase in Number of Facilities with Negative Results

The below table projects the number of facilities that could transition into having EBT and EBITDAR losses should the FY19 projections be realised. A comparison to FY17 and FY18 is included.

Table 9: FY19 Projection Number of Facilities with EBT and EBITDAR deficits (FY19 includes "one-off" subsidy boost)

	FY17 %	FY18 %	FY19* %		FY17 No.	FY18 No.	FY19* No.
% of facilities with negative facility EBT by remoteness							
Major Cities	30.2%	41.5%	35.8%		187	262	224
Inner Regional	36.1%	47.2%	40.8%		87	116	100
Outer regional, remote & very remote	52.1%	63.5%	60.6%		50	61	57
Survey	**33.9%**	**45.1%**	**39.5%**		**324**	**439**	**381**
% of facilities with negative facility EBITDAR by remoteness							
Major Cities	12.6%	18.0%	13.7%		78	114	86
Inner Regional	13.3%	22.4%	21.2%		32	55	52
Outer regional, remote & very remote	25.0%	37.5%	35.1%		24	36	33
Survey	**14.0%**	**21.0%**	**17.7%**		**134**	**205**	**171**

** FY19 forecast includes the additional 9.5% "one-off" subsidy. When considering the forecast without this additional subsidy the number of facilities (and percentage) would likely be an increase on FY18. This is an important consideration when assessing the likely performance (and sustainability) for FY20 and beyond*

6. HOME CARE ANALYSIS

Overview

The Home Care Packages (HCP) segment experienced a significant decline in profitability in FY18 with revenue and overall EBT per client day declining in both the Survey *Average* and Survey *First 25%* quartile. This result was compounded by an increase in unspent funds (revenue utilisation) per client and in aggregate.

For the six months to Dec-18, there are indications that this decline may have stabilised although the results for the *First 25%* continued to decline.

The overall Survey *Average* EBT result was a surplus of $3.33 per client day (Dec-17 $3.24 pcd) however Band 4 (highest acuity mix) have seen their results decline from $7.39 pcd to $5.92 pcd. The Band 4 *First 25%* also had a reduction in surplus to $25.14 pcd (Dec-17: $29.63 pcd). The Survey *First 25%* had a smaller reduction in their results from $18.98 pcd (Dec-17) to $18.04 pcd (Dec-18)

Revenue

- Increased by 9.6%
- Pricing pressure due to increased competition
- Revenue utilisation improved marginally from 87.6% (Dec-17) to 88.9% (Dec-18)
- Higher average unspent funds per client despite improvement in revenue utilisation

Expenses

- Decreased by 9.9%
- Direct service costs increased by $2.78 pcd
- Cost of direct service and brokered/sub-contracted as a percentage of total income has increased to 61% from 59% (Dec-17)
- Decrease in case management and advisory $0.11 pcd (reduction in staff costs)
- Increase in administration costs of $1.15 pcd (mostly reduction in corporate recharge and staff costs)

For both the Survey *Average* and *First 25%* the profitability declines were in Bands 1 and 4, whilst Bands 2 and 3 had slight improvements in results. The majority of the packages in the Survey are in Band 3 (37.9%) followed by Band 4 (31.8%).

Figure 15: Comparison of Survey Average EBT (operating surplus) Dec-18 and Dec-17

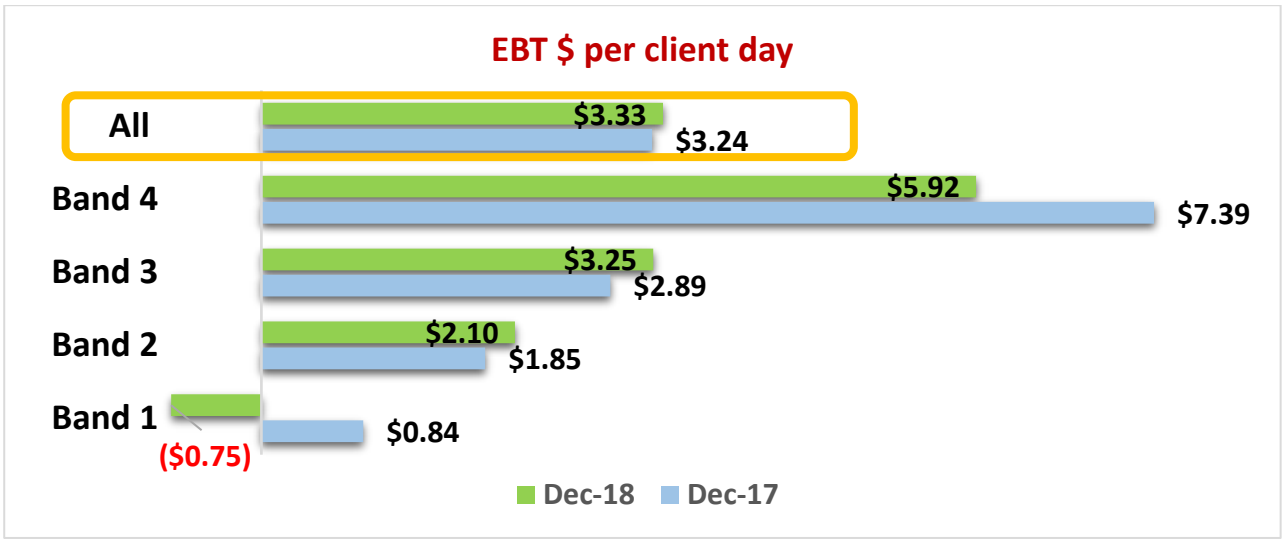


Figure 16: Comparison of Survey Average EBTDA per client per annum Dec-18 and Dec-17

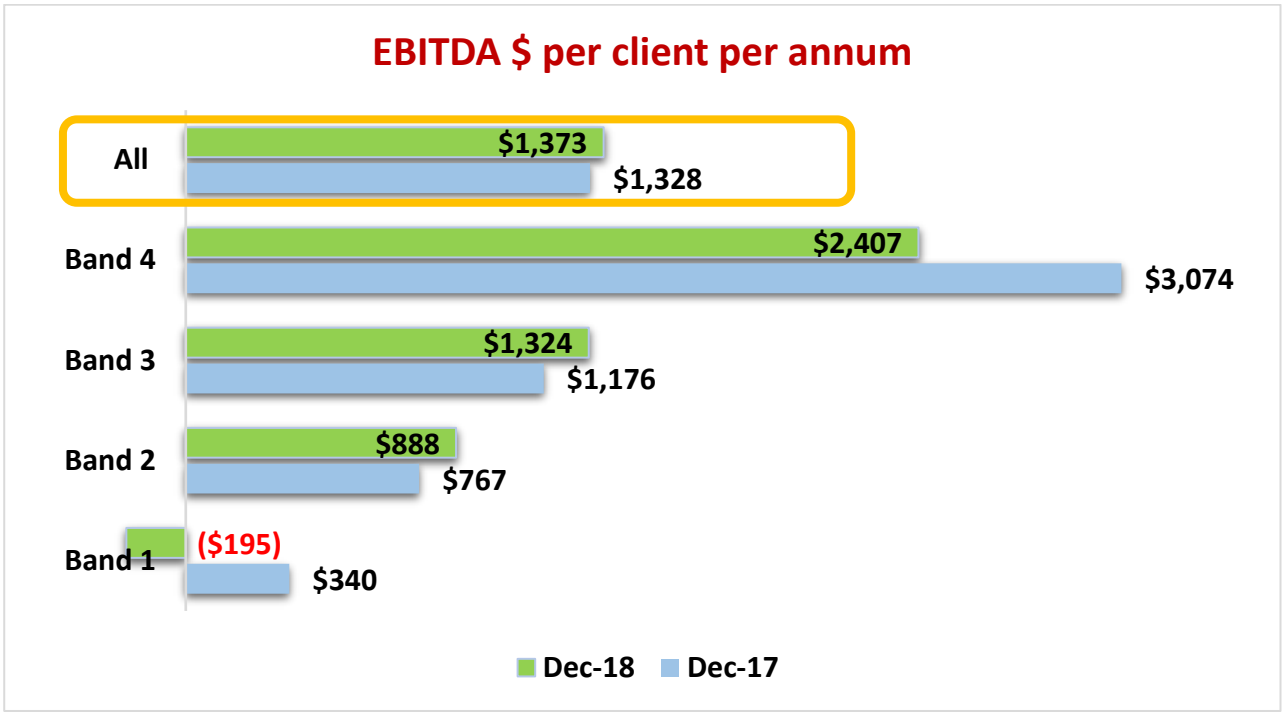

Figure 17: Comparison of Survey Average EBTDA Per client per annum trends

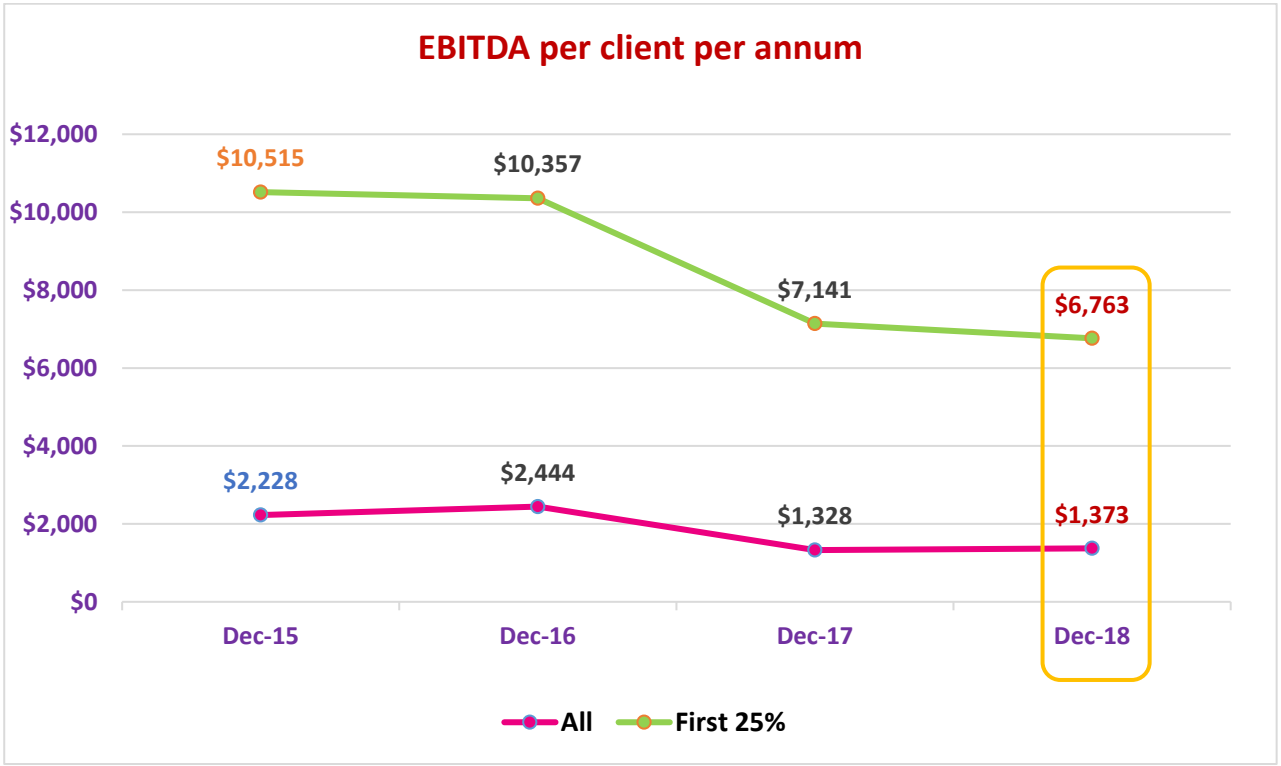
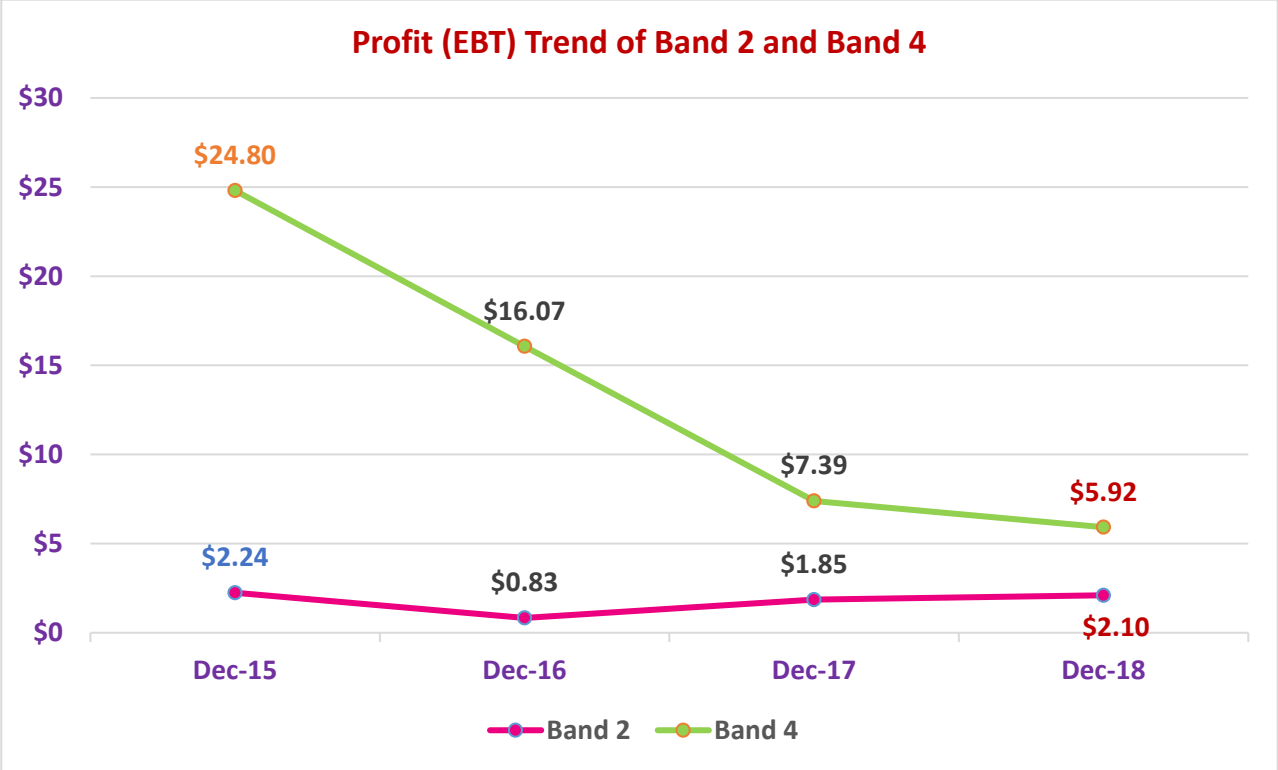


The trend graph above clearly shows the decline in results over time with the *First 25%* being affected in a more significant way than the survey *Average*.

Figure 18: Trend analysis for EBT Band 2 and Band 4



Similarly, as shown by Figure 18, the decline in results for Level 4 (high care) packages has been dramatic. At the commencement of Consumer Directed Care (CDC) Level 4 packages had an *Average* result of $24.80 per client per day but this has now declined to $5.92 per client per day for the Dec-18 survey.

This represents a return on revenue of 5.3% which bordering on being unsustainable given the investment that providers are now required to make in technology, staff recruitment and retention and growth.

EBT for Survey *First 25%*

The EBT performance of the Survey *First 25%* for Dec-18 continued to decline in contrast to the Survey *Average* with the effects of the reduced prices, revenue utilisation and increased administration costs being the predominant reasons.

Figure 19: Comparison of Survey First 25% EBT (operating surplus) Dec-18 and Dec-17

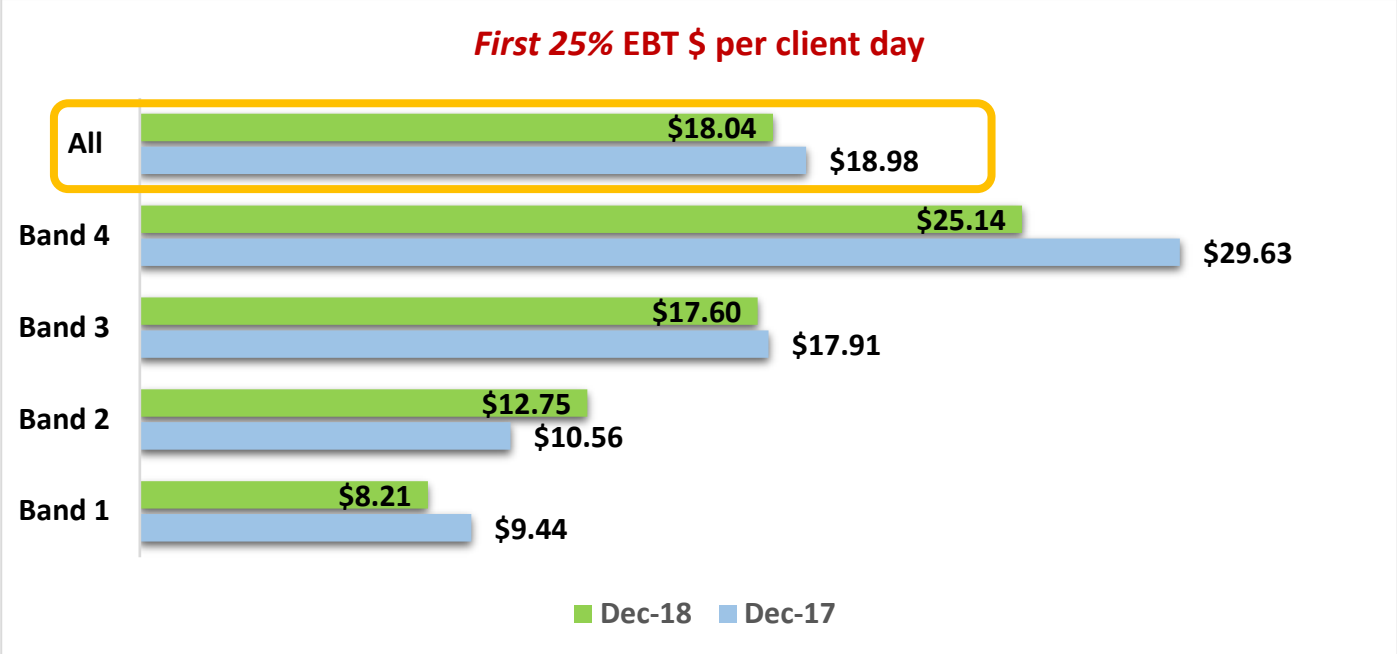

Figure 20: Comparison of Survey First 25% EBTDA Per client per annum Dec-18 and Dec-17

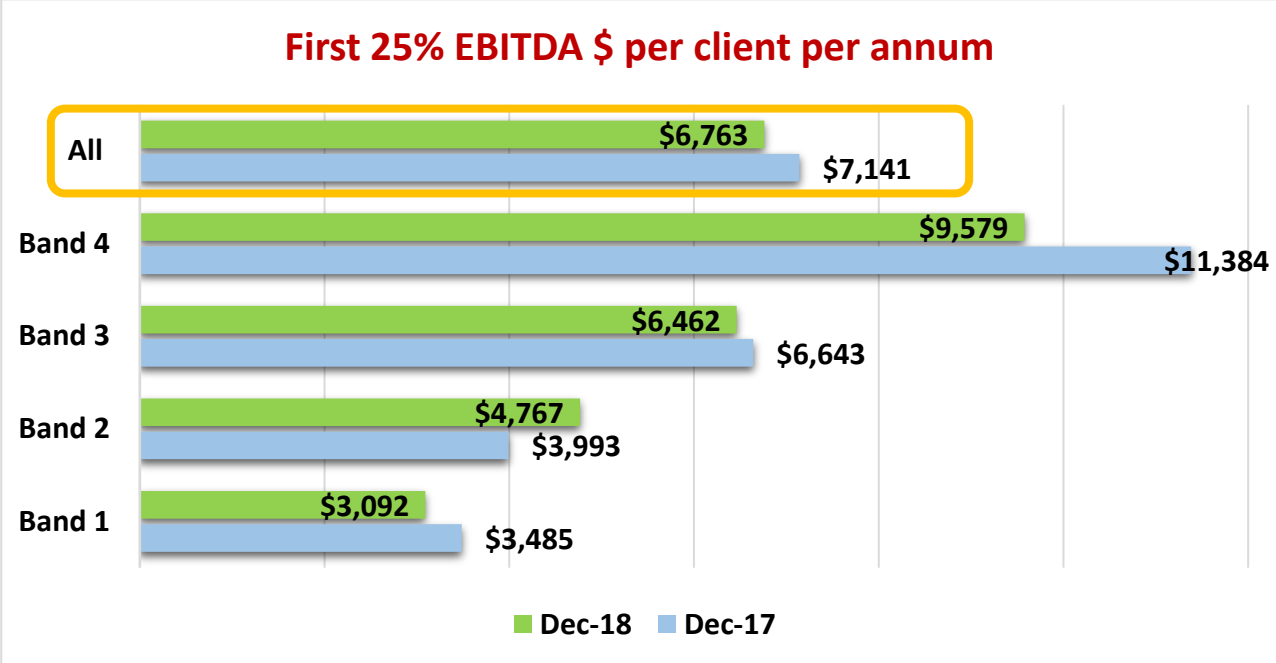
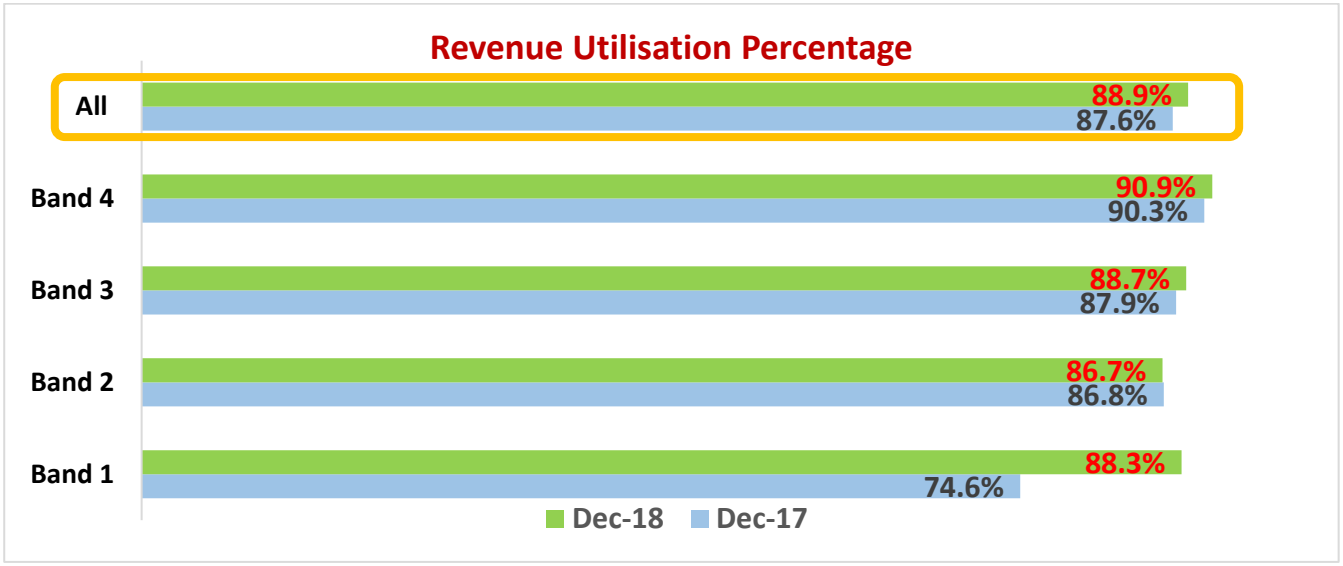


Revenue Utilisation

While there had been a significant decline in revenue utilisation in FY18 the year on year trend for Dec-18 has been a marginal improvement in revenue utilisation from 87.6% at Dec-17 to 88.9% at Dec-18. This has had a marginal affect on profitability as the fixed costs have been spread over slightly revenues and some of the variable (staff costs) are unlikely to have been adjusted a great deal. The improvement in revenue utilisation must be a continuing priority for the remainder of FY19.

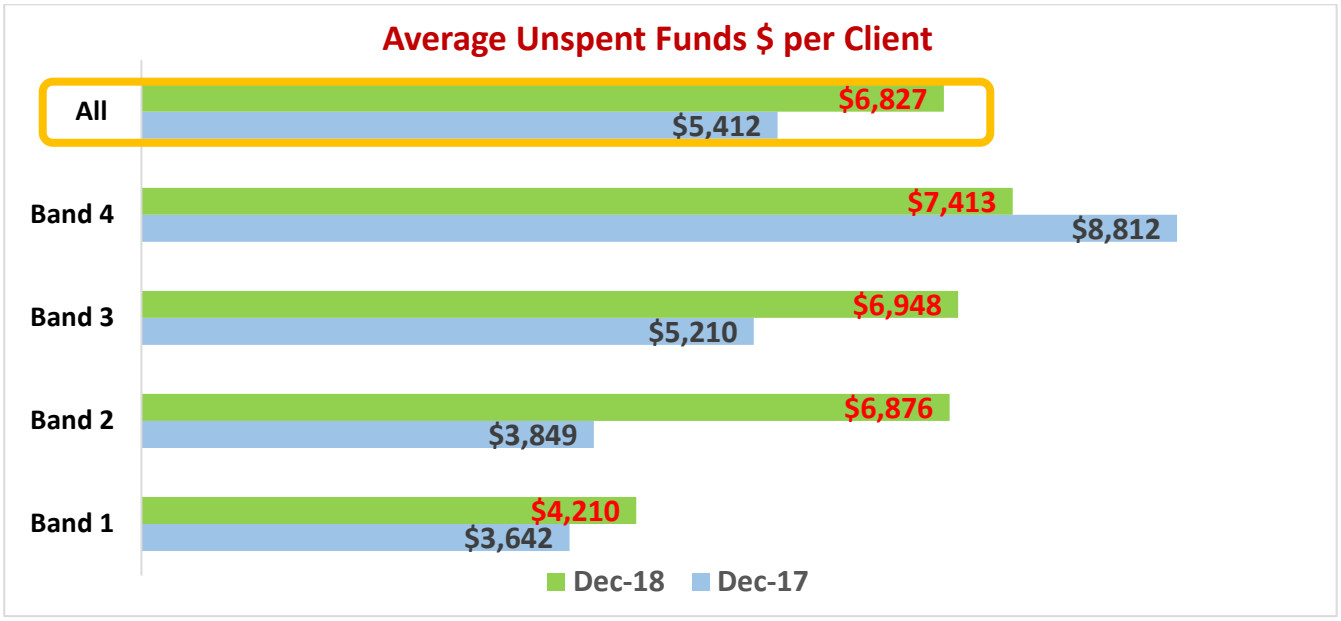
Figure 21: Revenue Utilisation comparison for Dec-18 and Dec-17



Unspent Funds

Despite the marginal improvement in *Average* revenue utilisation there has been a continuation in the increase of unspent funds for each client. ACFA estimated the unspent funds liability for FY17 to be $319 million and this is likely to be over $600 million as at FY19 year-end. This represents subsidy funds, by majority, that if not being utilised for direct care delivery could be diverted into those consumers on the national prioritisation queue that do not yet have funding provided.

Figure 22: Average Unspent Funds per client as at Dec-18 and Dec-17



Comment

The increasing amount of unspent funds is in many respects the most significant from both a service delivery and financial performance perspective.

From a consumer perspective, the large amount of unspent funds could be as a result of not fully utilising the subsidy provided to enable an overall package of care and support. Our indications are that between 8% - 12% of unspent funds are later utilised by a care recipient, with the remainder being used for capital purchases or returned to the government due to the consumer moving out of in-home care.

From a provider perspective, unspent funds affects the profitability (and sustainability) as the fixed costs for each client have already been absorbed and should the funds be utilised it is only the additional variable costs that would be incurred. We estimate the additional variable costs would be in the order of 35% - 40%, and the balance would be profit (in an overall sense).

We are also not aware of any provider who would not prefer to either provide services commensurate to the funding or have the underutilised funds reallocated to other new care recipients that are currently awaiting packages.

Another related issue is that due to the high level of unspent funds per client, there is a reluctance by providers to charge (and consumers to be charged) a client contribution (basic daily care fee) as it would effectively only add to the quantum of unspent funds. This distorts the overall funding model and discourages the notion of consumers "co-contributing" to their care needs.

Staff Hours Worked per Client

The average direct care hours per client per week have declined from the levels in FY17. This is partly due to lower available package revenue as a direct result of the increased unspent funds.

While a decrease in administration and support staff hours was observed across the survey for the FY18, there has been an increase in hours when comparing the Dec-18 period to the Dec-17 period. In contrast, there is a significant reduction in administration and support hours for the First 25% in this Dec-18 period. Many providers are making a concerted effort to improve efficiencies in this area to reduce costs.

Table 10: Home Care Staff Hours per client per week from Dec-18 and Dec-17

	Average			***First 25%***		
	Dec-18	**Dec-17**		**Dec-18**	**Dec-17**	
Direct service provision	5.05	5.38	↓	5.41	6.36	↓
Agency	0.18	0.27	↓	0.10	0.29	↓
Case management & advisory	0.94	0.90	↑	0.91	1.36	↑
Administration & support services (including co-ordination)	0.52	0.58	↑	0.53	0.80	↓
Total Staff Hours	**6.69**	**7.14**	↓	**6.96**	**8.81**	↓

Sector Data (GEN)

- Additional 406 approved home care providers since Jun-16 (902 in total as at 31 December 2018)
- Post deregulation - growth since Mar-17 to Dec-18 is 30.2% (209 providers)
- Additional 26,577 consumers since Jun-16 (at Sep-18 is 90,646 consumers)
- Reduction of 1,201 persons in packages in Sep-18 quarter
- Post deregulation - growth since Mar-17 to Sep-18 is 30% (20,067 consumers)
  - 22.2% increase in home care consumers between Sep-17 and Sep-18 (16,441 additional consumers).
- 53,770 queued either in or offered a lower level package and 73,978 not in or assigned a lower level package as at 30 September 2018 (127,748 in total in national prioritisation queue). This is an overall increase of 1,016 in the September quarter.

Figure 23: Number of Home Care Providers (GEN data)

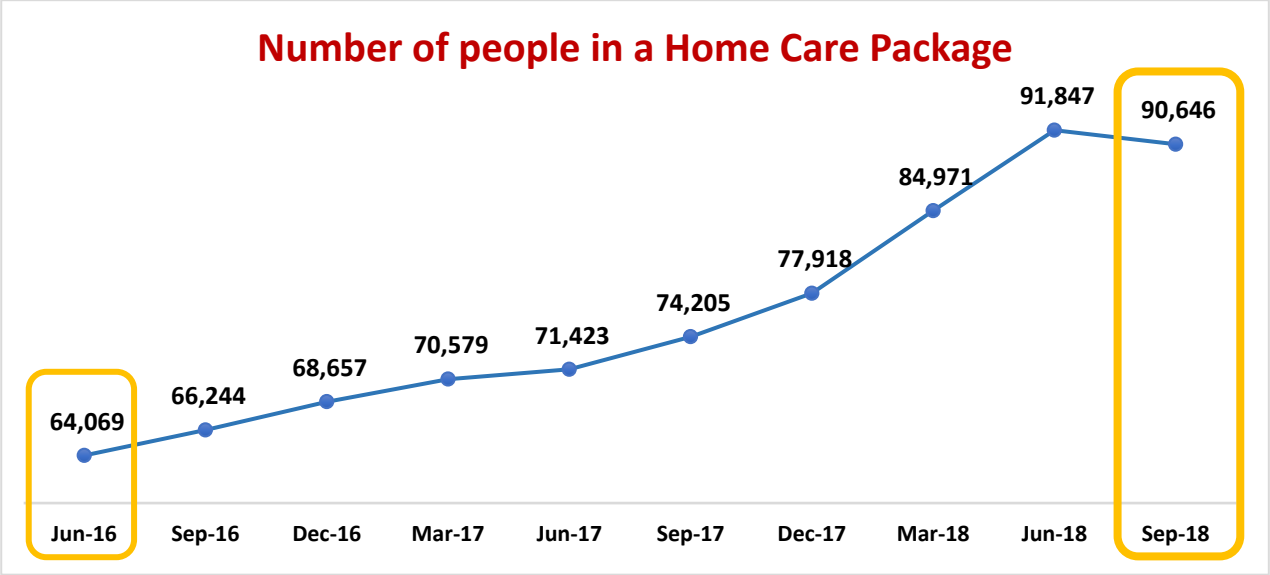


Figure 24: Number of Home Care Consumers (GEN data)

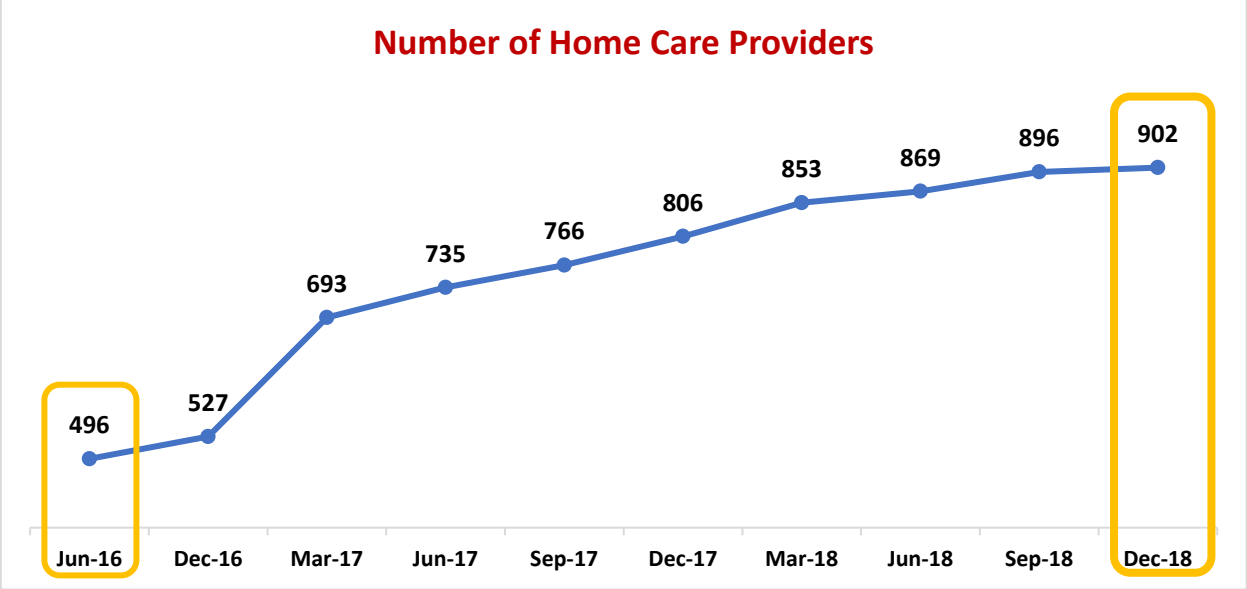


7. FUTURE SUSTAINABILITY - ISSUES TO CONSIDER

Analysis

A number of significant issues need to be considered when assessing the future funding model that is required to meet the requirements of a sector that is experiencing considerable resource pressures.

Whilst residential care has some clear financing issues that should be addressed as a priority, it should be noted that the Home Care Packages Program (HCP), Commonwealth Home Support Programme (CHSP) and Veterans Home Care Program (VHC) amongst a number of similar community programmes must also be considered in relation to the future funding models.

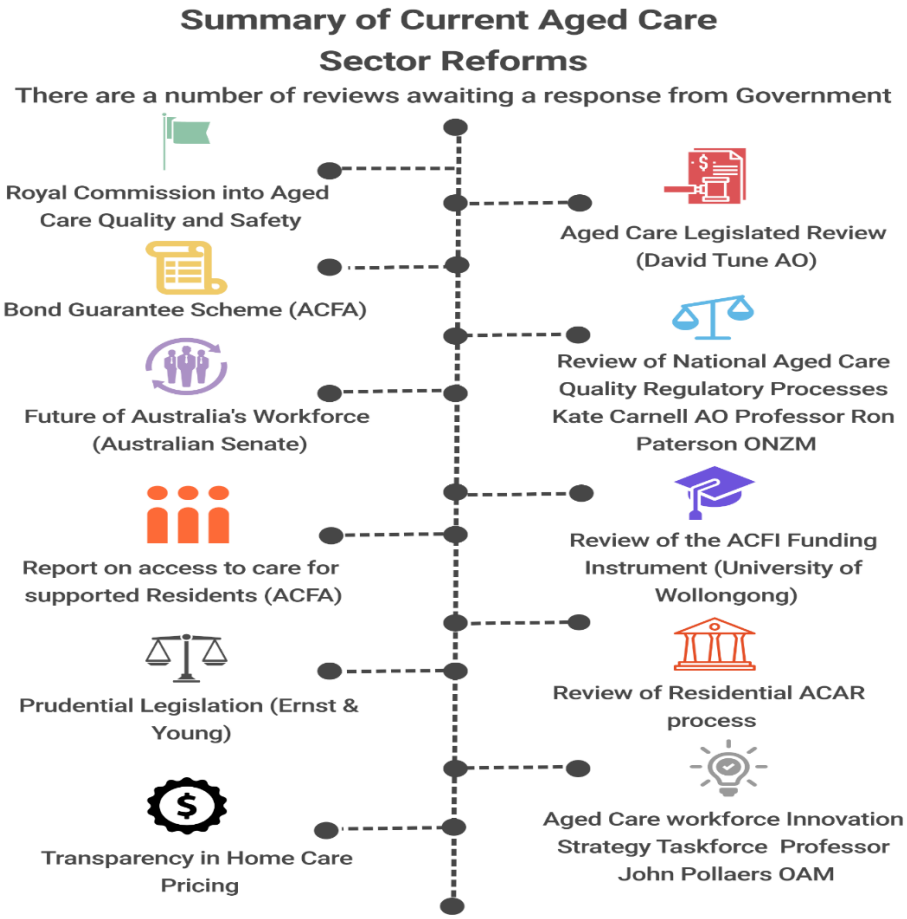
For the purpose of this brief analysis we are making specific comment on the Residential Care and HCP segments.

Current Reforms

The future sustainability of the sector will be dependent upon the impact of impending reforms and initiatives.

The graphic below summarises the current reforms that are progressing within the sector. Individually each reform has considerable importance and support, however, the sector has undergone considerable reforms dating back to 1997 (*Aged Care Act*) which have compounded the administrative and governance burden and affect strategic decisions due to uncertainty.

Figure 25: Summary of Current Aged Care Sector Reforms



Issues to be Considered

Specific areas that will need to be considered in developing a financially sustainable aged care sector include:-

Residential Care

- ACFI Funding - review the quantum of inflation (COPE) increases together with a stronger relationship between the funding instrument and actual resident care needs
- Additional funding is required for the Behaviour (BEH) and Complex Health Care (CHC) CFI domains due to the increased number of residents with dementia or other behaviour attributes, and with greater numbers of residents requiring palliative care and having almost sub-acute health conditions
- Rural, Remote and Very Remote facilities will continue to require a range of specific funding initiatives and support *(a possible remedy may be to fund the facilities at full occupancy levels based on the average ACFI - a similar concept to that adopted for MPS)*
- Workforce strategies, including availability, retention, career development, staffing levels, remuneration and conditions
- Additional and Optional Service Fees - clearer regulatory guidance, move toward either the deregulation of Basic Daily Fee or increasing the Basic Daily Fee base amount *(to $60 per day as a guide)*
- Accommodation Pricing - consumer education as to what is included in accommodation pricing, providers to increase the pricing and with an emphasis on a receiving a greater percentage of combination (RAD and DAP) receipts
- Innovation to be supported and encouraged at regulatory and legislative level
- Enhancement of My Aged Care functionality and portability
- Clearer and defined legislative and regulatory environment

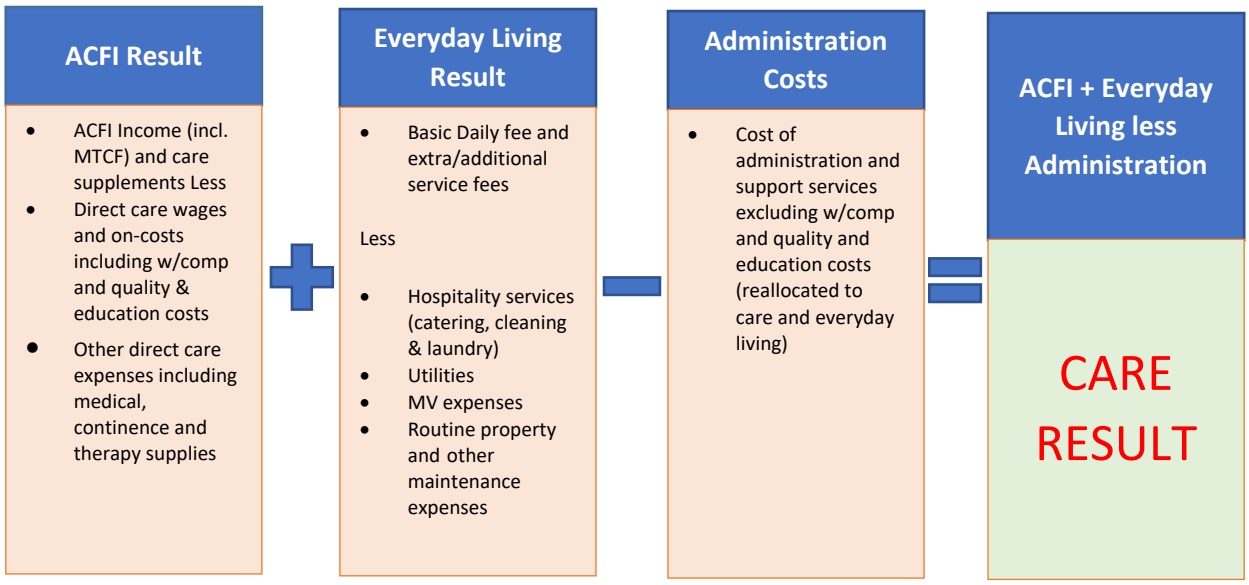
Home Care

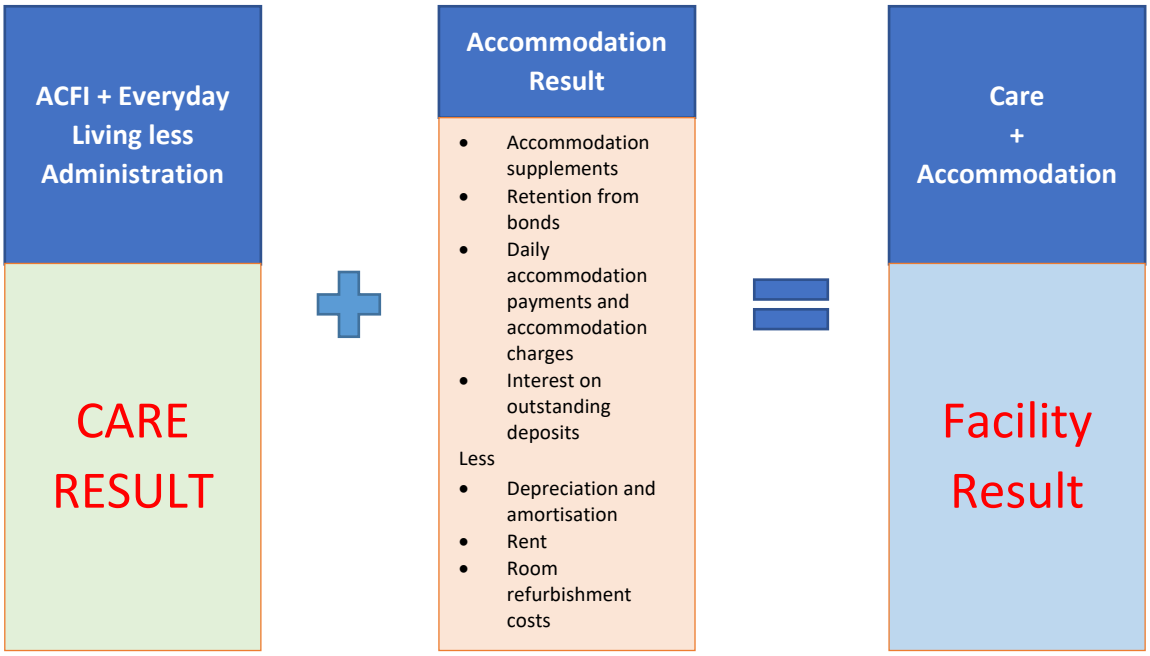
- National Prioritisation Queue and waiting lists - continued funding initiatives (in addition to MYEFO and recently announced increased package funding) to reduce the size of the prioritisation queue and reduce the length of time from consumer funding approval to the funding being provided - we note the additional home care places announced in MYEFO and further packages announced more recently in February
- Pricing Transparency - ensure that it does not disadvantage providers or consumers and allows for care delivery and business model innovation
- Pricing and Service Delivery - more clarity and flexibility in relation to provision of service guidelines *(including clear guidelines in relation to providing a package "bundle")*
- Quality Audits - enhanced monitoring and appropriate responses to non-conformance
- Unspent Funds - clearer definitions around use of unspent funds and possible redistribution of under-utilised funds to other consumers on wait lists (dependent on assessment of composition of unspent funds)
- Consumer Education - greater focus on providing increased consumer (and provider) education
- Enhancement of My Aged Care functionality and portability
- Clearer and defined legislative and regulatory environment (including quality and service delivery guidelines)
- Partial integration of CHSP and HCP programs *(possibly via Levels 1 and 2 funding)*
- Commitment to compulsory charging of client contributions (to encourage the notion of co-contributing to care)

8. APPENDIX A - GLOSSARY

Facility Result

*The **Facility Result** comprises the below components. The Care Result is a derivative of the resident acuity (care) needs whilst the Accommodation Result is derived from revenue streams not directly related to resident acuity but the resident's financial ability to pay for residential accommodation.*





Accommodation Result
Accommodation Result is the net result of accommodation revenue (DAPs/DACs/Accommodation supplements) and expenses related to capital items such as depreciation, property rental and refurbishment costs. It no longer includes costs associated with recurrent repairs and maintenance and motor vehicles.

ACFA
Aged Care Financing Authority - the statutory authority which provides independent advice to the government on funding and financing issues, informed by consultation with consumers, and the aged care and finance sectors.

ACFI revenue
Aged Care Funding Instrument (ACFI) revenue includes the subsidy received from the Commonwealth and the means-tested care fee component levied to the resident. ACFI revenue includes the additional care supplement subsidies and some specific grant (not capital) funding.

ACFI Result
ACFI Result represents the net result from revenue and expenses directly associated with care. It includes ACFI and Supplements (including means-tested care fee) revenue less total care expenditure, and this includes an allocation of workers compensation and quality and education costs.

Administration Costs
Administration Costs includes the direct costs related to administration and support services and excludes the allocation of workers compensation and quality and education costs to ACFI and Everyday Living.

***Average*s**
For residential care all *averages* are calculated using the total of the raw data submitted for any one-line item and then dividing that total by the total occupied bed days for the facilities in the group. For example, the average for contract catering across all facilities would be the total amount submitted for that line item divided by the total occupied bed days for all facilities in the survey.

For home care all *averages* are calculated using the total of the raw data submitted for any one-line item and then dividing that total by the total client days for the programs in the group. For example, the average for sub-contracted and brokerage costs across all programs would be the total amount submitted for that line item divided by the total client days for all programs in the survey.

***Average* by line item**
This measure is *average*d across only those facilities that provide data for that line item. All other measures are *average*d across all the facilities in the particular group. The *average* by line item is particularly useful for line items such as contract catering, cleaning and laundry, property rental, extra service revenue and administration fees as these items are not included by everyone

Bed day
The number of days that a residential care place is occupied in the Survey period. Usually represents the days for which an ACFI subsidy or equivalent respite subsidy has been received.

Benchmark
We consider the benchmark to be the average of the *First 25%* in the group of programs being examined. For example, if we are examining the results for facilities/ programs in Band 4, then the benchmark would be the average of the *First 25%* of the facilities/ programs in Band 4.

Care Result
This is the element of the facility result that includes the direct care expenses and everyday living costs and administration and support costs. It is calculated as ACFI Result *plus* Everyday Living Result *minus* Administration Costs.

Dollars per bed day
This is the common measure used to compare items across facilities. The denominator used in this measure is the number of occupied bed days for any facility or group of facilities.

Dollars per client day
This is the common measure used to compare items across programs. The denominator used in this measure is the number of client days for any programs or group of programs.

EBIT
Earnings Before Interest (including investment revenue) and taxation. This is a measure that excludes those variables relating to the tax status and financial position of an entity but recognises the consumption of capital in the form of depreciation and amortisation.

EBITDAR
This measure represents earnings before interest (including investment revenue), taxation, depreciation, amortisation and rent. The calculation excludes interest (and investment) revenue as well as interest expense on borrowings. EBITDAR is used for residential care analysis only, whereas Home Care uses EBITDA only.

The main reason for this is to achieve some consistency in the calculation. Different organisations allocate interest and investment revenue differently at the "facility level". To ensure that the measure is consistent across all organisations we exclude these revenue and expense items.

EBITDAR per bed per annum

Calculation of the overall Facility EBITDAR for the financial year divided by the number of operational beds in the facility.

EBT
Earnings before tax. This may also be referred to as the net result or, in the residential facility analysis, as the facility result.

Facility EBITDAR
The starting point for this calculation is the Facility Result which is the combination of the Care and Accommodation results. It excludes all "provider revenue and expenditure" including fundraising revenue, revaluations, donations, capital grants and sundry revenue. It also excludes those items excluded from the EBITDAR calculation above. This measure is more consistent across the facilities because it excludes all those items which are generally allocated at the facility level on an inconsistent and arbitrary basis depending on the policies of the individual provider.

*** The previous metric of Provider EBITDA is no longer included in the reporting as it is not considered to be a key indicator of facility performance.*

Everyday Living Result
Revenue from Basic Daily Fee plus Extra or Optional Service fees less Hotel Services (catering, cleaning, laundry), Utilities, Motor Vehicles and regular Property & Maintenance (includes allocation of workers compensation premium and quality and education costs to hotel services staff)

***First 25%* - Residential Care and Home Care Packages (HCP)**

The Residential Care and Home Care results (EBT) are distributed for the Survey period from highest to lowest in terms of $ per bed/client per day ($pd). This is then divided into four quartiles - the first 25%, second 25%, third 25%, fourth 25% and the average of each quartile is reported. The *First 25%* represents the quartile of programs with the highest EBIT $pd, the second 25% represents the quartile with the second highest EBIT $pd, the third 25% represents the quartile with the third highest EBIT $pd, whilst the fourth 25% represents the quartile of programs with the lowest (fourth highest) EBIT $pd.

Location - City

Facilities have been designated as being city based according to the designation by the Department of Health in their listing of aged care services. Those that were designated as being a “Major City of Australia” have been designated City.

Location - Regional

Facilities have been designated as being regionally based according to the designation by the Department of Health in their listing of aged care services. Those that were designated as being an “Inner Regional”, “Outer Regional” or “Remote” have been designated as Regional.

Survey

Survey is the abbreviation used in relation to the *Aged Care Financial Performance Survey*.

BEFORE THE FAIR WORK COMMISSION

Fair Work Act 2009 (Cth)

Title of matter: 4 yearly review of modern awards – Social, Community, Home Care and Disability Services Industry Award 2010 – Tranche 2 proceedings

Section: s156

Matter Number: AM2018/26

Document: Submissions of the Australian Federation of Employers and Industries (AFEI) in support of ABI proposed variations

Filed: Pursuant to Directions issued 28 June 2019

Lodged by: Australian Federation of Employers and Industries

Address for Service: Australian Federation of Employers and Industries
PO Box A233, Sydney South NSW 1235

Telephone: (02) 9264 2000

Facsimile: (02) 9264 5699

Email: paula.thomson@afei.org.au

Submissions in support of ABI proposed variations

1. These submissions are filed pursuant to Directions of 28 June 2019, in matter AM2018/26, 4-yearly review of the Social, Community, Home Care and Disability Services Industry Award 2010 (SCHADS Award), and address the AFEI's support of discrete elements of the variations proposed by Australian Business Industrial, and NSW Business Chamber (**ABI**), as outlined in the draft determinations filed 2 April 2019.

2. To the extent any of the ABI proposed variations are opposed, AFEI intends to file materials in reply by 3 September 2019.

Clause 25.1 and 25.4(a) - Ordinary hours of work

3. AFEI supports the ABI proposed variation to Clause 25.1.

4. The current Award provisions do not provide flexibility for employers to customise its arrangement of shifts and hours for full time employees, beyond the arrangements listed in Clause 25.1. If an employer requires an arrangement of shifts that is not contemplated in Clause 25.1, the employer would need to employ part-time or casual employees, or incur overtime rates.

5. The current restrictions in the Award are not supported by historical provisions in the social and community services industry (at least in NSW), nor current industry needs. Rather,

   a. Such restrictions were not included in the *Social and Community Services Employees (NSW) State Award*, which provided:

      ordinary hours of work shall be no more than 152 hours in any four week period exclusive of meal breaks, worked between the hours of 6am and 8pm Monday to Sunday inclusive.[1]

   b. In the disability services sector in particular, work includes provision of daily services without fixed duration from client to client, and aims to 'maximum choice and control for [NDIS] participants'.[2]

6. AFEI also supports the ABI application to vary Clause 25.4(a) – rest breaks between rostered work.

[1] Clause 11.1

[2] NDIS Market Position Statement, NSW, 2016.

Clause 25.5(d)(ii) – Change in roster

7. AFEI supports the ABI application to vary Clause 25.5(d)(ii) to include an ability to alter a roster at any time '*by agreement between the employer and relevant employee*.'

8. AFEI does not however support the proposed administrative requirement for the agreement between the employer and employee to be recorded in writing, in order for such an agreement to take effect as mutually intended.

9. AFEI supports the ABI application to vary Clause 25.5(d)(ii) to reflect the additional kinds of employee absences that could impact an organisation's ability to enable effective service delivery, as outlined at 25.5(d)(ii)B of the draft determination.

Clause 25.5(f) - Client cancellation

10. AFEI supports the introduction of paragraph 25.5(f)(i) and (ii) as outlined in the draft determination, insofar as it includes disability services as being subject to client cancellation provisions, and outlining the actions that may be taken by an employer in the event of a client cancellation in A and B.

11. AFEI does not support the removal of the words from the current provision at 25.5(f)(i) that '*in such circumstances no payment will be made to the employee*.'

12. AFEI reserves its position in respect to the proposed introduction of Clauses 25.5(f)(iii) – (vi) in the ABI draft determination.

Clause 20.10 - Remote response and Clause 28.5 - Recall to work overtime

13. AFEI supports the ABI's proposed introduction of Clause 20.10 for remote response work.

14. AFEI supports the clarification provided in ABI's proposed variation to Clause 28.5, including that recall to work does not apply to an employee performing remote response duties. Further in support, we say:

    a. ***Firstly,*** the proposed variation is consistent with the ordinary meaning of the term 'recalled,' that '*a person who is recalled is summoned to return to a place in a manner where there is a requirement for the person to return*.'[3]

    b. ***Secondly***, the remote response duties in the ABI proposed variation are also consistent with core responsibilities included in the Award's classification structure. For example, a Level 2 Social and Community Services Employee's responsibilities can include work allocation, rostering, and providing guidance.[4] Performance of core responsibilities as part of an ongoing arrangement are rightly distinguished from being "recalled to work" involving a specific instruction or direction to an employee on a particular occasion and for a more particular purpose.[5]

BEFORE THE FAIR WORK COMMISSION

Fair Work Act 2009 (Cth)

Title of matter: 4 yearly review of modern awards—*Social, Community, Home Care and Disability Services Industry Award 2010*—Tranche 2

Section: s.156

Matter Number: AM2018/26

Document: Submissions in reply to outstanding union claims

Filed: Pursuant to Amended Directions issued 11 July 2019

Lodged by: Australian Federation of Employers and Industries

Address for Service: Australian Federation of Employers and Industries, PO Box A233, Sydney South NSW 1235

Telephone: (02) 9264 2000

Facsimile: (02) 9264 5699

Email: paula.thomson@afei.org.au

Background

1. These submissions are made to the Fair Work Commission (the **Commission**) by the Australian Federation of Employers and Industries (AFEI) in respect to the 4 yearly review of the Social, Community, Home Care and Disability Services Industry Award 2010 – Tranche 2 (AM2018/26).

2. In particular, these submissions are in reply to the outstanding union claims listed at Attachment C to the Amended Directions of 11 July 2019, except those claims in relation to travel time. AFEI intends to file submissions in reply to travel-related union claims by 3 September 2019.

The claims

3. Proposed variations to the Social, Community, Home Care and Disability Services Industry Award 2010 ('the **Award'**/'the **SCHADSI Award**') in Tranche 2 have been filed by the Health Services Union (**HSU**), the United Voice, and the Australian Services Union (**ASU**).

4. The union claims relevant to these submissions include proposals to vary the Award in respect to:

   a. Overtime for part-time employees working additional hours (HSU)

   b. Overtime for part-time and casual employees working more than 8hrs (HSU)

   c. Minimum engagements periods (HSU)

   d. Rosters (United Voice)

   e. Broken shifts (United Voice, HSU, ASU)

   f. Recall to work (HSU)

   g. Client Cancellation (HSU)

   h. Telephone allowance (United Voice, HSU)

   i. Clothing allowance (United Voice, HSU)

   j. Sleepovers (HSU)

5. AFEI objects to the claims, as outlined in these submissions.

Legal Framework

6. The legislative framework applicable to the 4 yearly review (the **Review**) was considered in some detail in the 4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues Decision.[1] The Decision outlined a number of principles to be considered in relation to the Review of a modern award.

7. ***Firstly***, in exercising its power to vary an award, the Commission must ensure that the award, together with the National Employment Standards, provide a fair and relevant minimum safety net of terms and conditions, taking into account the matters contained in the modern awards objective.[2]

8. ***Secondly***, the objects of the Fair Work Act are also relevant to the exercise of this power.[3] The objects include, amongst other things, providing workplace relations laws that are flexible for businesses and acknowledging the special circumstances of small and medium-sized businesses.[4]

9. ***Thirdly***, the need for a 'stable' modern award system requires a party seeking to vary a modern award to advance a merit based argument in support of the proposed variation. In this regard, the circumstances of the proposal will dictate the extent of argument required. Relevantly, where there is a proposal for a substantial variation, such a proposal must be supported by submissions in addition to probative evidence properly directed at demonstrating facts which support the variation.[5]

10. ***Fourthly***, the party seeking the variation must demonstrate that the variation they propose only includes terms necessary to achieve the modern awards objective.[6]

11. ***Fifthly***, in conducting the review, the Commission will have regard to the historical context of the award.[7]

6 Ibid at [32]
7 Ibid at [24]

Nature of the Industry

12. The Community Services sector is predominantly operated by not-for-profit organisations, many being charitable organisations, and most charitable organisations being small (revenue less than $250,000) to medium (revenue less than $1m) in size.[8]

13. In the disability care sector, around 78 per cent of the businesses are community/not-for-profit organisations while a further 21 per cent operate as commercial/private businesses.[9]

14. The sector is highly labour-intensive, staff/labour costs account for a very high proportion of total operating costs, usually more than 70%, but often more than 80% of total operating costs. Service providers in the industry also operate with very low profit margins.[10]

15. The sources of income for organisations in the industry are diverse, including:

    a. Various Commonwealth Government departments;

    b. Various State Government departments;

    c. Councils;

    d. NDIS fee for services;

    e. Fees as a contribution from clients;

    f. Full fees;

    g. Philanthropic Trusts;

    h. Donations;

    i. Sponsorships for services

16. In 2017-2018:

    a. Total Australian, State and Territory government recurrent expenditure on community services (including aged care services, services for people with disabilities, child protection services, and youth justice services) was estimated to be $31.5 billion in 2017-18, around 13.4 per cent of total government expenditure on services;[11]

    b. Total recurrent expenditure on child protection, out-of-home care, family support services and intensive family support services was $5.8 billion nationally; and[12]

    c. Total recurrent expenditure on youth justice community-based supervision and group conferencing was $333 million across Australia.[13]

17. Government block-funding is provided in some sectors, and is obtained by tendering or sometimes commissioning from the funding Government Department or agency. Block funding contracts typically have a specified period or number of years (usually three years, but could be shorter) before being re-tendered. Recipient organisations are contracted to agreed outputs or outcomes and other conditions.

18. In the 2011 Equal Remuneration Decision, the Full Bench of the Commission observed that '*there is widespread reliance on government funding and that because of the pervasive influence of funding models any significant increase in remuneration which is not met by increased funding would cause serious difficulties for employers, with potential negative effects on employment and service provision*'.[14]

19. With 87.2% of respondents to the 2019 Fair Work Commission Survey of SCHADS Employers identifying that they received a *significant* proportion of income from Commonwealth, State or Local Government[15], it is evident that widespread reliance on government funding remains a major feature of the SCHADS industry. Accordingly, it remains true for the purpose of claims made in these proceedings, that increases in remuneration and consequent wage costs which are not met by increased funding would cause serious difficulties for employers, with potential negative effects on employment and service provision.

Developments in the industry

20. More recently, while private investment in welfare operations has increased, industry operators have been forced to increasingly rely on charitable donations by private citizens and companies.[16]

21. In recent years, the National Disability Insurance Scheme (NDIS) and My Aged Care Services have led a dramatic shift in the industry's funding from government block-funding to client directed, and client-specific funding. The NDIS is the first sector of the industry to provide clients the power to exercise choice and control by being able to purchase their supports directly from providers.

22. The NDIS is a fee for service, mostly on an hourly service basis. A client is able to determine the service required and the service provider within an agreed NDIS plan. This plan may be negotiated with the NDIA, with the services of a Plan Adviser, and the administration and information managed by the NDIS Plan organisation. Alternatively the plan may be self-managed where the person with a disability or their designated support person manage the choice of provider and expenditure.

[14] [2011] FWAFB 2700 at [272]

[15] Fair Work Commission Survey analysis of the *Social, Community, Home Care and Disability Services Industry Award 2010* June 2019

[16] IBIS Personal Welfare Services in Australia March 2019

23. The replacement of block grants with individual client funding has reduced certainty of funding for NDIS providers, impacting operational planning and certainty of workforce needs. This is particularly so as under the NDIS model, the fee is paid by the NDIS on delivery of the service, and for most categories of service has a regulated hourly rate set by the NDIS.

24. Under the NDIS there has been a significant increase in market competition for funded, client directed and fee for service clients. Service delivery providers are, however, limited in the use of strategies for remaining competitive (typically employed in more commercial settings), due to the high degree of regulation in pricing and service delivery under the NDIS.

25. Pricing regulation under the NDIS is intended to address various public policy interests, and is intended to continue until the market matures. In the meantime, price regulation needs to strike a fine balance of fiscal sustainability for the relevant stakeholders, which include not only tax-payers, but also some of the most vulnerable members of the community as recipients of the various human service providers.

26. As might be expected from such a diverse industry, the costs of providing services can be varied depending on the size, range and type of services provided, the extent to which it uses volunteers and/or obtains Local Council or other subsidies for its building or other infrastructure.

27. The staffing costs of providing an hour of service include not only direct service delivery staff, but also the management, administration, coordinator(s), and other specialised positions. Many of these positions are also covered by the SCHADSI Award. Cost savings measures to account for increases in staff wage costs which are not fully funded may occur by reducing non-support worker staff, and limiting investment in staff development and training; or alternatively, reducing the amount of supply or service hours if the cost increases are related to the weekend, overtime or other higher staff cost activities.

28. The cost of providing services could also be much higher where there are a limited number of clients, as this means the cost of the infrastructure, administration and other non-direct service delivery costs are higher per hour of service. This is of particular concern in areas of 'thin markets'. In our submissions of 22 May 2019, AFEI addressed the Department of Social Services and NDIA commissioned 'NDIS Thin Markets Project' at [35]-[36]. As highlighted in our earlier submissions, thin market challenges include:

    - '*Low client numbers (or difficulty finding/connecting with clients that are in a region), and/or highly dispersed clients result in higher per-client costs than can be supported under existing NDIS staff utilisation';* and
    - areas where '*providers have said there is not enough participant demand to support them to maintain a trained, skilled workforce*' and that thin market challenges '*not only present barriers to new providers entering the NDIS, they may also constrain the ability of current providers to deliver services'*.

29. As outlined in our earlier submissions, potential responses to thin markets are identified in the Thin Markets Project discussion paper as including 'market facilitation, market deepening, regulation, and alternative commissioning models'.[17] Irrespective of the approach taken by the Department, it is apparent that the market will continue to evolve (with an unknown degree of intervention) at least in the next few years, and is far from 'settled'.

30. It is also noted that the NDIS has not yet been fully rolled out, and that the composition of the NDIS market and labour market has evolved throughout its transition. To this point, we refer to our submissions of 22 May 2019 at [32]-[33].

31. Various government initiatives, including the thin markets project, contribute to the current evolutionary, uncertain, and complex nature of the industry and market, which is by no means 'settled' or 'matured'.

32. In the current state of the industry, unfunded increases in wage costs are likely to have negative effects on employment and services.

Submissions in Reply

Overtime for part-time employees working additional hours (HSU)

33. The HSU seeks to vary Clause 28.1(b)(iii) to require all time worked by part-time employees which exceeds hours agreed in 10.3(c) to be treated as overtime and paid at the rate of time and a half for the first two hours and double time thereafter.

34. The Award currently provides under the heading of Clause 28.1 – Overtime rates, and sub-clause 28.1(b) – Part-time employees and casual employees:

> ***(i)*** *All time worked by part-time or casual employees in excess of 38 hours per week or 76 hours per fortnight will be paid for at the rate of time and a half for the first two hours and double time thereafter, except that on Sundays such overtime will be paid for at the rate of double time and on public holidays at the rate of double time and a half.*
>
> ***(ii)*** *All time worked by part-time or casual employees which exceeds 10 hours per day, will be paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid for at the rate of double time, and on public holidays at the rate of double time and a half.*
>
> ***(iii)*** *Time worked up to the hours prescribed in clause 28.1(b)(ii) will, subject to clause 28.1(b)(i), not be regarded as overtime and will be paid for at the ordinary rate of pay (including the casual loading in the case of casual employees).*

Reply to HSU contentions concerning the Modern Awards Objective – s134(da)

35. In support of their claim, the HSU argue '*the overtime functions under the Award do not meet the Modern Award objective, which recognises (at s.134(da)), the need to provide additional remuneration for employees working overtime; or employees working irregular or unpredictable hours'*. AFEI disputes this contention for several reasons, as outlined below.

36. ***Firstly,*** the Award clearly already provides additional remuneration for part-time employees who perform overtime. This is outlined in Clause 28.1(b)(i) and (ii) above.

37. ***Secondly,*** it is also clear from the text of the Award that it does not regard the hours worked by a part-time employee up to 38 per week/76 per fortnight, or 8 per day, as overtime. This is expressed in unequivocal terms at clause 28.1(b)(iii).

38. ***Thirdly,*** it is apt to point out that s134(da) does not amount to a statutory directive that modern awards must provide additional remuneration for employees working overtime. This was observed both in the Award Flexibility Decision, and subsequently in the Penalty Rates Decision.[18] Rather, Section 134(da) is but one consideration to be taken into account, along with a number of other considerations to be taken into account in s134, in the Commission's task of ensuring that the modern award provides a 'fair and relevant minimum safety net'.[19] s134(da) therefore does not amount to an imperative to make the variation sought by the HSU.

39. ***Fourthly,*** there are relevant provisions in the Fair Work Act and the Award which address any adverse consequences arising due to working overtime. Section 62(2) gives an employee a right to refuse to work additional hours 'if they are unreasonable'. The criteria for determining whether additional hours are reasonable or unreasonable are set out in s.62(3).[20]

40. ***Fifthly,*** any claim in reliance on the relevance of s134(da) would require probative evidence in support of a merit argument addressing the circumstances of employers and employees in the industries covered by this Award. The HSU evidence is, however, insufficient to make findings of substance on the circumstances of employees covered by the various sectors in the SCHADS industry. Observations may, however, be made that the HSU part-time employee witnesses appeared to suffer negligible inconvenience as a result of working additional hours. For example:

    a. The additional hours worked by Ms Wilcock and Ms Waddell were within their 'available hours';[21] and

    b. Ms Thames expressed that she is contracted to work a 'minimum of 20 hours a week'[22] and would 'like to have more hours'.[23]

Reply to HSU contentions concerning a 'structural incentive to underestimate hours'

41. The HSU also argue in support of their claim that '*the absence of any penalty associated with the performance of such work creates a 'structural incentive to underestimate the hours of work required of a part-time employee at the time of engagement and/or rostering'*.

42. To address this contention, the specific provisions of clause 10.3(c) and (e) are extracted below:

> ***(c)*** *Before commencing employment, the employer and* [part-time] *employee will agree in writing on:*
>
> ***(i)*** *on a regular pattern of work including the number of hours to be worked each week, and*
>
> ***(ii)*** *the days of the week the employee will work and the starting and finishing times each day.*
>
> ***(e)*** *The agreement made pursuant to clause 10.3(c) may subsequently be varied by agreement between the employer and employee in writing. Any such agreement may be ongoing or for a specified period of time.*

43. AFEI disputes the HSU's inference that employers and part-time employees in the industry should be reaching agreement on a higher quantum of hours as part of the regular pattern of work, at the time of engagement/rostering.

44. From a practical perspective, the regular pattern of hours agreed in Clause 10.3(c) should be hours which the employer can reasonably predict are needed as productive hours of work, and will be needed on an ongoing basis. This is in the circumstances that:

a. the employer is unable to vary the regular pattern of work without agreement from the employee in writing;

b. part-time employment is (by its nature) ongoing.

45. It is therefore reasonable and sensible for employers to be cautious in their predictions of hours of work that can be offered as a regular pattern of work on a permanent basis. Particularly due to fluctuation in service delivery requirements, which may be outside the employer's control, and in the circumstances that NDIS service fees are paid to the service provider on delivery of the service (rather than on service-booking).

46. It is also largely relevant that the regular pattern of hours fixed pursuant to clause 10.3 involves an agreement with the part-time employee. The part-time employee therefore has the prerogative to impose caveats in respect to the hours they will be required to present themselves for work on a regular basis.[24]

[24] Subject to s62 of the Act.

47. To the extent the Award permits employers some degree of prerogative in estimation of the regular pattern of part-time hours of work that may be offered on a permanent basis, this is consistent with the 'need to promote flexible modern work practices and the efficient and productive performance of work' (s.134(1)(d)). It is not an appropriate basis to vary the Award in the manner sought by the HSU.

48. It is also relevant to note that the Full Bench of the Commission rejected a claim from employers in the Part Time and Casual Employment Case for additional flexibility in relation to part-time employment, basing the decision (in part) on the existing ability to roster part-time employees to perform additional hours without incurring overtime rates:

> *'Second, we consider that the current provision as is applied in practice is reasonably flexible…clause 28.2(b)(iii) allows for part-time workers to work additional hours up to 10 in a day or 38 in a week or 76 in a fortnight without the payment of any overtime penalty rate, so there is a considerable capacity to assign additional hours that may arise at short notice to employees* ***without the cost exceeding what the NDIA price structure will allow.*** *The evidence showed that employees are generally willing to work such additional hours if it does not interfere with fixed private commitments'.*[25] [our emphasis]

49. If the Award were varied to include overtime rates for part-time employees working hours additional to those agreed in Clause 10.3(c), this would remove flexibility in the Award which the Commission has already identified as 'reasonable', and has acknowledged the relevance of existing provisions in meeting industry needs.

The impact of applying overtime rates to agreed additional hours up to 38 per week/ 76 per fortnight

50. AFEI also disputes the HSU's inference that overtime rates would result in an increase in hours agreed with part-time employees at the time of engagement/rostering. There is no evidence that the variation would result in part-time employees having any higher agreed/rostered hours if overtime provisions applied for hours worked in excess of those agreed in Clause 10.3(c).

51. It is plain that the variation would, however, result in substantially additional cost to employers for offering any additional hours to part-time employees, as compared to casual employees.

52. Significantly, under the NDIS an employer cannot recover the overtime cost of a part-time employee's additional hours.[26]

[25] Part Time and Casual Employment Decision [637]

[26] https://www.ndis.gov.au/media/1455/download

53. The variation would also have the effect that a full time employee and a part-time employee being entitled to substantially different pay without any difference in the quantity, quality or value of the work. For example:

a. A part-time employee with 20 agreed hours per week, would receive the equivalent of 55x the ordinary hourly rate for working 38 hours in a week.

b. It could even result in a part-time employee being entitled to a higher weekly pay for working less hours than a full time employee. A part-time employee with 20 agreed hours per week would receive the equivalent of 39x the ordinary hourly rate for working 30 hours in a week.

Such a result would be inconsistent with the modern awards objective to promote the efficient and productive performance of work.[27]

54. It would also impact the viability of offering part-time employment (or accepting requests for part-time employment) for those who would prefer reduced permanent hours due to family or other personal commitments, and serve as a further disincentive to offer additional hours to part-time employees. Such a result would also be inconsistent with the modern awards objective to promote social inclusion through increased workforce participation.[28]

Relevance of the increase in cost of part-time employment to the current workforce composition

55. In its submissions, the HSU identify that '*of the permanent workforce of disability support workers, part-time work is the dominant, and increasing, mode of employment*'.[29] In comparing the proportion of part-time employment to casual employment, however, casual employment remains the preferred mode of employment overall in the industry.[30]

56. In its 2017 Part Time/Casual Employment Decision, the Full Bench observed:

> *'…there remains considerable uncertainty as to how the NDIS will operate and what will be the pattern of service demand from participants once the NDIS is fully implemented. We consider it to be likely that this uncertainty is a major reason for the current degree of preferment for casual employment, and that once the NDIS has been fully implemented and its operation becomes more certain and stable, part-time employment will be maintained as a substantial feature of the workforce.'*

[27] s134(1)(d)
[28] s134(1)(c)
[29] HSU submissions at [12]
[30] Fair Work Commission Survey analysis of the *Social, Community, Home Care and Disability Services Industry Award 2010* June 2019, p7

57. Since the 2017 Part Time/Casual Employment decision, there has remained considerable uncertainty in the NDIS market. Most significantly, the NDIS has not yet been fully implemented. Further uncertainty in the pattern of service demand in the NDIS industry was highlighted in our submissions of 22 May 2019 at [35]-[37].

58. The continued uncertainty in the industry and associated preferment for casual employment weighs against a decision that would increase the cost and regulatory burden of part-time employment and undermine the preferred course of establishing part-time employment as a substantial feature of the workforce.

In conclusion

59. The HSU:

a. does not make out a merit argument for the variation;

b. does not provide justification for removing a flexibility for employers in the Award which has been specifically acknowledged by the Full Bench in its 2017 Part-Time and Casual Employment Decision;

c. does not provide justification for the additional cost burden to employers that would arise as a result of the proposed variation;

d. particularly in circumstances where overtime costs are not recoverable, serve as a distinctive to provide additional part time hours;

e. proposes a variation that is not consistent with the modern awards objective;

f. is not supported by probative evidence, and should be rejected.

Claims for overtime after 8 hours per day (HSU)

60. The HSU further propose to vary the Clause 28.1(b)(ii) so that all time worked by part-time or casual employees which exceeds 8 hours per day, will be paid at the rate of time and a half for the first two hours and double time thereafter.

61. Clause 28.1(b)(ii) is under the heading '28.1 Overtime rates'. The provision thus signals to the reader that it deals with incidents of work which are overtime.

62. The Award's current provision of overtime becoming payable after 10 hours per day enables the facilitative provision in clause 25.1(b)[31] to have proper effect. So where an employee or majority of employees have reached agreement with their employer to work 10 ordinary hours in a day pursuant to clause 25.1(b), the hours up to 10 can be treated as 'ordinary hours'. This is important to maintain for several reasons:

    a. ***Firstly***, by having the character of ordinary hours, they will attract superannuation for both part-time employees and casual employees;

    b. ***Secondly,*** by having the character of ordinary hours, they will attract annual leave accruals;

    c. ***Thirdly,*** by having the character of ordinary hours, they can be part of a part-time employee's regular pattern of hours, and can be relied on by the employee as a predictable source of income, and can be relied on by the service provider (employer) and client as predictable hours of the employee's availability;

    d. ***Fourthly,*** if the ninth and tenth hours were not ordinary hours, then this result would undermine the agreement reached pursuant to 25.1(b).

63. The HSU evidence is gravely insufficient for the Commission to make any findings about the overall impact of the current provisions on employees covered by the SCHADSI Award, this is particularly so as:

    a. The evidence referred to in respect to this claim is limited to two support workers.[32] Such evidence would be insufficient for the Commission to make any findings about the overall impact of the current provisions on a single workplace let alone an entire sector, let alone an entire industry;

    b. The HSU rely on a reference to the nature of providing 'personal or domestic assistance for elderly clients or clients with a disability';[33] whereas the SCHADSI Award covers a wide range of other occupations.[34]

64. One relevant observation which may be made about the union evidence includes that a number of witnesses expressed the desire to work more hours[35].

65. If the proposed variation were made, it would also shorten the period of client care that could be available for the same price. This is a particularly undesirable outcome for NDIS participants who may already face high risk of supply shortage, including those in outer regional, remote or very remote areas, those with complex needs, or have acute care needs such as in crisis situations.

66. For the reasons outlined above, the claim should be rejected.

[31] Clause 25.1 corresponds with clause 13.1(b) in the Exposure Draft as at 15 March 2019. The Exposure Draft at Clause 7.2, lists 13.1(b) as a facilitative provision.

[35] See for example statements of Thelma Thames at [9], Deon Fleming at [17], Trish Stewart at [11]

Minimum engagement periods – (HSU) S10

67. The HSU has made a claim for a minimum engagement period of 3 hours for all employees covered by the Award.

68. The HSU minimum engagements claim affects casual employees, part-time employees, and full-time employees in all sectors of the Award.

69. Some observations may be made about the implications of this claim, which are relevant across casual, part-time and full-time employment. These include:

    a. the variation could have the result that an employer would be liable to pay an employee for hours during which no productive work is being performed, particularly in circumstances where the service requirement is set by the client; or,

    b. diminish the services offered to, for example, NDIS participants where services required are less than the proposed minimum engagement of 3 hours.

Claim for 3 Hour Minimum Engagement – Part Time Employees

HSU evidence

70. Contrary to the HSU submission[36], its evidence does not establish that it is '*commonplace within the industry for employees to be "rostered" to perform very short shifts – sometimes less than an hour…'*. The following observations can be made about the HSU evidence in respect to this claim:

    a. The HSU lay witness evidence relied on includes that of several union officials, 3 part-time employees, and three statements from persons whose names and employers are not given. This volume of evidence is gravely insufficient to establish any indicative industry practices.

    b. The evidence of HSU union officials and Ms McDonald, to the extent it deals with shift lengths is hearsay, has little probative value, and should not be given any weight.

    c. In respect to Social and Community Services sectors of the SCHADSI Award (other than disability services) affected by the claim, such as migrant support services, youth support services, Aboriginal and Torres Strait Islander support services, and others, there appears to be no evidence apart from HSU union officials.

    d. In respect to the Family Day Care stream of the SCHADSI Award, which is also affected by this claim, there appears to be no evidence at all filed by the HSU.

    e. The SCHADSI Award does not apply to any of the named part-time employee witnesses relied on by the HSU[37], as they are all covered by enterprise agreements. Evidence about the length of shifts or periods of work performed by those employees pursuant to an enterprise agreement is irrelevant to these proceedings.

[36] Para [29]

[37] Ms Waddell, Ms Thames, and Mr Lobert

f. The subject matter of Ms McDonald's co-authored article (attached to her statement), is limited in scope to disability support workers. Whereas the 'industry' covered by the SCHADSI Award includes not only other sectors, but also different types of workers in the disability services sector. The article further acknowledges:

i. '*The 10 DSWs cannot be seen as representative of all DSWs working under the NDIS*'

ii. '*It is not possible to generalise from the experiences of this small sample…*'

Relevant Award History

71. In Part 10A Award Modernisation, it was brought to the AIRC's attention that there existed minimum engagement periods for part-time employees in some pre-modern awards, and no minimum engagement periods for part-time employees in others.[38]

72. Subsequent to Part 10A Award Modernisation, the absence of a minimum engagement period for part-time employees in the Award was taken into account in a decision by VP Watson in the 2-yearly transitional review, to insert the requirement to agree on a regular pattern of part-time hours. VP Watson stated at [20]:[39]

> ***[20]*** *That part of the application seeking a requirement that part-time arrangements be agreed in writing prior to commencing employment is a common award provision. It requires employees to be given clear information as to the basis of their employment when they are engaged. I consider that the case for such a clause is strong, <u>especially when there is no award minimum engagement period</u>*' [our emphasis].

73. Further, in the Part Time and Casual Employment Decision, the Full Bench again considered the absence of part-time minimum engagement periods in the Award 'most important' in its determination of whether there ought to be variation to the Award safety-net in relation to part-time employment conditions. This is evident at [635] and [638] of the Decision (emphasis added by AFEI):

> *[635] We are not satisfied at this time, having regard to the various matters specified in s134(1), that the new provision proposed by ABI and supported by Jobs Australia is necessary to achieve the modern awards objective. We have reached this conclusion for the following reasons.*
>
> …
>
> *[638] <u>Most importantly, the SCHADSI Award does not contain any requirement for a minimum number of hours' work per week, nor (unlike the current provisions in the Hospitality Awards) does it provide for any minimum hours per day.</u> This latter aspect of the award was emphasised by Vice President Watson in his 2013 decision which added the current clause 10.3(c), in the passage we have earlier set out. <u>That means that the agreed pattern of hours for a part-time employee can encompass short periods of service, which a number of the employer witnesses envisaged would be an increasingly common feature of the NDIS service model…</u>*

[38] AM2008/24, AFEI Submissions, 24 July 2009

[39] [2013] FWC 4141 at [20]

74. The history of the Award demonstrates that the absence of a part-time minimum engagement period has been treated as a flexibility to employers which balances other restrictions on part-time employment, particularly those in clause 10.3(c) of the Award.

75. The absence of a part-time minimum engagement period is thus an important feature of the Award's safety-net and should not be disturbed without flexibility gains for employers. To do so would result in a safety net which is not fair to employers. As flexibility gains for employers are not part of the HSU proposed variation, the claim should be rejected.

Implications of the claim

76. We refer to our submissions above at paras. 19 and 32 concerning implications of the cost of the claim generally.

77. We further refer to our submissions above at paras. 55—58 concerning the impact of increasing costs associated with part-time employment in this Award.

78. As outlined above, the HSU has not established a merit case for the inclusion of a minimum engagement period for part-time employees, supported by evidence. The proposed variation would also unnecessarily disturb the Award's safety net, and would involve additional cost/reduced flexibility for employers. The proposed variation could also have an adverse impact on service delivery. The claim should therefore be rejected.

Minimum Engagements – Casual Employees

79. The HSU seeks to vary the minimum engagement periods provided for casual employees in Clause 10.4(c) of the Award.

80. This would result in a change to the casual minimum engagement periods as follows:

Sector	Current minimum engagement	HSU Proposed variation	Increase proposed by HSU
Home care employees	1 Hr	3 Hrs	2 Hrs
Disability services work	2 Hrs	3 Hrs	1 Hr
Family day care scheme sector	2 Hrs	3 Hrs	1 Hr

81. In support of their claim, the HSU argue that the question of minimum engagement periods did not receive any systematic consideration in the award modernisation process.[40] AFEI disputes this contention particularly in relation to casual employment. The HSU's claim rather re-agitates a matter that has already been given due consideration by the AIRC Full Bench during Part 10A Award Modernisation.

[40] HSU submission at [25]

82. In fact, the first exposure draft for the SCHADSI Award during Part 10A Award Modernisation included a 3hr minimum engagement period for all casuals in all sectors.[41] In response, various parties including AFEI, made submissions to the AIRC, raising the differences in minimum engagement periods across pre-modern awards in the various sectors to be covered by the Award, and arguing the need to maintain casual minimum engagement periods that were relevant to the industry.

83. In respect to the Social and Community Services Sector, the NSW *Social and Community Services Employees (State) Award,* covering both disability work, and other social and community services work, had a casual minimum engagement of 2 hours.

84. In respect to the Home Care sector, the majority of pre-modern awards provided for a minimum casual engagement of 1 hour or less:

Casual Minimum Engagement	**Instrument**
1 hour	*Miscellaneous Workers Home Care Industry (State) Award [NAPSA – NSW]**
	Attendant Care – Victoria Award 2004
	Community Services (Home Care) (ACT) Award 2002
	*Community Services (Home Care Service of New South Wales) Care Workers Award 2002 ***
No minimum engagement	*Home and Community Care Award 2001*

* For casual employees engaged other than Live-In house-workers

** For employees engaged in personal care services, and respite care services to personal care clients.

85. The AIRC also received comprehensive submissions on the rationale for a 1hr minimum engagement period in the home care industry.

86. The Full Bench of the AIRC, when making the SCHADSI Award, ultimately rejected the imposition of a sector-wide 3 hour minimum engagement period for casual employees, stating:

> '*The minimum period of engagement for casuals has been altered to take into account the different sectors of this industry.*'[42]

87. In the circumstances the AIRC has already given specific consideration to the history and needs of the relevant sectors covered by the Award in setting the casual minimum engagement periods, the current provisions should not be disturbed unless there is sufficient evidence of any change in the circumstances of the sectors or employees that would warrant departure from the current provisions.

[41] http://www.airc.gov.au/awardmod/databases/social/Exposure/social.pdf

[42] [2009] AIRCFB 945 at [83]

88. The HSU's direct evidence in relation to its proposal to vary the casual minimum engagement period claim only appears to include two statements from casual employees, one in disability services, and the other in home care. Such limited evidence would be insufficient to give the Commission a proper indication of a single workplace let alone an entire sector, let alone a number of sectors covered by the Award. Furthermore, the HSU has not filed any evidence in respect to its proposal to vary the casual minimum engagement period for the Family Day Care Scheme Sector from 2 hours to 3 hours.

89. Such limited evidence does not assist the Commission in its review of minimum engagement periods for casual home care employees, casual disability services employees, or casual family day care scheme employees.

90. The HSU has not established a merit case for variation to the casual minimum engagement period, and any such variation would unnecessarily disturb arrangements in the Award which have been prescribed specifically for particular industries. The variation would involve increased cost/reduced flexibility for employers, and could also have an adverse impact on service delivery. The proposed variation should therefore be rejected.

Minimum Engagements – Full Time Employees

91. The HSU's proposed minimum engagement period of 3 hours would also apply to full-time employees. AFEI objects to this.

92. In support of their claim, the HSU refer to the rationale for minimum engagement periods as outlined in the 2017 Casual and Part-Time Employment Case.[43] It is clear, from the fact that most modern awards do not include full-time employment minimum engagement periods, that this rationale has nominal relevance to full time employees.

93. The HSU argues in support of their claim that '*it is commonplace within the industry for employees to be 'rostered' to perform very short shifts*…'. This contention cannot, however, be accepted by the Commission on the evidence which has been filed by the HSU. The HSU has not, however, filed any evidence of full-time employees identifying the length of shifts undertaken by them in order to establish what is/ is not commonplace for this mode of employment.

94. Further reasons for rejecting this claim include:

    a. There is no evidence of employers in the industry unnecessarily rostering full-time employees for very short shifts.

    b. Contrary to the circumstances of a casual employment generally (which is by the hour), a person in full time employment will not receive any less pay for working a short shift. Rather, a full time employee will receive 38 hours' pay each week[44] irrespective of whether they work short shifts or not.

[43] HSU Submissions at [23]

[44] Unless the person's hours are averaged over a fortnight/4-week period, in which they will receive 76 hours' pay every fortnight, or 152 hours' pay every month.

c. If a short shift is worked by a full-time employee, they will still have the balance of their full-time hours available to them, which will need to be structured in rostered shifts that comply with the maximum shift length provisions in Clause 25.1.

95. The HSU has not established a merit case for inserting a full-time minimum engagement period in this Award, and has produced no probative evidence in support of this aspect of its claim. For the reasons outlined above, the proposed variation should be rejected.

Rosters (United Voice)

96. The United Voice propose to vary clause 25.5(d)(i) so that full time and part-time employees will be entitled to payment of overtime for roster changes where seven days' notice is not provided.

97. As the United Voice do not propose to vary clause 25.(d)(ii), (iii), or (f), there would appear to be only four circumstances where this variation would have application, these being:

a. Where a full-time employee's roster has been changed with less than 7 days' notice by agreement to include hours that are different, but not additional to their original rostered hours;

b. Where a part-time employee's roster has been changed with less than 7 days' notice by agreement, to include hours that are different, but not additional to their original rostered hours;

c. Where a full-time or part-time employee's roster has been changed with less than 7 days' notice to include hours that are different, but not additional to their original rostered hours, without the employee's agreement; and

d. Where a part-time or full-time employee's hours have been changed with less than 7 days' notice to include hours that are additional to their original rostered hours without the employee's agreement.

98. In respect to the first two circumstances, it would be highly inappropriate that the Award impose an overtime rate for variation to rostered hours where the change has been made by mutual agreement between the employer and the employee. In respect to this, we refer to our submissions in support of the ABL proposed variation to clause 25.5(d).

99. In respect to the third circumstance, the United Voice states '*the Award does not explicitly identify what the consequence is for the employer for failing to provide seven days' notice of a roster change in a situation where the exceptions in clause 25.5(d)(ii) and (iii) do not apply'*. There is, however, no requirement that an Award specify the consequences for non-compliance with a particular term. There is further, no imperative in the Fair Work Act to impose a penalty provision in the Award to address non-compliance. The implications of non-

compliance with Award terms is sufficiently addressed in Chapter 4 of the *Fair Work Act 2009*. The Act also provides:

a. rights and protections to employees so that issues of non-compliance with Award terms can be raised without adverse action taken against them;

b. union rights of entry for investigation of non-compliance;

c. Fair Work Ombudsman powers of investigation of non-compliance;

d. standing of employees, and unions to seek legal redress for non-compliance with an Award; and

e. powers of the Fair Work Ombudsman for compliance enforcement.

100. The United Voice evidence does not address the extent to which any of the avenues already available under the Act to address non-compliance have been exhausted unsuccessfully, prior to seeking variation to the Award to impose further regulation. Additional regulation in such circumstances is inappropriate, particularly taking into account the modern awards objective at s134(f) to take into account the impact of the regulatory burden.

101. Further in respect to the first three circumstances, if a roster change with less than 7 days' notice attracted overtime rates of pay, this would result in uncertainty ascertaining which hours are overtime and which are ordinary hours. This would also have implications for identifying which hours attract superannuation and leave accruals, and could result in uncertainty in determining whether a person had been provided with their full weekly/fortnightly ordinary hours pursuant to any contractual arrangements.

102. In respect to the last circumstance, an employer may require an employee to work reasonable additional hours in accordance with s62 of the Act. The Act already directly addresses the adverse consequences associated with working additional hours by providing a right to refuse to work unreasonable hours. The criteria for determining whether additional hours are reasonable or unreasonable are set out in s62(3) and include the employees personal circumstances,[45] whether the employee is entitled to receive overtime payments,[46] the needs of the workplace or enterprise in which the employee is employed,[47] the nature of the employee's role[48], and the usual patterns of work in the industry in which the employee works.[49]

103. In support of the proposed variation, the United Voice rely on the evidence of Ms Sinclair. The roster changes referred to in Ms Sinclair's statement at [23] appear to largely involve the working of additional hours. Ms Sinclair claims that '*[I] am concerned that if I complain or don't accept additional hours, I will be rostered less.*'. This is, however, at odds with her statement that she '*need*[s] *the hours'.*[50]

[45] s62(3)(b)
[46] s62(3)(d)
[47] s62(3)(c)
[48] s62(3)(h)
[49] s62(3)(g)
[50] Statement of Belinda Sinclair at [26]

104. The United Voice's argument is not supported by probative evidence, and does not provide a basis for the Commission to conclude that the proposed variation is necessary in order for the Awards to achieve the Modern Awards Objective. The proposed variation would, however, result in unnecessarily high regulatory restraints and costs associated with achieving mutually suitable working arrangements with employees, as well as uncertainty for employers and employees in determining entitlements. The proposed variation should therefore be rejected.

Broken Shifts (HSU, United Voice and ASU)

105. The HSU seek to restrict broken shifts in three ways, as outlined at [39] of their submissions:

a. that the shift may only be broken once and not multiple times;

b. that the minimum period of engagement should be applied to each period of work in a broken shift; and

c. that the employee is paid, as if working, for the time necessary to travel between clients required to be undertaken during any break in the shift.

106. In respect to the HSU claim, AFEI will address the first two proposed changes in these submissions, and address the claim concerning time in travel in conjunction with submissions in reply to the Union claims concerning travel time.

107. The United Voice seeks to vary the Award so that shift allowances are determined by 'the starting or finishing time' of the broken shift, and so 'the maximum number of broken shifts which can be worked per day is two'.

108. The ASU seeks to include a 15% loading for employees working broken shifts, payable for each hour of the broken shift from commencement of the shift to conclusion of the shift inclusive of all breaks.

109. Relevant to all the union claims, is the fact that broken shift provisions as they currently stand, were inserted into the Award to specifically address the needs of the disability services and home care industries. This is evident in:

a. the terms of the Award, by limiting operation of the broken shift provision to the social and community services employees performing disability work, and home care employees[51]; and

b. submissions made to the AIRC during Award Modernisation proceedings for the SCHADSI Award about the operational requirements of the industries.[52]

[51] Clause 25.6

[52] See for example, oral submissions in transcript of proceedings, 5 November 2009, at pn3118, and pn1375

The number of breaks in a broken shift

110. In respect to Broken Shifts, the Award currently provides at 25.6(a) that '*a broken shift means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours'*.

111. It is clear on the Award terms, that the broken shift provision was specifically intended to allow employers the ability to roster an employee for a broken shift which contains more than one unpaid break. If this was not intended, the words 'or more' would not have been included in the provision.

Minimum engagements in a broken shift

112. The proposed variation to require the minimum period of engagement to apply to each period of work in a broken shift is not appropriate for the relevant sectors. This is particularly so in the context of the HSU's claim to increase the minimum engagement period for home care employees from 1 hour to 3 hours.

113. In the Part 10A Award Modernisation process, the AIRC heard the following oral submissions from AFEI concerning one example of the industries' difficulties with applying minimum engagement periods to incidents of work during a broken shift:

> [PN3118] *… Firstly, where in a small community there is one person requiring assistance, assistance to get out of bed, attend to personal matters and get the person ready for the day ahead whatever that might be and that may take an hour, it might take a bit more than an hour.*
>
> [PN3119] *Then that same person in reverse needs to have that whole process reversed at the end of the day to get the person back to bed. If the employer is required to pay a three hour minimum on each one of those staff that's clearly inequitable because the work that's required is significantly less than three hours. The other circumstance is where you may have two or three people in the same community who all require to get out of bed at a certain time and it might be the same time and have all the same processes completed and at the end of the day the same process is completed again. To have one or three people paid three hours for each shift is once again clearly inequitable and it's unable to roster a person to say well, we will use your full three hours, we'll use your full three hours dealing with the three people in the morning and three people in the evening.*
>
> [PN3120] *The trouble is that you have a person then dealt with at 8 o'clock, another person dealt with at 9 o'clock and another person getting out of bed at 10 o'clock and…we say that that needs to be attended to in this award as a unique and critical issue in this award.*

114. The example above of work being required at the start and end of the day is also consistent with the statement of ASU witness Mr Rathbone, concerning his rostering.

115. If the variation to prevent broken shifts from having multiple breaks is made, then this would inevitably have the result of broken shifts finishing earlier (i.e. the shift would need to end once work is completed on the second side of the break). An employer would then be unable to roster the employee for a further shift until the expiration of an additional 10 hours in accordance with the need to provide rest breaks between shifts in Clause 25.4.

The proposed variation could therefore result in inconvenience to employees as:

a. The variation to prevent multiple breaks would limit the amount of remuneration an employee is able to earn over the same span of hours; and

b. Part-time employees wishing to maximise the number hours they work within their available hours may experience longer periods of time during which the employer is prevented from offering them available work, due to the mandatory 10hr rest break.

Shift loading determined by starting or finishing time of the broken shift

116. Currently, the Award stipulates that the shift allowance applicable to a broken shift is determined by the finishing time of the broken shift. The application of shift penalties to broken shifts has already been varied since the Award was made, as part of the 2-yearly review of the SCHADSI Award.

117. When the Award was made, Clause 25.6(b) stated: '*Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the* ***commencing time*** *of the broken shift*.' [emphasis added].

118. A union proposal to vary the Award provision in the 2-yearly review, followed by a conference convened by the Commission, led to a determination by consent issued by SDP Kauffman, to replace the previous Clause 25.6(b) with the current provision, which states '*Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the* ***finishing time*** *of the broken shift."*[53] [Our emphasis].

119. As the provision determining shift penalties to apply to broken shifts has already been the subject of consideration through Commission-based conferencing, and drafting by the consent of the parties, the position should not be departed from unless there has been a material change in circumstances since that time.

120. Since the 2-yearly review, there has been no material variations to the broken shifts provisions or the shift penalties provisions that would justify departure from the approach taken at that time. There is thus no basis to justify the variation, and the claim should therefore be rejected.

[53] 21 Nov 12 PR531544

15% loading

121. The ASU's proposed inclusion of a 15% loading on broken shifts could be expected to have a number of unnecessary and unwarranted adverse impacts, discussed below.

122. For service providers who operate predominantly in disability support/home care, the cost impact of a 15% increase generally would be significant. We refer to our submissions above concerning the serious difficulties for employers, and potential negative effects on employment and service provision where there are increased wage costs without commensurate increases in funding. Taking into account s134(1)(f) of the modern awards objective, the proposed variation would not result in a fair and relevant safety net for employers, and should be rejected.

Conclusions – broken shifts

123. Each of the unions' claims in isolation could be expected to have unnecessary adverse consequences. The combination of multiple and overlapping claims could be expected to have very serious adverse consequences including:

a. increased costs for providers offering discrete incidents of disability support/home care services, and depending on funding arrangements, increased costs to vulnerable clients often dependant on such services;

b. disruption to and/or reductions in services including the times services are available to clients who only require short periods of support at varying times of the day, to maximise independence and choice;

c. potentially, and undesirably, multiple carers providing services to the same client on any one day; and,

d. potentially less hours of work available to individual employees.

124. The limited nature of the union evidence in these proceedings does not provide a basis for factual findings about the relevant industry service needs nationally (including in areas with varying degrees of supply/demand for particular services), how services and broken shifts are structured in the industry nationally, or the impact of broken shifts on award-covered employees. As a result, there is no supported basis to justify departure from the current Award terms.

125. Without a merit basis in support of the proposed variations, and given the potential adverse impacts to employers and service delivery, the Commission cannot be satisfied that the variations would result in a safety-net that only includes terms to the extent necessary to meet the modern awards objective. The claims should therefore be rejected.

Recall to work (HSU)

126. The HSU seek to vary the recall to work provisions to require that an employee be paid for a minimum of one hours' work at the overtime rate for each time *an employee is required to perform work from home after leaving the employer's or a client's premises, including:*

i. Responding to phone calls, message or emails;

ii. Providing advice ('phone fixes')

iii. Arranging call out/rosters of other employees; and

iv. Remotely monitoring and/or addressing issues by remote telephone and/or computer access;

127. AFEI objects to the variation sought.

128. The proposed variation improperly characterises the circumstances under which a person is performing work as a 'recall' as the circumstances described in (i)-(iv) of the proposed variation do not involve any *return to a place.* The proposed provision presupposes that the employee had been performing work at the employer's premises or a client's premises, and then goes home. Work subsequently performed at home does not meet the ordinary meaning of a 'recall,' that is '*a person who is recalled is summoned to return to a place in a manner where there is a requirement for the person to return*.'[54]

129. Taking into account the rationale for minimum engagement periods generally,[55] there is no basis for imposing a minimum payment of one hour for responding to a phone call, remotely addressing issues by computer access, or performing any of the other duties identified in (i)-(iv) of the HSU's proposed variation when the individual is at their home, and is not required to leave their home, and where the individual:

a. Is not inconvenienced by losing any time associated with travelling to the employer's premises to perform the work then return and back home again;

b. Is not incurring the expense of unpaid travel to another location in order to perform the work, and then return home again; and

c. Is not expected to wear work clothes, or change into a work uniform.

130. Unlike the balance of Clause 28.4 of the Award which applies to when an employee is recalled to work an employee recalled to work *overtime,* the proposed provision would appear to impose the minimum payment at overtime rates for work performed that does not necessarily involve overtime (pursuant to clause 28.1). This would have the inappropriate implication of work performed as ordinary hours from home attracting a substantially higher rate of pay than work performed as ordinary hours at the employer's premises or a client's premises.

[54] [2018] FWC 4334 at [59]

[55] HSU Submissions at [23]

131. There is no evidence from the HSU that the work identified in (i)-(iv) would require 1 hour of work. It is more likely, that individual incidents of such work would take substantially less than 1 hour, and could be as short as 5 minutes to respond to a phone call or message. This could have the result that a person who spends a total of 15 minutes on the phone, by taking three 3 x 5 minute calls, could be entitled to 3hrs' pay at overtime rates. That is, the equivalent of 5 hours' pay, for 15 minutes' work. Such an outcome would result in an employee being paid an amount that is extremely disproportionate to the work performed. This would not result in a fair safety net for employers.

132. There are various other aspects of the proposed provision which would cause it to be unfair to employers. These include,

a. While the proposed provision expresses that the employee would need to be 'required' to perform work from home, it does not specify who/from where the 'requirement' arises. An employee might claim an entitlement under this provision for working from home where they have self-determined that they are required to perform the work, where this has not been authorised by the employer; and

b. The provision does not require the employee to provide any evidence of the time undertaken in performing the work from home, or the extent of work that was performed.

133. For the reasons outlined above, the claim should be rejected.

Client cancellation (HSU)

134. As part of the Commission's review of the client cancellation provisions, it will be taking into account proposals to vary the provision from ABL (including on behalf of ABI, NSWBC, ACSA and LASA), as well as from the HSU.

135. In consideration of these competing claims, the Commission should prefer the proposed variation submitted by ABL (including on behalf of various other employers). AFEI relies on its submissions of 3 July 2019 in respect to that claim.

Telephone allowance (United Voice, HSU)

136. The HSU and United Voice both seek to vary Clause 20.6 of the Award, in respect to the telephone allowance.

137. The HSU seeks to replace the current provision so that it states:

> *Where the employer requires an employee to use a mobile phone for any work-related purpose, the employer will either:*
>
> *a. Provide a mobile phone fit for purpose and cover the cost of any subsequent charges; or*
>
> b. *Refund the cost of purchase and subsequent usage charges on production of receipts.*

138. The United Voice seek to vary the current provision so that it states: *Where the employer requires an employee to install and/or maintain a telephone* ***or mobile phone*** *for the purpose of being on call* ***or to access work related information****, the employer will refund the installation costs and the subsequent rental charges on production of receipted amounts.*

139. For ease of reference, the current Award provision is extracted below:

> '*where the employer requires an employee to install and/or maintain a telephone for the purpose of being on call, the employer will refund the installation costs and the subsequent rental charges on production of receipted amounts.'*[56]

140. Some important observations can be made about the current provision. ***Firstly***, it only applies where an employee is required to install/maintain a phone for being on call. This is a very specific and discrete set of circumstances. Insofar as it is limited to on-call, this involves a period of time when the employee is *'required to be available for recall to duty in respect to any 24hr period or part thereof during the period from the time of finishing ordinary duty on Monday to the time of finishing ordinary duty on Friday*.' It is clear that this is in reference to a telephone at the employee's place of residence. ***Secondly,*** it does not require an employer to cover the cost of purchase for a phone.

141. A similar claim was made by the United Voice and HSU in the 4-yearly review of the Aged Care Award 2010, heard earlier this year. In the course of those proceedings, it became apparent that the proposed variation would impose costs on employers to cover phone/rental charges where overwhelmingly, the workforce already owned a personal mobile phone.[57]

142. The breadth of the proposed extension to the current provisions is therefore significant and requires a merit argument with probative evidence demonstrating the relevant facts. The HSU and United Voice have not, however, established such a basis for variation.

[56] Clause 20.6

[57] See in particular, transcript at PN182-PN194

143. Where an employer has not provided a mobile phone, the HSU's proposed variation would allow an employee to seek reimbursement for the cost of their personal mobile phone, even where:

a. the employer does not assume any property rights in the mobile phone, notwithstanding that they have paid the full cost of it; and/or

b. work-related usage of the phone does not result in any expense to the employee that is additional to their personal expenses;

The HSU does not make out a merit basis for imposing such costs on employers.

144. In relation to rental charges for matters unrelated to on-call, the HSU and United Voice proposed variations do not limit reimbursement of charges to those incurred for performance of work only. An employee could therefore incur charges (or use credit from available data on a plan) on a mobile phone due to personal use away from work, and utilise an employer's Wi-Fi when using the mobile phone at work (without using any of the mobile phone plan's data allocation), and still claim reimbursement of rental charges for the phone. Imposing rental charge costs on an employer in these circumstances would not be fair or relevant for employers, and would be inconsistent with the modern awards objective.

145. Both the HSU and the United Voice propose to extend the circumstances in which an employee will be eligible for a telephone allowance. The HSU proposes that the allowance apply to use of a mobile phone '*for any work-related purpose.*' The United Voice proposes that the allowance apply in circumstances of on call and '*to access work-related information*.' Notably:

a. The HSU provide no definition or scope for 'any work-related purposes.' Such words could therefore be open to wide interpretation. For example, 'work calls' can be taken to mean anything including an employee's call because they are sick, will be late for work, train delays etc. Such 'work' calls places an obligation on employers that is simply not fair nor relevant, and is thus inconsistent with the modern awards objective;

b. In support of their claim, the United Voice relies on statements from witnesses that rosters are provided by their employer via their own mobile phone. Communication between an employer and an employee about the hours in which they will be rostered for work does not involve the performance of work, but are rather steps taken by an employee to ensure they are ready, willing and able to work. Imposing such costs on employers is not fair nor relevant, and is also thus inconsistent with the modern awards objective.

146. For the reasons outlined above, the HSU and United Voice proposed variations should be rejected.

Clothing allowance (United Voice, HSU)

147. The HSU and United Voice both make claims in respect to clothing allowance provisions. AFEI objects to these claims.

HSU – Uniform and Damaged Clothing allowance

148. The HSU proposes a 'damaged clothing allowance' as follows:

> *(i) Where an employee, in the course of their employment suffers any damage or soiling of clothing or other personal effects (excluding hosiery), upon provision of proof of the damage, employees shall be compensated at the reasonable replacement value of the damaged or soiled item of clothing;*
>
> *(ii) This clause will not apply where the damage or soiling is caused by the negligence of the employee.*

149. To the extent the proposed provision could require an employee to pay the replacement cost of an item that is 'soiled' but is nonetheless able to be suitably cleaned, the employee could claim compensation from their employer for the value of the item, and then clean the item themselves. In such circumstances, the employee could be receiving compensation where no loss has actually arisen.

150. The proposed provision does not require that the employee actually purchased the clothing which had become damaged or soiled, or even that the employee owned the clothing which had become damaged or soiled. In this way, the employee could seek payment to cover a cost that they have not even incurred themselves.

151. The provision would also appear to allow an employee to claim an uncapped amount of compensation for the replacement of clothing or personal effects. It is common-sense that an employee should bear their own risk for choosing to unnecessarily wear expensive items to work. An employer should not be liable for an employee's decision to unnecessarily wear expensive items to a job where there is a prospect of damage or soiling of those items. This would not result in a fair safety net to employers.

152. Whilst the proposed provision requires that the employee provide proof of damage (to the clothing or personal effects), it does not require that the employee provide evidence that the damage occurred during the course of the employment, and that it did not involve negligence of the employee.

153. The proposed provision appears to replicate a term in the Yooralla Allied Services Agreement. There is, however, no such term in any other Modern Award. To the extent an employer is prepared to agree to an allowance in respect to damaged/soiled clothing or effects, this is more appropriately addressed at the workplace level in enterprise bargaining.

154. The HSU has not established that the variation would result in an Award that only includes terms to the extent necessary in order to achieve the modern awards objective. Rather, the proposed variation would result in uncertainty, and inappropriate additional cost to employers.

155. For the reasons outlined above, the claim should be rejected.

United Voice– Variation to clothing allowance

156. The United Voice proposes to insert a new provision in clause 20.2, that '*an adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.'*

157. The United Voice has not, however, made out a substantive case that the variation is necessary, or that the Award is not operating effectively without it.

158. In support of their claim, the United Voice rely on the sole evidence of Ms Sinclair. Ms Sinclair's evidence shows that, without the United Voice provision:

a. Ms Sinclair is a part-time employee, and was provided two uniform shirts at the commencement of employment.

b. Within two weeks of requesting additional uniform, Ms Sinclair employee was provided with an additional three shirts.

c. Notwithstanding the provision of uniforms, Ms Sinclair (who works five days each week) was also provided a uniform allowance, amounting to 10 x $1.23, that is, the equivalent of a uniform allowance for 10 shifts in the fortnight.

d. Ms Sinclair was also provided a laundry allowance each fortnight.

159. In the circumstances Ms Sinclair received a monetary uniform allowance which satisfied the current Clause 20.2(b), her evidence is not relevant to the United Voice's proposal to define 'adequate number of uniforms' for the purpose of Clause 20.2(a), and does not assist the Commission on this claim. Rather the evidence shows an example of an employer providing uniforms free of charge on request where this was not required, in circumstances where a uniform allowance is being paid.

160. For the reasons outlined above, the claim should be rejected.

Sleepovers

161. The HSU proposes to vary the sleepover provisions d at Clause 25.7(c) to include additional prescription of facilities to be provided to an employee when performing a sleepover. These include for example, a requirement for a 'lockable room with a peephole or similar in the door, a bed, and a telephone connection in the room'.

162. The current Award term already requires employees performing a sleepover to be provided with a separate room with a bed, use of appropriate facilities (including staff facilities where these exist) and free board and lodging for each night when the employee sleeps over.

163. The AIRC, in Award Simplification, undertook removing non-allowable matters from Awards, such as provisions relating to amenities considered to be overly prescriptive. For example, in The Hospitality Industry - Accommodation, Hotels, Resorts and Gaming Award 1995, the following provision was removed:

> *An employer shall provide a separate dressing room each for male and female employees, adequately lighted and ventilated with suitable floor coverings and floor space to be sufficiently roomy to accommodate all employees likely to use it at the one time; a table and adequate seating accommodation for staff to partake of meals, and lounge or settee and steel or vermin-proof lockers; adjacent thereto wash basins and showers with hot and cold water and toilets for staff use.*[58]

164. The approach taken by the AIRC reflects that the determination of which specific amenities should be provided for employees is more appropriately addressed at the workplace level rather than in Award prescription. This allows more individualised consideration of the circumstances in identifying amenity needs, such as the nature of the client's profile, the location at which the sleepover will be performed, the employee's level of training and skill, and other amenities already provided to the employee.

165. The HSU does not explain in it submissions any aspect of its argument for including such a substantial degree of prescription in the Award concerning facilities. The HSU say only '*the clause should be amended to ensure appropriate facilities are provided when employees are required to perform a sleepover shift*.'[59]

166. While it is anticipated that the HSU's concerns may be motivated by work, health and safety reasons, it is relevant that employers are already obliged to ensure, so far as reasonably practicable, the health and safety of its workers. If health and safety obligations are not met, there are avenues for reporting concerns to applicable State/Territory work health and safety regulators.

167. The Commission has not been provided with any basis to be moved to vary the Sleepover provisions of the Award. The claim is without merit and should be rejected.

Background

1. These submissions are made pursuant to the Amended Directions of 13 September 2019.

2. These submissions are in response to claims made by the United Voice, and the Health Services Union (HSU) in relation to travel time under the Social, Community, Home Care and Disability Services Industry Award 2010 ('the Award').

3. The Australian Federation of Employers and Industries (AFEI) has an interest in the Award.

The Claims

4. The HSU are seeking variation to the Award so that an employer will be required to pay an employee for what is described as the 'reasonable time of travel' between clients, and for such time to be treated as time worked. A similar claim is advanced by the United Voice. The United Voice claim is supported by the ASU, who has also filed submissions and materials in respect to the claim.

5. The submissions and witness evidence of the relevant unions indicate that the claim is directed at disability services and home care employees, when performing broken shifts.

6. AFEI objects to the claims.

Breaks between working time

7. The Award specifically provides for broken shifts, which may be performed by home care employees, or social and community services employees when undertaking disability services work.

8. A 'broken shift' is one that can include '*one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours*.'

9. The Award does not specify any particular length required for a break in shifts. The period of a break in a broken shift can be a short or substantial period of time. On the evidence of Robert James Steiner, he describes breaks exceeding 5hrs during a broken shift.[1]

[1] Statement of Robert James Steiner, at [16]

10. By the very nature of being 'breaks' an employee does not undertake any work during breaks in a broken shift, or is subject to the employer's instructions. During breaks in broken shifts, an employee could conceivably:
    10.1 Undertake personal errands, such as collecting children from school and dropping them at extra-curricular activities etc.;
    10.2 Undertake social engagements, such as meeting friends for golf;
    10.3 Return home; or
    10.4 Conduct other private affairs, unrelated to the employment.

11. It is therefore appropriate that such periods are not treated as time worked, or as attracting the ordinary rate of pay.

12. These circumstances are distinguishable from other Awards which require travel between locations of work to be treated as time worked, such as the Commercial Sales Award 2010. As the period of travel in such Awards is not undertaken during a 'break,' the employee is performing work, whereas a break between broken shifts in the SCHADSI Award will generally include time which the employee can conduct their own private affairs.

13. To the extent the break includes any periods of time which can be used privately by the employee, the break should not attract payment of the ordinary hourly rate.

14. Even during the break in a broken shift, where an employee is engaged in travel from one client to another, an employer has no control over such travel, including:
    14.1 Which travel route is taken and at what times;
    14.2 The means of travel;
    14.3 The time taken; and
    14.4 Whether cost are incurred.

15. In such circumstances, the treatment of travel time as time worked would inappropriate and would require imprecise calculations, and would be disproportionate to the extent of actual disutility to the employee during time that is a 'break' for the purpose of the Award.

16. The claim, if accepted, would inevitably involve increased cost and administrative burden to employers, in circumstances where the employer would not receive any productivity increases. Rather, the proposed variation would mean that service providers would be delivering less direct care services for the same number of hours' pay to employees.

Employers affected by the claim

17. Not all end users of home care services are funded through the NDIS. The Commonwealth Home Support Programme (CHSP) 'helps senior Australians access entry-level support services to live independently and safely at home.'[2] Services covered in the CHSP include domestic assistance, home maintenance, and personal care services such as 'help with showering, self-care, hygiene and grooming.'[3]

18. Both the NDIS and the CHSP have quality standards which service providers which are independently assessed and audited against. The introduction of these quality standards has meant that service providers have needed to designate resources to developing, reviewing, and maintaining systems for quality assurance, which are capable of being presented in a format appropriate for auditing purposes.

19. As highlighted in our submissions of 23 July 2019, broken shift provisions as they currently stand, were inserted into the Award to specifically address the needs of the disability services and home care industries. This is evident in:
    19.1 the terms of the Award, by limiting operation of the broken shift provision to the social and community services employees performing disability work, and home care employees; and
    19.2 submissions made to the AIRC during Award Modernisation proceedings for the SCHADSI Award about the operational requirements of the industries.

20. The existing broken shifts provisions enable service providers to:
    20.1 Roster employees to attend to in-home personal care requirements of clients who have varying degrees independence and only require specific services at certain times of the day; and,
    20.2 roster specific staff to specific clients, improving relationship-building, ideal skill/suitability matching of staff to clients, and providing continuity of care.

21. The extent of efficiencies that can be introduced into staff rostering for greater continuity of in-home care shifts are constrained, particularly in the circumstances that service demand will depend on regional, demographic and other factors outside the service provider's control.

[2] https://www.myagedcare.gov.au/help-at-home/commonwealth-home-support-programme
[3] https://www.myagedcare.gov.au/help-at-home/commonwealth-home-support-programme

22. Any substantive amendment affecting the broken shift provisions could adversely impact the viability of this crucial type of service delivery. Costs savings measures which may need to be considered by employers if faced with increased labour costs associated with providing in-home care services include:

    22.1 Reducing overheads by restructuring and reducing back-office staff levels or hours (such back-office roles include supervisory positions, and quality assurance);

    22.2 Moving away from providing higher-cost services, to other more attractive markets; or

    22.3 Increasing client fees for services;

    In the circumstances further increases to government funding are not guaranteed, the first to experience the adverse impacts of increased costs will likely be either those most vulnerable members of the community who require in-home services, or other employees.

23. Given the industry imperatives for broken shifts, and the potential implications of the proposed variation, the claim should be rejected.

The evidence

24. The volume of evidence filed in support of the claims is limited, and insufficient to provide an indication of the work patterns for a single organisation, let alone an entire industry sector. Further, the veracity of the evidence is limited in the circumstances that three of the HSU statements are from persons whose names and employers are not given.

25. Given the limited nature of the evidence, it does not establish a merit basis for variation to the Award.

4 YEARLY REVIEW OF MODERN AWARDS

Further Submission

Social, Community, Home Care and Disability Services Industry Award 2010 (AM2016/28)

2 May 2019

AM2018/26 SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES AWARD 2010

1. This submission is filed by the Australian Industry Group (**Ai Group**) in response to a statement[1] issued by the Fair Work Commission (**Commission**) on 23 April 2019. Ai Group was subsequently granted an extension of time to file its submission.

2. The statement relates specifically to the National Disability Insurance Scheme's (**NDIS**) funding arrangements and recent Federal Budget announcements, which were the subject of evidence led by the Health Services Union (**HSU**) during proceedings before the Commission on 17 April 2019. The following exchange is particularly relevant: (our emphasis)

> MS DOUST: No. Mr Farthing, can I just ask you to go to the calculations that are contained in the table after paragraph 21 of your statement?---Yes.
>
> Are any of those calculations going to be affected by the recent Federal Budget?---Yes, they will be.
>
> Can you explain how they will be affected by the budget?---Certainly. So in terms of each of the components, so the hourly rate, the amount of leave, those things, those salary on costs, those will stay the same for that particular price point, which is standard needs week day. However, the price cap by the NDIA has been substantially increased, and the increase applies - the increase varies depending on the time of the day that the care is delivered, and also the level of the support worker and the complexity of the participant being served. So on a level 1 week day, which is where I've made the comparison and done the analysis, that will actually increase by $6.22 per hour.
>
> JUSTICE ROSS: Is that from the $48.14?---Yes, that is correct. So the $48.14 is the current price cap from 1 July 2019. It will increase by $6.22. It will actually increase slightly further than that once the minimum wage case decision is known, because the NDIA will also apply indexation for that.
>
> Have those changes been - are they the subject of legislation to your knowledge, or have they been implemented administratively?---They have been implemented administratively.
>
> …
>
> JUSTICE ROSS: Let's not speculate about the further - when you say it was the subject of ministerial announcement is there a document that sets it out?---Yes. So there is a document on the NDIA website.

[1] *4 yearly review of modern awards—Group 4—Social, Community, Home Care and Disability Services Industry Award 2010—Substantive claims* [2019] FWC 2756.

Can you provide that through Ms Doust's instructors to her and she can tender that and provide it to the other parties?---Sure. Yes.[2]

3. On 18 April 2019, the HSU filed correspondence that:

   (a) Drew the Commission's attention to a NDIS price guide; (**NDIS Price Guide**)

   (b) Included a media release from Minister Fletcher and Assistant Minister Henderson of 30 March 2019; (**Media Release**) and

   (c) Identified further information available on a specific part of the National Disability Insurance Agency's (**NDIA**) website (**Online NDIA Material**).

4. Ai Group makes the following brief submissions in respect of the above material. They should be read in conjunction with the reply submissions we filed on 8 April 2019 (**Reply Submission**) and in particular, chapter 5 of that submission, which deals with the NDIS funding and pricing arrangements in detail.

5. Further, we continue to hold the concerns previously expressed about the funding currently afforded to providers in the industry, the implications that the insufficiency of that funding has had and continues to have on providers (and in turn, on their clients) and the extent to which those implications would be exacerbated if the various unions' claims were granted. The material here presented by the HSU does not cause us to demur from that position.

Online NDIA Material

6. It is convenient to deal with the Online NDIA Material first.

7. The HSU's correspondence directs the Commission to a webpage on the NDIA's website. A copy of that webpage is **attached** to this submission for convenience.

[2] Transcript of proceedings on 17 April 2019 at PN1589 – PN1597.

8. We refer to the 'Indicative change to east Price Guide', which was also extracted in our Reply Submission at paragraph 96. As we observed at paragraph 97 of that submission, the table indicates that the hourly price cap for the most basic level of one-on-one care on a weekday will increase by only $3.55 per hour.

9. Mr Farthing gave evidence that the price cap "on a level 1 week day … will actually increase by $6.22 per hour".[3] When asked by His Honour, Justice Ross, as to whether there was any documentation available that sets out the price increases, Mr Farthing indicated that there was such material available on the NDIA website and that it would be provided by him to the HSU. We take it that, by extension, the Online NDIA Material is that which was relied upon by Mr Farthing for the purposes of his evidence.

10. We have been unable to reconcile the evidence given by Mr Farthing and the Online NDIA Material. Mr Farthing's evidence appears to significantly overstate the extent of the increase that will be afforded for the level 1 care on a weekday as documented in the aforementioned table.

11. We also note that Mr Farthing's evidence proceeded on the basis that the current price cap for such care is $48.14. The aforementioned table suggests that the current price cap is $47.02, however we acknowledge that the NDIS Price Guide prescribes a price cap of $48.14. This further confuses the evidence given.

12. It is unclear whether Mr Farthing's evidence relies on the information contained in the Online NDIA Material regarding 'Temporary Transformation Payments' (**TTP**). If this is so, it must be noted that the payment is a *temporary* one, which is to be phased out by a 1.5% reduction each year. It substitutes the current Temporary Support for Overheads (**TSO**) of 2.5%, which was introduced from 1 July 2018 in light an Independent Pricing Review that was

[3] Transcript of proceedings on 17 April 2019 at PN1591.

undertaken in 2017 – 2018 and a recommendation made by McKinsey and Company, who subsequently published a report regarding their review.

13. The NDIA published the following explanation of the TSO and the reason for implementing it:[4]

Recommendation	Recommendation detail	NDIA Approach
Recommendation #14 **Temporary support overhead (TSO)**	Implement temporary support for overheads in the form of a temporary increase in the price cap for standard intensity attendant care. Government should offer business planning support for large providers that would otherwise exit and create risk of supply shortages.	The IPR recognised the time and effort it takes for providers to establish efficient systems and process to support the roll out of the NDIS. The NDIA will now provide temporary financial relief for providers as they transition their business operations to accommodate the participant-led NDIS funding approach. In 2018/19 a new 2.5 per cent loading will support standard intensity attendant care supports. 'Attendant care' refers both to assistance with daily personal activities and assistance with community participation. The Temporary Support Overhead will remain partially in place, at 1.25 per cent, in 2019/20 rather than be removed after 12 months as originally recommended. While this TSO loading is in place, the NDIA will continue to work to deliver initiatives that will reduce provider administrative costs and deliver a better NDIS provider experience. Significant progress has been made, with the NDIA delivering provider portal enhancements, payments process improvements, and continuous development of helpful tools such as the provider finder.

14. The HSU seeks to rely on a report published by the University of NSW June 2017 titled '*Reasonable, necessary and valued: Pricing disability services for quality support and decent jobs*' (**UNSW Report**). The report considers the assumptions underpinning the 'Reasonable Cost Model' for disability support work. Our Reply Submission summarised the many deficiencies of the NDIS funding model that are highlighted by the UNSW Report. That included concerns about the allowance made in the funding arrangements for corporate overheads.[5]

[4] NDIA, *Independent Price Review Implementation 2018/19* (accessed 2 May 2019).

[5] Reply Submission at paragraph 121 and footnote 56.

15. In this context, the implementation of the TTP cannot be relied upon to alleviate the potential impact of the unions' claims on employers. The temporary payment does not mitigate the concerns we have raised in this regard.

16. Further, at paragraph 125 of our Reply Submission, we observed that it is unclear whether the current funding arrangements account for the penalty rates payable under the Award in full. For example, it is unclear whether the labour component of the hourly rate is doubled for the purposes of the prices applying to Sundays or whether providers are required to partially absorb the additional labour costs incurred on those days. The same concern arises from the interim prices published in the NDIA Online Material.

17. Finally, the price increases are expressed to apply to attendant care, community participation and therapists. They do not appear to extend a the raft of other NDIS-funded supports such as support provided in group homes or supported independent living.

The Media Release

18. The Media Release was referenced at paragraph 95 of our Reply Submission. It regrettably contains little detail about the specific price increases that will be implemented in relation to different forms of care and the extent to which they will be implemented.

19. Whilst the Media Release provides certain headline figures regarding the relevant announcements made by the Morrison Government in March 2019, it does not serve any further probative value.

The NDIS Price Guide

20. The HSU has sought to highlight through its correspondence that the NDIS Price Guide that it specifies different price caps for work performed on a weekday, afternoon, night, Saturday, Sunday and public holiday.

21. The concerns we expressed at paragraphs 124 – 127 of our Reply Submission are apposite. Those submissions were made after having careful regard to the NDIS Price Guide. We remain concerned that the funding arrangements do not take into account various employee entitlements under the Award including overtime rates.

Annual price review

2019-20 Annual price review

The Annual Price Review cycle to determine 2019–20 prices is underway and this year will incorporate outcomes from the Therapy Review and recommendations from the WA Market Review.

In the lead up to the launch of the 2019-20 NDIS Price Guide, the NDIA will make a series of announcements to provide the market with an early insight into proposed changes. The first announcement (Saturday 30 March 2019) outlines changes to therapy and attendant care supports and the introduction of a conditional loading over a five year period to assist attendant care providers transition into the Scheme.
The 2019-20 Price Guide will be made available in June following the release of the minimum wage increase by the Fair Work Commission.

The NDIA Annual Price Review evaluates the effects of wage inflation on support prices and is unable to release the NDIS 2019-20 Price Guide prior to this work being completed.

For changes and recommendations endorsed by the Pricing Reference Group as a result of the Therapy Review, please visit the Pricing review of therapy services page.

For all other Annual Price Review updates please refer below.

Changes to attendant care supports

The NDIA will introduce increases to base attendant care and community participation supports across standard and levels one, two and three of high intensity price limits, effective 1 July 2019.

The increases, endorsed by the NDIA's Pricing Reference Group, aim to ensure the needs and costs to deliver these services are being met for providers. This in turn will ensure an adequate supply in the attendant care and community participation market and therefore enable participants to achieve their goals.

For providers delivering attendant care supports to NDIS participants, the tables below indicate the 2019-20 price limits, dependent on a number of variables such as location, times and days of shifts, and level of worker, etc. The 2019-20 price limits will be further indexed for wage inflation prior to implementation.

Indicative change to East Price Guide (does not yet include indexation for wage inflation)

Shift	Level of care	2019–20 base price	2018–19 base price	Increase in base price
Weekday	Level 1	$50.57	$47.02	7.6%
Saturday	Level 1	$69.56	$65.22	6.7%
Sunday	Level 1	$90.45	$83.47	8.4%
Public Holiday	Level 1	$113.24	$101.66	11.4%
Afternoon Shift	Level 1	$55.80	$51.56	8.2%
Night Shift	Level 1	$56.84	$52.46	8.4%
Weekday	Level 2	$54.69	$49.61	10.2%
Saturday	Level 2	$75.24	$68.92	9.2%
Sunday	Level 2	$97.83	$88.27	10.8%
Public Holiday	Level 2	$122.46	$107.55	13.9%
Afternoon Shift	Level 2	$60.34	$54.43	10.9%
Night Shift	Level 2	$61.47	$55.38	11.0%
Weekday	Level 3	$57.45	$51.86	10.8%
Saturday	Level 3	$79.02	$72.11	9.6%
Sunday	Level 3	$102.75	$92.42	11.2%

Shift	Level of care	2019–20 base price	2018–19 base price	Increase in base price
Public Holiday	Level 3	$128.63	$112.67	14.2%
Afternoon Shift	Level 3	$63.38	$56.91	11.4%
Night Shift	Level 3	$64.56	$57.91	11.5%

Indicative change to West Price Guide
(does not yet include indexation for wage inflation)

Shift	Level of care	2019–20 base price	2018–19 base price	Increase in base price
Weekday	Level 1	$50.57	$47.88	5.6%
Saturday	Level 1	$69.56	$65.86	5.6%
Sunday	Level 1	$90.45	$83.81	7.9%
Public Holiday	Level 1	$113.24	$101.78	11.3%
Afternoon Shift	Level 1	$55.80	$52.39	6.5%
Night Shift	Level 1	$56.84	$53.27	6.7%
Weekday	Level 2	$54.69	$50.30	8.7%
Saturday	Level 2	$75.24	$69.31	8.6%
Sunday	Level 2	$97.83	$88.26	10.8%
Public Holiday	Level 2	$122.46	$107.22	14.2%
Afternoon Shift	Level 2	$60.34	$55.08	9.5%
Night Shift	Level 2	$61.47	$56.00	9.8%
Weekday	Level 3	$57.45	$52.20	10.0%
Saturday	Level 3	$79.02	$71.98	9.8%
Sunday	Level 3	$102.75	$91.71	12.0%
Public Holiday	Level 3	$128.63	$111.47	15.4%
Afternoon Shift	Level 3	$63.38	$57.17	10.9%
Night Shift	Level 3	$64.56	$58.14	11.0%

Temporary Transformation Payment

Providers of attendant care and community participation will also be eligible for an additional pricing boost through a Temporary Transformation Payment. This conditional loading will assist providers to continue transforming their businesses in the move towards a more competitive marketplace. This replaces the Temporary Support for Overheads.

In 2019-20, the conditional loading will be set at 7.5 per cent on the relevant level 1 support item. It will reduce by 1.5 per cent each year thereafter. The loading applied on levels 2 or 3 support items will be the equivalent in dollar amount to the 7.5 per cent increase on the same level 1 support item.

From 1 July 2019, for attendant care and community participation the combined effect of the new price limits and the Temporary transformation Payment is an increase of between 10.9% and 20.4%, dependent on variables such as location, times and days of shifts, and level of worker.

In order to access the Temporary Transformation Payment, providers will have to comply with terms that will be outlined in the 2019-20 NDIS Price Guide. These terms will include:

- publishing their service prices,
- listing their business contact details in the Provider Finder and ensuring those details are kept up-to-date
- participating annually in an Agency-approved market benchmarking survey.

These measures will promote greater transparency for participants seeking to engage with providers in discussions about value for money. They will also improve the robustness of future pricing decisions and give providers the comparative information they need to assist them in becoming as efficient as possible.

Providers will be required to acknowledge compliance to these terms when submitting a payment request through the myplace provider portal.

These terms will be further outlined in the 2019-20 Price Guide.

The WA Market Review is also still to be finalised and may provide additional information about, and as a result impact on, prices in WA. Funding in participant plans will be automatically adjusted to reflect the changes in the price limits for attendant care and community participation, effective from 1 July 2019, as part of the annual indexation of plans. Participants will not need to seek a plan review to access the additional funds. More information around this will be made available leading up to 1 July 2019.

More announcements to come:

These price limit increases form part of a suite of changes that will be outlined through a series of announcements during May and June in the lead up to changes being effective from 1 July 2019.

Other forthcoming announcements from the Annual Price Review will include additional outcomes from the Therapy Services Review, recommendations from the WA Market Review and updated clarifications to policy. The policies currently under review are group and centre-based supports, cancellations, travel, use of volunteers, and charging for non-face-to-face time.

The Annual Price Review will also review and index, with updates effective 1 July 2019, for:

- Short Term Accommodation
- Group Based Care.

Note: Supported Independent Living (SIL) is not affected by these increases as SIL does not have price limits.

The full suite of price changes and associated arrangements for 2019-20 will be presented in a new-look and easier to navigate 2019-20 Price Guide.

The NDIA sets price controls for certain NDIS supports to ensure a balance between NDIS participants obtaining reasonable value for money and enabling providers to operate within a market of adequate size, quality and return

Australian Industry Group

4 YEARLY REVIEW OF MODERN AWARDS

Submission – Survey Results

Social, Community, Home Care and Disability Services Industry Award 2010 (AM2018/26)

3 July 2019

AM2018/26 SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES AWARD 2010 – SURVEY RESULTS

1. This submission is filed by the Australian Industry Group (**Ai Group**) in accordance with directions issued by the Fair Work Commission (**Commission**) on 11 June 2019 regarding a survey conducted by the Commission (**Survey**) and a report setting out the results of the survey, published on 26 June 2019 (**Report**).

General Observations about the Profile of the Survey Respondents

2. The Report notes that the Survey was "not designed to be representative of all enterprises that employ workers covered by the SCHADS award".[1]

3. Ai Group submits that the results of the Survey must be given appropriate weight given that the Survey is not representative of all employers covered by the *Social, Community, Home Care and Disability Services Industry Award 2010* (**Award**). Whilst the Survey results are demonstrative of various propositions, they are not reflective of the practices of all employers covered by the Award and cannot be extrapolated as such.

4. Over 60% of the Survey respondents operated in the disability services sector. This includes residential care and care provided in a person's home.[2] This represents over 500 respondents to the Survey.[3] They Survey results are, therefore, particularly useful when considering the operations of enterprises who operate in the disability services sector.

5. The majority of survey respondents were not covered by an enterprise agreement. Thirty-five percent of respondents indicated that an enterprise agreement applies to their employees covered by the Award[4]. Of those, 30% indicated that not all of their Award covered employees had an enterprise

[1] The Report at page 1.

[2] The Report at page 2.

[3] That is, 63% of the 854 complete responses received to the Survey.

[4] The Report at page 4.

agreement applying to them.[5] The potential impact of the unions' numerous claims advanced in these proceedings is self-evident from these results.

6. The responses of the Survey respondents to whom enterprise agreements apply are also relevant to the proceedings:

   (a) The safety net set by the Award will determine whether the relevant enterprise agreements are capable of passing the 'better off overall' test.[6] Employers covered by such agreements are therefore also potentially exposed to the adverse impacts that will flow from the proposed enhancements to the minimum safety net.

   (b) To the extent that the terms of the relevant enterprise agreements incorporate the Award or parts of the Award, the proposed variations may have a direct bearing on such employers.

   (c) For the purposes of assessing whether the proposed changes are necessary to ensure that the Award achieves the modern awards objective, the Commission must take into account the need to encourage collective bargaining.[7] This involves a consideration of whether employers who are currently covered by enterprise agreements will be incentivised to bargain again as well as whether enterprise agreements who are <u>not</u> covered by enterprise agreements will be incentivised to engage in bargaining.

7. The Survey results demonstrate a high degree of reliance on Commonwealth government funding. Close to 90% of survey respondents identified that they receive Commonwealth government funding.[8] The relevance of the National Disability Insurance Scheme (**NDIS**) and the constraints it imposes on an

[5] The Report at page 4.

[6] Section 193 of the *Fair Work Act 2009*.

[7] Section 134(1)(b) of the *Fair Work Act 2009*.

[8] The Report at page 10.

employer's capacity to recover additional employment costs is apparent from these results.[9]

Survey Results relating to Casual Employees

8. The Health Services Union is seeking a variation to the Award that would have the effect of requiring the payment of the 25% casual loading prescribed by clause 10.4(b) of the Award during the performance of ordinary hours of work on a weekend or a public holiday. The casual loading is not currently payable in those circumstances.

9. Additionally, United Voice is seeking a variation to the Award that would have the effect of requiring the payment of the 25% casual loading prescribed by clause 10.4(b) during the performance of overtime in circumstances where currently, the casual loading is not payable for the performance such work.

10. The aforementioned union claims were heard by the Commission with the other 'Tranche 1' claims. Ai Group filed submissions opposing the claims on 8 April 2019.[10] Amongst the various arguments made by Ai Group in opposition to the claims, we advanced the proposition that the proposed changes would have an adverse impact on business by virtue of the additional employment costs they would impose, which would not be covered by the NDIS's funding arrangements.[11] Submissions were also made about the heavy reliance of employers on casual labour.[12]

11. The results of the Survey support Ai Group's aforementioned contentions.

12. Close to 40% of Award-covered employees employed by the Survey respondents were casual employees.[13] Furthermore, during a four week

[9] Ai Group submission dated 8 April 2019 at paragraphs 153 – 163.
[10] Ai Group submission dated 8 April 2019 at pages 70 – 82.
[11] Ai Group submission dated 8 April 2019 at paragraph 189(f).
[12] Ai Group submission dated 8 April 2019 at paragraph 189(d).
[13] The Report at pages 5 – 6.

period in March 2019, 75% of Survey respondents had employed casual employees.[14]

13. We note that whilst employers covered by enterprise agreements were more likely to employ casual employees than those who were not covered by enterprise agreements[15], the extent of the differential is not remarkable and in either case, a significant proportion of employers employed casual employees.

14. We also observe that 77% of enterprises who receive Commonwealth government funding employed casual employees.[16]

15. The Survey results accordingly demonstrate the significant reliance of employers covered by the Award on casual labour. It is a matter that goes to the potential impact of the claims advanced by the unions. The Survey results demonstrate that the impact of the claims would be significant; both in the aggregate and on individual employers who rely on casual employment to provide the requisite level of flexibility necessary for their operations.

16. This proposition is further advanced by the Survey results concerning the extent to which casual employees are apparently required to work on Saturdays and Sundays:

    (a) 76% of casual employees employed during the aforementioned four week period worked on a Saturday; and

    (b) 70% of casual employees employed during the aforementioned four week period worked on a Sunday.[17]

17. The Survey results demonstrate a high incidence of casual employees working on weekends.

[14] The Report at pages 7 – 8.
[15] The Report at page 14.
[16] The Report at pages 17 – 18.
[17] The Report at page 9.

18. The Survey results indicate that 25% of casual employees employed during the aforementioned four week period worked in excess of 38 hours in a week or 76 hours in a fortnight.[18] We note that these are not the only circumstances in which casual employees are entitled to overtime rates. Pursuant to clause 28.1(b)(ii) of the Award, casual employees are also entitled to overtime rates if they perform more than 10 ordinary hours of work in a day. To that extent, the Survey results do not reveal the full extent to which casual employees are entitled to overtime rates.

Australian Industry Group

4 YEARLY REVIEW OF MODERN AWARDS

Reply Submission – Second Tranche of Claims

Social, Community, Home Care and Disability Services Industry Award 2010 (AM2018/26)

13 July 2019

4 YEARLY REVIEW OF MODERN AWARDS

AM2018/26 SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

1. INTRODUCTION

1. This submission is filed by the Australian Industry Group (**Ai Group**) in relation to the Fair Work Commission's (**Commission**) 4 yearly review of the *Social, Community, Home Care and Disability Services Industry Award 2010* (**Award**). It responds to the submissions and evidence filed by the Health Services Union (**HSU**), United Voice and the Australian Services Union (**ASU**) (collectively, **Unions**) in support of various substantive changes they seek to the Award.

2. In particular, the submissions respond to the 'second tranche' of substantive claims advanced by the Unions that are set out at chapter 4 of this submission.

3. Each of the claims are opposed by Ai Group. In our submission, they should be dismissed.

2. THE STATUTORY FRAMEWORK

4. The Unions claims are being pursued in the context of the 4 yearly review of modern awards (**Review**), which is conducted by the Commission pursuant to s.156 of the *Fair Work Act 2009* (**FW Act** or **Act**).

5. In determining whether to exercise its power to vary a modern award, the Commission must be satisfied that the relevant award includes terms only to the extent necessary to achieve the modern awards objective (s.138).

6. The critical principle to flow from the operation of s.138 is that a modern award can only include such terms as are *necessary* to achieve the modern awards objective. The requirement imposed by s.138 is an ongoing one. That is, at any time, an award must only include terms that are necessary in the relevant sense.

7. The modern awards objective is set out at s.134(1) of the FW Act. It requires the Commission to ensure that modern awards, together with the National Employment Standards (**NES**), provide a fair and relevant minimum safety net of terms and conditions. In doing so, the Commission is to take into account a range of factors, listed at s.134(1)(a) – (h). This necessarily requires a consideration of the Award, taken as a whole, including the various terms and conditions it provides.

8. In its decision concerning claims to reduce penalty rates in a number of awards (**Penalty Rates Decision**), the Commission made the following observations about various factors listed at s.134(1)(a) – (h), which we respectfully adopt for the purposes of our submission:

> **[165]** Section 134(1)(a) requires that we take into account 'relative living standards and the needs of the low paid'. This consideration incorporates two related, but different, concepts. As explained in the *2012–13 Annual Wage Review* decision:
>
> > 'The former, relative living standards, requires a comparison of the living standards of award-reliant workers with those of other groups that are deemed to be relevant. The latter, the needs of the low paid, requires an examination of the extent to which low-paid workers are able to purchase the essentials for a "decent standard of living" and to engage in community life. The assessment

of what constitutes a decent standard of living is in turn influenced by contemporary norms.'

[166] In successive Annual Wage Reviews the Expert Panel has concluded that a threshold of two-thirds of median full-time wages provides 'a suitable and operational benchmark for identifying who is low paid', within the meaning of s.134(1)(a). There is, however, no single accepted measure of two-thirds of median (adult) ordinary time earnings. The surveys that provide the information about the distribution of earnings from which a median is derived vary in their sources, coverage and definitions in ways that affect the absolute values of average and median wages (and, accordingly, what constitutes two-thirds of those values). The two main Australian Bureau of Statistics (ABS) surveys of the distribution of earnings are the '*Employee Earnings, Benefits and Trade Unions Membership* (the 'EEBTUM') and the survey of *Employee Earnings and Hours* (the 'EEH'). We note that the EEBTUM is no longer published and the relevant data is now produced as part of the *Characteristics of Employment Survey* (the 'CoE'). Some data is also available from the HILDA survey.

[167] In the *2015–16 Annual Wage Review* decision the Expert Panel noted that the submissions provided different estimates of the 'two-thirds of median (adult) ordinary time earnings' threshold. The relevant extract from that decision, and the Expert Panel's conclusion, are set out below:

'In its submission, the Australian Government provided two estimates to identify low-paid workers:

- $18.67 per hour (or about $710.00 per week over a 38-hour week), using the May 2014 EEH data; and

- $18.42 per hour (or about $700.00 per week over a 38-hour week) using the 2014 HILDA survey data.

The Australian Government contended that there were about 1.3 million low-paid employees in 2014 (or 13.3 per cent of all employees), with around one-third of award-reliant workers being low paid in the EEH data. Their analysis took explicit account of the number and the level of pay of junior workers.

The ACTU used unpublished ABS EEH data on the distribution of award only workers by hourly earnings to estimate the number of employees at each award classification level. On the basis of the May 2014 data, the ACTU estimated that 43 per cent of award only employees had hourly earnings at or below the C10 rate of pay in May 2014 ($724.50).

Research Report 6/2013 found that around 75 per cent of adult award-reliant employees in the non-public sector were earning below the C10 rate of $18.60 per hour.

Whilst no specific conclusion is available, the information as a whole suggests that a sizeable proportion—probably a majority—of employees who are award reliant are also low paid by reference to the two-thirds of median weekly earnings benchmark.' (footnotes omitted)

[168] The most recent data for the 'low paid' threshold is set out below:

Two-thirds of median full-time earnings	*$/week*
Characteristics of Employment survey (Aug. 2015)	818.67
Employee Earnings and Hours survey (May 2016)	917.33

[169] The assessment of relative living standards focuses on the comparison between award-reliant workers and other employed workers, especially non-managerial workers. 78 As noted in the 2015–16 Annual Wage Review decision:

> 'There is no doubt that the low paid and award reliant have fallen behind wage earners and employee households generally over the past two decades, whether on the basis of wage income or household income.'

[170] Award reliance is a measure of the proportion of employees whose pay rate is set according to the relevant award rate specified for the classification of the employee and not above that rate. Table 4.8 from the *2015–16 Annual Wage Review* decision sets out the extent of award reliance by industry. Relevantly for present purposes, the most recent data identify the Accommodation and food services and Retail trade industries as among the most award reliant in that they are the industries in which the highest proportion of employees are award reliant (42.7 per cent and 34.5 per cent, respectively).

[171] The relative living standard of employees is affected by the level of wages they earn, the hours they work, tax-transfer payments and the circumstances of the households in which they live. As a general proposition, around two-thirds of low-paid employees are found in low income households (i.e. in the bottom half of the distribution of employee households) and have lower living standards than other employees. Many low-paid employees live in households with low or very low disposable incomes.

[172] In taking into account 'relative living standards' in the context of Annual Wage Reviews, the Expert Panel has paid particular attention to changes in the earnings of all award-reliant employees compared to changes in measures of average and median earnings more generally.

[173] In the *2015–16 Annual Wage Review* decision the Expert Panel also observed that increases in modern award minimum wages have a *positive* impact on the relative living standards of the low paid and on their capacity to meet their needs. It seems to us that the converse also applies, that is, the variation of a modern award which has the effect of reducing the earnings of low-paid employees will have a *negative* impact on their relative living standards and on their capacity to meet their needs.

…

[179] Section 134(1)(c) requires that we take into account 'the need to promote social inclusion through increased workforce participation'. The use of the conjunctive 'through' makes it clear that in the context of s.134(1)(c), social inclusion is a concept to be promoted exclusively '*through* increased workforce participation', that is obtaining employment is the focus of s.134(1)(c).

…

[184] Section 134(1)(da) requires that we take into account the 'need to provide additional remuneration' for:

> '(i) employees working overtime; or
> (ii) employees working unsocial, irregular or unpredictable hours; or
> (iii) employees working on weekends or public holidays; or
> (iv) employees working shifts.'

[185] Section 134(1)(da) was inserted by the *Fair Work Amendment Act 2013* (Cth), with effect from 1 January 2014. The Explanatory Memorandum to the Fair Work Amendment Bill 2013 made the following observation about the addition of s.134(1)(da):

> 'Under the FW Act, the FWC must ensure that modern awards, together with the National Employment Standards, provide a fair and relevant safety net of terms and conditions. In making or varying modern awards, the FWC must take into account the modern awards objective (see subsection 134(1) of the FW Act).
>
> Item 1 of Schedule 2 to the Bill amends the modern awards objective to include a new requirement for the FWC to consider, in addition to the existing factors set out in subsection 134(1) of the FW Act, the need to provide additional remuneration for:
>
> - employees working overtime;
> - employees working unsocial, irregular or unpredictable hours;
> - employees working on weekends or public holidays; or
> - employees working shifts.
>
> This amendment promotes the right to fair wages and in particular recognises the need to fairly compensate employees who work long, irregular, unsocial hours, or hours that could reasonably be expected to impact their work/life balance and enjoyment of life outside of work.'

[186] In the second reading speech to the Fair Work Amendment Bill 2013 the then Minister for Employment and Workplace Relations said:

> '… as part of this Bill, the Government is seeking to ensure that work at hours which are not family friendly is fairly remunerated. This will be done by amending the modern awards objective to ensure that the Fair Work Commission, in carrying out its role, must take into account the need to provide additional remuneration for employees working outside normal hours, such as employees working overtime or on weekends…'

[187] Section 134(1)(da) is a relatively new provision and one which did not exist at the time the modern awards under review were made. These provisions have not yet been the subject of substantive arbitral or judicial comment.

[188] Five observations may be made about s.134(1)(da).

[189] First, s.134(1)(da) speaks of the 'need to provide additional remuneration' for employees performing work in the circumstances mentioned in s.134(1)(da)(i), (ii), (iii) and (iv).

[190] An assessment of 'the need to provide additional remuneration' to employees working in the circumstances identified in paragraphs 134(1)(da)(i) to (iv) requires a consideration of a range of matters, including:

> (i) the impact of working at such times or on such days on the employees concerned (i.e. the extent of the disutility);
>
> (ii) the terms of the relevant modern award, in particular whether it already compensates employees for working at such times or on such days (e.g. through 'loaded' minimum rates or the payment of an industry allowance which is intended to compensate employees for the requirement to work at such times or on such days); and
>
> (iii) the extent to which working at such times or on such days is a feature of the industry regulated by the particular modern award.

[191] Assessing the extent of the disutility of working at such times or on such days (issue (i) above) includes an assessment of the impact of such work on employee health and work-life balance, taking into account the preferences of the employees for working at those times.

[192] The expression 'additional remuneration' in the context of s.134(1)(da) means remuneration in addition to what employees would receive for working what are normally characterised as 'ordinary hours', that is reasonably predictable hours worked Monday to Friday within the 'spread of hours' prescribed in the relevant modern award. Such 'additional remuneration' could be provided by means of a penalty rate or loading paid in respect of, for example, work performed on weekends or public holidays. Alternatively, additional remuneration could be provided by other means such as a 'loaded hourly rate'.

[193] As mentioned, s.134(1)(da) speaks of the 'need' to provide additional remuneration. We note that the minority in *Re Restaurant and Catering Association of Victoria* (the *Restaurants 2014 Penalty Rates decision*) made the following observation about s.134(1)(da):

> 'This factor must be considered against the profile of the restaurant industry workforce and the other circumstances of the industry. It is relevant to note that the peak trading time for the restaurant industry is weekends and that employees in the industry frequently work in this industry because they have other educational or family commitments. These circumstances distinguish industries and employees who expect to operate and work principally on a 9am-5pm Monday to Friday basis. Nevertheless the objective requires additional remuneration for working on weekends. As the current provisions do so, they meet this element of the objective.' (emphasis added)

[194] To the extent that the above passage suggests that s.134(1)(da) '*requires* additional remuneration for working on weekends', we respectfully disagree. We acknowledge that the provision speaks of 'the *need* for additional remuneration' and that such language suggests that additional remuneration is required for employees working in the circumstances identified in paragraphs 134(1)(da)(i) to (iv). But the expression 'the need for additional remuneration' must be construed in context, and the context tells against the proposition that s.134(1)(da) *requires* additional remuneration be provided for working in the identified circumstances.

[195] Section s.134(1)(da) is a relevant consideration, it is *not* a statutory directive that additional remuneration must be paid to employees working in the circumstances mentioned in paragraphs 134(1)(da)(i), (ii), (iii) or (iv). Section 134(1)(da) is a consideration which we are required to take into account. To take a matter into account means that the matter is a 'relevant consideration' in the *Peko-Wallsend* sense of matters which the decision maker is bound to take into account. As Wilcox J said in *Nestle Australia Ltd v Federal Commissioner of Taxation*:

> 'To take a matter into account means to evaluate it and give it due weight, having regard to all other relevant factors. A matter is not taken into account by being noticed and erroneously disregarded as irrelevant'.

[196] Importantly, the requirement to take a matter into account does not mean that the matter is necessarily a determinative consideration. This is particularly so in the context of s.134 because s.134(1)(da) is one of a number of considerations which we are required to take into account. No particular primacy is attached to any of the s.134 considerations. The Commission's task is to take into account the various considerations and ensure that the modern award provides a 'fair and relevant minimum safety net'.

[197] A further contextual consideration is that 'overtime rates' and 'penalty rates' (including penalty rates for employees working on weekends or public holidays) are terms that *may* be included in a modern award (s.139(1)(d) and (e)); they are not terms that *must* be included in a modern award. As the Full Bench observed in the *4 yearly review of modern awards – Common issue – Award Flexibility* decision:

'… s.134(1)(da) does not amount to a statutory directive that modern awards must provide additional remuneration for employees working overtime and may be distinguished from the terms in Subdivision C of Division 3 of Part 2-3 which *must* be included in modern awards…'

[198] Further, if s.134(1)(da) was construed such as to *require* additional remuneration for employees working, for example, on weekends, it would have significant consequences for the modern award system, given that about half of all modern awards currently make no provision for weekend penalty rates. If the legislative intention had been to mandate weekend penalty rates in all modern awards then one would have expected that some reference to the consequences of such a provision would have been made in the extrinsic materials.

[199] Third, s.134(da) does not prescribe or mandate a fixed relationship between the remuneration of those employees who, for example, work on weekends or public holidays, and those who do not. The additional remuneration paid to the employees whose working arrangements fall within the scope of the descriptors in

s.134(1)(da)(i)–(v) will depend on, among other things, the circumstances and context pertaining to work under the particular modern award.

[200] Fourth, s.134(1)(da)(ii) is not to be read as a composite expression, rather the use of the disjunctive 'or' makes it clear that the provision is dealing with separate circumstances: 'unsocial, irregular or unpredictable hours' (emphasis added).

[201] Section 134(1)(da)(ii) requires that we take into account the need to provide additional remuneration for employees working in each of these circumstances. The expression 'unsocial … hours' would include working late at night and or early in the morning, given the extent of employee disutility associated with working at these times. 'Irregular or unpredictable hours' is apt to describe casual employment.

[202] Fifth, s.134(1)(da) identifies a number of circumstances in which we are required to take into account the need to provide additional remuneration (i.e. those in paragraphs 134(1)(da)(i) to (iv)). Working 'unsocial … hours' is one such circumstance (s.134(1)(da)(i)) and working 'on weekends or public holidays' (s.134(1)(da)(iii)) is another. The inclusion of these two, separate, circumstances leads us to conclude that it is not necessary to establish that the hours worked on weekends or public holidays are 'unsocial … hours'. Rather, we are required to take into account the need to provide additional remuneration for working on weekends or public holidays, irrespective of whether working at such times can be characterised as working 'unsocial … hours'. Ultimately, however, the issue is whether an award which prescribes a particular penalty rate provides 'a fair and relevant minimum safety net.' A central consideration in this regard is whether a particular penalty rate provides employees with 'fair and relevant' compensation for the disutility associated with working at the particular time(s) to which the penalty attaches.

…

[204] Section 134(1)(e) requires that we take into account 'the principle of equal remuneration for work of equal or comparable value'.

[205] The 'Dictionary' in s.12 of the FW Act states, relevantly:

> 'In this Act:
>
> ***equal remuneration for work of equal of comparable value:*** see subsection 302(2).'

[206] The expression 'equal remuneration for work of equal or comparable value' is defined in s.302(2) to mean 'equal remuneration for men and women workers for work of equal or comparable value'.

[207] The appropriate approach to the construction of s.134(1)(e) is to read the words of the definition into the substantive provision such that in giving effect to the modern awards objective the Commission must take into account the principle of 'equal remuneration for men and women workers for work of equal or comparable value'.

…

[217] Section 134(1)(f) requires that we take into account 'the likely impact of any exercise of modern award powers on business, including on productivity, employment costs and the regulatory burden'.

[218] We note at the outset that s.134(1)(f) is expressed in very broad terms. We are required to take into account the likely impact of any exercise of modern award powers 'on business, including' (but not confined to) the specific matters mentioned, that is, 'productivity, employment costs and the regulatory burden'.

…

[221] 'Productivity' is not defined in the FW Act but given the context in which the word appears it is clear that it is used to signify an economic concept.

[222] The Productivity Commission defines productivity as:

> '… a measure of the rate at which outputs of goods and services are produced per unit of input (labour, capital, raw materials, etc). It is calculated as the ratio of the quantity of outputs produced to some measure of the quantity of inputs used'.

[223] Similarly, the Commonwealth Treasury also defines productivity by reference to volumes of inputs and output:

> 'Productivity is a measure of the rate at which inputs, such as labour, capital and raw materials, are transformed into outputs. The level of productivity can be measured for firms, industries and economies. Productivity growth implies fewer inputs are used to produce a given output or, for a given set of inputs, more output is produced.'

[224] The conventional economic meaning of productivity is the number of units of output per unit of input. It is a measure of the volumes or quantities of inputs and outputs, not the cost of purchasing those inputs or the value of the outputs generated. As the Full Bench observed in the *Schweppes Australia Pty Ltd v United Voice – Victoria Branch*:

> '… we find that 'productivity' as used in s.275 of the Act, and more generally within the Act, is directed at the conventional economic concept of the quantity of output relative to the quantity of inputs. Considerations of the price of inputs, including the cost of labour, raise separate considerations which relate to business competitiveness and employment costs.
>
> Financial gains achieved by having the same labour input – the number of hours worked – produce the same output at less cost because of a reduced wage per hour is not productivity in this conventional sense.'

[225] While the above observation is directed at the use of the word 'productivity' in s.275, it is apposite to our consideration of this issue in the context of s.134(1)(f).

…

> **[228]** Section 134(1)(h) requires that we take into account 'the likely impact of any exercise of modern award powers on employment growth, inflation and the sustainability, performance and competitiveness of the national economy'.
>
> **[229]** We note that the requirement to take into account the likely impact of any exercise of modern award powers on 'the sustainability, performance and competitiveness *of the national economy*' (emphasis added) focuses on the aggregate (as opposed to sectorial) impact of an exercise of modern award powers. …[1]

9. Further, the employer parties in these proceedings do not bear any onus to demonstrate that the Unions' claims will result in increased employment costs, reduced productivity or undermine flexible work practices as contemplated by s.134(1) of the Act. No adverse inference can or should be drawn from the absence of evidence called by employer parties or from the absence of evidence that establishes that a union claim will affect all or most employers covered by the Award.

10. The conduct of the Review differs from an inter-party dispute. Those responding to a claim do not bear an onus. Rather, it is for the proponents of a claim to establish that the variation proposed is necessary in order to ensure that an award is achieving the modern awards objective of providing a fair and relevant minimum safety net of terms and conditions. In determining whether a proponent has in fact established as much, the Commission will have regard to material before it that addresses the various elements of the modern awards objective, including those that go to employment costs, flexible work practices and productivity. These considerations are both microeconomic and macroeconomic; they require evaluation with respect to the practices of different types of businesses as well as industry at large.

[1] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [165] – [229].

11. As the Full Bench stated in the Preliminary Jurisdictional Issues Decision: (emphasis added)

> The proponent of a variation to a modern award must demonstrate that if the modern award is varied in the manner proposed then it would only include terms to the extent necessary to achieve the modern awards objective (see s.138). What is 'necessary' in a particular case is a value judgment based on an assessment of the considerations in s.134(1)(a) to (h), having regard to the submissions and evidence directed to those considerations.[2]

12. It is therefore for the proponents to overcome the legislative threshold established by ss.138 and 134(1), which includes a consideration of the impact upon different types of businesses and industry at large.

13. As will become apparent from our submissions, the Unions claims are not necessary, having regard to ss. 134(1) and 138 of the FW Act and therefore, they should not be granted.

[2] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [60].

3. THE COMMISSION'S GENERAL APPROACH TO THE REVIEW

3.1 The Preliminary Jurisdictional Issues Decision

14. At the commencement of the Review, a Full Bench dealt with various preliminary issues. The Commission's Preliminary Jurisdictional Issues Decision[3] provides the framework within which the Review is to proceed.

15. The Full Bench emphasised the need for a party to mount a merit based case in support of its claim, accompanied by probative evidence (emphasis added):

> **[23]** The Commission is obliged to ensure that modern awards, together with the NES, provide a fair and relevant minimum safety net taking into account, among other things, the need to ensure a 'stable' modern award system (s.134(1)(g)). The need for a 'stable' modern award system suggests that a party seeking to vary a modern award in the context of the Review must advance a merit argument in support of the proposed variation. The extent of such an argument will depend on the circumstances. We agree with ABI's submission that some proposed changes may be self evident and can be determined with little formality. However, where a significant change is proposed it must be supported by a submission which addresses the relevant legislative provisions and be accompanied by probative evidence properly directed to demonstrating the facts supporting the proposed variation.[4]

16. The Commission indicated that the Review will proceed on the basis that the relevant modern award achieved the modern awards objective at the time that it was made (emphasis added):

> **[24]** In conducting the Review the Commission will also have regard to the historical context applicable to each modern award. Awards made as a result of the award modernisation process conducted by the former Australian Industrial Relations Commission (the AIRC) under Part 10A of the Workplace Relations Act 1996 (Cth) were deemed to be modern awards for the purposes of the FW Act (see Item 4 of Schedule 5 of the Transitional Act). Implicit in this is a legislative acceptance that at the time they were made the modern awards now being reviewed were consistent with the modern awards objective. The considerations specified in the legislative test applied by the AIRC in the Part 10A process is, in a number of important respects, identical or similar to the modern awards objective in s.134 of the FW Act. In the Review the Commission will proceed on the basis that prima facie the modern award being reviewed achieved the modern awards objective at the time that it was made.[5]

[3] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788.

[4] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [23].

[5] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [24].

17. The decision confirms that the Commission should generally follow previous Full Bench decisions that are relevant to a contested issue unless there are cogent reasons for not doing so: (emphasis added)

> **[25]** Although the Commission is not bound by principles of stare decisis it has generally followed previous Full Bench decisions. In another context three members of the High Court observed in Nguyen v Nguyen:
>
> > "When a court of appeal holds itself free to depart from an earlier decision it should do so cautiously and only when compelled to the conclusion that the earlier decision is wrong. The occasion upon which the departure from previous authority is warranted are infrequent and exceptional and pose no real threat to the doctrine of precedent and the predictability of the law: see Queensland v The Commonwealth (1977) 139 CLR 585 per Aickin J at 620 et seq."
>
> **[26]** While the Commission is not a court, the public interest considerations underlying these observations have been applied with similar, if not equal, force to appeal proceedings in the Commission. As a Full Bench of the Australian Industrial Relations Commission observed in Cetin v Ripon Pty Ltd (T/as Parkview Hotel) (Cetin):
>
> > "Although the Commission is not, as a non-judicial body, bound by principles of stare decisis, as a matter of policy and sound administration it has generally followed previous Full Bench decisions relating to the issue to be determined, in the absence of cogent reasons for not doing so."
>
> **[27]** These policy considerations tell strongly against the proposition that the Review should proceed in isolation unencumbered by previous Commission decisions. In conducting the Review it is appropriate that the Commission take into account previous decisions relevant to any contested issue. The particular context in which those decisions were made will also need to be considered. Previous Full Bench decisions should generally be followed, in the absence of cogent reasons for not doing so.[6]

18. In addressing the modern awards objective, the Commission recognised that each of the matters identified at s.134(1)(a) – (h) are to be treated "as a matter of significance"[7] and that "no particular primacy is attached to any of the s.134 considerations"[8]. The Commission identified its task as needing to "balance

[6] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [24] – [27].

[7] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [31].

[8] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [32].

the various s.134(1) considerations and ensure that modern awards provide a fair and relevant minimum safety net"[9]: (emphasis added)

> **[36]** … Relevantly, s.138 provides that such terms only be included in a modern award 'to the extent necessary to achieve the modern awards objective'. To comply with s.138 the formulation of terms which must be included in modern award or terms which are permitted to be included in modern awards must be in terms 'necessary to achieve the modern awards objective'. What is 'necessary' in a particular case is a value judgment based on an assessment of the considerations in s.134(1)(a) to (h), having regard to the submissions and evidence directed to those considerations. In the Review the proponent of a variation to a modern award must demonstrate that if the modern award is varied in the manner proposed then it would only include terms to the extent necessary to achieve the modern awards objective.[10]

19. The frequently cited passage from Justice Tracey's decision in *Shop, Distributive and Allied Employees Association v National Retail Association (No 2)* was adopted by the Full Bench. It was thus accepted that:

> … a distinction must be drawn between that which is necessary and that which is desirable. That which is necessary must be done. That which is desirable does not carry the same imperative for action.[11]

20. Accordingly, the Preliminary Jurisdictional Issues Decision establishes the following key threshold principles:

- A proposal to significantly vary a modern award must be accompanied by submissions addressing the relevant statutory requirements and probative evidence demonstrating any factual propositions advanced in support of the claim;
- The Commission will proceed on the basis that a modern award achieved the modern awards objective at the time that it was made;
- An award must only include terms to the extent necessary to achieve the modern awards objective. A variation sought must not be one that is merely desirable; and

[9] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [33].

[10] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [36].

[11] *Shop, Distributive and Allied Employees Association v National Retail Association (No 2)* (2012) 205 FCR 227 at [46].

- Each of the matters identified under s.134(1) are to be treated as a matter of significance and no particular primacy is attached to any of the considerations arising from it.

21. In a subsequent decision considering multiple claims made to vary the *Security Services Industry Award 2010*, the Commission made the following comments, which we respectfully commend to the Full Bench (emphasis added):

> **[8]** While this may be the first opportunity to seek significant changes to the terms of modern awards, a substantive case for change is nevertheless required. The more significant the change, in terms of impact or a lengthy history of particular award provisions, the more detailed the case must be. Variations to awards have rarely been made merely on the basis of bare requests or strongly contested submissions. In order to found a case for an award variation it is usually necessary to advance detailed evidence of the operation of the award, the impact of the current provisions on employers and employees covered by it and the likely impact of the proposed changes. Such evidence should be combined with sound and balanced reasoning supporting a change. Ultimately the Commission must assess the evidence and submissions against the statutory tests set out above, principally whether the award provides a fair and relevant minimum safety net of terms and conditions and whether the proposed variations are necessary to achieve the modern awards objective. These tests encompass many traditional merit considerations regarding proposed award variations.[12]

22. The Unions claims conflict with the principles in the Preliminary Jurisdictional Issues Decision. Further, the Unions have not discharged the evidentiary burden described in the above decision. Accordingly, the claims should be rejected.

3.2 Considerations Associated with Procedural Fairness

23. We are of course mindful of the nature of the Review and the Commission's repeated observation that it is not bound by the terms of a proponent's claim. Nevertheless, a respondent party at this stage of the proceedings can deal only with that which has been put before us. That is, these submissions only relate to the variations sought and the material filed by the Unions in support of them. It is not incumbent upon us to provide a response (or a hypothetical

[12] *Re Security Services Industry Award 2010* [2015] FWCFB 620 at [8].

response) to potential derivatives of the variations sought. Such an approach would render the task here before us virtually impossible to undertake.

24. Should the Unions or the Commission, during these proceedings, propose that the Award be varied in terms that differ to those which have been proposed as at the time of drafting these submissions, notions of fairness dictate that respondent parties such as Ai Group be afforded an opportunity to address the Full Bench in relation to whether such a course of action should be permitted or taken in the context of these proceedings. If such a course is to be adopted, there should also be a further opportunity to make submissions and/or call evidence in response to any such new proposal. Absent such a process, it may be argued that procedural fairness has not been afforded to those who oppose the claim because, for instance, such parties have not been granted a chance to be properly heard in relation to the variations ultimately sought to be made, which may well have implications that have not otherwise been put before the Full Bench.

4. THE UNION'S CLAIMS

25. In this section we summarise various claims advanced by the Unions that are being dealt with this second tranche of the proceedings.

4.1 Minimum Engagement Periods

26. The HSU is seeking the deletion of clause 10.4(c), which is in the following terms:

> **(c)** Casual employees will be paid the following minimum number of hours, at the appropriate rate, for each engagement:
>
> **(i)** social and community services employees except when undertaking disability services work—3 hours;
>
> **(ii)** home care employees—1 hour; or
>
> **(iii)** all other employees—2 hours.

27. The HSU also seeks the insertion of a new clause 10.6:

> **10.6** The minimum engagement for employees under this award will be 3 hours.

28. The variations would have the effect of:

(a) Increasing the minimum engagement period for casual employees performing home care, disability services work, crisis accommodation work and family day care employees to three hours.

(b) Introducing a minimum engagement period for full-time and part-time employees of 3 hours.

4.2 Broken Shifts

The HSU Claims

29. The HSU is seeking the following changes to clause 25.6 of the Award:

25.6 Broken shifts

(a) This clause only applies to:

(i) social and community services employees when undertaking disability services work; and

(ii) home care employees.

(~~a~~b) For the purposes of this clause, a ~~A~~ **broken shift** means a shift worked by ~~an~~ a casual or part-time employee that includes no more than one ~~or more~~ break~~s~~ (other than a meal break) and where the span of hours is not more than 12 hours.

(c) A broken shift may only be worked where there is mutual agreement between the employer and employee.

(d) Where an employee works a broken shift, they shall be paid at the appropriate rate for the reasonable time of travel from the location of their last client before the break to their first client after the break, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.

(e) The minimum period of engagement specified in clause 10.6 shall apply to each period of work in a broken shift.

(~~b~~f) In addition to the rates at 14.4(d) ~~Payment for a broken shift will be at ordinary pay with~~ penalty rates and shift allowances in accordance with clause ~~29~~20.2—Shiftwork and clause 19—Overtime apply~~, with shift allowances being determined by the finishing time of the broken shift~~.

(g) Shift allowances will be determined by the starting or finishing time of the broken shift, whichever allowance is higher. The allowance will apply across both parts of the shift.

(~~c~~h) All work performed beyond the maximum span of 12 hours for a broken shift will be paid at ~~double time~~ 200% of the minimum hourly rate.

(~~d~~i) An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

30. The variations proposed seek to significantly alter the current broken shift provisions. Specifically, they would have the following consequences:

(a) Limit the application of the clause to part-time and casual employees. The clause would no longer apply to full-time employees.

(b) Redefine a 'broken shift' such that a shift could only be 'broken' into two parts on a given day.

(c) Require that the employer and employee must *agree* that the employee will work a broken shift in order for a broken shift to be worked.

(d) Introduce an express obligation to pay an employee for time spent travelling during the break in the shift and to treat such time as time worked.

(e) Require that each portion of the broken shift must be at least three hours in length.

(f) In some circumstances, increase an employee's entitlement to the relevant shift allowances during the performance of a broken shift.

31. In light of an extension of time granted to respondent parties on 11 July 2019, Ai Group intends to file its submissions in opposition to the proposed clause 25.6(d) along with material in opposition to other Unions' claims in relation to the issue of 'travel time'. The aforementioned element of the HSU's broken shifts claim is therefore not dealt with in this submission.

The United Voice Claims

32. United Voice is seeking the following changes to clause 25.6 of the Award:

25.6 Broken shifts

This clause only applies to social and community services employees when undertaking disability services work and home care employees.

(a) ~~A **broken shift** means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.~~ For the purposes of this award a broken shift is a shift where an employee works in two separate periods of duty on any day within a maximum spread of twelve (12) hours and where the break between periods exceeds one hour.

(b) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the starting or finishing time of the broken shift, whichever is greater.

(c) All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.

(d) An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

33. The variations proposed seek to:

(a) Redefine a broken shift such that:

i) A shift could only be 'broken' into two parts on a given day;

ii) The break during the shift exceeds one hour.

(b) Potentially increase an employee's entitlement to the relevant shift allowances during the performance of a broken shift.

The ASU Claim

34. The ASU is seeking the insertion of a new clause 25.6(b)(i), in the terms set out below:

> **25.6 Broken shifts**
>
> This clause only applies to social and community services employees when undertaking disability services work and home care employees.
>
> **(a)** A **broken shift** means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.
>
> **(b)** An employee who works a broken shift will receive:
>
> **(i)** ~~Payment for a broken shift will be at o~~Ordinary pay plus a loading of 15% of their ordinary rate of pay for each hour from the commencement of the shift to the conclusion of the shift inclusive of all breaks; and
>
> **(ii)** ~~with~~ penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.
>
> **(c)** All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.
>
> **(d)** An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

35. The variation sought would see employees working a broken shift entitled to an additional 15% loading for the duration of the entire shift and any intervening breaks.

4.3 Overtime After 8 Hours of Work

36. The HSU is seeking the following amendment to clause 28.1(b)(ii):

28.1 Overtime rates

…

(b) Part-time employees and casual employees

…

(ii) All time worked by part-time or casual employees which exceeds ~~10~~ 8 hours per day, will be paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid for at the rate of double time, and on public holidays at the rate of double time and a half.

(iii) Time worked up to the hours prescribed in clause 28.1(b)(ii) will, subject to clause 28.1(b)(i), not be regarded as overtime and will be paid for at the ordinary rate of pay (including the casual loading in the case of casual employees).

…

37. The proposed variation would create an entitlement to overtime rates for part-time and casual employees for work performed in excess of 8 hours per day. Currently overtime rates are payable for work performed in excess of *10* hours per day.

4.4 Overtime for Part-Time Employees

38. The HSU is seeking the following amendment to clause 28.1(b)(iii):

28.1 Overtime rates

…

(b) Part-time employees and casual employees

(i) All time worked by part-time or casual employees in excess of 38 hours per week or 76 hours per fortnight will be paid for at the rate of time and a half for the first two hours and double time thereafter, except that on Sundays such overtime will be paid for at the rate of double time and on public holidays at the rate of double time and a half.

(ii) All time worked by part-time or casual employees which exceeds 10 hours per day, will be paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid for at the rate of double time, and on public holidays at the rate of double time and a half.

(iii) All time worked by part-time employees which exceeds the hours agreed in clause 10.3(c) will be treated as overtime and paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid at the rate of double time and public holidays at the rate of double time and a half. ~~Time worked up to the hours prescribed in clause 28.1(b)(ii) will, subject to clause 28.1(b)(i), not be regarded as overtime and will be paid for at the ordinary rate of pay (including the casual loading in the case of casual employees).~~

39. Clause 10.3(c) of the Award requires that an employer and part-time employee reach agreement before the employee commences employment about a regular pattern of work including the number of hours to be worked each week, and the days of the week the employee will work and the starting and finishing times each day.

40. The Award does not presently require payment at overtime rates to part-time employees where the employee works hours in addition to the hours they have agreed to work pursuant to clause 10.3(c) of the Award, unless the employee works more than 10 hours in a day or 38 hours in a week / 76 hours in a fortnight.

41. The HSU's claim would alter this position by requiring the payment of overtime rates to part-time employees wherever they work hours in addition to their 'agreed' hours.

4.5 Roster Changes

42. United Voice has proposed amendments to clause 25.5(d)(i) of the Award as follows:

> **25.5 Rosters**
>
> **(a)** The ordinary hours of work for each employee will be displayed on a fortnightly roster in a place conveniently accessible to employees. The roster will be posted at least two weeks before the commencement of the roster period.
>
> **(b)** Rostering arrangements and changes to rosters may be communicated by telephone, direct contact, mail, email, facsimile or any electronic means of communication.
>
> **(c)** It is not obligatory for the employer to display any roster of the ordinary hours of work of casual or relieving staff.
>
> **(d) Change in roster**
>
> **(i)** Seven days' notice will be given of a change in a roster. Full time and part time employees will be entitled to the payment of overtime for roster changes where seven days' notice is not provided.
>
> **(ii)** However, a roster may be altered at any time to enable the service of the organisation to be carried on where another employee is absent from duty on account of illness, or in an emergency.
>
> **(iii)** This clause will not apply where the only change to the roster of a part-time employee is the mutually agreed addition of extra hours to be worked such that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle, as the case may be.
>
> **(e)** Where practicable, accrued days off (ADOs) will be displayed on the roster.

43. The proposed variation purports to introduce a new substantive entitlement to overtime rates where a full-time or part-time employee is afforded less than 7 days' notice of a change to the roster.

4.6 Recall to Work Overtime

44. The HSU is seeking the insertion of a new clause 28.4(b), as set out below:

28.4 Recall to work overtime

(a) An employee recalled to work overtime after leaving the employer's or client's premises will be paid for a minimum of two hours' work at the appropriate rate for each time so recalled. If the work required is completed in less than two hours the employee will be released from duty.

(b) Where an employee is required to perform work from home after leaving the employer's or client's premises, including:

(i) Responding to phone calls, message or emails;

(ii) Providing advice ("phone fixes")

(iii) Arranging call out/rosters of other employees; and

(iv) Remotely monitoring and/or addressing issues by remote telephone and/or computer access;

the employee will be paid for a minimum of one hours' work at the overtime rate for each time recalled.

45. The proposed new clause would require payment at overtime rates for at least one hour each time an employee is required to perform any work after leaving the employer or client's premises.

4.7 Sleepovers

46. The HSU is proposing the following amendments to clause 25.7(c) of the Award:

25.7 Sleepovers

(a) A sleepover means when an employer requires an employee to sleep overnight at premises where the client for whom the employee is responsible is located (including respite care) and is not a 24 hour care shift pursuant to clause 25.8 or an excursion pursuant to clause 25.9.

(b) The provisions of 25.5 apply for a sleepover. An employee may refuse a sleepover in the circumstances contemplated in 25.5(d)(i) but only with reasonable cause.

(c) The span for a sleepover will be a continuous period of eight hours. Employees will be provided with:

(i) a separate and securely lockable room with a peephole or similar in the door, ~~with~~ a bed and a telephone connection in the room; and,

(ii) suitable sleeping requirements such as a lamp and clean linen; and

(iii) use of appropriate facilities (including staff facilities where these exist); and

(iv) free board and lodging for each night when the employee sleeps over.

(d) The employee will be entitled to a sleepover allowance of 4.9% of the standard rate for each night on which they sleep over.

(e) In the event of the employee on sleepover being required to perform work during the sleepover period, the employee will be paid for the time worked at the prescribed overtime rate with a minimum payment as for one hour worked. Where such work exceeds one hour, payment will be made at the prescribed overtime rate for the duration of the work.

(f) An employer may roster an employee to perform work immediately before and/or immediately after the sleepover period, but must roster the employee or pay the employee for at least four hours' work for at least one of these periods of work. The payment prescribed by 25.7(d) will be in addition to the minimum payment prescribed by this subclause.

(g) The dispute resolution procedure in clause 9 of this Award applies to the sleepover provisions.

47. The variations proposed require the provision of various additional amenities to an employee during a sleepover.

4.8 Uniforms

48. United Voice is seeking the insertion of a new clause 20.2(b), as set out below:

20.2 Clothing and equipment

(a) Employees required by the employer to wear uniforms will be supplied with an adequate number of uniforms appropriate to the occupation free of cost to employees. Such items are to remain the property of the employer and be laundered and maintained by the employer free of cost to the employee.

(b) An adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.

(~~b~~c) Instead of the provision of such uniforms, the employer may, by agreement with the employee, pay such employee a uniform allowance at the rate of $1.23 per shift or part thereof on duty or $6.24 per week, whichever is the lesser amount. Where such employee's uniforms are not laundered by or at the expense of the employer, the employee will be paid a laundry allowance of $0.32 per shift or part thereof on duty or $1.49 per week, whichever is the lesser amount.

(~~c~~d) The uniform allowance, but not the laundry allowance, will be paid during all absences on paid leave, except absences on long service leave and absence on personal/carer's leave beyond 21 days. Where, prior to the taking of leave, an employee was paid a uniform allowance other than at the weekly rate, the rate to be paid during absence on leave will be the average of the allowance paid during the four weeks immediately preceding the taking of leave.

(~~d~~e) Where an employer requires an employee to wear rubber gloves, special clothing or where safety equipment is required for the work performed by an employee, the employer must reimburse the employee for the cost of purchasing such special clothing or safety equipment, except where such clothing or equipment is provided by the employer.

49. Currently, the Award requires that an employer must provide "an adequate number of uniforms appropriate to the occupation" of the employee where the employer requires the employee to wear a uniform. The Award does not purport to prescribe what the "adequate number of uniforms" will be. Rather, this is a matter to be determined by the employer, having regard to the employee's occupation and other relevant circumstances.

50. United Voice seeks the insertion of a new clause that describes or defines what constitutes “an adequate number of uniforms”.

4.9 Damaged Clothing

51. The HSU is seeking the insertion of a new clause 20.3, which is in the following terms:

> **20.3 Damaged clothing allowance**
>
> **(i)** Where an employee, in the course of their employment suffers any damage to or soiling of clothing or other personal effects (excluding hosiery), upon provision of proof of the damage, employees shall be compensated at the reasonable replacement value of the damaged or soiled item of clothing.
>
> **(ii)** This clause will not apply where the damage or soiling is caused by the negligence of the employee.

52. The proposed clause would entitle an employee to compensation “at the reasonable replacement value” of any damaged or soiled clothing or personal effects if they are so damaged or soiled during the course of their employment by virtue of any cause other than the negligence of the employee.

4.10 Telephone Allowance

The HSU Claim

53. Clause 20.6 of the Award provides as follows:

> **20.6 Telephone allowance**
>
> Where the employer requires an employee to install and/or maintain a telephone for the purpose of being on call, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.

54. The HSU has proposed that the above clause be replaced with the following:

> **20.6 Telephone allowance**
>
> Where an employer requires an employee to use a mobile phone for any work related purpose, the employer will either:
>
> **(a)** provide a mobile phone fit for purpose and cover the cost of any subsequent charges; or
>
> **(b)** refund the cost of purchase and usage charges on production of receipts.

55. The proposed clause would apply wherever an employer requires an employee to use a mobile phone for any work related purpose. It would require the employer to provide the employee with a mobile phone and cover the cost of any usage charges (whether incurred for work purposes of otherwise) or reimburse the employee for the same.

The United Voice Claim

56. United Voice has proposed the following amendments to clause 20.6 of the Award:

> **20.6 Telephone allowance**
>
> Where the employer requires an employee to install and/or maintain a telephone or mobile phone for the purpose of being on call, for the performance of work duties or to access work related information, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.

57. The variations proposed seek to extend the application of clause 20.6 to circumstances in which:

(a) An employer requires an employee to "install and/or maintain … a mobile phone".

(b) An employer requires an employee to install and/or maintain a telephone for the performance of work duties or access work related information.

(c) An employer requires an employee to install and/or maintain a mobile phone for the performance of work duties or access work related information.

5. THE NATIONAL DISABILITY INSURANCE SCHEME

58. The NDIS was established in 2013, by the *National Disability Insurance Scheme Act 2013* (Cth) (**NDIS Act**). The NDIS is managed by the National Disability Insurance Agency (**NDIA**), which is a statutory agency.

59. In addition to the NDIS Act, a number of rules[13] (**NDIS Rules**) have been made by the relevant Federal minister. The NDIS Rules deal with a range of matters. In some cases, the rules apply only in certain states / territories, whilst in other instances, they have nationwide application.

60. The implementation of the NDIS brought with it significant changes to the way in which support and care for people with permanent and significant disability is provided and funded. Rather than the previous model of providing "block funding" to providers, the NDIS operates through individualised support packages for each participant in the scheme. At its core, the NDIS is directed towards enabling persons with a disability to exercise choice and control over the support and care that they receive. The model espoused by the NDIS is, in essence, a consumer-driven one. This has had and continues to have various implications for providers in the industry, which we later come to.

[13] For example, the *National Disability Insurance Scheme (Becoming a Participant) Rules 2016*; *National Disability Insurance Scheme (Children) Rules 2013*; *National Disability Insurance Scheme (Code of Conduct) Rules 2018*; *National Disability Insurance Scheme (Complaints Management and Resolution) Rules 2018*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans—Australian Capital Territory) Rules 2014*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans—New South Wales) Rules 2016*; *National Disability Insurance Scheme (Facilitating the Participation of Participants' Plans – Queensland) Rules 2016*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans—South Australia) Rules 2013*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans – South Australia) Rules 2014*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans – Tasmania) Rules 2016*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans—Victoria) Rules 2016*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans—Western Australia) Rules 2014*; *National Disability Insurance Scheme (Facilitating the Preparation of Participants' Plans—Northern Territory) Rules 2016*.

61. The scope of the NDIS can be characterised by reference to the following defining features, noting that this is not an exhaustive list of the various eligibility criteria stipulated by the NDIS Act[14] and NDIS Rules:

(a) The NDIS relates to the provision of care to persons with "permanent and significant disability". The NDIS Act prescribes "disability requirements" that must be satisfied in order for a person to be eligible for funding under the NDIS. Those requirements are summarised at rule 5.1 of the *National Disability Insurance Scheme (Becoming a Participant) Rules 2016* in the following terms:

- The person has a disability that is attributable to one or more intellectual, cognitive, neurological, sensory or physical impairments, or to one or more impairments attributable to a psychiatric condition; and
- The person's impairment or impairments are, or are likely to be, permanent; and
- The impairment or impairments result in substantially reduced functional capacity to undertake, or psychosocial functioning in undertaking, one or more of the following activities: communication, social interaction, learning, mobility, self-care, self-management; and
- The impairment(s) affect the person's capacity for social and economic participation; and
- The person is likely to require support under the NDIS for the person's lifetime.

[14] See for example age and residence requirements at sections 22 and 23 of the NDIS Act.

The rules go on to prescribe further requirements in relation to certain aspects of the above overarching requirements.[15]

(b) The NDIS funds "reasonable and necessary supports", having regard to s.34 of the NDIS Act, which describes the type of supports that will or will not be provided.[16]

62. The rollout of the NDIS commenced on a 'transitional' basis in various states and territories. The chart[17] below identifies the timeframes for the rollouts as agreed between the Commonwealth and State and Territory Governments in 2013:

Table 1 **NDIS transition arrangements by jurisdiction**

	Trial period			Transition to full scheme			Full scheme
	2013 14	2014 15	2015 16	2016 17	2017 18	2018 19	2019 20
NSW	Hunter area trial		Early Transition in Nepean Blue Mountains area (children aged 0–17 years)	Transition to full scheme (by region)		Full scheme	
Vic	Barwon area trial			Transition to full scheme (by region)			Full scheme
Qld			Transition to full scheme from July 2016 (by region). Early Transition from January 2016 in Townsville, Charters Towers and Palm Island				Full scheme
SA	Statewide trial (children aged 0–14 years)			Transition to full scheme (by age and region)		Full scheme	
Tas	Statewide trial (people aged 15–24 years)			Transition to full scheme (by age)			Full scheme
NT		Barkly region trial		Transition to full scheme (by region)			Full scheme
ACT[a]		Territorywide trial		Full scheme			
WA[b]		Perth Hills area trial MyWay trial			Transition to locally administered NDIS		

[a] The Bilateral Agreement for the NDIS launch between the Australian Government and the ACT Government notes that from 2016-17 the ACT will be in 'transition to full scheme'. This transition has been categorised as 'full scheme' because all residents who meet the eligibility criteria will have access to the scheme. [b] In February 2017, the Australian Government and Western Australian Government signed a Bilateral Agreement for a nationally consistent, but locally administered, NDIS.

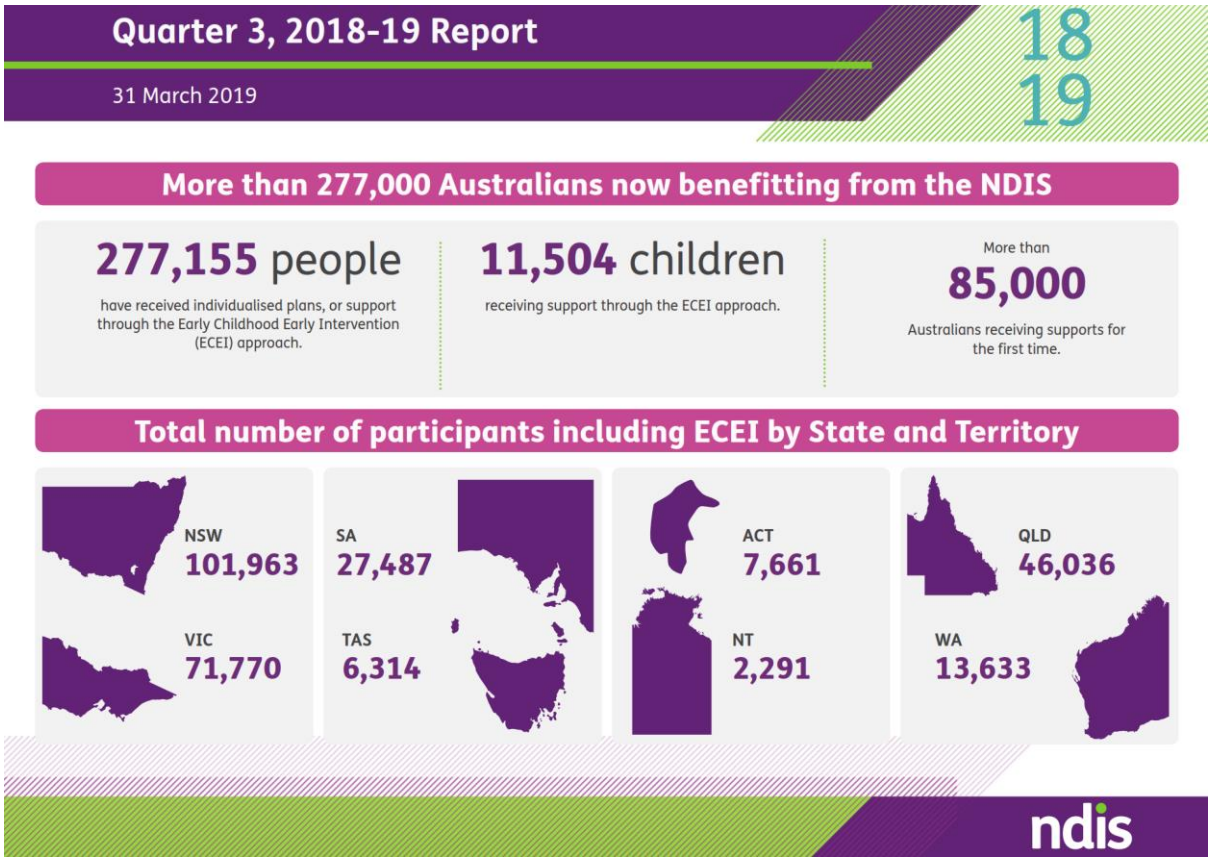
[15] *National Disability Insurance Scheme (Becoming a Participant) Rules 2016* at rules 5.4 – 5.8.

[16] See also the *National Disability Insurance Scheme (Supports for Participants) Rules 2013*.

[17] Productivity Commission, *National Disability Insurance Scheme (NDIS) Costs; Productivity Commission Study Report* (October 2017) at Table 1.

63. The rollout of the NDIS is continuing. In October 2017, the Productivity Commission (**PC**) observed that "the intake of participants with approved plans [had] already [fallen] behind the expected pace" and that if that trend continued, it would take "an additional year before all eligible participants are in the scheme"[18].

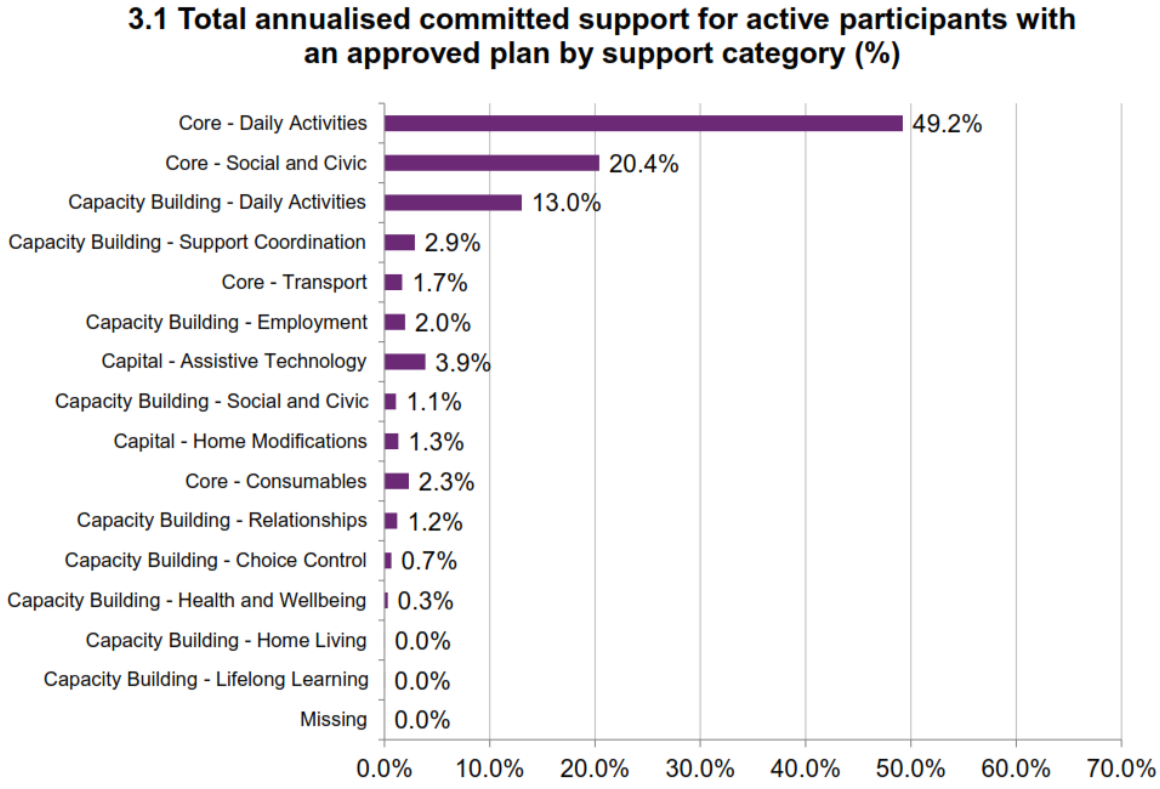
64. Information published by the NDIA indicates that as at 31 March 2019, 277,155 persons were accessing the NDIS, as follows:



65. This represents an increase of 32,502 persons accessing the NDIS during the January – March 2019 quarter.

[18] Productivity Commission, *National Disability Insurance Scheme (NDIS) Costs; Productivity Commission Study Report* (October 2017) at page 11.

66. As the chart below demonstrates[19], as at 31 March 2019, close to 50% of the funding included in active plans related to core daily activities[20]:



67. It is anticipated that when the rollout is complete (previously scheduled for 2019 – 2020), some 475,000 participants would have access to the scheme.[21]

[19] NDIA, *National Dashboard as at 31 March 2019*.

[20] For example, assistance with self-care activities during the day or evening.

[21] Productivity Commission, *National Disability Insurance Scheme (NDIS) Costs; Productivity Commission Study Report* (October 2017) at page 3.

5.1 Participant Plans

68. As previously mentioned, participants under the NDIS have individualised support packages and plans. In broad terms, the process for developing and implementing a plan is as follows:

(a) A person is required to provide various information about themselves and their disability to the NDIA. This is referred to as an 'access request'.[22]

(b) The relevant information is relied upon by the NDIA to assess whether the person is eligible for support under the NDIS. The NDIA's 'assess decision' is communicated to the person in writing, once determined.[23]

(c) The participant will then attend a 'planning meeting', to discuss the participant's current supports and goals for the purposes of developing a plan for the participant, including the specific types of support that the participant requires.

(d) All plans must be submitted to the NDIA for approval.

(e) Once approved, a participant's plan will indicate the funding that has been allocated to each support category. The NDIS' publications for participants in the scheme indicate that there are varying degrees of flexibility contemplated under participants' plans. For example:

[22] Section 18 of the NDIS Act.

[23] Section 28 of the NDIS Act.

i) A participant's "**Core Supports budget**" is "the most flexible, and in most cases, [the participant] can use [their] funding across any of the following four support categories:

- Assistance with daily life;
- Consumables;
- Assistance with social and community participation; and
- Transport.[24]

However, there are instances where [the participant does] not have flexibility in [their] funding, particularly transport funding".

ii) A participant's "**Capacity Building Supports budget** … cannot be moved from one support category to another. Funding can be used to purchase approved individual supports that fall within that Capacity Building category". The categories relevantly include:

- Increased social and community participation;
- Improved relationships;
- Improved health and wellbeing; and
- Improved daily living.[25]

iii) A participant's plan may also include "**stated supports**". Such supports are not flexible. Funding is allocated for specific stated supports or services and that funding cannot be directed towards an alternate support or service.[26]

[24] NDIS, *Using your NDIS plan* at page 6.
[25] NDIS, *Using your NDIS plan* at page 7.
[26] NDIS, *Using your NDIS plan* at page 8.

(f) The participant can choose which provider provides the various supports for which funding has been approved by the NDIA. A participant's funding will be managed in one of three ways:

i) Self-management (the NDIA provides the funding to the participant and the participant then pays the providers directly).

ii) Plan-management (a Plan Manager will pay providers on behalf of the participant).

iii) NDIA-Managed (The NDIA pays providers directly, on behalf of the participant).

(g) Once a participant selects their providers, a service agreement must be entered into between the participant and the provider. The service agreement will identify, amongst other matters, the services to be provided and their respective prices.

69. The function served by participant plans and the strictures contained therein regarding the manner in which participants may use their funding are important features of the scheme for the purposes of these proceedings. We explain the reasons for this below.

5.2 The NDIS Pricing Guides

70. It is expected that, ultimately, supports funded by the NDIS will be provided to participants at prices set by the market, absent regulation by the NDIA. Currently, however, the NDIA has imposed price caps on a range of supports. This market intervention is intended to strike a balance between ensuring that participants are able to access the relevant supports at affordable prices whilst also incentivising providers to in fact offer the relevant services.[27]

[27] Productivity Commission, *National Disability Insurance Scheme (NDIS) Costs; Productivity Commission Study Report* (October 2017) at page 33.

71. In practice, the pricing caps also limit a provider's ability to recover additional, unfunded costs or to increase the margin between the costs incurred in providing the relevant supports and the price charged to participants in the scheme for those same supports.

72. A participant's plan will identify the support category(ies) for which they are entitled to funding. The NDIS recognises numerous specific supports and services, which are referred to as "line items". Providers claim payments by reference to those "line items".

73. As at the time of drafting this submission, the most recent price guide published by the NDIS applies from 1 July 2019 (**Price Guide**). A copy of the Price Guide is **attached** to this submission at **Annexure A.** The Price Guide explains the framework of the NDIS funding arrangements. It also deals specifically with certain issues that are of direct relevance to the Unions' claims, such as travel by employees between participants.

74. The Price Guide operates alongside a 'Support Catalogue', which also applied from 1 July 2019 (**Support Catalogue**). A copy of the Support Catalogue is **attached** to this submission at **Annexure B.** The Support Guide lists the various line items, identifies whether a price cap in relation to the relevant service applies and specifies the quantum of such price caps. In relation to most line items, the same price cap applies nationwide; however in respect of certain types of 'supports', a different price cap applies in the majority of the eastern states and territories (New South Wales, Queensland, the Australian Capital Territory and Victoria) as compared to the remaining states and territories (Western Australia, Northern Territory, South Australia and Tasmania). These price caps operate subject to other (higher) price caps applying to "remote" and "very remote" areas within the various states and territories.

75. On 30 March 2019, the Federal Government announced increases to price limits for therapy, attendant care and community participation [28], which commenced operation from 1 July 2019. The Support Catalogue reflects those price increases.

76. The increases are intended to absorb increases to the Award minimum wages as a result of the Commission's Annual Wage Review decision[29] and the operation of the Equal Remuneration Order[30]. Updated information on the NDIS' website relevantly states as follows:

> 4.5% [increase] for supports listed under Assistance with Daily Activities and Social and Community Participation. This is in response to the Fair Work Commission annual wage review decision and the Equal Remuneration Order.[31]

77. Subject to some specific substantive changes made to the availability of funding in certain circumstances (detailed below), the information published by the NDIA to date does not suggest that the assumptions underpinning the pricing arrangements have been changed or that any additional funding has been released to address broader concerns previously expressed by employers about the inadequacy of the funding to cover the various costs associated with providing the relevant services, including labour costs. We return to these matters at section 5.3 of this submission.

78. As at the time of drafting this submission, limited information appears to be publicly available about the changes made to the NDIS. To the extent that additional relevant information become available to us, we may seek to make further submissions in this regard.

[31] NDIS, *Price Guides and Information* (accessed 6 July 2019).

Substantive Changes to the Funding Arrangements

79. The following substantive changes have relevantly been made to the funding arrangements. These changes also commenced operation on 1 July 2019.

80. *First*, a 'Temporary Transformation Payment' (**TTP**) for attendant care and community support participation has been introduced: (our emphasis)

> From 1 July 2019, providers of attendant care and community and centre based activities have access to a higher support price limit through a Temporary Transformation Payment (TTP). The TTP is a conditional loading to assist providers with any costs associated in transitioning to the NDIS.
>
> In 2019–20, the TTP is set at 7.5 per cent on the relevant level 1 support item and will reduce by 1.5 per cent each year thereafter.
>
> The TTP support item number is the support base number with the addition of the letter T. These support item numbers are outlined in the NDIS Support Catalogue 2019–20, effective 1 July 2019.
>
> Providers will need to comply with the following requirements if they wish to claim the higher TTP price limits:
>
> - publish their service prices
> - list and keep up-to-date their business contact details in the Provider Finder
> - participate annually in an Agency-approved market benchmarking survey.
>
> The TTP is similar to the previously introduced Temporary Support of Overheads but is of a higher value and is in place for a longer period.
>
> The TSO will be obsolete as of 1 July 2019 and providers are encouraged to adopt the higher valued TTP and conditions for claiming.[32]

81. It must be noted that the TTP is a *temporary* payment, which is to be phased out by a 1.5% reduction each year. It substitutes the current Temporary Support for Overheads (**TSO**) of 2.5%, which was introduced from 1 July 2018 in light an Independent Pricing Review that was undertaken in 2017 – 2018 and a recommendation made by McKinsey and Company, who subsequently published a report regarding their review.

[32] NDIS, *Annual Price Review* (accessed 1 July 2019).

82. The NDIA published the following explanation of the TSO and the reason for implementing it:[33]

Recommendation	Recommendation detail	NDIA Approach
Recommendation #14 **Temporary support overhead (TSO)**	Implement temporary support for overheads in the form of a temporary increase in the price cap for standard intensity attendant care. Government should offer business planning support for large providers that would otherwise exit and create risk of supply shortages.	The IPR recognised the time and effort it takes for providers to establish efficient systems and process to support the roll out of the NDIS. The NDIA will now provide temporary financial relief for providers as they transition their business operations to accommodate the participant-led NDIS funding approach. In 2018/19 a new 2.5 per cent loading will support standard intensity attendant care supports. 'Attendant care' refers both to assistance with daily personal activities and assistance with community participation. The Temporary Support Overhead will remain partially in place, at 1.25 per cent, in 2019/20 rather than be removed after 12 months as originally recommended. While this TSO loading is in place, the NDIA will continue to work to deliver initiatives that will reduce provider administrative costs and deliver a better NDIS provider experience. Significant progress has been made, with the NDIA delivering provider portal enhancements, payments process improvements, and continuous development of helpful tools such as the provider finder.

83. As the submissions that follow will highlight, documentary material relied upon in these proceedings by the HSU highlights providers' concerns about the insufficient allowance previously made in the funding arrangements for corporate overheads. It remains unclear whether the new TTP will be sufficient to allay such concerns.

84. In this context, the implementation of the TTP cannot be relied upon to alleviate the potential impact of the Unions' claims on employers. The temporary payment does not mitigate the concerns we have raised in this regard.

[33] NDIS, *Independent Price Review Implementation 2018/19* (accessed 2 May 2019).

85. *Second*, changes have been made to the circumstances in which providers can claim costs associated with travel by their employees between participants: (our emphasis)

> If agreed by participants, providers can claim for travel up to 30 minutes between appointments within city areas (MMM 1–3) and up to 60 minutes in regional areas (MMM 4–5). This is an increase from 20 and 45 minutes, respectively.
>
> Before providers can charge for travel, they must first discuss and get agreement on any changes with the participant. Once an agreement is reached, providers will need to update the relevant service bookings to reflect the changes agreed.[34]

86. The Price Guide additionally provides the following qualification on a provider's ability to claim for travel costs: (our emphasis)

> Providers can only claim travel costs from a participant in respect of the delivery of a support item if … the provider is required to pay the worker delivering the support for the time they spent travelling as a result of the agreement under which the worker is employed; or the provider is a sole trader and is travelling from their usual place of work to or from the participant, or between participants.[35]

87. We intend to deal with the implications of the above funding arrangements in the context of the relevant union 'travel time' claims when we file our response to those proposals.

5.3 The Assumptions Underpinning the NDIS Pricing Arrangements

88. The NDIS' pricing arrangements are based on a 'Reasonable Cost Model' (**RCM**). That model is underpinned by various assumptions.

89. The HSU seeks to rely on a report published by the University of NSW[36] in June 2017 titled '*Reasonable, necessary and valued: Pricing disability services for quality support and decent jobs*' (**UNSW Report**). The report considers the assumptions underpinning the RCM for disability support work.

[34] NDIS, *Annual Price Review* (accessed 1 July 2019).

[35] NDIS, *NDIS Price Guide 2019-20, Valid from 1 July 2019* (July 2019) at page 14.

[36] University of NSW; Cortis, N, Macdonald F, Davidson B and Bentham E, *Reasonable, necessary and valued: Pricing disability services for quality support and decent jobs* (June 2017).

90. We here summarise the key assumptions considered in the UNSW Report and the difficulties arising from them. For the reasons subsequently explained, in our submission the pricing arrangements are based on problematic assumptions and as a result, absent significant further adjustments to the NDIS, employers will be unable to recover any additional employment costs associated with enhancements to employee entitlements through these proceedings. The material before the Commission rather demonstrates that the grant of the Unions' claims would serve only to compound the significant existing difficulties experienced by employers under the NDIS.

91. *First*, The RCM assumes that disability support workers are employed at level 2.3 under the 'Social and Community Services' stream of the Award. The NDIA has described this as the "average" level at which such employees are engaged under the Award.[37] This of itself assumes that employees may be classified at a higher level under the Award.

92. The UNSW Report identifies the following problems with the first assumption:

(a) The assumed classification level does not reflect the applicable classification level under the Award when regard is had to the type of work performed by disability support workers. [38] Employers have described Level 2, pay point 3 as the "entry level" classification.[39]

(b) There is no allowance made for above award wages; for example, those provided under an enterprise agreement.[40]

(c) It is resulting in an over-reliance on inexperienced members of staff, which undermines the quality of the service delivered to participants in the scheme.[41]

[37] UNSW Report at page 22.
[38] UNSW Report at page 29.
[39] UNSW Report at page 30.
[40] UNSW Report at page 29.
[41] UNSW Report at page 29.

93. The authors conclude:

> Based on a comparison with definitions in the [Award], and on employer and disability worker accounts, Level 2.3 is considered entry level, and under-classifies disability support workers. This component of the price is misaligned to the actual profile of the workforce, creating incentives to hire less qualified, competent and permanent staff. As expectations of the disability support workforce grow, and new skills demands arise from individualisation and quality and safeguarding measures (DSS, 2016), the assumption that workers will, on average, be employed at Level 2.3 provides a disincentive to support upskilling and career progression.[42]

94. In addition, we note the following further concerns.

95. Clause 13.3(a) of the Award deals with progression through pay points under the Award:

> **13.3 Progression**
>
> **(a)** At the end of each 12 months' continuous employment, an employee will be eligible for progression from one pay point to the next within a level if the employee has demonstrated competency and satisfactory performance over a minimum period of 12 months at each level within the level and:
>
> **(i)** the employee has acquired and satisfactorily used new or enhanced skills within the ambit of the classification, if required by the employer; or
>
> **(ii)** where an employer has adopted a staff development and performance appraisal scheme and has determined that the employee has demonstrated satisfactory performance for the prior 12 months' employment.

96. In addition to the general application of the classification structure of the Award, clause 13.3(a) contemplates that an employee will progress through the pay scales set by the Award if the prescribed criteria are satisfied. On its face, it is apparent that the assumption made for the purposes of the RCM may not hold in the circumstances of a particular employee just 12 months after they are classified at Level 2, pay point 3.

97. Further, clause 30 of the Award ('Higher duties') requires payment at a higher rate than the rate applying to the classification in which the employee is

[42] UNSW Report at pages 30 – 31.

ordinarily engaged in the prescribed circumstances. Its application again distorts the assumption made in the RCM.

98. *Second*, the RCM assumes that only 10% of a disability support worker's paid time will be spent on leave and that of their remaining 'on duty' time, only 5% will constitute time that is spent on duty but not with a participant or travelling between participants. This comes to just 3 minutes per hour.[43]

99. The authors of the report make the following important observation regarding the assumptions underpinning the RCM in relation to employee utilisation: (our emphasis)

> … There does not appear to be any publicly available data or detailed analysis about the extent to which these assumptions reflect the time demands on disability support workers arising from the range of essential tasks required of workers when they are not with participants, and whether administration, handover and communication between disability support workers, supervision, training, team meetings, breaks and other requirements are accounted for.[44]

100. They then go on to say as follows: (our emphasis)

> Evidence from disability workers and employers shows NDIS prices for disability support do not allow adequate time for quality support. For example, there is too little allowance made for legal requirements such as breaks for workers, and for essential tasks such as administration and coordination, or for the development of workers through training and time for supervision and peer support.
>
> …
>
> Analysis of the pricing model in the context of the [Award] shows prices do not adequately account for non-client facing time, including breaks. The pricing model assumes that just 3 minutes per hour of workers' time is not spent either with participants or travelling between them (Section 4.2). This allows for little more than the 10 minute paid tea break required every four hours under the [Award], leaving minimal time for other non-client facing activities.[45]

[43] UNSW report at page 22.

[44] UNSW report at pages 22 – 23.

[45] UNSW Report at page 31.

101. The report criticises the NDIS pricing arrangements for not including, or adequately including, a consideration of other duties or activities undertaken by employees in the course of their employment, including:

(a) Communication between employees for the purposes of handovers;[46]

(b) Attendance at staff / team meetings;[47]

(c) Completion of paperwork and other administrative duties, which have reportedly increased under the NDIS;[48]

(d) Training for new and existing employees;[49]

(e) Leave, noting that:

(i) The assumptions inadequately reflect annual leave entitlements to the extent that they do not taking into account the entitlement to an additional week of leave where an employee meets the definition of 'shiftworker' at clause 31.2 of the Award.[50]

(ii) The assumptions inadequately reflect long service leave entitlements in certain states and territories, including portable long service leave schemes.[51]

(iii) Time spent by employees travelling between clients, which the report describes as a "vexed" issue:[52]

102. In light of the above observations, the assumption made is clearly problematic and without proper foundation. To that end, the funding arrangements

[46] UNSW Report at page 34.
[47] UNSW Report at page 34.
[48] UNSW Report at page 35.
[49] UNSW Report at pages 40 – 43.
[50] UNSW Report at page 43.
[51] UNSW Report at pages 43 – 44.
[52] UNSW Report at 37.

inadequately account for time necessarily spent by employees taking breaks required by the Award and undertaking duties other than attending to clients.

103. *Third*, the RCM assumes that supervisors are employed at level 3.2 under the Award. The NDIA has described this as the "average" level at which employees who undertake program management and administration are engaged under the Award. It also assumes a ratio of one supervisor to 15 members of staff.[53]

104. The authors of the UNSW Report have identified that the ratio "[does] not appear to be based on existing practice or any model of good practice, and [does] not recognise how disability support work is organised"[54].

105. An important link is also draw between this assumption and the first assumption articulated above: (our emphasis)

> … If all workers were employed at SACS Level 2, as per the pricing level, the span would need to be much less than 1:15. However, as Level 2.3 is assumed to be the average for support workers (with some employed at higher levels and some lower), in order to make 1:15 acceptable, supervisors would need to be employed at SACS Level 4 or higher, rather than at Level 3.2 as assumed in the RCM. The [Award] stipulates that Level 3.2 staff 'supervise a limited number of lower classified employees'. The assumed level of supervisors, at Level 3.2, is below the commencement level of a graduate with a three-year degree (Level 3.3). Under the [Award] a characteristic of Level 4, is that positions may involve a 'substantial component of supervision'. This would more plausibly reflect supervision spans of 1:15, than the 'limited number' stipulated at Level 3. Further, larger supervisory spans (such as the 1:18 envisaged in future) require higher levels of responsibility and employment of supervisors at higher levels, and are poorly aligned with the description of responsibilities at Level 3.2.
>
> Empirical data shows supervisory spans of 1:15 and 1:18 are much higher than is common practice. Data from the survey of disability workers shows that among disability workers with supervisory responsibilities, 2 in 3 were supervising 8 or fewer staff (66% of supervisors). Only 16.4% of supervisors reported supervising over 14 staff, although the figure was higher for those working under NDIS (20%) compared with those who were not (12%). …[55]

[53] UNSW Report at page 23.

[54] UNSW Report at page 44.

[55] UNSW Report at page 44.

106. The authors go on to observe as follows: (our emphasis)

> These data underline how the pricing model has assumed a larger supervision span than accords with the [Award] classifications or than is common practice. Supervision of 15 staff as per the pricing model would entail significant (and unrealistic) change to the design of supervisory roles, and would intensify supervisory workloads for around 83% of supervisors in the survey.[56]

107. Clearly, the supervisory ratios and classification levels upon which the pricing assumptions are made are unrealistic and do not reflect common practice. To the extent that employers cannot operate in accordance with those assumptions, the resulting additional employment costs are not provided for in the funding and accordingly, must be absorbed by employers.

108. *Fourth,* the authors state that it is "common practice" to include a loading of 25 – 30% for staff on-costs. They observe however that "it is not clear from public documents precisely how this element of the RCM was calculated and which other costs, if any, were included, making it difficult to assess its adequacy"[57]. They go on to observe that in any event, "the actual amounts in the RCM … are inevitably much less than what is necessary, because on-costs are a percentage mark-up on direct wage costs, which, as shown above, are significantly under-stated, based on the under-classification of workers and supervisors, and under-estimates of the time required to provide disability support …"[58].

109. We again express doubt as to the reliability of this assumption.

110. *Fifth*, the UNSW Report also documents concerns about the allowance made in the pricing arrangements for corporate overheads and return on capital.[59] In particular, in respect of corporate overheads, the authors state:

> Low allowance for overhead expenses in contracts with governments (or donors) is a problem for not-for-profit financing, as it feeds a cycle of under-investment (Lecy & Searing, 2015). Lecy and Searing (2015) identify how the excessive pursuit of

[56] UNSW Report at page 45.

[57] UNSW Report at page 23.

[58] UNSW Report at page 47.

[59] UNSW Report at pages 23 – 24 and 47 – 51.

administrative efficiency has caused a steady, self-perpetuating practice of cost-cutting in organisations, which in turn harms not-for-profits and their service users. Reductions in overheads can cause a myriad of behaviours which are detrimental to the long run productive capacity of not-for-profits, including cutting expenses relating to personnel development. Low overheads also place organisations at risk of financial shock, and have long term consequences by depleting organisational capacity, through starving organisations of funds to invest in skilled and efficient management, and training and development. Low overheads result in burned out staff, under-maintained capital, out of date programs, and other manifestations of poor quality.

It is difficult to assess the appropriateness of NDIS prices for corporate overheads, given the diversity of providers' operational models. Indeed, Lecy and Searing (2015) caution against a simple rule of thumb for all not-for-profits, and instead show that organisations have different levels of overheads depending on their size, subsector and stage of growth. However, it is pertinent that disability service providers report that NDIS pricing arrangements do not adequately cover overheads. One CEO explained, how under NDIS, there is:

> Very little face to face time, eg for supervision, meetings and training and it is inadequate and we will have to reduce all 3. We will be cutting back on our regular 3 full training days a year. We will initially be putting people on casual now as we will be unable to determine ongoing employment. The pricing may cause viability issues for us and is a poor outcome for our staff. (CEO of medium sized metropolitan organisation)

…

As discussed in Section 5.2, workers also identified the loss of paid time for training as something that had occurred with the NDIS with negative impacts on workers' ability to their jobs, and negative impacts on job satisfaction as they observed declining capacity and service quality. Workers we interviewed had experienced their organisations significantly cutting back on support for induction and training of support workers, and for supervision and team meetings. …

…

Some employers also pointed out how under NDIS, organisational overheads were higher, given both the need to spend time negotiating with service users, and the high costs of working with the NDIA:

> NDIS requires both of our organisation and our staff to be more flexible in terms of meeting the more frequently changing needs and demands of clients. It will also increase our administrative cost because our staff members will spend more time in negotiating with clients before they use our services and after they discharge from our services. (Human Resource Manager in large metropolitan service)
>
> At the moment, we still have great confusion among some of our clients and their plans. Even so, there are plans in place, they cannot always be accessed for the service we provide or the client has used up funds in one category but then has difficulties to access another part. To ring NDIA it takes often up to a hour on hold to get to talk to someone, who then in turn cannot always help with a solution. For a small organisation like us NDIS is nearly not worth the

> hassle. We have to pay our staff, but have delays in getting paid. We have one admin staff, who cannot spent hours trying to solve all the issues. Fees do not cover cost of the professional provider and admin cost. We find NDIS very heavy on administrative cost, which is hard to manage for a small organisation like us. We hope with time this gap will significantly reduce and make servicing NDIS clients more viable for us. (CEO of small non-metropolitan organisation)[60]

111. Earlier in this submission we have addressed the newly introduced TTP, which would appear to have been introduced in light of concerns such as those described above.

112. The price cap for relevant services may be increased by virtue of the following factors:

(a) The geographical location of the service (higher price caps apply in regional parts of Australia);

(b) The intensity or complexity of the participant's needs;

(c) The time when the support is provided; and

(d) The number of participants being supported.

113. In relation to the intensity or complexity of the participant's needs (paragraph (b) above), the UNSW Report states: (our emphasis)

> … the evidence … [shows] the loading for intensity is far too limited, as it fails to take account of the range and cost of strategies that are essential to assist participants with complex support needs, in particular the need for more senior workers and the frequent need for more than one worker to work with participants. The loading only takes (inadequate) account of additional non-client time required of workers, with a 5% reduction allowed from the proportion assumed in the base hourly rate. Under current arrangements, the higher rate of supports can be considered where assistance to manage challenging behaviour is required at least once per shift or where continual active support is required, but it is the case that some participants have more intermittent complex support needs. …[61]

[60] UNSW Report at pages 47 – 50.

[61] UNSW Report at page 51.

114. In relation to the time at which a support is provided (paragraph (c) above), the UNSW Report states:

> NDIS prices for a number of service types requiring disability support workers vary by the time of day and/or the day when the service is provided. Depending on the particular service type, there are up to six periods for which prices may be set, namely (i) daytime (6am – 8pm) (ii) weekday evening (8pm – 12am) (iii) Saturday (iv) Sunday (v) public holiday (not used for group programs), and (vi) overnight. The reasons for differences in process between these periods are not completely apparent but they appear to reflect the shift loadings and penalty rates in the [Award] at the time the RCM was developed.[62]

115. It appears that the assumptions have some regard to additional amounts payable under the Award for work performed on weekends and public holidays, however it is unclear whether the pricing arrangements account for the penalty rates payable under the Award in full. For example, it is not apparent whether the labour component of the hourly rate is doubled for the purposes of the prices applying to Sundays or whether providers are required to partially absorb the additional labour costs incurred on those days.

116. Importantly, we have not been able to identify any information that suggests that the following employee entitlements under the Award are accounted for or form part of the NDIA's calculations when setting the price caps for the relevant range of services:

(a) Overtime rates, including where they are payable:

(i) For work performed outside an employee's ordinary hours in accordance with clause 28.1 of the Award;

(ii) For work performed outside the hours stipulated by clause 25.9(a)(i) of the Award on Monday – Friday excursions;[63] and

[62] UNSW Report at page 26.

[63] Clause 25.9(a) of the Award.

(iii) For a minimum of two hours because an employee has been recalled to work overtime after leaving an employer's or client's premises.

(b) Payment at double time for work performed outside the maximum 12 hour span of a broken shift.[64]

(c) Payment at double time where an employee is instructed to resume or continue work without having had 10 consecutive hours off duty as required by clause 28.3(a).[65]

(d) Shift allowances payable except between 8pm and midnight.[66]

(e) Any monetary allowances[67] including the:

(i) Clothing and equipment allowance;

(ii) Meal allowance;

(iii) First aid allowance;

(iv) Travelling, transport and fares allowance;

(v) Telephone allowance;

(vi) Heat allowance;

(vii) Boarding and lodging allowance; or

(viii) On call allowance.

[64] Clause 25.6(c) of the Award.
[65] Clause 28.3(b) of the Award.
[66] Clause 29 of the Award.
[67] Clause 20 of the Award.

(f) Penalty rates payable where an employee is required to work during a meal break.[68]

117. The pricing arrangements do not enable employers to recover the full employment costs incurred for the services provided to participants in the NDIS.

118. The UNSW Report reveals that there are major problems with the RCM and as a result, the pricing arrangements of the NDIS. The evidence cited in the report demonstrates that "[o]verwhelmingly, … NDIS prices are not covering the full costs of disability service provision or supporting quality services".

119. Importantly for the purposes of these proceedings:

> Overall, the data shows how provider organisations are finding it difficult to be 'good employers' and to meet their industrial obligations and cover required pay rates and conditions. Many are reconsidering whether they are likely to be able to provide services in viable ways in the future. …[69]

120. We shortly return to the relevance of the fundamental issues posed by the pricing model to the proceedings here before the Commission.

5.4 Critique of the NDIS

121. The NDIS has been the subject of various reviews and reports since its implementation, including:

(a) The UNSW Report (published in June 2017).

(b) The PC's report titled '*National Disability Insurance Scheme (NDIS) Costs; Productivity Commission Study Report*' (published in October 2017) (**PC Report**).

[68] Clause 27.1(b) of the Award.

[69] UNSW Report at page 54.

(c) McKinsey and Company published a report[70] (**McKinsey Report**) following an Independent Pricing Review (**IPR**) of the NDIS in February 2018.

122. The aforementioned publications highlight the various complexities, difficulties and deficiencies that have emerged since the operation of the NDIS. We here summarise the salient points made in those reports that support the case advanced by Ai Group in opposition to the Unions' claims.

The UNSW Report

123. We have earlier summarised the UNSW Report's treatment of the problematic assumptions underpinning the NDIS pricing arrangements in relation to disability support work.

124. The UNSW Report draws, in part, on a survey on CEOs from 398 not-for-profit community service providers in NSW, conducted in February 2017.[71]

125. The survey results are set out at section 2.2 of the UNSW Report. They reveal that:

(a) Two-thirds of CEO's disagreed with the proposition that "NDIS prices enable us to meet our industrial obligations". Only 14% agreed. The rest were neutral or unsure.[72]

(b) Two-thirds of CEO's disagreed with the proposition that "NDIS prices allow us to pay rates necessary to attract and retain quality support workers". Only 10.9% agreed. The rest were neutral or unsure.[73]

[70] McKinsey & Company, *Independent Pricing Review, National Disability Insurance Agency, Final Report* (February 2018).

[71] UNSW Report at page 9.

[72] UNSW Report at page 15.

[73] UNSW Report at page 15.

126. The UNSW Report identifies that it has been argued on behalf of employers in the disability services sector that the prices set by the NDIA "are too low to cover providers' overheads and the margin necessary to cover future costs, and, as such, the pricing mechanism precludes existing service providers from developing the additional service capacity required to meet demand".[74]

127. The following responses received to the open-ended part of the survey are also telling:

(a) "Covering travel cost is a major concern as most of the clients we support live in rural remote areas. Without adequate funding to cover travel, our service may not be able to continue to provide support to clients in these areas. There are no other services in some of the areas we provide support in." (CEO of medium sized non-metropolitan organisation)[75]

(b) "The hourly rate is unsustainable and does not allow funds for training or CPD or staff meetings and supervision. This all is covered by the org as a commitment to maintaining quality. Hours cannot be guaranteed so we look to a casual workforce in regional areas, we cannot meet demand with staffing and are constantly short staffed. Travel is a nightmare in regional areas with agencies needing to pay mileage as well as travel time." (CEO of medium sized non-metropolitan based)[76]

(c) "The lack of alignment between how NDIS is funded and employers obligations under the Modern award (particularly in NSW with higher rates under transitional arrangements) make it incredibly difficult to attract and retain quality staff and operate at a level of efficiency and

[74] UNSW Report at page 14.

[75] UNSW Report at page 16.

[76] UNSW Report at pages 16 – 17.

quality that is sustainable". (Human resource manager in very large multi-state organisation)[77]

128. The survey results demonstrate that the current NDIS funding is placing employers under immense financial pressure. The funding appears inadequate to cover the costs associated with providing disability services. Indeed, the majority of CEOs surveyed considered that the funding arrangements are deficient to such an extent that they do not enable an employer to meet their "industrial obligations".

129. The survey results, coupled with the analysis presented by the authors of the report, lay bare the serious inadequacies of the NDIS and the very inherent limitation they place on employers to meet their legal obligations and ensure the quality and continuance of their services to persons with a disability.

The PC Report

130. In 2017, the PC undertook a review of the NDIS, for the purposes of informing the final design of the full scheme.[78]

131. The PC highlighted the need for the number of employers and employees in the industry to grow rapidly in order to keep pace with funding increases and demand for services.[79]

132. The PC Report documents the detrimental impact of the NDIS' pricing arrangements on providers and in turn, the market:

> The Commission heard from many stakeholders that the NDIA's pricing methodology has, in some cases, led to perverse incentives, poor participant outcomes and hindered market development – especially for supports required by participants with complex needs. …[80]

[77] UNSW Report at page 17.

[78] PC Report at page 5.

[79] PC Report at page 12.

[80] PC Report at page 33.

133. It made the following finding in this respect:

> FINDING 8.1
>
> The National Disability Insurance Agency's approach to setting price caps to date has hindered market development by discouraging the provision of some disability supports. In some cases, it has led to poor participant outcomes, especially for those with complex needs. The benefits of the National Disability Insurance Scheme will not be fully realised if the Agency continues with its current pricing approach.[81]

134. The submissions and evidence that were put before the PC are consistent with the UNSW Report in various respects, including supporting the following propositions:

(a) Price caps imposed in relation to services provided to participants with complex needs are inadequate and as a result, people with such needs are "struggling to find providers willing and able to provide services to them".[82]

(b) Many providers presented anecdotal evidence of price caps for attendant care being too low.[83]

135. A survey presented to the PC by National Disability Services (a body representing disability service organisations) showed that only 55% of disability support organisations reported making a profit in 2015 – 2016 and 40% of respondents budgeted to make a profit in 2016 – 2017.[84]

136. The PC observed that the uncertainty and low confidence amongst providers in the sector was not conducive to building the capacity of the market. It expressed a concern that there is "a serious risk that both existing and potential disability support providers will choose to provide their services elsewhere".[85]

[81] PC Report at page 304.
[82] PC Report at pages 297 – 298.
[83] PC Report at page 300.
[84] PC Report at page 303.
[85] PC Report at page 304.

137. The PC Report demonstrates that a multitude of consequences have flowed from deficiencies in the NDIS and the implications they have for providers. Importantly, the PC Report highlights the extent to which providers are struggling to profit under the scheme and the long-term implications of this for the market.

138. It is trite to observe that the imposition of additional employment costs in such circumstances will only serve to exacerbate the thin markets referred to by the PC, which have resulted from providers failing to invest in their organisation to build its capacity and from providers opting to not provide the relevant services at all.

The McKinsey Report

139. In June 2017, the Board of the NDIA commissioned McKinsey & Company to undertake the IPR and investigate the appropriateness of the NDIA's pricing.[86] The review included "extensive consultation" with stakeholders such as providers and peak bodies.[87] The process of the IPR is set out at pages 11 – 12 of the McKinsey Report.

140. The following issues of relevance were raised by stakeholders during the consultation process:

    (a) Current loadings for complex participants do not fully reflect the additional costs of serving these participants, such as higher wages for a more skilled workforce, additional time required for training and reporting, and higher supervision ratios.[88]

[86] McKinsey Report at page 3.

[87] McKinsey Report at page 4.

[88] McKinsey Report at page 4.

(b) Current travel allowances do not adequately cover the costs of provider travel and participant transport in regional areas and isolated communities.[89]

(c) The assumptions underpinning the pricing model are flawed, for reasons similar to those identified in the UNSW Report.[90]

141. The following important key findings were made:

(a) There are certain markets for which undersupply is a risk in the future:[91]

> Providers raised issues about price levels inhibiting the growth and development of a skilled workforce. Some providers believe there is a risk of supply shortage as demand increases towards Full Scheme, and there are anecdotal reports that some providers are choosing to reduce their services or not grow beyond their existing service levels due to pricing constraints. Some providers believe there is also potential that new participants and participants with complex needs could have difficulty finding a service provider if the market is not growing at the necessary rate to meet demand. …[92]

(b) A "substantial number" of providers were unable to operate profitably at the applicable pricing caps.[93] The following extract from the McKinsey Report is particularly relevant:

> The financial sustainability of providers in the NDIS is critical to ensuring ongoing supply of supports to participants. <u>While providers may be able to absorb losses for a period, operating in the NDIS needs to be attractive in the long term for enough providers to meet the growth in demand.</u>[94]

142. The McKinsey Report demonstrates that the NDIS has placed a substantial number of employers in an unsustainable position. Those who are unable to profit under the scheme are in turn unable to increase their capacity to provide their services and may ultimately choose not to continue to provide those services at all. The grant of the Unions claims, in circumstances where no

[89] McKinsey Report at page 4.

[90] McKinsey Report at pages 14 – 15.

[91] McKinsey Report at page 5.

[92] McKinsey Report at page 17.

[93] McKinsey Report at pages 5 and 27.

[94] McKinsey Report at page 24.

funding has been made available by the NDIS to cover the additional employment costs, would serve only to compound the difficulties currently faced by employers.

5.4 The Relevance of the NDIS to these Proceedings

143. The inherent connection between the Award and government funding has long been accepted by the Commission.

144. For example, in the context of proceedings concerning the ERO, the Full Bench stated as follows: (our emphasis)

> **[270]** There is considerable evidence in this matter and widespread acceptance by the parties that a major reason for the actual wage rates in the SACS industry is the level of funding provided by governments. This situation appears to be similar across the industry, even in parts which are less female dominated than others such as community legal work. …
>
> **[271]** We deal now with funding so far as it relates to the possible effects on the industry if the application is granted in whole or in part. Opponents of the claim and supporters alike all agreed that if remuneration is increased in the SACS industry as a result of these proceedings, employment levels and services will be affected unless the additional costs are fully met by government. It was also suggested that there is a significant part of the industry which is not dependent on government funding at the moment and the effect on employers in that part should also be taken into account. We were also told that a number of employers fund their operations through a combination of government funding and reserves, as well as income from philanthropy.
>
> **[272]** We accept that there is widespread reliance on government funding and that because of the pervasive influence of funding models any significant increase in remuneration which is not met by increased funding would cause serious difficulties for employers, with potential negative effects on employment and service provision.[95]

[95] *Equal Remuneration Case* [2011] FWAFB 2700 at [270] – [272].

145. When the tribunal ultimately decided to make the ERO, the Commonwealth Government's commitment to increase funding to meet the additional employments costs that would flow from the order was a central consideration that led the majority to conclude that the order jointly proposed by the relevant parties and the Commonwealth should be made: (our emphasis)

> **[4]** We made provision for further submissions and encouraged the parties to hold discussions. … On 17 November 2011, the applicants and the Commonwealth lodged a Joint Submission setting out a number of agreed matters. In particular, the submission contained an agreed outcome, subject to some matters of detail.
>
> …
>
> **[14]** The Commonwealth drew our attention to the Prime Minister's announcement on 10 November 2011 that the Australian Government would provide over $2 billion during the six-year implementation period. It is committed to fund its share of the programs which it funds directly and also in proportion its share of the joint state/federal funding through specific purpose payments and national partnership payments. While the way in which those funding commitments will be applied will be the subject of discussions between relevant parties, it was made clear in submissions that the Australian Government is committed to meeting its share of the burden that will flow from any decision that is given in this case and there is no suggestion of a limit at the figure of $2 billion.
>
> …
>
> **[65]** The Commonwealth has given a commitment to fund its share of the increased costs arising from the proposals. While some state governments are opposed, no government has indicated it will be unable to fund its share. On the other hand there are significant risks which need to be considered. For example, there will be an impact on employers in relation to programmes and activities which are not government funded. As a number of opponents of the proposals pointed out, any order we make has the potential to affect employment levels and service provision where costs cannot be recovered. We are also concerned about the effect on the finances of a number of the states. We have decided that in the circumstances these risks can be satisfactorily addressed by an extension to the length of the implementation period.[96]

146. Whilst the funding model that now applies in the sector is different to that which applied at the time that the ERO was made, the tribunal's observations regarding the reliance of the sector on government funding and the adverse implications that would flow for employers if it were to increase employee entitlements in the absence of funding increases, remain apposite.

[96] *Equal Remuneration Order* [2012] FWAFB 1000 at [4], [14] and [65].

147. In 2017, a Full Bench of the Commission made findings about the operation of the NDIS in the context of a claim made by ABI and the NSW Business Chamber to vary the part-time provisions of the Award. Relevantly, the Commission found that:

> **[630]** … In pricing items, the NDIA has been aggressive in trying to set the absolute minimal cost so as to control the cost to government of the NDIS as a whole. …[97]

148. Whilst the Commission dismissed the claim, its reasoning involved a detailed consideration of the evidence before it regarding the NDIS.[98] The relevance of the NDIS was affirmed in the Commission's concluding paragraph in relation to the proposal:

> **[643]** The ABI's application is therefore rejected. However we emphasise that the conclusions we have reached about it are made at a time when the NDIS is still a long way from full implementation and are therefore necessarily speculative to a degree. The issues raised by the ABI's application may require further review if, after the NDIS has been fully implemented, a different picture emerges.[99]

149. Consistent with the approach previously taken by the Commission and its predecessor when determining claims to enhance terms and conditions in the Award, in our submission, the Commission should in these proceedings have regard to the funding arrangements applying to employers covered by the Award. This is because the funding arrangements under the NDIS currently impose limitations on the price that can be charged by providers to their clients for their services. This places an inherent limitation on the capacity of employers to recover any additional costs flowing from variations to the Award. Additionally, it appears that the terms of approved participant plans place further limitations on the extent to which employers are able to claim additional amounts (for example, because plans limit the purpose or "support" for which certain funding can be used).

[97] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [630].

[98] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [636] – [642].

[99] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [643].

150. Furthermore, the material relied upon by the Unions in these proceedings demonstrates that:

(a) The current funding levels are insufficient to cover the costs associated with providing disability services. The analysis contained in the UNSW Report and the feedback received from surveyed CEOs further demonstrates that the funding model does not take adequate account of the terms and conditions currently stipulated in the Award and that employers, as a result, consider that the funding is insufficient to cover the relevant costs.

(b) A substantial number of employers are unable to make a profit under the current funding arrangements.

(c) The limited funding is having adverse consequences for the extent and quality of services provided by employers. This in turn has consequences for employment opportunities.

(d) The limited funding is having adverse consequences for the extent to which employers are able to provide career progression and training to their employees. This again has consequences for service delivery.

151. Whilst increases to the NDIS funding have recently been implemented, the information available about those increases does not suggest that they are of a sufficient magnitude to address employers' existing difficulties with operating under the scheme. There is nothing to suggest that the fundamental problems identified in the UNSW Report with the RCM will be alleviated by the funding increases. Further and in any event, the increases are certainly not sufficient to cover the additional costs that would flow from the grant of the Unions' claims; nor is there any indication that such funding would necessarily be released by the NDIA if the claims were nonetheless granted.

152. In our submission, the grant of the Unions' claims will serve only to exacerbate the existing concerns voiced by employers about their viability under the scheme and their ability to continue to provide services to persons with a

disability. If the Award were varied as sought by the Unions, employers will be faced with substantial additional costs for which there is no funding and no scope to recover from those who need and access their services.

153. The operation of the NDIS and the constraints it places on employers covered by the Award should, in our respectful submission, form the cornerstone of the Commission's consideration of the impact of the Unions claims on employers. Such a consideration necessarily leads to the inevitable conclusion that employers cannot and should not be saddled with the with the additional employee entitlements sought by the Unions in these proceedings.

6. MINIMUM ENGAGEMENT PERIODS

154. The HSU is seeking the deletion of clause 10.4(c), which is in the following terms:

> **(c)** Casual employees will be paid the following minimum number of hours, at the appropriate rate, for each engagement:
>
> **(i)** social and community services employees except when undertaking disability services work—3 hours;
>
> **(ii)** home care employees—1 hour; or
>
> **(iii)** all other employees—2 hours.

155. The HSU also seeks the insertion of a new clause 10.6:

> **10.6** The minimum engagement for employees under this award will be 3 hours.

156. The variations would have the effect of:

(a) Increasing the minimum engagement period for casual employees performing home care, disability services work, crisis accommodation work and family day care, to three hours.

(b) Introducing a minimum engagement period for full-time and part-time employees of 3 hours. At present, the Award does not stipulate a minimum engagement period for such employees.

The HSU's Case

157. The HSU has advanced its case on the basis of the following propositions:

(a) It might reasonably be concluded that the expense and inconvenience associated with each shift is greatest in respect of home care and disability support work. Despite this, casual home care and disability services workers are guaranteed the shortest minimum engagement periods.

(b) Changes to the industry (marketisation of service delivery, “proliferation” of part-time employment and “employment on decreased hours”) warrant a review of the current minimum engagement periods.

(c) The Award requirement for an employer and part-time employee to reach agreement at the time of engagement is not complied with, is ineffectual and/or does not apply due to the operation of enterprise agreements.

(d) The nature of the work performed by disability support workers and home care employees, which involves travelling between different locations, warrants particular consideration of minimum engagement periods in the Award.

(e) It is commonplace for employees to be rostered to perform “very short shifts … interspersed with unpaid breaks”, during which employees travel between clients.

158. We note at the outset that the propositions summarised at paragraphs (a), (d) and (e) above are inherently connected with the ‘travel time’ claims advanced by the Unions and the material filed in support of those claims, including the proposed clause 25.6(d) by the HSU. We therefore intend to deal with them when we file our submissions in respect of the travel time claims.

Prior Consideration Given to the Relevant Issues

The Part 10A Award Modernisation Process

159. When the Award was made, the AIRC made the following comments about the casual minimum engagement period: (our emphasis)

> **[80]** We have decided to make a modern award based on the terms of the exposure draft but with a number of alterations some of which we deal with below.
>
> …
>
> **[82]** We mention some of the significant changes from the terms of the exposure draft. …
>
> **[83]** The minimum period of engagement for casuals has been altered to take into account the different sectors of this industry. …[100]

160. As a consequence, the Award stipulated (and continues to stipulates) differentiating casual minimum engagement periods for different groups of employees by reference to the nature of the work they perform.

161. It is clear that the AIRC gave express consideration to the appropriate minimum engagement period that should apply to casual employees, having regard to the relevant pre-modern awards that operated in the different sectors of the industry. The HSU's case has not proffered any cogent reasons for departing from this decision.

[100] *Re Award Modernisation* [2009] AIRCFB 945 at [80] – [83].

The Transitional Review

162. During the transitional or two-year award review, the ASU sought to vary the Award to introduce a requirement that a part-time employee be paid for a minimum of three hours for each engagement.[101] This proposal was accompanied by a claim to introduce a new clause that required an employer and part-time employee to reach agreement at the time of engagement as to the employee's hours of work:

> **[16]** The proposed clause 10.3(d) seeks the introduction of a requirement to agree on part-time engagement details, and to record them in writing, before commencing employment as follows:
>
> "(d) Before commencing employment, the employer and the employee will agree in writing on a regular pattern of work including the number of hours to be worked each week, the days of the week the employee will work and the starting and finishing times each day. Any agreed variation to the regular pattern of work will be recorded in writing."[102]

163. Whilst the Commission granted the latter union claim, the proposed introduction of a minimum payment for part-time employees was refused:

> **[19]** It is clear that in common with many other awards, the AIRC deliberately did not insert a minimum engagement period for part-timers in this award. It was obviously influenced by the variable position under predecessor awards. In my view the introduction of a minimum engagement period for part-time employees as part of this review would require a strong case that evaluated the impacts on employees and employers across the various sectors covered by the award. The application fails to meet this standard.
>
> **[20]** That part of the application seeking a requirement that part-time arrangements be agreed in writing prior to commencing employment is a common award provision. It requires employees to be given clear information as to the basis of their employment when they are engaged. I consider that the case for such a clause is strong, especially when there is no award minimum engagement period. In my view the concerns of the employers can be allayed by standard procedures that comply with the clause, such as those that have been developed for employers covered by similar provisions in other awards. I will make this change prospective to allow employers to prepare for the change. If significant practical problems emerge an appropriate variation can be sought. I will insert the clause sought by the ASU with effect from 1 August 2013.[103]

[101] *Re Australian Municipal, Administrative, Clerical and Services Union* [2013] FWC 4141 at [15].

[102] *Re Australian Municipal, Administrative, Clerical and Services Union* [2013] FWC 4141 at [16].

[103] *Re Australian Municipal, Administrative, Clerical and Services Union* [2013] FWC 4141 at [19] – [20].

164. Relevantly, the decision:

(a) Observes that the absence of a part-time minimum engagement period in the Award was clearly the product of a deliberate decision made by the AIRC when the Award was made. It was not the result of any inadvertence or a failure to consider the issue during that process.

(b) Resulted in the Commission introducing a requirement that agreement be reached as to a part-time employee's hours at the time of engagement (now found at clause 10.3(c) of the Award). This evidently influenced the Commission's decision to not introduce a minimum engagement period for part-time employees. The Commission observed that the introduction of the requirement for agreement as to the employee's hours further negated the justification for a minimum engagement period.

165. The second matter is particularly relevant in these proceedings and as we shortly come to, a more recent Commission decision dealing with minimum engagement periods for part-time employees reached a similar conclusion about the justification for part-time minimum engagement periods where an award requires that agreement be reached about the employee's hours of work.

166. For completeness we note that whilst an appeal[104] of the aforementioned decision was filed by the ASU, the grounds of appeal did not relate to the Commission's decision concerning the aforementioned issues.

[104] *Re Australian Municipal, Administrative, Clerical and Services Union* [2014] FWCFB 379.

The Casual and Part-time Common Issues Proceedings

167. Earlier in the current award review, the ACTU advanced a claim to introduce four hour minimum engagement periods for casual and part-time employees in the vast majority of awards, including the Award. The claim, if it had been successful, would have resulted in:

(a) An increase to the casual minimum engagement periods at clause 10.4(c) of the Award such that all such employees would have been entitled to a four hour minimum engagement; and

(b) The introduction of a minimum engagement period for part-time employees of four hours.

168. In dealing with the ACTU's claim, the Commission considered the rationale underpinning minimum engagement periods in the awards system: (our emphasis)

> **[399]** Minimum engagement periods in awards have developed in an ad hoc fashion rather than having any clear founding in a set of general principles. However their fundamental rationale has essentially been to ensure that the employee receives a sufficient amount of work, and income, for each attendance at the workplace to justify the expense and inconvenience associated with that attendance by way of transport time and cost, work clothing expenses, childcare expenses and the like. An employment arrangement may become exploitative if the income provided for the employee's labour is, because of very short engagement periods, rendered negligible by the time and cost required to attend the employment. Minimum engagement periods are also important in respect of the incentives for persons to enter the labour market to take advantage of casual and part-time employment opportunities (and thus engage the consideration in paragraph (c) of the modern awards objective in s.134).
>
> …
>
> **[403]** These decisions confirm the fundamental rationale for minimum engagement periods which we have earlier identified. The *Victorian Employers' Chamber of Commerce and Industry* decision also adds that, in respect of casual employees, particular prejudice may arise where a shift is ended after a short period with little or no notice or where the casual employee agrees to perform unfairly short shifts in order to ensure that the employer continues to allocate work to them in the future. However the decisions also identify that, in establishing award minimum engagement requirements, there are a number of important countervailing considerations that need to be taken into account:

- longer minimum engagement periods may prejudice those persons who wish to and can only work for short periods of time because of family, study or other commitments, or because they have a disability;

- the need for and length of a minimum engagement period may vary from industry to industry, having regard to differences such as in rostering practices and whether there are broken shifts;

- an excessive minimum engagement period may cause employers to determine that it is not commercially viable to offer casual engagements or part-time work, which may prejudice those who desire or need such work; and

- a minimum daily engagement period for part-time employees might not need to be as long as for casual employees, because part-time employees are likely to enjoy the greater security of a guaranteed number of weekly hours of work.

[404] Modern awards contain a range of different minimum daily engagement periods for casual and part-time employees, and some contain no minimum at all, such as the VMRSR Award. These provisions generally derive from provisions in pre-reform awards which were in most cases likely formulated by the agreement of the award parties. It can be presumed that in doing so the parties took into account the circumstances of the industries in which they operated that prevailed at the time, but beyond this it is not possible to generalise about the basis upon which such provisions were struck. In particular modern awards, it is clear that that the minimum engagement periods were intended to meet the peculiar circumstances of special types of work or workers. For example, in clause 10.5(d) of the Bus Award, the minimum engagement period for casuals is 3 hours, but for school bus drivers it is 2 hours per engagement; and in clause 12.2 of the Higher Education Award the minimum engagement period for casuals is 3 hours, except that for undergraduate students who are attending the university as a student on the day they work, or for employees with a primary occupation elsewhere, it is one hour.[105]

169. As highlighted by the Full Bench in the above extract, the purpose of a minimum engagement period is not directed only to the interests of the relevant group of employees. Rather, minimum engagement periods must strike a balance between the relevant group of employees and the operational and rostering conditions that prevail in a particular industry. Put simply, the nature of the work may be such that a minimum engagement period of a certain duration may be entirely impracticable by virtue of the simple fact that there may be insufficient work required to be undertaken to engage an employee for the stipulated minimum period of time, or the work may be such

[105] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [399] and [403] – [404].

that it necessarily needs to be undertaken over several shorter segments of time and cannot be performed over a longer consecutive shift.

170. Ai Group respectfully relies upon the various "countervailing considerations" identified by the Full Bench and submits that they are particularly relevant in the context of the HSU's claim. As is borne out in the evidence filed by the Unions, employees are often required to perform work which, by its very nature, must be completed over a limited period of time. For example:

(a) Heather Waddell, a part-time community care worker, says:

> 4. As a Community Care worker, my role involves assisting clients with all their daily activities of living, including socialisation and personal care and home maintenance. This includes showering, dressing, administering medication from Webster packs, house cleaning and cooking shopping and caring for their pets, leisure activities and community engagement.
>
> …
>
> 21. The minimum client visit at Hammond Care is half an hour. Often we are rostered on back to back, one client to the next, because each client visit is short.[106]

(b) Thelma Thames, a part-time support worker, says: (our emphasis)

> 12. In the past, I have had some half hour shifts. I haven't had one in a while, but some employees do get these. Usually these are at the end of a day to help a client with meal preparation or their medications.[107]

171. Much of the work performed by employees providing home care and disability services work involves assisting clients with specific tasks such as showering, preparing and/or consuming a meal, taking medication, cleaning and so on. These are tasks which, in many instances, necessarily only require a limited period of time to complete. In the context of the NDIS, the question is not simply whether the employer can allocate or roster work differently so as to enable an employee to work a longer shift. The duration of the employee's engagement is determined entirely by the wishes of the client; including both

[106] Statement of Heather Waddell dated 15 February 2019 at paragraphs 4 and 21.

[107] Statement of Thelma Thames dated 15 February 2019 at paragraph 12.

the nature of the assistance they request and the timing of the delivery of that assistance (that is, a client may request two types of assistance be provided on a particular day, but they be provided in two separate instances – once in the morning and another in the afternoon).

172. These difficulties are further compounded by the extent to which multiple clients of an employer may request assistance simultaneously (for example, we understand there to be a particularly high demand for employers' services in the morning when clients typically need assistance with showering, having breakfast etc). An employer can satisfy such service demands only by engaging a larger number of employees, each of whom are rostered to work concurrently. This may result in a situation where those employees are each requested to work shorter engagements rather than arranging the work such that it can be performed by a smaller number of employees as a series of consecutive 'jobs' or 'supports'. As a result, an employer's ability to arrange work in a way that would enable the performance of work over a consecutive 3 hour period is seriously diluted.

173. In this context, "an excessive minimum engagement period may cause employers to determine that it is not commercially viable to offer casual engagements or part-time work, which may prejudice those who desire or need such work"[108]. It would also prejudice those who wish to work shorter engagements due to their personal circumstances or commitments. In either case, the grant of the claim "might have the counter-productive result of reducing workforce participation and social inclusion and … it may inhibit flexible modern work practices and the efficient and productive performance of work"[109].

[108] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [403].

[109] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [407].

174. The observation made in the decision about part-time employment is also apposite and resonates with the comments of the Commission during the two year review, when the ASU's claim to introduce a two hour minimum engagement was refused.

175. Part-time employees covered by the Award have the security of a guaranteed number of weekly hours of work by virtue of clause 10.3(c) of the Award. This of itself creates an important distinction between casual and part-time employment in the context of determining the necessity of a minimum engagement period.

176. The HSU submits that the Award requirement for an employer and part-time employee to reach agreement at the time of engagement is not complied with, is ineffectual and/or does not apply due to the operation of enterprise agreements. Each of these contentions are untenable:

(a) There is no persuasive evidence before the Commission that establishes that there is widespread non-compliance with clause 10.3(c) of the Award.

(b) To the extent that there is any non-compliance, it is trite to observe that there already exist avenues for addressing this. An employee could file a dispute pursuant to the dispute settlement procedure under the Award or seek to prosecute the employer by instituting proceedings in a Court of competent jurisdiction.

(c) The imposition of minimum engagement periods will not address the consequences for a part-time employee of any alleged non-compliance with the relevant requirement. That is, the introduction of a minimum engagement period will not of itself provide a part-time employee with the certainty that clause 10.3(c) is designed to provide.

(d) To the extent that enterprise agreements applying to employees covered by the Award do not contain a requirement that is comparable to clause 10.3(c) (noting that the prevalence of such enterprise agreements has not been established by the HSU), this is not a justification for granting the union's claim. An enterprise agreement represents a deal or a bargain that is struck between an employer and its employees, often with the involvement of the relevant union(s) as bargaining representatives for the employees. The process of negotiation preceding the making of an enterprise agreement generally involves the 'trading' of terms and conditions in a manner that is reflective of the significance of the relevant matters to the employer and employees. The outcome of bargaining between an employer and its employees in respect of the application of a particular clause of the Award is not a proper justification for introducing separate and additional entitlements.

(e) It is unclear how (if at all) the introduction of a minimum engagement period will overcome the union's concern about bargained outcomes in any event.

177. During proceedings concerning the casual and part-time common issues earlier in this award review, ABI and the NSW Business Chamber advanced a claim in which it proposed greater flexibility concerning the engagement of part-time employees under the Award. Whilst the claim was not granted, the Full Bench observed that the absence of a requirement for a minimum number of weekly or daily hours for part-time employees undermined the alleged necessity of the amendment to the part-time provisions pursued by ABI: (our emphasis)

> **[559]** ABI's proposed variation, in its final iteration, was only directed at those aspects of disability service provision which were said to be subject to client control and thus where the employer had least control over the hours required to be worked. In respect of part-time employees in that area, its variation proposed an employment model whereby actual working hours were not determined by agreement at the outset of the employment and were thereafter only alterable by agreement, but rather that the employer would have the ability to roster those hours in accordance with clause 25.5 subject to it providing an agreed guaranteed number of weekly hours and such

working hours being rostered at periods when the employee was agreed to be available to work.

…

[638] Most importantly, the SCHCDSI Award does not contain any requirement for a minimum number of hours' work per week, nor (unlike the current provisions in the Hospitality Awards) does it provide for any minimum hours per day. This latter aspect of the award was emphasised by Vice President Watson in his 2013 decision which added the current clause 10.3(c), in the passage we have earlier set out. That means that the agreed pattern of hours for a part-time employee can encompass short periods of service, which a number of the employer witnesses envisaged would be an increasingly common feature of the NDIS service model. In this respect, part-time employment is more flexible than casual employment under the SCHCDSI Award, since clause 10.4(c) provides, in effect, that disability services workers are to be paid a one hour minimum when performing home care work and a 2 hour minimum for other types of work.[110]

178. The interrelationship between the various Award provisions and the need to ensure that the requisite flexibility to engage employees to work shorter shifts due to the NDIS service model is reflected in the above passage. Indeed we consider that the introduction of a minimum engagement period for part-time employees may call into question the need for other Award variations that improve an employer's ability to engage part-time employees with sufficient flexibility to satisfy their clients' needs.

[110] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [559] and [638].

Other Modern Awards

179. We note that the absence of a part-time minimum engagement period in modern awards is not uncommon. Some 46 modern awards[111] do not impose a part-time minimum engagement or payment period for part-time employees. The relevant awards apply in a broad range of industries however we observe that, relevantly, they include other awards applying in the health and personal care industries such as the *Health Professionals and Support Services Award 2010* and the *Nurses Award 2010*.

180. As the Full Bench observed in the context of the casual and part-time common issues proceedings, there is a broad range of casual minimum engagement / payment periods required by modern awards. We also note that a minimum engagement regime that contemplates differing minimum engagement / payment periods for different categories of employees is not novel. The *Cleaning Services Award 2010* imposes minimum engagement periods in respect of casual employees, ranging from 1 – 4 hours, with reference to the total cleaning area of the location at which they are engaged to work:

[111] The *Airport Employees Award 2010, Animal Care and Veterinary Services Award 2010, Architects Award 2010, Airport Employees Award 2010, Animal Care and Veterinary Services Award 2010, Architects Award 2010, Asphalt Industry Award 2010, Banking, Finance and Insurance Award 2010, Black Coal Mining Industry Award 2010, Building and Construction General On-site Award 2010, Business Equipment Award 2010, Cemetery Industry Award 2010, Coal Export Terminals Award 2010, Concrete Products Award 2010, Cotton Ginning Award 2010, Dredging Industry Award 2010, Educational Services (Schools) General Staff Award 2010, Educational Services (Teachers) Award 2010, Electrical Power Industry Award 2010, Electrical, Electronic and Communications Contracting Award 2010, Gardening and Landscaping Services Award 2010, Health Professionals and Support Services Award 2010, Higher Education Industry-Academic Staff-Award 2010, Higher Education Industry—General Staff—Award 2010, Horse and Greyhound Training Award 2010, Horticulture Award 2010, Hydrocarbons Field Geologists Award 2010, Hydrocarbons Industry (Upstream) Award 2010, Labour Market Assistance Industry Award 2010, Marine Towage Award 2010, Medical Practitioners Award 2010, Mining Industry Award 2010, Miscellaneous Award 2010, Nurses Award 2010, Oil Refining and Manufacturing Award 2010, Plumbing and Fire Sprinklers Award 2010, Port Authorities Award 2010, Professional Employees Award 2010, Rail Industry Award 2010, Real Estate Industry Award 2010, Salt Industry Award 2010, Telecommunications Services Award 2010, Transport (Cash in Transit) Award 2010, Vehicle Manufacturing, Repair, Services and Retail Award 2010, Wine Industry Award 2010* and *Wool Storage, Sampling and Testing Award 2010*.

(c) Where only one employee is engaged at a small stand alone location with a total cleaning area (as defined) of 300 square metres or less, and where it is not practicable for a longer shift to be worked across two or more locations, the minimum engagement will be for one hour.

(d) Where employees are engaged at a location with a total cleaning area (as defined) of up to 2000 square metres the minimum engagement will be for two hours.

(e) Where employees are engaged at a location with a total cleaning area (as defined) of between 2000 and 5000 square metres the minimum engagement will be for three hours.

(f) Where employees are engaged at a location with a total cleaning area (as defined) of more than 5000 square metres the minimum engagement will be for four hours.[112]

181. As is clear from the above, the current position as to casual and part-time minimum engagement periods in the Award is not out of step with other modern awards.

Section 138 and the Modern Awards Objective

182. The Commission cannot be satisfied that the proposed clause is necessary to ensure that the Award achieves the modern awards objective. The union's claim must therefore fail.

A *Fair* Minimum Safety Net

183. The proposed clause is unfair to employers.

184. We have earlier explained the operation of the NDIS and the implications that this has for an employer's service delivery to its clients. The need for flexibility in this context is obvious. It would be unfair to require an employer to pay an employee for time that the employee is not working in circumstances where the scheduling of work, the nature and duration of the work to be performed and the location at which it is to be performed are beyond the employer's control. This is particularly so where the employer does not benefit from any productivity gains (because the employee is not in fact performing any work)

[112] Clause 24.2(c) – (f) of the *Cleaning Services Award 2010*.

and the employer is unable to recover the employment costs (because no claim for such time can be made to the NDIA).

185. To the extent that the resulting additional employment costs and reduced flexibilities render it impracticable for an employer to provide certain services, this may ultimately impact not only the employer but also persons with a disability seeking its services.

A *Relevant* Safety Net

186. As the Full Bench observed in the Penalty Rates Decision, in the context of s.134(1), the word 'relevant' is intended to convey that a modern award should be suited to contemporary circumstances.[113] In this context, the relevant contemporary circumstances include the operation of the NDIS and the need for flexibility in light of the client-focussed nature of the scheme. The grant of the union's claim would therefore be inconsistent with the maintenance of a relevant safety net.

Section 134(1)(a) – Relative living standards and needs of the low paid

187. There is no evidence dealing with the impact of the claim on the relative living standards and needs of the low paid.

188. In the circumstances, we consider that s.134(1)(a) does not advance the union's case. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

Section 134(1)(b) – The need to encourage collective bargaining

189. The grant of the claim may have an adverse impact on the need to encourage collective bargaining.

[113] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [120].

190. The union's pursuit of the claim here advanced demonstrates that the issue is one of importance to the union and by extension, it is one that may motivate it to engage in collective bargaining. Any such motivation would necessarily be extinguished by the grant of the claim.

191. Further, an improvement to the minimum floor and the imposition of additional employment costs may disincentivise employers from engaging in collective bargaining.

Section 134(1)(c) – The need to promote social inclusion through increased workforce participation

192. There is no evidence that might enable the Commission to conclude that the grant of the claim will improve social inclusion through increased workforce participation. To the extent that the imposition of the minimum engagement periods sought precludes employees from being engaged to work because they wish to work shorter engagements or because an employer is unable to facilitate the arrangement of work so as to provide for at least three hours of work, this would instead undermine workforce participation.

193. We consider that s.134(1)(c) does not advance the union's case.

Section 134(1)(d) – The need to promote flexible modern work practices and the efficient and productive performance of work

194. The grant of the claim would clearly be inconsistent with the need to promote flexible modern work practices and the efficient and productive performance of work. An employer would no longer have the ability to roster work for periods shorter than three hours at a time without an obligation to pay the employee for at least three hours.

195. The decisions cited earlier in this submission make clear that a minimum engagement period is intended to strike a balance between the interests of employers and employees; having regard to the rostering practices and operational realities of employers covered by the Award. The grant of the claim

would tip the balance entirely in favour of employees' interests in a manner directly contrary to the promotion of flexible work practices.

Section 134(1)(da) - The need to provide additional remuneration for employees working overtime; unsocial, irregular or unpredictable hours; on weekends or public holidays or shifts.

196. This consideration is not engaged by the union's claim.

Section 134(1)(e) – The principle of equal remuneration for work of equal or comparable value

197. This consideration is not engaged by the union's claim.

Section 134(1)(f) – The impact of any exercise of modern award powers on business, including on productivity, employment costs and the regulatory burden

198. It is axiomatic that the grant of the claim would substantially increase employment costs and undermine productivity. As for the latter, we note that in the Penalty Rates Decision, the Commission confirmed that 'productivity' for the purposes of s.134(1)(f) "is directed at the conventional economic concept of the quantity of output relative to the quantity of inputs"[114]. An excessive minimum engagement period during which an employer is required to pay an employee whilst an employee is not performing work is perhaps the very definition of unproductivity. It reflects a situation in which there is simply no output.

199. Further, as we have previously submitted, large portions of the industry covered by the Award are dependent on NDIS funding to cover their employment costs. The NDIS does not provide funding for the additional employment costs contemplated by the proposed clause. The impact on employers is compounded in these circumstances. Employers are unable to

[114] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [224] – [225].

recover the additional costs from participants in the scheme because of the pricing caps imposed by the NDIS.

200. The claim, if granted, would therefore have a serious and significant adverse impact on business.

Section 134(1)(g) - the need to ensure a simple, easy to understand, stable and sustainable modern award system

201. The need to ensure a stable system tells against the grant of the claim; particularly given that the claim lacks any proper foundation.

7. BROKEN SHIFTS

202. Three unions have proposed different claims to vary the provisions of the Award relating to broken shifts.

203. Before turning to the respective claims, we first address the current broken shift provisions, which are contained at clause 25.6:

> **25.6 Broken shifts**
>
> This clause only applies to social and community services employees when undertaking disability services work and home care employees.
>
> **(a)** A **broken shift** means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.
>
> **(b)** Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.
>
> **(c)** All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.
>
> **(d)** An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

204. The clause is presently limited in its application. It only applies to social and community services employees when undertaking disability services work and home care employees. However, it does apply to all types of employees; that is, it applies to casual, part-time and full-time employees.

205. The clause expressly recognises that a shift may include one or more breaks (other than a meal break).[115] It also serves to regulate the manner in which shift allowances payable under clause 29 are calculated in the context of a broken shift.[116]

[115] Clause 25.6(a) of the Award.

[116] Clause 25.6(b) of the Award.

206. The current clause provides safeguards relating to the use of broken shifts. Double time rates are payable for work performed beyond the maximum 12 hours span and there is a requirement that there be a 10 hour break between broken shifts rostered on successive days.

207. For context, we observe that the Award does not contain a general obligation that ordinary hours of work undertaken during day work be performed on a continuous basis. As such, the broken shift provisions are essentially beneficial to employees as they provide additional safeguards and benefits where ordinary hours are not worked continuously during day work.

The Need for Broken Shifts and the Potential Impact of Restricting Access to such Arrangements

208. The Award terms reflect the flexibility required in working arrangements covered by the Award. It appears to be common ground between the parties that the broken shift provisions are widely utilised. That is, there does not seem to be any dispute that employees are engaged to perform work under arrangements that include one or more breaks.

209. More significantly, it appears to be uncontentious that it is common for employees to be rostered to have multiple breaks in their shift. Such a trend is accepted by the Unions.[117]

210. The need for broken shifts, including shifts encompassing multiple breaks, is a reflection of the unique nature and requirements of the sectors covered by the Award. The capacity to utilise such arrangements is particularly important in the context of the home care and the disability sectors.

211. The evidence advanced by the Unions identifies multiple circumstances in which employees undertake short periods of work. Although it is undoubtedly led for the purposes of portraying the impact of broken shifts on employees, it also provides an insight into the reasons or indeed necessity for such shifts.

[117] HSU submission dated 15 February 2019 at paragraph 37.

212. Given the evidence is yet to be tendered or subject to cross-examination we do not seek to here address it in detail. Nonetheless, we point, by way of example, to the evidence of Thelma Thames, a support worker employed by Uniting, which is an aged care provider. Ms Thames provides a useful articulation of the kinds of services that are provided to clients. This includes personal care, meal preparation, medication assistance, transportation to appointments or other activities, domestic assistance (cleaning related tasks) and various forms of social support.[118]

213. Importantly, the witness attests to the fact that the service is based on what the client's package allows for in the care plan.[119] She also provides evidence of having worked shifts as short as half an hour for the purposes of helping a client with meal preparation or their medicines[120].

214. When regard is had to the type of work undertaken by employees such as the witness, it is not difficult to appreciate the necessity for gaps between periods of work during the course of a day; that is, for broken shifts.

215. Moreover, this form of flexibility has become increasingly essential as a product of the implementation of the NDIS. The scheme has had a profound impact on the way work is undertaken. This is a product of the extent to which services are now both allocated and funded on an individual client basis in a market environment (albeit one which is currently still regulated).

216. Underpinning the NDIS is the proposition that participants should have greater control over the manner in which they obtain care and they are free to select their care or service providers. They also have much greater capacity to control or influence issues such as the time or location at which the relevant service is provided, or even the individual worker that provides the assistance. This requires organisations to operate in a responsive manner.

[118] Statement of Thelma Thames dated 15 February 2019 at paragraph 5.

[119] Statement of Thelma Thames dated 15 February 2019 at paragraphs 5 – 7.

[120] Statement of Thelma Thames dated 15 February 2019 at paragraph 12.

217. The proposition that in many instances employers operating under the NDIS now have far less control over the manner in which work is structured when compared to that which they did under predecessor funding models, such as arrangements under which services were block funded or work was allocated by relevant governments or agencies, should not be contentious.

7.1 The ASU's Claim

218. The ASU seeks that employees working broken shifts receive additional pay. The proposal is the inclusion of the following provision in the clause dealing with broken shifts:

> An employee who works a broken shift will receive:
>
> **(i)** ~~Payment for a broken shift will be at o~~Ordinary pay plus a loading of 15% of their ordinary rate of pay for each hour from the commencement of the shift to the conclusion of the shift inclusive of all breaks; and

219. The manner in which the proposed clause would operate is arguably ambiguous.

220. At the very least, there appears to be a disconnect between the limited description of the ASU's proposal in its submissions and the wording of the clause. In this regard we note that the submission provides:

> 18. The ASU is seeking a variation to clause 25.6 of the SCHDS Award to provide for a 15% loading to be paid to employees who work broken shifts. …
>
> …
>
> 20. The ASU proposes to vary clause 25.6 by deleting clause 25.6 (b) and inserting a new subclause providing for a 15 per cent loading to be paid on the employees ordinary rates of pay…[121]

221. These extracts suggest that all that is being proposed is an additional loading. However, this is not consistent with the wording of the proposed clause. The clause appears to require the payment of "ordinary pay" as well as a loading of 15% of the "ordinary rate of pay" for the entire relevant time period referred

[121] Submission dated 18 February 2019 at paragraphs 18 and 20.

to in the clause. That is, an employee would be entitled to ordinary pay plus the loading for each hour from the commencement of the shift to the conclusion of the shift, inclusive of breaks.

222. If what is being proposed is that employees be paid for the 'breaks' between active parts of their shift, it would be a very significant change to the manner in which the Award currently operates and is entirely unjustifiable.

223. A further difficulty with the proposal is the absence of a definition as to what constitutes the "ordinary rate of pay" in either the proposed amendment or the supporting submissions. Nor is there any definition of the phrase "ordinary pay". Consequently, it is unclear whether the reference to the "ordinary rate of pay" refers to:

(a) All amounts that an employee is ordinarily or routinely paid;

(b) All amounts that an employee is paid in respect of an employee's ordinary hours of work;

(c) Amounts that are payable under the Award for the relevant hours of work (including relevant penalty rates);

(d) Amounts that include over-award payments; or

(e) The employee's minimum rate of pay under the Award or the employee's "ordinary hourly rate of pay" as contemplated in the context of exposure drafts that are being developed for the purpose of the current award review.

224. It is also unclear whether the phrase "ordinary rate of pay" is intended to mean something different to the phrase "ordinary pay". There is no apparent rationale for the different terminology within the clause.

225. Given the above observations, the ASU's proposal is not consistent with a consideration of the need to ensure that the award system is simple and easy to understand.[122]

226. Of course, the Commission is not restricted to varying an award in the terms sought. However, the deficiencies in the drafting of the provision and the absence of a clear explanation by the ASU as to the manner in which the provision is intended to operate renders it impossible to accurately assess the potential impact of the claim.

227. Given the deficiencies in the case advanced, it is appropriate for the Commission to decline to make the proposed variation.

The Alleged Disutility of Working Broken Shifts

228. One of the themes underpinning the union's arguments rests on the assertion that there is a disutility associated with the working of broken shifts.

229. We accept that breaks between active parts of work will not suit or be a preferred work arrangement for some employees. However, it might also reasonably be expected that such arrangements do suit some employees. The ASU does not advance evidence that can be said to be representative of the views or experiences of the workforce covered by the Award relating to the use of broken shifts and as such no firm conclusions can be reached in relation to such matter.

230. The disutility associated with working broken shifts must also be weighed against the evidence that many employees want to work additional hours. The availability of a flexible pattern of working undoubtedly enables some employers to offer individual employees additional hours to that which would be possible if the all hours on a day had to be rostered consecutively.

[122] Section 134(1)(g) of the Act.

231. A requirement to pay an additional loading in circumstances where an employee works a broken shift would instead create an incentive for employers to seek to offer or allocate the separate active parts of what would be a broken shift for a single employee to separate workers in order to minimise costs.

Continuous Work or Broken Shifts in Other Awards

232. The ASU asserts that the disutility of working broken shifts is recognised by the award system generally. In support of that contention, they argue that generally ordinary hours must be worked continuously and that only 18 modern awards permit employers to engage employees on 'broken' or 'split shifts'. The weight that can be afforded to such a submission is undermined by the following considerations.

233. *Firstly*, it appears that the ASU's submission may be based purely on the existence or otherwise of a provision within awards expressly dealing with broken or split shifts. This does not provide a complete picture of the extent to which other awards may permit ordinary hours to be worked on a single day in a non-continuous manner. For example, the *Road Transport (Long Distance Operations) Award 2010* does not contain a broken shift provision, however there is no requirement under that instrument for hours of work to be performed continuously.

234. *Secondly*, the union's analysis reveals that broken shift provisions are by no means rare or novel. Eighteen is not an insignificant number of awards.

235. *Thirdly*, the broken shift provisions currently contained in modern awards are diverse. They vary in the extent to which they regulate matters such as the number or duration of breaks between active performance of work and in the extent to which they provide for any additional payment to employees working under such arrangements.

236. *Fourthly*, the mere fact that there are awards that deal with matters associated with broken shift arrangements does not, of itself, establish that "the disutility of working broken shifts is recognised by the modern award system generally."[123] It simply establishes that there is a level of award regulation of such matters. The ASU has not identified any arbitral consideration of such provisions. It might just as easily be put that the existence of such provisions demonstrates the need for such arrangements and the legitimacy of such arrangements in the context of the safety net.

237. Notwithstanding the above arguments, we acknowledge that the Award does provide the parties covered by it with a high degree of flexibility in relation to the manner in which ordinary hours of work are performed, compared with that applicable under many other awards. However, it cannot be assumed that such a comparative analysis demonstrates any unfairness in the current provisions. In the context of this Review, the Commission will approach the matter on the basis that the terms and conditions were fair and relevant at the time the award was made.[124] Further, there can be multiple permutations and combinations of award terms that may constitute a fair and relevant safety net. [125] Consideration needs to be given to the characteristics and circumstances of employers covered by the particular awards.

238. Ai Group contends that the current provisions are appropriate in the context of the diverse and atypical sectors to which they apply. Simply identifying that the Award provisions differ from the approach adopted in some other awards does not establish that the current provisions should be amended.

[123] ASU submission dated 18 February 2010 at paragraph 31.

[124] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [24].

[125] *4 Yearly Review of Modern Awards: Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at [34].

The Quantum of the Proposed Loading

239. The ASU has not identified any reasoning or logic underpinning the adoption of 15% as the proposed quantum of the loading, much less why this particular amount would be *necessary* to ensure that the Award meets modern awards objective.

240. The union contends that the lay evidence upon which it intends to rely shows that low pay and irregular working hours have caused the relevant proposed witnesses to consider leaving the disability services industry. Without seeking to deal with such material comprehensively at this point, we observe that the evidentiary case advanced does not establish that these are concerns that are at play across the industry as a whole; nor does it establish that the proposed new entitlement would resolve such matters.

241. Ultimately, concerns about the sufficiency of pay rates contained within awards is a matter best dealt with in the context of the Annual Wage Review.

242. The union has not provided any explanation as to the extent to which such costs can be met under NDIS funding arrangements. It appears to us that the costs would not be recoverable or have not been taken into account under such funding arrangements. This weighs heavily against granting the claim.

243. In contrast to the alternate variations to the broken shift provisions proposed by the other unions, the ASU does not, as their primary position, seek to impose any limitation on the use of broken shift arrangements. Instead, they seek to require that an additional amount is paid to employees when they perform work on a broken shift.

244. The union's proposal appears to reflect both an express desire to enhance the compensation that their members receive for working broken shifts as well as a level of implicit recognition of the need for such flexibility and of the disruption to employers that would flow from limiting the availability of such working arrangements: (emphasis added)

> The ASU's variation would ensure that employees are properly compensated for the disability associated with working a broken shift under clause 25.6 without further limiting any flexibility for the employer. This preserves the employer's business models, but will also increase the incentive to work in the disability services.[126]

245. In relation to the union's objective of "increasing the incentive to work in disability services", the submission appears to have been put on the basis that the Award's terms should serve as an incentive to attract employees from other sectors or industries. In out submission, attracting employees to a particular type of work or sector is not necessarily relevant to the Full Bench's consideration of what constitutes a fair and relevant safety net of minimum terms and conditions to the extent that.

Section 138 and the Modern Awards Objective

246. The ASU has not advanced any argument referencing the modern awards objective. It acknowledges s.134 and the Commission's task in the context of this Review[127], however they take the matter no further. They do not, for example, identify any considerations that would weigh in favour of granting the claim.

247. Moreover, the ASU does not assert that the variation is necessary in order to ensure that the Award achieves the modern awards objective. In this regard they have failed to mount an appropriate case for the proposed variation.

[126] ASU submission dated 18 February 2019 at paragraph 33.

[127] ASU submission dated 18 February 2019 at paragraph 7.

Section 134(1)(a) – The relative living standards and the needs of the low paid

248. There is no basis for concluding that employers would continue to engage employees on broken shifts if the union's claim was granted. Accordingly, the Commission cannot be satisfied that a consideration of the relevant living standards and needs of the low paid would support the claim.

Section 134(1)(b) – The need to encourage collective bargaining

249. This is not a factor weighing in favour the claim.

Section 134(1)(c) – The need to promote social inclusion through increased workforce participation

250. A consideration of this matter does not support the granting of the claim. Indeed, it is foreseeable that the cost impost that the proposed new entitlement would impose upon employers in the sector may cause such employers to elect not to service clients in circumstances where such work can only viably be performed through the use of a broken shift. To the extent that this resulted in decreased employment opportunities with employers covered by the Award, it would undermine workforce participation.

Section 134(1)(d) – The need to promote flexible modern work practices and the efficient and productive performance of work

251. The granting of the claim may run contrary to such considerations if the financial impact of the proposal would distort employer decisions about the allocation of work.

252. For example, in circumstances where a client in the disability sector may require assistance at different times of the day, the clause would incentivise an employer to allocate different employees to perform such separate tasks in order to avoid the application of the relevant loading.

Section 134(1)(da) – The need to provide additional remuneration for employees working overtime; unsociable, irregular or unpredictable hours; weekends or public holidays; or shifts

253. A central tenant of the ASU's case appears to be an argument that the working hours in the industry are irregular. A consideration of s.134(1)(da) in the context of such an assertion does not weigh in favour of granting the claim. The extent to which the hours of work of employees covered by the Award may be irregular, unsociable or unpredictable is not inherently a consequence of there being a capacity for broken shifts. It is, instead, a consequence of the flexibility afforded more broadly under the Award in relation to the rostering of work. The mere fact that there are breaks between periods of work does not enliven the application of considerations specified in s.134(1)(da).

254. Separate provisions of the Award deal with the issue of remuneration for working overtime, shifts, weekends or public holidays.

Section 134(e) – The principal of equal remuneration for work of equal or comparable value

255. This consideration is not relevant to this claim.

Section 134(1)(f) – The likely impact of the claim on business, including on productivity, employment costs and the regulatory burden

256. It is axiomatic that the claim will increase employment costs and have an associated adverse effect on business. Moreover, it will have a particularly unfair adverse impact on employers operating in the context of the NDIS as they will have no capacity to recover such costs.

257. To the extent that the claim may render the use of broken shifts no longer viable, it will also adversely impact business by reducing the flexibility available to them in the context of rostering arrangements. This may also have a negative impact on productivity.

258. The change will also adversely impact employers in the sector that utilise broken shifts by undermining their ability to take on certain work viably.

Section 134(1)(g) – The need to ensure a simple, easy to understand, stable and sustainable modern award system

259. Given the drafting deficiencies we have earlier identified, the proposal is clearly inconsistent with this consideration.

Section 134(1)(h) – The likely impact of any exercise of modern award powers on employment growth, inflation and the sustainability, performance and competitiveness of the national economy.

260. This factor does not support the granting the claim.

7.2 The HSU and United Voice Claims

261. The HSU and United Voice have also filed claims seeking to amend the Award provisions dealing with 'broken shifts'. These claims differ from the ASU proposal in that they seek, in various ways, to limit the use of broken shifts.

262. The HSU proposes the following changes to clause 25.6:

25.6 Broken shifts

(a) This clause only applies to:

(i) social and community services employees when undertaking disability services work; and

(ii) home care employees.

(~~a~~b) For the purposes of this clause, a ~~A~~ **broken shift** means a shift worked by ~~an~~ a casual or part-time employee that includes no more than one ~~or more~~ break~~s~~ (other than a meal break) and where the span of hours is not more than 12 hours.

(c) A broken shift may only be worked where there is mutual agreement between the employer and employee.

(d) Where an employee works a broken shift, they shall be paid at the appropriate rate for the reasonable time of travel from the location of their last client before the break to their first client after the break, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.

(e) The minimum period of engagement specified in clause 10.6 shall apply to each period of work in a broken shift.

(~~b~~f) In addition to the rates at 14.4(d) ~~Payment for a broken shift will be at ordinary pay with~~ penalty rates and shift allowances in accordance with clause ~~29~~20.2—Shiftwork and clause 19—Overtime apply~~, with shift allowances being determined by the finishing time of the broken shift~~.

(g) Shift allowances will be determined by the starting or finishing time of the broken shift, whichever allowance is higher. The allowance will apply across both parts of the shift.

(~~c~~h) All work performed beyond the maximum span of 12 hours for a broken shift will be paid at ~~double time~~ 200% of the minimum hourly rate.

(~~d~~i) An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

(g) Shift allowances will be determined by the starting or finishing time of the broken shift, whichever allowance is higher. The allowance will apply across both parts of the shift.

263. United Voice has proposed the following amendment to clause 25.6(b):

(b) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the starting or finishing time of the broken shift, whichever is the greater.

264. The draft determination filed by United Voice is also seeking a new definition of 'broken shift' in the following terms:

(a) For the purposes of this award a broken shift is a shift where an employee works in two separate period of duty on any day within a maximum spread of twelve (12) hors and where the break between periods exceeds one hour.

265. There is a substantial degree of overlap between the HSU and United Voice claims. We accordingly deal with them both in this section of our submission.

266. The unions' cases seek to justify the claim based on the negative perspective of some employees engaged on broken shifts. In particular, they point to the disruption that such arrangements can have on the lives of employees and the negative consequences that can flow from having their work spread out over long periods of the day. The unions seek to portray the use of broken

shifts as potentially exploitative and on this basis, seek restrictions on the use of such provisions.[128]

267. The material fails to grapple with the necessity for such arrangements in order to accommodate the circumstances of the sector and the constraints imposed upon employers operating under funding arrangements (particularly the NDIS).

268. The case advanced by the unions assumes that employers are implementing broken shift arrangements in a deliberate and improper attempt to reduce their costs. Moreover, it rests on the startingly simplistic and erroneous assumption that employers in this sector will have the capacity to, and will as a matter of fact, offer hours of work on a continuous basis if access to broken shifts is limited and that they will respond to the proposed changes by restructuring the engagement of their employees in such a manner.

269. It is not open to the Commission to adopt a similarly optimistic approach.

Restricting Access to Broken Shifts

270. Ultimately, any assessment of the impact of implementing the kind of radical alteration to the arrangement of hours in this sector proposed under the HSU and United Voice proposals will necessarily be speculative. However, it is logically and reasonably foreseeable that restricting the use of broken shifts would potentially result in consequences such as:

(a) Employers electing not to provide a service to some NDIS participants.

(b) Employers electing to not offer employees multiple engagements on the same day, thus resulting in underutilisation/employment of such staff.

(c) Employers being subject to additional and unrecoverable labour costs for time between active periods of engagement of an employee.

[128] United Voice submission dated 4 February 2019 at paragraph 136 and HSU submission dated 15 February 2019 at 36 – 39.

(d) An impact on the viability of organisations that currently rely upon such arrangements.

(e) Intensification of problems flowing from current and anticipated labour shortages given the inefficient allocation and utilisation of labour that would be a product of such award regulation.

Limiting the Number of Breaks per Shift

271. A particularly problematic element of the claims is the proposal to prevent employers from 'breaking' a shift more than once. The Award presently defines a broken shift as one that includes "one or more breaks".

272. Ai Group has received very strong feedback from industry that the removal of this flexibility would have a devastating impact on their operations and ability to viably meet the needs of the clients they service. This is particularly so in the context of the disability and home care sectors.

273. The proposed variations would represent a significant departure from the current Award provisions (which have been in force for almost a decade), and indeed from a long-standing approach to the regulation of such matters in many of the sectors now covered by the Award. A review of various predecessor instruments[129] to the Award also reveals that the availability of broken shift arrangements permitting more than one break is by no means a new element of the industrial regulation of such sectors.

274. The entrenched nature of the availability of broken shifts within at least some sectors covered by the Award adds further weight to the argument that removing this flexibility would be unfair to employers.

[129] *Crisis Assistance, Supported Housing (South Australia) Award 2000, Disability Services (Northern Territory) Award 2002, Social and Community Services Industry - Community Services Workers - Northern Territory Award 2002, Miscellaneous Workers Home Care Industry (State) Award, Disabilities Services Award, Health Services Employees Award* and *Social & Community Services Award*.

Limiting the Clause to Casual and Part-time Employees

275. The HSU has proposed to limit the application of the broken shift clause to casual and part-time employees. It has not however advanced any submissions in support of the proposal.

276. It appears to be the unions' intent to prohibit full-time employees from working on broken shifts (as opposed to exempting full-time employees from the application of the clause).

277. There is no apparent reason why full-time employees should be prevented from being utilised to work broken shifts. This is not in the interests of full-time employees who may be happy to work such arrangements. Moreover, there can be no guarantee that those employers who engage full-time employees on broken shifts could continue to offer such employment if the availability of this arrangement was removed.

278. The proposal is also likely to result in part-time and casual employees being utilised in preference for full-time employees. There is no apparent reason why the union is seeking to promote such an outcome, or why it could be said to be consistent with the modern awards objective.

279. Given the above considerations, and the unions' failure to even attempt to advance an argument as to why such a variation is necessary in the sense contemplated by s.138 of the Act, the variation should be rejected.

The Applicable Shift Allowance

280. Both the HSU and United Voice are proposing that regard be had to the starting time of an employee in assessing the shift allowance that may be payable.

281. Under the current terms of the Award, the finishing time is the reference point for assessing the applicable allowance. Clause 25.6(b) of the award currently states:

> **(b)** Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29 – Shift work, with shift allowances being determined by the finishing time of the broken shift.

282. In short, the unions seek that the starting time or the finishing time be utilised depending upon which time would result in the more beneficial outcome for employees.

283. The most obvious difficulty with the unions' claim is that the proposed clauses cannot sensibly be applied given that the definitions for an afternoon or night shift under the Award operate by reference to the finishing time for the shift. They do not contemplate the starting point. Indeed a night shift or afternoon shift may, in context of a particular enterprise, have the same starting time.

284. Another difficulty is that if the Award were amended to reflect the intent of the unions, it would operate unfairly and unjustifiably to the benefit of an employee in all instances. There is no inherent rationale for such an approach in the context of a safety net that must be fair to both employers and employees.

285. Ultimately, a case for varying the current arrangements has not been made out. The industrial merit of the proposal in undoubtedly contentious and the evidence does not establish that there is some malicious or widespread practice of employers utilising broken shifts for the purpose of avoiding shift penalties so as to justify an alternate approach.

286. The material advanced by the unions does not enable any detailed assessment of the impact of the claim. Altering the circumstances where shift allowances are payable is a significant change. It could have significant cost implications for employers and ought not be made in an evidentiary vacuum.

287. Curiously, in support of their claim, United Voice point to what they characterise as an anomaly in the manner in which the provision operates in that an employee who commenced a broken shift at 5am and worked until 3pm would not receive a shift loading. In response we observe that there is nothing anomalous about such an outcome. There is no 'early morning' shift allowance payable under the Award and a shift that ends at 3pm would never attract an additional loading as it would not constitute either an afternoon or night shift under the Award.

288. In response to United Voice's contention that the Award is inconsistent with the modern awards objective in that it does not provide "adequate additional remuneration for employees working shifts", we observe that there is no statutory imperative to provide additional remuneration to employees working shifts.

The Requirement for Mutual Agreement

289. The HSU has proposed that broken shifts be worked only by agreement between the employer and employee but has not advanced any submissions in support of this variation. For this reason alone, the claim should fail.

290. The proposal has the potential to significantly disrupt current employment practices in the sector. It would significantly undermine the utility of the broken shift provisions. Accordingly, for all of the reasons that we previously indicated that broken shifts are an important flexibility given the circumstances of the industry, the variation should be rejected.

291. In relation to the specific variation proposed, we also observe that it is unclear whether the provision would require agreement to be reached in relation to each broken shift or whether it would be sufficient for an employer to obtain such agreement once and to then roster the employee on broken shift arrangements on an ongoing basis. Given such a lack of clarity, the proposal would not be consistent with the need to ensure a simple and easy to understand award system, as contemplated by s.134(1)(g) of the Act.

292. More significantly, requiring an employer to reach agreement on each occasion that an employer requires a broken shift to be performed, if this is what the proposal would require, would be extremely burdensome and would be contrary to considerations arising under ss.134(1)(d) and 134(1)(f).

293. If an employee could at any time simply elect to either perform or not perform a particular broken shift, it would also undoubtedly complicate rostering or arrangements and potentially undermine their capacity to align with an employer's operational needs. This would be a particularly problematic development in the context of the participant driven dynamics of the NDIS.

294. It is entirely unclear how, from a practical perspective, such a clause could be fairly imposed in the context of currently engaged employees. If an employee has been engaged on the condition that they work broken shifts (or in circumstances where any agreement as to their hours of work reflect the availability of broken shifts), it would be patently unfair to invalidate such arrangements and it is foreseeable that in some instances the change would jeopardise the ongoing viability of the individual's employment.

Section 138 and the Modern Awards Objective

295. In this section we address the extent to which the various matters identified under s.134(1) would weigh either in favour or against the HSU and United Voice claims to limit the use of broken shifts.

A *Fair and Relevant* Minimum Safety Net

296. To the extent that the proposals restrict the use of broken shifts or render them more expensive, this would be unfair to employers and inconsistent with the maintenance of a relevant safety net.

297. As we have already submitted, many employers covered by the Award require the ability to utilise their workforce in a flexible and agile manner so as to meet the variable needs of clients. For reasons already articulated, this is a flexibility

that is of paramount importance under the NDIS. The proposed changes are entirely out of step with the contemporary circumstances.

298. The unfairness to employers also flows from the extent to which the costs that would potentially be imposed upon employers by virtue of the claim could not be recovered by funding arrangements. This would include, in particular, instances where an employer may need to pay an employee for unproductive time between undertaking work for clients in circumstances which would presently constitutes 'breaks' under the current Award.

299. To the extent that the changes may be a catalyst for employers simply refusing to provide services that they might otherwise have undertaken or reducing the hours of work of an employee who would otherwise be engaged on broken shifts, they would also operate unfairly to those employees that would prefer to undertake such employment in preference to receiving less work.

300. In considering whether the proposed terms form part or a relevant safety net, the potential for the changes to undermine the effective operation of the NDIS, as well as the availability of services for many of the most vulnerable people must also be seriously considered.

Section 134(1)(a) – The relative living standards and needs of the low paid

301. A consideration of s.134(1)(a) does not advance the unions claims. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

302. United Voice contend that the proposed limitation of the number of breaks in a broken shift would improve the living standards of the low paid because "employers would have to properly roster shifts so that there would only be one break (excluding meal and rest breaks)".[130] They boldly assert that this would reduce the ability of employers to avoid paying travel time and that it

[130] United Voice submission dated 4 February 2019 at paragraph 141.

would "likely reduce the need for employers to seek secondary employment"[131]. There are a number of difficulties with such submissions.

303. *Firstly*, the position rests on an implicit assumption that the variation will cause employers to pay employees more. The difficulty with this contention is that there can be no guarantee that a particular employer will either continue to undertake the relevant work or simply engage employees to work a greater number of hours on a continuous basis. There is no evidentiary or indeed logical basis for such an assumption.

304. *Secondly*, the contention unfairly impugns the actions of employers. The evidence does not establish that employers are rostering employees on broken shifts in circumstances where an alternate approach would be feasible.

305. *Thirdly*, to the extent that they argue the claim will assist by reducing the need for unpaid travel time, we note that there are sperate union claims dealing with this issue and we will address such matters in the context of our response to those claims.

306. *Finally*, we note that there is no probative evidence to support United Voice's contention that secondary employment will be reduced because "more regular steady work will be available" if the variation is granted [132]. Moreover, the union has not explained why the avoidance of secondary employment would be relevant to considerations arising under s.134(1)(a).

307. Contrary to the outcomes envisaged by the unions, it is likely that some low paid employees will be disadvantaged by the variations.

<u>Section 134(1)(b) – The need to encourage collective bargaining</u>

308. The grant of the claim may have an adverse impact on the need to encourage collective bargaining.

[131] United Voice submission dated 4 February 2019 at paragraph 141.

[132] United Voice submission dated 4 February 2019 at paragraph 141.

309. The unions' pursuit of the claims here advanced demonstrates that the issue is one of importance to the unions and by extension, it is one that may motivate them to engage in collective bargaining. Any such motivation would necessarily be extinguished by the grant of the claim.

310. Further, an improvement to the minimum floor and the imposition of additional employment costs may disincentivise employers from engaging in collective bargaining.

311. The extent to which employers may be prepared to bargain over the broken shift arrangements will likely vary. The Award covers organisations undertaking a diverse range of services. It is foreseeable that some may be able to structure the work of their employees in a continuous manner, or at least without making significant use of the flexibility afforded under the Award in relation to broken shifts. Others will not. Given this context, combined with the various problems that limiting access to broken shifts would create in the context of some organisations, it is a matter that is best dealt with context of bargaining.

<u>Section 134(1)(c) – The need to promote social inclusion through increased workforce participation</u>

312. United Voice asserts that their claim to limit broken shifts to containing one break will improve conditions under the Award and that it would encourage employees to stay in the sector.

313. In response it must firstly be observed that s.134(1)(c) does not suggest any imperative to improve conditions of employees as an outcome in and of itself. Indeed, such matters are not relevant to a consideration of the matters referred on s.134(1)(c). As the Full Bench observed in the Penalty Rates Decision: (our emphasis)

> **[179]** Section 134(1)(c) requires that we take into account 'the need to promote social inclusion through increased workforce participation'. The use of the conjunctive 'through' makes it clear that in the context of s.134(1)(c), social inclusion is a concept

to be promoted exclusively '*through* increased workforce participation', that is obtaining employment is the focus of s.134(1)(c).[133]

314. The material before the Commission does not enable it to conclude that the proposed variation to the broken shift provisions would have a positive effect on employment. There can be no guarantee that the variation will result in increased workforce participation in the form of additional hours being worked by currently engaged employees.

315. As we have identified, the claim may result in employers declining to undertake work for clients that could not be performed sustainably from a cost perspective or it may result in fewer hours being allocated to an induvial employee and to the employer instead seeking to use different employees or independent contractors to perform part of the work that might otherwise have been allocated to a single employee through a broken shift.

316. In the circumstances, we consider that s.134(1)(c) does not advance the union's case.

Section 134(1)(d) – The need to promote flexible modern work practices and the efficient and productive performance of work

317. The grant of claims limiting an employer's capacity to utilise broken shifts or to limit the number of breaks would be inconsistent with the need to promote flexible modern work practices and the efficient and productive performance of work. The most obvious reason for this is that it would limit an employer's ability to allocate labour in a manner that accords with the needs of clients.

318. For example, it might prevent an employer from allocating the same worker to assist the same client at different parts of the day because it would necessitate the individual being paid for intervening periods between their performance of activities. There are a range of inefficiencies that would flow from such arrangements depending on the circumstances. Obvious examples would include the need for communication between the employees about the

[133] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [179].

provision of services to the client or the extent to which multiple persons would need to develop an understanding of the discrete needs of a particular client, given the nature of the work undertaken by employees covered by the Award.

319. In the Penalty Rates Decision, the Full Bench addressed what was required as a product of the reference to productivity in s.134(1)(f):

> **[224]** The conventional economic meaning of productivity is the number of units of output per unit of input. It is a measure of the volumes or quantities of inputs and outputs, not the cost of purchasing those inputs or the value of the outputs generated. As the Full Bench observed in the *Schweppes Australia Pty Ltd v United Voice – Victoria Branch*:
>
> > '… we find that 'productivity' as used in s.275 of the Act, and more generally within the Act, is directed at the conventional economic concept of the quantity of output relative to the quantity of inputs. Considerations of the price of inputs, including the cost of labour, raise separate considerations which relate to business competitiveness and employment costs.
> >
> > Financial gains achieved by having the same labour input – the number of hours worked – produce the same output at less cost because of a reduced wage per hour is not productivity in this conventional sense.'
>
> **[225]** While the above observation is directed at the use of the word 'productivity' in s.275,it is apposite to our consideration of this issue in the context of s.134(1)(f).[134]

320. The observations are also relevant to the consideration of the "productive performance of work" pursuant to s.134(1)(d).

321. To extent that the claim has the effect of requiring an employer to engage a worker for a period of time when they are not genuinely required to undertake duties on behalf of their employer, it would be contrary to the need to promote the efficient and productive performance of work. It would mean that, in order to achieve the same output (i.e. the provision of a service to a client), additional hours of work would potentially need to be undertaken in order to achieve award compliance.

[134] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [224] – [225].

Section 134(1)(da) – The need to provide additional remuneration for employees working overtime; unsocial, irregular or unpredictable hours; on weekends or public holidays or shifts

322. This issue is not relevant to a consideration of the claims to restrict the use of broken shifts. To the extent that it is contended to be relevant to proposed changes to the manner in which shift allowances are calculated, we have addressed such matters earlier in our submission.

Section 134(1)(e) – The principle of equal remuneration for work of equal or comparable value

323. This consideration is not relevant to the matter.

Section 134(1)(f) – The impact of any exercise of modern award powers on business, including on productivity, employment costs and the regulatory burden

324. The granting of claims restricting the use of broken shifts would substantially increase employment costs. The claims, if granted, would therefore have a significant adverse impact on business.

325. Further, the significant portions of industry that are dependent on NDIS funding to cover their employment costs would be unable to recover the additional costs that may flow from the need to pay employees for unproductive time between active work that is currently undertaken through the use of broken shifts, if the various restrictions on the use of broken shifts are implemented. Given the operation of pricing caps under the NDIS, this renders the proposed variations particularly unfair to such employers.

326. It is also axiomatic that the claim will have an adverse impact on business by greatly curtailing the level of flexibility that is available to them in relation to the manner in which they engage employees.

327. To the extent that the additional employment costs would result in inefficient work practices, this may also undermine productivity. We have addressed this issue in the context of our consideration of s.134(1)(d).

Section 134(1)(g) – The need to ensure a simple, easy to understand, stable and sustainable modern award system

328. The need to ensure a stable system tells against the granting any of the claims pertaining to broken shifts. The changes would not be sustainable given their incompatibility with the needs of the sector.

Section 134(1)(h) – the likely impact of any exercise of modern award powers on employment growth, inflation and the sustainability, performance and competitiveness of the national economy

329. A consideration of matters identified under s.134(1)(h) does not weigh in favour of the proposed claims.

8. OVERTIME AFTER 8 HOURS OF WORK

330. Clauses 28.1(b)(ii) and 28.1(b)(iii) of the Award currently require that time worked by a part-time or casual employee in excess of 10 hours in a day will be treated as overtime and paid at overtime rates.

331. The HSU seeks to alter this position. The union has proposed that the Award be varied such that it requires that time worked by a part-time or casual employee in excess of *eight* hours in a day be treated as overtime and paid at overtime rates.

332. Ai Group opposes the claim and submits that the changes proposed should not be made.

The HSU's Case

333. The HSU has made the following submission in support of its claim: (footnotes omitted)

> 47. Overtime for casual and part-time workers should be paid for shifts longer than 8 hours rather than 10. Work performed by carers in private homes and in the community providing personal or domestic assistance for elderly clients or clients with a disability is both physically and mentally taxing, which is compounded by the (often unrecognised and unpaid) travel involved in the performance of work. During long shifts there may be little opportunity, or appropriate facility to take proper breaks and rest.[135]

[135] HSU Submission dated 15 February 2019 at paragraph 47.

334. The HSU seeks to rely on the evidence of just two individual employees[136] in support of it's claim. Leaving to one side the evidence that relates to travelling between engagements or different portions of a broken shift, the evidence goes no further than establishing that:

(a) One support worker employed by an aged care provider "find[s] domestic assistance to be more physically demanding, wearing on the body and tiring than personal care"[137].

(b) Another disability support worker considers that "it can be difficult working one on one with someone with a disability for 7 hours or more"[138].

335. We note that although clause 28.1(b) applies to part-time and casual employees classified under all streams of the Award, the union has not led any evidence or provided any basis for enhancing the entitlement to overtime rates in other sectors covered by the Award.

336. Self-evidently, the evidence led by the HSU is not persuasive and does not provide a proper foundation for the imposition of the proposed additional employment cost.

[136] Statement of Thelma Thames dated 15 February 2019 at paragraphs [6] – [7] and [13] – [17] and statement of Bernie Lobert date 15 February 2019 at paragraph [21]; cited by the HSU at paragraph 47 of its submissions.

[137] Statement of Thelma Thames dated 15 February 2019 at paragraph [6].

[138] Statement of Bernie Lobert date 15 February 2019 at paragraph [21].

Section 138 and the Modern Awards Objective

337. There is no evidence or material that might justify the proposition that the clause proposed by the HSU is *necessary* to ensure that the Award achieves the modern awards objective for the reasons articulated above.

338. Further, the HSU's submissions do not address s.138 or s134(1) of the FW Act. We nonetheless make the following observations about various factors listed under s.134(1):

(a) Section 134(1)(a): there is no evidence dealing with the impact of the claim on the relative living standards and needs of the low paid. In the circumstances, we consider that s.134(1)(a) does not advance the union's case. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

(b) Section 134(1)(b): increasing the minimum entitlement of part-time and casual employees may have an adverse impact on the need to encourage collective bargaining.

(c) Section 134(1)(c): there is no evidence that might enable the Commission to conclude that the grant of the claim will improve social inclusion through increased workforce participation. In the circumstances, we consider that s.134(1)(c) does not advance the union's case.

(d) Section 134(1)(d): the proposed variation undermines the need to promote flexible modern work practices and the efficient and productive performance of work by requiring the payment of a premium where an employee is required to work in excess of eight hours. This is particularly so to the extent that it causes employers to alter their rostering arrangements in a way that results in inefficiencies or undermines productivity.

(e) Section 134(1)(da): this is a neutral consideration. We refer to and rely on the relevant observations of the Full Bench in the Penalty Rates Decision[139] regarding this provision of the Act, as cited earlier in this submission. The Award already provides additional remuneration for the performance of overtime. The evidence does not establish that there is any disutility associated with working more than eight hours in a day that would warrant the introduction of a higher rate of pay in respect of such hours of work. Further, there is no material to suggest that work performed after eight hours is "unsocial" in the sense contemplated by s.134(1)(da)(ii).

(f) Section 134(1)(e): the principle of equal remuneration for work of equal or comparable value is not relevant to this matter.

(g) Section 134(1)(f): it is axiomatic that an expansion of the circumstances in which overtime rates are payable will increase employment costs. The claim, if granted, would therefore have an adverse impact on business, which would be exacerbated by the absence of any NDIS funding for the additional Award obligation.

(h) Section 134(1)(g): the need to ensure a stable system tells against the grant of the claim.

339. There is no proper foundation for the HSU's claim. Ai Group submits that it should be dismissed.

[139] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [184] – [202].

9. OVERTIME FOR PART-TIME EMPLOYEES

340. Clause 10.3(c) of the Award requires that an employer and part-time employee must reach agreement before the employee commences employment about a regular pattern of work including the number of hours to be worked each week, and the days of the week the employee will work and the starting and finishing times each day.

341. The Award does not presently require payment at overtime rates to part-time employees where the employee works hours in addition to the hours they have agreed to work pursuant to clause 10.3(c) of the Award, unless the employee works more than 10 hours in a day or 38 hours in a week / 76 hours in a fortnight.

342. The HSU seeks the following variation to clause 28.1(b)(iii) in this regard:

28.1 Overtime rates

…

(b) Part-time employees and casual employees

(i) All time worked by part-time or casual employees in excess of 38 hours per week or 76 hours per fortnight will be paid for at the rate of time and a half for the first two hours and double time thereafter, except that on Sundays such overtime will be paid for at the rate of double time and on public holidays at the rate of double time and a half.

(ii) All time worked by part-time or casual employees which exceeds 10 hours per day, will be paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid for at the rate of double time, and on public holidays at the rate of double time and a half.

(iii) All time worked by part-time employees which exceeds the hours agreed in clause 10.3(c) will be treated as overtime and paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid at the rate of double time and public holidays at the rate of double time and a half. ~~Time worked up to the hours prescribed in clause 28.1(b)(ii) will, subject to clause 28.1(b)(i), not be regarded as overtime and will be paid for at the ordinary rate of pay (including the casual loading in the case of casual employees).~~

343. The HSU's claim would create a requirement to pay overtime rates to part-time employees wherever they work hours in addition to their 'agreed' hours. The claim is opposed by Ai Group.

The HSU's Case

344. The HSU has made only the following submissions in support of its claim: (our emphasis)

> 45. The way in which overtime functions under the Award for part-time employees does not meet the Modern Awards Objective, which recognises (at s.134(da)), the need to provide additional remuneration for employees working overtime; or employees working irregular or unpredictable hours.
>
> 46. Part-time employees only receive payment of the overtime rate for hours which exceed 10 in any shift, 38 in a week or 76 in a fortnight. Part-time employees should be entitled to overtime for work beyond their rostered hours. The absence of any penalty associated with the performance of such work creates a structural incentive to underestimate the hours of work required of a part-time employee at the time of engagement and/or rostering, and to utilise part-time workers like a pool of casual employees. The evidence above suggests the increasing tendency towards engagement of part-time employees in both home care and disability support work, with such employees working less hours.[140]

Section 134(1)(da) of the Act

345. The HSU submits that "the way in which overtime functions under the Award for part-time employees does not meet the Modern Awards Objective".[141] This submission misunderstands the operation of ss.138 and 134(1) of the Act.

346. By virtue of s.138, an award can include only terms that are necessary to ensure that the *award* provides a fair and relevant minimum safety net, taking into account the matters listed at s.134(1) of the Act. The question is not whether *the entitlement to overtime for part-time employees* of itself meets the modern awards objective, as contemplated by the HSU. Section 138 requires a wholistic assessment of the instrument, taking into account the minimum safety net that it provides.

[140] HSU Submission dated 15 February 2019 at paragraph 45 – 46.

[141] HSU Submission dated 15 February 2019 at paragraph 45.

347. Moreover, the HSU submits that the modern awards objective "recognises … the need to provide additional remuneration for employees working overtime; or employees working irregular or unpredictable hours".

348. When determining whether the Award provides a fair and relevant minimum safety net, one of the matters that the Commission is to take into account is the need to provide additional remuneration for employees working overtime [142] and employees working unsocial, irregular or unpredictable hours[143].

349. Notwithstanding the HSU's submission to the contrary, s.134(1)(da)(i) of the Act is not relevant to the Commission's consideration of the claim. This is because hours worked by part-time employees in addition to their "agreed" hours are not overtime, except where they exceed 10 hours in a day, 38 in a week or 76 in a fortnight. This is made clear by clause 28.1(b)(iii) of the Award: (our emphasis)

> **(iii)** Time worked up to the hours prescribed in clause 28.1(b)(ii) will, subject to clause 28.1(b)(i), not be regarded as overtime and will be paid for at the ordinary rate of pay (including the casual loading in the case of casual employees).

350. Our submission in this regard is consistent with the Commission's conclusions about similar submissions made in the context of proceedings regarding the part-time provisions of the *Fast Food Industry Award 2010*:

> **[40]** Finally, RAFFWU's submissions regarding the modern awards objective are unpersuasive. The consideration at s134(1)(da)(i) ('employees working overtime') is not apposite in these circumstances as hours worked pursuant to an agreed variation to an employees' regular pattern of work are not 'overtime' hours.[144]

351. As for s.134(1)(da)(ii), the hours worked by a part-time employee in addition to their 'agreed' hours will not necessarily be unpredictable, by virtue of the Award's rostering provisions, which require that an employee's ordinary hours must be displayed on a fortnightly roster that is published at least a fortnight

[142] Section 134(1)(da)(i) of the Act.

[143] Section 134(1)(da)(ii) of the Act.

[144] *4 yearly review of modern awards—Fast Food Industry Award 2010* [2019] FWCFB 4679 at [40].

prior to the commencement of the roster period. Once published, subject to limited exceptions[145], the roster can be changed with seven days' notice. Accordingly, save for where the relevant exceptions apply, a part-time employee will have at least 7 – 14 days' notice of the ordinary hours that they are rostered to work, including hours in addition to their 'agreed hours' and to this extent, their hours cannot properly be characterised as necessarily being unpredictable.

352. It is also relevant that one of the aforementioned exceptions to providing at least 7 days' notice of a roster change applies specifically to part-time employees:

> **(iii)** This clause will not apply where the only change to the roster of a part-time employee is the mutually agreed addition of extra hours to be worked such that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle, as the case may be.[146]

353. Clause 25.5(d)(iii) places a limitation on an employer's ability to roster a part-time employee to work additional hours unless the hours are mutually agreed and the employee will have the minimum number of days off over the relevant fortnight or 28 day roster cycle. There is little justification for requiring an employer to pay an employee at overtime rates for such work where this is not already required by clause 28.1 of the Award.

354. To the extent that part-time employees work additional hours that are 'irregular', this serves only to highlight the purpose and utility of the flexibility afforded by the current clause 28.1(b)(iii); a matter to which we return later in this submission.

355. In any event, s.134(1)(da) does not mandate that an Award prescribe a higher rate of pay for the performance of work in the circumstances described at s.134(1)(da). Such a construction of the relevant provisions is directly

[145] See clauses 25.5(d)(ii), 25.5(d)(iii) and 25.5(f) of the Award.

[146] See clause 25.5(d)(iii) of the Award.

inconsistent with the Penalty Rates Decision, in which the Full Bench observed as follows: (emphasis added)

[189] First, s.134(1)(da) speaks of the 'need to provide additional remuneration' for employees performing work in the circumstances mentioned in s.134(1)(da)(i), (ii), (iii) and (iv).

[190] An assessment of 'the need to provide additional remuneration' to employees working in the circumstances identified in paragraphs 134(1)(da)(i) to (iv) requires a consideration of a range of matters, including:

> (i) the impact of working at such times or on such days on the employees concerned (i.e. the extent of the disutility);
>
> (ii) the terms of the relevant modern award, in particular whether it already compensates employees for working at such times or on such days (e.g. through 'loaded' minimum rates or the payment of an industry allowance which is intended to compensate employees for the requirement to work at such times or on such days); and
>
> (iii) the extent to which working at such times or on such days is a feature of the industry regulated by the particular modern award.

[191] Assessing the extent of the disutility of working at such times or on such days (issue (i) above) includes an assessment of the impact of such work on employee health and work-life balance, taking into account the preferences of the employees for working at those times.

[192] The expression 'additional remuneration' in the context of s.134(1)(da) means remuneration in addition to what employees would receive for working what are normally characterised as 'ordinary hours', that is reasonably predictable hours worked Monday to Friday within the 'spread of hours' prescribed in the relevant modern award. Such 'additional remuneration' could be provided by means of a penalty rate or loading paid in respect of, for example, work performed on weekends or public holidays. Alternatively, additional remuneration could be provided by other means such as a 'loaded hourly rate'.

[193] As mentioned, s.134(1)(da) speaks of the 'need' to provide additional remuneration. We note that the minority in *Re Restaurant and Catering Association of Victoria* (the *Restaurants 2014 Penalty Rates decision*) made the following observation about s.134(1)(da):

> 'This factor must be considered against the profile of the restaurant industry workforce and the other circumstances of the industry. It is relevant to note that the peak trading time for the restaurant industry is weekends and that employees in the industry frequently work in this industry because they have other educational or family commitments. These circumstances distinguish industries and employees who expect to operate and work principally on a 9am-5pm Monday to Friday basis. Nevertheless the objective requires additional remuneration for working on weekends. As the current provisions do so, they meet this element of the objective.' (emphasis added)

[194] To the extent that the above passage suggests that s.134(1)(da) '*requires* additional remuneration for working on weekends', we respectfully disagree. We acknowledge that the provision speaks of 'the *need* for additional remuneration' and that such language suggests that additional remuneration is required for employees working in the circumstances identified in paragraphs 134(1)(da)(i) to (iv). But the expression 'the need for additional remuneration' must be construed in context, and the context tells against the proposition that s.134(1)(da) *requires* additional remuneration be provided for working in the identified circumstances.

[195] Section s.134(1)(da) is a relevant consideration, it is *not* a statutory directive that additional remuneration must be paid to employees working in the circumstances mentioned in paragraphs 134(1)(da)(i), (ii), (iii) or (iv). Section 134(1)(da) is a consideration which we are required to take into account. To take a matter into account means that the matter is a 'relevant consideration' in the *Peko-Wallsend* sense of matters which the decision maker is bound to take into account. As Wilcox J said in *Nestle Australia Ltd v Federal Commissioner of Taxation*:

> 'To take a matter into account means to evaluate it and give it due weight, having regard to all other relevant factors. A matter is not taken into account by being noticed and erroneously disregarded as irrelevant'.

[196] Importantly, the requirement to take a matter into account does not mean that the matter is necessarily a determinative consideration. This is particularly so in the context of s.134 because s.134(1)(da) is one of a number of considerations which we are required to take into account. No particular primacy is attached to any of the s.134 considerations. The Commission's task is to take into account the various considerations and ensure that the modern award provides a 'fair and relevant minimum safety net'.

[197] A further contextual consideration is that 'overtime rates' and 'penalty rates' (including penalty rates for employees working on weekends or public holidays) are terms that *may* be included in a modern award (s.139(1)(d) and (e)); they are not terms that *must* be included in a modern award. As the Full Bench observed in the *4 yearly review of modern awards – Common issue – Award Flexibility* decision:

> '… s.134(1)(da) does not amount to a statutory directive that modern awards must provide additional remuneration for employees working overtime and may be distinguished from the terms in Subdivision C of Division 3 of Part 2-3 which *must* be included in modern awards…'

…

[199] Third, s.134(da) does not prescribe or mandate a fixed relationship between the remuneration of those employees who, for example, work on weekends or public holidays, and those who do not. The additional remuneration paid to the employees whose working arrangements fall within the scope of the descriptors in s.134(1)(da)(i)–(v) will depend on, among other things, the circumstances and context pertaining to work under the particular modern award.

…

> **[202]** Fifth, s.134(1)(da) identifies a number of circumstances in which we are required to take into account the need to provide additional remuneration (i.e. those in paragraphs 134(1)(da)(i) to (iv)). Working 'unsocial … hours' is one such circumstance (s.134(1)(da)(i)) and working 'on weekends or public holidays' (s.134(1)(da)(iii)) is another. The inclusion of these two, separate, circumstances leads us to conclude that it is not necessary to establish that the hours worked on weekends or public holidays are 'unsocial … hours'. Rather, we are required to take into account the need to provide additional remuneration for working on weekends or public holidays, irrespective of whether working at such times can be characterised as working 'unsocial … hours'. Ultimately, however, the issue is whether an award which prescribes a particular penalty rate provides 'a fair and relevant minimum safety net.' A central consideration in this regard is whether a particular penalty rate provides employees with 'fair and relevant' compensation for the disutility associated with working at the particular time(s) to which the penalty attaches.[147]

356. Section 134(1)(da) is but one of a number of considerations that are to be taken into account. Accordingly, even if the Commission were to find that it lends support to the HSU's claim, it must be weighed against the various other competing considerations identified at s.134(1) of the Act.

357. Further, in relation to the considerations listed at paragraph [190] of the extract above:

(a) There is no probative evidence in support of the proposition that there is a disutility associated with working hours in addition to a part-time employee's agreed hours such that payment at a higher rate for such work is warranted.

(b) The Award does not appear to afford an employer the unilateral right to require a part-time employee to work additional hours; nor does the Award contain an obligation on a part-time employee to work such hours. This is, in our submission, an important contextual consideration that further undermines the proposition that there is any disutility associated with the performance of additional hours of work that might justify the payment of overtime rates.

(c) Further, a part-time employee is entitled to overtime rates for work performed in excess of 10 ordinary hours in a day (noting that the HSU

[147] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [189] – [202].

has also advanced a claim in these proceedings to reduce this to 8 hours) and in excess of 38 hours in a week or 76 in a fortnight. Similarly, part-time employees are entitled to any relevant penalty rates or loadings associated with additional hours worked on weekends, public holidays or on shifts. To the extent that part-time employees suffer any disutility associated with working additional hours in those circumstances, they are entitled to payment at the relevant higher rate for such work.

(d) The Award does not characterise hours worked in excess of a part-time employee's 'agreed hours' as overtime (subject to the maximum daily and weekly hours). That is, in addition to enabling an employer to engage a part-time employee to work additional hours absent an obligation to pay the employee at overtime rates, it also maintains the characterisation of such hours as ordinary hours. As a result, employees continue to accrue the relevant leave entitlements during such time and their wages would generally constitute ordinary time earnings for the purposes of an employer's superannuation obligations.

(e) To the extent that the relevant Award provisions are utilised such that part-time employees work additional hours, this is reflective the inherent features of the industry regulated by the Award. The client-focussed nature of the work, the variability in the days and times at which clients request the employer's services and the consequential need for flexibility in respect of an employee's hours of work are well-known features of the work performed by employees covered by the Award.

The Perceived Structural Incentive

358. The HSU submits that the "absence of any penalty associated with the performance of such work creates a structural incentive to underestimate the hours of work required of a part-time employee at the time of engagement

and/or rostering, and to utilise part-time workers like a pool of casual employees"[148].

359. There is no probative evidence before the Commission that might establish that employers are utilising the flexibility afforded by the Award in the way that is suggested by the HSU. That is, there is no evidence that employers are systematically, unjustifiably or deliberately engaging part-time employees on the basis of unreasonably few hours in light of the flexibility currently afforded by clause 28.1(b)(iii) of the Award. In fact Belinda Sinclair, a part-time home care worker's evidence demonstrates that her employer goes to great lengths to avoid rostering part-time employees to work additional hours:

> 22. My roster can change without notice when another employee falls ill or is unable to work. I understand that Wesley Mission North at Macquarie Park uses a large number of external staff to meet the workload. If the external company can't meet the services, it is called a "push back" and my roster might change. If Wesley Mission cannot find a casual then they change the roster so that the client will not miss out on service by adding the service onto a permanent employee's roster.[149]

360. The Commission should not, in the circumstances, be moved to vary the Award as sought by the HSU on the basis of the union's perception that the Award creates the alleged "structural incentive".

361. Further, a part-time employee's hours are required by the Award to be *agreed* prior to the employee's engagement. To the extent that agreement is reached at the time of engagement to work a certain number of hours in order to accommodate the employee's availability and preferences, but the employee nonetheless subsequently works additional hours (for example, because there is a change to the employee's availability or preferences; or because the employee is incentivised to agree to fewer hours in anticipation of receiving additional hours of work payable at overtime rates), it would be unfair to require an employer to pay for such work at overtime rates.

[148] HSU Submission dated 15 February 2019 at paragraph 46.

[149] Statement of Belinda Sinclair dated 16 January 2019 at paragraph 22.

362. We also note that the hours of work agreed prior to engagement can be altered subsequently only by written agreement between the employer and employee. A requirement to pay for additional hours at overtime rates would indeed create a structural incentive for employees to *not* agree to an expansion of the scope of their hours of work. To do so would result in a diminution of entitlements for such employees.

Section 138 and the Modern Awards Objective

363. The material before the Commission does not establish that the proposed provision is *necessary* to ensure that the Award achieves the modern awards objective. Indeed, the HSU's submissions do not so much as attempt to argue that this would be so.

364. In our submission, the proposed clause is not necessary in the relevant sense. The union's claim should therefore be dismissed.

A *Fair* Minimum Safety Net

365. The proposed clause is unfair to employers. In order for an employer to meet client needs, access to a flexible and agile workforce that can be deployed to work variable hours is essential. As we have previously submitted, under the NDIS, clients have a significant degree of control over what support or services they receive and when they receive them. In order to meet their client's needs, flexible work practices that enable an employer to arrange the performance of work of its employees to meet clients demands, are essential. It is not fair that employers be required to pay a penalty to part-time employees when they perform additional hours of work in those circumstances.

366. The imposition of a requirement to pay overtime rates is particularly unfair given that there is no Award-derived employer right to direct part-time employees to work additional hours or Award-derived employee obligation to work such hours.

367. The absence of any scope to recover the additional employment costs that would be imposed by the grant of the claim due to the NDIS' funding arrangements furthers the unfairness to employers. In essence, this is not a cost that an employer can simply 'pass on'.

368. To the extent that the resulting additional employment costs and reduced flexibilities render it impracticable for an employer to provider certain services, this may ultimately impact not only the employer but also persons with a disability seeking its services.

A *Relevant* Safety Net

369. As the Full Bench observed in the Penalty Rates Decision, in the context of s.134(1), the word 'relevant' is intended to convey that a modern award should be suited to contemporary circumstances.[150] In this context, the relevant contemporary circumstances include the operation of the NDIS and the need for flexibility in light of the client-focussed nature of the scheme. The grant of the union's claim would therefore be inconsistent with the maintenance of a relevant safety net.

Section 134(1)(a) – Relative living standards and needs of the low paid

370. There is no evidence dealing with the impact of the claim on the relative living standards and needs of the low paid.

371. In the circumstances, we consider that s.134(1)(a) does not advance the union's case. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

[150] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [120].

Section 134(1)(b) – The need to encourage collective bargaining

372. The grant of the claim may have an adverse impact on the need to encourage collective bargaining.

373. The union's pursuit of the claim here advanced demonstrates that the issue is one of importance to the union and by extension, it is one that may motivate it to engage in collective bargaining. Any such motivation would necessarily be extinguished by the grant of the claim.

374. Further, a further improvement to the minimum floor and the imposition of additional employment costs may disincentivise employers from engaging in collective bargaining.

Section 134(1)(c) – The need to promote social inclusion through increased workforce participation

375. There is no evidence that might enable the Commission to conclude that the grant of the claim will improve social inclusion through increased workforce participation.

376. In the circumstances, we consider that s.134(1)(c) does not advance the union's case.

Section 134(1)(d) – The need to promote flexible modern work practices and the efficient and productive performance of work

377. The grant of the claim would be inconsistent with the need to promote flexible modern work practices and the efficient and productive performance of work.

378. The Award presently enables a part-time employee to work additional hours without the imposition of a higher rate of pay. This enables an employer to respond to client demands for its services on specific days and at specific times, often at short notice. Short of refusing to provide the service, the employer has little if any control over the scheduling of such work. The clause

also enables an employer to respond to short-term needs for labour, such as relief for employees who are on leave.

379. For example, Belinda Sinclair, a part-time home care worker, gives the following evidence:

> My roster can change without notice when another employee falls ill or is unable to work.[151]

380. The importance of the flexibility afforded by the current clauses is self-evident.

381. Furthermore, an employer will not always enjoy certainty as to the demand for its services or the rate at which that demand will grow. As a result, the employer may be unable to agree to engaging a part-time employee on the basis of a greater number of weekly hours. Put simply, the demand for labour may be unpredictable as it is entirely contingent upon the desires of its clients.

382. During proceedings concerning the casual and part-time common issues earlier in this award review, ABI and the NSW Business Chamber advanced a claim in which it proposed greater flexibility concerning the engagement of part-time employees under the Award. Whilst the claim was not granted, the Full Bench observed that clause 28.1(b)(iii) afforded employers an important flexibility which, in its view, undermined the alleged necessity of the amendment to the part-time provisions pursued by ABI: (our emphasis)

> **[559]** ABI's proposed variation, in its final iteration, was only directed at those aspects of disability service provision which were said to be subject to client control and thus where the employer had least control over the hours required to be worked. In respect of part-time employees in that area, its variation proposed an employment model whereby actual working hours were not determined by agreement at the outset of the employment and were thereafter only alterable by agreement, but rather that the employer would have the ability to roster those hours in accordance with clause 25.5 subject to it providing an agreed guaranteed number of weekly hours and such working hours being rostered at periods when the employee was agreed to be available to work.
>
> …
>
> **[637]** Second, we consider that the current provision as it is applied in practice is reasonably flexible. Although the pattern of hours of work must be fixed in a written

[151] Statement of Belinda Sinclair dated 16 January 2019 at paragraph 22.

> agreement established at the commencement of the employment, they may thereafter be changed by agreement to meet either temporary exigencies or permanent changes in service demand. The evidence before us did not disclose any significant difficulty in obtaining the agreement of employees to alter their hours to meet changing circumstances, although we accept that the need for the agreement to be obtained and then recorded in writing does impose an administrative burden to some extent. Further, clause 28.2(b)(iii) allows for part-time workers to work additional hours up to 10 in a day or 38 in a week or 76 in a fortnight without the payment of any overtime penalty rate, so that there is a considerable capacity to assign additional hours that may arise at short notice to employees without the cost exceeding what the NDIA price structure will allow. The evidence showed that employees are generally willing to work such additional hours if it does not interfere with fixed private commitments; for example, in the case of a person with a disability attending a social event which ran over time, the employee involved readily agreed to stay on for the additional time until it ended.[152]

383. The grant of the union's claim could give rise to the need to reassess whether the flexibility of the nature sought by ABI is necessary.

384. The HSU submits that its evidence "points to a level of underemployment in the industry" amongst part-time employees.[153] The material before the Commission does not suggest that part-time employees seeking additional hours of work will in fact be afforded such hours if the claim is granted; and to the extent that employers are unable to absorb the additional employment costs associated with the performance overtime, it is likely that employers will in fact look to avoid having part-time employees work such overtime. This could conceivably result in a greater reliance on casual employment in order to ensure that employers have access to the necessary flexibility.

Section 134(1)(da) - The need to provide additional remuneration for employees working overtime; unsocial, irregular or unpredictable hours; on weekends or public holidays or shifts.

385. We have dealt with s.134(1)(da) earlier in our submission.

[152] *4 yearly review of modern awards – Casual employment and Part-time employment* [2017] FWCFB 3541 at [559] and [637].

[153] HSU submission dated 15 February 2019 at paragraph 27.

Section 134(1)(e) – The principle of equal remuneration for work of equal or comparable value

386. This consideration is not relevant to the matter.

Section 134(1)(f) – The impact of any exercise of modern award powers on business, including on productivity, employment costs and the regulatory burden

387. It is axiomatic that the grant of the claim would substantially increase employment costs. The claim, if granted, would therefore have a significant adverse impact on business.

388. Further, as we have previously submitted, significant portions of the industry covered by the Award are dependent on NDIS funding to cover their employment costs. The NDIS does not provide funding for the additional employment costs contemplated by the proposed clause. The impact on employers is compounded in these circumstances.

389. To the extent that the additional employment costs result in efficient work practices, this may also undermine productivity.

Section 134(1)(g) - The need to ensure a simple, easy to understand, stable and sustainable modern award system

390. The concept of a part-time employee working additional hours without the payment of overtime rates is not new. As was highlighted by a number of submissions made by interested parties during the Part 10A Award Modernisation Process[154], the current regime is reflective of the prevailing standard that applied in respect of at least some sectors in New South Wales[155] and potentially other states / territories prior to the making of the modern award.

[154] See for example AFEI submission dated 24 July 2008, CCIWA submission dated 24 July 2008 and a draft award filed by Jobs Australia on 24 July 2008.

[155] See for example the *Social and Community Services Employees (State) Award* (AN120505).

391. The need to ensure a stable system tells against the grant of the claim; particularly given that the claim lacks any proper foundation.

10. ROSTER CHANGES

392. United Voice seeks the following amendment to clause 25.5 of the Award:

25.5 Rosters

(a) The ordinary hours of work for each employee will be displayed on a fortnightly roster in a place conveniently accessible to employees. The roster will be posted at least two weeks before the commencement of the roster period.

(b) Rostering arrangements and changes to rosters may be communicated by telephone, direct contact, mail, email, facsimile or any electronic means of communication.

(c) It is not obligatory for the employer to display any roster of the ordinary hours of work of casual or relieving staff.

(d) Change in roster

(i) Seven days' notice will be given of a change in a roster. Full time and part time employees will be entitled to the payment of overtime for roster changes where seven days' notice is not provided.

(ii) However, a roster may be altered at any time to enable the service of the organisation to be carried on where another employee is absent from duty on account of illness, or in an emergency.

(iii) This clause will not apply where the only change to the roster of a part-time employee is the mutually agreed addition of extra hours to be worked such that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle, as the case may be.

(e) Where practicable, accrued days off (ADOs) will be displayed on the roster.

393. Ai Group opposes the variation and submits the claim should be dismissed.

United Voice's Case

394. United Voice's case for varying clause 25.5(d)(i) can be summarised as follows:

(a) Clause 25.5(d)(i) currently permits changes to rosters to be made with seven days' notice;

(b) Rosters can be changed with less than seven days' notice if one of two exceptions apply;

(c) Clause 25.5(d)(i) does not expressly state what consequence flows from a change in the roster that is made with less than 7 days' notice, in circumstances where one of the two exceptions do not apply;

(d) It is logical that overtime must be paid in these circumstances; and

(e) Therefore, the clause ought to expressly state that overtime rates will apply.

395. Ai Group's overarching response to the case advanced by United Voice is that the variation is not necessary having regard to matters including the following considerations:

(a) It is not necessary (in the sense contemplated by s.138 of the Act) or appropriate to provide for the payment of overtime penalties by reference to circumstances which constitute a breach of an award clause;

(b) The Award already appropriately and comprehensively regulates the manner in which overtime should be paid;

(c) The proposal would introduce inconsistencies between award clauses and give rise to various problems, including uncertainty as to whether the rostering provisions can be breached if a relevant payment is made; and

(d) The evidentiary case advanced does not establish the various factual assertions relied upon in support of the variation.

The Interaction between the Rostering and Overtime Provisions of the Award

396. Clause 25.5 of the Award contains a number of rules that govern rostering in the industry. They dictate how rosters can be communicated, the classes of employees for whom a roster must be prepared, and how rosters can be changed.

397. The manner in which the hours of work may be rostered and arranged under the Award is regulated in a relatively detailed way, compared to the approach adopted under most awards. This appears intended to reflect the needs of the sectors covered by the Award. It also, in various respects, reflects elements of the relevant predecessor awards. United Voice have not advanced a case that warrants a departure from such arrangements.

398. Under the Award, rosters may not be changed except as expressly contemplated by clause 25.5. Where a roster is changed in other circumstances, it would be a breach of the Award and expose an employer to a relevant penalty for such a breach. It cannot be considered necessary, in the sense contemplated by s.138, for an award to regulate the amount that should be payable to an employee in the event that the provisions of the award are breached.

399. Further, the Award already contemplates the circumstances where an employee is entitled to be paid overtime rates. This is dealt with under clause 28.1. It is unnecessary and indeed potentially both confusing and problematic for the Award provisions dealing with rostering to be amended to include an additional and contradictory provision establishing a separate basis upon which such rates would be payable.

400. We acknowledge that the Award differs in its approach to the regulation of overtime entitlements based on an employee's type of employment; that is, whether they are engaged as a full-time, casual or part-time employee as defined under the instrument.

401. For a full-time employee, hours worked outside of their rostered hours will constitute overtime and will attract relevant penalty rates, pursuant to clause 28.1(a): (emphasis added)

> (a) A full-time employee will be paid the following payments for all work done in addition to their rostered ordinary hours on any day:

402. Given this clause, the provision proposed by United Voice would have no work to do in the context of full-time employment, as it appears intended to merely deliver the same outcome as is already provided for under the current terms of the Award.

403. For part-time or casual employees, the situation is different. Clause 28.1(b) of the Award provides as follows:

> **(i)** All time worked by part-time or casual employees in excess of 38 hours per week or 76 hours per fortnight will be paid for at the rate of time and a half for the first two hours and double time thereafter, except that on Sundays such overtime will be paid for at the rate of double time and on public holidays at the rate of double time and a half.
>
> **(ii)** All time worked by part-time or casual employees which exceeds 10 hours per day, will be paid at the rate of time and a half for the first two hours and double time thereafter, except on Sundays when overtime will be paid for at the rate of double time, and on public holidays at the rate of double time and a half.
>
> **(iii)** Time worked up to the hours prescribed in clause 28.1(b)(ii) will, subject to clause 28.1(b)(i), not be regarded as overtime and will be paid for at the ordinary rate of pay (including the casual loading in the case of casual employees).
>
> **(iv)** Overtime rates payable under this clause will be in substitution for and not cumulative upon:
>
> **(A)** the shift premiums prescribed in clause 29—Shiftwork; and
>
> **(B)** the casual loading prescribed in clause 10.4(b),
>
> and are not applicable to ordinary hours worked on a Saturday or a Sunday.

404. On our construction, the Award simply does not permit a part-time employee's roster to be changed with less than seven days' notice unless one of the exceptions under the Award applies. In such circumstances there is no apparent necessity for regulating what rate of pay should attach to such an outcome.

405. Moreover, under clause 10.3 of the Award (which defines and deals specially with part-time employment) there are a raft of additional protections or limitations that restrict the extent to which a part-time employee's hours of work may be altered. Relevantly, there is no Award-derived right to require an employee to work outside of the hours set in accordance with these provisions. This reinforces our contention that there is no necessity to grant the claim.

406. It is also apparent, on the face of the Award, that the flexibility afforded to employers and part-time employees to work hours in addition to their 'agreed' hours without attracting overtime rates has been provided for quite deliberately. There is no 'gap' that might justify the granting of the claim.

407. Contrary to United Voice's submissions, there is no ambiguity about what might be payable if an employee's roster is varied in breach of the Award.

The Consequences of United Voice's Claim

408. If the Commission were to grant the proposed variation, it will lead to ambiguity and inconsistencies within the Award and would purport to create an additional substantive entitlement for part-time employees.

409. If the Award where to provide a payment that applies in circumstances where the roster is changed without providing the requisite notice, it might be interpreted by employers and employees as suggesting that this is permissible, if the relevant payment is made. Ironically, the clause might consequently be a catalyst for greater irregularity in working hours.

410. The proposed change may also lead to increased costs, which are not funded by the NDIS and are not factored into the funding model.

411. Ai Group also submits that the drafting of United Voice's proposed wording is problematic in the following significant respects.

412. *Firstly*, we submit that an employee being "entitled to the payment of overtime for roster changes" is inherently ambiguous. If an employee is entitled to the "payment of overtime", it is unclear whether those hours are actually overtime, or ordinary hours subject to a penalty equivalent to overtime. Whichever it is, it has significant implications; for example:

(a) In respect to the accrual of various kinds of paid leave, such as annual leave;

(b) Whether the payment is considered ordinary time earnings for superannuation purposes;

(c) It may have implications on how provisions of the National Employment Standards, such as those in s.62 of the FW Act would apply.

413. *Secondly*, it is unclear how United Voice's proposed clause 25.5(d)(i) would interact with the exceptions found at clauses 25.5(d)(ii) and (iii) (which are not sought to be varied). On one construction, even though clauses 25.5(d)(ii) and (iii) are currently considered 'exceptions', they would no longer operate as exceptions under the proposed clause. While the roster may be changed in those circumstances, it does not necessarily follow that overtime would not still be payable. Rather than provide clarity, (as United Voice submits their clause is intended to achieve), the variation will likely cause confusion and the incorrect application of the Award.

414. Given the proposed variation would in various respects be inconsistent with existing Award provisions regarding payment for overtime and the prohibition on altering rosters without the provision of the requisite notice, and the other deficiencies in its drafting identified above, it cannot be considered consistent with the need to ensure a simple and easy to understand award system, as contemplated by s.134(1)(g).

415. In our submission, there are serious doubts as to the utility and necessity of a variation to the clause.

416. United Voice offers two contradictory factual assertions in respect to the operation of clause 25.5(d). On one hand, United Voice submits that it is the "stand industrially generally" for overtime to be paid in circumstances where seven days' notice is not provided.[156] At the same time, United Voice posits that "many employers do not heed this".[157] United Voice has not provided any evidence to support either of these factual contentions.

417. Although United Voice submits that "many employers do not heed to this", they have not provided any examples of cases where this matter has been considered either by the Commission or a Court. It is difficult to reconcile United Voice's submission that the Award is so frequently breached, with the glaring absence of any evidence that they have ever disputed its application in a Court or tribunal.

United Voice's Evidentiary Case

418. United Voice relies on three witness statements in support of its claim. It appears to rely principally on the evidence of Ms Belinda Sinclair[158], a part-time home care worker with Wesley Mission. Ai Group submits that Ms Sinclair's evidence does not provide a basis for varying the Award as proposed by the union.

[156] United Voice submissions at paragraph 68.

[157] United Voice submissions at paragraph 69.

[158] Statement of Belinda Sinclair dated 16 January 2019 at paragraphs 22 – 26.

419. It is Ms Sinclair's evidence that her roster can change without notice when another employee falls ill.[159] This is an uncontroversial statement and generally accords with clause 25.5(d)(ii) of the Award. Her evidence is that her employer, Wesley Mission, will undertake the following steps to cover such absences:

(a) Firstly, Wesley Mission will try to engage one of a large number of "external" employees;

(b) Where the absence cannot be covered by external staff, Wesley Mission will try to engage a casual employee to cover the absence;

(c) As a last resort, it may change Ms Sinclair's roster to accommodate the absence.[160]

420. Ms Sinclair's evidence illustrates that it is not the case that her rosters are changed 'on a whim', but rather as a final resort.

421. United Voice also relies on the evidence of Mr Deon Fleming. Mr Fleming's description of when his roster can change[161] is entirely consistent with clauses 25.5(d)(ii) and 25.5(f) of the Award. Mr Fleming's evidence provides no support for United Voice's submission that clause 25.5(d)(i) should be varied in the way it seeks.

422. Finally, United Voice relies on the evidence of Ms Trish Stewart, a part-time employee of LiveBetter Support Services Limited. In summary, Ms Stewart's evidence is that her roster can change frequently due to a colleague being absent due to illness, or alternatively because she is offered, and accepts, additional shifts.[162] These roster changes are contemplated and permitted by

[159] Statement of Belinda Sinclair dated 16 January 2019 at paragraph 22.

[160] Statement of Belinda Sinclair dated 16 January 2019 at paragraph 22.

[161] Witness statement of Deon Fleming dated 16 January 2019.

[162] Witness statement of Trish Steward dated 17 January 2019 at paragraph [10]-[11].

the current clause 25.5(d). The evidence provides no support for the variation sought by United Voice.

423. Self-evidently, the evidence led by United Voice does not justify a variation to clause 25.5(d).

Section 138 and the Modern Awards Objective

424. United Voice's only reference to the modern awards objective in seeking to justify the proposed variation is to s.134(1)(da)(ii). In this regard it merely asserts that "there should be proper compensation for employees who are required to work unpredictable hours as a result of late roster changes."

425. In response, we firstly note that s.134(1)(da)(ii) does not constitute a legislative imperative to provide additional remuneration in the relevant circumstances.[163]

426. We also note that the extent to which the Award heavily regulates the manner in which hours must be rostered, this weighs against the need for additional compensation. This is reinforced by our observation that the evidentiary case advanced does not establish that employers are breaching the award provisions pertaining to rosters.

[163] *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 at [195].

11. RECALL TO WORK OVERTIME

427. The HSU has proposed a new clause that would create an obligation to provide certain payments to an employee performing work from home after leaving the employer or client's premises.

428. In this section we address the reasons why the Full Bench should reject the union's claim. In our submission, a case for the proposed changes has not been made out. Further, there are a range of deficiencies or problems with the proposed clause that would in any event weigh against granting the variation.

429. The HSU seeks the following changes to clause 28.4:

> **28.4 Recall to work overtime**
>
> **(a)** An employee recalled to work overtime after leaving the employer's or client's premises will be paid for a minimum of two hours' work at the appropriate rate for each time so recalled. If the work required is completed in less than two hours the employee will be released from duty.
>
> **(b)** Where an employee is required to perform work from home after leaving the employer's or client's premises, including:
>
> **(i)** Responding to phone calls, message or emails;
>
> **(ii)** Providing advice ("phone fixes")
>
> **(iii)** Arranging call out/rosters of other employees; and
>
> **(iv)** Remotely monitoring and/or addressing issues by remote telephone and/or computer access;
>
> the employee will be paid for a minimum of one hours' work at the overtime rate for each time recalled.

430. Before addressing the merits of the HSU's proposal, we note that a variation to the Award directed at 'remote response work' was an element of the consent variations that was previously agreed between several, but not all parties to the proceedings. The provision was cast in the following terms:

> 17.2(e) Remote response
>
> (i) In this award, unless the contrary intention appears, remote response duties include:
>
> (a) responding to phone calls, messages or emails;
>
> (b) providing advice ("phone fixes");
>
> (c) arranging call out/rosters of other employees; and
>
> (d) remotely monitoring and/or addressing issues by remote telephone and/or computer access.
>
> (ii) If an employee is required to perform remote response duties between 6.00am and 10.00pm in any day, the employee will be paid at the prescribed overtime rate for the time worked, rounded up to the nearest 15 minutes.
>
> (iii) If an employee is required to perform remote response duties between 10.00pm and 6.00am in any day the employee will be paid at the prescribed overtime rate for the time worked, with a minimum payment as for one hour. Where such work exceeds one hour, payment will be made at the prescribed overtime rate for the duration of the work.
>
> (iv) An employee remotely responding will be required to maintain and provide to the employer a time sheet of the length of time taken in dealing with each matter remotely for each day commencing from the first remote response.

431. This proposal was the subject of conferences before the Commission in the context of the current proceedings. Ai Group expressed concerns during that process about the drafting of the proposed provision. Although agreement between the parties was not ultimately reached in relation to such matters, several employer parties have subsequently filed a proposal for an award variation dealing with related issues (**Joint Employer Proposal**). Accordingly, there are now what may be described as competing claims before the Commission relating the performance of work that occurs away from an employer or client's premises.

432. The Joint Employer Proposal is in the following terms:

20.10 Remote response

(a) In this award, remote response duties means the performance of the following activities by an employee outside of hours at the direction of, or with the authorisation of, their employer:

(i) responding to phone calls, messages or emails;

(ii) providing advice ('phone fixes');

(iii) arranging call out/rosters of other employees; and

(iv) remotely monitoring and/or addressing issues by remote telephone and/or computer access,

in circumstances where the employee is not required to attend their employer's premises, or any other particular place of work, and at a time when the employee is either on call or has not otherwise been rostered to work.

(b) Subject to clause 20.10(f), where an employee is directed or authorised by their employer to perform remote response duties between 6.00am and 10.00pm, the employee will be paid at the applicable rate of pay specified in this Award for any such work performed between these hours, with a minimum payment of 15 minutes.

(c) Where an employee undertakes multiple separate instances of remote response duties during a particular period referred to in clause 20.10(b), and the total time spent performing such duties does not exceed 15 minutes, only one minimum payment is payable.

(d) Subject to clause 20.10(f), where an employee is directed or authorised to perform remote response duties between 10.00pm and 6.00am the employee will be paid at the applicable rate of pay specified in this Award for any such work performed between these times, with a minimum payment of one hour. Where such work exceeds one hour, payment will be made at the applicable rate for the duration of the work.

(e) Where an employee undertakes multiple separate instances of remote response duties during a particular period referred to in clause 20.10(d), and the total time spent performing duties does not exceed one hour, only one minimum payment is payable.

(f) Subject to clause 20.10(g), an employee who performs remote response duties must maintain and provide to their employer a time sheet specifying the time at which they commenced and concluded performing any remote response duty and a description of the work that was undertaken. This record must be provided to the employer prior to the end of the next full pay period or in accordance with any other arrangement as agreed between the employer and the employee.

(g) An employer may implement an alternate method or system for the recording and notification of the details referred to in clause 20.10(f).

(h) An employer is not required to pay an employee for any time spent performing remote duties if the employee does not comply with the requirements of clause 20.10(f) or any alternate method or system pursuant implemented under clause 20.10(g).

(i) For the purposes of this clause, remote response duties do not include employees undertaking administrative tasks such as (but not limited to) reviewing or inquiring about their roster or seeking changes to their roster.

433. In the context of the Review, the Commission is not bound to grant a remedy in the terms sought. Accordingly, although Ai Group has not advanced a claim for a new clause imposing additional obligations on employers that require employees to work remotely, we observe that many of the deficiencies or criticisms we identify in relation to the union's claim might be ameliorated or even negated by adopting elements of the Joint Employer Proposal in any clause dealing with the kinds of issues that the competing claims seek to address.

The Merits of the HSU's Claim

434. The HSU has advanced very little by way of submission in support of its claim for a major change to the Award. The substance of the union's arguments in support of the proposed variation are contained in the following paragraphs of its submission:

71. The award does not clearly identify whether employees required to perform additional work without attending the place of work are entitled to compensation. Many employees are now able to perform valuable work for the employer outside the employer's premises connecting remotely with employer systems. Such work should be compensated appropriately.

72. The HSU contends the Award should be amended to make clear that employees required to perform work out of hours should be compensated, with a minimum payment of one hour attached to such work.[164]

[164] HSU Submission dated 15 February 2019 at paragraph 71 – 72.

435. The union's case can be characterised as resting upon the following two contentions:

(a) That there should be greater clarity about what employees should be paid for work undertaken without attending the workplace, and

(b) Employees performing work "out of hours" should be paid for a minimum of one hour.

436. The Commission should not accept that the HSU has established a case for a variation to the Award.

437. Ai Group does not dispute the proposition that many employees are now able to perform valuable work for their employer outside the employer's premises. Our opposition to the union's claim centres on a disagreement as to:

(a) Whether an additional clause is necessary to provide clarity as to the payment that attaches to work undertaken at home;

(b) What constitutes *appropriate* compensation for such work;

(c) The extent to which the proposed minimum payment is justifiable;

and a potential disagreement with the HSU as to what should constitute 'work' that attracts such a payment.

Is Greater Clarity Necessary?

438. The HSU's submission appears to allude to the prospect that it is either unclear whether an employee is entitled to be paid for work undertaken in the circumstances contemplated by the proposed variation, or, that it is unclear whether or not clause 28.4 (Recall to Work Overtime) applies in such instances.

439. In responding to the union's proposal, it is convenient to first address the manner in which the Award currently regulates payment for the type of work contemplated by the proposed clause.

440. Where work is performed, at the direction of an employer, and after leaving a client's or employer's premises, it would currently attract a payment at the appropriate rate specified in the Award for the relevant circumstances. This may be at the ordinary rate of pay (inclusive or not inclusive of shift rates or a relevant penalty rate) or at overtime rates. It is not, generally, the location at which the work is performed that governs the amount that should be paid, or indeed whether a payment should be made.

441. The exception to this arises from clause 28.4, which deals with the circumstances of an employee being recalled to work overtime after leaving the employer or client's premises:

> **28.4 Recall to work overtime**
>
> An employee recalled to work overtime after leaving the employer's or client's premises will be paid for a minimum of two hours' work at the appropriate rate for each time so recalled. If the work required is completed in less than two hours the employee will be released from duty.

442. Ai Group contends that clause 28.4 addresses the circumstances where an employee is directed to return to perform overtime work at an employer or client's premises. Such an interpretation aligns with the common approach adopted in similar provisions in other awards.

443. The text of the provision provides further support for the interpretation that we advance. Relevantly, the term "recalled" suggests that an employee has been called back or ordered back to work. Its use in the context of a sentence referencing the physical location of the employer or client's premises suggests that it is to such a location that the employee must be recalled to work. Moreover, the notion that the provision might be apt to cover the employee's performance of discrete work activities, whist at their home, is difficult to reconcile with the element of the clause that provides that the employee will be "released from duty" if the required work is completed in less than two hours.

444. Implicit in the approach proposed by the HSU is that circumstances where an employee performs work from home after leaving the employer or client's premises are different to those involving situations where an employee is recalled to work at an employer or client's premises and as such should be remunerated differently.

445. Notwithstanding the above contentions, we do not here seek to address the interpretation of clause 28.4 in detail as we do not understand that any party is seriously asserting that it operates in a manner different to that which we have canvassed. Moreover, an award clause that required an employee be paid for two hours on every occasion that they are required to undertake any activity at the direction of their employer would be exceedingly generous and would not be *necessary*, in the sense contemplated by s.138. As such it would have no place in the safety net.

446. A further difficulty with accepting that the proposed variation is necessary is that the union has failed to establish the extent to which the performance of work at home by employees covered by the Award actually occurs. The HSU's submissions in support of this variation do not assert that employees are undertaking large amounts of unpaid work. Similarly, the lay witness evidence that they have advanced does not establish that this is a problematic phenomenon.

447. There is some reference to unpaid work in the expert witness statement of Dr McDonald; however, this relates to the diary entries of 10 unnamed employees who have not given evidence attesting to the accuracy of such entries. It is in the nature of hearsay evidence, which cannot be tested and ought not be given any significant weight.

448. The role of NDIS' funding arrangements must be carefully considered. The difficulty, or indeed pointlessness, of responding to alleged problems flowing from deficiencies in the current funding arrangements to the extent that they

are resulting in employees performing unpaid administrative duties[165], by simply modifying or further regulating terms and conditions specified in the Award, is apparent. Simply imposing more strident obligations on employers is not a productive or appropriate response and it does not grapple with the underlying root causes of such issues.

449. Ultimately, the union's claim may simply intensify the kinds of problems that the aforementioned report identifies. Moreover, we cannot identify any basis upon which it might be said that the NDIS funding arrangements would enable employers to cover the costs of the proposed clause. In such circumstances it is unfair to simply impose an additional unrecoverable cost upon employers.

Deficiencies in the HSU's Proposed Clause

450. There is a lack of clarity as to the circumstances in which the proposed clause will apply. Moreover, there is a risk that the provision will expose an employer to payments in circumstances where they do not want and/or direct the relevant "work" to be undertaken.

451. The proposed clause does not define "work" in an exhaustive or descriptive manner. It merely lists a number of tasks that are included in the concept. In the context of the award system, "work" attracting a payment should be restricted to labour that is undertaken by an employee under authorisation, or at the direction, of an employer in the course of their employment.

452. Moreover, the tasks identified in clause 24.5(b) are referred to in a fairly unclear and ambiguous manner. For example, there are no parameters around either what kind of 'advice' is referred to in clause 25.5(b)(ii), or to whom the 'advice' must be given, in order to attract payment. Similarly, there is no indication as to the kinds of "issues" that are intended to be caught by clause 28.4. The provision would give rise to uncertainty as to precisely what activities might attract payment under the clause. For example, if an employee

[165] UNSW, *Working under the NDIS: Insights from a survey of employees in disability services* (June 2017) at page 46.

elects at their own initiative to monitor their emails on their phone or computer; or elects at their own initiative to respond to an email; or takes a phone call from a colleague seeking assistance (without the knowledge or approval of management); or indeed simply actively thinks about the manner in which to assist a client during their own time, would it be work for the purposes of the clause?

453. The clause also creates a risk that simple administrative tasks that might currently reasonably be considered a necessary task for employees to undertake in order to maintain their employment, without constituting work attracting a payment under the Award, might now unreasonably attract a significant additional payment. For example, it is not uncommon in many industries for employees to be expected to check their roster in their own time, or to make contact with their employer in their own time in order to verify when they will either be offered or allocated work. It can be assumed that this occurs in the context of the sectors covered by the Award.

454. In many ways technological developments have impacted upon such practices. For example, the prevalent use of smart phones means that such activities can and are now commonly be undertaken remotely; a change that in many instances will be to the mutual benefit of all parties. The proposed variation would mean that these conveniences would trigger a payment under the Award, which is not warranted.

455. Similarly, the use of online platforms for the allocation of work is a phenomenon that has arisen in the sectors covered by the Award and other industries.[166] Given the drafting of the proposed clause, there is a risk that activities undertaken by a casual employee who engages with such a platform in order to advise of their availability, or to secure their next casual engagement, would be undertaking “work” as envisaged by the proposed clause or, at the very least, it would be unclear whether or not such activities constitute work. If it would, and employees would therefore be entitled to

[166] McKinsey Report at page 28.

significant additional payments for undertaking such activities, this could potentially have a significant adverse impact upon employers utilising such technologies.

456. In advancing the above criticisms, we nonetheless recognise that the obligation to provide the payments contemplated by the proposed clause is tempered by the prerequisite that to be eligible for a payment the employee must be "required to perform work from home after leaving the employer's or client's premises". However, the condition that the employee is "required to perform remote response duties" is not sufficient to render the clause reasonable or workable. The clause does not specify the basis upon which the employee may be *required* to perform the overtime work. It does not, for example, specify that it is only work that an employee has been asked or authorised by their employer to perform that attracts the payment. This can be contrasted with the current requirement in clause 28.1 to only pay for overtime work in circumstances where it is "authorised" overtime.

457. There is a risk that the proposed provision might result in (or might be perceived by employees to result in) an entitlement to the additional payment whenever an employee undertakes work away from the employer or client's premises because they *believe* that it is necessary, even if it has not been authorised or requested by their employer. Indeed, we are concerned that this may be the outcome that the HSU is intending to achieve.

458. There is a very real possibility in this sector that employees may undertake activities that they have not been instructed or authorised to undertake. The material before the Commission suggests that in some instances employees will do more than is requested or required by their employer in order to assist a client or indeed facilitate the services of their employer.

459. We do not seek to impugn the actions or motivations of such employees; however, it cannot be that an employee's own assessment of whether a task is "necessary" is sufficient to render a payment to the employee under the safety net. If an Award clause is to impose a financial obligation upon an

employer, it is fair and appropriate that the employer be afforded a capacity to manage their exposure to such costs. A clause that did otherwise would risk exposing employers to unsustainable costs.

460. The Joint Employer Proposal provides an alternate approach to regulating payment for work undertaken away from an employer or client's premises. In various respects it remedies a number of the abovementioned deficiencies by expressly providing that it applies in the context of activities performed by employees "at the direction of, or with the authorisation of, their employer". Moreover, it applies to a discrete range of duties (thus limiting the difficulties associated with a reference to "work", absent a definition of what this term constitutes). If the Full Bench were minded to grant an award variation addressing the matter that has been put in issue by the HSU and Joint Employers, it should include these elements of the Joint Employer Proposal.

The Rates that are Payable

461. The proposed clause would require that all remote duties would be paid at overtime rates.

462. It is unclear why overtime rates should apply to duties undertaken at home that are undertaken within the span of hours and would constitute ordinary hours. Three obvious issues flow from this.

463. *Firstly*, the clause fails to recognise that employees may be performing their ordinary hours of work at home as part of their usual working arrangements (for example, by virtue of flexible working arrangements). This may well be part of their rostered hours of work. In such circumstances the proposed provision would now require that overtime rates apply to such work. We do not know whether this is intended, but it is clearly unjustifiable. In contrast, we note that the Joint Employer proposal only applies in the context of activities performed at the direction or authorisation of an employer when the employee is "on-call" or "not otherwise rostered to work."

464. *Secondly*, the proposed clause greatly restricts an employer's capacity to utilise casual and part-time employees to perform work at home at ordinary hourly rates. Under the Award, a full-time employee will generally be entitled to be paid overtime for all authorised overtime worked outside of their rostered ordinary hours. However, casual and part-time employees can work outside of rostered hours (indeed a casual does not even need to be provided with a roster) subject to such hours not exceeding certain specified daily and weekly or fortnightly limits.[167]

465. *Thirdly*, it does not appear that the work would, at least for casual and part-time employees be overtime. It would just be paid at overtime rates. There is no reference to the employee being required to work "overtime" at home in a manner equivalent to the approach adopted in clause 28.4(a). Consequently, such employees would not only have the benefit of a higher rate of pay; their employer would also generally be required to take such payments into account when making superannuation contributions. There would also arguably be a need to accrue relevant NES entitlements (at least for employees other than casuals) by reference to such payments. There is no apparent justification for such outcomes.

466. If the Commission is to vary Awards to specify that work undertaken at home and after leaving a client or employer's premises is payable, it should only attract the rates that would ordinarily be applicable (depending on the circumstances this might be the ordinary rates, overtime rates or penalty rates). We note that this is broadly the approach taken in the Joint Employer Proposal.

The Proposed One Hour Minimum Payment

467. The proposed clause requires that on each occasion that an employee is required to work, they will receive a minimum payment of one hour at overtime rates. This does not account for the possibility (or indeed likelihood) that some

[167] Clause 28.1(b)(iii) of the Award.

of the activities contemplated by the clause may only be undertaken for a very short duration. No submission has been advanced as to why a one hour minimum payment is justified.

468. The paucity of evidentiary material before the Commission in relation to this claim does not render it feasible for the Full Bench to make any firm assessment of the level of disruption or the disutility associated with performing such activities. Nor does it enable a proper consideration of the cost impact of the claim to be made.

469. In such circumstances, the Commission should not impose any requirement for a minimum payment. A case for such a provision has not been made out.

470. In the alternate, we contend that the Commission should not impose such a significant minimum payment as is suggested by the HSU. The need for a cautious approach in this regard is reinforced by the risk that such costs will not be able to be recovered given the NDIS's funding constraints. If a minimum payment is to be applied (contrary to our submissions) it should be no longer than the 15 minutes that is proposed to apply in some instances under the Joint Employer Proposal.

Multiple Separate Instances of Work

471. A further difficulty is that it appears that on each occasion an employee is required to perform work in the circumstances contemplated by the HSU, they may be eligible for a one hour minimum payment. Accordingly, in circumstances where an employee may, on multiple occasions, undertake several short instances of work at their home, each for a short duration, they may become entitled to several hours of pay at overtime rates, even if this is entirely disproportionate to the activities undertaken. For example, an employee who receives several short separate phone calls after leaving work at a client or employer's premises would be eligible to several hours of pay at overtime rates, even if the total time spent undertaking such calls was less than one hour. Such an approach is unreasonable.

472. In contrast to the HSU's proposal, the Joint Employer Proposal attempts to address circumstances of employees undertaking multiple separate instances of work by ensuring that only one minimum payment should be payable where the cumulative amount of time spent performing the relevant activities does not exceed the applicable minimum amount payable:

> (C) Where an employee undertakes multiple separate instances of remote response duties during a particular period referred to in clause 20.10(b), and the total time spent performing such duties does not exceed 15 minutes, only one minimum payment is payable.

473. If the Commission were to vary the Award to include a clause dealing with work undertaken at an employee's home, after they have left the client or employer's premises, it should include a comparable provision to clause (C) in the corresponding Joint Employer Proposal.

Verifying that the Work was Undertaken

474. Another difficulty with the union's proposal is that an employer subject to the clause will, at least in some instances, have no ability to supervise the relevant activities or indeed verify either that they were undertaken or, importantly, when such work is undertaken. The second point is of more significance should the Commission accept that such work should not always be payable at overtime rates, as the rate of remuneration payable may consequently vary depending upon the time at which the work is undertaken.

475. Ai Group notes that the Joint Employer Proposal seeks to address this through proposed subclauses (f), (g) and (h), which are cast in the following terms:

> (f) Subject to clause 20.10(g), an employee who performs remote response duties must maintain and provide to their employer a time sheet specifying the time at which they commenced and concluded performing any remote response duty and a description of the work that was undertaken. This record must be provided to the employer prior to the end of the next full pay period or in accordance with any other arrangement as agreed between the employer and the employee.
>
> (g) An employer may implement an alternate method or system for the recording and notification of the details referred to in clause 20.10(f).

(h) An employer is not required to pay an employee for any time spent performing remote duties if the employee does not comply with the requirements of clause 20.10(f) or any alternate method or system pursuant implemented under clause 20.10(g).

476. Should the Full Bench decide to amend the Award to include a provision dealing with work undertaken either at home or remotely, comparable provisions to the above extracted elements of the Joint Employer Proposal should be included.

Section 138 and the Modern Awards Objective

477. The HSU has not so much as attempted to justify why the proposed provision is *necessary* or sought to deal with the various elements of s.134(1) of the Act.

478. In our submission:

(a) The proposed clause is *unfair* to employers[168] in various ways, for the reasons set out in our submissions above.

(b) There is no material that might establish that the proposed provision would enhance or improve the relative living standards and needs of the low paid[169]. Further, the HSU does not appear to contend as much.

(c) The need to encourage collective bargaining[170] does not lend support to the grant of the claim.

(d) There is no material that might establish that the proposed provision would promote social inclusion through increased workforce participation[171].

[168] Section 134(1) of the Act.
[169] Section 134(1)(a) of the Act.
[170] Section 134(1)(b) of the Act.
[171] Section 134(1)(c) of the Act.

(e) The proposed clause is inconsistent with the need to promote flexible modern work practices and the efficient and productive performance of work.[172]

(f) The principle of equal remuneration for work of equal or comparable value[173] is not a relevant consideration in this matter.

(g) The proposed clause would likely have a negative impact on business.[174] In particular it would impose significant new employment costs absent any ability to recover such costs through the NDIS' funding arrangements.

(h) The need to ensure a stable and sustainable modern awards system[175] tells against the grant of the claim.

[172] Section 134(1)(d) of the Act.
[173] Section 134(1)(e) of the Act.
[174] Section 134(1)(f) of the Act.
[175] Section 134(1)(g) of the Act.

12. SLEEPOVERS

479. The HSU seeks that employees be provided with additional amenities when undertaking sleepovers. The claim would result in the following variations to clause 25.7(c):

> **(c)** The span for a sleepover will be a continuous period of eight hours. Employees will be provided with:
>
> **(i)** a separate and securely lockable room with a peephole or similar in the door, ~~with~~ a bed and a telephone connection in the room; and,
>
> **(ii)** suitable sleeping requirements such as a lamp and clean linen; and
>
> **(iii)** use of appropriate facilities (including staff facilities where these exist); and
>
> **(iv)** free board and lodging for each night when the employee sleeps over.

480. The only HSU submission in support of the proposal is as follows:

> 73. The clause should be amended to ensure appropriate facilities are provided when employees are required to perform a sleepover shift. Such shifts are compensated modestly.[176]

481. Notwithstanding the characterisation of the Award as only "modestly" compensating employees for sleepovers, no party seeks to fundamentally alter the current provisions dealing with payment for sleepovers.

482. On any reasonable assessment, the union has failed to mount a case warranting such a variation. The union does not assert that the variation is necessary to achieve the modern awards objective or indeed otherwise refer to the relevant considerations identified in s.134. At an even more fundamental level, no meaningful reasoning for the variation is contained in the union's submission. We are left to speculate as to the why the HSU contends that the additional amenities would be "appropriate".

[176] HSU Submission dated 15 February 2019 at paragraph 73.

483. The HSU's submission does not identify an evidentiary basis for the variation. Moreover, it does not identify any evidence establishing any significant deficiency with the operation the current award provisions in practice.

484. Despite the paucity of material in support of the claim, it appears to us that it seeks, at least in part, to inappropriately deal with safety issues through an extremely simplistic mechanism. Employer obligations relating to the management of the safety of their employees at work is comprehensively dealt with under specialised laws dealing with workplace health and safety obligations for employers. It is not desirable or necessary, in the sense contemplated by s.138, for the award system to regulate such matters in a piecemeal manner.

485. The evidentiary material advanced by the union does not establish that the kind of amenities specified in clause 25.7(c) are actually warranted in the context of all circumstances in which a sleepover occurs. In reality, they are not. To take an obvious example, there is no apparent necessity for the separate room utilised for the sleepover arrangement to be locked or to contain a peephole if the client that is being assisted is not able to independently mobilise and the entrance to the property is otherwise secure. We do not here suggest that the kinds of amenities contemplated by the proposal would never have relevance, but it would be heavy handed and unrealistic to assert that that such amenities be provided in all instances in which a sleepover occurs.

486. Similarly, the need for each room to contain a phone connection is also unrealistic. Depending on the particular circumstances, it might be sufficient that a client has access to a centrally located landline phone or to a mobile phone.

487. Compliance with the proposed variation to clause 25.7(c) would also be problematic from a practical perspective. The provision assumes a level of control over particular premises that does not accord with the practical realities of the industry. An employer will not always own the premises at which a

sleepover occurs. For example, the premises may be an individual client's residence, or it may be a rented facility. In such circumstances an employer will not always have the capacity or legal right to make the kind of physical modifications proposed.

488. We also note that the references to "*suitable sleeping requirements such as a lamp and clean linen*" is imprecise. The provision does not provide for an exhaustive list of items or conditions that might be said to constitute suitable sleeping requirements or any indication as to the basis upon which the requirements might be regarded as "suitable". The inclusion of such wording would be fertile ground for disputation and, at the very least, inconsistent with the need to ensure a simple and easy to understand modern award system.[177]

489. To the extent that the proposed variation seeks to impose new and potentially expensive obligations upon employers, it is axiomatic that a consideration of s.134(1)(f) (the likely impact of any exercise of modern award powers on business) would weigh against granting the claim.

490. Further, the inclusion of terms establishing these new obligations would be beyond power. Section 136 of the Act limits the kinds of terms that can be included within a modern award. It provides, in effect, that a modern award must only include terms that are permitted or required by certain provisions of the Act. Ai Group cannot identify any provision of the Act that would permit a modern award to include provisions of the nature proposed. They do not appear to be about any of the matters specified in s.139 and it has not been established that the provision satisfies the requirements for inclusion in the Award under s.142. On its face, the inclusion of the proposed clause in a modern award would be contrary to s.136.

[177] Section 134(1)(g) of the Act.

13. UNIFORMS

491. United Voice is seeking the insertion of a new clause 20.2(b), as set out below:

20.2 Clothing and equipment

(a) Employees required by the employer to wear uniforms will be supplied with an adequate number of uniforms appropriate to the occupation free of cost to employees. Such items are to remain the property of the employer and be laundered and maintained by the employer free of cost to the employee.

(b) An adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.

(~~b~~c) Instead of the provision of such uniforms, the employer may, by agreement with the employee, pay such employee a uniform allowance at the rate of $1.23 per shift or part thereof on duty or $6.24 per week, whichever is the lesser amount. Where such employee's uniforms are not laundered by or at the expense of the employer, the employee will be paid a laundry allowance of $0.32 per shift or part thereof on duty or $1.49 per week, whichever is the lesser amount.

(~~c~~d) The uniform allowance, but not the laundry allowance, will be paid during all absences on paid leave, except absences on long service leave and absence on personal/carer's leave beyond 21 days. Where, prior to the taking of leave, an employee was paid a uniform allowance other than at the weekly rate, the rate to be paid during absence on leave will be the average of the allowance paid during the four weeks immediately preceding the taking of leave.

(~~d~~e) Where an employer requires an employee to wear rubber gloves, special clothing or where safety equipment is required for the work performed by an employee, the employer must reimburse the employee for the cost of purchasing such special clothing or safety equipment, except where such clothing or equipment is provided by the employer.

492. Currently, the Award requires that an employer must provide "an adequate number of uniforms appropriate to the occupation" of the employee where the employer requires the employee to wear a uniform. The Award does not purport to prescribe what the "adequate number of uniforms" will be. Rather, what is adequate will depend on the relevant circumstances.

493. United Voice seeks the insertion of a new clause that describes or defines what constitutes "an adequate number of uniforms".

494. Ai Group opposes the claim and submits that the proposed changes should not be made.

United Voice's Claim

495. United Voice's claim appears to rest on the following propositions:

(a) Employees are "often" not provided with an "adequate" number of uniforms.

(b) Many of the employees covered by the Award carry out work which can easily result in uniforms becoming stained or dirty quickly.

(c) The burden of ensuring they have a clean uniform for work falls on individual employees.

(d) Having to wash uniforms several times a week can be onerous.

496. The only witness evidence called by the union in support of its claim is that of Belinda Sinclair.[178] Ms Sinclair gives evidence that she was provided with two uniforms upon the commencement of her employment; however, after raising the issue with her employer, she was provided with an additional three uniforms.[179]

497. Quite clearly, the factual propositions relied upon by the union, as listed at paragraphs (a) – (d) above, are not made out by its evidentiary case. Specifically:

(a) At its highest, the union has called evidence from just one employee who perceived that at the commencement of her employment, she was not provided with an adequate number of uniforms. The evidence does not establish that employees are "often" not provided with an adequate number of uniforms, as asserted by United Voice.

[178] Statement of Belinda Sinclair dated 16 January 2019.

[179] Statement of Belinda Sinclair dated 16 January 2019 at paragraphs 18 – 21

(b) The union's evidence does not deal with, let alone establish, that "many" employees covered by the Award carry out work which can easily result in uniforms becoming stained or dirty quickly.

(c) On its face, it is clear from the terms of the Award that the "burden" of ensuring that employees have clean uniforms does not fall squarely on employees. Clause 20.2(a) of the Award contemplates that an employer covered by the Award will maintain and launder an employee's uniform, without cost to the employee. It is only where this does not occur that the employee is responsible for laundering their own uniform and they are entitled to the allowance prescribed by the current clause 20.2(b). The union's evidence does not establish the extent to which employees in fact launder their own uniforms because their employers do not do so.

(d) There is no evidence before the Commission that establishes that laundering uniforms "several times a week can be onerous". We note firstly that the assertion proceeds on the assumption that employees covered by the Award launder their uniforms "several times a week"; a proposition that has not been made out. Further, the union's case does not appear to take into account:

(i) The extent to which employees do their laundry more than once a week in the ordinary course and therefore, laundering their uniforms during the week does not create any additional burden or inconvenience.

(ii) The extent to which the working hours and/or personal circumstances of employees in the industry facilitates their ability to undertake any necessary laundry more than once a week; for example, because they do not work full-time. We note that the Unions have consistently observed for the purposes of these proceedings that casual and part-time employment prevail in this industry.

498. There is, as such, no justification for creating an Award-derived obligation on an employer for providing uniforms by refence to the benchmark proposed by United Voice (i.e. that employees not be required to launder their uniforms more than once a week).

499. The evidence relied upon by United Voice falls far short of being probative and does not advance its case. Further, the union has not advanced any meritorious arguments which might otherwise, on their face, lend support to their claim.

Section 138 and the Modern Awards Objective

500. There is no evidence or material before the Commission that might justify the proposition that the clause proposed by United Voice is *necessary* to ensure that the Award achieves the modern awards objective.

501. We note also that the variation proposed by United Voice is out of step with the modern awards system. To the extent that awards deal with the issue of uniforms, overwhelmingly (if not consistently) they do not prescribe the *number* of uniforms to be provided to employees. Furthermore, we note that other awards in the health and aged care sectors, take a similar approach to that currently adopted in the Award.[180] The number of uniforms to be provided is, appropriately in our submission, left to be determined by reference to the relevant circumstances; including the nature of the work undertaken by the employee. United Voice has not provided any rationale for why different approach should be adopted by the Commission in this matter.

502. Also relevant to the question of whether the proposed clause is necessary in the relevant sense is the current obligation on an employer to provide an *adequate* number of uniforms. To the extent that an employee considers that they have not been provided with an adequate number of uniforms, the Award's dispute settlement procedure provides a readily accessible avenue

[180] See for example clause 15.2 of the *Aged Care Award 2010*, clause 18.3 of the *Health Professionals and Support Services Award 2010*, clause 16.2 of the *Nurses Award 2010* and clause 15.3 of the *Aboriginal Community Controlled Health Services Award 2010*.

to deal with such issues. Notwithstanding the availability of this mechanism, United Voice has not pointed to any disputes that have arisen in relation to the question of the adequacy of the number of uniforms provided by employers covered by the Award. Rather, the evidence demonstrates that employers and employees are able to discuss and resolve the matter within the workplace.

A *Fair* Minimum Safety Net

503. The proposed clause is unfair to employers.

504. The provision requires the payment of an allowance where an employee is required to launder their own uniform. Such an allowance compensates an employee for the cost and/or inconvenience associated with laundering their uniform. If an employer is required to provide employees with additional uniforms such that they need only launder their uniforms once a week, the justification for the payment of the allowance (and/or the quantum of the allowance) is potentially called into question.

505. It is unfair that employers are required to provide their employees with additional uniforms on the basis that they should not be required to launder them more than once a week *and* pay the laundry allowance currently prescribed by clause 20.2(b).

Section 134(1)(a) – Relative living standards and needs of the low paid

506. There is no evidence dealing with the impact of the claim on the relative living standards and needs of the low paid.

507. In the circumstances, contrary to United Voice's submission, we consider that s.134(1)(a) does not advance the union's case. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

Section 134(1)(b) – The need to encourage collective bargaining

508. The grant of the claim may have an adverse impact on the need to encourage collective bargaining.

509. The union's pursuit of the claim here advanced demonstrates that the issue is one of importance to the union and by extension, it is one that may motivate it to engage in collective bargaining. Any such motivation would necessarily be extinguished by the grant of the claim.

510. Further, a further improvement to the minimum floor and the imposition of additional employment costs may disincentivise employers from engaging in collective bargaining.

Section 134(1)(c) – The need to promote social inclusion through increased workforce participation

511. There is no evidence that might enable the Commission to conclude that the grant of the claim will improve social inclusion through increased workforce participation.

512. In the circumstances, we consider that s.134(1)(c) does not advance the union's case.

Section 134(1)(d) – The need to promote flexible modern work practices and the efficient and productive performance of work

513. This is a neutral consideration in this matter.

Section 134(1)(da) - The need to provide additional remuneration for employees working overtime; unsocial, irregular or unpredictable hours; on weekends or public holidays or shifts.

514. This is a neutral consideration in this matter.

Section 134(1)(e) – The principle of equal remuneration for work of equal or comparable value

515. This consideration is not relevant to the matter.

Section 134(1)(f) – The impact of any exercise of modern award powers on business, including on productivity, employment costs and the regulatory burden

516. It is axiomatic that the grant of the claim would increase employment costs. The claim, if granted, would therefore have an adverse impact on business.

517. Further, as we have previously submitted, significant portions of the industry covered by the Award are dependent on NDIS funding to cover their employment costs. The NDIS does not provide funding for the additional employment costs contemplated by the proposed clause. The impact on business is compounded in these circumstances. Employers are unable to recover the additional costs from participants in the scheme because of the pricing caps imposed by the NDIS, nor does the NDIS provide specific funding for employee uniforms.

Section 134(1)(g) - The need to ensure a simple, easy to understand, stable and sustainable modern award system

518. The clause is not simple and easy to understand. The interaction between the proposed clause 20.2(b) and an employer's obligation to launder and maintain the uniforms at clause 20.2(a) is not clear. There is, however, no apparent no justification for the application of clause 20.2(b) where an employer launders the employees' uniforms.

519. Finally, the need to ensure a stable system tells against the grant of the claim; particularly given that the claim lacks any proper foundation.

14. DAMAGED CLOTHING ALLOWANCE

520. The HSU is seeking the insertion of a new clause 20.3, which is in the following terms:

> **20.3 Damaged clothing allowance**
>
> **(i)** Where an employee, in the course of their employment suffers any damage to or soiling of clothing or other personal effects (excluding hosiery), upon provision of proof of the damage, employees shall be compensated at the reasonable replacement value of the damaged or soiled item of clothing.
>
> **(ii)** This clause will not apply where the damage or soiling is caused by the negligence of the employee.

521. The proposed clause would entitle an employee to compensation "at the reasonable replacement value" of any damaged or soiled clothing or personal effects if they are so damaged or soiled during the course of their employment by virtue of any cause other than the negligence of the employee.

522. Ai Group opposes the claim and submits that the proposed variation to the Award should not be made.

The HSU's Case

523. The HSU has made only the following submission in support of its case: (footnotes omitted)

> 61. Clause 20.2 of the Award provides for payment of an allowance for uniforms and their laundering. The reality of work in the industry, particularly for home carers and disability support workers, is that employees are not provided with uniforms, but wear their own clothes to work, which are at risk of being soiled or damaged in the course of their duties.
>
> 62. The award should include a damaged clothing allowance, which takes into account that employees' clothing will frequently become damaged, soiled or worn given the nature of the work they do. Where such damage occurs, upon provision of proof of the damage, employees should be compensated at the reasonable replacement value of the damaged or soiled item of clothing.[181]

[181] HSU submission dated 15 February 2019 at paragraphs 61 – 62.

524. The HSU also seeks to rely on the following evidence:

(a) The evidence of Pamela Wilcock (a community care worker) that her role involves cleaning duties in a client's home, which can include using cleaning agents that "can" damage clothing however her employer providers protective clothing and gloves.[182] She also states that her role also includes cleaning bodily fluids and urine.[183]

(b) The evidence of Heather Waddell (a community care worker) that clothing can be spoiled by bodily fluids cleaning agents.[184] She also gives evidence that her employer provide single use aprons and goggles for employees to use, however she chooses not to because to do so would require her to travel to her employer's office, which "is usually in the opposite direction of [her] clients".[185]

525. The case advanced by the union falls well short of providing a proper basis for the proposed clause, for the reasons explained below.

Section 138 and the Modern Awards Objective

526. There is no evidence or material that might justify the proposition that the clause proposed by the HSU is *necessary* to ensure that the Award achieves the modern awards objective.

527. Further, the HSU's claim is unfair to employers in various ways:

(a) The proposed clause would appear to apply even where an employee such as Ms Waddell elects not to use equipment, clothing or protective effects provided by an employer for the very purpose of ensuring that an employee's clothing and personal effects are protected from damage and/or soiling. This is clearly unfair and unjustifiable.

[182] Statement of Pamela Wilcock dated 15 February 2019 at paragraph 13.
[183] Statement of Pamela Wilcock dated 15 February 2019 at paragraph 14.
[184] Statement of Heather Waddell dated 15 February 2019 at paragraph 33.
[185] Statement of Heather Waddell dated 15 February 2019 at paragraph 34.

(b) The proposed clause requires reimbursement "at the reasonable replacement value". Whilst not abundantly clear, the provision appears intended to entitle an employee to replace the value of clothing or personal effects that they have elected to wear during the course of their employment, irrespective of their value. Accordingly, the proposed clause appears to create an Award-derived obligation to reimburse an employee for potentially pricey items, even though they were not essential for the purposes of enabling the employee to undertake their work (e.g. designer brand glasses). This is clearly unfair.

(c) The scope of the clause is broad. It applies wherever there is *any* damage or soiling, even if the extent of the damage or soiling does not necessitate or warrant the replacement of the clothing or other item (for example, because it can be cleaned or replaced). This is unfair and unjustifiable.

(d) The proposed clause does not require an employee to provide proof of the "reasonable replacement value" or absolve an employer from their liability to reimburse an employee where such proof is not forthcoming. This is also unfair.

528. These matters of themselves provide a basis for dismissing the HSU's claim.

529. The HSU's submissions do not address s.138 or s.134(1) of the FW Act. We nonetheless make the following additional observations about various factors listed under s.134(1):

(a) Section 134(1)(a): there is no evidence dealing with the impact of the claim on the relative living standards and needs of the low paid. In the circumstances, we consider that s.134(1)(a) does not advance the union's case. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

(b) Section 134(1)(b): the grant of the claim may have an adverse impact on the need to encourage collective bargaining.

(c) Section 134(1)(c): there is no evidence that might enable the Commission to conclude that the grant of the claim will improve social inclusion through increased workforce participation. In the circumstances, we consider that s.134(1)(c) does not advance the union's case.

(d) Section 134(1)(d): this is a neutral consideration.

(e) Section 134(1)(da): this is a neutral consideration.

(f) Section 134(1)(e): the principle of equal remuneration for work of equal or comparable value is not relevant to this matter.

(g) Section 134(1)(f): it is axiomatic that the grant of the claim will increase employment costs. It will also increase the regulatory burden imposed on employers in order to deal with and process requests for reimbursement made by their employees. The claim, if granted, would therefore have an adverse impact on business. Such an impact is compounded in the case of NDIS-funded services, because the funding does not contemplate the proposed entitlement.

(h) Section 134(1)(g): the need to ensure a stable system tells against the grant of the claim. Further, the proposed clause is not simple and easy to understand. The meaning of "reasonable replacement value" – a central element of the proposed clause – is unclear.

530. There is no proper foundation for the HSU's claim. Ai Group submits that it should be dismissed.

15. TELEPHONE ALLOWANCE

531. Clause 20.6 of the Award provides as follows:

> **20.6 Telephone allowance**
>
> Where the employer requires an employee to install and/or maintain a telephone for the purpose of being on call, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.

532. The HSU has proposed that the above clause be replaced with the following:

> **20.6 Telephone allowance**
>
> Where an employer requires an employee to use a mobile phone for any work related purpose, the employer will either:
>
> **(a)** provide a mobile phone fit for purpose and cover the cost of any subsequent charges; or
>
> **(b)** refund the cost of purchase and usage charges on production of receipts.

533. The proposed clause would apply wherever an employer requires an employee to use a mobile phone for any work related purpose. It would require the employer to provide the employee with a mobile phone and cover the cost of any usage charges (whether incurred for work purposes of otherwise) or reimburse the employee for the same.

534. United Voice has proposed the following amendments to clause 20.6 of the Award:

> **20.6 Telephone allowance**
>
> Where the employer requires an employee to install and/or maintain a telephone <u>or mobile phone</u> for the purpose of being on call, <u>for the performance of work duties or to access work related information,</u> the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.

535. The variations proposed seek to extend the application of clause 20.6 to circumstances in which:

(a) An employer requires an employee to "install and/or maintain … a mobile phone".

(b) An employer requires an employee to install and/or maintain a telephone for the performance of work duties or access work related information.

(c) An employer requires an employee to install and/or maintain a mobile phone for the performance of work duties or access work related information.

536. While the variations proposed are not in the same terms, their essence is similar.

537. Ai Group opposes the variations proposed and submits that they should not be made.

The Union's Cases

538. The HSU has made only the following submissions in support of their claim: (footnotes omitted, our emphasis)

> 59. The current telephone allowance clause – as worded in both the exposure draft and current award – is outdated. The language of the clause refers to a landline telephone. The Commission would safely conclude that the vast bulk of employees now have mobile phones and that they are available to them during the course of their work.
>
> 60. Employers frequently require or expect care workers to be contactable by mobile phone when performing their duties. Employees commonly need to use smart phones to check their rosters, make notes on clients, take photographs, log onto company apps or portals, call ambulances or supervisors in emergencies, as well as answer calls about their availability for shifts, often at the last minute. Any employees required to use a phone for work in this way should receive a telephone allowance which reflects the cost of maintaining and using such mobile phone. Employees required to use a smart phone

should be reimbursed for the cost of purchasing one if such purchase is necessary.[186]

539. United Voice advances its case on the following bases:

(a) Employees covered by the Award are required to use mobile phones in the course of their duties and they have, in effect, become tools of trade.

(b) The Award is out of date to the extent that it does not contemplate mobile phone usage.

Section 138 and the Modern Awards Objective

540. The material before the Commission does not establish that the clause proposed by the HSU or United Voice is *necessary* to ensure that the Award achieves the modern awards objective.

A *Fair* Safety Net

541. The HSU's claim is unfair to employers, for the reasons that follow.

542. *First*, the grant of the HSU's claim would see employers liable for "any subsequent charges" or "usage charges" incurred by an employee. It is plainly unfair that an employer be required to pay for costs incurred by an employee for usage unrelated to work. The proposed clause does not create an Award-derived limitation on the purpose for which the mobile phone may be used, nor does it absolve employers from the liability for paying for such expenses.

543. *Second,* the HSU's proposed subclause (b) would entitle an employee to the reimbursement of expenses incurred through acquiring a phone and usage, even where those costs are excessive or unnecessary. For example, the clause would entitle an employee to reimbursement even if the employee selected a phone plan with inclusions that are not necessary for the purposes of fulfilling the employee's duties.

[186] HSU submission dated 15 February 2019 at paragraphs 59 – 60.

544. *Third*, the proposed clause would afford employees a windfall gain where they are employed by more than one employer covered by the Award; a situation which, on the unions' material, is apparently not uncommon.

545. *Fourth,* the clause does not account for circumstances in which an employee already possesses a mobile phone which is adequate for the purposes of an employee's duties. The clause applies to any employee who is required to use a mobile phone and essentially delivers to them an entitlement to an additional mobile phone and/or reimbursement for the purchase and usage of such a mobile phone, even if they already have one.

546. The unions have not presented any material that establishes the proportion of employees covered by the Award who are required by their employer to use a mobile phone for the purposes of their employment and of those, the percentage who do or do not own a mobile phone that is fit for purpose. Of the evidence called by the unions, only one of the witnesses claims that they did not own a smartphone as required by their employer.[187]

547. Indeed the evidence before the Commission rather suggests that most employees either own a mobile phone[188] or that they are provided with a device by their employer[189].

548. Further, a report published by Deloitte in 2018[190], which sets out the results of a survey of a nationally representative sample of over 2,000 Australian consumers aged 18–75, found that 89% of those surveyed owned a smartphone. Another 11% owned a standard mobile phone.[191] The survey

[187] Statement of Deon Fleming dated 16 January 2019 at paragraph 27.

[188] Statement of Belinda Sinclair at 16 January 2019 at paragraphs 15 – 17, statement of Trish Stewart dated 17 January 2019 at paragraphs 20 – 22, statement of William Elrick dated 15 February 2019 at paragraph 30 and statement of Bernie Lobert dated 15 February 2019 at paragraph 20.

[189] Statement of Robert Sheehy dated 15 February 2019 at paragraphs 12 – 13, statement of Pamela Wilcock dated 15 February 2019 at paragraph 19, statement of Heather Waddell dated 15 February 2019 at paragraph 31 and statement of Thelma Thames dated 15 February 2019 at paragraph 22.

[190] Deloitte, *Behaviour Unlimited, Mobile Consumer Survey 2018, The Australian cut* (2018).

[191] Deloitte, *Behaviour Unlimited, Mobile Consumer Survey 2018, The Australian cut* (2018) at page 6.

results appear to suggest that the entire survey population owned a mobile phone of some description.

549. In this context, the unions' proposed variations are plainly unjustifiable and unfair.

550. The variation proposed by United Voice is unclear. It appears to grant employees an entitlement to "installation costs and the subsequent rental charges" in relation to mobile phone usage notwithstanding that the concepts of installation and rent are generally not relevant to mobile phone usage. In any event, assuming that the proposed variations are intended to deliver a similar outcome to the HSU's claim; the submissions we have made above regarding the HSU's claim are apposite.

551. In our submission, these matters of fairness of themselves provide a basis for dismissing the HSU and United Voice's claims.

A *Relevant* Safety Net

552. We also note that the variations proposed by the unions are out of step with the way in which the modern awards system typically deals with the matter of telephones, including mobile telephones.

553. The vast majority of awards do not make any provision for telephones. Of those that do, most appear to contemplate only landline telephones, as per the current clause 20.6 of the Award.[192] Other award provisions either deal expressly with mobile phones or are drafted such that they appear to apply, implicitly, to mobile phone usage. In each case, they include various important parameters that do not appear in the union's proposals.

[192] See for example clause 19.6 of the *Air Pilots Award 2010*, clause C.1.10 of the *Aircraft Cabin Crew Award 2010*, clause 18.5 of the *Broadcasting and Recorded Entertainment Award 2010*, clause 18.11 of the *Health Professionals and Support Services Award 2010*, clause 16.5 of the *Medical Practitioners Award 2010*, clause 31.2 of the *Plumbing and Fire Sprinklers Award 2010* and clause 15.2 of the *Rail Industry Award 2010*.

554. For example:

(a) The *Commercial Sales Award 2010*[193], *Contract Call Centres Award 2010*[194], and *Telecommunications Services Award 2010*[195] entitle an employee to reimbursement for the reasonable cost of purchasing a phone *only where the employee does not already have a telephone*.

(b) The aforementioned awards entitle an employee to reimbursement for the *reasonable cost* of purchasing a mobile phone; not to *all* costs incurred by purchasing a mobile phone.

(c) The *Real Estate Industry Award 2010* requires the payment of only *reasonable reimbursement*, as agreed between the employee and employer.[196]

(d) The *Stevedoring Industry Award 2010* provides for the payment of a set weekly allowance, as prescribed by the award.[197]

555. The approach proposed by the HSU and United Voice is inconsistent with that adopted in the aforementioned awards and lacks any of the limitations found in the relevant provisions. The unions have failed to point to any justification for this.

<u>Sections 134(1)(a) – (g) of the FW Act</u>

556. We also make the following additional observations about various factors listed under s.134(1):

(a) Section 134(1)(a): there is no evidence dealing with the impact of the claim on the relative living standards and needs of the low paid. In the circumstances, we consider that s.134(1)(a) does not advance the

[193] Clause 16.1(a).
[194] Clause 20.3(a).
[195] Clause 17.1(c)(i).
[196] Clause 18.6.
[197] Clause 14.5.

union's case. The Commission cannot properly conclude that the relative living standards and needs of the low paid will be enhanced or improved if the claim is granted.

(b) Section 134(1)(b): the grant of the claim may have an adverse impact on the need to encourage collective bargaining.

(c) Section 134(1)(c): there is no evidence that might enable the Commission to conclude that the grant of the claim will improve social inclusion through increased workforce participation. In the circumstances, we consider that s.134(1)(c) does not advance the union's case.

(d) Section 134(1)(d): the imposition of additional employment costs and the accompanying regulatory burden will not promote flexible modern work practices and the efficient and productive performance of work to the extent that it deters employers from using mobile technology. This issue is particularly important in light of the observations made in the McKinsey Report about the importance of employers under the NDIS funding arrangements implementing and leveraging technological systems and solutions.[198] In particular:

> While there is no single model of care that will work for all providers and participants, and acknowledging the substantial investment providers have already made in transforming their organisations, the significant variation in cost to serve across the market indicates there are opportunities to innovate and lessons to be learned from operating models that are working well in standard intensity attendant care. Providers will generally need to achieve corporate overheads of 10-15% and improve workforce utilisation rates to above 90% to make a profit while complying with SCHADS award obligations. To do this, most existing providers will be required to adjust their operating models, driving efficiencies and innovation through technology and other operational improvements.[199]

(e) Section 134(1)(da): this is a neutral consideration.

[198] See for example, McKinsey Report at pages 20, 27 and 28.

[199] McKinsey Report at page 71.

(f) Section 134(1)(e): the principle of equal remuneration for work of equal or comparable value is not relevant to this matter.

(g) Section 134(1)(f): it is axiomatic that the grant of the claim will increase employment costs. The effect on business resulting from these employment costs would be exacerbated by the various elements of the proposals discussed above; including the broad application of the clause and the absence of any limitation on an employer's liability to pay costs arising from an employee's usage.

The proposed clauses would also increase the regulatory burden imposed on employers in order to deal with and process requests for reimbursement made by their employees and/or providing employees with all-expenses-paid mobile phones.

The claim, if granted, would therefore have an adverse impact on business. Such an impact is compounded in the case of NDIS-funded services, because the funding does not contemplate the proposed entitlement.

(h) Section 134(1)(g): the need to ensure a stable system tells against the grant of the claim. Further, the clause proposed by United Voice is not simply and easy to understand. The clause requires the payment of "installation costs and the subsequent rental charges" where an employee is required to maintain a mobile phone. Mobile phones do not incur installation costs and generally do not involve rental charges. Accordingly, the application of the clause is unclear.

557. A proper foundation of the provisions proposed by the unions has not been made out. Ai Group submits that the claims should not be granted. The issue of mobile phones is more appropriately dealt with at the enterprise level where employees are in fact required to use mobile phones; having regard to the purpose for which they are required to use mobile phones and the extent to which the employer's employees already own appropriate mobile phones. The

one-size-fits-all approach proposed by the unions is not appropriate for the reasons set out above.

ANNEXURE A

NDIS Price Guide 2019-20

Valid from: 1 July 2019

Delivered by the National Disability Insurance Agency

Copyright Notice

Version Control

The NDIS Price Guide is subject to change. The latest version of the NDIS Price Guide is available on the NDIS website.

Version	Page.	Details of Amendment	Date
1.0			25 June 2019
1.1	p. 7	• Text added to clarify the link between the Price Guide and the Support Catalogue	28 June 2019
	p. 12	• Text added to clarify that non-registered providers are not eligible for the TTP.	
	p. 13-15	• Text added to better distinguish between Core travel and Capacity Building travel • Added 4 examples of the application of the travel rules	
	p. 16	• Text added to clarify that "no shows" are treated as short notice cancellations. • Added an example of the application of the cancellation rules;	
	p. 27	• Price limits in the Support Catalogue for group based supports have been substantially revised. • Text added to clarify that providers of group-based supports are not permitted to bill for non-face-to-face services as the hourly price limits for these supports include an allowance for non-face-to-face services.	
	p. 36	• Further text added on Employment Related Assessment and Counselling supports.	
	p. 36	• Further text added on Workplace Assistance supports.

Scope of the NDIS Price Guide

Where possible, the National Disability Insurance Agency (NDIA) utilises market mechanisms to deliver the level of supply required by the he National Disability Insurance Scheme (NDIS) to meet participant demand and deliver the correct mix of goods/services, produced at market clearing (efficient) prices. However, in underdeveloped or non-existent markets, reliance on a deregulated market mechanism may not meet participant demands; may not deliver adequate supply; may not deliver the correct mix of disability supports and may not produce efficient prices. To address these issues, the NDIA has a role, as market steward, to create an efficient and sustainable marketplace through a diverse and competitive range of suppliers who are able to meet the needs of a consumer driven market.

As part of its market stewardship role, the NDIA imposes price controls on some supports by limiting the prices that registered providers can charge for those supports and by specifying the circumstances in which registered providers can charge participants for supports. Price controls are in place to ensure that participants receive value for money in the supports that they receive. In the short to medium term, price controls are required for some disability supports because the markets for disability goods and services is not yet fully developed. The longer-term goal of the NDIA is to remove regulatory mechanisms from the markets for disability supports.

This Price Guide is a summary of NDIS price limits and the associated pricing arrangements that will apply from 1 July 2019 as set by the NDIA. It is designed to assist participants and disability support providers, both current and prospective, to understand the way that price controls for supports and services work in the NDIS. The price limits within this Price Guide are the maximum prices that Registered Providers can charge NDIS participants for specific supports. There is no requirement for providers to charge at the maximum price for a given support or service. Participants and providers are free to negotiate lower prices.

Currently, the NDIA varies its approach to the regulation of prices, depending on market conditions, between:

- **No regulation** (deregulated markets): this is typically used in cases where markets are highly competitive – for example, transport.
- **The imposition of price limits**: these represent a maximum allowable price payable by participants for types of supports. This approach is used in a significant number of markets, which are still developing and growing, such as those for attendant care.
- **Quotable supports**: in which participants are expected to obtain quotations from suppliers to provide to the NDIA, which will verify that the prices are fair and reasonable. This approach is typically used in the case of highly specialised, differentiated supports that may not have a high level of competition – for example, assistive technology. They are also used in cases, such as supported independent living, where a bundle of supports is being purchased.

This Price Guide is principally concerned with the rules that apply to NDIS supports that are subject to price limits.

A comprehensive list of all NDIS supports ("the Support Catalogue") is at https://www.ndis.gov.au/providers/price-guides-and-information.

The Support Catalogue:

- **includes item descriptors to assist providers to claim payments using a "best-fit" approach, and to assist participants in engaging and negotiating with service providers; and**
- **lists the price limits of those support items that are subject to price limits.**

In general, support items subject to price controls have a single national price limit. However, some Capacity Building supports have two price limits: one for New South Wales, Victoria, Queensland and the Australian Capital Territory; and a different price limit for South Australia, Western Australia, Tasmania and the Northern Territory.

The NDIA publishes separate price guides for:

- Assistive Technology at https://www.ndis.gov.au/providers/essentials-providers-working-ndia/providing-assistive-technologies-and-home-modifications
- Specialist Disability Accommodation at https://www.ndis.gov.au/providers/essentials-providers-working-ndia/specialist-disability-accommodation

Application of this Price Guide

The price limits and other arrangements in this Guide must be followed when supports are delivered to NDIS participants who have either an agency-managed plan or a plan manager.

A provider of supports to a participant with an agency-managed plan (or of a support that is agency managed):

- must be a registered provider with the NDIS;
- must declare relevant prices to participants before delivering a service, including any notice periods or cancellation terms;
- must adhere to the arrangements in the Price Guide, including ensuring that their prices do not exceed the price limits prescribed in the Pricing Guide

Plan managers can purchase supports on behalf of participants from either registered or unregistered providers, but they are registered providers themselves, and therefore responsible for ensuring that prices paid for supports on behalf of their participants adhere to the arrangements in the Price Guide, including price limits.

Self-managing participants can use registered or unregistered providers and are not subject to the pricing arrangements in the Price Guide.

In addition, all registered providers, regardless of whether funding for the support is managed by the participant, by a registered provider, or by the NDIA, must not add any other charge to the cost of the supports they provide, including credit card surcharges, or any additional fees including any 'gap' fees, late payment fees or cancellation fees.

Support Purposes, Categories and Line Items

This section describes the way that the NDIS categorises disability supports. These categories can be relevant to rules for participants about how they can spend their support budgets, and for providers when seeking payment for delivered supports.

Support Purpose Types

NDIS participant budgets can be allocated to three separate types of support purpose:

1. CORE – Supports that enable participants to complete activities of daily living. Participant budgets often have a lot of flexibility to choose specific supports with their core support budgets, but cannot reallocate this funding for other support purposes (i.e. capital or capacity building supports).
2. CAPITAL – Investments, such as assistive technologies - equipment, home or vehicle modifications, or for Specialist Disability Accommodation (SDA). Participant budgets for this support purpose are restricted to specific items identified in the participant's plan.
3. CAPACITY BUILDING - Supports that enable a participant to build their independence and skills.

Support Categories aligned to the NDIS Outcomes Framework

Participant budgets are allocated at a support category level and must be used to achieve the goals set out in the participant's plan.

Support categories are aligned with the NDIS Outcomes Framework, which has been developed to measure goal attainment for individual participants and overall performance of the Scheme. There are eight outcome domains in the Framework, which help participants think about goals in different areas of their life and assist planners explore where supports in these areas already exist and where further supports are required. These domains are:

1. Daily Living	5. Work
2. Home	6. Social and Community Participation
3. Health and Wellbeing	7. Relationships
4. Lifelong Learning	8. Choice and Control

NDIS service providers should be aware that all supports and services for NDIS participants must contribute to the achievement of their individual goals as outlined in the participant's plan. Support purpose categories are designed to align with the Outcomes Framework and the 15 support categories (listed below). This helps participants choose supports that help them achieve their goals, and providers to understand how the supports they provide contribute to the participant's goals. The following table shows the links between support purpose types, domains in the Outcomes Framework and support categories.

SUPPORT PURPOSE	OUTCOME DOMAINS in FRAMEWORK	SUPPORT CATEGORY
CORE	Daily Living Daily Living Daily Living Social & Community Participation	Assistance with Daily Life Transport Consumables Assistance with Social & Community Participation
CAPITAL	Daily Living Home	Assistive Technology Home Modifications and Specialised Disability Accommodation (SDA)
CAPACITY BUILDING	Choice & Control Home Social and Community Participation Work Relationships Health & Wellbeing Lifelong Learning Choice and Control Daily Living	Support Coordination Improved Living Arrangements Increased Social and Community Participation Finding and Keeping a Job Improved Relationships Improved Health and Wellbeing Improved Learning Improved Life Choices Improved Daily Living Skills

Support items

Each support category has many specific supports and services that are recognised in the NDIS payment system. These are referred to as 'support items' and are, in most cases, not prescribed in participant plans.

Providers should claim payments against a support item that most closely aligns to the service they have delivered.

Each support item has a unique reference number, according to the following structure:

For example:

01_013_0107_1_1 - Assistance with Self-Care Activities - Standard - Saturday

Support Category	Sequence Number	Registration Group	Outcome Domain	Support Purpose
01	013	0107	1	1

Units of Measure

The NDIS payment system includes units of measure to suit each support item as follows:

• Each	• Hour	• Daily
• Week	• Month	• Annual

Claiming supports and services

Registered Providers can make a claim for payment for a support once that support has been delivered or provided. Where price limits apply, prices charged to participants must not exceed the price limit prescribed for that support in this Guide. Providers cannot add any other charges to the cost of the support, including credit card surcharges, or any additional fees including any 'gap' fees, late payment fees or cancellation fees unless otherwise stated in this Price Guide.

When claiming, it is the responsibility of the provider to ensure that the claim accurately reflects the supports delivered, including the frequency and volume of supports. Falsifying claims for any aspect of supports delivered is a serious compliance issue and may result in action against the provider. Providers are also required to keep accurate records of claims, which are subject to audit at any time.

Providers should claim payments against a support item that most closely aligns to the service they have delivered.

Service Agreements

A Service Agreement is a formal agreement between a participant and provider. They help to ensure there is a shared understanding of:

- expectations of what supports will be delivered and how they will be delivered; and
- the respective responsibilities and obligations of the provider and the participant and how to resolve any problems that may arise.

Service Bookings

Service bookings are used to set aside funding for an NDIS registered provider for a support or service they will deliver. Each service booking sets out the specific supports or support domains agreed to be provided and the length of time that agreement is applicable within the current participant plan dates. Service bookings are not the same as 'service agreements', which set out the terms and conditions negotiated with the participant.

The Agency recommends that service bookings should be created at the category level, where possible. This allows providers and participants to negotiate or access supports on a more flexible basis, especially for on-the-spot assessments or less predictable support needs. This is preferable to having to edit existing service bookings or create another service booking for that item at a later date or have funds locked into a support item that may not eventuate, which restricts funding for alternate services.

See the 'NDIS Myplace Provider Portal Step-by-step guide' on the Provider Toolkit for further information.

Special NDIS Pricing Arrangements

Regional, Remote and Very Remote Areas

The NDIA uses the Modified Monash Model (MMM) to determine regional, remote and very remote areas using a scale based on population size and locality (see Table below).

	Zones	MMM	Inclusion
Metropolitan	MMM 1-3	1	All areas categorised as Major Cities of Australia.
		2	Areas categorised as Inner Regional Australia or Outer Regional Australia that are in, or within 20km road distance, of a town with population >50,000.
		3	Areas categorised as Inner Regional Australia or Outer Regional Australia that are not in MM 2 and are in, or within 15km road distance, of a town with population between 15,000 and 50,000.
Regional	MMM 4-5	4	Areas categorised as Inner Regional Australia or Outer Regional Australia that are not in MM 2 or MM 3, and are in, or within 10km road distance, of a town with population between 5,000 and 15,000.
		5	All other areas in Inner Regional Australia or Outer Regional Australia.
Remote	MMM 6	6	All areas categorised Remote Australia that are not on a populated island that is separated from the mainland and is more than 5km offshore.
Very Remote	MMM 7	7	All other areas – that being Very Remote Australia and areas on a populated island that is separated from the mainland in the ABS geography and is more than 5km offshore.

Further details on the MMM can be found on the Department of Health's DoctorConnect website, which contains a resource to look up the MMM area for particular locations[1].

Participants located in MMM4 and MMM5 areas are classified as 'Regional', MMM6 as 'Remote', and MMM7 as 'Very Remote'. In general, price limits are 40% higher in remote areas and 50% higher in very remote areas. There is no additional loading applied for supports in regional areas.

Providers should refer to support price limits based on where the support is delivered, which is not necessarily where the participant lives. For example, if a participant living in a Remote location visits a therapist in their capital city, the therapist should not attempt to claim a price that is higher than the price limit for the support in that city. On the other hand, if the therapist was to visit the participant in their local area to deliver the support, then the therapist could claim a price that is within the limit set by the 'Remote' Price Guide.

If local providers are not available, the NDIA may enter into arrangements (and at times contracts) with specific providers for provision of services to more remote regions. The contract with a service provider will specify the cost of travel and any other associated expenses in these areas.

Temporary Transformation Payment (TTP)

Providers of attendant care and community participation supports who meet the eligibility criteria set out below will have access to a higher price limit through a Temporary

[1] www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/locator

Transformation Payment (TTP). This conditional loading will assist providers to continue transforming their businesses in the move towards a more competitive marketplace. This replaces the Temporary Support for Overheads.

In order to access the higher TTP price limits, providers will have to:

- publish their service prices;
- list their business contact details in the Provider Finder and ensure those details are kept up-to-date; and
- participate annually in an Agency-approved market benchmarking survey.

TTP Providers will have to until 31 December 2019 to meet these requirements, and to include in their contractual arrangements with their participants that they are entitled to use the TTP support items (and price limits) because they are compliant with the TTP terms.

That is, in the first year, providers can commence making claims using the TTP items from 1 July 2019, and will have until 31 December 2019 to meet the three compliance requirements. In later years, providers will need to be compliant by the start of the financial year, noting that the Benchmarking Requirement is met up until 31 December of any year by the provider's intention to take part in the next Benchmarking Survey, and after that date by actual participation in the most recent Benchmarking Survey.

Providers who become non-compliant during a financial year should not claim for TTP items while they are non-compliant.

Every support item in scope of the TTP has two support items and two price limits. The non-TTP items should be used by providers who are not compliant with the TTP conditions. The TTP items should be used by providers who are compliant with the TTP conditions, an example is given in the following Table.

01_011_0107_1_1	Assistance With Self-Care Activities - Standard - Weekday Daytime
01_011_0107_1_1_T	Assistance With Self-Care Activities - Standard - Weekday Daytime - TTP

There will be no formal registration process for TTP providers. Providers indicate that they intend to fulfil the TTP conditions by making a claim for a TTP support item through the payment system. They will be required to acknowledge compliance to the Price Guide terms, including the TTP terms if applicable, when submitting a payment request through the Myplace Provider Portal. By claiming TTP items through the NDIA payment system, or from a plan manager, providers are warranting that they have complied with the TTP conditions, or intend to comply with the TTP conditions by the relevant time.

Plan managers will not be responsible for ensuring providers are TTP compliant. They can accept the claim for a TTP support item by a registered provider as proof of TTP compliance. However, non-registered providers are not eligible for the TTP and plan managers should not use TTP line items to claim for services delivered by non-registered providers.

Claims for the new TTP support items can be made against existing service bookings that were made at the support category level.

Billing for non-direct services

Provider Travel

Providers can only claim travel costs from a participant in respect of the delivery of a support item if:

- the Support Catalogue indicates that providers can claim for Provider Travel in respect of that support item;
- the provider has the agreement of the participant in advance (i.e. the service agreement between the participant and provider should specify the travel costs that can be claimed); and
- the provider is required to pay the worker delivering the support for the time they spent travelling as a result of the agreement under which the worker is employed; or the provider is a sole trader and is travelling from their usual place of work to or from the participant, or between participants.

Where a provider claims for travel time in respect of a support then the maximum amount of travel time that they can claim for the time spent travelling to each participant (for each eligible worker) is 30 minutes in MMM1-3 areas and 60 minutes in MMM4-5 areas. (Note the relevant MMM classification is the classification of the area where the support is delivered.)

In addition to the above travel, capacity-building providers who are permitted to claim for provider travel can also claim for the time spent travelling from the last participant to their usual place of work. The maximum amount of travel time that they can claim for the time spent on return travel (for each eligible worker) is 30 minutes in MMM1-3 areas and 60 minutes in MMM4-5 areas. (Note the relevant MMM classification is the classification of the area where the support is delivered.)

Where a worker is travelling to provide services to more than one participant in a ‘region’ then the provider can apportion that travel time (including the return journey where applicable) between the participants, with the agreement of each participant in advance.

Claims for travel in respect of a support must be made separately to the claim for the primary support (the support for which the travel is necessary) using the same line item as the primary support and the “Provider Travel” option in the Myplace portal. When claiming for travel in respect of a support, a provider should use the same hourly rate as they have agreed with the participant for the primary support (or a lower hourly rate for the travel if that is what they have agreed with the participant) in calculating the claimable travel cost.

Remote and very remote travel

In remote areas, capacity-building providers may enter specific arrangements with participants to cover travel costs, up to the relevant hourly rate for the support item. Providers should assist participants to minimise the travel costs that they need to pay (e.g. co-ordinating appointments with other participants in an area, so that travel costs can be shared between participants).

Example 1 – Core support – Single Participant – MMM 1-3
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A Provider travels for 25 minutes to a participant who is located in zone 3 of the Modified Monash Model. They provide two hours of support to the participant They then spend 25 minutes returning to their usual place of business.

The provider and participant have agreed an hourly rate of $50.00, which is below the price limit for this item. They have also agreed that the provider can claim for travel time.

The provider is entitled to apply the 30 minute time-cap against the 25 minutes of travel to the participant. They are not entitled to claim for the time spent travelling back to their usual place of business, even though some of that time is could fit within the 30 minute time-cap. In total, 25 minutes of travel can be claimed.

The provider's claim for this support is in two parts, which should be shown separately on their invoice to the participant and claimed for separately in the system.

- $100.00 for the two hours of support
- $20.83 for the 25 minutes travel to the participant.
  $\left(\frac{25}{60}\right) \times \$50\ agreed\ price = \$20.83\ travel\ claim$

Example 2 – Capacity building support – Multiple Participants – MMM 1-3
(In this example, the support is 15_056_0128_1_3, which has a price limit of $193.99 per hour)

A Provider travels for 35 minutes to a participant who is located in zone 3 of the Modified Monash Model. They provide two hours of support to the participant They then spend 25 minutes returning to their usual place of business.

The provider and participant have agreed an hourly rate of $190.00. They have also agreed that the provider can charge for their travel time.

The provider is entitled to apply the 30 minute time-cap against the 35 minutes of travel to the participant. They are also entitled to claim for the time spent travelling back to their usual place of business by applying the 30 minute time-cap against the 25 minutes of return travel. In total, 55 minutes of travel can be claimed.

The provider's claim for these supports is in two parts, which should be shown separately on their invoice to the participant and claimed for separately in the system.

- $380.00 for the two hours of support
- $174.17 for the 55 minutes travel to the participant.
  $\left(\frac{55}{60}\right) \times \$190\ agreed\ price = \$174.17\ travel\ claim$

Example 3 – Core support – Multiple Participants – MMM 4-5
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A Provider travels for 65 minutes to Participant A who is located in zone 4 of the Modified Monash Model. They then provide two hours of the support to participant A. The provider then travels 25 minutes to Participant B, who is also located in zone 4. They deliver one hour of support to participant B. They then spend 45 minutes returning to their usual place of business.

The provider and participants have agreed an hourly rate of $50.00. They have also agreed that the provider can charge for their travel time and that the provider can apportion the costs of the travel between the participants.

The provider is entitled to apply the 2x60 minute time-cap against the 65 minutes of travel to participant A and the 25 minutes of travel to participant B. They are not entitled to claim for the time spent travelling back to their usual place of business, even though some of that time is could fit under the 2x60 minute time-cap. In total, 90 minutes of travel can be claimed.

The provider's claim for these supports is in two parts for each participant, which should be shown separately on their invoice to the participant and claimed for separately in the system.

Participant A
- $100.00 for the two hours of support to the participant
- $37.50 for the 45 minutes travel to and between participants

Participant B
- $50.00 for the two hours of support to the participant
- $37.50 for the 45 minutes travel to and between participants

Example 4 – Core support – Multiple Participants – MMM 1-3 - Participants do not agree to share travel costs.
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A Provider travels for 35 minutes to Participant A who is located in zone 3 of the Modified Monash Model. They then provide two hours of the support to participant A. The provider then travels 10 minutes to Participant B who is also located in zone 3. They deliver one hour of support to participant B. They then spend 25 minutes returning to their usual place of business.

The provider and participants have agreed an hourly rate of $50.00. They have also agreed that the provider can charge for their travel time. They have not agreed that the provider can apportion the costs of the travel between the participants.

The provider is entitled to apply the 30 minute time-cap against the 35 minutes of travel to participant A. They are also entitled to apply the 30 minute time-cap against the 10 minutes of travel to participant B. They are not entitled to claim for the time spent travelling back to their usual place of business, even though some of that time is could fit under the 30 minute time-cap. In total, 40 minutes of travel can be claimed.

The provider's claim for these supports is in two parts for each participant, which should be shown separately on their invoice to the participant and claimed for separately in the system.

Participant A
- $100.00 for the two hours of support to the participant
- $25.00 for the 30 minutes travel to the participant

Participant B
- $50.00 for the two hours of support to the participant
- $8.33 for the 10 minutes travel to the participant

Participant transport as part of a community participation support

Providing community participation supports may, at the request of a participant, involve a worker accompanying a participant on a community outing and/or transporting a participant from their home to the community. In these situations, the worker's time can be claimed at the agreed hourly rate for the relevant support item for the total time the worker provides support to one or more participants, including time spent accompanying and/or transporting the participant. Where a provider is transporting two or more participants on the same trip, the worker's time should be claimed at the appropriate group rate for the relevant support.

This claim should be made using the relevant community participation support item and against the participant's core budget. In essence, the participant transport is a part of the community participation activity and should be billed accordingly.

Contribution towards costs of transport itself

If a provider incurs costs, in addition to the cost of a worker's time, when accompanying and/or transporting participants in the community (such as cost of ticket for public transport, road tolls, parking fees and the running costs of the vehicle), they may negotiate with the participant for them to make a reasonable contribution towards these costs.

A participant's support budget may include funding for transport, and this funding can be used for these types of contributions, which should be clearly specified in the service agreement. If the participant's support budget does not include funding for transport, then these costs should not be met from the participant's plan, but can be charged as an out of pocket expense to the participant.

Cancellations

Where a provider has a short notice cancellation (or no show) they are able to recover 90% of the fee associated with the activity, subject to the terms of the service agreement with the participant. Providers are only permitted to charge for a short notice cancellation (or no show) if they have not found alternative billable work for the relevant worker and are required to pay the worker for the time that would have been spent providing the support.

A cancellation is a short notice cancellation if the participant:

- does not show up for a scheduled support within a reasonable time, or is not present at the agreed place and within a reasonable time when the provider is travelling to deliver the support; or
- has given less than two (2) clear business days' notice for a support that meets both of the following conditions:
    - the support is less than 8 hours continuous duration; AND
    - the agreed total price for the support is less than $1000; or
- has given less than five (5) clear business days' notice for any other support.

Claims for a short notice cancellation should made using the same support item as would have been used if the support had been delivered, using the "Cancellation" option in the

Myplace portal. When making a claim for a cancelled support the provider should claim for the full agreed price of the support and indicate in the payment system that the claim is for a cancellation. The payment system will reduce the claim to 90% of the full agreed price.

Example 5
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A one hour support is scheduled for 10 am on a Tuesday following a Public Holiday Monday.

The provider and participant have agreed an hourly rate of $50.00 and have agreed that the provider can charge for short notice cancellations and no shows.

The participant cancels the support after 10 am on the preceding Thursday and the provider is not able to find alternative billable work for the relevant worker and is required to pay the worker for the time that would have bene spent providing the support.

The provider's claim for this support should be made at the agreed rate for the service and indicate that the support was cancelled at short notice. The system will reduce the claimed amount by 10%.

There is no limit on the number of short notice cancellations (or no shows) that a provider can claim in respect of a participant. However, providers have a duty of care to their participants and if a participant has an unusual number of cancellations then the provider should seek to understand why they are occurring.

The NDIA will monitor claims for cancellations and may contact providers who have a participant with an unusual number of cancellations.

NDIA Reporting

Providers will be expected to provide progress reports to the participant and NDIS at agreed times. A provider may charge for the time taken to write a therapy report (including functional assessment) that is requested by the NDIA, and claim this against the appointment at the hourly rate for the relevant support item. A report requested by the NDIA is considered a report that is required at the commencement of a plan which outlines plan objectives and goals, and at plan review which measures functional outcomes against the originally stipulated goals. Providers are also expected to make recommendations for ongoing identified needs (informal/community/mainstream and/or funded supports). Providers may charge for any other NDIA-requested therapy report that is stipulated as being required in a participant's plan.

Claims for a NDIS requested reports are made using the relevant support item, using the "NDIA Report" option in the Myplace portal.

Non-Face-to-Face Supports

Non face to face activities are billable if:

- the activities are part of delivering a specific disability support item to that participant (rather than a general activity such as enrolment, administration or staff rostering); and

- the provider explains the activities to the participant, including why they represent the best use of the participant's funds (i.e. explains the value of these activities to the participant); and
- the proposed charges for the activities comply with the NDIS Price Guide, and
- the participant agrees to pay for the activities (preferably in a service agreement).

For example, the Assistance with Self Care support items are described as covering activities "Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible". Therefore, time spent on non-face to face activities that assist the participant - for example, writing reports for co-workers and other providers about the client's progress with skill development – could be charged against this support item. The costs of training and upskilling staff, and of supervision, are also included in the base price limits for supports and are not considered to be billable non-face-to-face supports. However, research undertaken by a capacity building provider specifically linked to the needs of a participant and to the achievement of the participant's goals may be billable as a non-face-to-face support with the participant's prior agreement.

Service agreements with each client can 'pre-authorise' these activities, but providers should only charge a participant for delivering a support item if they have completed activities that are part of the support for that participant. Charging a fee that is not linked to completed activities would not be appropriate.

Time spent on administration, such as the processing of NDIS payment claims for all clients, is outside the description of the support item and should not be claimed from a participant's budget as a non-face-to-face support. The NDIS price limits include an allowance for overheads, so that providers can fully recover the efficient costs, including the costs of administration tasks. Examples of administrative activities that are covered by the overhead component of the primary support price limits and that should not be billed as non-face-to-face supports include:

- Pre-engagement visits
- Developing and agreeing Service Agreements
- Entering or amending participant details into system
- Making participant service time changes
- Staff / participant travel monitoring and adjustment
- Ongoing NDIS plan monitoring
- Completing the Quoting tool
- Making service bookings and payment claims

In working out the cost of non-face-to-face supports it is not appropriate to charge all participants an average additional fee. The additional fee must be worked out in each case and related specifically to the non-face-to-face services delivered to the particular participant. This is not to say that the same additional fee might end up being charged to a number of participants, but it must be worked out separately.

Claims for a non-face-to-face supports are made using the relevant support item, using the "Non-face-to-face" option in the Myplace portal.

Other Payment Considerations

This section outlines various other considerations that may be relevant to participants and providers. These should be reviewed when entering into a new Service Agreement or if there is a significant change in the participant's circumstances.

Medicare and insurance

Some elements of a participant's care may be covered by funds outside the NDIS. These expenses are commonly medical, including those covered by private health insurance or Medicare. These medical expenses are not funded under the NDIS, even if they are related to, or a symptom of the disability. These expenses should be claimed under the relevant health care scheme or insurance policy. Some providers (e.g. therapists) may need to distinguish between the health services and disability supports that they provide to a single client, and make separate payment claims (e.g. claim payments from Medicare for health services, and the NDIS for disability supports).

Prepayments

Registered Providers can make a claim for payment once a service booking has been created and the support has been delivered or provided. Prepayment is not permitted unless the NDIA has given prior approval in writing to the Registered Provider. This will only occur in exceptional circumstances such as for certain assistive technologies, home modifications and remote area servicing where this has been agreed to by the participant.

Co-Payments for Capital items, including assistive technology

Co-Payments by the participant are not required; however, where the participant would like a customisation to a support or assistive technology that is not considered reasonable or necessary, they are required to pay for this themselves. These may include an aesthetic customisation to an assistive technology or modifications to a vehicle that are additional to the assistive components.

Goods and Services Tax (GST)

Most items are GST-Free, as per Australian Tax Office information about GST and NDIS and the application of section 38-38 of the GST Act.[2] For a small number of items where GST is applicable (for example, delivery fees and building materials), the price limit is inclusive of GST.

Other fees (Commissions and exit fees)

Participants are generally not required to pay exit fees, even when changing provider's part way through a plan. A core principle of the NDIS is choice and control for participants, allowing them to change providers without expense. Further information on establishment fees claimable by the incoming provider can be found below under *Establishment fee for personal care/community access*.

Core – Assistance with Daily Life (includes Supported Independent Living)

This support category relates to assisting with and/or supervising personal tasks of daily life to enable the participant to live as autonomously as possible. These supports are provided individually to participants and can be provided in a range of environments, including but not limited to, the participant's own home.

Daily Personal Activities, including High Intensity Daily Personal Activities

A hierarchy of price limits applies to this group of supports, based on:

A) the time of day that the support is delivered;

B) the day of week that the support is delivered;

C) whether the support is Standard Intensity or High Intensity;

D) if the support is High Intensity then whether it is a Level 1 (Standard), Level 2 (High Intensity) or Level 3 (Very High Intensity) support; and

E) whether the provider is eligible for the Temporary Transformation Payment.

Time of day

In determining which price limit is applicable to a support, providers should note that a support is considered to be:

- a Daytime Support is it is delivered between 6 am and 8 pm;
- an Evening Support if it is delivered after 8 pm and before 12 midnight; and
- an Overnight Support is it is delivered between 12 midnight and 6 am.

Day of week

In determining which price limit is applicable to a support, providers should note:

- a weekday is Monday to Friday;
- the extra rates paid for Saturday, Sunday and Public holidays are in substitution for, and not cumulative upon, the shift premiums payable for evening and overnight supports; and
- the extra rates for Saturday/Sunday/Public holidays do not increase further when the support finishes after 8pm.

High intensity supports

A support is considered a high intensity support if the participant requires assistance from a support worker with additional qualifications and experience relevant to the participant's complex needs. The high intensity price limits may be considered when:

- frequent (at least 1 instance per shift) assistance is required to manage challenging behaviours that require intensive positive behaviour support; and/or
- continual active support is required due to high medical support needs (such as unstable seizure activity or respiratory support)

In determining which price limit for High Intensity Supports should apply to a given support, the provider should consider the skills and experience of the worker delivering the support. In general, the Level 2 price limit applies to most high intensity supports. However, if the particular instance of support is delivered by a worker who does not have the skills and experience to deliver a high intensity support then the Level 1 price limit should be applied. If the particular instance of the support is delivered by a more highly skilled or experienced worker then the provider can consider applying the Level 3 price cap, with the participant's prior agreement.

Other matters

Provisions for 'shadow shifts'

Shadow shifts may be considered where the participant has complex individual support needs that are best met by introducing a new worker to the participant before it is reasonable that they commence providing the support independently. These are considered where the specific individual support needs include:

- Very limited communication;
- Behaviour support needs; and/or
- Medical needs/procedures such as ventilation or Home Enteral Nutrition (HEN).

Where the individual would require shadow shifts to assist with the introduction of new workers, and this is the desired method by the participant or their family, the provider may claim for up to 6 hours of weekday support per year.

Introducing new workers is not designed to replace formal, recognised training that will be provided by an employer to their workforce, such as Shadowing (or "Buddying") less experienced staff or new staff with experienced workers or informal carers to help build knowledge and social capital (worker retention), which is not claimable under the NDIS.

Establishment fee for personal care/community access

This fee applies to all new NDIS participants in their first plan where they receive at least 20 hours of personal care/community access support per month. This payment is to cover non-ongoing costs for providers establishing arrangements and assisting participants in implementing their plan.

An establishment fee is claimable by the provider who assists the participant with the implementation of their NDIS Plan, delivers a minimum of 20 hours per month of personal care/community access support and has made an agreement with the participant to supply these services.

A budget of $750 is included in the first plan for NDIS participants, in case they need this type of assistance from providers to design and implement support arrangements. Providers can draw against this budget as follows:

- If the participant is new to the NDIS and new to the provider, then the provider can charge a maximum of $500 against the participant's plan;
- If the participant is new to the NDIS but is an existing client of the provider, then the provider can charge a maximum of $250 against the participant's plan; and
- If the participant is choosing to change providers, then the new provider can charge a maximum of $250 against the participant's plan to assist the participant in changing providers.

Assistance with household tasks

These support items enable participants to maintain their home environment. This may involve undertaking essential household tasks that the participant is not able to undertake.

Preparation and delivery of meals

This support item is for the preparation and delivery of food to participants who are unable to do this themselves, and are not in receipt of other supports that would meet the same need. The cost of the food itself is not covered by the NDIS. The cost of this support will vary based on the number of meals prepared and the deliveries required.

Assistance in Shared Living Arrangements – Supported Independent Living

Supported Independent Living (SIL) is the assistance with and/or supervising tasks of daily life in a shared living environment, with a focus on developing the skills of each individual to live as autonomously as possible. The support is provided to each person living in the shared arrangement in accordance with their need.

SIL does not include rent, board and lodging or other day to day usual living expenses such as food and activities. It also does not include the capital costs associated with a participant's accommodation.

SIL does not have fixed price limits, and providers can quote for the specific SIL service that they offer to each participant. To assist providers with quoting, the NDIA has developed a Provider SIL Pack[3]. The Provider SIL Pack contains templates that assist providers in developing an individualised quote. The purpose of this quote is to identify:

- The individual supports that will be available for the person, focussed on maximising the person's capacity to be as independent as possible with household decision making, personal care and domestic tasks,

[3] https://www.ndis.gov.au/providers/essentials-providers-working-ndia/supported-independent-living

- The typical roster of supports that is shared between participants to maximise the efficient use of resources, and
- What supports are available to all residents to ensure the smooth operation and running of the household.

Once a quote is received, the NDIA uses a 'SIL Tool' to analyse provider quotes and to make sure that they represent value for money. In some cases, negotiation between the NDIA and providers will be necessary to agree appropriate prices for SIL.

For those providers who wish to continue to use the previous version of the quoting templates they may do so as these will continue to be accepted by the Agency.

Short Term Accommodation and Assistance

From time to time, participants may require temporary supports that are different from their usual arrangements. These are non-typical days and may include short stays in a group-based facility (short term accommodation), or the purchase of additional in-home support.

For the purposes of this Price Guide, the 'short term accommodation' price limit includes all expenses in a 24 hour period including assistance with daily personal activities, accommodation, food and negotiated activities. Typically, this type of support would be used for short periods of up to 14 days at a time. For longer term arrangements, other options are likely to be more appropriate (e.g. Supported Independent Living).

In cases where a participant will receive substantially less than 24 hours of assistance with daily personal activities, it may be appropriate for the participant and provider to negotiate a lower price than the maximum price specified in this Guide, based on the actual support provided. This situation might arise, for example, if a participant enters a short term accommodation facility in the evening, and exits again early the following morning. Also, where a participant enters accommodation late in the day, it may be appropriate to claim the daily rate for the day of the week that the majority of the support is provided. In each case, support arrangements, including price, should be **agreed with participants in advance**.

Short term accommodation price limits vary according to the support needs of the participant and the day of the week the support is provided. Providers claiming at the rates for high intensity (i.e. ratio of 1 support worker for 2 participants) or 1:1 support must deliver assistance with daily personal activities at those support ratios for the duration of the participant's stay.

Core - Transport

Transport enables participants to access disability supports outside their home, and to pay for transport that helps them to achieve the goals in their plan. Transport supports generally do not have price limits; however, participants should use the least expensive transport that meets their needs. Transport funding is paid fortnightly in advance to self-managed participants. Funding transport assistance is limited to those who cannot use public transport due to their disability. If the participant has questions about their transport support, providers may direct them to the NDIS factsheet available on the NDIS Website[4].

Accompanying participants for community access

Providing community access supports may, at the request of a participant, involve a worker accompanying a participant on a community outing and/or transporting a participant from their home to the community. In these situations, the worker's time can be claimed at the agreed hourly rate for the relevant support item for the total time the worker provides support to one or more participants, including time spent accompanying and/or transporting the participant. Where a provider is transporting two or more participants on the same trip, the worker's time should be claimed at the appropriate group rate for the relevant support.

This claim should be made using the relevant community participation support item and against the participant's core budget. In essence, the participant transport is a part of the community participation activity and should be billed accordingly.

Contribution towards costs of transport itself

If a provider incurs costs, in addition to the cost of a worker's time, when accompanying and/or transporting participants in the community (such as cost of ticket for public transport, road tolls, parking fees and the running costs of the vehicle), they may negotiate with the participant for them to make a reasonable contribution towards these costs.

A participant's support budget may include funding for transport, and this funding can be used for these types of contributions, which should be clearly specified in the service agreement.

If the participant's support budget does not include funding for transport, then these costs should not be met from the participant's plan, but can be charged as an out of pocket expense to the participant.

[4] https://www.ndis.gov.au/participants/creating-your-plan/plan-budget-and-rules/transport-funding

Core - Consumables

Consumables are a support category available to assist participants with purchasing everyday use items. Supports such as Continence and Home Enteral Nutrition (HEN) products are included in this category. More information on these supports can be found in the *Assistive Technology and Consumables Code Guide* on the Assistive Technology webpage.[5]

[5] https://www.ndis.gov.au/providers/essentials-providers-working-ndia/providing-assistive-technologies-and-home-modifications

Core - Assistance with Social and Community Participation

These supports enable a participant to engage in community, social or recreational activities. They may be provided in a centre or in community settings at standard or higher intensity rates. If arranged in advance with participants, providers may charge up to four hours for each plan period to document proposed supports and expected outcomes. Price limits vary according to the support needs of the participant and the day of the week the support is provided.

Providers should not claim payment for:

- expenses related to recreational pursuits, such as event tickets for the participant, as they are not covered by the NDIS; and
- the cost of entry for a paid support worker to attend a social or recreational event.

A hierarchy of price limits also applies to this group of supports, based on:

A) the time of day that the support is delivered;

B) the day of week that the support is delivered;

C) whether the support is Standard Intensity or High Intensity;

D) if the support is High Intensity then whether it is a Level 1 (Standard), Level 2 (High Intensity) or Level 3 (Very High Intensity) support; and

E) whether the provider is eligible for the Temporary Transformation Payment.

(See the definitions and notes in the Assistance with Daily Living Support Category.)

Community and social activity costs

This support is included in a participant's plan to enable them to pursue recreational activities and engage in the community when associated with a participant's disability and goals. Participants may use this funding for activities such as camps, vacation and outside school hours' care, course or membership fees. More information can be found in the Operational Guidelines[6]

Where appropriate, funded hours in a Community Access budget may be converted to a fee and claimed by a provider for these purposes.

Group based supports

Assistance to access community, social and recreational activities is often provided in a group setting, either in the community or in a centre.

A hierarchy of price limits applies to group based supports, based on:

A) the time of day that the support is delivered;

[6] https://www.ndis.gov.au/about-us/operational-guidelines/planning-operational-guideline/planning-operational-guideline-deciding-include-supports-participants-plan

B) the day of week that the support is delivered;

C) whether the support is Standard Intensity or High Intensity (complex);

D) whether the provider is eligible for the Temporary Transformation Payment;

E) the size of the group and ratio of staff to participants; and

F) whether the support is provided in a Centre or in the community.

(See the definitions and notes in the Assistance with Daily Living Support Category.)

For support ratios that are not stated in this Guide (e.g. two workers for three participants), participants and providers should discuss and agree the most appropriate line item to be used for payments, and the appropriate price to be paid (which might be lower than the price limit for that line item).

Providers of group based supports are not permitted to bill for non-face-to-face services as the hourly price limits for these supports include an allowance for non-face-to-face services.

Capital – Assistive Technology

This support category includes all aids or equipment supports that assist participants to live independently or assist a carer to support the participant. It also includes related delivery, set-up and some training support items. Usually, providing independent advice, guidance, trials, set-up and training (not bundled with the sale of an item) is funded through a capacity building support.

More detailed information on assistive technologies and consumables codes can be found in the *Assistive Technology and Consumables Guide* on the Assistive Technology webpage[7].

Vehicle Modifications

Vehicle modifications include the installation of, or changes to, equipment in a vehicle to enable a participant to travel safely as a passenger or to drive.

A participant is free to choose a more expensive option at their own expense, where the more expensive option is not considered to be reasonable and necessary. An example of this situation would be where a vehicle modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not related to their disability or are more expensive than others that have an equivalent function. In this situation, the NDIA will cover the reasonable and necessary component of the modification, and the participant will pay the additional cost.

[7] https://www.ndis.gov.au/providers/at/supplying-at.html

Capital – Home Modifications and Specialist Disability Accommodation

This support category includes home modifications and Specialist Disability Accommodation (SDA) supports.

Home Modifications

Home modifications include design, construction, installation of or changes to equipment or non-structural components of the building, and installation of fixtures or fittings, to enable participants to live as independently as possible or to live safely at home. All home modifications in excess of $1,500 are quotable.

A participant is free to choose a more expensive option or modification that achieves the same outcome at their own expense, where the more expensive option is not reasonable and necessary. For example, where a home modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not reasonable and necessary, the NDIA will provide funding for the reasonable and necessary component of the modification, and the participant will pay any extra costs.

Specialist Disability Accommodation (SDA)

SDA funding is intended for participants who require a specialist dwelling that reduces their need for person-to-person supports, or improves the efficiency of the delivery of person-to-person supports. SDA funding will only be provided for participants who meet the eligibility criteria. Participants who meet the eligibility criteria will have an extreme functional impairment and/or very high support needs.

SDA does not refer to the support services, but the homes in which these are delivered. SDA may include special designs for people with very high needs or may have a location or features that make it feasible to provide complex or costly supports for independent living.

SDA payments are an adjusted contribution to the cost of capital required for the land and physical building required for SDA needs. Importantly, SDA funding is not intended to cover personal support costs, which are assessed and funded separately by the NDIS. Additionally, SDA does not cover accommodation costs where these are not linked to a person's disability or where specialist accommodation with integrated supports is not required. SDA is a separate support category and does not replace Supported Independent Living (SIL) or any other support. Participants receiving SDA could also be eligible for SIL supports in their package.

All providers who are registered with the NDIA for the Registration Group 'Specialist Disability Accommodation' will also be required to declare and ensure that the infrastructure meets the NDIA's specialist built form requirements and the relevant legislation and standards applicable to the state in which the accommodation is situated. These individual sites/locations must also be enrolled with the NDIA.

Due to the nature of the support, the identification of maximum SDA prices and the process by which providers can claim for SDA are more complex than for most other supports.

Providers should refer to the Specialist Disability Accommodation section of the NDIS website for detailed information about maximum prices that can be charged, dwelling enrolment and participant assessments[8].

SDA has two support items: Specialist Disability Accommodation and SDA person-specific adjustments.

Each SDA dwelling has a unique maximum price, based on a standard set of factors. There are also limits on the amount that providers of SDA can charge participants in addition to the SDA price, for rent and other board-like services provided. Providers should refer to the SDA section of the NDIS website for detailed guidance on maximum prices[9]. Participants are able to choose to move between SDA dwellings, as long as the SDA dwelling is commensurate with their SDA budget.

SDA person specific adjustments

In certain limited circumstances, the NDIA will continue to make SDA payments on behalf of a participant who has moved out of an enrolled SDA dwelling. Provided all conditions are met in section 6.3 of the *National Disability Insurance Scheme (Specialist Disability Accommodation) Rules 2016*, vacancy payments may continue to be made for a period of up to 90 days if the dwelling is enrolled to house four or five residents, or up to 60 days if the dwelling is enrolled to house two or three residents[10]. Vacancy payments will not be made where a dwelling is only enrolled to house one resident. Vacancy payments will only be payable if the vacancy is available to another NDIS participant and the NDIA has been notified.

Capacity Building - Support Coordination

Support Coordination (if required) is included in the Capacity Building budget. This is a fixed amount for strengthening participant's abilities to coordinate and implement supports in their plans and to participate more fully in the community.

There are three items in the NDIS Price Guide that describe different layers of support coordination activity.

Level 1: Support Connection

Assistance for participants to implement their plan by strengthening the ability to connect with the broader systems of supports and understand the purpose of the funded supports and participant in the community Support Connection will assist a participant to understand their NDIS plan, connect participants with broader systems of supports, and provide assistance to connect with providers. Support Connection will assist participants to achieve effective utilisation of their NDIS plan.

Support Connection will increase a participant's capacity to maintain (or in some cases change) support relationships, resolve service delivery issues, and participate independently in NDIA processes. Support Connection includes, but not limited to:

- Understand the Plan;
- Connect with Supports and Services;
- Establish Supports;
- Coach, Refine, Reflect; and
- Report to the NDIA.

Where a participant aged 0-6 years is receiving assistance from Partners in the Community (PITC) delivering Early Childhood Early Intervention (ECEI) services, linking the family to a service provider/s (under ECEI best practice principles, a service provider operating under the key worker approach) and support through changes in circumstance will be delivered through Partner arrangements.

Where a participant aged seven (7) and over is receiving assistance from Partners in the Community (PITC) delivering Local Area Coordination (LAC) services, plan implementation and monitoring support will be delivered by a Participant's Local Area Coordinator.

Level 2: Coordination of Supports

The delivery of Coordination of Supports is to assist strengthening a participant's ability to design and then build their supports with an emphasis on linking the broader systems of support across a complex service delivery environment. Coordination of Supports is to focus on supporting participants to direct their lives, not just their services. This involves working together to understand the funding, identify what participants expect from services, and how participants want this designed. Coordination of Supports also includes coaching participants, and working with participants to develop capacity and resilience in their network.

Support coordinators are focussed on assisting participants to build and maintain a resilient network of formal and informal supports.

It is generally expected that participants will develop their capacity to implement and manage their supports and network more independently over time. Some participants however will require Coordination of Supports funding in subsequent plans to support ongoing capacity building or manage the complexity within the participants support environment and/or circumstances. This is to be identified in the plan review process. Coordination of Supports includes, but is not limited to:

- Understand the Plan;
- Connect with Supports and Services;
- Design Support Approaches;
- Establish Supports;
- Coach, Refine, Reflect;
- Targeted Support Coordination;
- Crisis: Planning, Prevention, Mitigation and Action;
- Build Capacity and Resilience; and
- Report to the NDIA.

Over time as a participant's capacity is strengthened, this support may be replaced by Support Connection or the introduction of a Local Area Coordinator (LAC) or Early Childhood Early Intervention (ECEI) Partner in subsequent plans.

Level 3: Specialist Support Coordination

Specialist Support Coordination is delivered utilising an expert or specialist approach, necessitated by specific high complex needs or high level risks in a participant's situation. Specialist Support Coordination is delivered by an appropriately qualified and experienced practitioner to meet the individual needs of the participant's circumstances such as a Psychologist, Occupational Therapist, Social Worker, or Mental Health Nurse. Specialist Support Coordination will address highly complex barriers impacting on the ability to implement their plan.

Specialist support coordination is expected to address complex barriers impacting a participant's ability to implement their plan and access appropriate supports. Specialist support coordinators assist participants to reduce complexity in their support environment, and overcome barriers to connecting with broader systems of supports as well as funded supports.

Specialist support coordinators are expected to negotiate appropriate support solutions with multiple stakeholders and seek to achieve well-coordinated plan implementation. Specialist support coordinators will assist stakeholders with resolving points of crisis for participants, assist to ensure a consistent delivery of service and access to relevant supports during crisis situations.

Specialist support coordination is generally delivered through an intensive and time limited period necessitated by the participant's immediate and significant barriers to plan

implementation. Depending on individual circumstances, a specialist support coordinator may also design a complex service plan that focusses on how all the stakeholders in a participant's life will interact to resolve barriers and promote appropriate plan implementation. Once developed, a specialist support coordinator will continue to monitor the plan, but it may be maintained by one of the participant's support workers or other care supports.

In some instances depending on the individual circumstances, a participant may have specialist support coordination as well as Coordination of Supports funded in the same plan. For instance, when immediate complex barriers have been addressed and the participant still requires more general coordination of supports for the remainder of their plan period. For others, they may have specialist support coordination in one plan, and Coordination of Supports in subsequent plans. Specialist Support Coordination includes, but is not limited to:

- Understand the Plan;
- Connect with Supports and Services;
- Design Support Approaches;
- Establish Supports;
- Coach, Refine, Reflect;
- Targeted Support Coordination;
- Crisis: Planning, Prevention, Mitigation and Action;
- Address Complex Barriers;
- Design Complex Service Plan;
- Build Capacity and Resilience; and
- Report to the NDIA.

Capacity Building and Training in Plan and Financial Management by a Support Coordinator

This reasonable and necessary support focusses on strengthening the participant's ability to undertake tasks associated with the management of their supports. This includes:

- Building financial skills
- Organisational skills
- Enhancing the participant's ability to direct their supports
- Develop self-management capabilities

Plan and Financial Capacity Building providers are expected to assist the participant to develop their skills for self-management in future plans, where this is possible. As a part of this capacity building support, providers are to assist the participant to build capacity in the overall management of the plan including engaging providers, developing service agreements, paying providers and claiming payment from the NDIA and maintain records.

Capacity Building - Improved Living Arrangements

Support is provided to guide, prompt, or undertake activities to ensure the participant obtains and/or retains appropriate accommodation. This may include assisting to apply for a rental tenancy or to undertake tenancy obligations in line with the participant's tenancy agreement.

Capacity Building - Increased Social and Community Participation

This support category involves supports for participation in skills-based learning to develop independence in accessing the community.

Skills Development and Training

These support items are price controlled. Providers of these supports can also claim for: Provider Travel; Cancellations, NDIA Report Writing and Non-Face-to-Face supports.

The group rate is based on a staff/participant ratio of 1:3. If the group size differs, providers should claim at the rate applicable for the group size. A higher staff ratio for groups may be indicated when a participant has challenging behaviour or high medical support needs, which require additional assistance from another worker and this is referred to as a higher intensity support.

Innovative Community Participation

This support item is not price controlled. It is designed to allow providers to offer new and innovative services to NDIS participants. Any standards applicable to the industry in which the provider operates would need to be met.

Community Participation Activities

These support items are not price controlled. They are designed to enable providers to claim for tuition fees, art classes, sports coaching and similar activities that build skills and independence. Camps, classes and vacation activities that have capacity building components. These may include assistance to establish volunteer arrangements in the community, mentoring, peer support or individual skill development.

All supports funded under these items need to be determined as reasonable and necessary given the participant's plan goals and could include, but are not limited to:

- Universal recreational activities: A limited number of lessons could be funded to enable a participant to try out an activity and test their capability and interest in further pursuing this activity – such as horse riding, art, dance or singing classes
- Funding to attend a "camp" or groups that build a person's relationship skills and offer a range of activities and opportunities to explore wider interests.
- Other items or adjustments such as customised tools required because of the person's disability could also be funded.

Capacity Building - Finding and Keeping a Job

Employment Related Assessment and Counselling

This support is designed to provide workplace assessment and/or counselling to assist participants successfully engage in employment. For workplace assessments - if a participant is employed and on award wages, then in most instances a work place assessment is available through the Employment Assistance Fund administered by JobAccess and is a free service to employers. For employment related counselling, this service may benefit participants who have, for example, experienced traumatic injury and need significant support (over and above a mainstream employment related service) to develop a new work pathway.

Please note that this support item falls under a different registration group, therapeutic supports, and as such a provider needs to have registration for this group to deliver this supports.

Workplace assistance

These supports provide workplace assistance that enables a participant to successfully obtain and/or retain employment in the open or supported labour market.

These supports can be applied to any working age participant (including students reaching working age) with an employment goal. This may include supports to:

- explore what work would mean for them (discovery);
- build essential foundation skills for work;
- managing complex barriers to obtaining and sustaining employment;
- specialised job customisation;
- supports to transition from an Australian Disability Enterprise (ADE) to open employment;
- develop a career plan; and
- other capacity building supports which are likely to lead to successful engagement in a Disability Employment Service (DES).

School Leaver Employment Supports (SLES)

School Leaver Employment Supports (SLES) is a support for school leavers to assist them to transition from school into employment. Some students may already be engaged with the mainstream DES Eligible School Leaver (ESL) program during Year 12 and therefore not require SLES.

These supports are designed to plan and implement a pathway to inclusive employment, focussing on capacity building for goal achievement. With appropriate supports, it is expected that the majority of SLES participants will transition to DES to undertake the job seeking, placement and post placement support phases of their pathway.

Supports will have an individualised approach, with a strong emphasis on “try and test” work experience opportunities, (generally in work places that would pay award wages). Capacity building should focus on hard and soft skill development.

Supports, more generally, should facilitate positive experiences that contribute to developing an understanding of work capability and confidence to step into employment. SLES should also help inform the level and nature of future supports needed to obtain and sustain employment.

Capacity Building - Improved Relationships

This support category is the provision of specialised assessment where the participant may have complex or unclear needs, requiring long term and/or intensive supports to address behaviours of concern.

Behaviour support requires a behaviour support plan to be developed that aims to limit the likelihood of behaviours of concern developing or increasing once identified. This plan outlines the specifically designed positive behavioural support strategies for a participant, their family and support persons that will achieve the intended outcome of eliminating or reducing behaviours of concern.

This support category includes specialist behavioural intervention support, which is an intensive support for a participant, intending to address significantly harmful or persistent behaviours of concern.

Capacity Building - Improved Health and Wellbeing

Physical Wellbeing Activities

These activities support, maintain or increase physical mobility or well-being through personal training or exercise physiology. Physical well-being activities promote and encourage improved physical capacity and health.

Dietetics

These supports provide individual advice to a participant on managing diet for health and wellbeing due to the impact of their disability.

Capacity Building - Improved Learning

This support is for provision of skills training, advice, assistance with arrangements and orientation to assist a participant moving from school to further education.

Capacity Building - Improved Life Choices

Plan Management – Financial Administration

Plan Management – Financial Administration funding applies to registered providers who undertake financial administration of a plan on behalf of a participant.

Plan Management – Financial Administration funding includes a setup fee to establish the payment arrangements with providers and a monthly processing fee. This support assists a participant by:

- Giving increased control over plan implementation and utilisation with plan financial assistance
- Managing and monitoring budgets over the course of the plan
- Managing NDIS claims and paying providers for delivered service
- Maintaining records and producing regular (at least monthly) statements showing the financial position of the plan
- Providing access to a wider range of service providers, including non-registered providers whilst remaining in line with the price limits contained within this Guide.

A Plan Management – Financial Administration provider will possess bookkeeping / accounting skills and qualifications. They will have systems in place for efficiently processing payments on behalf of a participant.

Capacity Building and Training in Plan and Financial Management by a Plan Manager

This reasonable and necessary support focusses on strengthening the participant's ability to undertake tasks associated with the management of their supports. This includes:

- Building financial skills
- Organisational skills
- Enhancing the participant's ability to direct their supports
- Develop self-management capabilities

Plan and Financial Capacity Building providers are expected to assist the participant to develop their skills for self-management in future plans, where this is possible. As a part of this capacity building support, providers are to assist the participant to build capacity in the overall management of the plan including engaging providers, developing service agreements, paying providers and claiming payment from the NDIA and maintain records.

Capacity Building - Improved Daily Living

This support category includes assessment, training, strategy development and/or therapy (including Early Childhood Intervention) supports to assist the development or increase a participant's skills and/or capacity for independence and community participation. Supports can be delivered to individuals or groups.

Therapy Supports (over 7 years)

In the NDIS, therapy supports are for participants with an established disability, where maximum medical improvement has been reached, to facilitate functional improvement. For people who access the Scheme as 'early intervention' NDIS participants, reasonable and necessary supports are likely to be a blend of medical and disability therapies, but should be predominantly disability therapy supports. Therapy in this context must be aimed at adjustment, adaption and building capacity for community participation.

For NDIS participants whose medical condition, illness or disease requires a particular treatment to maintain the functioning of a body part, or slow/prevent the deterioration, the NDIS may fund reasonable and necessary training for non-skilled personnel to undertake this intervention as part of the usual daily personal care. For participants where such treatment can only be met through skilled rather than non-skilled care, this treatment is to be funded through medical funds, not the NDIS.

Ongoing funding for therapy is subject to a detailed support plan that is designed to deliver progress or change for the participant. Providers develop this plan with the participant and it should clearly state the expected therapy outcomes and demonstrate a link to the participant's goals, objectives and aspirations.

Massage Therapy (over 7 years)

Massage, delivered directly to impact a body part or body system, is more appropriately provided by the health system and is therefore not funded by the NDIS.

Maintenance Therapy (over 7 years)

Where maintenance therapy is reasonable and necessary, it is funded as part of ongoing direct support hours (delivered by carers who are or can be trained in this if required), and is not funded as ongoing therapy.

For participants whose medical condition or disability requires a particular regime to maintain functioning of a body part, or to slow the deterioration of a medical condition or body part, the NDIS will fund reasonable and necessary training for non-qualified personnel to assist the individual as part of usual daily care.

Where a skilled therapist is involved in establishing a therapy program for a participant, funding can include the development of a plan and training for a therapy assistant, informal or funded carers, as part of usual care. Building capacity with family and carers to undertake therapy or exercises under the supervision of a skilled therapist can deliver ongoing benefit to NDIS participants.

Group Supports for Therapy

The NDIA prefers to allow participants and providers flexibility in negotiating arrangements, so there may not be price limits or support items for specific group ratios beyond what is currently in place.

For support ratios that are not stated in this Guide (such as one therapist to two participants, or one therapist to four participants), the NDIA encourages participants and providers to discuss arrangements both parties agree to, including price. Therapy delivered in a group may be claimed using the relevant therapy support item, but with lower prices than the price limit, as agreed between provider and participant. This arrangement for support ratios is intended to allow providers to offer a range of services and discuss with participants about more flexible arrangements which both parties prefer.

Early Childhood Intervention Supports (under 7 years)

Early Childhood Intervention (ECI) provides specialised support and services for infants and young children with disability and/or development delay and their families, to help their development, well-being and participation in family and community life.

The aim of ECI is to ensure that parents and other important adults in the child's life can provide young children with disability and/or developmental delay, with experiences and opportunities that help them gain and use the skills they need to participate meaningfully in their everyday lives.

Families know their child best and will continue to be involved in their child's life. Family centred ECI services understand that parents and caregivers have the most powerful influence on their child's development. ECI services partner with families to ensure that family life and family priorities and choices drive what happens in planning and intervention.

We know that children learn best in everyday situations with familiar people. ECI is about encouraging and supporting everyday learning to naturally build on opportunities for learning and development already being provided at home, childcare, preschool, playgroups and in the community such as parks and shopping.

Early intervention is much more effective if the adults who have the deepest relationships and spend the most time with the child, are skilled to provide intervention through the child's everyday activities and daily routines.

This category includes supports provided in small groups or to individual families by an ECI provider. It can also include supports provided by an allied health assistant under the supervision of a therapist and/or any other combination of ECI supports.

Eligible participants will have budgets built by Early Childhood Partners to reflect the child and family individual needs, applying the reasonable and necessary criteria as per the Early Childhood Early Intervention (ECEI) approach. Budgets will allow flexibility in service delivery by ECI providers to reflect the changing needs of the participant.

The provision of supports under ‘capacity building supports for early childhood’ are expected to deliver outcomes for the child that will enable them to participate meaningfully in everyday

life. Each child's NDIS plan will focus on functional, participation based goals and will summarise the outcomes expected from early intervention and will be reviewed at regular intervals.

These supports are price controlled. Providers of these supports can also claim for: Provider Travel; Cancellations, NDIA Report Writing and Non Face to Face supports.

Multidisciplinary Team Intervention (over 7 years)

This support item enables a coordinated multidisciplinary approach to be delivered to participants beyond the age covered by the Early Childhood Early Intervention approach. All team members will claim against a single support item, thereby increasing flexibility in service delivery to reflect the changing needs of a participant. This support item is not price controlled.

NDIS Support Catalogue 2019-20

Valid from 1 July 2019

The NDIS Price Guide is subject to change. The latest version of the NDIS Price Guide is available on the NDIS website.

4 YEARLY REVIEW OF MODERN AWARDS

Reply Submission – Claims Concerning Travel

Social, Community, Home Care and Disability Services Industry Award 2010 (AM2018/26)

16 September 2019

AM2018/26 SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES AWARD 2010

CLAIMS CONCERNING TRAVEL

1. INTRODUCTION

1. The Australian Industry Group (**Ai Group**) advances these submissions in response to the Australian Services Union (**ASU**) United Voice and the Health Services Union (**HSU**) claims relating to the payment of travel undertaken by employees (**Travel Time Claims**) and the HSU's proposed variation to clause 20.5(a), which relates to the vehicle allowance provided by the *Social, Community, Home Care and Disability Services Industry Award 2010* (**Award**).

2. The submission addresses the following matters:

   (a) The context in which the claims are advanced, including a consideration of the relevant circumstances of the industry and the other claims being pursued by the unions.

   (b) The nature and effect of the proposed variations.

   (c) The operation of relevant current award provisions.

   (d) Considerations associated with the merit of the claims, including:

      (i) The current funding arrangements;

      (ii) Concerns over the workability of the Travel Time Claims; and

      (iii) The modern awards objective.

   (e) Specific arguments relating to the HSU's proposed amendments to the current award provisions governing when a vehicle allowance is payable.

2. THE CONTEXT IN WHICH THE CLAIMS ARE ADVANCED

3. It is uncontentious that the work of some employees covered by the Award requires employees to work at different locations during the course of a single day.

4. Moreover, we doubt that it is contentious that in some instances employees will travel directly and immediately between consecutive clients in order to undertake such work. In other instances, employees may, during the course of a single day, undertake work at different locations but at times which mean that there is a substantial break between the time spent undertaking client facing work.

5. It should be uncontentious that the above described working arrangements are widespread and long standing in the context of this sector. This is both reflected in the material filed in these proceedings and the provisions of various predecessor instruments to the Award.

6. The implementation of the National Disability Insurance Scheme (**NDIS**) and the resulting necessity for the implementation for client-orientated working arrangements in the sector has, we argue, been an even greater catalyst for the adoption of such practices than traditional funding arrangements. This is because:

   (a) Employers now have reduced capacity to schedule the manner in which clients are serviced; and

   (b) There are limits on the amount an employer in this sector can charge for time spent travelling.

7. In thiss context, United Voice, the ASU and the HSU have advanced claims and submissions that variously assert that time spent travelling between clients either is or should be regarded as ‘work’ and that it should attract a relevant payment. The HSU has also sought to expand the circumstances in which the vehicle allowance currently provided under the Award applies, so as to make employers liable for an employee’s costs associated with getting to and from work.

8. In assessing the unions' claims, the Full Bench should consider the degree of interconnectedness between them and the other claims advanced in the context of these proceedings. In this regard we point in particular to the claims advanced by the unions relating to minimum engagements and restrictions on the use of broken shifts. Without accepting that any of the proposed variations are warranted, we observe that granting any of the proposed changes would lessen the force of any argument that the other changes are necessary, in the sense contemplated by s.138 of the *Fair Work Act 2009* (**Act**).

9. The various proposed changes may be seen as different mechanisms to address many of the unions' underlying concerns about employees undertaking short periods of work that do not provide sufficient remuneration for the associated effort and cost of getting to and from such work and the associated disutility of performing such work. For example, the granting of a minimum engagement period would negate the validity of arguments that there is a need to also provide additional entitlements directed at compensating employees for travel that they undertake to or from work.

3. THE CLAIMS

10. The HSU, ASU and United Voice have all proposed provisions dealing with payment for travel undertaken by employees covered by the Award. In certain respects, the claims are relatively similar, although it is important that the Full Bench appreciates that they do reflect subtly different approaches. In the section below we identify what we perceive to be the effect of the relevantly overlapping proposed variations.

11. As previously mentioned, the HSU has also proposed a variation to the current provisions of clause 20.5(a), which provides for the payment of a vehicle allowance. It appear that it is intended to operate in addition to the entitlements that would flow from the Travel Time Claims.

The HSU's Travel Time Claim

12. The HSU has proposed a variation to the Award provisions regulating broken shifts to provide a payment for travel that may be undertaken in the course of a break during a broken shift:

> **(d)** Where an employee works a broken shift, they shall be paid at the appropriate rate for the reasonable time of travel from the location of their last client before the break to their first client after the break, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.

13. A number of observations can be made about the effect of the proposed provision.

14. *Firstly*, it only operates in the context of a broken shift. In this regard, the claim varies from that advanced by other unions.

15. *Secondly*, the clause requires payment for the "reasonable time of travel from the location of [an employee's] last client before the break to their first client after the break". In this regard, the provision does not appear to require payment for time an employee actually spends travelling between the aforementioned locations. Instead, it appears to contemplate an assessment of what constitutes "reasonable time of travel" between such locations. This might serve to create a basis for calculating an entitlement where an employee does not travel directly between such clients (given the employee is on a break and free to undertake other activities in the interim); an arrangement that is likely not uncommon.

16. This element of the clause appears to potentially place some limitation on the payment an employer is liable to make under the clause. It might, for example, mean that an employer is not required to pay the entirety of the period of time that an employee spends travelling between such locations if they elect to undertake such travel by means of car during peak hour conditions if it could have been undertaken more efficiently at a different time. It might also mean that an employer is not put to the costs of paying for time spent travelling via an inefficient route or mode of transport.

17. *Thirdly*, there is no articulation of how or when such travel is to be undertaken. It does not specify the mode of transportation or the route that must be undertaken for the purposes of making the relevant assessment.

18. *Fourthly***,** the clause provides that the "reasonable time of travel" is to be "treated as time worked". This appears to reflect an appropriate acknowledgment by the HSU that travel between clients in the context of a broken shift will not be work and will not attract a payment under the Award, where it occurs during a break. It also appears that the intent is for the clause to effectively deem the reasonable travel time as being time worked by force of the Award, or at least to compel an employer to treat the time as though it was spent working.

19. The purpose for which such time is to be treated as time worked is not clear; but we assume that it is to be so treated at least for all purposes under the Award. Accordingly, we assume that it is to be treated as time worked so as to attract a relevant payment under the Award.

20. It is unclear as to whether the HSU intends that such time to be treated as time worked in a broader sense. For example, is such time intended to be regarded as time worked in the context of the Act or other legislative or regulatory schemes, such as relevant workers compensation and workplace health and safety laws. We return to this issue in section 6 of our submission.

The United Voice & ASU Travel Time Claim

21. The ASU and United Voice have proposed the following variation:

> **25.7 Travel time**
>
> (a) Where an employee is required to work at different locations they shall be paid at the appropriate rate for reasonable time of travel from the location of the preceding client to the location of the next client, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.
>
> (b) This clause does not apply to travel from the employee's home to the location of the first client nor does it apply to travel from the location of the last client to the employee's home.

22. The claim advanced by the ASU and United Voice is, in various respects, similar to that advanced by the HSU. As such, most of the observations pertaining to the HSU's proposed clause are apposite to the United Voice proposal.

23. The claim advanced by these unions is however different in that it does not only apply in relation to travel undertaken during breaks that occur in the context of a broken shift.

24. It is not clear whether the proposed clause applies in the context of notional travel between the "preceding" and "next" client when the work is undertaken on a single day, single shift, single engagement or some other unspecified context. This issue does not arise in the context of the HSU provision given it operates in the context of a broken shift, as defined in the Award.

25. It is particularly unclear how the proposed provision would operate in the context of casual employment. It is arguable that under the Award, a casual employee may be able to be employed on entirely separate engagements on the same day without attracting the application of the broken shift provisions. On one view, where this occurs the minimum engagement provisions of the Award would have application. If the proposed variation was adopted, such a casual employee might also receive the benefits flowing from the proposed clause.

26. We do however acknowledge that ASU and United Voice proposal also expressly, and in our view appropriately, excludes travel between an employee's home and the location of a client. This does not however clarify what occurs if the employee does not travel from their "home" to work or from work to "home".

27. Put simply, the operation of the proposed clause 25.7(b) is not clear. The provision does not actually reference the context in which a client is to be assessed as being either the first or last client. It may be that it is the first and/or last client per engagement that is excluded. If so, this would negate the potential application of the clause to casual employees who are engaged to perform work for particular clients.

The HSU's Additional Claim

28. The HSU has proposed a variation to clause 20.5(a) so that it provides as follows:

> **(a)** Where an employee is required and authorised by their employer to use their motor vehicle in the course of their duties, the employee is entitled to be reimbursed at the rate of $0.78 per kilometre. Disability support workers and home care workers shall be entitled to be so reimbursed in respect of all travel:
>
> **(i)** from their place of residence to the location of any client appointment;
>
> **(ii)** to their place of residence from the location of any client appointment;
>
> **(iii)** between the locations of any client appointments on the basis of the most direct available route.

29. We understand the effect of the proposed variation to be that travel which does not occur in the course of an employee's duties would attract the payment of the vehicle allowance.

30. The claim only provides for payment in relation to travel that is actually undertaken, although clause 20.5(a)(iii) appears to provide an alternate "basis" for calculating the amount that is payable to a mechanism that is simply linked to the kilometres actually travelled.

4. THE CURRENT AWARD PROVISIONS

31. Before responding to the individual claims, it is convenient to address the current Award provisions.

32. It must firstly be observed that the Award already provides a travelling allowance:

> **20.5 Travelling, transport and fares**
>
> **(a)** Where an employee is required and authorised by their employer to use their motor vehicle in the course of their duties, the employee is entitled to be reimbursed at the rate of $0.78 per kilometre.
>
> **(b)** When an employee is involved in travelling on duty, if the employer cannot provide the appropriate transport, all reasonably incurred expenses in respect to fares, meals and accommodation will be met by the employer on production of receipted account(s) or other evidence acceptable to the employer.
>
> **(c)** Provided that the employee will not be entitled to reimbursement for expenses referred to in clause 20.5(b) which exceed the mode of transport, meals or the standard of accommodation agreed with the employer for these purposes.

> **(d)** An employee required to stay away from home overnight will be reimbursed the cost of reasonable accommodation and meals. Reasonable proof of costs so incurred is to be provided to the employer by the employee.

33. On its face, this provision is directed at compensating an employee for the costs of travel undertaken in the course of their duties. No party appears to have undertaken an analysis of the history of the provision.

34. This application of clause 20.5 was considered by Commissioner Saunders in *Re Alzheimer's Australia WA Ltd*[1]. Here, an application was made for approval of an enterprise agreement that contained a provision similar to clause 20.5(a). Commissioner Saunders noted that both provisions provided for a travel allowance of not less than $0.78 per kilometre to be paid to an employee when the employee is required and authorised to use their motor vehicle in the course of their duties. Although it was not necessary for him to decide this point, Commissioner Saunders stated:

> **[7]** The SACS Award does not specify when an employee commences their duties, whereas the Agreement does. Clause 18.8 of the Agreement makes clear that an employee commences their duties each day on arrival at the first place of work and finishes work on departure from the last place of work for the day. For a Support Worker who travels to and between the residences of clients, the residences of the clients are the Support Worker's places of work (clause 18.9 of the Agreement).
>
> **[8]** Although the SACS Award does not expressly state when an employee commences their duties, if an employee made a claim under the SACS Award for the payment of a travel allowance in respect of their travel from their home to the residence of their first client for the day in circumstances where the employee's usual practice was to travel from their home directly to the residence of a client, I am of the view that such a claim would not succeed. That is because an employee's duties do not commence until they arrive at their workplace. For an employee who is engaged to provide services at the residences of clients, the employee's places of work are the residences of their clients. Accordingly, the SACS Award would, in my view, be given the same interpretation as clauses 18.8 and 18.9 of the Agreement in the circumstances to which I have referred.
>
> **[9]** Because the Agreement confers on a Support Worker an entitlement to the payment of a travel allowance insofar as the Support Worker is required to travel more than 20km from their home to the residence of a client whereas the SACS Award does not, the Agreement provides a benefit over and above the SACS Award. Accordingly, in my view, the motor vehicle allowances in the Agreement are more beneficial than the motor vehicle allowances in the SACS Award.

[1] [2016] FWCA 4863.

35. The Award also compensates employees for the time they spend travelling where this occurs in the course of their work or duties. Such work would attract the application of award provisions providing for the remuneration of the performance of work (i.e. the minimum hourly rates and penalty rates etc). However, where an employee is engaged exclusively to undertake work at a client's premises, they would not receive payment under the Award for time that they spend travelling to or from such location. Relevantly, an employee would not receive such compensation in relation to travel undertaken during the breaks that occur in the course of a broken shift.

36. It also relevant to consider the provisions of the Award dealing with the arrangement of ordinary hours of work and rostering. This includes the provisions dealing with 'broken shifts' and any requirement to structure hours of work in a continuous manner. In simple terms, the relevance of such matters is that the Award provides mandatory payments for work performed. The pertinent issue for consideration in the context of the current proceedings is consequently the extent or manner in which an employee's employment may be structured such that activities performed either before or after assisting a client might be said to fall outside an employee's employment and therefore not attract payment under the Award on the basis that such activities do not constitute work.

37. Clause 25 deals with ordinary hours of work and rostering. It is relevant to observe that clause 25.1 deals with the arrangements of ordinary hours:

> **25.1 Ordinary hours of work**
>
> **(a)** The ordinary hours of work will be 38 hours per week or an average of 38 hours per week and will be worked either:
>
> **(i)** in a week of five days in shifts not exceeding eight hours each;
>
> **(ii)** in a fortnight of 76 hours in 10 shifts not exceeding eight hours each; or
>
> **(iii)** in a four week period of 152 hours to be worked as 19 shifts of eight hours each, subject to practicality.

> **(b)** By agreement, the ordinary hours in clause 25.1(a) may be worked up to 10 hours per shift.

38. Significantly, although clause 25 provides for very restrictive limits on the span of ordinary hours that may be worked, it does not provide that ordinary hours must be worked *continuously*.

39. The ASU appears, arguably erroneously, to contend that the hours of work for employees other than disability service workers must be performed continuously. We understand that they contend that this is a product of clause 25.6, which deals with the issue of broken shifts in the following terms:

> **25.6** This clause only applies to social and community services employees when undertaking disability services work and home care employees.
>
> **(a)** A **broken shift** means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.
>
> **(b)** Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.
>
> **(c)** All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.
>
> **(d)** An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

40. Clause 25.6 is limited in its application to social and community service employees undertaking disability services work and home care employees. On its face, clause 25.6 appears to do four things:

    (a) Define a broken shift[2];

    (b) Provide for payment for hours of work on a broken shift[3];

    (c) Set a maximum span of hours for a broken shift beyond which double time rates apply[4]; and

[2] Clause 25.6(a).

[3] Clause 25.6(b).

[4] Clause 25.6(c).

(d) Provided a minimum 10 hour beak between broken shifts rostered on successive days.[5]

41. On a literal reading of the Award, clause 25.6 does not permit the working of broken shifts but instead regulates the use of broken shifts that may otherwise be worked under the terms of the Award. It is, on one view, the flexibility afforded under clause 25.1, and in particular the absence of any requirement for ordinary hours of work to be performed in a continuous manner that enables work to be structured under the award around 'breaks'.

42. The above framework is relevant to a determination of whether time spent undertaking travel currently attracts a payment under the Award.

43. In simple terms, time spent travelling by an employee at the direction of their employer, and in the course of their employment, will already attract payment and constitute time worked. That is, where an employer directs an employee to travel in the course of their employment it will constitute work and must be paid.

44. However, time that an employee spends travelling, either before or after work, will not attract a payment. This is not a novel proposition. It represents the manner in which most awards typically operate. Further, time spent travelling during a break on a broken shift will not attract payment.

5. THE CURRENT FUNDING ARRANGEMENTS

45. Ai Group has previously filed detailed written submissions regarding the operation of the NDIS funding arrangements.[6]

46. In addition, we draw the Commission's attention to the following information displayed on the NDIS' website as at the time of drafting this submission which

[5] Clause 25.6(d).

[6] Chapter 5 of the Ai Group Submission dated 8 April 2019.

summarises the funding arrangements in relation to travel undertaken by employees:

Provider travel

The length of time providers can claim for travel has changed, effective 1 July 2019.

If agreed by participants, providers can claim for the time spent travelling to each participant, for core supports—as indicated by the travel column in the Support Catalogue 2019–20. Only the actual travel time can be claimed, up to a maximum of:

- 30 minutes within city areas (MMM 1–3)
- 60 minutes in regional areas (MMM 4–5).

This is an increase from 20 and 45 minutes, respectively. Examples are provided to help give further clarification. Refer to the NDIS Price Guide 2019–20.

Providers delivering capacity-building supports are also able to claim time spent travelling from the last participant to their usual place of work. The maximum amount that can be claimed for return travel is 30 minutes within city areas and 60 minutes in regional areas.

Before providers can charge for travel, they must first discuss and get agreement on any changes with the participant. Once an agreement is reached, providers will need to update the relevant service bookings to reflect the changes agreed.

47. As is apparent from the above extracts, NDIS funding in respect of travel undertaken by employees providing 'core supports' is constrained in the following ways:

(a) Funding is available only if the client / participant agrees that the provider may claim the funding. Such agreement would diminish the amount of funding available to the participant to utilise in respect of other services or supports. Unless an employer declines to provide the relevant services if the participant does not agree to the funding being claimed, there is, as such, no imperative for a participant to consent to the funding being claimed.

(b) A maximum of 30 minutes of travel can be claimed in respect of travel in 'city areas' and up to 60 minutes can be claimed in 'regional areas'. In the context of large cities that suffer from significant congestion (such as Sydney and Melbourne) it is readily apparent that 30 minutes of travel time may fall well short of the time an employee actually spends travelling from

one client to the next. The same can be said of long distances travelled in regional areas.

48. We acknowledge the Commission's recent decision[7] in relation to the 'tranche 1' claims and the observations it made about Ai Group's previous submissions about the constraints imposed by the NDIS funding arrangements. We understand that these funding arrangements are not determinative of the matter. In our submission, however, they weigh heavily against the grant of the claim for the reasons articulated later in this submission in relation to the modern awards objective. We emphasise the unfairness that will be visited upon employers in circumstances where they are prohibited under the NDIS from recovering the costs that would be associated with paying an employee for time spent travelling pursuant to the unions' claims unless the relevant prerequisites are satisfied.

6. WORKABILITY OF THE PROPOSED TRAVEL TIME CLAUSES

49. The claims advanced by the unions have been the subject of extensive conferencing before the Commission. Since the commencement of Ai Group's involvement in these proceedings, we have openly and consistently expressed concern about the workability, from a practical perspective, of proposals that are intended to require payment for travel undertaken in the context of beaks or non-work time. [8]

50. There has ultimately been no serious attempt or indeed willingness by the unions to grapple with such issues or to address them through the refinement or amendment of the claims they are seeking to propose. Consequently, the unions have proposed provisions directed at establishing a new and significant entitlement to payment for travel which are not only in various respects unjustifiable, but also manifestly unworkable.

[7] *4 yearly review of modern awards – Group 4 – Social. Community, Home Care and Disability Services Industry Award 2010 – Substantive Claims* [2019] FWCFB 6067.

[8] See, for example the transcript of the Conference before Commissioner Lee on 31 January 2019

51. In this section we identify the various problems that would flow from the proposed provisions. This is discrete from arguments that we will raise as to whether, from a broader merit perspective, it is appropriate to impose additional obligations upon employers covered by the Award to provide additional payment for travel undertaken by employees.

52. We also observe that these proceedings are being conducted through the prism of the specific proposals advanced. In this context, the unions have been given ample opportunity to refine their claims and the cases that they have advanced in support of their proposals. The Commission has already devoted significant resources to facilitating conferences concerning parties' claims.

53. If the Full Bench is not satisfied that a case for the specific variation proposed is made out, it is appropriate that the Full Bench exercise its discretion to not make the relevant variations for the reasons that follow. Put bluntly, while we accept that in the course of the current award review the Commission is not bound by the terms of a party's claim, it should similarly not be sufficient for a party in this review to propose an ill-thought-out proposal in the blatant hope that the Commission will, if not satisfied that the specific claim advanced is warranted or workable, undertake the process of developing an alternate provision to address the party's concerns over the operation of the Award. Such an approach unfairly requires respondent parties to expend their resources (including, where relevant, costs) to respond to multiple iterations of a claim.

54. In relation to the specific practical problems or deficiencies with the travel time claims proposed, we raise the following points.

55. *Firstly*, the unions' approach of requiring payment by reference to travel which is notionally, but not actually, undertaken is fundamentally flawed.

56. The approach would leave an employer in the difficult position of having to determine what the reasonable travel time in the relevant context would be absent any guidance as to how to approach this task. This is very problematic given that travel times between locations can vary wildly due to variables such as traffic conditions.

57. The unions have made no attempt to explain how an employer would calculate the reasonable travel time in circumstances where the travel is not actually undertaken.

58. *Secondly***,** even if it were assumed that the provisions only require an employer to pay for time actually spent travelling, no effort has been made to consider how an employer would be able to verify what time was spent undertaking such travel.

59. It might be suggested that this could be achieved through monitoring the employee's location through electronic means. However, no effort has been made to establish through submission or evidence how this could occur. There are also limits under state legislation on the extent to which employers can undertake surveillance of their employees. For example, the *Workplace Surveillance Act 2005* (NSW) prevents surveillance of employees while they are not at work.[9]

60. *Thirdly*, it cannot be assumed that an employee engaged under the Award to perform work at different locations on the same day, but who is not directed to undertake the travel in the course of their duties will, as a matter of fact actually travel directly from one client to the next. Take, for example, the circumstances of an employee working a broken shift who may perform a couple of hours in the morning but then may not be required to perform work at another nearby location until several hours later. There is no reason to conclude that the employee will actually travel directly between the locations of the two clients without undertaking some deviation (such as to obtain lunch, return home or undertake some other activity).

61. *Fourthly*, if an employee has been engaged to perform work at two different locations on the same day but has not been directed to undertake the travel between such locations in the course of their duties, the employee will retain control over the time at which they travel. This could have a significant impact on

[9] Section 47.

the time they spend travelling. It is unclear how the requirement to only pay for reasonable travel time would address this issue.

62. The reference to “reasonable travel time” contained in the proposed clauses is also inherently imprecise and accordingly inappropriate for inclusion in the safety net, given that the provision potentially creates significant monetary entitlements.

63. *Fifthly*, there are a raft of problems, uncertainties and likely unintended consequences that will flow from a requirement to deem or “treat” time that is not work as work. Relevantly, the following question inevitably arise in relation to this aspect of the provision’s proposed operation:

- For what purposes will such time be considered time worked? Is it only for purposes under the Award or is the intended that it be regarded as time worked for the purposes of determining employer obligations under the Act and/or other legislation or regulation (this would include legislation dealing with workplace health & safety, workers compensation and long service leave)?

- Will such work form part of the employee’s ordinary hours of work?

- Will employees accrue or be credited NES entitlements by reference to such time?

- Will an employer, by virtue of the clause, have capacity to direct an employee’s conduct during such time?

64. If the effect of the proposed clause is to deem time spent travelling as time worked, for all purposes under the Award, it may also give rise to a number of difficulties and potentially unintended consequences associated with the manner in which the provision interacts with other Award clauses. This would include provisions dealing with rostering, ordinary hours of work, types of employment, overtime and penalty rates. The current practical application of all of these provisions would potentially be altered by the proposed clause.

65. Ai Group doubts that an award clause can have the legal effect of causing a notional period of time to constitute work under any legislative scheme. However, at the very least, an award clause that has the effect of requiring an employer to treat such time as time worked, without specifying the purpose for which it should be so treated would be potentially very confusing.

66. *Finally*, we would observe that none of the proposed clauses specify the mode of transport that is assumed to be adopted for the purposes of the clause.

7. SECTION 138 AND THE MODERN AWARDS OBJECTIVE – TRAVEL TIME CLAIMS

67. Ai Group contends that the Travel Time Claims are not necessary in the sense contemplated by s.138 of the Act. In the section below we address the mandatory considerations contemplated by s.134(1).

The relative living standards and the needs of the low paid (s.134(1)(a))

68. An assessment of whether this matter weighs either for or against the claim is not straight forward.

69. In its treatment of this issue, the ASU contends that "if employees are paid for travel time, their incomes will increase". To the extent that this an accurate assessment of the outcome that would flow from the granting of the ASU or other unions claims, it might reasonably be asserted that the needs of the low paid would support the granting of the claim.

70. The evidence advanced does not permit the conclusion that employees will always benefit from the proposed variation.

71. As already identified, there are funding constraints that mean an employer may, in some circumstances, not be able to recover amounts paid pursuant to the proposed provisions. It is likely that some employers will accordingly respond to any such variation by seeking to minimise their exposure to such unrecoverable costs. This may mean that the employer either declines to provide a relevant service that it might otherwise provide, or that it allocates the work to its workforce in a manner that avoids the obligation to make the relevant payments. In the

second scenario it might, for example, minimise the extent to which it offers multiple engagements to an employee on the same day. Either way, it is entirely foreseeable that the proposed variation could have the perverse effect of actually reducing the amount that some employees earn under the Award.

72. Any assumption that employers will simply incur additional unrecoverable costs is unrealistic and ought not be adopted by the Full Bench in weighing the merits of the claim.

73. This matter we here identify temper the extent to which a consideration of the matters identified in s.134(1)(a) could be said to weigh in favour of the claims.

The need to encourage collective bargaining (s.134(1)(b))

74. To the extent that either employees or the relevant unions strongly support the adoption of enhanced entitlements pertaining to travel undertaken by employees, it can be argued that declining to afford such an outcome through the Award could encourage such employees to engage in collective bargaining to obtain such an outcome.

75. It is also arguable that the kinds of matters raised in the unions' claims are perhaps best dealt with at the enterprise level. This would, for example, enable parties to develop agreement provisions that reflect enterprise specific practices relating to travel. Such an approach might be more feasible than the development of provisions in a safety net that must be workable in the context of all employers.

76. In support of our contentions we observe that it appears that parties covered by the Award do bargaining over issues associated with payment for travel. Nonetheless, we accept that there is no evidence before the Commission to establish that these issues have, to date, themselves been a major catalyst for widespread collective bargaining in the sector.

77. Given the notoriously low margins in the sector, we also observe that the proposed variation would potentially discourage employers from bargaining as it would 'raise the bar' for the application of the "better off overall test".

78. Ultimately, we contend that a consideration of the need to encourage collective bargaining is matter that might be said to weigh against the claim, but we accept that it would by no means be a determinative consideration.

The need to promote social inclusion through increased workforce participation (s.134(1)(c))

79. This is not a matter that would weigh in favour of the claim. Indeed, it may weigh against the claim, although we accept that it is not possible to be definitive about the specific impact that the claim would have on such matters, based on the material advanced.

80. As already indicated, it is foreseeable that some employers will respond to being saddled with additional unrecoverable costs by limiting their exposure to such costs. This may take the form of a reduction in the services they provide or limiting the allocation of work to individual employees. Either outcome may reduce workforce participation.

81. The ASU contends that if workers are paid for the time actually worked, they may reduce their weekly hours of work. To the extent that this occurs it may actually reduce workforce participation.

82. The ASU optimistically submits that this will create opportunities for other workers to increase their hours. It is not clear how this will actually increase total employment. Moreover, it cannot be simplistically assumed that the labour of such workers is always readily substitutable or even available. Indeed, this is an especially problematic proposition given current and impending issues associated with labour shortages in the sector.

83. There is no merit to the ASU contentions that if employed workers are paid for the hours they actually work it will increase the hours that they work. The outcome will just result in additional pay, not additional labour force participation.

The need to promote flexible modern work practices and the efficient and productive performance of work (s.134(1)(d))

84. To the extent that the proposed clauses would cause employers to modify their rostering practices to negate the application of the provisions, a consideration of the matters identified in s.134(1)(d) would be inconsistent with the granting of the claim. It may mean that employees who could most efficiently and productively perform the relevant task cannot viably be utilised. To take a practical example, if an employee provides services to a particular client in the morning there may be a range of efficiencies that can be achieved by having the same employee provide services to the same client in the afternoon. However, the proposed clauses would incentivise, if not force, employers to consider allocating the discrete engagements to different employees in order to avoid the proposed new obligations.

85. Union submissions to the effect that the proposed provisions will cause employers to arrange work so that it can be undertaken continuously by an employee ignore the realities of the sector and in particular the impact of the NDIS on such matters. It should not be assumed that employers commonly elect to roster work in a manner which is inefficient. Instead, there are external pressures that dictate the manner in which work may be arranged, not the least of which is the client driven nature of work that is undertaken in the context of the NDIS.

86. Ultimately, we observe that the ASU submissions relating to s.134(1)(d) do not actually grapple with how the variation will encourage modern work practices or the efficient and productive performance of work. They instead appear to be directed towards the implicit contention that their claim might reduce unpaid waiting time which is not currently regarded as work under the Award.

87. At paragraph 31 of the ASU's submissions they point to a range of current Award provisions that are said to afford employers in the sector with a significant amount of flexibility. In response we observe that various union claims advanced in these proceedings seek to alter such provisions and undermine the "flexibility" afforded under the Award.

The need to provide additional remuneration for working overtime; unsocial, irregular or unpredictable hours; weekends or public holidays; or shifts (s.134(1)(da))

88. This is not a relevant consideration in this matter.

The principle of equal remuneration for work of equal or comparable value (s.134(1)(e))

89. The ASU contends that "the failure to pay travel time" is an equal remuneration matter. The material advanced does not establish this proposition.

90. The comparison between conditions for disability support workers under the Award and the conditions under the *Business Equipment Industry Award 2010* (**Business Equipment Award**) is inaccurate and consequently unhelpful. Relevantly, the ASU has not acknowledged that the Business Equipment Award contains an exemption provision that has the effect of rendering many of the provisions of the award not applicable to employees in the technical stream if they are in receipt of a salary above a certain level.

91. Regardless, the limited material advanced does not allow a proper comparison of the work undertaken by employees covered by the two awards.

92. It should not be accepted that the approach to regulating brokens shifts or travel time is a product of any gender-based considerations. The provisions reflect the unique nature of the industry.

93. It must also be observed that not all travel that would attract payment under the travel time claims would constitute work, as contemplated under s.134(1)(f).

The likely impact of any exercise of modern award powers on business, including productivity, employment costs and regulatory burden (s.134(1)(f))

94. A consideration of s.134(1)(f) weighs heavily against the granting of the claims.

95. The unions' proposed claims would have a dramatic impact on employers in this industry and the manner in which work in the sector is undertaken. The potential

imposition of new obligations relating to the payment for travel which are fundamentally out of step NDIS funding arrangements is a major concern for elements of the industry covered by the Award and has indeed been a significant catalyst for Ai Group's involvement in the proceedings.

96. It is axiomatic that the claims will have an adverse impact on business. They will impose new, and in many instances significant, costs on employers. For the reasons already explained, many employers will be prohibited from recovering such costs under current funding arrangements.

97. Ai Group accepts that the NDIS' funding arrangements are not of themselves determinative of whether the proposed provisions are a necessary element of the safety net. They are, nonetheless, a relevant consideration. The Full Bench should give careful consideration to whether it is *fair* to impose upon employers such a radical change to Award obligations in circumstances where it is apparent that the employers (for reasons beyond their control) are unable to recover such costs and where they will, at least in some circumstances, have no capacity to avoid incurring the costs.

98. The claims will also expose employers to costs that are potentially very difficult to foresee with precision. For example, the period of time that an employee may spend in traffic travelling might be expected to vary dramatically depending on variables such as the time of day which it is undertaken and the geographical location at which such travel occurs.

99. To the extent that the claims will require employers in the sector to measure or indeed calculate time spent travelling (or notionally travelling) by their workers, in circumstances where they are not currently so required, it will also impose an administrative burden on such employers.

100. The claims may also undermine an employer's capacity to undertake particular work if the costs of travel time cannot be recovered, thus resulting in a reduction in revenue. Such difficulties may also render it difficult for employers to afford their employees sufficient levels of work.

The need to ensure a simple, easy to understand, stable and sustainable modern award system for Australia that avoids unnecessary overlap of modern awards (s.134(1)(g))

101. The proposed clauses are far from simple or easy to understand. We here refer to earlier observations regarding the operation of the provisions and their "workability".

102. We also contend that the need to ensure a "stable and sustainable modern award system" weighs against granting such fundamental changes to the obligations that the Award imposes upon employers absent certainty around whether such entitlements can be met under current funding arrangements. Any submission that funding arrangement will change to mirror award obligation should be treated cautiously in the context of such a significant change to the Award. There are of course no certainties regarding whether funding arrangements will be altered to reflect the outcome of these proceedings.

103. We also here observe that it is not apparent how the funding arrangements could be altered to provide cost recovery for the kind of entitlements contemplated by the claims.

104. In advancing these submissions we accept that our arguments may have less force once the price caps that currently constitute such a substantial feature of NDIS funding arrangements are ultimately removed. However, in the current context, the potential impact of the claims on employers, and the extent to which the proposals would be simply unaffordable, should lead the Full Bench to declining to grant the claims.

The likely impact of any exercise of modern award powers on employment growth, inflation and the sustainability, performance and competitiveness of the national economy (s.134(1)(g))

105. There is insufficient material before the Commission to enable a proper consideration of the matters identified in s.134(1)(g).

8. THE HSU'S VEHICLE ALLOWANCE CLAIM

106. The HSU has proposed the following amendments to the current clause dealing with the payment of an allowance to employees using their own motor vehicle:

> **(a)** Where an employee is required and authorised by their employer to use their motor vehicle in the course of their duties, the employee is entitled to be reimbursed at the rate of $0.78 per kilometre. Disability support workers and home care workers shall be entitled to be so reimbursed in respect of all travel:
>
> **(i)** from their place of residence to the location of any client appointment;
>
> **(ii)** to their place of residence from the location of any client appointment;
>
> **(iii)** between the locations of any client appointments on the basis of the most direct available route.

107. The extent to which the proposed amendments would extend the current obligation is somewhat unclear. The last sentence of the provision is interconnected with the operation of the first sentence of the current clause. It relevantly provides that "Disability support workers and home care workers shall be entitled to be so reimbursed in respect of all travel". It is accordingly unclear whether the amended provision would merely operate to clarify that the identified instances of travel by an employee using their own motor vehicle would attract payment under the clause, when the threshold requirements that such travel be undertaken in the course of their duties and that it is authorised by the employer are met, or, whether it is simply intended that all use of an employee's motor vehicle in respect of any of the identified circumstances of travel would attract the payment regardless of whether it is undertaken in the course the employee's duties or is authorised.

108. The wording of the proposed amendment also fails to clarify whether an individual needs to utilise their own vehicle in order to receive the payment, or whether merely undertaking the identified travel is sufficient.

109. The provision is far from simple and easy to understand. As such a consideration of the matters referred to in s.134(1)(g) would weigh against granting the claim.

110. The union's submissions are similarly somewhat unclear as to whether the travel time needs to occur during work (that is, in the course of the employee's duties)

for the obligation to apply. Indeed, the intended operation of the proposed new provision is not directly explained in the submissions. In this regard they simply submit as follows:

> The HSU makes claims for variation of the Award to ensure that it achieves the modern awards objective by:
>
> > c) amending the "Travelling, transport and fares" clause, to ensure that employees are compensated appropriately for the cost of travel required to perform their duties – (Clause 20.5; ED 16.3(c)) – S19)

111. It might reasonably be inferred from the reference to "*the cost of travel required to perform their duties*" that the union intends for the clause to cover not only travel undertaken in the course of the employee's duties but also travel that enables the performance of the duties or which is a consequence of the performance of their duties.

112. The HSU's submissions do, however, address the manner in which the existing provision is applied in industry.[10] They contend, in effect, that the evidence suggests that disability support workers and home care workers perform work travelling to their first client and from the final client but that such work is not regarded by some employers as occurring in the course of their duties.

113. The union also identifies some limited evidence that they intend to lead that they contend, in effect, establishes that some employers regard travel undertaken in the context of a break that occurs during a broken shift as not being undertaken in the course of an employee's duties and therefore as not attracting compensation.[11]

114. Ai Group agrees that, subject to the terms of an individual employee's engagement, travel to an initial client and travel that occurs after servicing a final client for the day, are activities would not form part of an employee's duties.

115. Under the terms of the Award, it is open to an employer to engage an employee on the basis that they commenced work at the location of their first client and

[10] At paragraphs 41 and 42

[11] Ibid at 42 (we assume that the reference here to compensation is intended to cover reimbursement pursuant to clause 20.5)

conclude it at the location of their last client. In such circumstances, travel from wherever an employee may be prior to first commencing work for the day or to wherever they next go after finishing work for the day is not part of their duties, as contemplated by clause 20.5. The situation may be different in circumstances where an employee is required to attend a separate location (such as an employer's premises) before or after undertaking work for a client, or where an employer directs that the travel be undertaken in a particular manner.

116. It seems that the union's intent is to require the all travel undertaken by disability support workers and home care workers be paid for the rate of $0.78 per kilometre, regardless of whether or not it is undertaken in the course of their duties. That is, it is intended to compensate employees for the costs of getting to or from work.

Arguments against the claim

117. Imposing an obligation on an employer to reimburse or compensate an employee for the cost of getting to or from work would be a very significant change to the safety net.

118. The proposal would unfairly expose employers to potentially open ended and uncontrollable costs. Under the proposal, the amount an employee earns would in large part be dependent upon where they elect to live. Indeed, under the proposal an employee could move to a location a significant distance from the location of clients that their employer services and consequently impose unreasonable additional costs upon their employer.

119. The union appears to argue that travel undertaken by disability support workers "well exceeds the usual travel engaged in by employees to and from their workplaces". However, an evidentiary basis for such an assertion is not made out. The material does not identify the amount of travel typically undertaken by employees so as to enable such a comparative analysis.

120. The proposal is also out of step with NDIS funding arrangements. Accordingly, employers operating under this regime would not be able to recover the costs that would flow from the implementation of the proposed clauses 20.5(a)(i) or

20.5(a)(ii). Depending on the circumstances, the costs associated with the application of the proposed clause 20.5(a)(iii) would be similarly unfunded.

121. The HSU has not made out a sufficient case to establish that the proposed variations are necessary, in the sense contemplated by s.138.

Social, Community, Home Care and Disability Services Industry Award 2010 (AM2018/26)

26 September 2019

AM2018/26 SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

EMPLOYER CLAIMS

1. INTRODUCTION

1. The Australian Industry Group (**Ai Group**) advances these submissions in relation to certain variations (**Employer Claims**) to the *Social, Community, Home Care and Disability Services Industry Award 2010* (**Award**) that are sought by Australian Business Industrial, the New South Wales Business Chamber, Aged and Community Services Australia and Leading Age Services Australia Limited (**ABLA's Clients**).

2. Specifically, the relate to the following changes proposed by ABLA's Clients:

   (a) Changes proposed to clause 25.1 of the Award (**Ordinary Hours Claim**);

   (b) Changes to clause 25.5(d)(ii) of the Award (**Rostering Claim**); and

   (c) Changes to clause 25.5(f) of the Award (**Client Cancellation Claim**).

2. THE ORDINARY HOURS CLAIM

3. Clause 25.1 of the Award is presently in the following terms:

> **25.1 Ordinary hours of work**
>
> **(a)** The ordinary hours of work will be 38 hours per week or an average of 38 hours per week and will be worked either:
>
> **(i)** in a week of five days in shifts not exceeding eight hours each;
>
> **(ii)** in a fortnight of 76 hours in 10 shifts not exceeding eight hours each; or
>
> **(iii)** in a four week period of 152 hours to be worked as 19 shifts of eight hours each, subject to practicality.
>
> **(b)** By agreement, the ordinary hours in clause 25.1(a) may be worked up to 10 hours per shift.

4. The provision enables an employee's ordinary hours to be averaged over a period of one week, two weeks or four weeks.

5. ABLA's Clients propose that clause 25.1 be replaced with the following: (our emphasis)

> **25.1 Ordinary hours of work**
>
> **(a)** The ordinary hours of work will be 38 per week or an average of 38 hours per week <u>over the employee's roster period</u>, up to a maximum of four weeks.
>
> **(b)** Subject to clause 25.1(c), the maximum ordinary hours that can be worked per shift is 38.
>
> **(c)** By agreement between an employer and an individual employee, ordinary hours may be worked up to 10 hours per shift.

6. The intention underpinning the proposed clause is explained by ABLA's Clients as follows:

> 4.7 Our clients propose a simplified clause 25.1, that retains all of the key elements of the existing provision, but which removes unnecessary and superfluous prescription which does not actually have any operative effect.[1]

[1] ABLA's Clients' submission dated 2 July 2019 at paragraph 4.7.

7. The proposed variation introduces the notion of an employee's "roster period" to the Award's regulation of the period over which an employee's ordinary hours may be averaged. The underlined words in the proposed clause 25.1(a) are, at the very least, confusing. Moreover, we are concerned that they potentially substantively alter the operation of the extant clause 25.1 in a manner that removes existing flexibility and is seemingly unintended by ABLA's Clients.

8. Clause 25.5(a) of the Award requires an employer to display a fortnightly roster for each employee (subject to the exemptions otherwise provided by the Award[2]). The Award thereby prescribes a roster period of two weeks.

9. Read in the context of clause 25.5(a), the changes proposed by ABLA's Clients would appear to have the effect of limiting the period of time over which an employee's ordinary hours may be averaged. Whilst the Award presently enables that an employee's ordinary hours maybe averaged over a period of four weeks, the underlined portion of the proposed clause 25.1(a) would potentially limit this to a fortnight. To that extent the proposed provision is also internally inconsistent. This is because the clause goes on to state that an employee's ordinary hours may be averaged over a period of up to four weeks.

10. The relevant aspect of the proposed variation is inconsistent with the need to promote flexible modern work practices and the efficient and productive performance of work[3]. The proposed variation is also likely to have an adverse impact on business[4].

11. There is no material before the Commission that would justify the change. In Ai Group's submission, the reference to an employee's roster period should not be introduced to clause 25.1(a).

[2] For example, clause 25.5(c) of the Award.

[3] Section 134(1)(d) of the *Fair Work Act 2009*.

[4] Section 134(1)(f) of the *Fair Work Act 2009*.

3. THE ROSTERING CLAIM

12. Clause 25.5(d) of the Award provides for changes to rosters in the following terms: (our emphasis)

> **(d) Change in roster**
>
> **(i)** Seven days' notice will be given of a change in a roster.
>
> **(ii)** However, a roster may be altered at any time to enable the service of the organisation to be carried on where another employee is absent from duty on account of illness, or in an emergency.
>
> **(iii)** This clause will not apply where the only change to the roster of a part-time employee is the mutually agreed addition of extra hours to be worked such that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle, as the case may be.

13. The extant provision requires that seven days' notice be provided by an employer to an employee of a roster change. However, such notice is not required where a roster is altered in order to enable the service of the organisation to be carried on where another employee is absent on account of illness. The clause does not require that the employee absent on account of illness is taking personal/carer's leave during their absence.

14. ABLA's Clients propose that clause 25.5(d)(ii) be replaced with the following: (our emphasis)

> **(ii)** However, a roster may be altered at any time:
>
> **A.** by agreement between the employer and the relevant employee, provided the agreement is recorded in writing;
>
> **B.** to enable the services of the organisation to be carried out where another employee is absent from work on account of personal/carer's leave, compassionate leave, community service leave, ceremonial leave, leave to deal with family and domestic violence, or in an emergency; or
>
> **C.** where the change involves the mutually agreed addition of hours for a part-time employee to be worked in such a way that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle.

15. The proposed provision would limit the scope of the exemption currently afforded by clause 25.5(d)(ii) to the extent that it would no longer apply where another employee is absent on account of illness but is not taking personal/carer's leave. Ai Group opposes this element of the claim and submits that the reference to "illness" should be retained (in addition to the specific forms of leave that ABLA's Clients have proposed be referenced in the clause).

16. ABLA's Clients have made only the following submission in support of the proposed variation: (our emphasis)

> 4.13 Our clients propose a relatively minor variation to clause 25.5(d)(ii) to:
>
> …
>
> (b) clarify the operation of the existing provision allowing for roster changes in the event of another employee being absent from duty on account of "illness".
>
> 4.14 The wording proposed is consistent with the Full Bench decision in the 4 yearly review of the modern awards – *Nurses Award 2010* [2018] FWCFB 7347.[5]

17. ABLA's Clients contend that the variation proposed "clarifies" the operation of the current clause where another employee is absent due to illness. We respectfully disagree. The proposal instead:

    (a) Expands the scope of the exemption afforded by clause 25.5(d)(ii) to the extent that it would apply:

        (i) Where an employee takes carer's leave. The entitlement to carer's leave under the NES arises in circumstances that extend beyond an illness suffered by the employee taking the leave (or, for that matter, the person to whom they are providing care or support).

        (ii) Where an employee takes compassionate leave. The entitlement to compassionate leave under the NES arises in circumstances that extend beyond an illness suffered by the employee taking the leave (or, for that matter, another person).

[5] ABLA's Clients' submission dated 2 July 2019 at paragraphs 4.13 – 4.14.

(iii) Where an employee takes community services leave or ceremonial leave. The entitlement to these forms of leave under the NES and / or the Award self-evidently arise in circumstances that extend beyond an illness suffered by the employee.

(iv) Where an employee takes leave to deal with family and domestic violence. Whilst in some cases an employee taking such leave may be absent due to illness, there are a range of other circumstances in which such lave may be taken, which are not associated with illness.

(b) Narrows the scope of the exemption afforded by clause 25.5(d)(ii) to the extent that it would apply in the event of another employee's absence due to illness only if the employee had taken personal/carer's leave.

18. An employee will not in all circumstances take personal/carer's leave when absent from work due to illness. For example, an employee may be absent from work due to illness whilst on workers' compensation or on (authorised or unauthorised) unpaid leave because the employee has exhausted their paid leave entitlements.

19. There is no warrant or justification for narrowing the application of the current exemption in the manner proposed. Clause 25.5(d)(ii) of the Award relieves employers of needing to provide 7 days' notice of a roster change in a manner that better enables employers to respond to employee absences. The rationale for such flexibility also applies to employee absences due to illness, even if the employee is not taking personal leave.

20. The relevant aspect of the proposed variation is inconsistent with the need to promote flexible modern work practices and the efficient and productive performance of work[6]. The proposed variation is also likely to have an adverse impact on business[7].

[6] Section 134(1)(d) of the *Fair Work Act 2009*.

[7] Section 134(1)(f) of the *Fair Work Act 2009*.

21. The remaining considerations listed at s.134(1) of the Act are either not enlivened by the claim or are neutral considerations.

22. ABLA's Clients refer to a recent decision[8] made by the Commission to vary the *Nurses Award 2010* (**Nurses Award**) in relevantly similar terms to the change here proposed.

23. The relevant aspect of the decision concerning the Nurses Award related primarily to a claim advanced by the Aged Care Employers:

> **[146]** ACE proposes to vary clause 8.2 of the Nurses Award exposure draft (clause 25 of the current award) in order to provide an employer with the ability to alter an employee's roster without the requirement of giving the employee seven days' notice, in circumstances where the employee has agreed to the roster change.[9]

24. The Commission determined not to grant the claim, but went on to say as follows: (our emphasis)

> **[159]** We do not intend to make the change proposed by ACE however we will provide greater flexibility. We will remove the words "due to illness" from clause 25.4 and insert the words "pursuant to clauses 33 – Ceremonial leave; 34 – Personal/carers' leave and compassionate leave and 36 – Leave to deal with Family and Domestic Violence."
>
> **[160]** We propose that clause 25.4 will read as follows:
>
> **25. Rostering**
>
> …
>
> 25.4 Seven days' notice of a change of roster will be given by the employer to an employee. Except that, a roster may be altered at any time to enable the functions of the hospital or facility to be carried out where another employee is absent from work pursuant to clauses 33 – Ceremonial leave; 34 – Personal/carers' leave and compassionate leave and 36 – Leave to deal with Family and Domestic Violence, or in an emergency. Where any such alteration requires an employee working on a day which would otherwise have been the employee's day off, the day off instead will be as mutually arranged.
>
> **[161]** Interested parties are invited to file submissions in relation to the proposed wording of clause 25.4.[10]

25. Respectfully, it appears to us that the change proposed (and ultimately made) by the Commission to the Nurses Award does not in fact have the Commission's

[8] *4 yearly review of modern awards—Nurses Award 2010* [2018] FWCFB 7347.
[9] *4 yearly review of modern awards—Nurses Award 2010* [2018] FWCFB 7347 at [146].
[10] *4 yearly review of modern awards—Nurses Award 2010* [2018] FWCFB 7347 at [159] – [161].

stated intent. That is, in the context of illness, the amended provision does not provide “greater flexibility”.

26. It appears that no interested party raised this issue in response to the above decision. The Full Bench subsequently determined that it would vary the Nurses Award in the terms proposed at paragraph [160] above.[11]

27. In the circumstances, the Full Bench should not simply adopt the decision made by the Commission in the context of the Nurses Award. The absence of submissions before the Commission in that matter in relation to this issue is a cogent reason for departing from it.

[11] *4 yearly review of modern awards—Nurses Award 2010* [2019] FWCFB 121 at [24].

4. THE CLIENT CANCELLATION CLAIM

28. Clause 25.5(f) of the Award provides for client cancellation. It operates as follows:

    (a) The clause applies only to home care services.

    (b) Where a client cancels or changes a rostered home care service, it requires an employer to provide an employee with notice of a change to their roster by 5pm the day before the service.

    (c) Where notice is provided in accordance with paragraph (b) above, the employee is not entitled to any payment. Accordingly, if a client cancelled their service and an employer notified the relevant employee before 5pm on the day prior that they are no longer required to work, the employee would not be entitled to any payment.

    (d) Where notice is <u>not</u> provided in accordance with paragraph (b), the employee is entitled to payment for their minimum specified hours.

    (e) An employer has an Award-derived right to direct an employee to perform make-up time where a client cancels or changes a rostered home care service. Further:

        (i) The employer may direct the employee to work make-up time only during the same or the following fortnightly period.

        (ii) The time may be made up working with other clients or in other areas of the employer's business, if the employee has the skills and competence to perform the work.

29. ABLA's Clients have proposed a significantly different regime for dealing with client cancellations. It is our understanding that it would operate as follows:

    (a) The clause would apply to home care and disability services.

    (b) The clause would apply in the event of any cancellation to a service by a client, regardless of whether an employee is provided with notice of the cancellation (and, by extension, regardless of the period of notice provided to the employee).

    (c) In the event of a client cancellation, the clause would provide an employer with two options:

        Option 1: The employer would have the right to direct the employee to perform other work during the hours that they were rostered to work; in which case the employer would be required to pay the employee the amount they would have been paid had the employee performed the cancelled service or the amount payable for the work actually performed; whatever is greater.

        Option 2: The employer would be permitted to cancel the shift; in which case, the employer would be required to:

        (i) Pay the employee the amount they would have received had they performed the cancelled service; or

        (ii) Provide the employee with make up time. Such make up time must be rostered to be performed within 3 months of the date of the cancelled shift. The employer must consult with the employee about when the make up time will be performed.

30. We also note that whilst the proposed clause 25.5(f)(i) states that the clause is to apply where a client cancels or changes a service; clause 25.5(f)(ii), which is the operative provision, is expressed to apply only where a service is *cancelled* by a client. Read literally, neither it nor the rest of the clause appear to apply where a client *changes* a service. In this way, the proposed clause appears to limit the scope of the flexibility currently afforded under the Award.

31. The written submissions filed on behalf of ABLA's Clients summarised the funding arrangements that applied to client cancellations under the National Disability Insurance Scheme as at the time that the submissions were prepared.[12] Those funding arrangements have since changed. They now operate as follows:

> **Cancellations**
>
> Where a provider has a short notice cancellation (or no show) they are able to recover 90% of the fee associated with the activity, subject to the terms of the service agreement with the participant. Providers are only permitted to charge for a short notice cancellation (or no show) if they have not found alternative billable work for the relevant worker and are required to pay the worker for the time that would have been spent providing the support.
>
> A cancellation is a short notice cancellation if the participant:
>
> - does not show up for a scheduled support within a reasonable time, or is not present at the agreed place and within a reasonable time when the provider is travelling to deliver the support; or
> - has given less than two (2) clear business days' notice for a support that meets both of the following conditions:
>   - the support is less than 8 hours continuous duration; AND
>   - the agreed total price for the support is less than $1000; or
> - has given less than five (5) clear business days' notice for any other support.
>
> …
>
> There is no limit on the number of short notice cancellations (or no shows) that a provider can claim in respect of a participant. However, providers have a duty of care to their participants and if a participant has an unusual number of cancellations then the provider should seek to understand why they are occurring.

[12] ABLA's Clients' submission dated 2 July 2019 at paragraphs 5.11 – 5.13.

The NDIA will monitor claims for cancellations and may contact providers who have a participant with an unusual number of cancellations.[13]

32. Having summarised the NDIS funding arrangements as they then applied, ABLA's Clients submit:

> 5.14 While the intention behind the NDIS cancellation rules is to attempt to strike a balance between the interests of service providers and participants, the reality is that the cancellation rules place service providers in a very difficult position.
>
> 5.15 Unless there is an ability to cancel the rostered shift (without being required to pay the employee), or redeploy the rostered employee to other available work, service providers will incur costs regardless of the scheduled service having been cancelled, yet not derive any revenue.
>
> …
>
> 5.16 There is a clear disconnect between the terms of the Award and the funding arrangements under the NDIS when it comes to client cancellations. The disconnect is having a materially adverse impact on the viability of businesses operating in this sector.[14]

33. The disconnect between the Award's extant client cancellation provisions and the NDIS funding arrangements is potentially less problematic than was previously the case in light of the revised NDIS rules concerning client cancellations. The proposal advanced by ABLA's Clients will, however, exacerbate or further any existing disconnect between the two in some respects.

[13] National Disability Insurance Scheme, *Price Guide 2019 – 2020* (valid from 1 July 2019, accessed on 26 September 2019) at pages 17 – 18.

[14] ABLA's Clients' submission dated 2 July 2019 at paragraphs 5.14 – 5.16.

34. We provide the following example. If a client cancels a home care service that is less than 8 hours in duration and $1000 in price with 72 hours' notice and the employer immediately notifies the employee that their corresponding shift is cancelled:

    (a) **Under the NDIS**, the cancellation is not a "short notice" cancellation. The employer therefore cannot recover any amount under the NDIS funding arrangements.

    (b) **Under the current Award clause:** the employer is not required to pay the employee or to afford the employee make-up time. The employee's shift can be cancelled.

    (c) **Under ABLA's Clients' proposal:** the employer no longer has the ability to cancel the employee's shift without payment to the employee. The employer must either:

        (i) Direct the employee to perform other work at the same time and pay the employee in accordance with clause 25.5(f)(iii); or

        (ii) Cancel the shift and pay the employee the amount they would have received had they performed the cancelled service; or

        (iii) Provide the employee with make-up time.

35. Ironically, a claim advanced by the HSU in relation to client cancellations is more modest than that of ABLA's Clients. The HSU has proposed that clause 25.5(f) be varied as follows:

> **(f) Client cancellation**
>
> **(i)** Where a client cancels or changes the rostered home care service, an employee will be provided with notice of a change in roster at least 48 hours' in advance ~~by 5.00 pm the day prior~~ and in such circumstances no payment will be made to the employee. If a full-time or part-time employee does not receive such notice, the employee will be entitled to receive payment for their rostered hours of that visit ~~minimum specified hours~~ on that day.
>
> **(ii)** The employer may direct the employee to make-up time equivalent to the cancelled time, in that or the subsequent fortnightly period. This time may be made up working with other clients or in other areas of the employer's business providing the employee has the skill and competence to perform the work.

36. Under the HSU's claim, in the above scenario, the employer would not be required to pay the employee or to afford the employee make-up time. The employee's shift would simply be cancelled.

37. The claim advanced by ABLA's Clients is in some respects more onerous, more costly and more inflexible than the existing client cancellation scheme. It is problematic in at least the following respects.

38. *First,* it operates in the event of *any* client cancellation, even where ample notice of the cancellation is provided by the client to the employer and, in turn, by the employer to the employee. No justification for this significant expansion of the current clause is provided by ABLA's Clients.

39. The extant clause is clearly designed to deal with changes to an employee's roster at short notice due to client cancellations or changes. It appears intended to strike a balance between ensuring that an employer has some flexibility to respond to changes to service demands (which, in the context of the NDIS, are entirely beyond its control) and the inconvenience caused to an employee by changes made to their rosters at short notice.

40. Under the proposal advanced by ABLA's Clients, even where an employee has, for instance, four weeks of notice of a cancellation, the clause will require the employer to either pay them or to afford them make-up time. There is, however, no foundation for proceeding on the basis that the purpose or rationale underpinning the requirement to pay an employee in the context of a short notice change under the current clause is also relevant in the context of an employee having weeks of notice. Rather, the proposition that an employee should be compensated in the same way for a roster change with multiple weeks of notice as they should for a change made after 5pm on the preceding day, self-evidently has little force.

41. *Second*, the proposed clause will in many instances increase employment costs and the regulatory burden. The clause will require an employer, in the context of any client cancellation to either pay the employee for the shift or to find other work for the employee to perform (either at the same time or later, in the form of make-up time).

42. Whilst the existing provision creates an Award-derived employer *right* to direct an employee to perform make-up time, the proposed clause instead creates an employer *obligation* to provide make-up time (unless payment is made to the employee). In our consultation with employers covered by the Award, they have repeatedly expressed concern about the regulatory burden associated with managing accrued make-up time under the proposed clause, particularly given the frequency with which client cancellations occur.

43. The proposal potentially overlooks the complexities associated with allocating other work to an employee either at the same time as the cancelled shift or subsequently. Various factors are taken into account by an employer when allocating employees to the performance of home care and disability services including client preferences, continuity of care, the employees' skills and the clients' location.

44. Whilst Ai Group supports greater flexibility being afforded in respect of client cancellations to the provision of disability services; the scheme proposed by ABLA's Clients for dealing with client cancellations is not consistent with the need to afford flexible modern work practices[15] and it will have an adverse impact on many employers[16].

45. In Ai Group's submission, any scheme dealing with client cancellation should retain an ability to cancel an employee's shift without payment where a client cancels or changes their service request.

[15] Section 134(1)(d) of the *Fair Work Act 2009*.

[16] Section 134(1)(f) of the *Fair Work Act 2009*.

SURVEY

Fair Work Act 2009
s.156 - 4 yearly review of modern awards

4 yearly review of modern awards—Award stage—Group 4—*Social, Community, Home Care and Disability Services Industry Award 2010*— Substantive claims

(AM2018/26) SYDNEY, 2019

The Fair Work Commission (the Commission) is conducting a review of the *Social, Community, Home Care and Disability Services Industry Award 2010* (SCHADS Award) as part of the 4 yearly review of modern awards.

The sectors covered by the SCHADS Award include:

- crisis accommodation for women, children, families, young people and men;
- sexual assault, domestic and family violence services;
- women's domestic violence court advocacy services;
- youth and child protection services;
- out of home care for children and young people at risk;
- homelessness, housing and tenancy services;
- family support services;
- disability services, including residential care and care provided in a private residence;
- health and mental health services;
- alcohol, gambling and other drugs of addiction and rehabilitation services;
- aged care services;
- first nation people's services;
- migrant and settlement services;
- prisoner rehabilitation;
- community legal services;
- community and neighbourhood services;
- policy, research and advocacy services;
- community transport;
- family day care; and

- home care (provision of personal care, domestic assistance or home maintenance to an aged person or person with a disability in a private residence)

Welcome

The Fair Work Commission requests that you complete the survey below to assist in the review of the *Social, Community, Home Care and Disability Services Industry Award 2010* (SCHADS Award).

This survey should only be completed by you if your enterprise is currently covered by the SCHADS Award (including where an enterprise agreement applies).

You should only complete the survey **once**, regardless of how many times you have received an invitation to complete this survey.

If you are unable or unwilling to complete the survey you may be required to attend the Commission to give evidence in respect of the questions asked in this survey.

How the survey data will be used

Information collected by the Commission about the enterprises that complete the survey will be used for the sole purpose of excluding those enterprises from attending to give evidence.

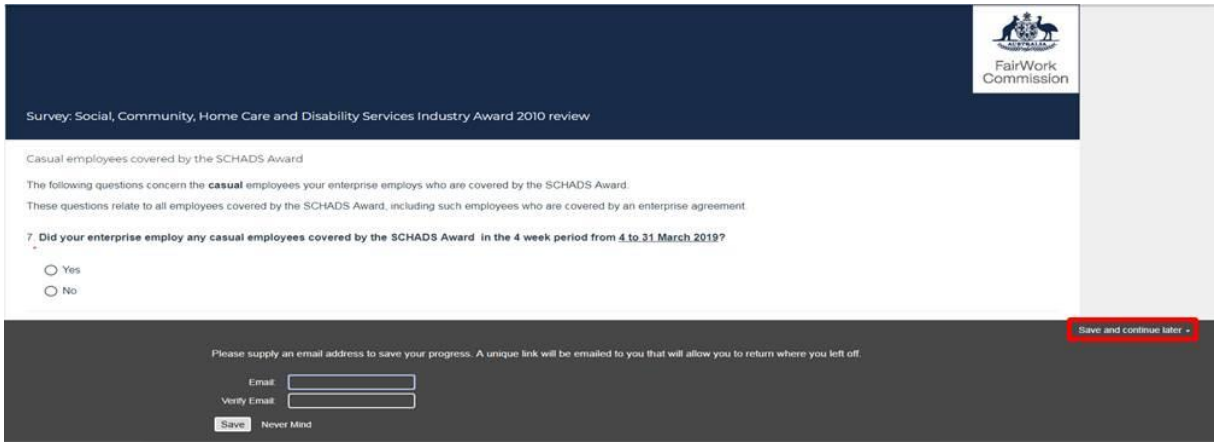
Data will be presented in aggregate form and will not identify the enterprises that completed the survey.

Instructions for completing the survey

Please complete the survey at your earliest convenience. The survey will close at **4.00 pm** on **Wednesday, 12 June 2019**.

It is recommended that you complete the online survey in one session. It may be helpful to review this survey and to consult your relevant records before commencing the online survey.

If necessary, the **'Save and continue later'** feature can be used which enables you to complete the online survey at another time. This feature can be accessed by clicking on **Save and continue later** in the bottom right-hand corner of the page and entering an email address for a unique link to the online survey to be sent.



The unique link will direct to the question where you left the online survey and retains the responses already provided. The email containing the unique link can get picked up in SPAM filters. It can take several hours to be delivered, can be delivered to your junk mail folder or may be undeliverable. Therefore, this feature should be used with caution.

Sectors

1. Which sector or sectors does your enterprise operate in?
Please select all that apply.

☐ Crisis accommodation for women, children, families, young people and men

☐ Sexual assault, domestic and family violence services

☐ Women's domestic violence court advocacy services

☐ Youth and child protection services

☐ Out of home care for children and young people at risk

☐ Homelessness, housing and tenancy services

☐ Family support services

☐Disability services, including residential care and care provided in a private residence

☐ Health and mental health services

☐ Alcohol, gambling and other drugs of addiction and rehabilitation services

☐ Aged care services

☐ First nation people's services

☐ Migrant and settlement services

☐ Prisoner rehabilitation

☐ Community legal services

☐ Community and neighbourhood services

☐ Policy, research and advocacy services

☐ Community transport

☐ Family day care

☐ Home care services

☐ Other sector – please specify _____

Employees covered by the SCHADS Award

The remaining questions in this survey relate to all employees covered by the SCHADS Award, including such employees who are covered by an enterprise agreement.

2. **Does an enterprise agreement apply to employees currently covered by the SCHADS award?**

☐Yes ☐ No

3. **Does your enterprise agreement (or agreements) cover <u>all</u> of your SCHADS Award–covered employees?**

☐Yes ☐ No

4. **How many employees does your enterprise <u>currently</u> employ who are covered by the SCHADS Award?**

☐ Fewer than 20 employees
☐ Between 20 and 49 employees
☐ Between 50 and 99 employees
☐ 100 or more employees

5. [If employs 100 or more employees who are covered by the SCHADS Award] **How many employees covered by the SCHADS Award does your enterprise employ?**

ENTER NUMBER

6. **Of the employees your enterprise employs who are covered by the SCHADS Award; how many employees are employed in the categories set out below?**

Category	**No. of Employees**
Permanent full time employees	ENTER NUMBER
Permanent part time employees	ENTER NUMBER
Fixed term contract full time employees	ENTER NUMBER
Fixed term contract part time employees	ENTER NUMBER
Casual employees (i.e. in receipt of the 25% casual loading and not in receipt of any paid leave entitlement)	ENTER NUMBER

Casual employees covered by the SCHADS Award

The following questions concern the casual employees you employ in the sectors covered by the SCHADS Award.
These questions relate to all employees covered by the SCHADS Award, including such employees who are covered by an enterprise agreement.

7. **Did your enterprise employ any casual employees covered by the SCHADS Award in the 4 week period from <u>4 to 31 March 2019</u>?**

☐Yes ☐ No [SKIP TO Q11]

8. **Did any of the casual employees work in excess of 38 hours per week or 76 hours per fortnight?**

☐Yes ☐ No

9. **Did any of the casual employees work on a Saturday?**

☐Yes ☐ No

10. **Did any of the casual employees work on a Sunday?**

☐Yes ☐ No

Income from government sources

11. **Does your enterprise receive a significant proportion of its income from the Commonwealth, a State Government or a Local Government?**

☐Yes ☐ No [SKIP TO Q13]

12. [If the answer to Question 11 is Yes] **What is the source of the income?**
Please select all that apply.

☐ Commonwealth

☐ State Government

☐ Local Government

24 hour care shifts

Clause 25.8 of the SCHADS Award provides that home care employees may be rostered for a 24 hour care shift which requires an employee to be available for duty in a client's home for a 24 hour period.

13. **Has your enterprise rostered a home care employee for a 24 hour care shift in the 12 month period from 1 March 2018 to 1 March 2019?**

☐Yes ☐ No [SKIP TO Q15] ☐ Don't know [SKIP TO Q15]

14. [If the answer to Question 13 is Yes] **How many times has your enterprise rostered a home care employee for a 24 hour care shift in the 12 month period from 1 March 2018 to 1 March 2019?**

ENTER NUMBER

About your enterprise

Please note that information collected by the Commission about the enterprises that complete the survey will be used for the sole purpose of excluding those enterprises from attending to give evidence.
Data will be presented in aggregate form only and will not identify the enterprises that completed the survey.

15. **Where is the primary location of your enterprise?**

☐Metropolitan area
☐Regional area
☐Rural/remote area

16. **What is the name of your enterprise?**

ENTER NAME

17. **Is your enterprise a member of one or more of the organisations listed below?**
Please select all that apply.

☐ Jobs Australia

☐ Australian Federation of Employers and Industry (AFEI)

☐ Australian Business Industrial (ABI)

☐ NSW Business Chamber

☐Aged and Community Services Australia

☐ Leading Age Services Australia

☐ National Disability Services (NDS)

☐ Australian Industry Group (Ai Group)

☐ None of these organisations [SINGLE RESPONSE ONLY]

Thank you

Thank you for completing the survey.

The survey results will be used for the purpose of reviewing the *Social, Community, Home Care and Disability Services Industry Award 2010* as part of the Commission's 4 yearly review of modern awards.

Survey data will be presented in aggregate form only and will not identify the enterprises that participated.

If you have any queries or concerns about this survey and how your responses will be used, please contact:

Survey analysis of the *Social, Community, Home Care and Disability Services Industry Award 2010*

June 2019

The contents of this paper are the responsibility of Commission staff and the research has been conducted without the involvement of members of the Fair Work Commission.

Table of Contents

1 Introduction

The Fair Work Commission (the Commission) is conducting a review of the *Social, Community, Home Care and Disability Services Industry Award 2010* (SCHADS award) as part of the 4 yearly review of modern awards (the Review). A number of substantive claims have been made to vary the SCHADS award as part of the Review and these are being dealt with in matter AM2018/26.

A survey was conducted by the Commission titled 'Survey - *Social, Community, Home Care and Disability Services Industry Award 2010*'.

The purpose of the survey is to assist the Full Bench (in matter AM2018/26) in informing itself and the relevant parties about the information relating to the matter. The survey is not designed to be representative of all enterprises that employ workers covered by the SCHADS award.

The survey questions were developed in consultation with parties in matter AM2018/26. Relevant documentation is posted to the Commission's website and is accessible via the link below:

https://www.fwc.gov.au/awards-and-agreements/modern-award-reviews/4-yearly-review/award-stage/award-review-documents/MA000100?m=AM2014/285

The survey was open for a period of 5 weeks (from 15 May 2019 until 19 June 2019).

The survey was administered via an online survey platform. A link was sent by the Commission to each party (in matter AM2018/26) and the email was forwarded by each employer party to their members. Participation in the survey is limited to the membership of parties in matter AM2018/26 (or enterprises represented in the proceedings).

In total, 854 enterprises provided a complete response to the survey with the survey sent out to approximately 2980[1] enterprises, generating an approximate response rate of just under 30 per cent.

The analysis is conducted on the 854 complete responses. Incomplete or responses from enterprises not covered by the SCHADS award were also received but were not included as part of the analysis. A number of responses were not included for the following reasons:

- 496 enterprises provided responses that were incomplete;
- 17 enterprises provided multiple responses—duplicates were removed;
- 3 enterprises were not covered by the SCHADS award; and
- 4 enterprises provided responses that included errors or were missing key data.

[1] This figure is an approximation as it may include organisations that are members of more than one party to the matter and may have been sent the survey more than once.

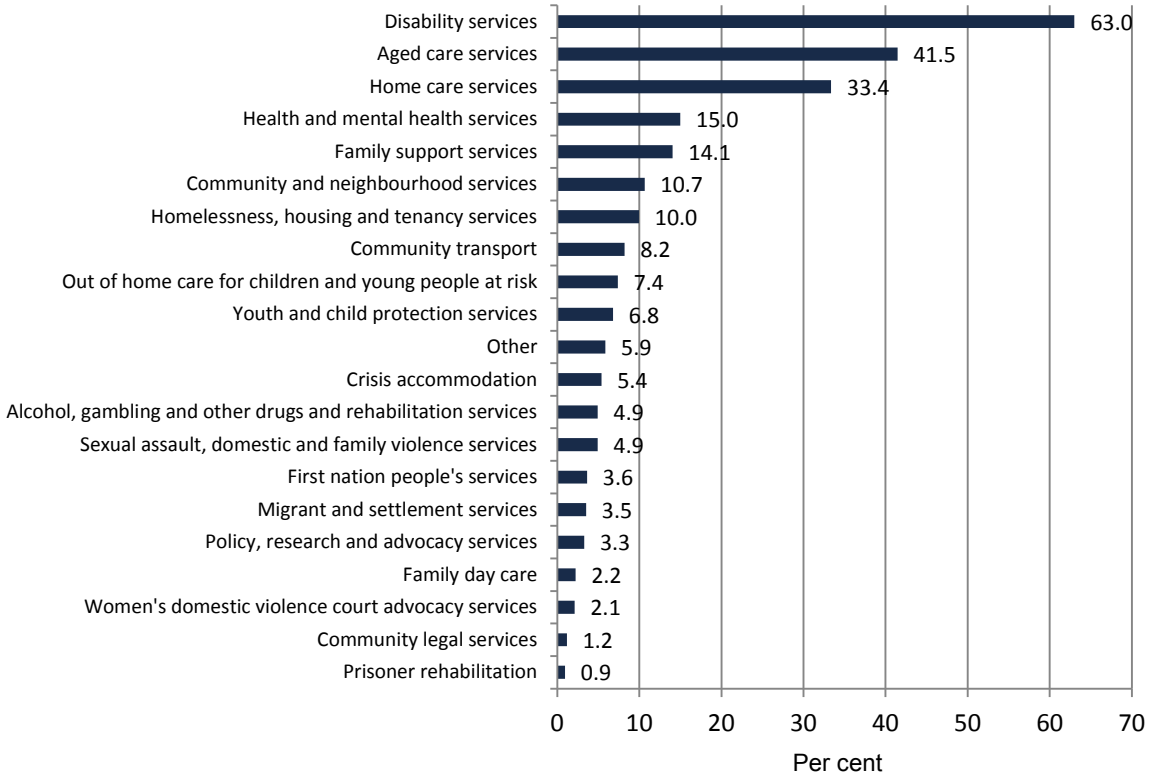
2 Aggregate analysis of responses

This section provides an analysis of responses to the survey from enterprises that are members of parties in matter AM2018/26.

2.1 Sectors

Chart 1 shows the sector or sectors that the enterprises operated in. The most common sector that the enterprises operate in is Disability services, including residential care and care provided in a private residence (Disability services) (63.0 per cent), followed by Aged care services (41.5 per cent) and Home care services (33.4 per cent).

Chart 1: Which sector or sectors does your enterprise operate in?



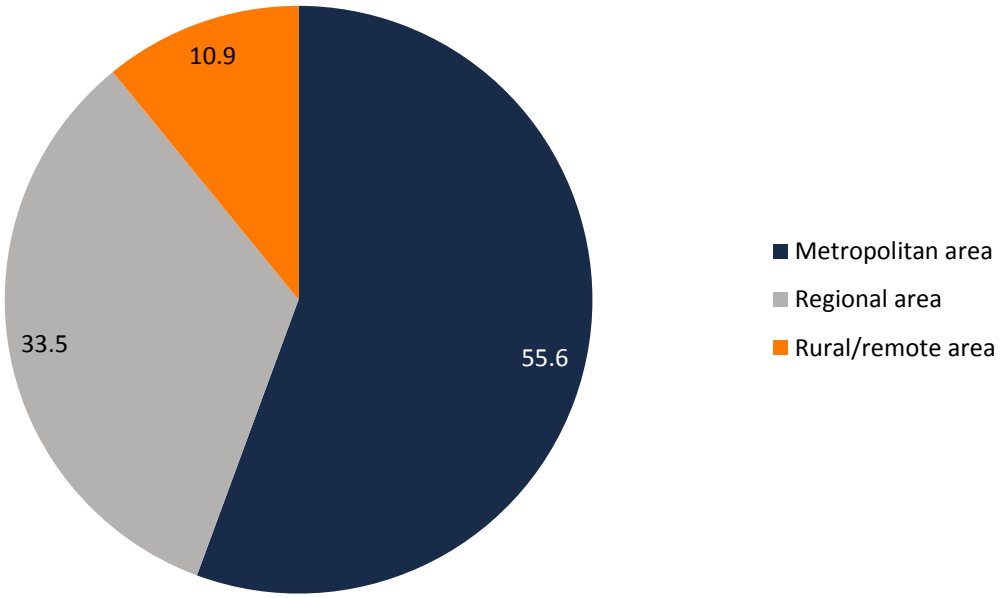
Note: The total sums to more than 100 as enterprises can operate in multiple sectors.

Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010*, 2019, Question 1.

2.2 About your enterprise

More than half (55.6 per cent) of enterprises that responded to the survey have their primary location in a metropolitan area, while around one third (33.5 per cent) have their primary location in a regional area. Only around one in ten enterprises operated in a rural/remote area (Chart 2).

Chart 2: Where is the primary location of your enterprise?

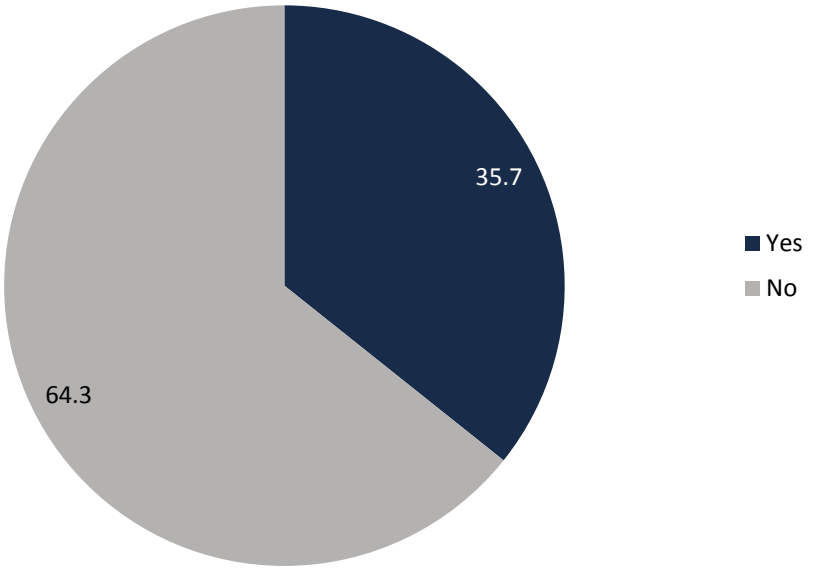


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 15.

2.3 Employees covered by the SCHADS award

Over one third (35.7 per cent) of enterprises that responded to the survey have an enterprise agreement which applies to employees currently covered by the SCHADS award (Chart 3).

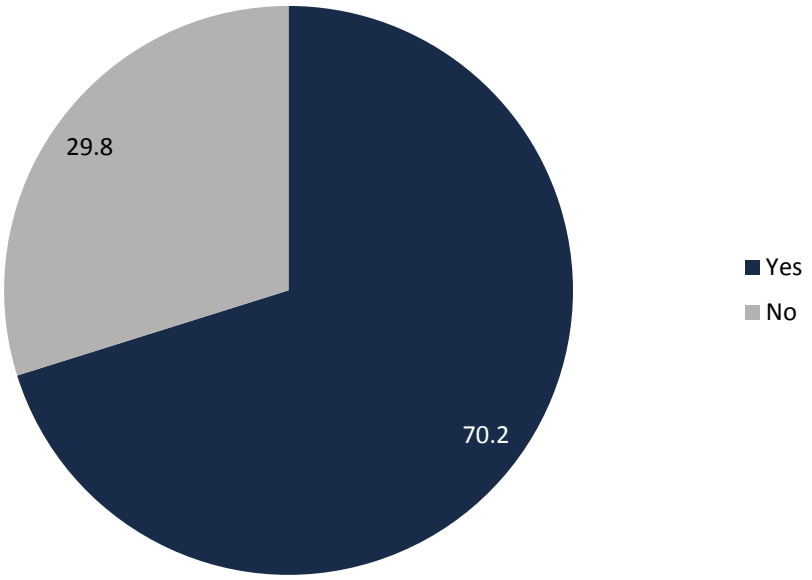
Chart 3: Does an enterprise agreement apply to employees currently covered by the SCHADS award?



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 2.

Of those enterprises that responded that they have an enterprise agreement, around seven in ten (70.2 per cent) responded that their enterprise agreement (or agreements) covers all of their SCHADS award-covered employees (Chart 4).

Chart 4: Does your enterprise agreement (or agreements) cover all of your SCHADS Award-covered employees?

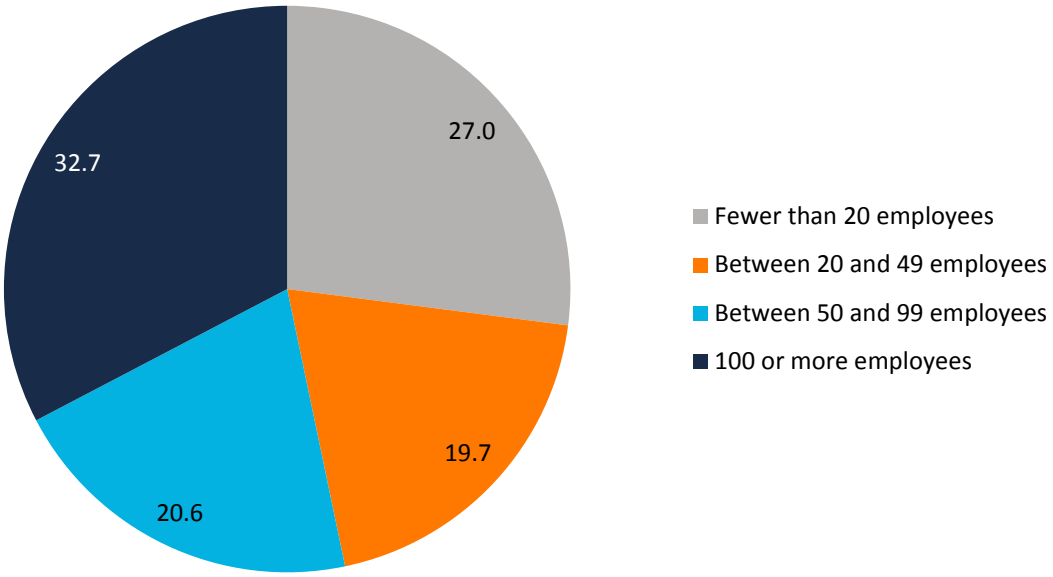


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 3.

2.4 Number of SCHADS employees by enterprises

Around one third (32.7 per cent) of enterprises that responded to the survey employ 100 or more employees who are covered by the SCHADS award, while over one quarter (27 per cent) employ fewer than 20 employees who are covered by the SCHADS award (Chart 5).

Chart 5: How many employees does your enterprise currently employ who are covered by the SCHADS award?



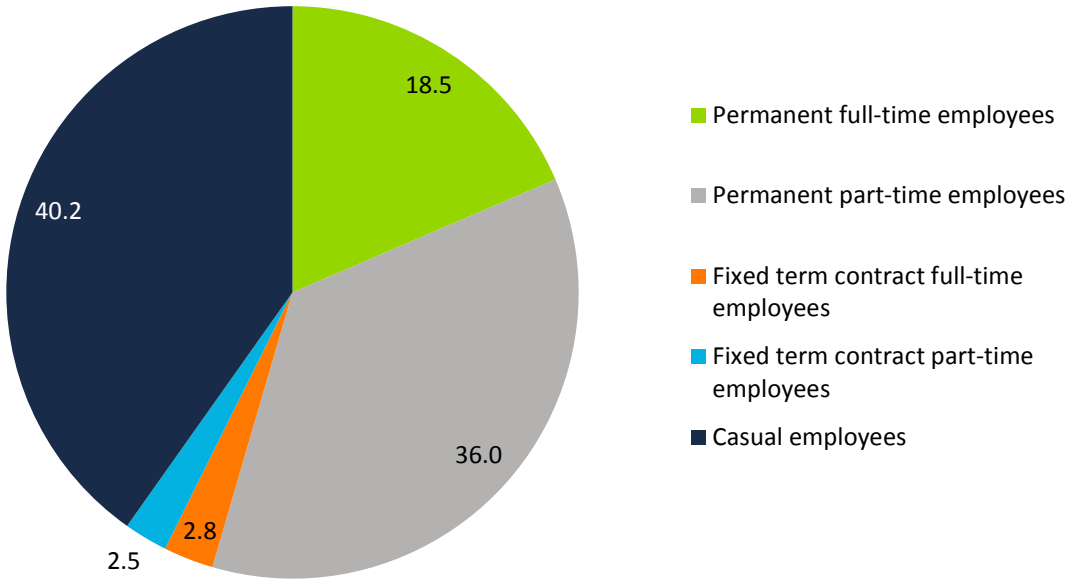
Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 4.

Enterprises that employ 100 or more employees covered by the SCHADS award had an average of 397 employees covered by the SCHADS award and a median of 175 employees covered by the SCHADS award.[2]

Around four in ten employees covered by the SCHADS award that are employed in the enterprises that responded to the survey are casual employees (i.e. in receipt of the 25 per cent casual loading and not in receipt of any paid leave entitlements) (Chart 6). The next most common employment type was permanent part-time employees (36.0 per cent), followed by permanent full-time employees (18.5 per cent).

[2] AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 5.

Chart 6: Of the employees your enterprise employs who are covered by the SCHADS Award; how many employees are employed in the categories set out below?



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 6.

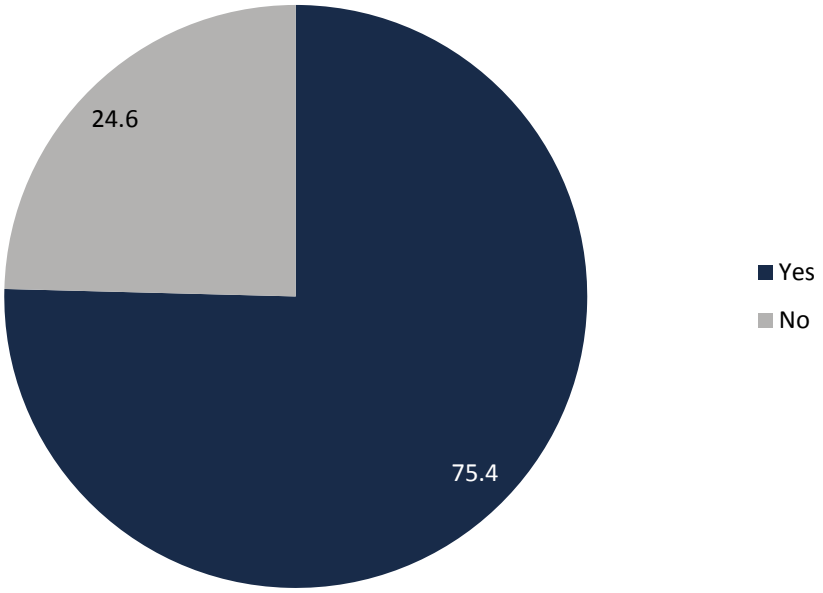
2.5 Casual employees covered by the SCHADS award

As noted in the survey, the following questions concerning casual employees, relate to all employees covered by the SCHADS award, including employees covered by an enterprise agreement.[3]

In the 4 week period from 4 to 31 March 2019, around three-quarters (75.4 per cent) of enterprises that responded to the survey employed casual employees that were covered by the SCHADS award (Chart 7).

[3] AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, pp. 4–7.

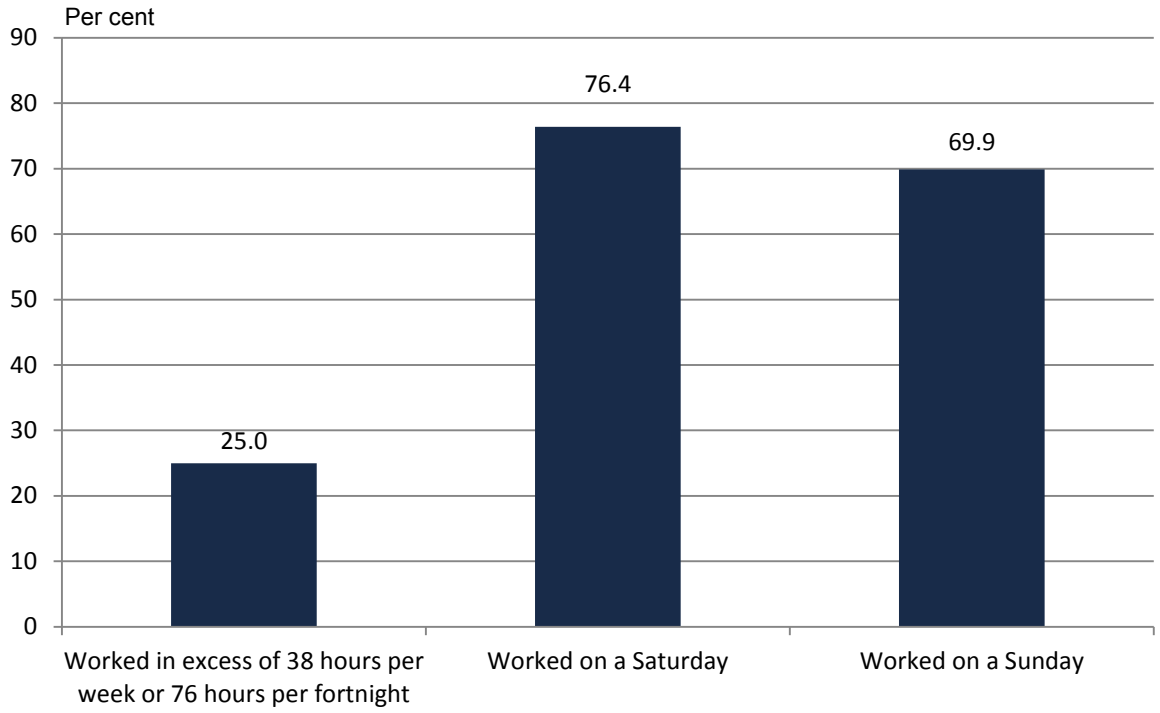
Chart 7: Did your enterprise employ any casual employees covered by the SCHADS award in the 4 week period from 4 to 31 March 2019



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 7.

Of the enterprises that employed casual employees in the 4 week period from 4 to 31 March 2019, one quarter had casual employees that worked in excess of 38 hours per week or 76 hours per fortnight (Chart 8). Around three-quarters of enterprises (76.4 per cent) responded that casual employees worked on a Saturday during this period, and around seven in ten enterprises (69.9 per cent) responded that casual employees worked on a Sunday.

Chart 8: Did any of the casual employees work in excess of 38 hours per week or 76 hours per fortnight, work on a Saturday, or work on a Sunday



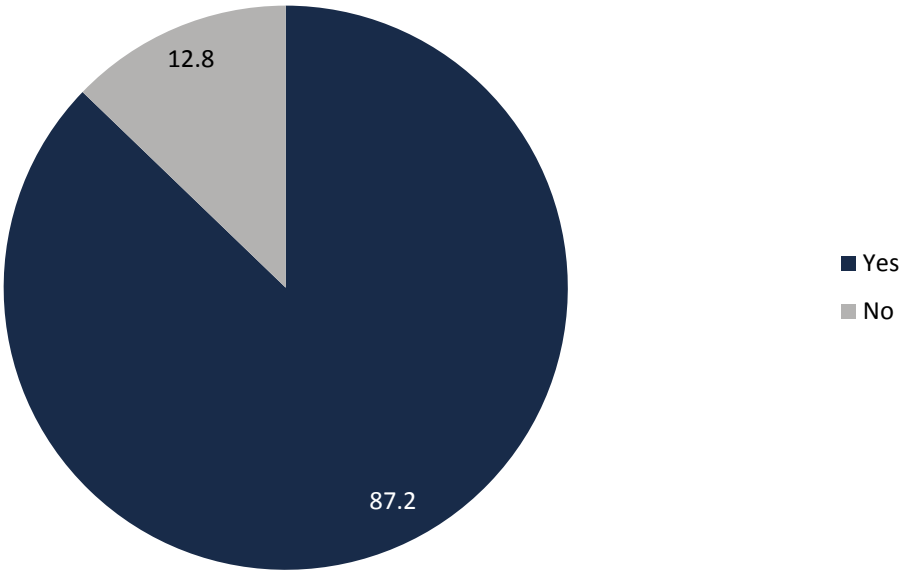
Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 8, 9 and 10.

2.6 Income from government sources

Almost nine in ten (87.2 per cent) enterprises that responded to the survey receives a significant proportion of its income from the Commonwealth, State or Local Government (Chart 9).[4]

[4] These responses may include enterprises that receive NDIS funding indirectly from a government source (i.e. via a client).

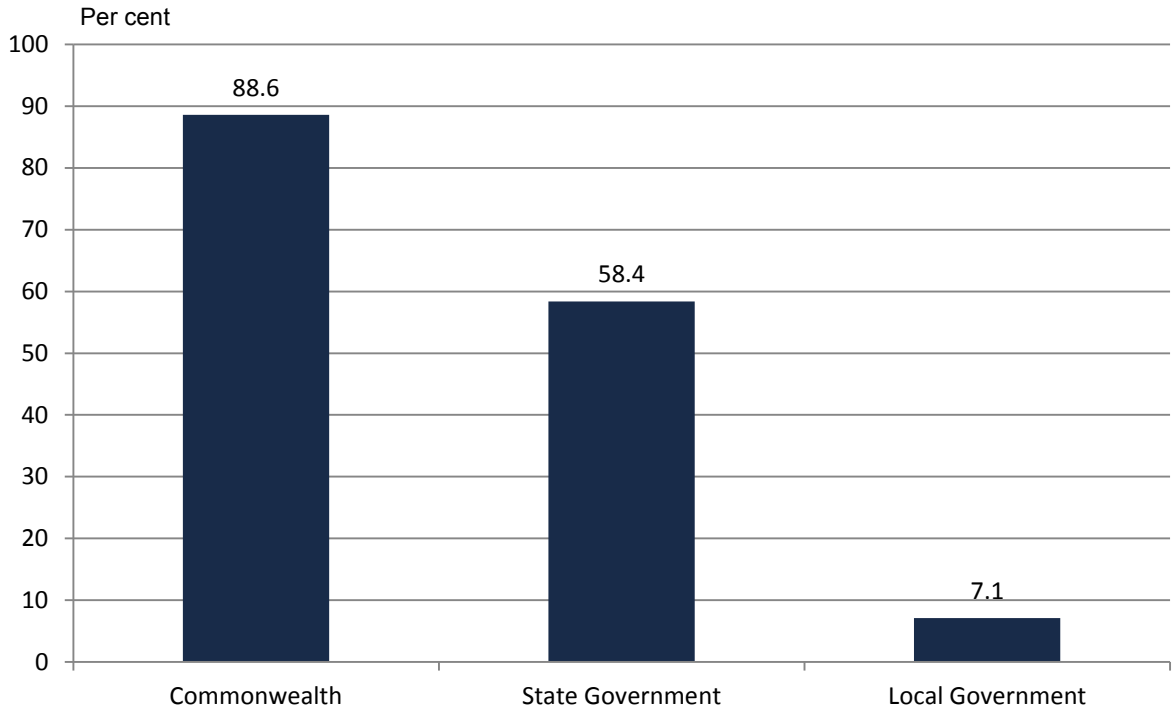
Chart 9: Does your enterprise receive a significant proportion of its income from the Commonwealth, a State Government or a Local Government?



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 11.

Around nine in ten enterprises that responded to the survey received income from the Commonwealth Government (88.6 per cent) and around six in ten (58.4 per cent) received income from the State Government. Only 7.1 per cent of these enterprises received income from the Local Government (Chart 10).

Chart 10: What is the source of the income?



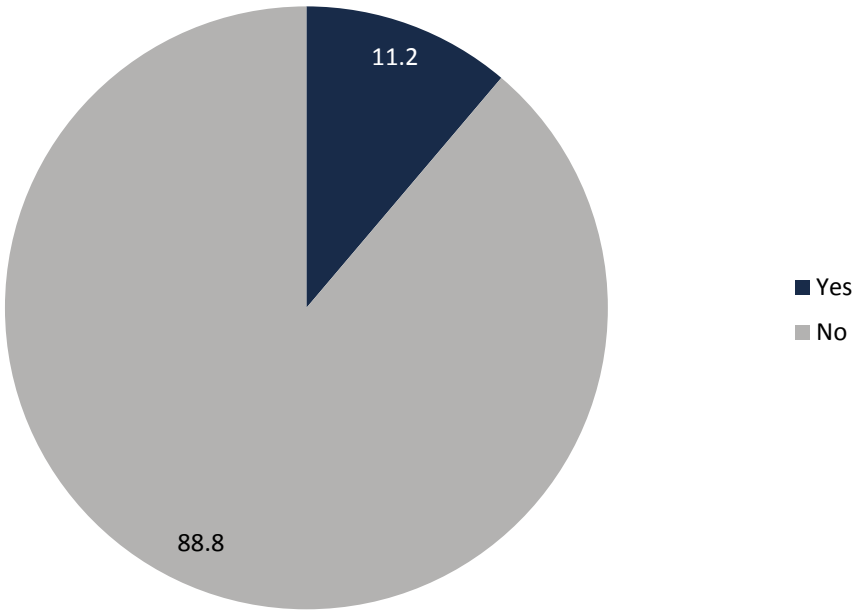
Note: The total does not sum to 100 as enterprises can receive income from multiple government sources.

Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 12.

2.7 24 hour care shifts

Around one in ten enterprises (11.2 per cent) that responded to the survey rostered a home care employee for a 24 hour care shift between 1 March 2018 and 1 March 2019 (Chart 11).

Chart 11: Has your enterprise rostered a home care employee for a 24 hour care shift in the 12 month period from 1 March 2018 to 1 March 2019?



Note: The 14 enterprises that responded with 'don't know' in regard to whether they had rostered a home care employee for a 24 care shift were excluded.

Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Question 13.

For enterprises that rostered a home care employee for a 24 hour care shift in this period, the average number of times that the enterprise rostered a home care employee in the 12 month period from 1 March 2018 to 1 March 2019 was 304.[5]

[5] AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010*, 2019, Question 14.

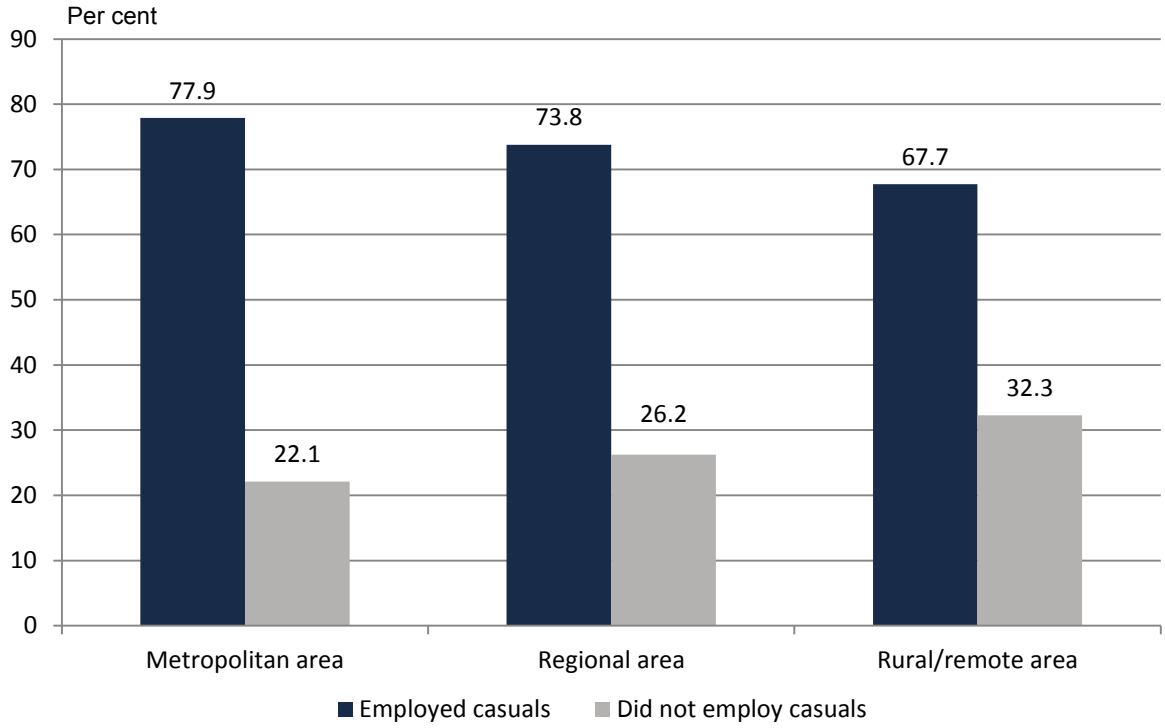
3 Enterprises that employ casuals

This section provides further analysis of enterprises that responded they employ casual employees by comparing them with the responses of enterprises that do not employ casual employees for a range of variables.

3.1 Location

Chart 12 presents the proportion of enterprises that employed casuals by the primary location of the enterprise. The chart shows that across all locations, enterprises that responded to the survey were more likely to have employed casuals. The highest proportion of enterprises that employed casuals had their primary location in metropolitan areas (77.9 per cent), followed by regional areas (73.8 per cent), while enterprises with their primary location in rural/remote areas had the lowest proportion of enterprises that employed casuals (67.7 per cent).

Chart 12: Enterprises that employed casual employees by location

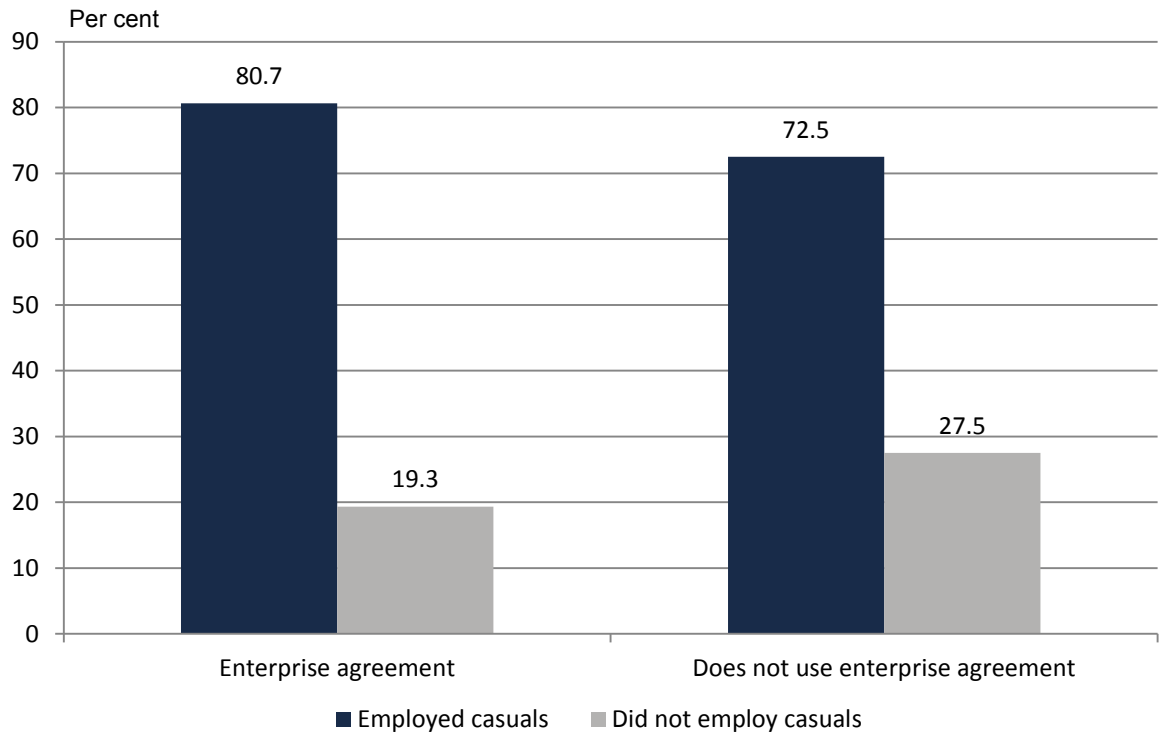


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 7 and 15.

3.2 Enterprise agreement coverage

Enterprises that responded that they have an enterprise agreement that applies to employees currently covered by the SCHADS award were more likely to employ casual employees than enterprises that do not use enterprise agreements (Chart 13).

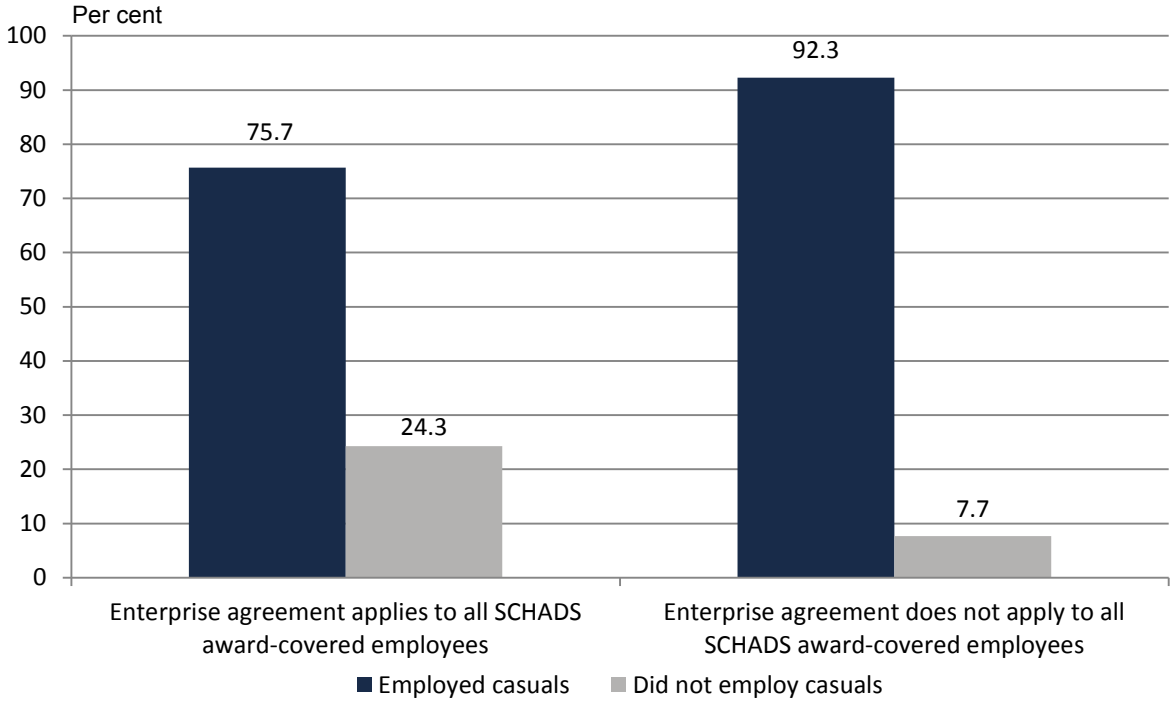
Chart 13: Enterprises that employed casual employees by use of enterprise agreement



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 2 and 7.

Enterprises that responded using an enterprise agreement (or agreements) for all of their SCHADS award-covered employees were less likely to employ casual employees than enterprises that use enterprise agreements that do not cover all of their SCHADS award-covered employees (Chart 14).

Chart 14: Enterprises that employed casuals by whether the enterprise agreement (or agreements) covers all SCHADS award-covered employees

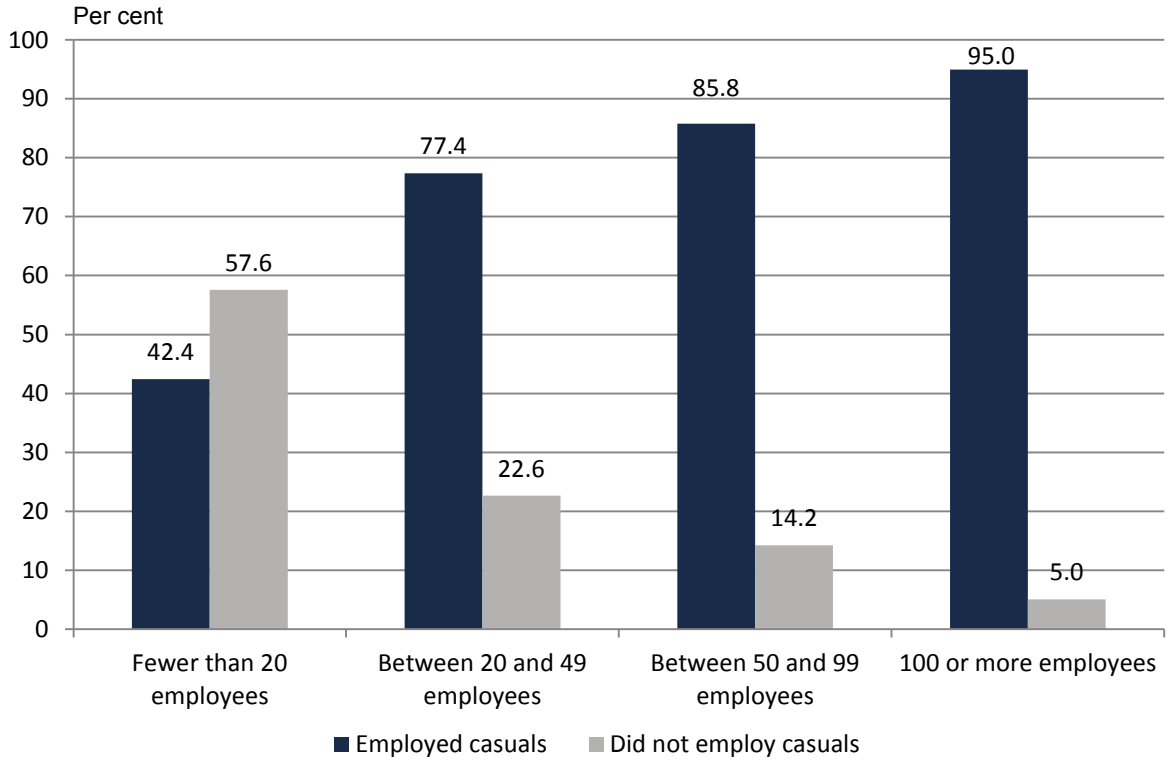


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 3 and 7.

3.3 Number of SCHADS award-covered employees

Enterprises that responded employing a higher number of employees covered by the SCHADS award were more likely to employ casual employees (Chart 15). Enterprises that employ fewer than 20 employees covered by the SCHADS award were less likely to employ casual employees.

Chart 15: Enterprises that employed casuals by number of SCHADS employees

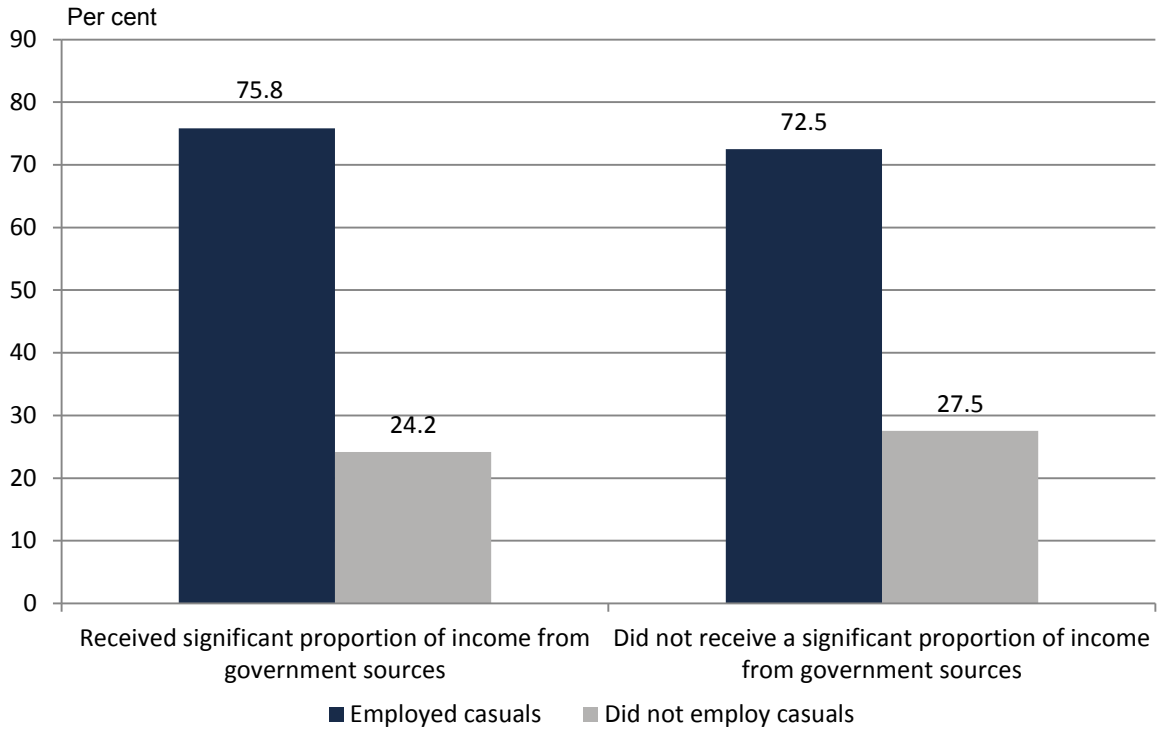


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 4 and 7.

3.4 Income from government sources

Chart 16 shows the proportion of enterprises that responded to the survey that employed casual employees by whether they receive a significant proportion of their income from government sources. There was a slightly higher proportion of enterprises employing casuals that received a significant proportion of income from government sources (75.8 per cent compared with 72.5 per cent).

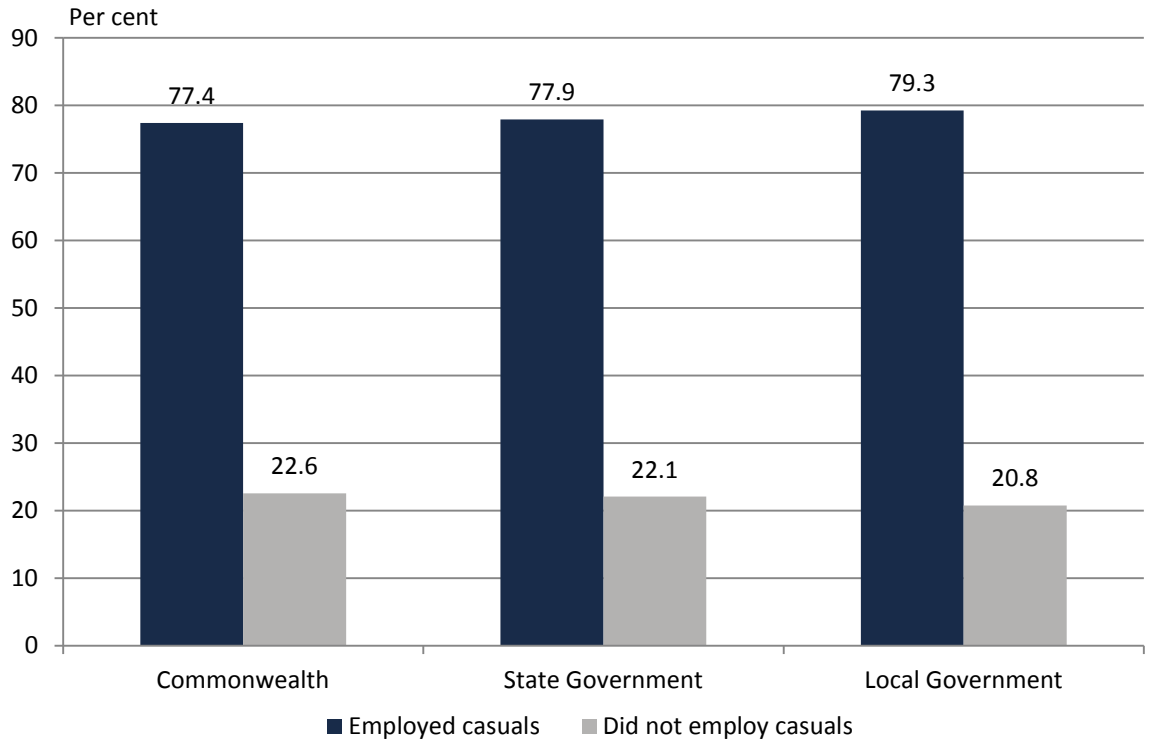
Chart 16: Enterprises that employed casual employees by whether received a significant proportion of income from government sources



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 7 and 11.

Chart 17 presents the proportion of enterprises that employ casuals by source of government income. There is little difference in the employment of casuals across the sources of income. As many enterprises receive funding from multiple levels of government, there is overlap between the groups.

Chart 17: Enterprises that employed casual employees by government funding source



Note: Enterprises may receive funding from more than one level of government.

Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 7 and 12.

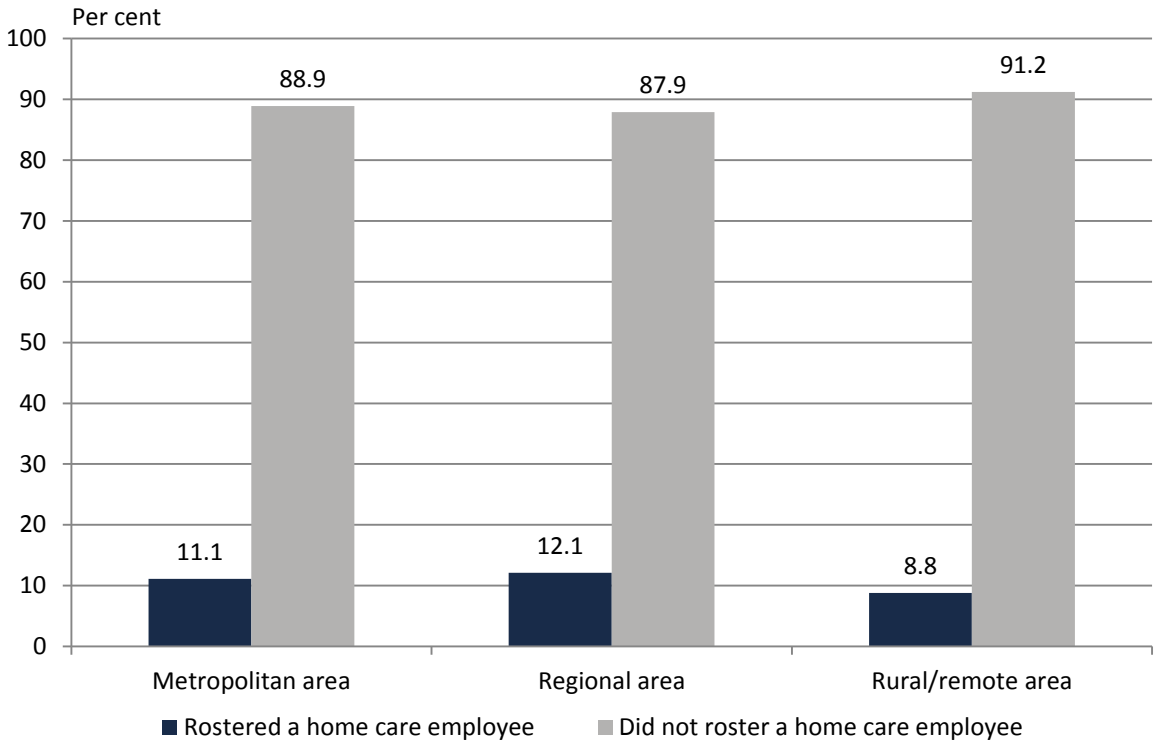
4 24 hour care shifts

This section provides further analysis of enterprises that responded that they rostered a home care employee for a 24 hour care shift in the period from 1 March 2018 to 1 March 2019 by comparing them with the responses of enterprises that did not roster a home care employee for a 24 hour care shift during the same period. Clause 25.8 of the SCHADS Award provides that home care employees may be rostered for a 24 hour care shift which requires an employee to be available for duty in a client's home for a 24 hour period.

4.1 Location

Chart 18 presents the proportion of enterprises that responded that they rostered a home care employee for a 24 hour care shift by the primary location of their enterprise. The chart shows that across all areas, around one in ten enterprises rostered a home care employee for a 24 hour care shift. Enterprises in regional areas had the highest proportion that rostered a home care employee (12.1 per cent), followed by metropolitan areas (11.1 per cent), while rural/remote areas have the lowest proportion (8.8 per cent).

Chart 18: Enterprises that rostered a home care employee for a 24 hour shift by location

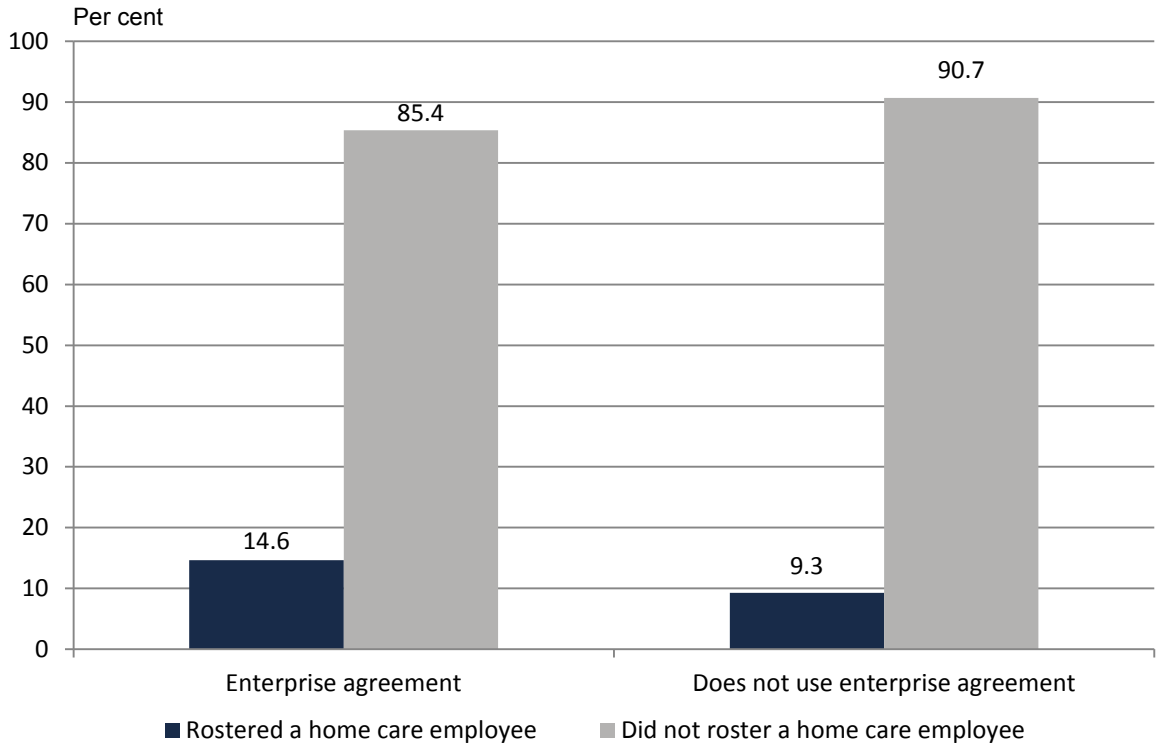


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 13 and 15.

4.2 Enterprise agreement coverage

Enterprises that responded having an enterprise agreement that apply to employees currently covered by the SCHADS award were more likely to roster a home care employee for a 24 hour care shift than enterprises that do not use an enterprise agreement for these employees (Chart 19).

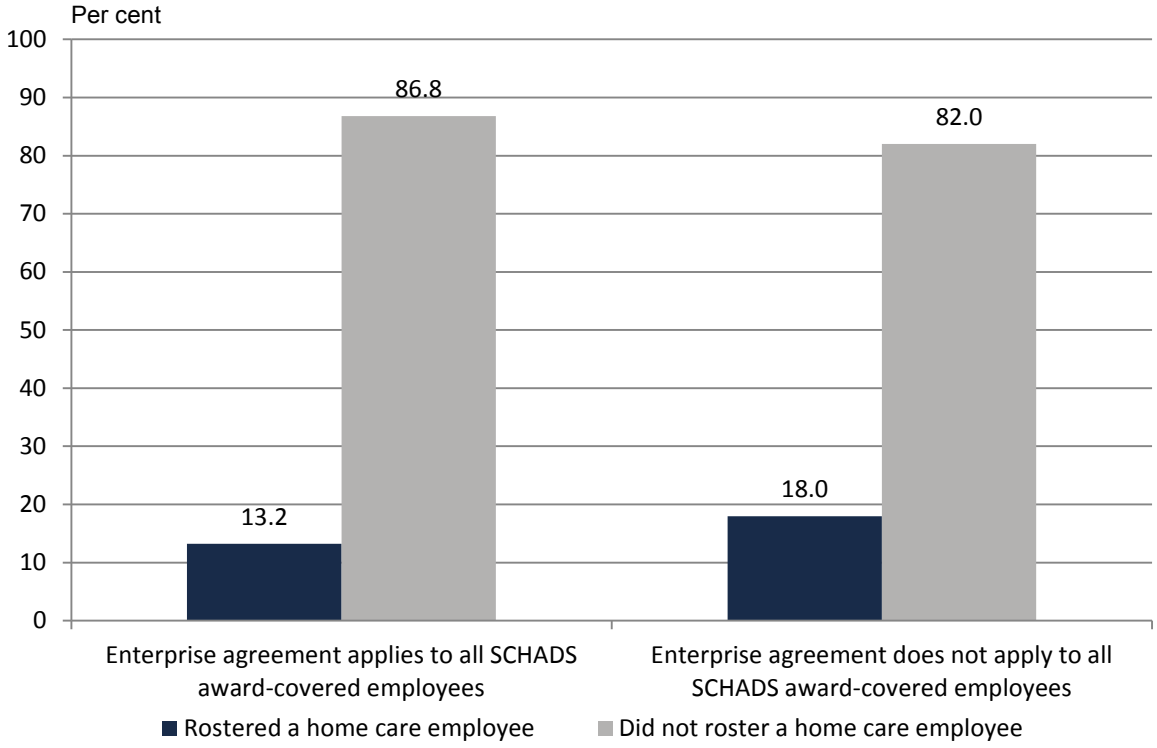
Chart 19: Enterprises that rostered a home care employee for a 24 hour shift by use of enterprise agreement



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 2 and 13.

Enterprises that use an enterprise agreement (or agreements) that apply to all of their SCHADS award-covered employees were less likely to roster a home care employee for a 24 hour care shift than enterprises that use enterprise agreements that do not cover all of their SCHADS award-covered employees (Chart 20).

Chart 20: Enterprises that rostered a home care employee for a 24 hour shift by whether the enterprise agreement covered all SCHADS employees

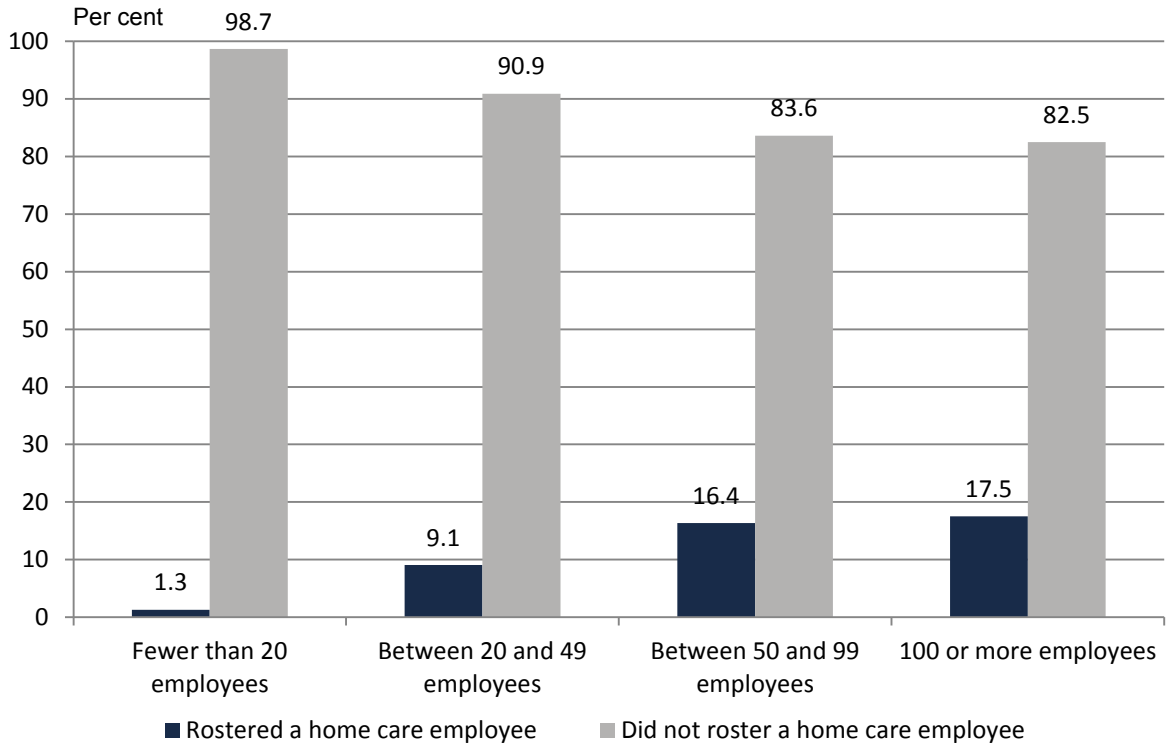


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 3 and 13.

4.3 Number of SCHADS award-covered employees by enterprises

Enterprises that responded employing a higher number of employees covered by the SCHADS award were more likely to have rostered a home care employee for a 24 hour care shift. Enterprises that employ 100 or more SCHADS award-covered employees (17.5 per cent) and between 50 and 99 SCHADS award-covered employees (16.4 per cent) had the highest proportion of enterprises that rostered a home care employee for a 24 hour care shift (Chart 21).

Chart 21: Enterprises that rostered a home care employee for a 24 hour shift by number of SCHADS employees

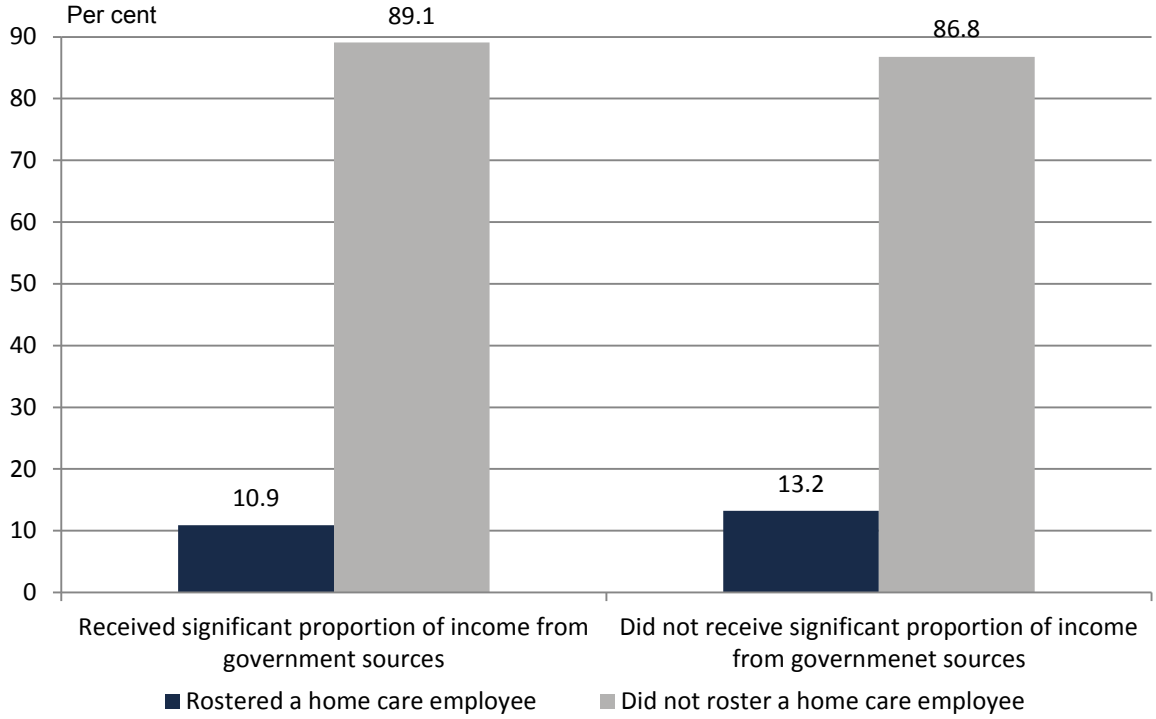


Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 4 and 13.

4.4 Income from government sources

Chart 22 shows the proportion of enterprises that responded to the survey that rostered a home care employee for a 24 hour care shift by whether they received a significant proportion of their income from government sources. The chart shows that enterprises that did not receive a significant proportion of income from government sources were more likely to have rostered a home care employee for a 24 hour care shift (10.9 per cent compared with 13.2 per cent).

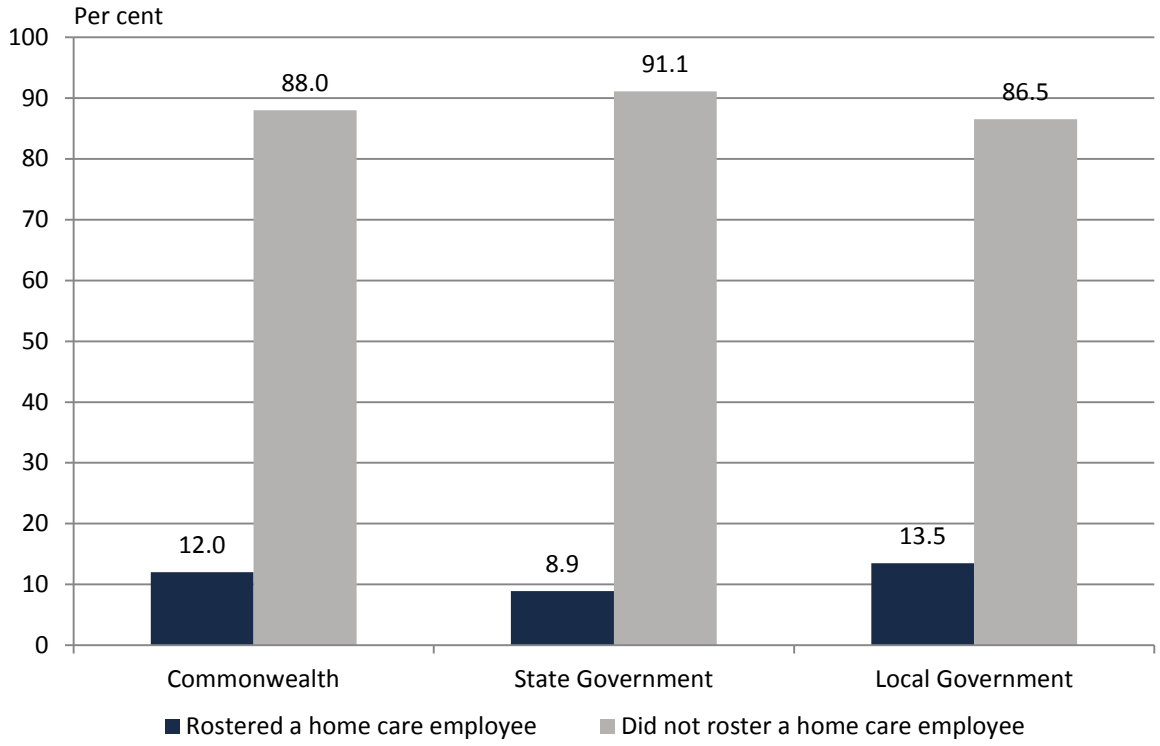
Chart 22: Enterprises that rostered a home care employee for a 24 hour shift by whether it received income from Government sources



Source: AM2018/26, Survey - *Social, Community, Home Care and Disability Services Industry Award 2010,* 2019, Questions 11 and 13.

Chart 23 presents the proportion of enterprises that rostered a home care employee for 24 hour care shift by income from government sources. Enterprises that received income from the State Government were less likely to roster a home care employee relative to enterprises that received income from the Commonwealth or local Government.

Chart 23: Enterprises that rostered a home care employee for a 24 hour shift by Government funding source



Note: Enterprises may receive funding from more than one level of government.

s.156 - 4 yearly review of modern awards

4 yearly review of modern awards –
(AM2014/285)

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010
[MA000100]

Social, Community, Home Care and Disability Services Industry

COMMISSION MEMBER PLACE, DATE

Further to the Decision issued by the Fair Work Commission on the above award is varied as follows:

[1] By deleting clause 25.6 and inserting in lieu thereof:

25.6 Broken shifts

This clause only applies to social and community services employees when undertaking disability services work and home care employees.

(a) A **broken shift** means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.

(b) An employee who works a broken shift will receive:

(i) Ordinary pay plus a loading of 15% of their ordinary rate of pay for each hour from the commencement of the shift to the conclusion of the shift inclusive of all breaks; and

(ii) penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.

(c) All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.

(d) An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

[2] The determination shall operate on and from [ ].

NDIS Costs Productivity Commission Paper June 2017

UNSW Workforce Issues in the NSW Community Services Sector April 2017

Australian Institute of Health and Welfare - Australia's Welfare 2017

1. This submission regards the substantive claims pursued by the Australian Services Union ('**ASU**') in the Four yearly review ('**the Review**') of the *Social, Community, Home Care and Disability Services Industry Award* 2010 ('**SCHDS** Award'). It is made pursuant to the Directions issued by the Fair Work Commission ('**Commission**') on 9 November 2018.
2. The ASU filed draft determinations for each of its claims on 7 November 2018. These include:
    a. a variation to clause 25.6 to provide a loading to be paid to employees who work broken shifts;
    b. a new clause providing an allowance to employees who use community language skills to provide services to speakers of languages other than English or to provide signing services to those with hearing difficulties; and
    c. a variation to clause 4.2 of the SCHDS Award to ensure that health professionals employed in the Social and Community Sector are not excluded from coverage of the SCHDS Award.
3. The proposed variation to clause 4.2 is withdrawn.
4. The ASU notes that conciliations occured in January regarding the Draft Consent Determinations filed by the parties in February 2017. Discussions may continue in the lead up to the hearing. We reserve our right to propose additional variations in the Four yearly review of modern awards.

JURISDICTIONAL ISSUES

5. The Commission's task in the Review is to 'decide if a particular modern award achieves the modern awards objective'.[1] If the modern award does not meet the modern awards objective it must be varied. However variations must be 'necessary to achieve the modern awards objective' not merely desirable because modern awards must only include terms that are 'necessary to achieve the modern awards objective' (s 138). Any case for change must be accompanied by probative evidence properly directed to demonstrating the facts supporting the proposed variation.[2]
6. The modern awards objective, in s 134(1), requires the Commission to ensure that modern awards, together with the National Employment Standards (NES) provide a fair and relevant minimum safety net of terms and conditions'. As noted by the Full Bench in the *Penalty Rates Decision*: 'The word

[1] *Four yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001, [36].
[2] *Re Four Yearly Review of Modern Awards – Preliminary Jurisdictional Issues* [2014] FWCFB 1788, (2014) 241 IR 189 ('**Jurisdictional Issues Decision**').

'relevant', in the context of s.134(1), is intended to convey that a modern award should be suited to contemporary circumstances.'[3] 'Fairness' means fairness to both employees and employers.

7. Paragraphs 134(1)(a) through (h) set out a number of considerations that the Fair Work Commission must take into account. The obligation to take into account the matters set out in paragraphs 134(1)(a) to (h) means that each of the matters set out must be treated as a matter of significance in the decision making process.[4] However, no particular weight should be given to any one consideration over another; and not all considerations will be relevant to a particular proposed variation.[5] The Commission's task is to balance the considerations to ensure that the modern awards meet the modern awards objective.[6]

THE AUSTRALIAN SERVICES UNION

8. The ASU's interest in the SCHDS Award comes from our coverage of the social and community services sector. The ASU is the largest union of workers in the social and community services sector. Our members predominantly work in non-government, not-for-profit organisations that support people experiencing or at the risk of experiencing crisis, disadvantage, social dislocation or marginalisation.
9. ASU members in the community and disability sector work to protect vulnerable women, babies, children, young people, men and families in their own homes, in out-of-home care, in refuges and in after care. Our members also work to support and protect those same people when they are living with violence, homeless, living in cars, on the streets, 'couch surfing', and in other dangerous circumstances. Our members provide case work, crisis intervention, referral, financial and other support for individuals of all ages and families experiencing poverty, isolation and homelessness, gambling, drug and alcohol addictions, disabilities, mental health issues, overwhelming legal and financial problems, very young parents and those who are refugees or have other settlement issues. They work with women, children, young people and men who are experiencing or escaping violence and those who are living with physical, intellectual and other disabilities and mental health issues.

THE SOCIAL AND COMMUNITY SECTOR

10. The social and community services sector is highly diverse sector. It covers a range of workers from:

[3] *Penalty Rates Case*, [1948].
[4] *Jurisdictional Issues Decision*, [31].
[5] *Four Yearly Review of Modern Awards – Annual Leave* [2015] FWCFC 3406, [19], [20] (**'Annual Leave Decision'**).
[6] *Annual Leave Decision*, [20].

a. crisis accommodation for women, children, families, young people and men;

b. sexual assault, domestic and family violence services;

c. women's domestic violence court advocacy services;

d. youth and child protection services;

e. out of home care for children and young people at risk;

f. homelessness, housing and tenancy services;

g. family support services;

h. disability services, including residential care;

i. health and mental health services;

j. alcohol, gambling and other drugs of addiction and rehabilitation services;

k. aged care services;

l. first nation people's services;

m. migrant and settlement services;

n. prisoner rehabilitation;

o. community legal services;

p. community and neighbourhood services;

q. policy, research and advocacy services; and

r. community transport.

11. These workers are almost entirely covered by the classifications in Schedule B – Classification Definitions – Social and Community Services Employees and Schedule C – Classification Definitions – Crisis Accommodation Employees of the SCHDS Award.

12. The size of the social and community services workforce is hard to measure but it is very large. Disability services, providing supports to the 4.3 million Australians with a disability,[7] is the largest area of growth. Spurred by the introduction of the National Disability Insurance Scheme, one in five new jobs created in Australia will be in disability services during the transition to the NDIS.[8] In 2017, the Productivity Commission found that the disability services workforce was growing quickly, but not fast enough to meet the overall growth target.[9]

[7] ABS 2016a. Disability, ageing and carers, Australia: first results, 2015. ABS cat. no. 4430.0.10.001. Canberra: ABS.
[8] Productivity Commission 2017. National Disability Insurance Scheme (NDIS) Costs, 2017. Canberra: Productivity Commission. ('**Productivity Commission Report**').
[9] Productivity Commission Report, p 36.

13. 80 percent of people who work in the social and community sector are women. The Fair Work Commission recognised the gendered undervaluation of work performed in this sector when it made the ERO. The case, which was successfully lead by the ASU, argued that people in the social and community sector carry out work that was identical to that carried out by employees of state and federal government, but was not equally remunerated, in large part because of the gendered nature of the community sector and also because historically workers in the community sector had not been recognised for their skills and qualifications or for the professionalism of their work.

INDUSTRIAL REGULATION OF THE SOCIAL AND COMMUNITY SECTOR

14. The social and community sector is largely award reliant. Rates of pay in the sector are almost always set by the 2012 Equal Remuneration Order ('**ERO**').[10]
15. The industry is award reliant because of the structural impediments to bargaining in an industry that is reliant on government funding. Even where cooperation and industrial power exists in organisations, employees' ability to bargain is stymied by the nature of the industry. Community sector employers are constrained by the funding arrangements that are dictated to them by governments and funding bodies. They are forced to engage in competitive tendering processes to 'win' funding contracts to continue to deliver vital services on behalf of governments, yet governments do not participate in negotiating and setting the wages and conditions of the workforce who are employed to deliver these services. While the 'employer' is the not-for-profit organisation, the effective decision maker is whichever level of government funds the organisation. This also means that employers are unable to tailor industrial conditions to their needs through bargaining.
16. The effect of the transition of the Modern Award system has been to increase the 'distance' between the social and community sector employees and their ultimate economic employer in government. Under previous industrial relations regimes, it was easier to negotiate with government funders in their respective industrial relations system. However, the Act provides that the modern award system must provide a minimum safety net for all employees in Australia with no state-based differences.[11] Since then, state and federal governments have largely accepted the rates of pay and conditions set by the Commission and set their funding accordingly.

[10] PR525485.
[11] The Act, s 154.

17. This means that the safety net is 'higher' for the social and community sector than for other industries. The SCHDS Award must include terms and conditions that would normally be dealt with through bargaining, for instance clause 25.7 – Sleepovers or clause 25.5(f) Client Cancellation, to ensure that it provides a fair and relevant safety net.

BROKEN SHIFTS

18. The ASU is seeking a variation to clause 25.6 of the SCHDS Award to provide for a 15 percent loading to be paid to employees who work broken shifts. The purpose of this allowance is to compensate employees for the disutility associated with working unusual broken shift arrangements of the Award.

The ASU's proposed variation

19. Clause 25.6 currently provides that the ordinary hours of work of social and community services employees undertaking disability services work and home care employees do not need to be worked continuously. It states:

> **25.6 Broken Shifts**
>
> *This clause only applies to social and community services employees when undertaking disability services work and home care employees.*
>
> ***(a)** A broken shift means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more irrthan 12 hours.*
>
> ***(b)** Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.*
>
> ***(c)** All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.*
>
> ***(d)** An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.*

20. The ASU proposes to vary clause 25.6 by deleting clause 25.6(b) and inserting a new subclause providing for a 15 per cent loading to be paid on the employees ordinary rates of pay, as follows:

> ***25.6 Broken shifts***
>
> *This clause only applies to social and community services employees when undertaking disability services work and home care employees.*
>
> ***(a)*** *A broken shift means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more that 12 hours.*
>
> ***(b)*** *An employee who works a broken shift will receive:*
>
> > ***(i)*** *Ordinary pay plus a loading of 15% of their ordinary rate of pay for each hour from the commencement of the shift to the conclusion of the shift inclusive of all breaks; and*
> >
> > ***(ii)*** *penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.*
>
> ***(c)*** *All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.*
>
> ***(d)*** *An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.*

21. Clause 25.6 does not provide a fair and relevant safety net of minimum terms and conditions. The clause offers an employer exceptional flexibility to roster a disability services or home care employee in broken engagements, without significant restriction or any compensation. Under clause 25.6:
    a. ordinary hours do not need to be worked continuously;
    b. there are no restrictions on the number of breaks in work;
    c. there is no minimum engagement;
    d. there is no requirement for the employee to agree to work broken shifts, so broken shifts may be rostered at the discretion of the employer;
    e. shift allowances are determined by the finishing time of the broken shift; and

f. no allowance is paid to compensate for the disability associated with working a broken shift.

22. Employees do not receive any additional remuneration to compensate for this extreme variability in rostering.

23. Further, the SCHDS Award has the following unique features which provide employers with significant flexibility:

a. the roster of part-time employees may be changed at any time under clause 25.5 (d) (iii) which provides that the restrictions on changing the roster do not apply to mutually agreed additional hours worked by part-time employees;

b. part-time employees are not paid overtime until they work 10 hours in a day or 38 hours in a week or 79 hours in a fortnight;[12]

c. there is no minimum engagement for part-time or full-time employees;

d. employers are not required to roster meal breaks if they require an employee to have a meal with a client or clients;[13]
