e. casual disability services employees are only entitled to a 2 hour minimum engagement;[14]

f. casual home care employees are only entitled to a 1 hour minimum engagement;[15] and

g. if a client cancels an appointment, a home care employee's roster can be changed if the client is notified that their roster is being changed because of a client cancellation before 5.00 PM the day before, they will not be paid for the shift if they are notified about the client cancellation after that time, they will only be paid for the minimum specified hours, an employee can also be directed to work make up time sometime in that roster period or the next;[16]

24. The combined effect of clause 25.6 and the other unique features of the SCHDS Award is that an employee may be rostered to work broken shifts with little restriction on how those hours may be worked. This permits employers to roster employees in highly irregular and unsociable patterns of work.

[12] SCHDS Award, Cl 28.1(b).
[13] SCHDS Award, Cl 27.1(c).
[14] SCHDS Award, Cl 10.4(c)(iii).
[15] SCHDS Award, Cl 10.4(c)(ii).
[16] SCHDS Award, cl 25.5(f).

Lay evidence

25. The ASU's lay witness evidence will show that employees working broken shifts experience a wide range of disabilities. The ASU's members report a variety of disabilities associated with working broken shifts under clause 25.6. The evidence of Augustino Encabo and Richard Rathbone will show that working broken shifts spreads their working day over a long period of time, causing fatigue and interfering with family, social and community engagement. The witnesses report both relatively short and relatively long unpaid periods between engagements. Both cause significant disutility.
26. Further, short breaks between engagements are often rostered to avoid paying for time spent travelling between clients at different locations by engaging employees only for the period of time spent directly servicing a client. Each witness explains that these shift patterns cause them significant disutility. Both employees report that they are required to eat meals with their clients and are not rostered for meal breaks.
27. Each witness will also show that low paid social and community sector employees need to maximise their incomes by working additional hours and at times that attract a penalty. Further, the witness evidence will show that disability services employees do not refuse additional hours, even when this is inconvenient to them, because they require the additional income and are worried that additional hours will not be offered to them in the future if they refuse.
28. Each witness explains that the low pay and irregular working hours in the industry have caused them to consider leaving the disability services industry. This is undesirable when the disability workforce is growing so rapidly and struggling to attract staff.

Expert evidence

29. We also rely on the Report of Olav Muurlink entitled '*Predictability and control in working schedules*' filed in the Part-time Work Common Issue on 14 July 2016.[17] We also rely on paragraphs 59 top 71 of the joint submissions ASU, Health Services Union ('**HSU**') and United Voice filed in the Part-Time Work Common Issue on 11 November 2016.
30. Dr Muurlink's evidence will demonstrate that working irregular and unsystematic hours, as is permitted by clause 25.6, has a negative effect on the physical and psychological health, and on the social life, of workers and their families and the people they care for.

[17] AM2014/196

Regulation of continuous work in other modern awards

31. The disutility of working broken shifts is recognised by the modern award system generally. The majority of modern awards do not permit broken shifts. It appears that the general position is that ordinary hours of work are worked continuously. Only 18 modern awards provide permit employers to engage employees on 'broken' or 'split' shifts.
32. The SCHDS Award provisions are unique in the flexibility they offer the employer almost complete freedom to roster broken engagements, they do not provide the employee any right to refuse broken shifts, and they do not provide any additional remuneration. Attached at **Annexure A** is a summary of the broken shift provisions in other modern awards.
33. The ASU's variation would ensure that employees are properly compensated for the disability associated with working a broken shift under clause 25.6 without limiting any flexibility for the employer. This will preserve the employer's business models, but will also increase the incentive to work in the disability services. This approach consistent with the decision of the Commission in the *Penalty Rates Decision*, which found that deterrence was not a relevant consideration in setting a penalty rate. Instead, penalties should be set at a rate that compensates for the disutility associated with the work.
34. The ASU notes that the HSU and United Voice have also proposed variations to clause 25.6. The other unions' claims deal with the same problems addressed by the ASU claim but seek to fix the problem in different ways. Rather than providing a loading to compensate for the disability arising from the clause, they seek to impose restrictions on how broken shifts may be worked. If the Commission is not minded to make the variations proposed by the ASU, we would support either one of the variations proposed by the other unions. The other union's proposals would bring the SCHDS Award into line with the standard set by most other modern awards.

COMMUNITY LANGUAGE ALLOWANCE

35. The ASU has proposed a variation to the SCHDS Award to provide a community language allowance Culturally and Linguistically Appropriate Services ('**CLA**') to remunerate employees when they use a language other than English in the course of their duties.

The proposed variation

36. This variation would:

a. Recognise and endorse the fundamental principles of the ERO which recognise equal pay for equal work in the social and community services sector
b. Better position community sector organisations to meet the policy challenge of ensuring access and equity for Australia's culturally and linguistically diverse population
c. Assist in the provision of the highest standard of effective professional communication, programmes and services that are responsive to the needs of all Australians
d. Be an efficient and effective use of limited resources in the community sector, allowing less reliance upon external translators and interpreters
e. Be capacity building for the community sector workforce, which is currently the fastest growing sector in the country.

37. Australia is one of the most diverse societies in the world. Almost one in four Australian residents were born outside of Australia and many more are first or second generation Australians, the children and grandchildren of recently arrived migrants and refugees. These wide varieties of backgrounds, together with the culture of Indigenous Australia, have helped create a uniquely Australian identity. Many people in our society speak one or more languages other than English and use those languages in their working lives.
38. The ASU's proposed variation promotes flexible modern work practises and the efficient and productive performance of work, by attracting skilled staff to the social and community sector and thus reducing the costs associated with the sector's reliance on interpreters. It addresses the needs of the low paid by providing additional remuneration to low paid workers and promotes equal remuneration for work of equal value. Unless the award is varied in the manner proposed by the ASU, it will not provide a fair and relevant safety net.

Language skills are vital to the industry, but are not remunerated

39. The ability to communicate in more than one language is a skill that is highly sought after in potential employees in the social and community sector. This skill is often enhanced by a deep understanding of cultural issues associated with the language(s) in which the employee is proficient. Because of the nature of the work that is done by employees in the community sector, it is therefore very common for organisations to seek to employ people who are bilingual, even if the advertised position description to be filled does not specify a requirement for this skill. The use of language skills is not contemplated

by the classifications of the award. It is therefore not compensated for in the base rates of pay provided by the Award and ERO.

40. The evidence of Ruchita and Nadia Saleh will describe the important of using community languages in the social and community sector.

Bilingual workers are valued by employers

41. Employers in the social and community sector actively seek out bi-lingual workers to ensure that they can service their diverse communities. Engaging bilingual workers is more efficient and cost-effective than using translation services or fee-for-service interpreters. However, these valuable skills are not rewarded by employers who are constrained by their funding arrangements. These funding arrangements are set by reference to the modern award.
42. The value of bilingual workers in the community sector is recognised as providing a superior professional service to clients and the community, particularly where a community organisation works with complex and traumatised clients and communities. In these instances, the establishment of a professional counselling and/or trusting relationship is essential. Particular issues arise in regional and remote communities and in small or isolated communities where clients and the community may not trust 'outsiders' or there may be political or other cultural issues that mean an interpreter will be rejected by the client.
43. Community organisations make extensive use of professional interpreters and translators to assist people who find themselves unable to communicate effectively with essential community services. These interpreters and translators are professionally qualified and adhere to professional standards and guidelines. Most community organisation access interpreters through external interpreting services or by engaging individual interpreters on a fee for service or casual basis.
44. The evidence of Nadia Saleh and Lou Bacchiela will show that bilingual workers are sought after by social and community sector employers because they are the most efficient way to deliver services to culturally and linguistically diverse communities.

Alternatives to using bilingual workers

45. While there are times where professional interpreters and translators must be used, it is a far more efficient for social and community sector organisations to utilise bilingual staff for much of their work. Interpreters are expensive. The availability of appropriate bilingual workers in an organisation means

that funds used to pay for interpreters could be directed towards the delivery of programs to the community. Further, it is often time consuming, or even impossible, to arrange a professional interpreter for a meeting or appointment.

46. In many circumstances it is undesirable to use an interpreter, because they are not usually specially trained social and community workers. They often lack the qualifications and experience required for social and community sector work. Sometimes this also means that interpreters often lack the commitment to the values and principles of all the organisations that employ them. Bilingual social and community service workers will hold appropriate qualifications and have an understanding and commitment to the values of their organisation.
47. Further, while interpreters are well trained and qualified in their own profession, they cannot reasonably be expected to have the same qualifications and experience as professional counsellors and others who often work with highly complex and traumatised clients. Greater use of bilingual professional community workers would mean that professional interpreters and translators would not be forced to deal with the high level of traumatic work that is currently undertaken, for which they are unsuited.
48. Nadlia Saleh and Lou Bacchiella report that the alternative to bilingual workers is to use fee for service interpreters or translating services. While they are suitable in some circumstances, interpreters are poorly suited to casework. The costs of interpreters are significant and that government puts the burden of funding interpreters on the service.
49. In the community sector, it is also very common for organisations to find ways to work around the inconvenience and expense of using interpreters. This is often because it is time consuming, inconvenient and expensive to book and pay for a professional person to assist. It may also be because the client declines or refuses to utilise an interpreter. This could be for many reasons, including perceived political or confidentiality issues which often arise in some communities.
50. It is common for family and other community members to be asked to assist clients. Sometimes, unqualified employees who speak a required language, such as administrative staff, are asked to interpret. These arrangements, where untrained and unqualified people are asked to interpret for clients who may be experiencing serious trauma or other very personal and sensitive issues can be very traumatic for both the client and the worker concerned. This is an entirely inappropriate arrangement, which has negative outcomes for both clients and their informal translators.

51. Nadiah Saleh and Ruchita will give evidence regarding the issues with using community and family members as translators. Lou Bacchiella will give evidence about his attempts to limit use of unqualified staff for casework.

Capacity building in the Social and community sector

52. Employers in the social and community sector report difficult finding adequately skilled staff. The evidence of Lou Bacchiella will show that employers require qualified staff with the relevant community language skills for the efficient running of their organisation.
53. The community sector, which includes aged care services and disability services, is the fastest growing sector in the Australian workforce. Providing a CLAS system in the community sector equal to that paid to government employees would enhance opportunities for the sector to attract the best possible employees as potential employees make a decision whether to work in the community sector or for government. Payment of a CLAS would also be capacity building for the community sector as current and potential bilingual employees undertake additional training and skills development that would enable them to be eligible for payment of the community languages allowance.
54. Lou Bacchiella will give evidence that he has trouble recruiting and retaining staff because of competition with government. Government can offer better pay and conditions, including a community language allowance. Lou Bacchiella will also give evidence that the reason he cannot offer his staff additional remuneration for using their community language skills because he is not funded to offer anything other than the modern award pay and conditions. He also gives evidence that if the SCHDS Award were varied, his funders would be obliged to adjust their funding to reflect the change.
55. Being Culturally and Linguistically Diverse is a barrier to accessing essential services as the evidence of Lou Bachiella demonstrates. One such service is the National Disabilty Insurance Scheme ("NDIS") . Workers in the NDIS are covered by the SCHDS Award. A report commissioned by Family and Community Services ("FACS") and Aging Disability and Home Care ("ADHC") and completed by Settlement Services International makes clear that the lives of people with a disability would be improved if there more access to community language speakers in the NDIS, both at the assessment stage and support stage. It is acknowledged in the report that there is a lack of cultural competency within organisations that provide support under the NDIS (at 4.2 pg 36). Lou Bachiella's evidence confirms that attracting suitably qualified staff would be easier if there was financial enticement for workers with this skill set see **Annexure B**.

CONCLUSION

56. The ASU's proposed variation is necessary for the SCHDS Award to achieve the modern awards objective. Community language skills are essential to the function of the industry. However, qualified and skilled workers are not attracted to the industry because of the unfavourable conditions and low pay. The majority of the industry relies on the SCHDS Award to set their pay and conditions. Employers cannot offer this entitlement through bargaining or individual contracts, because the labour cost component of their funding is calculated based on the conditions of the SCHDS Award.

ANNEXURE A

	Award	General Position	Notes

1.	AGED CARE	Clause 59	• Only where agreed
			• Only for part time and casual workers
			• Overtime and penalties may be payable :
			  • not *because* its a broken shift, only because of the hours that might be worked as part of it; and, separately
			  • if the span of hours over the broken shift is more than 12
			• If there are broken shifts 2 days in a row, there must be 10 hours between the end of one and the start of the next

2.	SECURITY SERVICES	Clause 64 defines and permits it, clauses 33 & 39 provide an allowance	• Can only be broken in two • Must be at least 3 working hours on *each* side of the break • An allowance is payable
3.	EDUCATIONAL SERVICES (SCHOOLS) GENERAL STAFF	Clause 68 defines, permits and prescribes entitlements. Clause 60, 66 & 69 create consequential exceptions to other entitlements/restrictions.	• Can only be broken in two • Employees (other than casuals) entitled to minimum pay of 2 hours on *each* side of the break • 15% penalty rate payable (but not for casuals)

	Award	General Position	Notes
			• Overtime is payable if the span of hours over the broken shift is more than 12
4.	CLEANING SERVICES	Clause 34 defines and creates an allowance. Clause 71 allocates tea breaks.	• Can only be broken in two • Break between periods of work must be at least an hour • (subject to the above) Spread of hours must be no more than 13 • allowance is payable • entitled to paid morning and afternoon tea breaks
5.	FITNESS INDUSTRY	Clause 51 defines and creates conditions. Some conditions repeated in clause 14. Clause 33 creates an allowance.	• Can only be broken in two • Total length must be at least three hours (e.g. 1.5 at the start and 1.5 at the end) • Span of hours must be 12 or less • An allowance is payable
6.	SOCIAL, COMMUNITY, HOME CARE & DISABILITY SERVICES	Clause 81 defines and creates conditions.	• Only applicable to some categories of workers covered by the award, and only when some are performing particular kinds of work • Unlimited number of breaks in the shift (e.g. can be more than 2 working periods) • Span of hours must be not more than 12, if it is then payable at double time

	Award	General Position	Notes
			• Other penalties & overtime might be available, not *because* it is broken shift but because of when the hours are worked. • 10 hours break between broken shifts on successive days
7.	CHILDREN'S SERVICES	Clause 35 vaguely defines and creates an allowance	• Allowance is payable "where an employee works two separate shifts in a day" • Note the concept of working two separate shifts in a day is at odds with the description of ordinary hours given in clause 53.1
8.	ABORGINAL COMUNITY CONTROLLED HEALTH SERVICES	Undefined, but clause 57 provides some overtime for broken shifts and presumes they may be rostered.	• Time and half if the period extends beyond 9 hours • Double time if the period extends beyond 12 hours
9.	PASSENGER VEHICLE TRANSPORTATION	Defined in clause 3.1. Permitted in clause 51.4. Allowance for some employee in clause 51.5. Minimum engagement for some employees.	• Only two portions of work permitted • Unpaid break of more than 60 minutes is part of definition. • Definition interacts with spreads of hours permitted in State & Territory legislation. • Waiting time allowance for some employees • Appears that only casuals

	Award	General Position	Notes
			transporting schoolkids gets minimum engagement payment (2 hours) either side
10.	REGISTERED AND LICENSED CLUBS	Not defined. Allowance payable to some employees.	• Allowance payable (but nor for casual employees, or some managerial employees on salaries)
11.	HOSPITALITY INDUSTRY GENERAL	Not defined. Allowance payable, overtime may be payable	• Allowance payable, depending on the length of the break between shifts • Casuals not entitled to the allowance • Spread of hours can be no greater than 12 (but these restrictions don't apply to casual employees) or else overtime is payable.
12.	MINING INDUSTRY	Not defined. Allowance available for some.	• Clause 43(ii) provides an allowance for some employees. • Note that shiftworkers must work "consecutive" hours, the word absent in the provision relating to non-shiftworkers.
13.	RESTAURANT INDUSTRY	Not defined. An allowance payable, but not to casual employees. Overtime entitlements might apply to Full Time workers as well, but this is unclear.	• No restriction on how many breaks in the work day • Unclear whether for full timers there is an outright probhibition on the spread of a broken shift being over 12 hours, or whether

	Award	General Position	Notes
			this attracts overtime (interplay between 60 & 65(a)). • Overtime might come from rest period prescriptions (but this happens whether or not there is a broken shift).
14.	ANIMAL CARE AND VETINARY SERVICES	Not defined. An allowance is payable	• Allowance contemplates shifts being broken into more than two, with allowance payable for all but the first shift. • Hours of work clause for dayworkers says that hours must be worked continuously. Shiftwork clause is silent on the issue. • Predecessor NSW NAPSA had a separate category of workers called “broken shift workers”.
15.	HIGHER EDUCATION INDUSTRY (GENERAL STAFF)	Not defined, but an allowance is payable to some employees. Rostering provisions very flexible, with only real restriction being the span of hours.	• Allowance is payable to the only categories of workers (outside of shiftwork who are permitted to be rostered for ordinary hours on weekends.
16.	BUILDING AND CONSTRUCTION INDUSTRY (GENERAL) ON SITE	Specific definition, appears to relate to an entirely different issue arsing from shiftwork	• Penalty rates are payable for some shiftworkers in some sub-sectors, but seems to deal with situations where insufficient work is provided.
17.	SUGAR INDUSTRY	Not defined. For non-shiftworkers,	• Appears prohibited for non-

	Award	General Position	Notes
		ordinary hours are required to be worked continuously. Ordinary hours for shiftworkers prescribe only 1 in each 24 hours, else overtime is payable. Broken shifts prohibited for shiftwork during the "crushing season". Silent re the "slack season"	shiftworkers • Attracts overtime for shiftworkers, but not permitted at all for shiftwork during the "crushing season".
18.	MEDICAL PRACTITIONERS	Not defined. Prohibited for one class of employees, silent re others. No positive stipulation of "consecutive" or "continuous" hours for any class of employee.	• Prohibited in relation to doctors in training. • Otherwise silent

AGED CARE AWARD

59. Broken shifts
With respect to broken shifts:
(a) Broken shift for the purposes of this clause means a shift worked by a casual or permanent part-time employee that includes breaks (other than a meal break) totalling not more than four hours and where the span of hours is not more than 12 hours.
[22.8(b) varied by PR995161 ppc 23Mar10]
(b) A broken shift may be worked where there is mutual agreement between the employer and employee to work the broken shift.
[22.8(c) varied by PR994419 from 01Jan10]
(c) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clauses 65—Overtime penalty rates and 73—Shiftwork, with shift allowances being determined by the commencing time of the broken shift.
(d) All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.
(e) An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

SECURITY SERVICES AWARD

33. Wage related Allowances

Allowance	Payable	% of standard rate
Broken Shift	Per broken shift	1.62

39. Broken shift allowance
A broken shift allowance is payable to an employee who is required to work a rostered shift in two periods of duty (excluding crib breaks).

64. Broken shifts broken
Employees may be rostered to work ordinary hours in up to two periods of duty, exclusive of crib breaks, per day, with a minimum payment of three hours for each period of duty.

EDUCATIONAL SERVICES (SCHOOLS) GENERAL STAFF

60. Breaks between periods of duty
(a) An employee will be entitled to a minimum break of 10 consecutive hours between the end of one period of duty and the beginning of the next. This applies in relation to both ordinary hours and where overtime is worked.
(b) Where an employer requires an employee to continue or resume work without having a 10-hour break off duty, the employee is entitled to be absent from duty without loss of pay until a 10-hour break has been taken, or be paid at 200% of the ordinary rate of pay until released from duty.
(c) The entitlements in clauses 60.1(a) and (b) do not apply to:
(i) a boarding supervision services employee, where the periods of duty are concurrent with a sleepover; [22.5(c)(ii) substituted by PR575283]
(ii) an employee who is provided with accommodation on the employer's premises or in the vicinity of the employer's premises at no cost to the employee;
(iii) an employee who is attending a school camp or excursion; or
(iv) an employee working a broken shift.

65. Shiftwork
66. Ordinary hours for shiftwork
The ordinary hours for shiftwork will:
(a) be worked continuously each shift (except for broken shifts and meal breaks);
(b) not exceed 10 hours, inclusive of a meal break in any single shift; and
(c) be rostered in accordance with clause 70.

68. Broken shifts
(a) An employee may be rostered to work ordinary hours in a broken shift, that is a rostered shift in two periods of duty, exclusive of breaks, per day, with a minimum payment (other than for a casual) of two hours for each period of duty.
(b) An employee, other than a casual, required to work a broken shift will be paid at the ordinary time rate plus a penalty of 15% of the ordinary time rate.
(c) The maximum spread between the start of the first period of duty and cease of the second period of duty for a broken shift is 12 hours. Any hours in excess of this 12 hour spread will be paid for as overtime.

69. The provisions of clause 68.1(c) do not apply to a boarding supervision services employee who is provided with reasonable accommodation including living quarters, fuel and light, and available to the employee for their exclusive use for 52 weeks of the year, at no cost to the employee.

CLEANING SERVICES

34. Broken shift allowance
[17.1 substituted by PR543432 ppc 21Oct13]
An employee who works a broken shift will be paid an allowance of 0.458% of the standard rate per day up to a maximum of 2.29% of the standard rate per week. For the purposes of this award a broken shift is a shift where an employee works in two separate periods of duty on any day within a maximum spread of thirteen 13 hours and where the break between periods exceeds one hour.

71. Non-shift workers
[26.2 replaced by PR502506 ppc 06Oct10]
Non–shift workers are entitled to an unpaid meal break of not less than 30 minutes, and not more than one hour. An employee will not be required to work for more than four and one half hours without a meal break, except in cases of emergency, when the time may be extended to five hours. All day workers and broken shift workers are entitled to a 10 minute paid morning tea break and a 10 minute paid afternoon tea break.

FITNESS INDUSTRY

14. Part-time employment
14.1 A part-time employee is an employee who:
(a) works less than the full-time hours of 38 hours per week;
(b) has reasonably predictable hours of work; and
(c) receives, on a pro rata basis, equivalent pay and conditions to those of full-time employees who do the same kind of work.
14.2 At the time of engagement the employer and the part-time employee will agree in writing on a regular pattern of work, specifying at least the hours worked each day, which days of the week the employee will work and the actual starting and finishing times each day.
14.3 Any agreed variation to the hours of work will be recorded in writing.
14.4 An employer is required to roster a part-time employee for a minimum of three consecutive hours on a shift or a minimum of three hours, exclusive of meal breaks, on a broken shift.
14.5 An employee who does not meet the definition of a part-time employee and who is not a full-time employee will be paid as a casual employee in accordance with clause 15—Casual employment.
14.6 All time worked in excess of the hours as agreed under clause 14.2 or varied under clause 14.3 will be overtime and paid for at the rates prescribed in clause 57—Overtime and penalty rates.
14.7 A part-time employee employed under the provisions of this clause must be paid for ordinary hours worked at the rate of 1/38th of the weekly rate prescribed in clause 24—Minimum wages for the work performed.

33. Broken shift allowance
[18.4 varied by PR998115, PR523076, PR536879, PR551802 ppc 01Jul14]
An employee working a rostered broken shift must be paid per day 1.7% of the standard rate extra and for excess fares $1.89 extra.

51. Ordinary hours of work and rostering

51.1 The ordinary hours of work for a full-time employee must not exceed an average of 38 hours per week over a period of four weeks. Such hours may be worked over any five days of the week, between the hours of:
(a) 5.00 am and 11.00 pm, Monday to Friday; and
(b) 6.00 am and 9.00 pm, Saturday and Sunday.
51.2 The ordinary hours of work for a full-time or part-time employee must not exceed 10 hours on any one day.
51.3 An employee may be rostered to work a broken shift on any day provided that:
(a) the shift is not broken into more than two parts;
(b) the total length of the shift is not less than three hours, exclusive of meal breaks; and
(c) the span of hours from the start of the first part of the shift to the end of the second part of the shift is not more than 12 hours.
broken

SOCIAL, COMMUNITY, HOME CARE & DISABILITY SERVICES

81. Broken shifts
[25.6 varied by PR995399 ppc 26Mar10]
This clause only applies to social and community services employees when undertaking disability services work and home care employees.
(a) A broken shift means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.
[25.6(b) substituted by PR531544 ppc 21Nov12]
(b) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 99—Shiftwork, with shift allowances being determined by the finishing time of the broken shift.
(c) All work performed beyond the maximum span of 12 hours for a broken shift will be paid at double time.
(d) An employee must receive a minimum break of 10 hours between broken shifts rostered on successive days.

CHILDREN'S SERVICES

35. Broken shift allowance
Where an employee works two separate shifts in a day, they will be paid an allowance of 1.91% of the standard rate per day for each day on which a broken shift is worked.

ABORIGINAL COMMUNUTY CONTROLLED HEALTH SERVICES

57. Overtime rates
57.1 The following overtime rates will be paid for all work done:
(a) in excess of the number of hours fixed as a day's, a week's or a fortnight's work as the case may be—time and a half for the first two hours and double time thereafter;
(b) outside the span of hours in clause 53.1—time and a half for the first two hours and double time thereafter;
(c) outside a spread of nine hours from the time of commencing work by an employee rostered to work broken shifts—time and a half; and
(d) outside a spread of 12 hours from the time of commencing work by an employee rostered to work broken shifts—double time.

PASSENGER VEHICLE TRANSPORTATION

3.1 In this award, unless the contrary intention appears:
…
broken shift means a shift with a spread of hours permitted under the relevant State or Territory driving hours legislation and with an unpaid break of greater than 60 minutes between the two portions of work

16. Casual employment
(a) A casual employee is an employee engaged as such and paid by the hour.
(b) An employer must wherever practicable notify a casual employee if their services are not required the next working day.
(c) A casual employee while working ordinary hours must be paid on an hourly basis 1/38th of the appropriate weekly wage rate prescribed by the award, plus 25% of ordinary time earnings for the work performed.
[10.5(d) corrected by PR598965 ppc 01Jan18]
(d) A casual employee is to be paid a minimum payment of three hours pay for each shift.
[10.5(e) inserted by PR598502 ppc 01Jan18]
(e) A casual employee solely engaged for the purpose of transportation of school children to and from school may be rostered to perform one engagement or two separate engagements per day, with a minimum payment of two hours for each separate engagement.

51.4 All known rostered duty, which may include broken shifts and days off, must be displayed at least seven days prior to the commencement of such duty. Changes to the roster, including alterations to days off, must be displayed at least 24 hours in advance and the employee must be notified. Any changes for which less than 24 hours' notice has been given must be agreed to by the employee.
[21.5 substituted by PR538349 ppc 01Aug13]

51.5 An employee who is engaged as a coach driver or a bus driver on a single day charter may have a rostered shift divided into two working periods with no requirement to return to the depot during a rostered shift. Such an employee will be paid waiting time at the rate of 50% of the ordinary rate of pay plus any

applicable penalty or loading, provided that the waiting time so paid for will not be taken into account in the computation of hours for overtime purposes.

REGISTERED AND LICENSED CLUBS

66. Allowance for disabilities associated with the performance of particular tasks or work in particular conditions or locations—broken periods of work
An employee (other than casual) who is required to work any of their ordinary hours on any day in more than one period of employment, other than for meal breaks as prescribed in accordance with the provisions of clause 77—Meal breaks, will be paid an allowance of 0.4% of the standard weekly rate per day, for such broken work period worked.

HOSPITALITY INDUSTRY GENERAL

63. Broken periods of work
[21.3(a) substituted by PR994455 from 01Jan10]
Employees other than casuals who have a broken work day must receive an additional allowance as follows:
where the time between periods of work is two hours and up to three hours—an allowance per day equal to 0.33% of the standard weekly rate; or
where the time between periods of work is more than three hours—an allowance per day equal to 0.5% of the standard weekly rate.

98. Entitlement to overtime rates
(a) A full-time employee is paid at overtime rates for any work done outside of the hours set out in clause 80—Ordinary hours of work.
[33.2(b) substituted by PR598473 ppc 01Jan18]
(b) A part-time employee is paid at overtime rates in the circumstances specified in clause 15.8.

82. Part-time employees
[29.2 varied by PR598473 ppc 01Jan18]
A part-time employee's rostered hours of work under clause 15.5 must meet the following conditions:
(a) A minimum of three hours and a maximum of 11 and a half hours may be worked on any one day. The daily minimum and maximum hours are exclusive of meal break intervals.
(a) An employee cannot be rostered to work for more than 10 hours per day on more than three consecutive days without a break of at least 48 hours immediately following.
(b) No more than eight days of more than 10 hours may be worked in a four week period.
(c) Where broken shifts are worked the spread of hours can be no greater than 12 hours per day.

15. Part-time employment
…
15.8 All time worked in excess of:
(a) 38 hours per week or, where the employee works in accordance with a roster, an average of 38 hours per week over the roster cycle; or
(b) the maximum hours limitations specified in clause 82; or
(c) the employee's rostered hours;
will be overtime and paid for at the rates prescribed in clause 99—Overtime rates.

80. Ordinary hours of work (Full-time and part-time employees)
[29–Ordinary hours of work renamed as Ordinary hours of work (Full-time and part-time employees) and substituted by PR540249; corrected by PR540578; varied by PR598473]
81. Full-time employees
(a) The average of 38 hours per week is to be worked in one of the following ways:
a 19 day month, of eight hours per day;
four days of eight hours and one day of six hours;
four days of nine and a half hours per day;
five days of seven hours and 36 minutes per day;
152 hours each four week period with a minimum of eight days off each four week period;
160 hours each four week period with a minimum of eight days off each four week period plus a rostered day off;
any combination of the above.
(b) The arrangement for working the average of 38 hours per week is to be agreed between the employer and the employee from the alternatives in clause 81(a) and must meet the following conditions:
(i) A minimum of six hours and a maximum of 11 and a half hours may be worked on any one day. The daily minimum and maximum hours are exclusive of meal break intervals.
(ii) An employee cannot be rostered to work for more than 10 hours per day on more than three consecutive days without a break of at least 48 hours immediately following.
(iii) No more than eight days of more than 10 hours may be worked in a four week period.
(iv) Where broken shifts are worked the spread of hours can be no greater than 12 hours per day.

MINING INDUSTRY

43. Drilling, prospecting and exploration allowances
[14.3(d) renumbered as 14.3(c) by PR561478 ppc 05Mar15]
The following allowances apply only to employees who are required to perform drilling, prospecting and exploration duties.
….

(i) Employees who are classified as cooks and cooks assistants will be paid an all purpose allowance of 1.07% of the standard rate per week, whilst they are required by their employer to work broken shifts.

55. Ordinary hours of work
[Varied by PR992071 from 01Jan10; 17 renumbered as 18 by PR545968 ppc 01Jan14]
55.1 A full-time employee’s ordinary hours of work will be an average of 38 hours per week. The ordinary hours of part-time and casual employees will be in accordance with clause 14—Types of employment.

56. Employees other than shiftworkers
(a) Subject to clause 56.1(c) employees, other than shiftworkers, may be required to work up to 10 ordinary hours per day, between the hours of 6.00 am and 6.00 pm, Monday to Sunday.
(b) An employer may agree with a majority of affected employees to alter the spread of hours in clause 56.1(a) and/or to increase the ordinary hours per day to a maximum of 12.

(c) Where employees were required to work 12 hour shifts under roster and working hours arrangements which were in place before 1 January 2010 those arrangements may continue to operate in respect to both existing employees and new employees.

57. Shiftworkers
(a) Subject to clause 57.1(c) shiftworkers may be required to work a shift of up to 10 **consecutive** ordinary hours (including meal breaks). Shiftwork may be worked on any or all days of the week.
(b) An employer may agree with a majority of affected employees to alter the spread of hours in clause 57.1(a) and/or to increase the ordinary hours per day to a maximum of 12.
(c) Where employees were required to work 12 hour shifts under roster and working hours arrangements which were in place before 1 January 2010 those arrangements may continue to operate in respect to both existing employees and new employees.

RESTAURANT INDUSTRY

43. Split shift allowance
[24.2 substituted by PR994479 from 01Jan10]
Full-time and part-time employees who have a broken work day will receive an additional allowance of 0.5% of the weekly standard rate for each separate work period of two hours or more.

60. Spread of hours
Where broken shifts are worked the spread of hours can be no greater than 12 hours per day.

61. Minimum break between shift
The roster for all employees other than casuals will provide for a minimum 10 hour break between the finish of ordinary hours on one day and the commencement of ordinary hours on the following day. In the case of changeover of rosters, eight hours will be substituted for 10 hours.

59. Hours of work
59.1 The hours of work of a full-time employee are an average of 38 per week over a period of no more than four weeks.
59.2 The arrangement of ordinary hours must meet the following conditions:
…
(d) an employee must be given a minimum break of 10 hours between the finish of ordinary hours of work on one day and the commencement of ordinary hours of work on the next day. In the case of a changeover of rosters the minimum break must be eight hours;

64. Overtime
[Varied by PR585805, PR598487]
65. Requirement to pay overtime rates
[33.1 substituted by PR598487 ppc 01Jan18]
(a) Full-time employees shall be paid at overtime rates for any work done outside of the **spread of hours** or rostered hours set out in clause 59—Hours of work.
(b) Part-time employees shall be paid at overtime rates in the circumstances specified in clause 15.8.
(c) Casual employees shall be paid at overtime rates in the circumstances specified in clause 16.5.

15. Part-time employment
….
15.8 All time worked in excess of:
(a) 38 hours per week or, where the employee works in accordance with a roster, an average of 38 hours per week over the roster cycle; or
(b) the maximum hours limitations specified in clause 59.2; or
(c) the employee's rostered hours;
will be overtime and paid for at the rates prescribed in clause 66—Overtime rates.

ANIMAL CARE AND VETINARY SERVICES

39. Broken shift allowance
[16.2(b) substituted by PR539252 ppc 22Jul13]
Where an employee is required to carry out their ordinary hours of duty in more than one shift, the employee will be paid 1.60% of the standard rate, per shift so worked. This is to be paid only once per 24 hour period.

62. Span of hours—day work
(a) The ordinary hours of work will be between 6.00 am and 9.00 pm Monday to Sunday.
(b) The ordinary hours of work are to be worked continuously, except for meal breaks, at the discretion of the employer. The spread of hours may be altered by agreement between the employer and the individual employee.

HIGHER EDUCATION INDUSTRY (GENERAL STAFF)

51. Ordinary hours and spread of ordinary hours
Ordinary hours may be worked in a manner agreed over a four week cycle.

Category of staff employees	**Ordinary hours**	**Spread of hours (non shiftworkers)**
…	…	…
Catering and retail staff	38	6.00 am – 7.30 pm Monday – Sunday
Security staff	38	6.00 am – 6.00 pm Monday – Sunday

Schedule K —Allowances
….
The following additional allowances apply to certain trades and services staff only as specified in the following table, subject to the terms in the table:

Allowance	Staff Category	Rate	Application
…	…	…	…
Broken shift	Catering and retail staff; and security staff	0.28% of SR per day to a maximum of 1.38% of SR per week	When an employee is required to work shift in two periods of duty

BUILDING AND CONSTRUCTION INDUSTRY (GENERAL) ON SITE

200. Shiftwork
[34.1(a) substituted by PR538792 ppc 15Jul13]
201. General building and construction and metal and engineering construction sectors
(a) Definitions
For the purposes of this clause:
afternoon shift means a shift commencing at or after 1.00 pm and before 3.00 pm
night shift means a shift commencing at or after 3.00 pm and before 11.00 pm
morning shift means a shift commencing at or after 4.30 am and before 6.00 am
early afternoon shift means a shift commencing on or after 11.00 am and before 1.00 pm.
[34.1(b) substituted by PR538792 ppc 15Jul13]
(b) When an employee is employed continuously (inclusive of public holidays) for five shifts Monday to Friday, the following rates will apply:
(i) afternoon and night shift— ordinary time hourly rate plus 50%;
(ii) morning and early afternoon shifts— ordinary time hourly rate plus 25%.
(c) Where a job finishes after proceeding on shiftwork for more than five consecutive days or the employer terminates the employee's services during the week, the employee must be paid at the rate specified in clause 201.1(b) for the time actually worked.
(d) In the case of broken shifts (i.e. less than 38 ordinary hours worked over five consecutive shifts Monday to Friday) the rates prescribed will be time and a half for the first two hours and double time thereafter.
[34.1(e) substituted by PR538792 ppc 15Jul13]
…….

SUGAR INDUSTRY

(in the section dealing with workers other than shiftworkers)
105. Altering spread of hours
The ordinary hours of work are to be worked continuously, except for meal breaks, at the discretion of the employer. The spread of hours may be altered by up to one hour at either end of the spread by agreement between an employer and the majority of employees concerned or, in appropriate circumstances, between the employer and an individual employee.

(in the section dealing with shift workers)
125. Nominal crushing season—shiftwork
[32.8(a) varied by PR542207 ppc 04Dec13]
(a) The ordinary working hours in the nominal crushing season must not exceed 40 in any one week or eight in any one day, which may be worked in accordance with a roster system as mutually agreed upon between the employer and the majority of employees directly affected, or as approved by the Fair Work Commission. Provided that with agreement between the employer and the majority of employees directly affected, shifts of more or less than eight hours may be worked. The working of broken shifts or six hour shifts in mills is prohibited.
(b) In mills where locomotive drivers, their assistants and weighbridge clerks are working two shifts, such shifts may be worked between 6.00 am and 2.00 pm and between 2.00 pm and 10.00 pm or such other roster as mutually agreed upon between the employer and the majority of employees directly affected.

126. Nominal slack season—shiftwork
The ordinary working hours for shiftworkers in the nominal slack season must not exceed 40 in any one week or eight in any one day, provided that with agreement between the employer and the majority of employees directly affected, shifts of more or less than eight hours may be worked.

(a) For employees other than seasonals and also other than those deemed to be seasonals, the ordinary working hours must be worked in accordance with an agreed roster which will provide for nine ordinary working days or 72 ordinary working hours per fortnight. One day of such two week cycle must be an unpaid rostered day off.
(b) For seasonal employees the ordinary working hours must be worked in accordance with an agreed roster which will provide for 19 working days or 152 ordinary working hours per four week cycle. One day of such four week cycle must be an unpaid rostered day off.
(c) The agreed rosters provided for must provide for a rostered day off on a Monday, or if agreed between the employer and employees at a particular mill, on a Friday.
(d) If a rostered day off falls on a public holiday, the rostered day off must be taken on the next ordinary working day.
(e) Rostered days off may, by agreement between the employer and the majority of employees directly affected, be accrued up to a maximum of six rostered days off, which must be taken within 12 calendar months of the date on which the first rostered day off was accrued, at a time or times agreed between the employer and the employees directly affected.
(f) Employees terminated prior to taking any banked rostered day(s) off must receive one fifth of average weekly pay over the previous six months multiplied by the number of banked substitute days.

MEDICAL PRACTITIONERS

72. Shift length—Doctors in training
(a) No shift will be less than eight hours in length on a week day or less than four hours in length on Saturday, Sunday or a public holiday.
(b) No broken or split shifts will be worked.
(c) All time worked in excess of 10 hours in any one shift will be paid as overtime.

IN THE FAIR WORK COMMISSION

Matter No: AM2018/26

S 156 – Four yearly review of modern awards - Social, Community, Home Care and Disability Services Industry Award 2010 – Substantive matters

Submission of the Australian Services Union

I – INTRODUCTION

1. This submission regards the Australian Services Union's ('**ASU**') claim for paid travel time in the *Social, Community, Home Care and Disability Services Industry Award 2010* ('**SCHDS Award**'). We support the Commission varying the SCHDS Award in the form of the Draft Determination filed by United Voice ('**UV**') on 1 April 2019.

2. The broken shift provisions permit employers to drain the working day of paid time by breaking shifts: limiting paid time to that spent directly with the client. For employees who perform in-home care, this means that they regularly travel at their employer's direction but they are not paid for it. This is work and should be remunerated. To meet the modern awards objective, the SCHDS Award must be varied pay employees when they travel for work.

The proposed variation

3. Some disability services employers are using the clause 25.6 of the SCHDS Award to avoid paying '*social and community services employees when undertaking disability services work*' ('**disability support workers**') (covered by Schedule B) and home care employees home care employees (covered by Schedule E of the SCHDS Award) for time spent travelling at their employers direction.

4. The ASU is seeking to insert the following new clause into the SCHDS Award:

> *Clause 25.7 Travel time*
>
> *(a) Where an employee is required to work at different locations they shall be paid at the appropriate rate for reasonable time of travel from the location of the preceding client to the location of the next client, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.*
>
> *(b) This clause does not apply to travel from the employee's home to the location of the first client nor does it apply to travel from the location of the last client to the employee's home.*

5. The proposed variation would ensure that all hours worked by disability services and home care employees are paid and that travel time will be recorded as hours worked for the purposes of service and the accrual of entitlements.

6. This claim will not affect employers and employers in other streams of the SCHDS Award, who must work their ordinary hours continuously. These employees are already paid for any time spent travelling within their ordinary hours. Disability services and home care employers should be given the same entitlements as their colleagues.

II – THE DISABILITY SECTOR AND DISABILITY SERVICES WORKERS

7. The ASU represents employees covered by the SACS and Crisis Accommodation streams of the SCHDS Award.[1] Our submissions are directed to the circumstances of the disability sector, disability services workers and their employers.

What are disability services?

8. Disability services covers employers and employees engaged in the provision of personal care and domestic and lifestyle support and/or training to a person with a disability. This includes work done in a community setting whether residential or non-residential, a respite centre, a day service facility or in a private residence where work in that residence involves either teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs. The skill of work required will vary depending on the needs of the client.

9. Most disability services workers will be working under the National Disability Insurance Scheme ('**NDIS**'). However, the NDIS only provides support to those people with a significant and permanent disability under the age of 65. This means that only 475,000 of the 4.3 million people with a disability will be covered by the NDIS when it is fully rolled out.[2] Some disability support workers may work with clients who are not entitled to NDIS funding, for example disabled persons over the age of 65.

10. The statements of Tino Encabo, Richard Rathbone, Tracy Kinchin and Rob Steiner describe the typical duties of a disability support worker.

In-home disability support

11. While some people with disabilities live in group homes and residential facilities, many people live in private residences. Disability services organisations will cater to the needs of these people

[1] We continue to rely on paragraphs 8-13 of the ASU's Submissions dated 18 February 2019.
[2] Productivity Commission, Review of the National Disability Agreement, Study Report, 3.

by offering in-home services. They will direct their employees to attend the client's residence to provide supports. Often, disability support workers will be directed by their employer to work at several different clients' residences in one day or shift. This necessitates travel between those locations. This is an integral part of the job. Services could not provide in-home supports if employees did not travel between locations. The statements of Tino Encabo, Richard Rathbone, Tracy Kinchin and Rob Steiner describe the hours of work of disability support workers providing in-home care.

Working patterns in in-home care

12. Employers are permitted to roster disability services workers on broken shifts under clause 25.6. It is a common practice amongst disability employers to use the broken shifts clause to design jobs whose ordinary hours of work are restricted to the time spent directly working with the client. This includes rostering unpaid 'breaks' for the time taken travelling between client's homes, despite the employer directing the employee to travel between those locations.

13. But for the broken shift clause, this time would otherwise form part of the employee's ordinary hours of work. This is not time that could be used by the employee for their own purposes, this is time controlled by the employer. Employees rostered to work broken shifts, and directed to work at different locations at each of those shifts, could not lawfully refuse to travel. This travelling time is the 'service' which is the source of the entitlement to wages under the employment contract.[3] The SCHDS award is not functioning as a fair and relevant safety net if it permits employers to make contracts of employment with award dependent workers that require, potentially substantial, periods of unpaid service.

14. Each of the ASU's witnesses gives evidence that they are not paid for most or all of their travel time. Tino Encabo and Richard Rathbone are part-time employees who give evidence that they are sometimes paid an informal 20 minute travelling allowance when there is less than an hour's gap between shifts. Tracy Kinchin gives evidence that she was previously engaged to work her full-time hours continuously, but her employer has recently started rostering broken shifts so that she is not paid for travel time. Rob Steiner is also a full-time employee. He gives evidence that his employer rosters broken shifts so that they do not have to pay for travel time. These statements are supported by the findings of a recent research paper authored by Fiona McDonald, Eleanor Bentham and Jenny Malone. Using diaries kept by 10 disability support workers, they found that '*unpaid travel was equivalent to between 1% and 15% of the employee's paid time over 3 days, and as much as 25% in a single day*'.[4]

[3] *Automatic Fire Sprinklers v Watson* (1946) CLR 435, 465.
[4] Fiona McDonald, Eleanor Bentham and Jenny Malone, 'Wage theft, underpayment and unpaid work in marketised social care' (2018) 29(1) *The Economic and Labour Relations Review*, 80, 88.

15. We also rely on the expert report of Dr Olav Muurlink filed entitled '*Predictability and control in working schedules*' filed in the Part-time Work Common Issue on 14 July 2016. Dr Muurlink

16. According to the *NDIS Price Guide 2019-2020*, providers are entitled to claim up funding for up to 30 minutes travel time in urban areas and 60 minutes travel in regional areas.[5]

III - THE MODERN AWARDS OBJECTIVE

17. The Commission may make a determination vary a modern award if the Commission is satisfied that the determination is necessary to achieve the modern awards objective (s 156). When deciding if a modern award meets the modern awards objective it must consider a number of matters listed at s 134 of the Act. We address those considerations below.

1(a) Relative living standards and needs of the low paid

18. Some disability support workers are low paid employees. Others may receive a rate of pay that is higher than the two-thirds of median time earnings threshold, but are at risk of poverty because of their short hours of work. Ensuring that employees are remunerated for all working hours, including travel time, will make sure that relative living standards are maintained and help the SCHDS Award meet the needs of the low paid.

Relative living standards of low paid employees

19. According to the July 2018 NDS Workforce Report, Most employees in the sector work part-time hours.[6] Roughly 20% of disability support workers are full-time.[7] There is a downward trend in the number of hours worked by employees (from 26 to 20).[8] 58% of employees in the sector were permanent employees and 46 percent of employees were casual in March 2018.[9]

20. The evidence of the ASU is that part-time employees are concerned about getting enough hours of work, despite some employees also preferring to be part-time employees. These employees report that they seek to maximise their income through a variety of strategies. Some seek to increase the number of penalty hours they work to increase their income. Other witnesses report seeking additional hours of work. These witnesses report that they rarely refuse additional hours (including the attendant unpaid travel time), even if they are inconvenient, because they are worried that they will not be offered additional hours in the future. These witnesses may work more hours of work than they would prefer.

[5] National Disability Insurance Agency, *DIS Price Guide 2019-2020*, 12. ('**NDIA Price Guide 2019**')
[6] National Disability Services, *Australian Disability Workforce Report February 2018*, 10. ('**NDS Workforce Report**'),
[7] NDS Workforce Report, 24.
[8] NDS Workforce Report, 24.
[9] NDS Workforce Report, 22.

21. If these employees are paid for travel time, their incomes will increase. Some employees may be able to reduce the number of hours they work each week without losing pay. Employees may also be able to reduce their reliance on additional hours and weekend penalty shifts if they earn enough income during the normal working week.

22. Further, under clause 10.3(c) part-time employees are entitled to a written agreement on their regular pattern of work. If travel time is treated as working time, then at least some of that time may need to be recorded in the written agreement. This would increase the employee's certainty about their pay each week.

Most disability service workers are likely to earn less than two-thirds of median full-time earnings threshold

23. Almost all disability services workers are classified at SACS employee level 2 ('**SACS2**') or SACS employee level 3 ('**SACS3**'). ERO rates of pay apply to SACS2 and SACS3 employees. SACS2 employees support people with a disability who do not have complex needs. SACS3 employees support people with complex needs. This is reflected in the NDIA pricing.[10] The McKinsey Pricing Report found that some employers engaged workers at SACS Employee level 4 where a client's needs are unusually complex.[11]

24. Two-thirds of median full-time wages is used by the Commission as an operational benchmark for identifying which workers are low paid.[12] The Commission uses two sources of data two estimate this figure: the ABS *Characteristics of Employment Survey* ('**COE**')[13] and the ABS *Survey of Employee Earnings and Hours* ('**EEH**').[14] In the 2019 Annual Wage Decision, the Commission found that two-thirds of median earnings was $886.67 per week ($23.33 per hour) in the August 2018 COE survey.[15] EEH survey data has not been released since May 2018: at that time $973.33 (or $25.61 per hour) was two-thirds of median earnings.[16]

25. Given the age of this data, it is difficult to make comparisons between rates of pay that are relevant to June 2019. Under the two-thirds of median full time earnings metric, some full-time SACS2 employees covered by the ERO were low paid in either May or August 2018 and may be so now. The Commission cannot be satisfied either way. In any case, the incidence of part-time employment in the industry means that comparing full-time weekly incomes will not give an accurate picture of incomes in the sector.

1(b) – the need to encourage collective bargaining

26. This claim is properly a safety net matter because it concerns the payment of employees for hours worked at the direction of their employer. Employees should not be required to bargain with their employer to simply be paid for time worked. The evidence of the ASU is that this gap in the safety net undermines negotiated working time arrangements and promotes unfair job design.

27. The evidence of Tracy Kinchin shows that the absence of a safety net allows employers to alter long standing rostering arrangements to the detriment of the employee. The evidence of Rob Steiner shows that the absence of paid travel time allows employers to build jobs that require travel over a wide area without accounting for the costs of travel. The evidence of Tino Encabo and Richard Rathbone is that they are sometimes paid a travel time allowance. However, this does not cover all time spent travelling.

1(c) – the need to promote social inclusion through increased workforce participation

28. Underemployment is a significant issue in the social and community sector, including social community services. Community and personal service workers have one of the highest underemployment ratios of all occupations at 16.7 percent.[17] The ASU's evidence is that part-time employees in disability services are seeking to increase their hours (see above at paragraphs 18 and 19 for discussion of the incidence of part-time work and the falling average hours in the sector).

29. The proposed variation may increase workforce participation in a number of ways. Firstly, currently employed workers will be paid for the hours they actually work. This will increase the hours worked by each employee. Secondly, if workers are paid for the time they actually work, they may reduce their weekly hours of work, creating opportunities for other workers to increase their hours. Consequently, this variation may increase total employment while reducing the incidence of underemployment.

1(d) – the need to promote flexible modern work practices and the efficient and productive performance of work

30. Requiring employee's to pay for time spent travelling at the direction of the employer will promote flexible modern work practice. Unpaid travel time is not a flexible modern work practice. It is an atavism dating from an era when women's work was deliberately undervalued (see our submissions regarding the principle of equal remuneration for equal or comparable work below at paragraphs 27 through 33).

[17] Kelvin Yuen and Oliver Smith, *Insights into under employment*, Fair Work Commission Research Report 2/2019, February, 10, see table 2.2.

31. The SCHDS Award provides employers with a significant amount of flexibility in arranging ordinary hours, rostering employees and paying employees for their time. This includes:

    a. the roster of part-time employees may be changed at any time under clause 25.5 (d) (iii) which provides that the restrictions on changing the roster do not apply to mutually agreed additional hours worked by part-time employees;

    b. part-time employees are not paid overtime until they work 10 hours in a day or 38 hours in a week or 79 hours in a fortnight;

    c. there is no minimum engagement for part-time or full-time employees;

    d. employers are not required to roster meal breaks if they require an employee to have a meal with a client or clients;

    e. casual disability services employees are only entitled to a 2 hour minimum engagement;

    f. casual home care employees are only entitled to a 1 hour minimum engagement; and

    g. if a client cancels an appointment, a home care employee's roster can be changed if the client is notified that their roster is being changed because of a client cancellation before 5.00 PM the day before, they will not be paid for the shift if they are notified about the client cancellation after that time, they will only be paid for the minimum specified hours, an employee can also be directed to work make up time sometime in that roster period or the next;

32. These flexibilities will not be impacted by a requirement to pay for travel time.

33. Further, by not paying for travel time employers must tailor rosters to the exact times they require their employees to support clients. This is not only unfair to the employee works without pay; it is also inefficient and unproductive for the employer. The evidence of Tracy Kinchin is that her employer has ceased to roster hours of work continuously. She is now no longer paid for time spent travelling. This means that her roster must be varied each time her client changes or cancels their service time. Previously, her hours were rostered continuously. She received advanced notice of start and finish times over a 4 week roster. This allowed her employer to direct her work within those times without needing to change the roster. This was preferable to her because it made her hours of work more certain.

1(e) – the principle of equal remuneration for work of equal or comparable value

34. The failure to pay travel time is an equal remuneration matter. Disability services is a female dominated sector of the female dominated SACS industry. The March 2018 NDS Workforce

report found that 70% of disability support workers are women,[18] while a 2017 survey commissioned by the ASU, HSU and United Voice found that 74.1% of the workforce were women. [19] The historical undervaluation of the work performed by disability support workers was recognised by a Full Bench of Fair Work Australia in the *SACS Equal Remuneration Decision*.[20] This decision dealt with gendered undervaluation of base rates of pay and did not address other equal remuneration issues.

35. There is no rational way to find that travel time is not equal or comparably valuable work between industries. If employees covered by a modern award covering a male-dominated industry are paid for their travel time, then employees covered by the SCHDS Award should be paid for this work too. **Annexure A** sets out the travel time provisions for a number of modern awards covering male dominated industries that involved regular travel between work locations.

Business equipment: an example male industry[21]

36. The *Business Equipment Industry Award 2010* ('**BEI Award**') covers the business equipment industry, defined as:

> *sale or lease and associated installation and servicing of business equipment such as computers, data processing equipment, photocopiers, facsimile machines, cash registers, accounting and adding machines, calculators and peripheral equipment associated with such equipment including keyboards, display screens, printers, routers and multifunction devices.* (Clause 4.2,

37. The business equipment industry is male dominated. A niche industry which does not have an ANZSIC code, data is hard to come by. However, the most recent Form F17's lodged by the largest employers in the sector: Ricoh Australia, Konica Minolta Business Solutions, Canon Australia Pty Ltd, Fuji Xerox Australia Pty Ltd and NCR Australia Pty Ltd reveal a total of three women employed in the sector. The majority of (possibly all) employees in the industry would be covered by enterprise agreements.

38. Business Equipment employees are engaged to sell, install and service business equipment. They are generally assigned an area of operations. Technical employees travel within that area of operations on their employers business. They will regularly travel between warehouses, workshops and customers offices. The witness statement of Paul O'Brien describes work patterns

[18] NDS Workforce report, 10.
[19] Cortis, Natasha, *Working under the NDIS: Insights from a survey of employees in disability services (Report prepared for Health Services Union, Australian Services Union and United Voice, June 2017)*, Social Policy Research Centre, University of New South Wales, Sydney, 5.
[20] *Equal Remuneration Case* [2012] FWAFB 1000.
[21] We note that there is no obligation under s 134(e) to demonstrate a male comparator.

of technical employees in the industry. Paul O'Brian is paid for time spent travelling because his hours of work are rostered continuously.

39. There is no provision in the BEI Award for broken or split shifts. Ordinary hours are worked continuously.[22] Consequently, all time spent travelling, except to the place where the employee commences work and time travelling home after the finish of work, is treated as working time. Where a commercial traveller is '*travelling on their employer's business will be regarded as being "on duty" for all purposes of this award*'.[23] This provides a safety net for improved bargained outcomes around travel time, such that at clause 25 of the *Canon Australia Pty Ltd. (Technical Consultants) Enterprise Agreement 2019*.

40. Further, technical stream employees must either be provided with '*all required means of locomotion*' or a vehicle allowance if they are required to use their own vehicle.[24] The allowance is paid for periods of personal and annual leave. If the employee is paid a vehicle allowance, they also must be paid an allowance of $0.34 per kilometre travelled during the course of business.[25]

Comparison with the disability support workers

41. The work value of travel to an employer who must service clients away from their premises is undeniable: the employers business could not operate if the employee did not attend the client/customers premises. This value is the same if the service provided to the client is photocopier maintenance or in-home disability support. Travel is travel.

42. The relevant difference between disability services employees and the business equipment employees is that disability services are almost all women and business equipment employees are almost entirely male. The modern award covering each industry should remunerate this valuable work equally.

43. We also note that disability services employees are only entitled to $0.78 per kilometre travelled. This allowance is not paid on periods of annual or personal leave. There is no obligation to provide a vehicle to a SCHDS employee required to travel by their employer. All male dominated awards in Annexure A require the employer to provide means of transportation, or provide a vehicle allowance, when they require their employee to work at more than one employee per day or shift.

[22] BEI Award, cl 27.1(a), cl 28.2(a)(ii).
[23] BEI Award, Cl 22.2(C)(iii).
[24] BEI Award, Cl 22.1(b)(i), 22.1(b)(ii)(A).
[25] BEI Award, Cl 22.1(b)(ii)(B).

1(f) – the likely impact of any exercise of modern award powers on business, including productivity, employment costs and the regulatory burden

44. This claim is unlikely to have any impact on productivity or the regulatory burden. If this claim does have any effect on employment costs, this consideration does not outweigh the other considerations.

1(g) – the need to ensure a simple, easy to understand, stable and sustainable modern award system for Australia that avoids unnecessary overlap of modern awards

45. The proposed variation is simple, easy to understand, sustainable, and does not overlap with other modern awards.

1(h) – the likely impact of any exercise of modern award powers on employment growth, inflation and the sustainability, performance and competitiveness of the national economy.

46. This claim may increase employment growth. By ensuring that employees are paid for all the hours that they work, this variation will increase the income of those employees. Consequently, some employees, particularly those who work part-time by preference, may reduce their hours of work. This will make more hours of work available to employees who desire them.

47. It is unlikely that this claim will have any effect on inflation or the sustainability, performance and competitiveness of the national economy.

IV – NATIONAL EMPLOYMENT STANDARDS ('NES') EXCLUSIONS

48. The failure to pay for travel time is inconsistent with Division 3 of Part 2-2 of the Act which deals with the NES entitlements regarding weekly working hours. Under s 55(1) a modern award must not exclude the National Employment Standards.

49. Section 62 provides that an employer must not request or require an employee to work additional hours unless they are reasonable. For a fulltime employee, that means more than 38 hours. For a part-time employee that means the lesser of 38 hours or the employee's ordinary hours in a week. Subsection 62(2) of the Act provides the right to refuse additional work beyond 38 hours per week if it is unreasonable. Subsection 62(3) lists the criteria to judge the reasonableness of a request or direction to work additional hours for the purposes of s 62(1).

50. These criteria are:

    (a) any risk to employee health and safety from working the additional hours;

    (b) the employee's personal circumstances, including family responsibilities;

    (c) the needs of the workplace or enterprise in which the employee is employed;

(d) whether the employee is entitled to receive overtime payments, penalty rates or other compensation for, or a level of remuneration that reflects an expectation of, working additional hours;

(e) any notice given by the employer of any request or requirement to work the additional hours;

(f) any notice given by the employee of his or her intention to refuse to work the additional hours;

(g) the usual patterns of work in the industry, or the part of an industry, in which the employee works;

(h) the nature of the employee's role, and the employee's level of responsibility;

(i) whether the additional hours are in accordance with averaging terms included under section 63 in a modern award or enterprise agreement that applies to the employee, or with an averaging arrangement agreed to by the employer and employee under section 64;

(j) any other relevant matter.

51. Section 63 of the Act provides that modern awards may provide for the averaging of hours of work and, at s 63(2), may also provide for average weekly hours that exceed 38 hours per week if '*the excess hours are reasonable for the purposes of subsection 62(1)*'.

52. As noted above, where an employee travels at the direction of their employer they are working. However, the broken shift provision allows employers to avoid recording this working time as ordinary hours of work. Unpaid travel time is then 'additional hours' for the purposes of Division 3 of Part 2-2. Because these hours are unpaid they may be unreasonable.

53. Consequently, clause 25.6 permits employers to require employees to work additional hours without remuneration at the base rate of pay, let alone at penalty or overtime rates. Further, this working time is not counted as hours of work, artificially shortening the working day. This allows an employer to roster further additional hours. However, an employee is not able to refuse to work these additional hours, which may be unreasonable, because they are not recognised as hours of work by the SCHDS Award. Consequently, that employee is denied their right under s 62(2) to refuse to work additional hours. Clause 25.6 therefore excludes section 62 of the Act.

54. Moreover, clause 25.1 of the Award provides for the averaging of full-time hours of work. The evidence of Tracy Kinchin and Robert Steiner is that they regularly work more than 38 hours each week because they are rostered 38 paid hours and are required to travel between clients. This clause, when it interacts with clause 25.6, may exclude section 63 of the Act because it provides for average weekly hours that exceed the hours referred to in s 63(1) which are unreasonable for the purposes of s 62(1).

55. The variation proposed by the ASU would ensure that the SCHDS Award does not exclude the NES.

V – INTERACTIONS WITH OTHER CLAIMS

56. The ASU has also made a claim for a 15 percent loading for employees required to work broken shifts. We filed submissions and evidence in support of this claim on 18 February 2019. We note that the disutility of a lack of payment for travel time is an element of the 15 percent loading. If the ASU's claim for paid travel time were successful, we would still press the broken shift loading claim, but would accept that the quantum of the loading should be less than 15 percent.

57. We also rely on the statements of Tracy Kinchin and Robert Steiner in support of that claim.

VI – CONCLUSION

58. The Commission should vary the SCHDS Award to ensure that disability services and home care employees are paid for all time they spend travelling at the direction of their employer. the current provisions artificially reduce the paid working time of employees who are mostly low income women. The current provisions of the SCHDS Award are unfair to disability support employees and are not relevant to the current state of the disability services sector. The SCHDS Award will not achieve the modern awards objective until it ensures all work performed by employees is treated as work and fairly remunerated.

AUSTRALIAN SERVICES UNION

2 JULY 2019

Appendix A - List of Awards that contain travelling time provisions in male dominated industries

	Award	Clause	Provision	Percentage female employment
1.	Building and Construction General On-site Award 2010	25. Fares and travel patterns allowance	25.1 Employees will start and cease work on the job at the usual commencing and finishing times within which ordinary hours may be worked, and will transfer from site to site as directed by the employer. Other than in the case of an employee directed by the employer to pick up and/or return other employees to their homes, time spent by an employee travelling from the employee's home to the job and return outside ordinary hours will not be regarded as time worked. No travelling time payment is required except as provided for in clauses 21.1, 24.7, 25.5, 25.7	12.4%[26]

[26] ABS Labour Force May 2019

			and 36.3. The fares and travel patterns allowance recognises travel patterns and costs peculiar to the industry, which include mobility in employment and the nature of employment on construction work. 25.9 Transfer during working hours (a) An employee transferred from one site to another during working hours will be paid for the time occupied in travelling and, unless transported by the employer, must be paid reasonable cost of fares by the most convenient public transport between such sites.	
2. Annexure A – Judith Wright Witness Statement

I - INTRODUCTION

1. This submission is made in reply to various submissions filed by employer groups in support of variations to the *Social, Community, Homecare and Disability Services Industry Award 2010* ('**Award**') proposed by Australian Business Industrial, the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia, ('**collectively ABI**') as set out in the Draft Determination filed on 2 April 2019 ('**ABI Claims**'). It is made in accordance with the amended Directions issued on 11 July 2019. ABI is supported, broadly, by National Disability Services ('**NDS**'), the Australian Federation of Employers and Industries ('**AFEI**') and Business SA ('**collectively the Employers**'). Australian Industry Group's ('**AIG**') position is unclear.

2. The variations proposed by the Employers can be grouped into three categories.

   a. Firstly, there are the claims for additional 'flexibility'. However, this 'flexibility' is entirely the employer's: employees will experience this 'flexibility' as arbitrary variability. These include a claim to remove the protections for the regularity working hours for full-time employees at cl 25.1; a claim to change rosters by agreement; and the removal of the requirement to roster 10 hour breaks between rostered periods of non-working duty such as sleepover or 24 hour care.

   b. Secondly, the Employers seek the extension of the cl 25.5(f) ('**the Home Care client cancellation term**') to social and community services employees undertaking disability services ('**disability services employees**'). The purpose of this claim is to shift risk from the employer to the employee. This puts the cost of client choice on the person least capable of bearing the costs or mitigating the risk.

   c. Finally, the Employers seek to impinge on the employee's private time, by instituting a 'remote response' term that would permit an employer to require employees to work from home outside of ordinary hours. This provision also undermines the on call arrangements of the Award.

3. The Australian Services Union ('**ASU**') opposes each of the ABI claims. If the Award were varied in the manner proposed by the Employers it would not provide fair and relevant safe terms and conditions. The Employers have not provided the Commission with the substantial evidentiary case or the comprehensive submissions necessary to satisfy it that the proposed

variations should be made. In many cases, the Employers evidence and submissions suggest that they misunderstand significant elements of their case, including the coverage of the Award and the operation of the NDIS.

The Employers are unrepresentative of the industries covered by the Award

4. The Award covers a diverse industry with a number of related, but quite different sectors. The Employers appear to largely represent home care sector and social and community services ('**SACS**') employers operating disability services. Certainly, this is where they have directed their evidence. But home care and disability services are only part of the industry covered by the Award.

5. The Award also covers the Family Day Care and Crisis Accommodation sectors. These sectors will be also be affected by the proposed variations to the arrangement of ordinary hours for full-time employees, rostering and remote response. Further, disability services are not the only organisations covered by the SACS stream of the Award. The SACS sector also covers: sexual assault, domestic and family violence services; women's domestic violence court advocacy services; youth and child protection services; out of home care for children and young people at risk services; homelessness, housing and tenancy services; family support services; health and mental health services; alcohol, gambling and other drugs of addiction and rehabilitation services; aged care services; first nation people's services; migrant and settlement services; prisoner rehabilitation; community legal services; community and neighbourhood services; policy, research and advocacy services; and community transport organisations.

6. These organisations operate under different funding arrangements, work with different clients and engage different types of employees than disability services. The Employers' proposed variations regarding the arrangement of ordinary hours for full-time employees, rostering and remote response will affect these organisations and their employees. The Employers have nothing to say about these sectors. In the absence of submissions and evidence about the full breadth of the Award's coverage, the Commission should not make the variations proposed by the Employers.

The implementation of the NDIS is a period of opportunity and growth for the disability sector, not a crisis

7. The Employers generally assert that their claims are necessary because of changes in the disability sector driven by the implementation of the NDIS. From the employer submissions, it would appear that there is a crisis in the disability sector. They argue that employers have lost control of their businesses and so the minimum safety net of the Award needs to be reduced. However, while the disability sector is clearly changing in response to the NDIS, the variations proposed by the Employers are a knee-jerk overreaction.

8. Firstly, it is apparent from the Employers' evidence that organisations in the sectors are successfully adapting their operations to the new NDIS model. From the Employers' evidence, it is apparent that employers in this sector are experimenting with new operational models and innovating in response to the challenge of the NDIS. This is desirable, and appears to be uninhibited by the safety net provided by the Award. There is no evidence of any genuine hardship on the employer's behalf.

9. However, these organisations appear to be unused to their clients acting as 'customers' with the right to choose, but also the obligation to negotiate and compromise. Unused to dealing with their clients as empowered economic actors, employers are lashing out at their employees. This appears to be the real basis of the Employer's claims and it is not a reason to reduce the Award safety net.

10. Secondly, the NDIS is still relatively new. It is going through a process of implementation, review and revision. It is not in its final form and its administrator, the NDIA, has shown itself to be willing to change the system in response to feedback from clients, support providers and workers. For example, the Employers have made many submissions about the inadequacy of funding arrangements under the NDIS. However, they ignore the fact that pricing is reviewed annually, and the pricing structure has been updated several times in response to employee feedback. As the NDIA notes on their website:

> *Changes to prices are updated to respond to market trends and changes in costs and are generally identified through an Annual Price Review. The Annual Price Review is undertaken by the NDIA in the lead up to new financial year, with any new prices outlined in an updated price guide, effective 1 July each year*.[1]

[1] 'Price Guides and Information', *National Disability Insurance Agency*, (Web page, 13 September 2019), <https://www.ndis.gov.au/providers/price-guides-and-information>.

11. Further, the NDIA has also commissioned external research into NDIS pricing and updated their pricing arrangements accordingly. In 2019, NDIS pricing was reviewed by McKinsey and Company on behalf of the Board of the NDIA. In their *NDIA Independent Pricing Review Report* they identified a number of changes to funding in response to input from NDIS participants, NDIS providers and disability advocates. These recommendations were progressively adopted by the NDIA in the 2018 and 2019 NDIS Price Guides.[2] The recommendations included, amongst other items, funding for 45 minutes of travel time in rural areas, a new client cancellation policy (discussed in detail below), a third pricing tier to account for higher skilled workers (SACS employees Level 3) for more complex care.[3] The Commission should not accept a submission that changes in the disability sector since the introduction of the NDIS means that disability services employees should not be protected by the same modern award safety net as other employees. The NDIS has evolved significantly since it was first introduced and continues to evolve in response to the concerns of providers and participants.

12. In any case, the statutory duty of the Commission is to ensure that the Award, along with the NES, provides a fair and relevant safety net. As the Commission noted in the Decision of 2 September 2019, '*The Commission's statutory function should be applied consistently to all modern award employees*'.[4] The Employers have not supported their claim with probative evidence or cogent arguments about why the NDIS (or consumer directed care) should mean that employees in the SCHDS industry should have lower terms and conditions than those in other industries.

The Award is already unusually flexible, and the minimum safety net does not need to be lowered further

13. The Employers have proposed a number of variations to increase the variability of working hours under the Award. These claims are unnecessary because the Award is already so flexible that the ordinary hours, overtime and rostering terms may not meet the modern awards

[2] National Disability Insurance Agency , *Price Guide 2018-2019*; National Disability Insurance Agency , *Price Guide 2019-2020*.
[3] 'Price Guides and Information', *National Disability Insurance Agency*, (Web page, 13 September 2019), <https://www.ndis.gov.au/providers/price-guides-and-information>.
[4] *Four Yearly Review of Modern Awards* [2019] FWCFB 6067, [142].

objective.[5] The Award has the following unique features which provide employers with significant flexibility:

a. the roster of part-time employees may be changed at any time under cl25.5 (d) (iii) which provides that the restrictions on changing the roster do not apply to mutually agreed additional hours worked by part-time employees;

b. Home care employees and SACS employees undertaking disability services may work broken shifts with no restrictions (cl 25.6);

c. part-time employees are not paid overtime until they work 10 hours in a day or 38 hours in a week or 76 hours in a fortnight;[6]

d. there is no minimum engagement for part-time or full-time employees;

e. employers are not required to roster meal breaks if they require an employee to have a meal with a client or clients;[7]

f. casual disability services employees are only entitled to a 2 hour minimum engagement;[8]

g. casual home care employees are only entitled to a 1 hour minimum engagement;[9] and

h. if a client cancels a rostered home care service, a home care employee's roster can be changed if the client is notified that their roster is being changed because of a client cancellation before 5.00 pm the day before, they will not be paid for the shift if they are notified about the client cancellation after that time, they will only be paid for the minimum specified hours, an employee can also be directed to work make up time sometime in that roster period or the next;[10]

14. The evidence of the ASU's witnesses is that they experience significant variability in their hours of work and are willing to agree to their employer's requests out of a sense of duty to their clients and a need to maximise their income. The Employer's variations will only further weaken the safety net for these employees. The detail of these claims will be discussed below, but the Employers have not advanced any evidence that proves that these claims are necessary to

[5] See the various ASU, HSU and United Voice claims regarding paid travel time, broken shifts, overtime for part-time employees and minimum engagements.
[6] SCHDS Award, Cl 28.1(b).

[9] SCHDS Award, Cl 10.4(c)(ii).
[10] SCHDS Award, cl 25.5(f).

achieve the modern awards objective. The Commission should not accept that employers need to impose more variability upon Award employees.

15. Further, the Commission has found that some SCHDS Award employees are low paid. The extreme variability of working time under this Award means that low paid workers seek to maximise their income by working longer hours, acceding to employer requests and working penalty hours, even though working those hours has negative personal and social effects. The evidence of Augustino Encabo is that he seeks to maximise his hours of work, overtime and working during periods of time that attract a penalty rate to maximise his income. In contrast, Tracy Kinchin gives evidence that, at least before the introduction of broken shifts in her workplace, her fulltime job offered her stability of income and work/life balance.

II – VARIABILITY CLAIMS

Roster Changes

16. ABI proposes that clause 25.5(d) of the Award should be varied to permit rosters to be changed at any time by agreement and in certain other circumstances where an employee takes leave. This claim is supported by the other employer groups, except that AFEI submits that employers should not have to keep written records of the agreed change. The Employers have little to say in support of this claim. ABI simply describes the proposed variation as '*relatively minor*'[11] and make no submissions about the merits of this claim other than to refer to a Decision[12] regarding the rostering clause of the *Nurses Award 2010*. They do not offer evidence or submissions about why this decision is relevant to their proposed variation. This is unsurprising because in that Decision, the Commission rejected a claim to change rosters at any time by agreement.[13]

<u>The rostering term of the Award is already sufficient flexible</u>

17. As noted in above in Part 1 of these submissions, the Award is already very flexible, which has a significant impact on employees. The proposed variation would only further undermine the already sparse safety net for hours of work. It is unclear what issue the Employers hope to address through the proposed variation. Under the current terms and conditions of the Award, an employer could engage a casual employee or offer a permanent part-time employee voluntary additional hours if they needed staff at short notice. The evidence before the

[11] ABI, Submission of 2 July 2019, [4.13]
[12] *Four Yearly Review of Modern Awards* [2018] FWCFB 7347
[13] *Four Yearly Review of Modern Awards* [2018] FWCFB 7347, [158].

Commission shows that part-time employees are generally willing to work additional hours unless doing so would interfere with another commitment. Further, the evidence before the Commission shows that employees are worried that if they do not agree to requests to work additional hours they will not be offered additional hours in the future.

Employees are likely to feel pressured to agree to change their roster if the proposed variation is made

18. Further, if the proposed variation were made, it is likely that some employees would feel pressured to change their roster at short notice.

19. This is consistent with findings of the Commission regarding similar applications in other Modern Awards. In making the Aged Care Award, the Australian Industrial Relations Commission ('**AIRC**') expressly rejected part-time employment arrangements like those proposed by the Employers.[14] Instead, they created a clause which balanced the need to protect the part-time employee without preventing an employer from offering additional hours of work. The Full Bench noted that they held reservations regarding the nature of consent where a supervisor requests an employee to work additional hours. The AIRC said (at [148]):

> *We have some reservations about the nature of the consent in circumstances where a supervisor directly requests a change in hours on a day where the part-timer had otherwise planned to cease work at a particular time. Existing provisions require that any amendment to the roster be in writing and we have retained this provision. We also have no doubt that many part-time employees would welcome the opportunity to earn additional income.* ***However, there may also be part-timers who would be concerned to ensure that their employment is not jeopardised by declining a direct request from a supervisor to work additional non-rostered hours at ordinary rates. From the submissions of the employers this is a major cost saving and used widely.***

20. In a 2018 Decision regarding the *Nurses Award*, the Commission rejected a claim to allow an employer to ask an employee to agree to a change in the roster within the 7 day period before the commencement of the roster period. The Commission said '*we have considered the ANMF's submission concerning the possibility that an employee may feel pressured to agree to*

[14] *Re Award Modernisation* [2009] AIRCFB 345, [147]-[149].

a change to the roster within the 7 day period and we agree with it'.[15] The Commission then echoed the AIRC in *Re Award Modernisation*, saying:

> '*We consider that the nature of the employer-employee relationship is such that if a supervisor asks an employee to change rosters within the 7 day period before the commencement of the roster period the employee's decision making may be compromised by fear (even if unwarranted) of repercussions if the request is declined*'.[16]

21. In the absence of probative evidence and cogent submissions about the merit of ABI's claim, the Commission should adopt the approach of previous Full Benches which protect employees covered by the Award from undue pressure to change their rosters at short notice.

Ordinary hours of work

22. ABI is seeking a variation to clause 25.1 Ordinary Hours of work. If the proposed variation were made by the Commission, the Award would not provide a fair and relevant safety net for full-time employees covered by the Award.

23. Currently, clause 25.1 provides as follows:

(a) *The ordinary hours of work will be 38 hours per week or an average of 38 hours per week and will be worked either:*

(i) *in a week of five days in shifts not exceeding eight hours each;*

(ii) *in a fortnight of 76 hours in 10 shifts not exceeding eight hours each; or*

(iii) *in a four week period of 152 hours to be worked as 19 shifts of eight hours each, subject to practicality.*

(b) *By agreement, the ordinary hours in clause 25.1(a) may be worked up to 10 hours per shift.*

24. The Employers propose a new clause that removes the restrictions on the arrangement of ordinary hours at clause 25.1(a)(i)-(iii). ABI describe this proposal as a '*minor or technical variation rather than a substantive amendment*'.[17] However, because the Award's working time protections are relatively weak, the full-time employees need the protections of clause 25.1(a). Otherwise, employers would be able to structure a full-time employee's ordinary hours in a

[15] *Four Yearly Review of Modern Awards* [2018] FWCFB 7347, [156].
[16] *Four Yearly Review of Modern Awards* [2018] FWCFB 7347, [157].
[17] ABI, Submission of 2 July 2019, [4.9].

highly irregular manner. The Commission should not make this variation without evidence of the impact on employees.

III – CLIENT CANCELLATION

25. Australian Business Industrial has proposed that the Commission should delete clause 25.5(f) Client Cancellation and replace it with a new clause. The proposed variation would make several changes to the current entitlement, the most significant of which is to extend the coverage of 25.5(f) to social and community sector employees when undertaking disability services.

The proposed variation unfairly shifts risk from the employer to the employee

26. The purpose of a client cancellation clause is to transfer the risk associated with a client's cancelling their services from the employer to the employee. It does so by allowing an employer to vary the roster or withhold payment from an employee where a client cancels their service. This is unfair to the employee and presents a moral hazard to the employer.

27. The employer is best placed to manage the risk of client cancellation and to absorb any unavoidable costs. Employers can draw on institutional knowledge and expertise that employees cannot access. They have oversight of their entire workforce. Employers also have control over operational matters such as rostering and staffing levels. Employers also have a contractual relationship with the client that allows them to influence the client's behaviour. In the extreme case, they may choose to terminate an agreement with a client. The employer is also able to draw income from a multiple sources, and have access to commercial financial products. Most employers in this sector are not for profit organisations and do not pay income tax. Some are charitable organisations with deductible gift status.

28. In contrast, the employee does not have access to the employer's institutional knowledge or expertise. Even if they did, employees are obliged to follow the lawful and reasonable directions of the employer. They do not control when they are required to work, who they are required to work with, or how the work of the organisation is structured. They are also more likely to draw income from one source, their wages; have less money in reserve; and pay tax. Many disability services employees are low paid. They already seek to maximise their income by working additional hours and working hours that attract overtime or a penalty rate. If the proposed clause were adopted they would be at risk of losing vital income at a moment's notice. They

would then be forced to work even longer hours to replace this income. The employee cannot control the client relationship, cannot mitigate the risk of cancellations and cannot absorb the cost of lost income. The employer can. Why then should the employee bear the burden? More importantly, how can a safety net of terms and conditions be '*fair and relevant*' if it shifts risk to the party least able to bear it?

29. The ASU is not advancing a claim to delete clause 25.5(f) from the Award. However, we do suggest that clause 25.5(f) in its current state does not achieve the Modern Awards Objective. The Commission should consider whether clause 25.5(f) should be varied to offer better protections, if not deleted.

Funding arrangements for client cancellation under the NDIS

30. Finally, if the proposed variation were made, employers would lose any incentive to work with their clients to manage cancellations or to modernise their business practices so as to effectively utilise their staff. This would mean that that Award promotes inefficient and unproductive business practices *while* reducing participation in the workforce.

31. From 1 July 2019, the following arrangements will apply where a client cancels their service:

> ***Client Cancellation***
>
> *Where a provider has a short notice cancellation (or no show) they are able to recover 90% of the fee associated with the activity, subject to the terms of the service agreement with the participant.*
>
> *A cancellation is a short notice cancellation (or no show) if the participant has given*
>
> - *less than 2 clear business days' notice for a support that is less than 8 hours continuous duration and worth less than $1000; and*
> - *less than 5 clear business days' notice for any other support.*
>
> *There is no limit on the number of short notice cancellations (or no shows) that a provider can claim in respect of a participant.*
>
> *However, providers have a duty of care to their participants and if a participant has an unusual number of cancellations then the provider should seek to understand why they are occurring.*

> *The NDIA will monitor claims for cancellations and may contact providers who have a participant with an unusual number of cancellations.*[18]

32. The new client cancellation arrangements were set by reference to the existing terms and conditions that apply to Social and Community Services employees undertaking disability services work. They have been designed to minimise the impact of client cancellations on employers, while also encouraging those employers to reduce the incidence of cancellations.

33. The current arrangements were adopted by the NDIA in response to a recommendation in the *Independent Pricing Review Report*. In their report, McKinsey and Company set out the reasoning for their proposed cancellation policy:

> *This revised policy minimises the financial loss incurred by providers on short-notice cancellations and recognises that while providers should work with participants to minimise short notice cancellations, providers should also not bear financial risk for these incidents. It also incentivises positive behaviour by all actors in the market: participants are incentivised to give sufficient notice, while providers are incentivised to work with participants and implement processes to minimise risk of cancellations. It is not expected that this change in policy will have an adverse impact on participant outcomes or Scheme costs. In most cases, the cost of cancellations will be absorbed by participants' budgets. If the nature of a participant's disability makes him or her more susceptible to cancellations, then the participant's budget should be increased accordingly. It is expected this will be a small proportion of participants.*[19] (Emphasis added)

34. The NDIS client cancellation policy was consciously designed, with reference to the current award provisions, to promote the efficient and productive performance of work in the sector. The proposed variations would in fact promote less efficient and productive working practices. They would also permit an employer to 'double dip', because it would permit the employer to bill the NDIA for a cancelled service, but also require the employee to work make up time, for which the employer could claim further fees.

35. Disability services employers do not need a Home Care style client cancellation clause, because they may claim 90 percent of the price of a cancelled service in most circumstances. This will cover the cost of the employee's wages. The claim is not relevant to the circumstances

[18] National Disability Insurance Agency, NDIS Price Guide 2019-2020, p 12.
[19] Mckinsey and Company, *Independent Pricing Review Final Report*, ('**NDIS Pricing Report**'), p76.

of employers covered by the Award. In any case, for the reasons discussed above, any client cancellation clause would not meet the modern awards objective.

ABI submissions about the coverage of Clause 25.5(f)

36. ABI have wrongly asserted that the clause presently applies to disability services provided in the home. This 'mistake' obscures the true significance of ABI's claim. Clause 25.5(f) does not apply to any disability services work, whether that service is provided in a private residence, a residential facility, a group home or in a community setting. Consequently, the claim is not simply a matter of extending client cancellation from one group of employees providing disability services to another. The proposed variation is a much more significant change than ABI's submissions would suggest.

37. ABI bases their assertion on the definition of '*home care sector*' at clause 3.1 of the Award, which provides:

> ***'home care sector*** *means the provision of personal care, domestic assistance or home maintenance to an aged person or a person with a disability in a private residence'*

38. ABI correctly says that the application of clause 25.5(f) is strictly limited to employees covered by the Home Care classification definitions at Schedule E of the Award. However, they wrongly say that the reference to '*person with a disability*' means that all work with a person with a disability in a private residence is covered by Schedule E. However, this ignores the clear distinction made by the Award between disability services work and home care work.

Employees providing disability services are covered by Schedule B of the Award

39. Disability services are exclusively covered by the SACS classification definitions at Schedule B. '*Disability Services*' are not defined by the Award. However, the definition of Social Community Sector explicitly references '*disability services*'. Clause 3 of the Award relevantly provides:

> ***social and community services sector*** *means the provision of social and community services including social work, recreation work, welfare work, youth work or community development work, including organisations which primarily engage in policy, advocacy or representation on behalf of organisations carrying out such work and the provision of disability services including the provision of personal care and domestic and lifestyle support to a person with a disability in a community and/or residential setting including respite centre and day services. To avoid doubt, an employee will not be precluded from*

being engaged under Schedule B, instead of another schedule, merely because they provide services in a private residence or in outreach. (emphasis added)

40. ABI fails to cite the definition of the Social and Community Sector in their submissions regarding the coverage of clause 25.5(f) and Schedule E of the Award. Presumably because to do so would be fatal to their argument.

41. The work of Home Care (Schedule E) employees is distinct from the work of SACS (Schedule B) employees undertaking disability services. Disability services may include the provision of personal care or domestic assistance, but it also involves a significant element focused on building the client's capacities and supporting their life choices. This includes either teaching, promoting or maintaining living skills, client, advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs. The complexity of this work and the prerequisite higher skill and qualification is reflected in the classification definitions at Schedule B.

42. In contrast, Home Care work is strictly limited to '*personal care, domestic assistance or home maintenance*'. Home care is simply the provision of personal and household services, and the classification system covers handy men as much as it covers care workers. The classification definitions at Schedule E do not refer to capacity-building or lifestyle support.

43. The distinction between disability services and home care services provided to a person with a disability was at issue in the 2010-2012 Equal Remuneration Case. In that case, AFEI tendered a document setting out an agreed position between it and the ASU regarding the distinction between home care and disability services. This was not challenged by any party to the proceeding. The witness statement of Judith Wright, Deputy Secretary of the ASU New South Wales and Australian Capital Territory (Services) Branch (see Annexure A), describes this history and the differences between home care and disability services work.

IV – REMOTE RESPONSE

44. We have not filed evidence or submissions in respect of the ABI Remote Response Claim due to a without prejudice settlement. We reserve our rights to file evidence and submissions in the case that the settlement does not progress.

V – DELETION OF PERIOD OF WORK

45. Clause 25.4 (a) provides as follows:

An employee will be allowed a break of not less than 10 hours between the end of one shift or period of work and the start of another.

46. ABI proposes that the words '*period of work*' should be deleted from the clause. They say that these words have no work to do.

47. This is incorrect. Clause 25.7 Sleepovers and cl 25.8 24 hour care provide for working time arrangements that do not fit comfortably with the word 'shift'. The purpose of '*period of work*' is to ensure that 24 hour care shifts and sleepovers are not worked back to back.

Annexure A.

BEFORE THE FAIR WORK COMMISSION
MATTER NO. AM2014/286
S. 156 - Four yearly review of modern awards – Social, Community, Home Care and Disability Services Industry Award 2010

STATEMENT OF JUDITH WRIGHT

I, Judith Wright, Union Official, of Level 1, 39-47, Renwick Street, Redfern, in the State of New South Wales, say;

1. I am the Deputy Secretary of the Australian Services Union, NSW & ACT (Services) Branch ('**the NSW Branch**'). I am also a member of the Australian Services Union National Executive. I have held these positions since April 2015. I have been an official of the Branch for ten years. Prior to taking up the position of Deputy Secretary, I was a Senior Industrial Officer from 2009 then Assistant Secretary responsible for industrial services from 2012.

2. Prior to working for the NSW Branch I practiced as a solicitor in New South Wales then New Zealand.

3. I have responsibility, amongst other things, for the legal and industrial activities of the NSW Branch. I have significant experience dealing with the Social and Community Services Sector (SACS), in:

    a. Being responsible for ten years for the NSW Branch's Industrial Services Team which provides advice and representation to ASU members in the SACS sector in relation to workplace grievances, disciplinary matters, unfair dismissal cases, Award and Agreement entitlements, classification issues, workplace health and safety, discrimination and bully and harassment matters.

    b. Representing SACS members in Enterprise Bargaining.

    c. Appearing in the Fair Work Commission in a range of matters affecting SACS members including disputes, adverse action and unfair dismissal matters, and the 2012 and 2015 SCHADS Award Reviews.

4. In my position as Senior Industrial Officer, I was involved in the Social, Community and Disability Services Industry Equal Remuneration Case. I worked extensively on the case from the time the application was lodged in March 2010 until the final order was made in June 2012. I briefed and instructed Counsel throughout the hearing, organised all of the workplace

inspections in New South Wales, attended all of the workplace inspections in New South Wales and Queensland, prepared all of the witness statements for witnesses based in New South Wales and the ACTU and some in other states and territories, engaged all of the expert witnesses called by the ASU and assisted with research and written submissions.

5. I have been shown the submissions filed by the Australian Business Industrial on 2 July 2019. I note that at paragraph 5.2, they assert that clause 25.5(f) '*already applies to a significant part of the disability services sector, as it applies to services provided to people with a disability in their home.*' They base this assertion on the description of '*Home Care Sector*' at clause 3.1 of the *Social, Home Care and Disability Services Award 2010* ('**the Award**').

6. Clause 25.5(f) does not apply to any part of the Disability Services sector, it only applies to employees classified under Schedule E of the Award as Home Care employees. Employees providing disability services are properly classified under the Social and Community Services Sector classification definitions (Schedule B of the Award). This work is distinct from work carried out by home care employees (covered by Schedule E of the Award) for people with a disability.

7. Clause 3 of the Award relevantly describes the Social and Community Sector as follows:

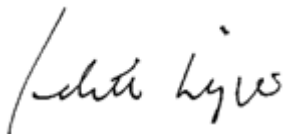
> ***social and community services sector*** *means the provision of social and community services including social work, recreation work, welfare work, youth work or community development work, including organisations which primarily engage in policy, advocacy or representation on behalf of organisations carrying out such work and the provision of disability services including the provision of personal care and domestic and lifestyle support to a person with a disability in a community and/or residential setting including respite centre and day services. To avoid doubt, an employee will not be precluded from being engaged under Schedule B, instead of another schedule, merely because they provide services in a private residence or in outreach.* (emphasis added)

8. Disability services involves the provision of personal care and domestic and lifestyle support and/or training to a person with a disability including in a community setting whether residential or non-residential, a respite centre, a day service facility or in a private residence where work in that residence involves either teaching, promoting or maintaining living skills, client, advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.

9. Disability services (classified under Schedule B of the Award) can be distinguished from the provision of home care services to people with a disability (classified under Schedule E). These are roles where the workers only provide personal care for a client.

10. The distinction between Home Care employees and Social and Community Services employees undertaking disability services was the subject of controversy during the Equal Remuneration Case 2010-2012. In that case, the Australian Federation of Employers and Industries sought to clarify that the proposed Equal Remuneration Order did not apply to employees covered by Schedule E of the Award.

11. The parties came to an agreed position, which was filed by AFEI and marked as Exhibit AFEI 6. Attached and marked **Annexure A** is a copy of Exhibit AFEI 6.



JUDITH WRIGHT

Dated: 12 September 2019

ANNEXURE A

EXHIBIT: AFEI 6

Extract from transcript: 11 February 2011 — PN5572–PN5583

AFEI Letter to ASU: 9 February 2010

ASU Letter to AFEI: 22 February 2011

Extract from transcript: 3 February 2011 — PN3155–PN3177

Extract from Witness Statement – Sally McManus: ASU Exhibit 34 – page 21 and 22

PN5572

JUSTICE GIUDICE: Very well. In the circumstances, what we'll do is vary the timetable to provide for the New South Wales government to file submissions by 30 March and for the Victorian - I'm sorry. Just a moment. What date does the caretaker period commence?

PN5573

MS DOUST: The caretaker period commences on 4 March.

PN5574

JUSTICE GIUDICE: Yes. So what I had in mind was an extra couple of days only which would take it to 2 March for the New South Wales submissions.

PN5575

MS DOUST: We would be grateful for that, your Honour.

PN5576

JUSTICE GIUDICE: In relation to Victoria, then that will be 21 March.

PN5577

MS DOYLE: Yes, your Honour.

PN5578

JUSTICE GIUDICE: Otherwise the timetable will not be varied. Yes, any other matters? Mr Warren, yes.

PN5579

MR WARREN: Your Honour, one short matter. I raised prior to the luncheon adjournment, I indicated there was a difficult issue that the AFEI had. We've had some discussions over the luncheon adjournment and it appears to have been resolved. In short frame, it grew out of the cross-examination of Mr Di Troia and his evidence with respect to the coverage of the home care industry by this proposed order. A letter has been written by AFEI to Mr Harvey. I understand that Mr Harvey or his union will be responding to AFEI next week in writing and that may well resolve the matter and we will inform the tribunal of that resolution.

PN5580

JUSTICE GIUDICE: Right.

PN5581

MS DOUST: I have (indistinct) relates to the questionnaires that Ms Lowson raised earlier on. I think she indicated that it's proposed to have them. I'll ultimately post it to the web site if that occurs on the basis that they de-identify (indistinct) witnesses who have been treated. That became contentious if we (indistinct) basically supported that position, but as I understand it there's going to be some more discussions occurring anyway between Ms Lowson and Mr Warren.

PN5582

JUSTICE GIUDICE: Yes.

PN5583

MS LOWSON: Your Honour, could I just put on the record my thanks to Judith Wright and Keith Harvey for the work that they've done during the course of these proceedings; in particular juggling witnesses and re-scheduling matters and arranged a couple of matters that has helped the matter proceed more smoothly.

AFEI
Australian Federation of Employers & Industries

9 February 2010

Mr Keith Harvey
National Industrial Officer

Carlton South VIC 3053

Via email: kharvey@asu.asn.au

Dear Mr Harvey,

Re: FWA Matter No.: C2010/3131 – Application for Equal Remuneration Orders

We write with regard to the above matter and in particular seek clarification of the intended scope of the Equal Remuneration Order (ERO) sought by the applicants.

We note with concern that the evidence of Mr David Di Troia given in cross examination to Fair Work Australia on 3 February 2010 (PN3170) indicated that he understood the application is intended to cover employees in the Home Care Industry.

We note also that, whereas the Social, Community, Home Care and Disability Services Industry Award 2010 contains a separate classification structure for Home Care Employees (Schedule E), the amended application dated 23 December 2010 does not.

The Home Care Industry, in our view, is comprised of a significant number of *for profit* organizations which operate on a fee for service basis without assistance through government funding.

We request, as a matter of urgency, clarification as to whether it is the intention of the applicants that the ERO sought by the applicants apply to the Home Care Industry.

If you require any further information, please call me on (02) 9264 2000.

Yours faithfully,

Tony Doyle

Mr T Doyle
Manager – Workplace Relations
AFEI

By email: Tony.doyle@afei.org.au

Dear Mr Doyle,

Re: FWA Matter No.: C2010/3131 – Application for Equal Remuneration Order – Home care employees

I refer to your letter dated 9 February 2010 [sic].

The intended scope of the Application is clearly defined in paragraphs 3 and 4 of the Amended Application filed on 23 December 2010. It covers employers and employees engaged in:

> *The provision of personal care and domestic and lifestyle support and/or training to a person with a disability including in a community setting whether residential or non-residential, a respite centre, a day service facility or in a private residence where work in that residence involves either teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.* [See definition of Disability Services Sector at paragraph 3.1 of the Amended Application].
>
> and/or
>
> *The provision of social and community services including social work, recreation work, welfare work, youth work or community development work, including organisations which primarily engage in policy, advocacy or representation on behalf of organisations carrying out such work.* [See definition of Social and Community Services Sector at paragraph 3.1 of the Amended Application].

The Application is not intended to cover employers and employees of "the home care sector" as defined in paragraphs 139 and 140 of Exhibit 34 (witness statement of Sally McManus) as follows:

> *There are some roles where workers are supporting people with a disability or an aged person which do not fit the definition of "disability services sector" or "social and community services sector" work. Therefore, these roles do not fall under the classification definitions in Schedule B of the Order sought in this matter. These are roles where the workers only provide personal or physical support for a client. A typical example of this is the type of support required for clients who have a physical disability but do not have an intellectual disability.*

Paul Slape

Assistant National Secretaries
Greg McLean
Linda White

For example, a person who depends on a wheelchair may need assistance getting out of bed, showering, dressing and with housework. However, they may not need and are not provided with other support such as living skills. These clients would live in their own homes and otherwise live independently. The workers who provide this role would be considered to work in the home care sector.
The same example could be given where workers are providing only personal care, domestic assistance or home maintenance for an aged person in their own homes. These workers are part of the home care sector.

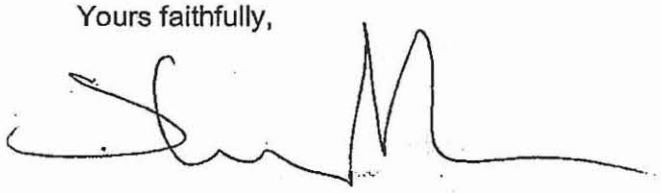
However the Application does cover the following work which may be performed at a client's home and which falls within the definitions of Disability Services Sector and/or Social and Community Services Sector:

- The provision of personal care and domestic and lifestyle support and/or training to a person with a disability involving either teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.
- Provision of outreach or home visiting for aged people to identify needs or to provide support of a social or welfare nature, which could include support with organising appointments, monitoring medications, assistance with communication, meal planning, accompaniment on outings and the coordination of home care services.
- Recruiting and organising volunteers or paid workers to visit aged people in their homes as part of overcoming social exclusion.

We understand that the term "Home Care Industry" has different meanings in different parts of Australia so we trust that the contents of this letter makes clear the scope of the Application.

Please contact me if you require further clarification.

Yours faithfully,



Keith Harvey
National Industrial Officer

PN3155
JUSTICE GIUDICE: Defer it, yes, very well. All right, we'll adjourn now until 2 o'clock.

<SHORT ADJOURNMENT [12.56PM]

<RESUMED [2.04PM]

PN3156
MS LOWSON: Your Honours, Commissioners, the next witness is David Di Troia.

PN3157
JUSTICE GIUDICE: Yes.

<DAVID DI TROIA, SWORN [2.05PM]

<EXAMINATION-IN-CHIEF BY MS LOWSON [2.05PM]

PN3158
MS LOWSON: Would you tell the tribunal your current occupation?---I'm the branch secretary of the LHMU's South Australian branch.

PN3159
Did you, for the purpose of these proceedings, prepare a statement?---Yes, I have.

PN3160
Do you have a copy of that with you?---Yes, I do.

PN3161
Can I just take you to paragraph 24 of that statement?---Yes.

PN3162
There's a reference there in the first line to "local government sector". Do you see that?---Yes, I do.

PN3163
Is that meant to refer to the state government sector?---Yes, the word "local" should be replaced with the word "state".

PN3164
With that amendment, is the content of your statement otherwise true and correct to the best of your knowledge and belief?---Yes.

PN3165
I tender that statement.

PN3166
JUSTICE GIUDICE: It will be exhibit ASU39.

EXHIBIT #ASU39 STATEMENT OF DAVID DI TROIA

PN3167
MS LOWSON: Yes, thank you, your Honour. I have no further questions.

<CROSS-EXAMINATION BY MR WARREN [2.07PM]

PN3168

MR WARREN: Mr Di Troia, you mention in your evidence in paragraph 2 of your statement that you speak of your branch membership. Does your branch membership spread across government and non-government employees, the non-government employees being in the SACS sector?---Yes, it does.

PN3169

So when you speak in paragraph 2 of your branch membership records - "64 per cent of these members are women" - that's a mix. Those women you are therein referring to are a mix of both SACS and government employees? ---I believe so.

PN3170

In paragraphs 3, 4 and 5 at least, you mention the home care classification stream. Is it your position that persons employed in home care would be covered by the order sought in these proceedings?---That's my understanding.

PN3171

Could I take you to annexure A to your statement please, Mr Di Troia?---Yes.

PN3172

Are you familiar with the enterprise agreements therein contained?---Other than seeing a final copy of those documents at the time of signing, I've not had any involvement in the negotiations of those agreements listed in attachment A. What I can say is that since tendering my statement in relation to the Minda agreement, I had some involvement in finalising the new agreement.

PN3173

There has been a new agreement?---Yes, there has.

PN3174

If I could just take you to attachment A?---Yes.

PN3175

I want to put a proposition to you. If you're unable to answer it, please say so. I'm suggesting to you that the enterprise agreements listed as Anglicare, Hills Community, Community Living Options, La Vida, Elizabeth Bowey Lodge, Helping Hand Aged Care, all specifically have a capacity of the employees covered by those agreements to have beneficial concessional tax with respect to fringe benefits tax within the agreements?---Look, I'm not in a position to answer that.

PN3176

You're not in a position because you don't have particular knowledge of those agreements?---I don't have the knowledge of what I'm suggesting you're putting to me - is that there are some salary sacrifice arrangements.

PN3177

Yes?---I'm not aware as to the actual arrangements when it comes to salary sacrificing.

The Nature of Work in the Disability Sector

132. Over the last fourteen years of being an official at my Branch, I have had extensive interaction with workers and employers in the disability sector. I have visited many workplaces where our members in the disability sector work; these include residential facilities, day program facilities and offices. I have had discussions with hundreds of workers in the disability sector, I have met many clients who use the services our members work in, I have had discussions with all the major employers in the sector in NSW and been directly involved in many industrial disputes in the disability sector. For these reasons, I am very familiar with nature of work undertaken by our members in the disability sector in NSW.

133. Since November 2008 I have been a member of the National People with Disabilities and Carer Council. I was appointed by the Federal Government to this Council whose role is to advise the Australian Government on the needs of people with disability, their families and carers. Through this role, I have met and had many discussions with employers in other States, as well as people who advocate for service users (or clients) of these disability services.

134. According to our membership records our Branch has about 2000 members employed in the disability sector.

135. I have read the witness statements of W59, W60, W64, W65, W66, W67, and Lloyd Williams. The nature of the work they describe accurately reflects the work performed by the members of our Branch in the disability sector. There are some differences in terminology only, for example, in NSW residential services for people with disabilities are referred to as "group homes", not "community residential units".

136. W60 works at Kirinari Community Services (Kirinari). She works both in NSW and in Victoria. I have visited workplaces and met members and clients from Kirinari in Albury, the Blue Mountains and Inverell. I have also been involved in negotiating their enterprise agreements over many years. The nature of the work W60 describes is the same as the work performed by residential disability sector workers throughout NSW. The only differences are differences that come about because of the particular mix of clients.

137. Workers in the disability sector develop or implement individual or person plans for each of the clients they support.

138. Many workers in the disability sector will perform duties that are of a personal care nature, however this is only part of their role. They implement personal plans that cover all aspects of a person's life. They also perform work that includes teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion.

139. There are some roles where workers are supporting people with a disability or an aged person which do not fit the definition of "disability services sector" or "social and community services sector" work. Therefore, these roles do not fall under the classification definitions in Schedule B of the Order sought in this matter. These are

roles where the workers *only* provide personal or physical support for a client. A typical example of this is the type of support required for clients who have a physical disability but do not have an intellectual disability. For example, a person who depends on a wheelchair may need assistance getting out of bed, showering, dressing and with housework. However, they may not need and are not provided with other support such as living skills. These clients would live in their own homes and otherwise live independently. The workers who provide this role would be considered to work in the home care sector.

140. The same example could be given where workers are providing *only* personal care, domestic assistance or home maintenance for an aged person in their own homes. These workers are part of the home care sector.

141. There are roles within the social and community sector where workers will be providing outreach or home visiting aged people to identify needs or to provide support of a social or welfare nature. These workers are part of the social and community services sector. Similarly, there are roles within the social and community sector that involve recruiting and organising volunteers or paid workers to visit aged people in their homes as part of overcoming social exclusion. These workers are considered part of the social and community services sector. In NSW these workers are funded by the Home and Community Care (HACC) program or Federal Government Aged Care packages funding.

Public Sector Awards

NSW

142. The following public sector awards apply to persons performing the same or similar work as performed in the SACS industry in New South Wales:

a. *Crown Employees (New South Wales Department of Ageing, Disability and Home Care) Community Living and Residential Award* – applies to Disability Support Workers and Team Leaders employed by the New South Wales Department of Ageing, Disability and Home Care;

b. *Crown Employees (Administrative and Clerical Officers - Salaries) Award 2007* - applies to Case Workers employed by the Community Services NSW, Client Service Officers employed by Housing NSW and Alcohol & Other Drug Officers, Welfare Officers and Accommodation Support Officers employed by Corrective Services NSW;

c. *Health & Community Employees Psychologists (State) Award 2008* – applies to Mental Health Workers (psychologist) and Sexual Assault Counsellors employed by NSW Department of Health;

Annexure A – Witness Statement of Deborah Anderson

Annexure B – Witness Statement of Emily Flett

Annexure C – Draft Determination

1. This submission is made in reply to evidence and submissions filed by the employer groups in support of Australian Business Industrial's ('**ABI**') claim to vary the *Social, Community, Homecare and Disability Services Industry Award 2010* ('**Award**') by inserting clause a 'remote response' term and consequential amendments to clause 28.4 Recall to work overtime term.

2. We note the correspondence from Commissioner Lee regarding the without prejudice in principle agreement reached on 9 September 2019. The ASU has consulted its members. Consequently, we are no longer a party to that agreement.

Australian Business Industrial's Claim

3. The ASU opposes the ABI's claim because the proposed variation has the following deficiencies:

   a. The description of '*remote response*' appears to be derived from the *Local Government (State) Award (NSW)* and the *Local Government Award 2010* (Cth) ('**the Act**'). It may be appropriate for the local government industry, but it does not describe work in the SCHDS Industry.

   b. An employer would be entitled to direct an employee to perform work outside of their ordinary hours of work. Currently, an employee would be entitled to refuse to work these hours if they were unreasonable under s 62 of the *Fair Work Act 2009* (Cth).

   c. The clause expands the scope of the current on call term, which currently applies where an employee is '*required to be on call (i.e. available for recall to duty*)'. That is, available to be recalled to duty under clause 28.4.

   d. The draft variation makes no distinction between a '*remote response*' where an employee is rostered on call and where an employee is not rostered to work. Employers may decide not to require employees to be on call to avoid the payment of the on call allowance, but still direct employees to perform work. This promotes unproductive and inefficient work practices while permitting significant interference with an employee's private life.

   e. If an employee performs work in such circumstances, then the employee will be paid at the '*applicable rate*' for any time worked. This means that part-time employees may be paid at their minimum rate of pay if they have not worked more than 10 hours in a day or an average of 38 hours or 76 hours per fortnight. Given that this clause could only reasonably apply where work is required out of normal hours and at short notice, it should attract a penalty rate to compensate for the disutility of the work. Additionally, if the time work is paid at the minimum rate of pay, it may mean that these hours are not '*reasonable*' for the purposes of s 62 and 2 63 of the Act.

f. Employers may refuse payment where an employee does not provide a timesheet to their employer by the next full pay period. However, there is no obligation placed on the employer to inform the employee of the appropriate recording keeping practices. This may create the perverse situation where an employee is obliged to perform work without payment.

g. The clause explicitly excludes '*administrative tasks*'. However, from the limited evidence and submissions filed in support of this claim, it appears that the application is actually directed at administrative tasks.

h. Clause 28.3 does not apply where an employee performs work under this clause. This means employees could be required to attend work after a disrupted rest period or after working a significant amount of overtime.

4. ABI has led very little evidence in support of its claim. Indeed, the only reference to anything like 'remote response' is found in Scott Harvey's statement where he states that his employer '*has an on-call team*' but does not give any detail about how the team operates or give any indication of how the propose variation would affect his operations. Given the magnitude of the proposed variation, this level of evidence is insufficient to satisfy the Commission that the proposed variation is necessary to achieve the Modern Awards Objective.

5. Further, ABI have not supported their claim with submissions of any substance. They have not described the work that this provision will cover or how it would operate in practice. They also mischaracterise the disutility of working remotely. At paragraph 6.12 of their submissions of 2 July 2019, they identify a number of considerations which suggest that '*the level of disutility associated with employees performing remote response work is significantly less*' than being recalled to the workplace. The Commission should not accept this submission for the following reasons:

a. ABI asserts that employees are not '*required to stay in the vicinity of the workplace while on call*' or incur additional expenses and travel time. However, there is nothing in the proposed clause that would ensure that may only employee is required to be on call solely for the purpose of remote response. The witness statement of Deborah Anderson demonstrates that employees may be required to be available for both recall to the workplace and remote response. Further, this submission ignores the circumstances of the SCHDS Industry where employees required to be on call will return to their homes, even if they are likely to be recalled physically to the workplace.

b. ABI asserts that an employee '*can be on-call remotely from anywhere*'. This is wrong. Employees in the SCHDS Industry, and especially the SACS Sector, deal with highly confidential and sensitive issues. In many cases they are rostered to be on call to provide expert advice or assistance to more junior employees rostered to work a night shift. Employees required to be on call will often need to refer to their employer's policies

and procedures, relevant legislation and other regulatory matters. This work cannot be done at the local café, while bushwalking or a busy bar. The witness statement of Emily Flett describes the work on call work in the Youth Services sector.

c. Further, the clause proposed by ABI permits an employer to '*require*' an employee to work remotely. This is different from the Recall to work overtime term, which only permits an employer to '*request*' an employee to return to the workplace. This element of compulsion increases the disutility of the work.

d. Additionally, the proposed clause does not distinguish between a time where an employee is required to be on call and any time outside of ordinary hours. Employees covered by the Award would then live in apprehension that they could be required to work. This creates a disincentive to properly structure work.

The ASU's Position

6. There is in fact significant disutility to the employee associated with working outside of ordinary hours even if they are not recalled to the physical workplace. The ASU relies on the witness statements of Deborah Anderson (see Annexure A) and Emily Flett (see Annexure B) in support of our application. Both witnesses have had long careers in the Social and Community sector. They are qualified and experienced employees who have been selected for on call work by their employers to support less senior employees working weekends and night shifts. This is a cost saving for employers who would otherwise need to roster a senior employee on a night shift. Both witnesses report that while they derive satisfaction from their work and feel loyal to their clients, the hardship of on call work is significant. Both witnesses describe the severe physical, psychological and social impact on working remotely. In both cases, their employer has offered an above award two hour minimum payment at overtime rates to attract them to the work. Both witnesses report that they would be less willing to do this work if they were paid any less. These arrangements are common in the Social and Community Sector.

7. If the Commission is minded to make a term dealing with recall to work overtime remotely it should have the following features:

a. Remote work, like physical recall to the workplace, should be voluntary and paid at overtime rates.

b. There should be a clear incentive for remote work to only occur while an employee is required to be on call. This can be achieved by a structure of minimum payments.

c. A two hour minimum payment at overtime rates should apply where an employee works remotely when they are not required to be on call. This aligns with the minimum payment for a recall to work overtime at the physical workplace.

d. A one hour minimum payment when an employee works remotely when they are required to be on call. This aligns the minimum payment for remote work while on call with the minimum payment for work performed during a sleepover.

e. Further, because this is a significant expansion of the current 'on call provision', cl 25.3 Roster days off should be varied to ensure that on call time counts as duty for the purposes of the clause. This is to ensure that the expansion of the scope of on call work does not reduce an employee's personal time.

8. We filed with this submission a draft determination (see Annexure C) that would give effect to these principles.

Annexure A.

BEFORE THE FAIR WORK COMMISSION
MATTER NO. AM2014/285
S. 156 - Four yearly review of modern awards – Social, Community, Home Care and Disability Services Industry Award 2010

STATEMENT OF DEBORAH LEE ANDERSON

I, Deborah Lee Anderson, Shared and Supported Living Co-ordinator of 17/3 Parkside Parade Toronto, The Leisure Life Village in the State of New South Wales, say;

1. I am a Delegate of the Australian Services Union, New South Wales.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on 17 July 1958, I am 61 years old.

4. I am single and live with my aged mother to help support her. My mother is 81 and I assist her by doing the shopping and taking her out on weekends to visit her specialist.

My work history

5. I have worked as a Shared and Supported Living Co-ordinator since on or about 14 June 2018.

6. I hold a Certificate 4 in Youth and Community, a Diploma in Community Services, a Certificate 2 in Frontline Business Management, and Certificate 2 in Leadership.

7. During the early years of my life I was raising my children and worked part time on and off as a bar attendant. This was over a period of about 25 years, although for about 2 years at the end of this period I worked as a teacher's aide at Lake Macquarie High School. I then worked as a teacher's aide at Toogoolawa, a private school for disadvantaged youth, for about three years.

8. In 2013, I entered the Social and Community Services sector when I began work with Life Without Barriers as a Disability Support Worker. In June 2016, I was employed by St Vincent de Paul as an NDIS Local Area Co-ordinator. In June 2018 when I returned to work with Life Without Barriers in my current role as a Shared and Supported Living Co-ordinator. Life Without Barriers is a not for profit community organisation and a registered NDIS provider.

Current employment

9. On 18 June 2018, I commenced work with Life Without Barriers as a Shared and Supported Living Co-ordinator. I am a full time employee. Attached and marked **Annexure A** is a copy of my contract of employment.

10. I am employed under the *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award')**. I am paid a yearly salary of $74,865.75.

11. I manage up to 30 frontline staff in two group homes. One group home has five high needs medical clients. These client's needs are constantly changing. I must continually monitor their needs to make sure we meet their requirements. The second home has two women with their own particular needs and compliance requirements.

12. Managing two homes in different physical locations makes it difficult to monitor and ensure compliance in both places. It is common for me to wake up through the night with worries about what hasn't been done. I monitor emails in personal time on weekends and evenings, when not rostered on, because management still send emails at this time and I feel obliged to stay on top of things and to do work outside hours unpaid

13. My job involves many different tasks:

    a. This includes overseeing rostering, conducting formal supervisions, finding staff to fill roster gaps as needed, conducting team meetings, and interviewing frontline staff for vacancies.

    b. I am also responsible for ensuring staff are up to date with training; monitoring and writing incident reports and monitoring follow up actions; monitoring Work Health and Safety systems and practices: conducting work cover processes: and monitoring restricted work practices. I also have to ensure that all compliance documentation is in line with NDIS Commission requirements.

    c. I am responsible for ordering the stationary requirements of the houses; placing orders for client medical supplies; (e.g. incontinence, ventral stomach (peg) feeding requirements): arranging house maintenance: and ensuring first aid compliance.

    d. I liaise with external services for the clients, (eg medical practitioners, therapists, dieticians, dentists), and am responsible for ensuring that their recommendations are endorsed and followed, (eg a transfer procedure). I also monitor client finance processes, monitor medications to ensure they are in place and current, and notify staff of any medication changes.

My hours of work

14. I work 76 hours over a fortnight on weekdays starting at 8.00 am until 4:30 pm. My pattern of daily work doesn't change. However, I am also on a rotating roster to perform On Call duties which can overlap my regular hours and extend well beyond them. I only receive a roster for my on call duties.

15. I am usually rostered to be on call once a week. If I am rostered to be on call during the week my normal hours of work will change. I will start work at 11.30 am and finish at 8.00 pm. I will start on call duties 5.00 pm and finish at 8.00 am the following morning. This means that there is a three hour overlap between starting my on call duties and the end of my normal rostered work. However, there are still urgent tasks that need to be done, and no-one else takes over those tasks in my place. Staff and management still contact me during this period. I usually start begin working at around 8.00 am, even if I am not rostered to start until 11.30 am. I am sometimes rostered to be on call on weekends. Then I will be rostered between 9.00 am and 9.00am.

16. Attached and marked are copies of my on call roster for the period 17 June 2019 to 16 December 2019.

On Call Duties

17. When I am rostered on call, I am expected to perform a wide range of duties. Typically, this includes responding to emergencies, administrative tasks such as rostering, providing phone advice and assisting less experienced staff with their issues. However, I can be called for any reason. I have to make an assessment over the phone of what action should be taken. I am

also responsible for reporting and recording all incidents. On a busy shift this can mean continuing after the shift to ensure all incidents have been logged and recorded.

18. When I am on call, I will usually take calls from staff at group homes when another staff member has not turned up or a staff member becomes sick and has to leave work early. I will then find another staff member to fill in for the absent staff member. This can require calling many people. It is not unusual for me to make up to 12 calls to find an available person. I am also required to contacting our labour hire agency when agency staff do not attend work as they were rostered. I will also rearrange rosters that flow on from this change to manage overtime and breaks.

19. Ultimately, if there are no staff available to cover a shift then I have to cover the absent workers duties. This means I will need to return to the workplace and directly support our clients. I must also continue responding to 'on call' calls after I have been recalled to work. This has happened twice so far since starting on the on call roster in August 2018.

20. Being on call also involves assisting staff to find information. This may require contacting other staff to find out where the information is located. It also involves advising on medication issues, and recommending corrective action when equipment is not functioning correctly.

21. I am also required to assist staff in our group homes to deal with emergencies that arise. For example, when clients have escalated behaviour, such as becoming violent or have seizures. This requires talking the staff through the situation, helping resolve the issue, ensuring incident reports are made, and logging the occurrence.

22. I am paid an above Award allowance of $30.00 when I am rostered on call between Monday and Friday, and $50.00 when I am rostered on call on weekends and public holidays. When I am working while rostered on call I am paid at the rate of time and half for the first 2 hours and double time after that.

Other work outside of rostered working hours

23. I am not usually required to work out of hours unless I am rostered to be on call. If I am contacted out of hours, this is usually just a telephone call from a new coordinator or a more junior staff member with a quick enquiry. There is no overt expectation from my employer to do this work. However, there is a clear expectation that I will be available to answer calls from management outside of working hours. But this does not happen very often and has only minor impact on me.

Impact of on call work

24. When I am on call, I cannot leave my home as I need to have phone, internet and computer access. I must also be ready and able to respond to any requests for work. I cannot go anywhere nor do anything else. This is particularly difficult on weekends when doing an on call shift from 9am until 9am. This causes high anxiety for me as I could be called out to any site to handle difficult incidences. This has occurred 3 times so far, and once resulted in me having to do a 23 hour shift. This can also result in me being required to attend at two places at the one time which is highly stressful as I can't go to a house to attend an incident when I am already attending an incident at another house.

The Australian Business Industrial remote response claim

25. I have been show a copy of ABI's remote response draft determination. I understand that it means that from 5pm until 10pm at night, I could be called to respond to an issue and I may only be paid for 15 minutes. There is no obligation for my employer to roster me to be on call.

26. I am greatly concerned by this proposal. The proposed 15 minute minimum engagement is completely inadequate payment for the inconvenience and stress involved with being contacted out of hours. You can never know what call may come through. It could be enormously inconvenient. What if I was out with a family member and I received a call that required me to attend a house? What would I do with my family member? How could this payment reimburse me for the significant imposition on my family life.

27. I was not previously considering leaving my job, but if something like this proposal was brought in as compulsory I would seriously consider leaving the industry. Doing work out of hours is only worthwhile for the additional pay it provides. Without significant remuneration to provide for not just the time involved, but the inconvenience as well, it is not worthwhile doing this work.

SCHEDULE 1

Item No.	Item	Detail
Item 1	Commencement Date	18 June 2018
Item 2	Duties	Refer to Position Description
Item 3	Employee	Deborah Lee Anderson
Item 4	Position	Shared & Supported Living Coordinator
Item 5	Base Remuneration	$74,865.75
	Additional Benefits 1	Not Applicable
	Additional Benefits 2	Not Applicable
	Superannuation 9.5%	$7,112.25
	Total Fixed Remuneration	$81,978.00
Item 6	Term of Appointment	Permanent
Item 7	Start Date of Employment	18 June 2018
Item 8	Reporting to	Shared & Supported Living Manager
Item 9	Hours of work	Full Time 38 hours per week.
	Hours of Work Averaging Period	6 monthly
Item 10	Probationary Period	6 months from start date of employment.
Item 11	Licences and Qualifications	Certificate IV or equivalent in Disability, Mental Health or Community and Social Services First Aid Certificate Current driver's license
Item 12	Probity Clearances Required	National Criminal History Record Check NSW Working with Children Check
Item 13	Governing Law	New South Wales
Item 14	Annual Leave	20 days for each 12 months of service (pro-rated for part time employees), accrued and cumulative in accordance with the National Employment Standards.

WE
LIFE WITHOUT BARRIERS
VE

Item 15	Personal/Carers Leave	10 days for each 12 months of service (pro-rated for part time employees), accrued and cumulative in accordance with the National Employment Standards.
Item 16	Guarantee of Annual Earnings	Not applicable
Item 17	Termination Notice Period after expiration of Probationary Period	The Employee or Organisation will provide 4 weeks' written notice to the other party of their intention to terminate employment. If the Employee is at least 45 years of age at the time of Termination of Employment and has completed at least 2 years' continuous service at the time the notice is given, the Organisation will increase the notice period by 1 additional week. The Organisation may provide payment in lieu of the equivalent notice period or part thereof.
Item 18	Tool of Trade Vehicle	A tool of trade vehicle is provided to the position outlined in Item 4 of Schedule 1. As per the Vehicle Eligibility & Allowances Policy Guideline, a tool of trade vehicle is required to meet the inherent requirements of the position. The allocation of this vehicle is subject to change by the Organisation. Tool of trade vehicles may be utilised for personal use in accordance with the Fleet Management Policy, however they do not form part of an employee's remuneration package and the vehicle is to be made available for use by others in the Organisation as required. Utilising a tool of trade vehicle for business travel restricts you from claiming kilometre reimbursements.

WE
LIFE WITHOUT BARRIERS
VE

1. APPOINTMENT

1.1 Commencement

a) Subject to the terms of this Agreement, the Organisation appoints the Employee to the Position set out in Item 4 of Schedule 1 and the Employee accepts that appointment (**the Employment**).

b) The Organisation will employ the Employee from the Commencement Date specified in Item 1 of Schedule 1 until the Employment is terminated by either party in accordance with this agreement.

c) Subject to the terms of this Agreement, the appointment is for the term outlined in Item 6 of Schedule 1.

1.2 Prior Employment or Agreements

a) This Agreement replaces all previous contracts of employment and other employment arrangements between you and the Organisation.

b) Where this Agreement replaces an existing employment Agreement, the Organisation will recognise continuity of service and your period of prior service with the Organisation for the purposes of all employment related entitlements. For the purpose of calculating your period of continuous service with the Organisation, your employment by the Organisation is deemed to have commenced on the date listed in Item 7 of Schedule 1.

1.3 Probation

a) From the Start Date the Employee is subject to the probationary period specified in Item 10 of Schedule 1.

b) During the probationary period, either the Organisation or the Employee may terminate the Employee's employment by giving one (1) weeks' notice in writing or, in respect of the Organisation, payment in lieu of such notice.

1.4 Reporting

a) The Employee will report to the Position described in Item 8 of Schedule 1 or such other position as nominated by the Organisation.

1.5 Work Location & Travel

a) Due to the nature of services provided by the Organisation, the Employee may reasonably be required to travel to and perform work at various work sites or locations at the Organisation's discretion. The Employee will not be entitled to any additional remuneration for such travel, but travel expenses for approved travel will be paid for by the Organisation in accordance with the Organisation's travel policies.

1.6 Hours of Work

a) The Employee's ordinary hours of work are set out in Item 9 of Schedule 1. The Employee may be required to work reasonable additional hours as required to fulfil the requirements of their role. The Organisation may require the Employee to work varying hours each week in order to satisfy the requirements of their position. In this case the Organisation may average the ordinary hours of work over a period of time greater than one week. This averaging period is outlined in Item 9 of Schedule 1.

b) The organisation may vary these hours from time to time after giving a minimum of 7 days' notice to the Employee

c) The Employee's Total Fixed Remuneration includes compensation for all hours the Employee is required to work. The Employee is not entitled to receive payments for reasonable additional hours worked.

WE
LIFE WITHOUT BARRIERS
VE

2. PROBITY, CONDITIONS AND CONSENTS

2.1 Probity

a) The Organisation is committed to the safety and protection of clients we support. This means that we need to make sure that all employees, whether in client-facing roles or not, do not pose any risk to our clients or to the Organisation. To ensure this, all employees, must undergo suitability and probity checks in accordance with State and Federal legislation and internal policy requirements.

b) The employee promises to obtain and maintain the probity checks and relevant Federal and State based clearances listed in Item 12 of Schedule 1, and any other checks as reasonably required by the Organisation.

c) This offer of employment is conditional upon the Organisation receiving satisfactory probity and Federal and State based clearances from the Employee. If such clearances are not provided, the offer of employment may be withdrawn.

d) The Organisation may unilaterally terminate this Agreement if the Employee is unable to obtain or maintain satisfactory probity and Federal and State based clearances by providing the notice period prescribed in clause 6.1 of this Agreement or payment in lieu of notice.

2.2 Conditions of Employment

a) The Employee must have the necessary skills and experience to carry out the duties and responsibilities referred to in the Position Description.

b) The Employee must be competent to properly carry out their duties and any representations as to qualifications, experiences, skills and employment history must be true and correct. The Organisation may at any time request reasonable evidence of the Employee's ability to meet these requirements.

c) In addition to clause 2.2 (b), it is a condition of employment that the Employee maintains the specific qualifications, licences, and professional admissions set out in Item 11 of Schedule 1. Additionally, the Employee may be required to undertake mandatory training in order to meet the inherent requirements of the role as listed in the Position Description. Failure by the employee to maintain the qualifications or satisfactorily complete mandatory training for any reason (including suspended qualifications) may result in the Organisation terminating this agreement in accordance with clause 6.1.

d) The Employee must be eligible to work in Australia and meet all Australian immigration requirements to work in the position set out in Item 4 of Schedule 1.

2.3 Consent

The Employee consents to all or any acts or omissions by or on behalf of the Organisation (whether occurring before or after this consent is given) which infringe or may infringe any of the Employee's Moral Rights in relation to any works and other Intellectual Property Rights described in clause 5.2 made or created by the Employee in the course of the Employee's employment with the Organisation. Furthermore, the Employee acknowledges that as a result of providing such consent, the Employee waives their right to bring any Moral Rights claim against the Organisation.

2.4 Extent of consent

The Employee's consent under this clause is irrevocable and extends to:

a) the Organisation's licensees and successors in title in respect of the Works; and

b) any person authorised by the Organisation or its licensees or successors in title to do acts comprised in the copyright for the Works.

2.5 Genuine consent

The Employee acknowledges that the consent in this clause is a genuine consent given under Part IX of the *Copyright Act 1968* (Cth) and has not been induced by duress or any false or misleading statement.

3. EMPLOYEE'S DUTIES

3.1 General and alternative duties

The Employee will serve the Organisation in the Position set out in Item 4 of Schedule 1 and perform the Duties set out in the Position Description. The Employee may reasonably be directed to perform alternative duties within the Employee's skills, capabilities and expertise as required.

3.2 Client Care

A primary duty of all employees, whether directly client facing or not, is to ensure the delivery of service to clients is of the highest quality. We expect all employees to contribute to our clients feeling safe and respected and to make sure they are cared for and protected from abuse, neglect and exploitation. All employees have a responsibility to report the inappropriate, or suspected inappropriate, treatment of clients to their manager.

3.3 Work Health, Safety and Environment

The Employee is obliged to follow all reasonable and lawful instructions, policies and procedures relating to health, safety, and the environment as directed by Officers or duly authorised delegates.

3.4 Fitness for Duty

a) The Employee must maintain the required fitness for duty necessary to perform the inherent requirements of the Position.

b) Where the Organisation has concerns about the Employee's fitness for duty or capacity to perform the inherent requirements, the Organisation may direct the employee to undergo a medical assessment by a nominated registered medical practitioner at the Organisation's expense. Any resulting recommendations or diagnosis provided by the registered medical practitioner may be relied upon by the Organisation to determine the Employee's ongoing ability to safely perform the terms of this agreement.

3.5 Additional duties

The Employee must:

a) devote the whole of the Employee's time, attention and skill during Ordinary Hours of Work and at other times as reasonably necessary, to the duties of office;
b) faithfully and diligently perform the duties and exercise the powers entrusted to the Employee from time to time;
c) promote the interests and prosperity and enhance the reputation of the Organisation;
d) comply with all reasonable and lawful orders and directions given to the Employee by the Organisation;
e) notify the Organisation of any charges or convictions gained during the course of the Employment;
f) comply with the Organisation's policies and procedures as amended from time to time;
g) not be engaged or interested in any other business or occupation (whether paid or unpaid), accept appointments as a director or other officer of any corporation or to the boards of committees or charities without the prior written consent of the Organisation; and
h) promptly disclose any breaches of the Organisation's policy and procedures including any serious misconduct or wrong doings (including but not limited to your own, other employees, volunteers, carers and/or external representatives to the Organisation).

4. REMUNERATION AND ENTITLEMENTS

4.1 Total Fixed Remuneration

a) Unless agreed otherwise, the Employee's Total Fixed Remuneration is comprised of the following:

i. Base Remuneration as set out at Item 5 of Schedule 1;
ii. Superannuation payable at 9.5%; and
iii. any additional benefits set out at Item 5 of Schedule 1.

b) The Total Fixed Remuneration (including the Base Remuneration, Superannuation and Additional Benefits) as set out in Item 5 of Schedule 1, is expressed as the full-time equivalent remuneration for the Position. Part-time employees will receive a pro-rata amount of the Total Fixed Remuneration based on the Ordinary Hours of Work as outlined in Item 9 of Schedule 1.

c) The Organisation will pay to the Employee the Base Remuneration component (pro-rata for part-time employees) of the Total Fixed Remuneration by electronic funds transfer on a fortnightly basis into the Employee's nominated account.

d) The Employee may apply to receive part of the Total Fixed Remuneration by way of other benefits which can be lawfully provided by the Organisation, in accordance with any relevant policies of the Organisation, as varied from time to time. The Employee may apply to receive these benefits, provided that:
i. the election is consistent with any policy of the Organisation, as varied from time to time; and
ii. the costs of the election to the Organisation (including any liability for Fringe Benefits Tax) do not result in the total payments and benefits being paid or provided to the Employee exceeding the Total Fixed Remuneration.

e) The Employee's Base Remuneration as set out at Item 5 of Schedule 1 includes and absorbs all entitlements the Employee may have to any and all minimum rates of pay, loadings, allowances, penalty rates or overtime payments (other than as set out in this Agreement) that arise under any statute, any applicable modern award or any other applicable industrial agreement.

f) Any remuneration set out at Item 5 of Schedule 1 that is in excess of the minimum rate of pay under any applicable statute or applicable industrial instrument may be set-off against (ie be taken to satisfy) any other monetary obligations imposed by that statute or instrument.

g) The rates used for calculating any set-off will be the relevant rates contained in the applicable instrument or prescribed under the applicable statute.

4.2 Superannuation

a) The Organisation will make superannuation contributions in accordance with the Employer Superannuation Component and for any additional amounts elected by the Employee to any complying superannuation fund nominated in writing by the Employee or, if no fund is nominated by the Employee, the Organisation's nominated superannuation fund provider at the time.

b) The Employee's Total Fixed Remuneration will be altered with any changes to the Employer Superannuation Component as provided by relevant legislation.

4.3 Expense Benefit Payment

a) As a Public Benevolent Institution, the Employee may be eligible to benefit from tax savings by packaging a portion of their Base Remuneration.

b) The Organisation bears no responsibility or liability, nor has any discretion as to whether you are eligible to receive this benefit. We recommend you seek independent advice in relation to the Expense Benefit Payment and any such matters.

4.4 Review

a) The performance of the Employee and the amount of the Base Remuneration may be reviewed as part of an annual review process which takes effect at such times as the Organisation in its absolute discretion determines throughout the Employment in accordance with Organisation policies. There is no expectation that remuneration will increase as a result of the annual review.

b) In undertaking such a review the Organisation may take into account all circumstances that it considers relevant, including but not limited to the performance of the Employee, the performance of the Organisation, the prevailing economic conditions, the Organisation's business requirements and the Organisation's capacity to pay.

4.5 Annual leave

a) The Employee will be entitled to Annual Leave as outlined in Item 14 of Schedule 1 and in accordance with the entitlements provided by the Fair Work Act or any subsequent legislation. Annual Leave will be accrued progressively throughout the year.

b) Where possible, Annual Leave is to be taken at times agreed between the parties, having regard to the Organisation's operational requirements.

4.6 Long service leave

The Employee will accrue Long Service Leave in accordance with the Governing Law of the State set out in Item 13 of Schedule 1 and any relevant Organisation policy.

4.7 Personal/Carer's leave

The Employee is entitled to paid Personal/Carers leave as outlined in Item 15 of Schedule 1 and in accordance with the entitlements provided by the Fair Work Act or any subsequent legislation.

4.8 Other leave

All other leave, including unpaid leave, compassionate leave, parental leave, parental partner leave, and community service leave, will be provided to the Employee in accordance with the Organisation's policy or the Fair Work Act, whichever is more generous.

4.9 Public holidays

The Employee will be entitled to paid absence from work on the public holidays referred to in the Fair Work Act. The Organisation may request the Employee to work on a public holiday and this will be a matter for discussion between the Employee and the Organisation at the time of any such request.

4.10 Guarantee of Annual Earnings

The Employee is not provided with a Guarantee of Annual Earnings

5. PROTECTION OF BUSINESS

5.1 Confidentiality Obligations

a) Employee's obligations

The Employee must:

i. keep any **Confidential Information** which the Employee has received (whether before the date of this Agreement and in whatever capacity) secret and confidential, except to the extent that the Employee is required by law to disclose it;
ii. take all reasonable and necessary precautions to maintain the secrecy and prevent the disclosure of any Confidential Information;
iii. refrain from using or attempting to use Confidential Information in any manner which will or may cause or be calculated to cause injury or loss to the Organisation or its customers or clients; and
iv. not, except in the ordinary and proper course of employment with the Organisation, use or disclose or allow to be used or disclosed any Confidential Information to any third party without the prior written consent of the Organisation.

b) Survival of obligations

The Employee's confidentiality obligations survive the termination of this Agreement.

5.2 Ownership of Intellectual Property Rights

a) Ownership

i. Subject to any written agreement to the contrary, all Intellectual Property Rights created by the Employee solely or jointly with others in the course of the Employee's employment automatically vest in the Organisation.
ii. Employee must disclose Inventions.
iii. The Employee must disclose to the Organisation the full details of any Invention. The Employee agrees that all rights in such Invention will belong to the Organisation.

b) Assistance

The Employee must at the request and expense of the Organisation do all things necessary or desirable to vest in the Organisation or its nominee absolutely as legal and beneficial owner all rights, title and interest in:

i. any Intellectual Property Rights created by the Employee in the course of the Employee's employment, including executing any documents which are reasonably required by the Organisation; and
ii. any Invention, including securing patent or other protection anywhere in the world and executing any documents which are reasonably required by the Organisation.

c) Inventions

The Employee must not disclose or make use of any Invention with external parties without the Organisation's prior written consent.

d) No prejudice

The Employee will not do or fail to do any act which would, or might, prejudice the rights of the Organisation under this clause.

e) Survival of obligations

The Employee's intellectual property obligations survive the termination of this Agreement.

6. TERMINATION AND SUSPENSION

6.1 Notice of Termination

a) This Agreement may be terminated at any time by either the Organisation or the Employee giving the notice prescribed in Item 17 of Schedule 1, or by the Organisation giving the Employee pay in lieu of notice for part or all of the notice period

b) Following the giving of notice by the Organisation or the Employee, the Organisation at it discretion do any of the following (or a combination thereof):

i. make payment in lieu of part or all of the notice period

ii. require the Employee to perform alternative or no duties

iii. require the Employee not to attend work

6.2 Immediate Termination – Summary Dismissal

The Organisation may terminate this Agreement immediately without notice, if the Employee commits any act constituting serious misconduct including, but not limited to, acts of dishonesty, theft, fraud, violence, serious breaches of occupational health & safety procedures, wilful disobedience, breach of duty, or persistent breaches of the Organisation's policies or provisions of this Agreement.

6.3 Return of Equipment

On termination of this Agreement the Employee must return to the Organisation all property of the Organisation including all Confidential Information, books, any physical means of storing the Organisation's Confidential Information such as, but not limited to: laptops, tablets, mobile phones, discs or USB sticks, documents, papers, materials, credit cards, cars and keys held by or under the control of the Employee.

6.4 Deductions

Subject to law, the Organisation has the right to seek to recover any sums owed to the Organisation. The Employee agrees to provide authorisation to the Organisation in writing to deduct from their pay or otherwise recover any amounts owing to the Organisation.

6.5 Suspension

The Organisation may suspend the Employee from their Employment for any period on full pay, including to investigate any concerns the Organisation has regarding the Employee's performance or conduct, or a suspected breach of this Agreement. The Employee must continue to comply with all terms of this Agreement and the policies and procedures of the Organisation during the period of suspension.

6.6 Termination for Redundancy

In the event the Employee's employment is terminated on the basis of redundancy, the Employee will be entitled to a severance payment in accordance with the Fair Work Act.

7. GENERAL

7.1 Policies, Procedures and Code of Conduct

a) The Employee agrees to comply with the Organisation's policies and procedures.

b) These policies, procedures and code of conduct may be amended and varied by the Organisation from time to time. It is the obligation of the Employee to ensure they understand the terms and conditions of the Organisation's policies and procedures and maintains currency with these policies and procedures as they may change from time to time at the organisation's discretion.

c) The employee acknowledges and accepts that the Organisation's policies and procedures are not incorporated into this Agreement and do not form part of the Employee's contract of employment.

7.2 Governing law

This Agreement is governed by the laws of the State detailed in Item 13 of Schedule 1.

7.3 Severance

If a clause is void, illegal or unenforceable, it may be severed without affecting the enforceability of the other provisions in this Agreement.

7.4 Continued operation

Despite any change to the Employee's place of work, position description, Duties, Remuneration or any matters contained in Schedule 1, this Agreement will continue to apply to the parties unless otherwise agreed in writing.

7.5 Entire Agreement

This Agreement supersedes all previous agreements or representations in respect of the Employee's employment by the Organisation and embodies the entire Agreement between the parties.

7.6 Amendment

This Agreement can only be amended by agreement in writing by both parties. Any understanding, agreement, representation or warranty outside of this Agreement which relates to the Employee's employment has no effect unless it is an agreement in writing, with terms duly authorised by a relevant delegate of the Organisation, and signed by both parties.

7.7 Effect of waiver

The waiver by either party of a breach of any provision may not be held to be a waiver of any later breach of the provision or a waiver of the provision itself.

8. DEFINITIONS

In this Agreement, unless the context of the clause indicates an alternative intention:

Agreement means this agreement.

Award means the *Social, Community, Home Care and Disability Services Industry Award 2010*, or any subsequent Award.

Business Day means any day that is not a Saturday, Sunday or Public Holiday.

Commencement Date means the date set out in Item 1 of Schedule 1.

Confidential Information means the confidential information of the Organisation relating to the Organisation or its operations or business affairs and includes, but is not limited to:

a) financial information and policies, business plans, strategic plans, acquisition or business expansion plans, pricing policies and reporting procedures of the Organisation whether relating to past, present or future operations of the Organisation;
b) the Organisation's past, present and future client information, including client identity and terms of dealing with specific clients;
c) the Organisation's past, present and future supplier information, including supplier identity, price for supply, terms and conditions of supply and the value of accounts to suppliers;
d) the Organisation's past, present and future employee information, including terms of employment and remuneration packages;
e) information marked as confidential or which the receiving party could reasonably regard as confidential; and
f) the Organisation's general know-how and procedures whether or not marked as confidential;
g) but Confidential Information does not include information which:
    i. is legally in the public domain or is generally known or is available by publication; or
    ii. the receiving party either already possesses at the time of disclosure to it by the disclosing party or independently acquires except through a breach of an obligation of confidentiality by any third party.

Duties means the duties described in the Position Description.

Employee means the person listed in Item 3 of Schedule 1.

Employer Superannuation Component means the contributions the Organisation is required to make to a complying superannuation fund as a result of the operation of the *Superannuation Guarantee (Administration) Act 1992* and the *Superannuation Guarantee Charge Act 1992*.

Fair Work Act means the *Fair Work Act 2009* (Cth).

Intellectual Property Rights means all present and future rights to:

a) trademarks, trade names, domain names, logos, set-up, patents, inventions, registered and unregistered design rights, copyrights, circuit layout rights, and all similar rights in any part of the world (including know-how); and
b) where the rights referred to in paragraph a) are obtained or enhanced by registration, any registration of such rights and applications and rights to apply for such applications.

Invention means any discovery, invention, design, development, technique, idea, method, secret process, system or improvement made or discovered by the Employee (alone or with others) during the course of the Employee's Agreement with the Organisation, in connection with or in any way affecting or relating to the

Organisation's operations or capable of being used or adapted for use by the Organisation or in connection with its operations.

Materials means all things brought into existence by the Employee in the course of their employment by the Organisation including inventions, ideas, discoveries and improvements (whether patentable or not); information and data, designs, drawings, presentations, proposals, reports, lists, plans and software.

Moral Rights means the right of attribution of authorship, the right not to have authorship falsely attributed, the right of integrity of authorship, or any other similar rights arising under any statute, including the *Copyright Act 1968* (Cth).

Ordinary Hours of Work means the hours stated in Item 9 of Schedule 1.

Organisation means Life Without Barriers ACN 101 252 171.

Position means the position set out at Item 4 of Schedule 1.

Probity is an assessment of the Employee's suitability and clearance to perform the role. This assessment includes a review of the Employee's national criminal history and police record and any other State based checks as legislated by governing law or in accordance with the Organisation's policies and procedures.

Total Fixed Remuneration means the Employee's Total Fixed Remuneration, as set out in Item 5 of Schedule 1.

Work means the performance of the Duties in the course of employment.

8.1 Interpretation

In this Agreement, headings are for convenience only and do not affect the interpretation of this Agreement and, unless the context otherwise requires:

a) a reference to termination of this Agreement includes a reference to termination of the Employee's contract of employment;
b) the singular includes the plural and vice versa;
c) words that imply a gender include all other genders;
d) a word that is derived from other parts of speech and grammatical forms of a word or phrase defined in this Agreement have a corresponding meaning;
e) an expression that implies or refers to a natural person includes any Organisation, sovereign state, government, government department or agency, partnership, joint venture, association, unincorporated association, corporation or other body corporate and vice versa;
f) a reference to a statute, regulation, proclamation, ordinance or by-law includes all statutes, regulations, proclamations, ordinances or by-laws amending, consolidating or replacing it, whether passed by the same or another government agency with legal power to do so, and a reference to a statute includes all regulations, proclamations, ordinances and by-laws issued under that statute; and
g) a reference to a document or agreement includes all written amendments or supplements to, or replacements or novation's of, that document or agreement.

Position Title:	Shared & Supported Living Coordinator

Position Purpose & Scope

Purpose & Objective	The Shared & Supported Living Coordinator ensures that customers who require a high level of support are enabled to live in their home, and in their community. The role coordinates and delivers a range of supports that reflect the customer's individual needs and goals as described in their Service Agreement. The Shared & Supported Living Coordinator is responsible for engaging with customers, families, guardians and other key stakeholders so as to facilitate a cohesive, quality and inclusive support system around the customer. The incumbent takes a leadership role in organising, supervising and coaching support workers around a customer or group of customers.	
Business Unit	Client Services	
Reporting Relationships	**Direct Manager**	Shared and Supported Living Manager
	Direct Reports	Between 1-30 (this comprises F/T, P/T, casual workforce) *the number of direct reports will depend upon program / operational requirements*
Delegated Authority	Level 8 - Specific delegations are outlined in the Delegation of Authority Schedule - http://intranet.lwb.local/su/practiceandquality/qa/Pages/Delegations.aspx	

Organisation Purpose & Values

Our Purpose	To partner with people to change lives for the better.
Our Values	Our Values state our beliefs. They define our purpose and drive everything we do. Our Values fuel our passion for working with people and by living our Values, we are in a better position to champion opportunities for the people we work with and support. All people engaged by Life Without Barriers are required to uphold our Values of; *Responsive*, *Imaginative*, *Courageous*, *Respectful* and *Relationships*.
Our Stance on Child Safety & Wellbeing	Every day, Life Without Barriers offers support and care to children. We want each and every one of those children to feel as safe and respected as they should. We all have a responsibility to make sure their safety comes first – and that they're well cared for, protected from abuse and given the respect they deserve.

Key Responsibilities

Support Customers	• Work within relevant legislation, LWB policy and procedures and the National Disability Service Standards to ensure that Shared & Supported Living supports are delivered which reflect the customer's Service Agreement with LWB. • Engage with customers to build rapport and understand their needs, preferences and expectations; where required, work directly with customers • Ensure that direct support is delivered, as far as possible, by the support worker who best matches the customer in terms of relevant skills, capability and interests.

	• Build positive relationships with stakeholders by:
	  ○ working directly families, guardians and mainstream services to enhance opportunities for the customer in their communities
	  ○ engaging with health professionals, support coordinators, community, other agencies and other stakeholders including advocate
	• Actively develop and maintain an environment and ecology that balances the needs of any other customers who share the same residence; for example type of residence, compatibility.
	• Monitor, and where appropriate, adjust support based on the customer's changing needs.
	• Advocate where required with the NDIA, support coordinators, families, guardians and other stakeholders to respond to customer changing needs or goals.
	• Respond to feedback and complaints promptly.
	• Routinely utilise the established mechanisms, including client scheduling system, technical solutions and documentation systems to ensure that support is provided, outcomes are recorded and a transparent and accountable service is delivered.
	• Complete service satisfaction activities as directed by manager

Team Leadership	• Provide guidance, supervision and support to direct support staff. • Promote a positive environment through demonstrating good communication and interpersonal skills and appropriate peer support. • Model appropriate conflict resolution, communication and positive behaviour management skills. • Escalate any issues of concern to the manager immediately, where a serious risk of harm or to reputation is apparent
Organisational Responsibilities	• Communicate and act in ways that are consistent with Life Without Barriers Values of *Responsive*, *Imaginative*, *Courageous*, *Respectful* and *Relationships* • Provide an environment free of abuse, harm and exploitation for people we support • Support and promote the work of Life Without Barriers, maintaining a positive image of the organisation in accordance with the level of position. • Comply with all Life Without Barriers policy, code of conduct, procedures and practices, external funding body requirements and legislation. • Apply and uphold the principles of a respectful, inclusive and diverse workplace, free from discrimination, harassment or bullying • Adhere to organisational and legislative Health, Safety and Environment requirements.

Required Knowledge, Skills & Experience

Qualifications & Licenses	• Minimum Cert IV or equivalent in Disability, Mental Health or Community and Social Services • First Aid Certificate • Current driver's license
Required Experience	• Demonstrated experience in similar role and / or relevant experience in providing and improving customer support/service

	• Demonstrated experience in supporting complex customers (clients) • Demonstrated experience in working both independently and as part of a team • Demonstrated coordination and leadership experience • Demonstrated experience in managing competing priorities and to deliver outcomes within agreed timeframes and quality standards
Essential Knowledge & Skills	• An excellent understanding of the principles of the National Disability Insurance Scheme (NDIS) and relevant legislation • Demonstrated commitment to customer choice, inclusion and quality practice • Demonstrated knowledge of contemporary disability practice approaches including but not limited to, positive behaviour support, medication management and complex medical management. • Demonstrated leadership and coaching skills, with the ability to build a shared understanding of, and commitment to the organisation's Purpose and Values • The ability to work collaboratively and in partnership with a range of stakeholders including customers, peers, employees, external organisations, funding bodies and government agencies • Ability to support organisation-wide initiatives that support Life Without Barriers' Purpose and Values • Excellent verbal and written communication skills • Demonstrated understanding and / or ability to use Data Bases and Microsoft Office suite of programs, for example Outlook, Word and Excel • Ability to work in a complex environment and respond appropriately to high risk or critical events and situations • Demonstrated problem solving and conflict management skills and an ability to think creatively and use initiative

Additional Requirements & Conditions

Probity Requirements	All positions within Life Without Barriers will be required to undergo probity checks including criminal record checks and working with children checks (where relevant to the position) and as outlined in their Contract of Employment.
Work Hours	As per Contract of Employment, the incumbent may be required to work reasonable additional hours to fulfil the requirements of the position. To fulfil the requirements of the position the incumbent may be required to be on-call and / or work an alternating work pattern e.g. day and afternoon pattern on a fortnightly basis.
Travel	The position may require the incumbent to travel to various work locations to discharge the responsibilities of the position

Annexure B.

BEFORE THE FAIR WORK COMMISSION

MATTER NO. AM2014/286

S. 156 - FOUR YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

Statement of Emily Flett

I, Emily Flett, Youth Worker, of Unit 7, [redacted] in the State of Victoria, say;

1. I am a member of the Australian Services Union, Victorian and Tasmanian Authorities and Services Branch

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on the 25th of November 1981.

4. I have a partner. We have been together for eight years. We are hoping to buy a house and live together soon.

My work history

5. I am a qualified youth worker. I have a Bachelors of Youth Work from Victoria University and Certificate IV in Child, Youth and Family Intervention.

6. I have worked in the community sector for about sixteen years. I have worked at Anglicare Victoria for most of that time. I have worked at other organisations in the youth work sector and community services roles but I have always maintained some type of employment with Anglicare.

Current employment

7. Since 2015, I have worked with Anglicare Victoria as After Hours Practitioner. I am a part-time employee. Attached and marked **Annexure A** is a copy of my position description

I am employed under *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award'**). I am classified as Social and Community Services Employee Level Level 6 (Social Worker Class 3)

8. I am paid $42.36 per hour. With overtime I earn approximately $80 – 85K per year.

9. I work in a dedicated team that provides after hours on call support to staff, volunteers and young people in our care. We work from the Anglicare Offices in Collingwood, we respond to phone calls from all regions of the metro area. This position tests you out because you get a variety of calls every night, some of these calls are day to day issues, such as staffing matters, but we spend a lot of our time providing risk mitigation and managing crisis. The position is relatively senior as it holds a large amount of responsibilities and Anglicare staff calling in can use this management structure for support, guidance and direction, while out of hours for their regular line manager.

10. Anglicare created our dedicated on-call team to address the impact of on call work on staff performing their regular duties during the day time and to reduce impacts on them as previously, house managers, specialist practitioners and other frontline staff were required to be on call.

Now this work has been given to our team so appropriate breaks can be structured in to a roster and we reduce burnout on valuable staff.

11. We often support staff members who need advice and support about how to proceed with dealing with young people with volatile behaviours. Another important part of my work is dealing with emergency referrals, where we need to urgently find a safe place for a young person in a case of family or guardian break down. In that case, I will try to find a place for them in one of our residential facilities or emergency foster care. I will also need to conduct an assessment of risk, I will consider the care needs of the young person, and judge whether we have the resources to safely meet those needs.

12. I am also available to provide advice to youth workers with basic troubleshooting or we might just refer the caller to one of our employer's policies dealing with the issue. The After Hours Practitioners in our team help youth workers to apply trauma informed theory and assist in seeing the young person in context. Youth workers are professionals who draw on a wide range of knowledge and skills in their work, if there is a grey area, we assist them to find a solution that is in the best interest of young person. This feels like important work that involves risk mitigation for our young people, our staff and the organisation.

13. We a responsible for ensuring that policies, legislation and best practices are followed, when staff are calling in for assistance around how to manage a situation. If there is a Quality of Care Investigation the After Hours Practitioner's on call notes as used as evidence along with other relevant client case notes. Our documentation has been used in court when the investigation proceeds to that end.

My hours of work

14. I work according to a rotating roster fortnightly roster. I have a line in the roster, with all my shifts fixed and I am able to plan well in advance around these shifts as my contract is ongoing for each shift in the fortnight. I can tell if I'm rostered on for Christmas or another public holiday easily. I am contracted to work 41 base hours each fortnight, but a component of my work hours are as re-call hours as this is the nature of my job.

15. My roster follows this pattern:

    a. I will work my ordinary hours at the Anglicare Victoria offices in Collingwood. I will commence work at some time between 4.30 pm and 7.30 pm depending on my rostered hours.

    b. I will finish work late at night, often around 11.00 pm. I have a break, in which I drive home, un-paid for 1 hour.

    c. Then I will be on call from 12.00 pm to 9.00am. I am not expected to return to the workplace when I am on call. Instead I will respond to issues by telephone or by computer. We refer to this period of the shift as 'Recall'. I am then paid at a re-call rate and if I receive no calls at all I will not be paid – but I will have had some sleep so a win there!

    d. At the end of the re-call shift at 9am, I will then have a 10 hour break between the end of my on call period and the start of my next shift.

16. I am paid two hours pay at double time when I receive a call and no more if I receive 20/30 calls in that same period, once I get a call in the next call block after the two hours I will again be paid another two hour block. I believe this is an above award condition, I understand that it

was necessary for my employer to offer this condition to attract sufficiently skilled staff to the after hours on call team.

17. The number of Recall hours I work each week fluctuates and is most defiantly seasonal, calls are quiet over winter for the most part. I usually work between 10 and 15 hours Recall each fortnight and this greatly subsidises my low part-time base hours and brings me closer to full time wages.

18. Attached and marked **Annexure B** are copies of my roster for the period [7-9-19] to [*20-9-19*] & [24-8-19] to [6-9-19]

Roster Changes

19. Each worker in my team has a line on the roster. We have set days and nights that rotate over a long period of time according to fixed pattern. We all know when we will be working. This is important for many of the other people in my team because many of us have caring responsibilities. But it is also important for me because it helps ensure that I have work/life balance. Without a fixed roster it is hard to be a shift worker and participate in social events and sporting clubs. We very rarely try to change or swap our shifts. If Anglicare does change the roster, we have a mini-meltdown in the office and it causes much distress.

20. I am worried that if rosters could be changed by agreement at any time, I would be pressured to change my shifts to accommodate my employer. We have a sense of duty to keep the place running. A good example of this was in April 2019. Anglicare Victoria had restructured the on call team to centralise the work that was done by the regional North West After hour's team in the Collingwood office. This required roster changes. We felt incredible pressure to adhere to whatever the organisation told us they needed to do, even if it would cause us problems. We just tried to adapt and have come across to the central roster. We have all lost income doing this, we are now working more nights for less money.

Impact of on call work

21. When I work through the night on call, I feel exhausted the following day. I find it is different from working a shift when you are awake through the night. In the morning, you just feel like you are jetlagged as you have only slept in parts and will need to sleep again later in the day once the mornings duties are finalised and you go off shift.

22. The following day after a night shift I can't do the things I like to do. I cannot exercise at a high level, my balance is affected, I cannot ride my motorbike or pushbike. I also find it harder to engage with my partner friends and family. I find that I don't have the energy to socialise, so I tend to withdraw a little bit and miss out.

23. I find that I do not get that regular connection with my partner in an undisturbed space. It is tricky to maintain a relationship when my working patterns are one of the reasons I do not live with my partner. When I am on call, we cannot share the same bed: or he would just be on call with me. That would be unfair to him.

24. I also find it hard to access to fresh and healthy food. This is one thing I really notice. I cannot go to the supermarket after work, because supermarkets are not open late at night. So I do a lot of food preparation to make sure I have healthy food to eat. But this is different from having access to fresh fruit and vegetables as you would after work 9-5pm.

25. I am always weighing up if this job is worth it. I can guarantee that if I was paid any less I would not do this job. Instead, I would take a small pay cut and work as a case manager for similar money and I would still be working hard, but at least I would be working normal hours

in line with my partner friends and family. It's the balance of the eight hour day, it looks after you. If your working hours are not in balance like that you need some sort of special conditions, there is a reason they call it a penalty rate, because you are paying a personal penalty to be working at 3am.

Classification	SCHADS Award Level 6 (Social Worker Class 3) (Classification will be dependent on qualification and years of experience within the relevant field consistent with the SCHADS Award)
Hours	Part Time or Full Time applications will be considered
Hours per week	Base Hours + OnCall and Recall Allowances
Duration	Ongoing
Fixed term end date	N/A
Location	Collingwood Requirement to complete outreach if required.
Reporting Relationship	Team Leader After Hours Service
Effective date	

Overview of program

Anglicare Victoria are establishing a new Afterhours response team, which will provide an out of business hours crisis response service to relevant program areas. Programs will include but not be limited Residential Care, Home Based Care, Lead Tenant, Youth Refuge and Targeted Care Packages.

This afterhours service will provide high quality risk assessment, advocacy, and will coordinate and manage any complex issues which arise out of business hours.

This support will be provided to clients, staff and volunteers and will primarily be provided by telephone, however in person responses will also occur as needed.

Position Objectives

Anglicare Victoria

This section has the position objectives of the position. A maximum of four to six objectives is regarded as sufficient. Please delete rows that are not required.

1.	Be part of a team who delivers a high quality afterhours emergency response to staff, clients and volunteers who present with a range of complex and high risk issues across a range of programs areas.
	Provide immediate response, support, intervention, information, guidance and if required direct care to clients, staff and volunteers.
	Manage and respond to incoming referrals, as well as make any relevant outgoing referrals.
	To work within a professional framework and complete professional documentation as required.
	To provide an in person response if required.

Key responsibilities

This section has the key responsibilities of the position. A maximum of seven responsibilities is regarded as sufficient. Please delete rows that are not required. Focus on the key responsibilities of the role and don't list every task and duty.

The key responsibilities are as follows but are not limited to:

	Be an active part of the emergency afterhours roster, which includes evening, weekend and OnCall/ReCall work, both over the phone and in person when required
	Provide high quality risk assessment and emergency responses to staff, client and volunteers, across a range of services, including statutory services. This will require both phone and in person responses as required.
	Conduct risk assessments to determine the current and ongoing risks, as well as negotiate with relevant stakeholders (including but not limited to: DHHS, Police, Hospitals etc) to implement a response which is in the best interests of all involved.
	Complete timely, accurate and appropriate case notes, CIMS reports and statistical documentation, as well as engage in staff meetings, supervision and other relevant professional forums.
	Work with the team to enable continual improvement to the new service model to further extend our commitment to improving the lives of children, young people and their families.

Anglicare Victoria

Key Selection Criteria

The Key Selection Criteria are based on role specific requirements ***and*** the Anglicare Victoria Capability Framework. Applicants are required to provide a written response to ***both*** a) and b).

a) Role specific requirements

Applicants are required to provide a written response to the role specific requirements. The five criteria are to be addressed individually (no more than 2 pages in total).

 Role Specific	1. Tertiary qualifications, preferably in social work, psychology or behavioural sciences or equivalent.
	2. Excellent understanding and experience working within the child protection, placement and support, and family service system, including a sound understanding of relevant legislative and policy framework.
	3. Ability to demonstrate excellent communication and negotiation skills, both over the phone and in person, in complex and demanding situations.
	4. Experience in working in fast paced, high pressured situations, which includes triaging complex issues, and negotiating with other stakeholders including statutory services.
	5. Highly developed skills in risk assessment and responding to and managing complex, high risk and critical incidents across statutory and other services, including over the phone and in person responses.
	6. Excellent knowledge of, and experience in the application of relevant theoretical approaches that underpin casework practice to vulnerable children, young people and families.
	7. Highly developed written and organisation skills.

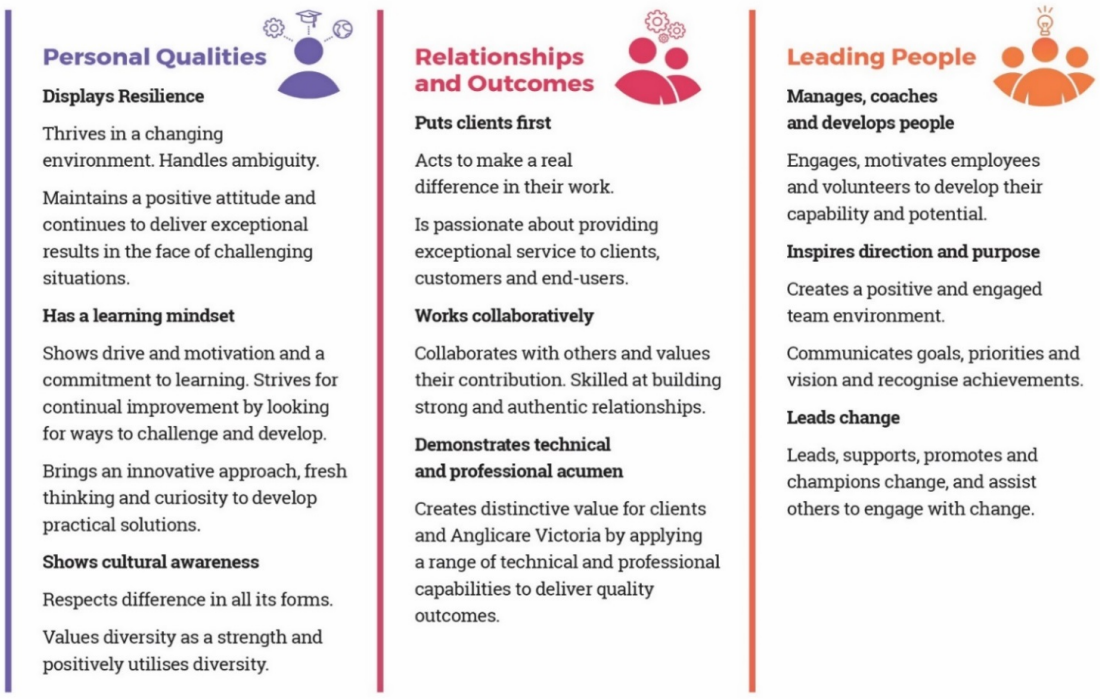
Key Selection Criteria (continued)

b) Anglicare Victoria Capability Framework

Applicants are required to provide a written response to the Anglicare Victoria Capability Framework. Applicants are to describe how they demonstrate the characteristics in each of the two capability groups; **Personal Qualities and Relationship and Outcomes** (no more than 1 page in total).

The Anglicare Victoria Capability Framework describes the capabilities required to meet the expectations of clients, colleagues and communities in today's changing environment.

These capabilities work together to provide an understanding of the knowledge, skills and abilities required of all employees.



Occupational health & safety (OHS)

Anglicare Victoria is committed to ensuring the health and safety of its employees and any other individuals present in our workplaces.

In achieving and maintaining workplace health and safety, Anglicare Victoria will apply best practice in OHS in accordance with statutory obligations at all times.

All Anglicare Victoria employees, contractors and volunteers are required to:

- take reasonable care for their own health and safety and for that of others in the workplace by working in accordance with legislative requirements and the company's OHS policies and procedures
- take reasonable care their actions or omissions do not adversely affect the health and safety of themselves and others
- cooperate with any reasonable directions, policies and procedures relating to health and safety in the workplace
- report all injuries, illness or 'near misses' to their Supervisor or Manager
- participate in relevant health and safety training based on roles and responsibilities
- as required, participate in the development and implementation of specific OHS hazard and risk management strategies.

In addition to the above, positions with supervision or management responsibility are required to ensure a safe and healthy work environment for all employees, clients, contractors and visitors. This can be achieved by ensuring all people are aware of and have access to OHS policies, procedures, training and reporting systems

Cultural Safety in the Workplace

Anglicare Victoria recognises the important and unique contribution Aboriginal and Torres Strait Islander employees make by bringing their unique skills, knowledge and experience to the workplace. They also contribute important insight into how Anglicare Victoria can provide for and engage with Indigenous clients and communities more effectively.

Our Reconciliation Action Plan (RAP) and Workforce Strategy outlines Anglicare Victoria's commitment to leading and facilitating sustainable employment, training, retention and career development opportunities for Aboriginal and Torres Strait Islanders people.

Conditions of employment

- Salary and conditions are in accordance with the click to select. Salary packaging is offered with this position.
- All offers of employment at Anglicare Victoria are subject to a six month probationary period. The staff member will be asked to participate in an annual performance review linked to objectives set out for the position.
- All offers of employment are subject to a satisfactory Criminal History Check, a current Driver's License and an Employment Working with Children Check prior to commencement.

Acceptance of Position Description requirements

FAIR WORK COMMISSION

DRAFT DETERMINATION

Fair Work Act 2009

s.156 - 4 yearly review of modern awards

4 yearly review of modern awards –
(AM2014/47)

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

[MA000100]

Social, Community, Home Care and Disability Services Industry

COMMISSION MEMBER PLACE, DATE

A. Further to the Decision issued by the Fair Work Commission on the above award is varied as follows:

1. By inserting the following words at clause 3.1:

   Workplace means a place where work is performed except for the employee's residence.

2. By deleting clause 25.3 and inserting a new clause 25.3 as follows:

   25.3 Rostered days off

   Employees, other than a casual employee, will be free from duty for not less than two full days in each week or four full days in each fortnight or eight full days in each 28 day cycle. Where practicable, days off will be consecutive. For the purposes of this sub-clause, duty includes time an employee is on call.

3. By deleting clause 28.4 and inserting a new clause 28.4 as follows

   28.4 Recalled to work overtime

   (a) An employee who is recalled to work overtime after leaving the workplace

and requested by their employer to attend a workplace in order to perform such overtime work will be paid for a minimum of two hours' work at the appropriate overtime rate for each time recalled. If the work required is completed in less than two hours the employee will be released from duty.

(b) An employee who is not required to be on call and who is requested to perform work by the employer via telephone or other electronic communication away from the workplace will be paid at the appropriate overtime rate for a minimum of two hours work. Multiple electronic requests made and concluded within the same hour shall be compensated within the same one hour's overtime payment. Time worked beyond two hours will be rounded to the nearest 15 minutes.

(c) An employee who is required to be on call and who is requested to perform work by the employer via telephone or other electronic communication away from the workplace will be paid at the appropriate overtime rate for a minimum of one hours work. Multiple electronic requests made and concluded within the same hour shall be compensated within the same one hour's overtime payment. Time worked beyond one hour will be rounded to the nearest 15 minutes.

B. The determination shall operate on and from [ ].

Expert Report of Dr. Jim Stanford & Attachments A-H

Introduction

1. This submission is made in reply to various submissions filed by employer groups around the 16 September 2019 in opposition to the Australian Services Union's claims for paid travel time in the Social, Community, Homecare and Disability Services Industry Award 2010 (Award). They include submissions by the Australian Industry Group (AIG), the Australian Federation of Employers and Industries (AFEI), Australian Business Industrial et al(ABI) and the National Disability Services(NDS).

2. Our submission relies on the statements of Rob Steiner, Tracy Kinchin, Tino Encabo and Richard Rathbone (previously submitted). Furthermore, we rely on the Expert Report of Dr. Jim Stanford (attached) and are generally supported in our application by Jeffrey Owen Smith from People with Disability Australia.

3. The ASU notes that the HSU and United Voice have also proposed variations to Clause 25.6 of the Award. As we said in our submission dated 18/2/2019, 'if the Commission is not minded to make variations proposed by the ASU, we would support either one of the variations proposed by the other unions' (paragraph 34).

4. The ASU further notes that in their submissions the National Disability Services and the ABI et al suggest alternative proposals to the ASU to address the issues of broken shifts and travel times. If the Commission were not of a mind to accept the ASU proposals, the union would like the opportunity to make further submissions regarding any alternative proposals, including the one suggested by ABI et al.

The ASU Proposals

5. The ASU seeks to make two variations to the Award. Firstly, to vary Clause 25.6 Broken Shifts, so that an employee who works a broken shift will receive a loading of 15% of their ordinary

rate of pay. Secondly, the ASU supports the United Voice variation to create a new Clause 25.7 Travel Time, so that an employee required to work at different locations shall be paid at the appropriate rate for reasonable time of travel.

6. The ASU submits that the acceptance of these proposals would more properly remunerate already low paid employees and assist the disability sector, which is struggling to attract skilled, experienced and qualified staff because of the low conditions in the existing Award.

The Disability Services Workforce Profile

7. According to the Expert Report by Dr. Jim Stanford, the following are some of the characteristics of the Disability Services Workforce:
   - About 80% of employees work part-time while casual and fixed term account for over one half of all jobs;
   - Women account for about 70% of the workforce;
   - Fewer than 10% of the workforce are employed on a full-time permanent basis;
   - Turnover in the industry is very high with over 25% of workers changing jobs in one year; and,
   - average hours of work are low and highly variable with workers working an average of 22 hours per week. (Paragraph 18 Stanford Report)

8. This workforce can be characterised as highly casualised, female dominated with insecure work and low average hours. It is an industry where workers are low paid and often seek extra shifts just to make ends meet. This precarious work is exacerbated by the problem of discontinuous or split or broken shifts which are allowed under the current Award, where working days are split between increasingly multiple shorter shifts.

9. This is also further exacerbated by the behaviour of employers who, faced with fluctuating client demand for specific support services, "…are attempting to shift the resulting uncertainty and risk associated with these fluctuations in demand onto their employees, through the imposition

of increasingly insecure and unstable employment relationships, rostering practices, and compensation" (Paragraph 8 Stanford Report).[1] The effect of this on the employee according to Stanford can be that, "The time spent in travelling to and from work under these split or broken shifts, and the often wasted time between these short periods of work, (added emphasis) has the effect of greatly reducing the effective skill level hourly income associated with this work – as well as imposing considerable stress on the workers and their families." (Paragraph 29, Stanford Report)

10. The time spent travelling by the employee between broken shifts cannot be characterised as private time to conduct private affairs as advocated in the AFEI submission where the employee could "undertake social engagements, such as meeting friends for golf" (Paragraph 10, AFEI submission). This example would be risible if it wasn't for the serious effect of broken shifts on employees' working and family lives.

The SCHDS Award is already very flexible

11. The employers complain in their submissions that the union proposals are 'unjustifiable, but also manifestly unworkable' (Paragraph 50 AIG). They say that the union proposals will increase costs and administrative burdens for the employers while reducing rostering flexibility for both the employer and employee. However, the reality is that the Award already gives employers a significant amount of flexibility in arranging ordinary hours, rostering employees and paying employees for their time. In the ASU submissions dated 2 July 2019, the ASU gave a number of examples of this flexibility including that part-time employees are not paid overtime until they work 10 hours in a day, 38 hours in a week or 76 hours in a fortnight. In a sea of broken shifts and limited hours this seems a very high threshold before the employee qualifies for any overtime. Furthermore, there is no minimum engagement for part-time or full-time employees, while casual disability services employees are only entitled to a 2 hour minimum engagement and casual home care employees are only entitled to 1 hour minimum engagement. (Paragraph 31)

[1] See also Para 26 of the Stanford Report for further problems experienced by the workforce in this sector, such as disability service workers experiencing increased levels of violence in their work.

12. This theme is evidenced by Stanford's original research in his Expert Report. He finds that the Award has permitted the growing use of casual labour which lacks some basic protections in shift scheduling or entitlements (Paragraph 54(a)). The Award allows employers to assign "broken shifts" to both permanent and casual employees in disability services, with no penalty (Paragraph 54(c)). He also finds that given the fragmentation of work assignments under the NDIS this has meant "… the increasingly common requirement that DSW (workers) must travel to their clients – in some cases to multiple locations in the course of a day…" (added emphasis) (Paragraph 56). Stanford concludes by saying "Note that the hyper-flexibility permitted by the SCHDS Award in shift scheduling, short assignments, broken shifts, and required but uncompensated travel time serves to eliminate the incentive or pressure on employers to try to organise work in the most efficient and stable manner" (Paragraph 57).

13. Regarding the unions' Award variation proposals, Stanford concludes "To this end, I find the proposed amendments to the SCHDS Award to be modest, incremental and sensible. They would make a small but important difference in stabilising jobs and schedules, preventing further fragmentation of work, and somewhat improving fairness in compensation practices" (Paragraph 77). In other words, the modest reforms proposed by the Unions would improve the working lives of employees without significantly impacting the great flexibility and power employers already possess under the Award.

The Employer Submissions

14. The Commission should note that that the employer submissions are not ignorant of the plight of the employee working broken shifts and some of the implications for employees working in the disability services sector. In tis respect the AIG acknowledges the reality of discontinuous work for employees when it says, "In other instances, employees may, during the course of a single day, undertake work at different locations but at times which mean there is a substantial break between the time spent undertaking client work" (added emphasis) (Paragraph 4). Similarly the National Disability Service (NDS) submission also says that "… the NDS accepts

that there is the potential for this to be onerous on the employee where there are a number of such periods of travel and in particular where the portions of the shift are of a short duration" (Paragraph 35).

15. Furthermore, the National Disability Service (NDS) submission also recognises the difficult working environment of disability workers when it says "… the NDS is aware of international evidence of the risks of a market-based system such as the NDIS leading to employment practices that undermine reasonable minimum employment standards, resulting in high levels of employee turnover and deskilling of the workforce, resulting in a higher risk of abuse and neglect of clients" (Paragraph 9).

16. Nor should it be assumed by the Commission that employers are necessarily opposed to varying the Award so as to address the kind of issues the unions are concerned about. Thus the ABI et al submission says, "To the extent that Clause 25.6 (broken shifts) is capable of being applied in a manner that does not appropriately compensate employees for time spent travelling between clients' residencies when working broken shifts, our clients are not opposed to that issue being rectified".(added emphasis) (Paragraph 7.6) Similarly the NDS in its submission says, "However, to the extent that there is any doubt about payment for such travel under the current provisions of the award, NDS does not oppose a variation to clarify the situation (added emphasis) (Paragraph 26)

17. Thus the Commission should be encouraged that the employers are not necessarily opposed to variations to Clause 25.6 of the Award. In fact two of the employer submissions suggest solutions to ameliorate the conditions of disability workers working broken shifts. The NDS for example recognises that the Award sets no minimum engagement for part-time or full-time employees and only very limited engagement for casual home care employees and casual disability workers (Paragraph 37). It suggests the Commission may alleviate the problems associated with broken shifts "… by specifying a minimum engagement for each portion of a broken shift (which) could provide a basis for enduring reasonable compensation for associated travel during the break" (Paragraph 39).

18. The Unions have a separate application regarding minimum engagement under the Award and so will not comment further here. However the ASU notes that the NDS goes further by saying that if its minimum engagement suggestion was to fail it would support the idea of the ABI et al to pay an allowance for those working broken shifts (Paragraph 41)

19. The ABI et al submission is also sympathetic to varying the Award to improve the conditions of those employees working broken shifts by way of paying an allowance. It suggests providing a payment of an allowance at the rate of 3% of the ordinary hourly rate per kilometre travelled where employees were rostered to work with consecutive clients (Paragraph 9.4). The ABI et al argues that an allowance "… would appear to be a sensible way of compensating employees for time spent travelling during periods that are expressed in Clause 25.6 (a) as not being work time" (Paragraph 9.6).

20. The Commission should note that the employers are open to varying the Award regarding broken shifts by either having mandated minimum engagements for employees or compensating them via the payment of an allowance.

21. However, regarding the ABI's call for an allowance, this falls a long way short of the proposal advanced for an allowance by the ASU. The ASU seeks to vary Clause 25.6 Broken Shifts, so that an employee who works a broken shift will receive ordinary pay plus a loading of 15% of their ordinary rate of pay, for each hour from the commencement of the shift to the conclusion of the shift inclusive of all breaks.

22. This contrasts markedly with the ABI proposal where it intends to pay 3% of the ordinary hourly rate and only per kilometres travelled from one client to another. The proposed payment would only be made where the employee is rostered to work with consecutive clients. It does not seek to compensate the employee where the shifts are non-consecutive as the ASU proposal does.

23. The ABI proposal would amount to a small and inadequate compensation to the employee working broken shifts. The ASU would recommend for the Commission to adopt its model of allowance as compensation for all disability workers, but as we said in the introduction to this submission, if our proposal fails then the Union would like the opportunity to make further submissions regarding any alternative proposals, including the one suggested by the ABI et al.

24. Finally, the People with Disability Australia submission is generally supportive of the Unions' ambition to improve the working lives of disability workers. It says, "Devaluing the work of disability support workers devalues the lives of the people with disability they support" (Paragraph 18). It sees a direct correlation between the working conditions of disability employees and the welfare of its vulnerable clients in stating, "People with disability want to employ staff who are paid appropriately for their work… Resentful and disgruntled staff are more likely to be more difficult for people with disability to work with, influence high rates of staff turnover, and ultimately can result in people with disability being put at risk of harm" (Paragraph 13).

25. Furthermore, People with Disability Australia is opposed to employer applications to change the Award so as to remove overtime protections and changes to roster provisions, which it says makes disability support work an unattractive career path and lowers the level of skills and commitment required to do these critical jobs properly.

26. The ASU encourages the Commission when it reviews the views of the employer submissions to distinguish between the view of the AIG which opposes the unions' proposals in their totality without presenting a viable alternative, with those of the NDS and ABI et al who appreciate the difficulties of those workers who experience broken shifts and suggest viable alternatives which either support (through minimum engagement) or try to remunerate (through an allowance) this low paid, casualised and vulnerable workforce.

27. Furthermore, the Commission should heed the submission of the People with Disability Australia which, like the unions, supports a skilled, stable and properly remunerated workforce that would in turn be best equipped to deal with its sensitive clients.

Conclusion

28. The ASU respectfully submits that the Commission should vary the SCHDS Award to ensure that disability services and home care employees are paid for all time they spend travelling at the direction of their employer.

29. We have seen the Expert Report from Dr. Jim Stanford characterise these employees as a low paid, highly casualised, female dominated workforce who work fragmented shifts with limited hours. Stanford calls the ASU proposed variations to the Award "modest, incremental and sensible" and states that they would make a small but important difference in stabilising jobs and schedules and somewhat improving fairness in compensation practices. The Union proposals are also generally supported by the submission by People with Disability Australia, who like the Unions would like to see a properly remunerated workforce which is stable and skilled in carrying out its vital work with its vulnerable clients.

30. We have also shown that the employers do acknowledge some of the problems experienced by employees who work broken shifts. Furthermore, two of the employer submissions by NDS and ABI et al are open to variations to the Award and in fact suggest proposals to assist employees subject to broken shifts and the absence of travel time payments.

31. The ASU submits that its variations to the Award would ensure that employees are properly compensated for the disadvantage associated with working a broken shift under clause 25.6 without limiting any flexibility for the employer. Our proposed variations would preserve the employer's business model as well as increase the incentive to work in the disability services sector. This approach is consistent with the decision of the Commission in the *Penalty Rates Decision*, which found that deterrence was not a relevant consideration in setting a penalty rate.

Instead, penalties should be set at a rate that compensates for the disutility associated with the work.

32. The ASU encourages the Commission to adopt its proposed changes to the Award. It reminds the Commission that only 18 modern awards allow employers to engage employees on 'broken' or 'split' shifts. It is not a common clause. The ASU seeks to amend the clause so it more properly remunerates disability workers who experience discontinuous shifts. This will lead to a more stable, experienced and happier workforce that is better equipped to deal with the care of their clients.

BEFORE THE FAIR WORK COMMISSION

MATTER NO. AM2014/286

S. 156 - FOUR YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

Statement of Augustino Encabo

I, Augustino Alfonso Encabo, Support Worker, of [redacted], Western Australia, say;

1. I am a member of the Australian Services Union, Western Australia Branch.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on 15 August 1964, I am 54 years old.

4. I am married and I live with my wife.

My work history

5. Since 23 December 2015, I have worked as a Support Worker at the Community Living Association.

6. I have a completed a *Certificate IV in Disability Services*. I have also completed substantial in-house training while working in the industry, including leadership and development courses, medication administration, St John First Aid Awareness, and administration of PEG Feeding.

7. I have Bachelor of Arts from Edith Cowan and a Postgraduate Diploma in Business Administration from Curtin University.

8. My first experience with disability was caring for my first wife who had multiple sclerosis. This was in the early days of one-on-one disability care, so I did not have that much support to care for my wife. Everything I do now as a disability services worker, I now apply in my current job as a Disability Support Worker. I worked as a cook in the hospitality industry for 30 years, because this fitted around my caring responsibilities.

Current employment

9. On Since 21 December 2015, I commenced work with the Community Living Association (‘**CLA**’) as a as Disability Support Worker. I am a permanent part-time employee.

10. I am employed under the *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**‘the Award’)**. I am classified as a Social and Community Services Employee Level 2.2.

11. My role is to assist my clients with their day to day living, engaging with the community, achieving their life goals and empowering them to make decisions. I do not simply provide services; I am expected to support people to improve their day-to-day skills so that they can live more independently and make their own decisions. I work with my clients on a one-on-one basis.

12. I have a wide range of duties, reflecting the fact that CLA provides support to people all types of disability. I have worked with people with physical and mental disabilities, each of whom have different needs.

13. I provide personal care to most clients. This includes assisting my clients with showering, cooking, cleaning and taking medication. However, while providing care I will work with them so that they learn how to better look after themselves. I might engage a client with planning their meals or teach them cooking skills. I might also support a client to be more responsible for their personal hygiene or taking their medication.

14. I will also assist my clients with day to day living; such as going to the shops or taking them out to engage with the community. Again, the focus of my role is to empower the client to make decisions and do things for themselves. For example, I do not just go to the shops to buy groceries for my clients. I might help my client work out a shopping list, figure out how much money they have in their budget and then help them to decide if they have enough money to pay for the things they want. At the shops, I will support them to find their items on the shelves and pay at the cashier.

15. Some of my clients need support with the activities they enjoy and to engage with the community. For example, a client may enjoy going to a café. Some clients might only need assistance with mobility or transport to the venue. But other clients may need support to develop social skills, such as ordering from a waiter or having a conversation at an appropriate volume.

16. There are many barriers that keep my clients from engaging in the community or achieving their goals. I will support my clients to overcome these barriers or advocate for their rights and basic human dignity. If we are at a restaurant, I might need to negotiate with the manager for a quieter space for a client with autism or extra room for a client in a wheelchair. I might also need to explain to a fellow customer that my client has a right to be at the restaurant, even if their disability means they behave in ways that are not always socially acceptable.

17. My clients do not live in residential facilities. They live in their own personal home or group homes with small groups of people with disability. This means I am required to travel between clients to work.

My hours of work

18. I am contracted to work 69 hours in each fortnight. My contracted days of work are Monday, Tuesday, Wednesday, Thursday, Saturday and Sunday. I work according to a fortnightly roster. Attached and marked **Annexure A** are copies of my roster for the period 24 September 2018 to 16 December 2018.

19. Although I have contracted hours of work, my actual hours of work change regularly. In the period between 24 September 2018 and 16 December 2018 I worked between 66 and 113 hours in each fortnight.

20. My contracted hours can be varied by agreement between me and CLA under clause 10.3(e) of the Award. I can also agree to work additional hours without overtime under clause 25.5 (iii) of the Award. These additional hours do not have to be continuous with my contracted ordinary hours of work. I am regularly rostered on broken shifts at short notice when my employer needs me to cover a shift.

21. I often agree to additional hours or roster changes, even if they do not suit me, because I am worried that my employer will not offer me additional hours of work in the future. Even

though they say I can refuse these hours, but if I refuse the shifts I am given, I cannot earn enough money to support my family.

22. I am not rostered for meal breaks because I am required to have meals with my clients under clause 27.1(c) of the Award.

23. I am not entitled to a minimum engagement because I am a permanent part-time employee. I am regularly engaged to work for short periods of time. For example, I am engaged to work for one hour between 2:45PM and 3:45PM on Thursdays.

24. I am rostered for broken shifts under clause 25.6 of the Award. My employer can, and does, break my engagements so that I am not engaged to work when I am travelling between clients. My union has negotiated an above-award allowance for travel time equal to 15 minutes work at ordinary time rates, regardless of the time actually taken to travel. Because this is an allowance it does not count as time worked.

25. For example, I am rostered on a broken shift every Monday. I work from 9.30AM to 2.30PM at one client's house. I am required to have a meal with the client, so I am not rostered a meal break. I am then engaged to work another shift from 3.00PM to 5.00PM at another client's house. I have a half hour unpaid break between 2.30PM and 3.30PM.

26. I cannot understand why I cannot be rostered for a normal 8 hour shift. I think the broken shift provision encourages bad rostering practices. I know this because my shift was originally rostered when my client was attending school. I was engaged to care for him after he finished school. My client hasn't attended school for a few years, but someone else has been rostered between 9.30AM and 3.00PM. Another worker has been rostered for a sleepover shift after 5.00PM. If my employer wasn't permitted to engage me on broken shifts, I could have an 8 hour continuous shift. Instead I have a half hour unpaid break and a 2 hour 'left over' shift. If you add up all the little half hours over the years I have worked there, I have wasted a lot of time.

27. I also regularly work sleep overs under clause 25.7 of the Award. I work between 3 and 4 sleepover shifts each fortnight. Sometimes I am rostered a morning shift before afternoon shift that is rostered next to a sleepover. I come off work at 8.30AM and start work again at 5.00PM. I have an 8 hour break between shifts, but it's not like I have 8 hours to do what I want. I am not super human and I need sleep. After resting, I really only have 3 hours before I need to start work again.

My income and expenses

28. My pay varies considerably because I rely on additional hours to increase my income. In an normal week I earn between $2,400 and $3,000 per fortnight after tax. Attached and marked **Annexure B** are copies of my payslips for the period 24 September 2018 to 2 December 2018.

29. My employer offers salary packaging. This allows me to pay for some essential items out of my pre-tax salary. This helps, but does not completely fix the problems with a low rate of pay.

30. My wife is self-employed as a portrait photographer. The amount she earns each week depends on how many clients she can book. On average, she brings home about $500 each week after tax and business expenses.

31. We are just keeping our head above board, we are living mostly pay check to pay check, with a little put away for a holiday and the future. If a big bill comes in, we would have trouble

paying it. We would have trouble if something unexpected happened, like my partner being hospitalised or our car breaking down.

My problems with working broken shifts

32. My pattern of work significantly interferes with my time with my friends and family, my hobbies and my involvement in the community. I am always trying to get more hours so I can earn more money. The breaks in my shifts just mean I have to work more hours and longer spans of hours to make the same money I would if I was rostered continuously. I work very long hours, and this is very tiring.

33. My wife works during the days, so if I am working nights, we just pass by each other by. Sometimes I do not see her for a few days. Even If she is home while I am on a broken shift, we can't spend that time together because she needs to do her work. She is not happy with my working hours and is encouraging me to leave the disability sector.

34. The breaks between shifts are also a problem. Often, there is not enough time to go home from work and then get to the next workplace. Other times it's just not cost effective to go home because of the cost of fuel. If I can't go home, I will I would head to the library to read for a bit. This is not what I really want to do with my time; it's just all I can do in the time available. If I am able to go home, I am usually only there for about an hour after travelling between clients. It's not really enough time to do anything useful or have a real rest.

35. I find it hard to maintain friendships or participate in the community, because I work long and irregular hours. No groups meet in the middle of the day. I can't join the bowls club because they compete on a Saturday when I am working. I joined a photography club, and attended one meeting, but I quit because I was working all the other meeting times. I would like to join a bushwalking group, but they go walking at time I am working. I also enjoy fishing, but I cannot find the time to fit it in. I cannot use my breaks between shifts to socialise because most people are working when I have my breaks.

36. I do not think I could get a second job. I need to ask for permission to work for another organisation, and it cannot conflict with my employer's rostering needs. In any case, I do not really want a second job. I need a job with consistent and stable hours that gives me the income I need to support my family.

My problems with working broken shifts

37. I have considered leaving the disability sector. I am unsure how long I can keep working this pattern of work. Some days I reach my limit, but sometimes I think I can keep doing this. My wife wants me to find another job. I am staying because I get so much out of supporting people with disability. I have strong emotional attachments to my work and the people I support. I have been an advocate for people with a disability since I was caring for my first wife. My connection to this sector is deeply personal.

38. I love the actual job that I do, but I want some consistency in hours, with full shifts during the day. I would like to be able to support myself and my family without working such long shifts over such irregular hours.

39. I have been shown the variation proposed by the Australian Services Union. If I was paid a 15 percent loading when I was engaged to work a broken shift, it would increase my income. If my income increased I would need to work fewer hours to make the same amount of money. I would need to work fewer night and weekend shifts. I would be able to see my wife more. I might even be able to join a photography or bushwalking club.

BEFORE THE FAIR WORK COMMISSION

MATTER NO. AM2014/286

S. 156 - FOUR YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

Statement of Richard Rathbone

I, Richard Rathbone, Disability Support Worker, [redacted] Western Australia, say;

1. I am a member of the Australian Services Union, Western Australia Branch.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on 4 June 1956, I am 62 years old.

4. I have worked in the disability services industry since 2011. Before I worked in disability I had a number of jobs in a variety of industries.

5. I do not have any formal qualifications in disability services. However, I have worked in the industry for a long time. Before I worked in the industry, I was at various times a carer, supporter and advocate for my first wife who suffered from bipolar disorder. My experience of caring for my wife has given me skills which I apply in my work.

6. I am a person with a disability. My right arm was amputated after a car crash. The nature of my amputation means that I am unable to use prosthesis. I also suffered a stroke, which means that my other arm is not fully functional. I have been assessed as being able to work 30 hours a week.

7. I am currently married, and I have three step-children. I live with my wife and my 16 year old son.

Current employment

8. I commenced work with Community Living Association ('**CLA**') as a Disability Support Worker in March 2011. I am a permanent part-time employee.

9. I am employed under the *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award')**. I am classified as Social and Community Services Employee Level 2.4.

10. CLA provides disability services to clients with many different types of disability. The support I provide my clients varies significantly from client to client, depending on the nature of their disability. Some clients need mainly physical support and assistance whilst others need cognitive and emotional support, while some need all three. I have a preference for working with clients with cognitive and psychological disabilities due to my experience caring for my first wife.

11. The objective of my job is to provide my clients with a healthy environment, nourishing food, engagement in the community, and to provide as much support as possible for them to live as independently as they are able to. Attached and marked **Annexure A** is a copy of my Job Description dated 16 September 2016.

12. My duties involve caring for and supporting clients in their daily life. That includes some personal care. For instance, I assist one client with their personal hygiene. They suffer from cognitive issues which means I need to talking them through each step of cleaning themselves. I will also assist by cleaning some harder to reach places, like their back. I also provide support with housework, gardening and cooking. I also help my clients to engage with the community. This involves taking them to events and activities. An important part of this job is finding out what the client would enjoy. I am always looking for suitable things to take them to.

13. An important part of my job is supporting clients to learn new skills and abilities. One element of this is to identify where assistance will be effective, and assess if this is an issue that can be overcome with support. Sometimes this means taking a step back, because providing them with too much help can prevent a client from achieving a result that they 'own' and that benefits their sense of independence and control.

14. I need to make sure that the support I provide is suited to my client's needs. For example, when I am working with autistic and bipolar people, the key is to guide them without being overwhelming. It's important to be non-threatening. It is really important for a support worker to look at their own attitude and behaviour see if that is negatively impacting the client.

My hours of work

15. I am contracted to work 46 hours in each fortnight. I have regular shifts every Sunday and Monday and every second Tuesday, Wednesday and Saturday. Attached and marked **Annexure B** are copies of my roster for the period 5 November 2018 to 16 December 2018.

16. I am rostered for broken shifts under clause 25.6 of the Award. There is no minimum engagement for permanent part-time employees under the Award, so some of my rostered broken shifts are for very short periods of time. I often start work at 8.30 in the morning and finish work at 7.00PM but only work 4 hours. My employer is also able to roster my shifts over a 12 hour span, so there can be very long breaks in the middle of the day.

17. I can also work for more than one client in a day. CLA sometimes, but not always, rosters paid working time for time spent travelling between clients. I have been told that there is a practice where there is less than one hour between shifts they will pay 15 minutes travel time.

18. My regular roster of work includes the following broken shifts:

<u>Week1</u>

a. Mondays, 8.00AM to 9.30AM then 4.00PM to 7.00PM;

b. Sunday, 9.00AM to 11.00PM and 4.00PM to 6.30PM;

<u>Week 2</u>

a. Mondays, 8.00AM to 9.30AM then 4.00PM to 7.00PM;

b. Tuesday, 4.00PM to 7.00PM;

c. Wednesday, 5.00PM to 7.00PM;

d. Saturday, 9.00AM to 1.30PM then 4.00PM to 6.30PM; and

e. Sunday, 9.00am to 2.00pm and 4.00pm to 6.30pm second week.

19. My contracted hours can be varied by agreement between me and CLA under clause 10.3(e) of the Award. My employer regularly asks me to make short term variations to my contracted hours to meet the needs of its clients. I usually agree to these variations.

20. I can also agree to work additional hours without overtime under clause 25.5 (iii) of the Award. Sometimes I am given additional hours through my roster. This is posted on a Thursday and starts the following Monday. I also receive additional hours during my roster period, for example to cover the shift of someone who is on leave.

21. I usually agree to work additional hours. These additional hours are highly variable and they are not guaranteed. I can be offered additional hours at any time, they do not need to be posted with my roster. Further, additional hours do not have to be continuous with my contracted ordinary hours of work. I am regularly rostered on broken shifts at short notice.

22. I usually work between 50 and 52 hours in a fortnight. The number of hours varies based on amount of work; I have worked as much as 60 hours in a fortnight.

My income and expenses

23. In an average fortnight I earn about $1800 net. Attached and marked **Annexure C** are copies of my payslips for the period 22 October 2018 to 16 December 2018.

24. My income depends on the number of hours that I work each week and the days I work those hours. I try to work on the weekend because I am paid penalty rates for those hours and I need the additional income.

25. I receive a partial disability pension. The amount I receive changes according to how much my wife and I earn each fortnight. It averages to about $100 per fortnight.

26. My partner used to be a cleaner but she recently quit her job to become a student, she has no income at the moment. She has applied for Austudy but it has not yet been granted. She was earning between $500 and $800 per fortnight in 2018. She is studying so that she can get a more reliable and better paying job.

27. My wife and I also receive Family Tax Benefit A.

28. Most of my money is spent on groceries and bills. I try to put away money each week, but this comes at the expense of other things. I am trying to get buy a house at the age of 62. This is not easy, especially with my low income. I am not thinking about retirement very much. I do not have enough money in superannuation or savings to retire.

My problems with working broken shifts

29. One problem with working broken shifts is the wasted time. The time between shifts is time I need to fill in, not time I can choose what to do with. Most of my breaks between shifts are too long for a meal and too short to do something else.

30. Longer breaks are easier to handle. Even during longer breaks it's hard to do anything, because I need a longer period of time to really focus on a task. I like being able to be spend my free time in a way that is satisfying or rewarding. For example, I like woodworking but my breaks between shifts are usually too short to do anything productive. It is not a long enough period of time to set up my tools, do my work and then clean up afterwards.

31. However, if I have a long break between shifts it means I am working a very long day. I will start early in the morning and usually finish around 7.00PM. This is very tiring and it means I will miss meal times with my wife and son.

32. My wife and son are really only available on the weekend, and I have most of my shifts on the weekend because they are both studying. I miss out on quality time with my family because I need to earn penalty rates to support my family. I am also rostered to work broken shifts on Saturdays and Sundays, which draws out the time I spend working.

33. Working broken shifts makes it hard to keep friendships. Most of my friends work regular hours. They aren't available during the middle of the day, and I usually finish to late in the evening to see them after work.

34. I am lucky that I live near my current clients. Most of my clients are within 5 or 6 minutes' drive of my house. Any problems would be worse if I lived further away from my clients, like many of my co-workers do. If I had to drive longer than I do, I would find this to be a bigger problem.

35. I feel that I have reached my used by date in the disability sector. Maybe if the working hours were better I would feel differently. At the moment I am actively investigating leaving the disability sector. I am looking for work experience in engineering, local government or administration. I want to work in an industry where I can earn the same or more money with a more compact working day.

Community Living Association Inc

SCHEDULE 1: JOB DESCRIPTION

1. JOB DETAILS

Job Title	**SUPPORT WORKER**
Position Number	N/A
Location	Albany or Denmark
Employment Status	Various

2. REPORTING RELATIONSHIPS

This Position reports to	• Coordinator, CLA
Positions reporting to this position	• Senior Support Worker • Support Worker

3. PRIMARY ROLE

Support individuals with disabilities by promoting personal well-being, choice and inclusion.

4. EXTENT OF AUTHORITY

Under the direction of the Coordinator, adhere to the Staff Code of Conduct and organisational policies and procedures to provide a professional service which is able to meet individual needs and maintain CLA values.

5. KEY TASKS & RESPONSIBILITIES

Brief Summary:

- Provide support and encouragement to the individual you are supporting to develop skills and participate in the community;
- Provide assistance with the daily routine activities such as personal hygiene, grooming, eating, dressing and medication;
- Provides a homely environment at the residence of the client, where applicable;
- Attend to the individual's physical and material well-being and safety, while encouraging independence.

Skills Development:

- Incorporate opportunities for skill development into all activities;
- Enable the person you are supporting to develop independence by encouraging them at all times to be involved or complete activities themselves;
- Ensure the person you support has real choices in all aspects of their daily life;
- Provide opportunities for the person you are supporting to have:
  a. Functional skills and meaningful activities;
  b. Relationships with other people;
  c. Social, community and civic activities;
  d. Personal development and fulfilment;
  e. Access to community and generic services;
- Adhere to any skill development program;
- Monitor skill development program to ensure that it remains relevant and report to the Coordinator in the first instance any need for review or change.

Health Care & Safety:

- Show due care and diligence in all aspects of supporting the person with a disability;
- Administer medications with care and according to schedule prescribed by GP;
- Follow all guidelines outlined in the occupational safety and health manual;
- Assist with meal preparation where necessary, adhering to dietary guidelines;
- If necessary accompany person you are supporting to medical appointments, whilst respecting privacy and confidentiality.

Personal Care and Grooming:

- Encourage a high standard of personal hygiene and grooming. Assist with bathing, showering, hair washing and styling, shaving, toileting, cleaning teeth and dressing where necessary. Encourage independence in these areas;
- Encourage and assist with general household chores such as washing clothing and changing and washing bed linen.

Behaviour Management:

- Encourage behaviours that are likely to increase independence and positive social relationships;
- Ensure that perceptions that others have of the person you support are managed in a positive manner;
- Follow any behaviour management plans consistently;
- Ensure that expectations placed on the person you support are realistic and will not cause anxiety;
- Act in a manner that provides positive role modelling for the person that you support in all situations.

Records and Reporting:

- Follow all reporting and recording requirements of the CLA;
- Report to the coordinator any matters relating to the daily program of the person you support;
- Report to the Coordinator any matters relating to the health of the person that you are supporting;
- Report to the Executive officer any concerns or issues relating to conditions of employment;
- Provide legible, completed payment claim forms for processing of wages. Record description of activities on claim form;
- Grievances to be dealt with by following the grievance policy and procedure.

Maintenance of Routines and Schedules:

- Ensure that you are ready to commence any activity or program in good time. Assist the person you support to develop good time keeping skills if appropriate.
- Ensure that every effort is made to enable the person you support to attend and participate in the planned activities;
- Give as much notice as possible to the Coordinator or work colleagues if you are unable to work due to illness.

Performance Standards:

- Provide a high standard of care and attend to duties with skill and competence;
- Act in a manner which ensures the safety and well-being of the person you support and which respect's their right to privacy, dignity and confidentiality;
- Demonstrate a positive and contemporary attitude towards people with a disability.
- Abide by the policies and procedures of the CLA, including the Staff Code of Conduct and occupational safety and health policies;
- Performance will be appraised as part of formal appraisal program;
- Attend training sessions as identified by the CLA.

Community Living Association Inc

6. ESSENTIAL CRITERIA

- Sound knowledge and understanding of the Disability Service Standards.
- Sound level of verbal, written and interpersonal skills.
- Ability to work with minimal supervision and as part of a team.
- Highly developed time management skills.

7. DESIRABLE CRITERIA

- Experience in working with people from diverse cultural backgrounds
- Previous experience in the provision of in-home/community support services.
- Current First Aid Certificate
- Demonstrated experience in providing a creative, flexible and person-centred approach to people with disabilities.
- Demonstrated experience in the provision of quality care and support for individuals who are vulnerable.
- Commitment to participate in training and development.
- Capacity to work within relevant legislation, Standards and adherence to CLA policies and procedures.

8. SPECIAL CONDITIONS

Appointment is subject to the following:

- Proof of Eligibility to work in Australia

BEFORE THE FAIR WORK COMMISSION
MATTER NO.: AM2018/26
S. 156 - Four yearly review of modern awards – Social, Community, Home care and Disability Services industry award 2010

Statement of Tracy Lee Kinchin

I, Tracy Lee Kinchin, Disability Support Worker, of [redacted] in the State of New South Wales, say;

1. I am a member of the Australian Services Union, NSW & ACT (Services) Branch.
2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I am 40 years old.
4. I am single, and I live with my 20 year old daughter.

My work history

5. I have worked in the disability sector for approximately 18 years.
6. I have Diploma in Community Services.
7. While I was studying for my diploma I worked as an after-school carer for a child with a disability. Once I completed by diploma I was employed part-time as a disability support worker by Newcastle & Hunter Community Access, now known as Connect Ability. I was also employed by the Salvation Army as a homelessness case manager at the Single Women's Refuge. I was made redundant by the Salvation Army. Connect Ability was not able to give me enough hours so I was forced to leave Connect Ability. I went to Leap Frog because I was offered full-time work.

Current employment

8. At the beginning of 2014, I commenced work with Leap Frog Ability as a disability support worker. Attached and marked Annexure A is my contract of employment.
9. I am employed under *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award'**). I am classified as Social and Community Services Employee, level 2.4. I am paid $28.35 per hour. I am a full-time employee.
10. Leap Frog Ability is a not for profit disability service operating in Newcastle, Central Coast and Hunter Valley region. Since April 2018, Leap Frog Ability has merged with Live Better Services Limited ('**Live Better**').
11. I provide support to people with disabilities. I work one-on-one with clients in their private homes. I support their social needs, help them engage with the community and assist them with the daily life. Any important part of my role is assisting clients to develop life skills and new capacities. I also provide personal care and domestic assistance. My work involves a significant amount of travel because my clients are spread out over the city of Newcastle, Central Coast and the Hunter Region.

My hours of work

12. Until recently, I worked an average of 40 hours per week over a 4 weekly rotating roster. I was entitled to an RDO. I would work 8 continuous hours per day with a half hour lunch break. I travelled between the homes of my clients but did so during paid time. However, I would often be required to travel between client's houses during my lunchbreak.

13. I usually received my roster 2 weeks in advance. Sometimes, I would receive my roster by email, but I usually received my roster in paper. My roster did not specify the clients I would be working with each day. Instead, my roster only showed me my start and finishing times for the day. My start and finish times could change from roster to roster, but I would know the hours I was working well in advance.

14. I would normally find out what I was doing, which client's I was working with and where I needed to be when I started work for the day. This was not a problem for me because I already knew my starting and finishing times. I would start and finish work at the Leap Frog Ability office. Each morning, I would attend the offices to do administrative work and pick up my work car. This would take between 15 minutes and half an hour depending on where and when my 1st client was. Then I would perform 6 to 7 hours face to face support work with clients. I would travel between clients in a company car in paid time. At the end of the day, we were given half an hour to return to the office to do our case notes. Sometimes I spent the whole half hour driving back to the office, but this was balanced out by the times when I had a much shorter drive back to the office.

15. I liked having this level of certainty about my hours of work. This meant I could plan my life around my work with certainty. I would go to the gym, walk my dog and see my friends. I really love bushwalking in winter, so I save up my annual leave so I can do multi-night trips. Because I had certainty about my rosters in advance, I could plan my annual leave.

Recent changes to my hours of work

16. Since Leap Frog Ability merged with Live Better, rostering practices have changed. I now receive my roster through a smart phone application. In May 2019, we were told by the new management that we will not be paid for travel time between our clients.

17. As a full-time employee, my employer must roster me an average of 40 hours each week. However, because I am not paid for travel time I work those hours over a longer period of time. I am now often working my 8 hours of 9 or 10 hours spans. I have not been getting my RDO due to new rostering practices. I find working such long days exhausting and I am not coping with it. I have found it hard to go to the gym or walk my dog.

18. I am only being rostered to work at the times I am doing client facing work. This means that my roster needs to change each time a client changes the time or date of their service. This means that my days or work and start and finish times are constantly changing. It is difficult to plan my annual leave. I have found it hard to go hiking since Live Better has stopped paying me for travel time.

19. The changes at my work have been significant and I have taken stress leave.

WI[redacted]

Tracy Kinchin

WITNESS NAME

DATE: 24/06/2019

17 January 2014

Tracy-Lee Kinchin
20 Norfolk Avenue
ISLINGTON NSW 2296

Dear Tracy-Lee

Re: Offer of Employment

I am pleased to offer you full time employment with LeapFrog ability ("the Employer") as a Support Worker commencing 28 January 2014.

In addition to the terms and conditions contained in this letter, the Social, Community, Home Care and Disability Services Industry Award 2010 (the 'Award'), and National Employment Standards (the 'NES') along with the Fair Work Act 2009 apply to your position.

In addition to the Award and the NES the following conditions apply:

1. Criminal Record and Child Protection Records

(a) A criminal record check must be undertaken in order to secure your employment. If your check does not show a clear criminal record, your employment may be terminated. The Employer reserves the right to undertake ongoing criminal history checks. You are required to immediately notify the Employer if you are subject to any official investigation which may lead to criminal charges. Failure to notify the Employer of any official investigation may give rise to termination of employment.

(b) As your employment may involve working directly with children, employment is offered only on the condition that you provide us with a copy of your current Working With Children Check.

2. Position Responsibility

(a) You will report to the Service Manager – Individual Services however, the Employer may change your reporting arrangements in accordance with the needs of the business.

(b) It is expected that you will use your best endeavours and skills to further the Employer's interests and comply with all lawful directions and instructions given to you.

(c) Your duties and responsibilities are contained in the Position Description attached to this letter of offer. In addition, you may be required to perform work that is incidental or peripheral to these duties or at the reasonable request of the employer.

(d) The Employer may alter your position, position description and responsibilities in accordance with the changing needs of the business.

3. Probation and Qualifying Period

As indicated at your interview and in the application material your permanent employment is subject to the completion of the first six (6) months of probationary period. During the probationary period the Employer or you may terminate the employment by giving one (1) week's written notice.

Any legislated qualifying period will also apply to your employment.

4. Ongoing Employment

Your employment will continue subject to the availability of funding, or until terminated in accordance with the provisions specified in this offer.

5. Drivers License

You are offered employment on the condition that you hold and maintain a current driver's licence. If during your employment with the Employer your licence is cancelled or suspended for any reason you must notify the Employer as soon as practicable.

6. Hours of Work

Your normal ordinary hours of work are 40 per week, however you may be may be requested to work reasonable additional hours from time to time.

Your hours of work may be performed at any time between 6.00am and 8.00pm, 7 days per week. You will be provided with a roster and all payments will be made in accordance with the Award.

In recognition of working 40 hours per week, you are entitled to receive one *Rostered Day Off (RDO)* each month which may be taken on a day agreed to be the Employer.

You will be required to take an unpaid meal break of 30 minutes per day no later than after 5 hours of work. However, the taking of the break may be varied, or staggered to meet work demands and/or personal commitments.

7. Time off in lieu of working overtime

You may at times be required to start work earlier or later or work back outside your ordinary hours, or work additional days to those stated above, by working reasonable additional hours as overtime. Where you are required to do so by the Employer, you agree to elect to take time off in lieu of overtime for all time worked (on an hour per hour basis) in excess of your ordinary hours, in substitution for the payment of overtime.

8. Remuneration

You will be paid at the rate of $876.64 per week which is equivalent to that of a Level 2, Pay Point 4 under the current Award.

You may chose to salary sacrifice part of your remuneration in accordance with the Employers Salary Sacrifice Policy.

If for whatever reason, the remuneration paid to you is over and above the amount payable for your classification under the Award, the Employer may offset such payments against any future Award wage increases.

9. Payment of Wages

You will be paid fortnightly in arrears by direct credit to your nominated bank, credit union or building society account subject to you completing and returning an approved timesheet within the required deadline by the Employer.

10. Superannuation

The Employer will contribute compulsory employer superannuation guarantee contributions into a fund nominated by us on your behalf or another fund nominated by you in accordance with relevant superannuation choice of fund legislation.

11. Employment Policies

You are directed to read and comply with the obligations imposed upon you within the Employer's policies and procedures as they relate to your employment. These policies and procedures may be varied from time to time, and you are directed to comply with such variations.

12. Other Employment; Conflicts of Interest and Media

During your employment with the Employer, you must not engage, directly or indirectly, in any employment or business that is similar to or competitive with the business of the Employer, without the prior written approval of the Employer.

You must declare any potential conflicts of interest between your employment and any involvement in outside activities and never use or disclose the Employer's confidential information for private gain or malicious purposes. You must not provide any of the Employer's confidential information to the media or any other organisation, other than when required by law.

13. Confidential Information

(a) **Definition**

(i) "Confidential Information" means information (whether in writing or otherwise) given to or gained by you in confidence at any time, whether before, during or after your employment with the Employer that relates to:

(a) the Employer and other related offices or subsidiaries,

(b) customers, clients or suppliers of the Employer and other related offices or subsidiaries.

(ii) Confidential Information includes, but is not limited to:

(a) trade secrets;

(b) information relating to the Employer's business affairs, accounts, clients, marketing plans, sales plans, prospects, price information, supplier lists, research, management, financing, products, inventions, designs or processes;

(c) computer data bases and computer software;

(d) data surveys, customer lists, supplier lists, client lists, specifications, drawings, records and reports;

(e) private information provided to the Employer by any arm of government.

(f) private information provided to the Employer by any of its suppliers, or customers.

(b) **Confidentiality**

You must, at all times, including following the termination of your employment with the Employer, keep secret and confidential any Confidential Information of any kind and must not make use of any Confidential Information for your own benefit or for the benefit of any other person, business or entity.

(c) **Uncertainty about Confidential Information**

If there is uncertainty about whether information is Confidential Information, or is lawfully within the public domain, the information is taken to be Confidential Information unless you are advised by the Employer, in writing, that the information is not Confidential Information.

If you wish to accept this offer of employment, please sign the enclosed copy of this letter and return it to me.

Yours sincerely

VANESSA CUMMING
HR/Office Manager

I have read and accepted the policy and Procedures of the employer and agree to abide by them.

Signed: _____ *Dated:* 20/01/14

I hereby acknowledge that I accept the offer of employment with the Employer on the terms and conditions contained in this letter.

Signed: _____ *Dated:* 20/01/14

liveBetter
community services

27th April 2018

Ms. Tracey Kinchin
3 Nothumberland Street
Maryville NSW 2293

Dear Tracey,

I am pleased to offer you employment with LiveBetter Services Limited (LiveBetter) on the terms set out in this Letter of Employment. Please read these terms carefully and, if you wish to accept this offer, sign and return the attached copy to the Human Resources Department.

TERMS AND CONDITIONS OF EMPLOYMENT

1. Commencement date

This Letter of Employment will be effective from the 9th May 2018.

2. Term of employment

Your employment with LiveBetter will continue for an indefinite period, subject to successful relevant background checks including a review of your national police record and working with children check. You will also be required to successfully complete a pre-employment Health & Wellness Check. If you do not consent to these background checks and pre-employment Health & Wellness Check or, if your background checks reveal past behaviors that are inconsistent with the expectations of you in this role and this Letter of Employment, then this offer of employment will be revoked immediately.

3. Role, duties and performance

You are engaged as a Support Worker on a permanent, full time basis of 76 nominal hours per fortnight plus any reasonable additional hours. You will be working in the Newcastle area, in the Client Services Team and reporting to David Lewsam, Community Living Program Coordinator.

During your employment with LiveBetter, in addition to those duties outlined in your position description, you are required to:

- comply with all policies and procedures (as amended from time to time) that pertain to your employment and the performance of your duties, which are published by e-mail and/or located on the LiveBetter Intranet;
- perform the duties assigned to you from time to time and comply with all lawful and reasonable directions given to you by your Manager;
- perform your duties and responsibilities in a proper and efficient manner;

Level 1, 235 Lords Place
Orange NSW 2800

PO Box 2500
Orange NSW 2800

T 02 6391 2400
F 02 6391 2444

livebetter.org.au
ABN 13 160 259 512

- except in the case of absence by reason of illness or incapacity or leave in accordance with this contract of employment, devote your time, attention and abilities during normal business hours exclusively to the business of LiveBetter;
- use your best endeavors to promote and enhance the interests, welfare, business, growth and reputation of LiveBetter; and
- not intentionally do anything which is or may be harmful to LiveBetter.

Your duties, responsibilities, team and location may be revised from time to time in consultation with you to meet the changing needs of the organisation. Any changes will be discussed with you in advance and confirmed in writing.

4. Remuneration

Classification
Your conditions of employment will be governed by the applicable provisions of the *Social, Community, Home Care and Disability Services Industry Award 2010 (SCHCDSI).*

Due to the nature and scope of your role, your position been classified as Level 2 Pay Point 4 schedule (B) Social and Community Services Employee on the basis of the nature and scope of the role and your qualifications and experience. Under the transitional arrangements, we are also required to classify you under the Social and Community Services Award, as such your classification is Grade 2, Year 4 (Community Service Worker). You will be paid the higher rate of the two classifications until the transitional arrangements cease.

Rate of Pay
Your rate of pay upon commencement will be $27.37 per hour as per the Award. This rate is subject to change as per LiveBetter's obligations under the *Social, Community, Home Care and Disability Services Industry Award 2010.* LiveBetter will also make superannuation contributions on your behalf in accordance with the Superannuation Guarantee legislation.

Payment of Salary
Payment of your salary will be made on a fortnightly basis, in arrears, by electronic deposit to an account nominated by you. Your manager will confirm if you are required to complete a timesheet.

Superannuation contributions
You are free to direct your superannuation contributions to a regulated complying superannuation fund of your choice. If you do not advise us of your choice of a regulated complying fund, your contributions will be made to the superannuation fund chosen by LiveBetter as the default fund, currently HESTA. If you choose your own fund and do not become a member of the LiveBetter default fund, you are required to provide the information about your chosen fund as listed in the Choice of Superannuation Fund form.

Additional contributions to superannuation
In addition to the legislated employer superannuation contributions, you may direct an additional amount to the fund by means of automatic deduction from your pay. For further information please contact the Payroll Officer.

Salary packaging
You may be entitled to participate in LiveBetter's salary packaging scheme, which at present is administered by AccessPay.
Remuneration reviews
Salaries are reviewed annually in conjunction with the annual performance review process, the relevant industrial Award and the LiveBetter remuneration framework.

5. Hours of work

LiveBetter's normal hours of work are 38 hours per week, Monday to Friday, with an unpaid lunch break of not less than 30 minutes and not more than 1 hour in duration.

You will work an average of 38 hours/week each month which will enable the maintenance of your Rostered Day Off (RDO), including normal ordinary working hours of 40 hours per week, and one RDO each month at a time agreed to by your supervisor.

6. Overtime

All overtime worked must be approved by your manager in advance and, providing approval is obtained, you will be paid in accordance with the overtime provisions of the appropriate Award. Alternatively, you may like to make use of time in lieu provisions, if mutually agreed between yourself and your supervisor and in accordance with the relevant Modern Award.

7. Leave entitlements

Annual leave
You will be entitled to accrue entitlements to paid annual leave at the rate of 20 days for each year of continuous service (or, if part-time, pro-rated) in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time and the appropriate Award.

Annual leave loading of 17.5% will be paid on accrued leave when it is taken.

Unused annual leave will be paid out on termination of employment.

Personal/carer's leave
You will be entitled to ten days paid personal/carer's leave for each year of continuous service (or, if part-time, pro-rated) in accordance with the LiveBetter Leave Entitlements Policy as amended from time to time.

You are not entitled to any payment in lieu of accrued personal leave on termination of your employment.

Compassionate leave
You will be entitled to up to two days paid compassionate leave per permissible occasion in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time.

Parental leave
You will be entitled to parental leave in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time and relevant industrial instruments, such as the Fair Work Act.

Long Service Leave
You will be entitled to long service leave in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time.

Public holidays
You will be entitled to public holidays as proclaimed in your relevant state or territory without loss of pay. Payment will be made in accordance with the National Employment Standards.

Other leave
For information regarding all other leave such as community service leave, religious holidays, study leave and leave without pay, refer to LiveBetter's Leave Entitlements Policy or contact the HR team.

Service Date
For the purpose of calculating service and leave accruals, your original start date with Leapfrog Ability will be used.

Transfer of leave entitlements
As part of your transition from Leapfrog Ability, LiveBetter will be transferring your statutory entitlement accruals. This transfer is conditional upon LiveBetter receiving sufficient funds from Leapfrog Ability to cover these entitlements prior to commencement.

8. Workers' compensation

LiveBetter has workers' compensation insurance in accordance with the relevant state or territory legislation. In the event of any injury occurring during working hours you should immediately notify your manager.

9. Code of Conduct

LiveBetter is committed to ensuring that all individuals are treated with dignity and respect. The LiveBetter Code of Conduct explains what is meant by equal employment opportunity, discrimination, harassment, victimisation and bullying. It is essential that you understand and comply with the Code of Conduct as amended from time to time. A copy of the Code of Conduct is included in your employee handbook which is issued at induction and is also available on the Intranet.

10. Conduct and attire

You will be expected to conduct yourself in a manner that enhances the professional standing of LiveBetter, whether in the office, at third party locations, or any forum in which you may be seen as representing LiveBetter.

11. Driver's Licence

Given the nature of the role, a condition of employment is that you must possess and maintain a valid unrestricted Australian driver's licence. You must provide LiveBetter with a copy of your valid driver's licence and must notify LiveBetter immediately if you are disqualified from driving.

12. Confidentiality

You must not disclose, or allow access to, any confidential information, to any person except in the proper course of your duties, or as permitted by LiveBetter, either during or after the course of your employment. Confidential information is defined as any information relating to LiveBetter employees and clients, which is not lawfully available to the general public.

Further, as an employee of LiveBetter you will have access to "Know-How" and have a detailed knowledge of LiveBetter's clients and business' clients. You will have the opportunity to build professional relationships with those clients, employees and others engaged in LiveBetter's Business (goodwill). It is reasonable for LiveBetter to protect the goodwill of the business and as such, you must not during or post-employment with LiveBetter, induce, solicit, canvas or approach any customers of LiveBetter on behalf of any other business. This includes but is not limited to soliciting or approaching LiveBetter clients/and or families to move providers or encouraging LiveBetter client/ and or families to select another service provider on the basis of your employment with that provider.

In addition, you must not during or post-employment with LiveBetter, do or say anything that may be harmful to the reputation of LiveBetter in any forum, or that may lead a person to cease, curtail or alter their dealings with LiveBetter.

13. Medical Examinations and Considerations

Where a specific medical examination is not required for your position, LiveBetter assumes that you are medically fit to undertake employment with LiveBetter unless you notify it otherwise. If you have a medical condition that may have an impact upon your ability to carry out your duties or may require LiveBetter to provide you with assistance to undertake your duties, then it is important to disclose the extent of the medical condition to LiveBetter so that it may fulfil any requirements it has to assist you.

Where during the course of your employment with LiveBetter the CEO forms the opinion that there are reasonable concerns that you are not fit to undertake your normal duties you may be required to attend a medical examination.

14. Termination of employment

Either you or LiveBetter may terminate your employment with LiveBetter at any time by giving written notice in accordance with the National Employment Standards as outlined below.

Period of continuous service at the end of the day the notice is given	Notice period
Not more than 1 year	1 week
More than 1 year but not more than 3 years	2 weeks
More than 3 years but not more than 5 years	3 weeks
More than 5 years	4 weeks

Notwithstanding any other provision contained in the Letter of Employment, LiveBetter may terminate your employment at any time without prior notice if you commit an act of serious misconduct. Serious misconduct includes both of the following:

- wilful or deliberate behaviour that is inconsistent with the continuation of this Letter of Employment;
- conduct that causes imminent and serious risk to the health and safety of a person, or the reputation or viability of LiveBetter.

Examples of serious misconduct include but are not limited to:

- theft, fraud, assault, intoxication, or refusing to carry out a lawful and reasonable instruction consistent with this Letter of Employment;
- the commission of a crime in the course of your employment;
- the commission of a crime outside your employment with LiveBetter (e.g. criminal dishonesty, where your duties require good faith and honesty);
- neglect of duties; and/or
- the use of objectionable or obscene language in certain circumstances (e.g. if such language is directed towards managers, employees or clients of LiveBetter).

LiveBetter may suspend you on full pay from part or all of your duties at any time, including during any period of notice of termination of your employment.

15. Security of equipment and documentation

Whilst working at LiveBetter you are required to take care to secure your personal belongings. LiveBetter will not reimburse an individual who suffers a loss due to theft of cash or personal possessions. You are also responsible for all equipment issued to you and documentation in your custody. This includes computers, mobile phones and confidential documentation. Any losses must be reported to your manager immediately.

16. Variation and entire agreement

This Letter of Employment may only be varied, replaced or terminated by agreement in writing signed by you and an authorised representative of LiveBetter. This Letter of Employment embodies the entire understanding of the parties in relation to your employment by LiveBetter and supersedes all previous negotiations, representations or agreements. This offer of employment is valid for strictly two weeks from the date of issue unless otherwise agreed.

Please indicate your written acceptance of this offer by signing, dating and returning the copy of this Letter of Employment to the Human Resources Department.

Yours sincerely,

Nerissa Marat
General Manager People & Culture

I have read and accept the terms and conditions of employment as set out in this Letter of Employment.

LeapFrog ability
overcoming disadvantage

Position Description

Position Title:	**Support Worker**
Reports to:	**Individual Services Manager**
Status:	**Full Time/Part Time and Casual**
Award:	**MA000100 - Social, Community, Home Care and Disability Services Industry Award 2010 (Modern Award)**
Classification:	**SACS Level 2**
Last Updated:	**October 2013**

LeapFrog ability Vision:

To be the innovative leader in helping people overcome disadvantage

LeapFrog ability Mission:

To inspire the community to join us in helping people overcome disadvantage

ORGANISATIONAL CONTEXT

LeapFrog ability provides a number of different services to disadvantaged people in the community.

The Individual Supports Team work with people to assist them to help themselves to live more independently and to improve access to the wider community. Functions managed by this team include: Drop-in Support, Case Management, Behaviour Management, Skills Training, Gym and the Connections group.

The Flexible Supports and Respite Team provide practical support to carers of people with a disability by providing direct assistance to the family unit or by brokering respite opportunities. Our Flexible Support Options, Flexible Respite, Hunter CRA Panel co-ordination, Emergency Respite and Crisis Management functions are currently managed by this team.

Both of the above services are funded either through the Federal Government's DisabilityCare Australia or via the NSW Government through the Department of Family and Community Services.

The Fair Go For Kids Program (FGFK) is an initiative that specifically targets disadvantaged children that would benefit from early intervention that they would not otherwise be able to receive. Funding comes from both corporate and private donations.

A copy of this signed agreement is to be given to the employee and a 2nd copy kept on file.

liveBetter

Position Description

Private and Confidential

Support Worker

The Organisation

LiveBetter is an organisation formed through an amalgamation of several like-minded, regionally based community service organisations that recognised the need for specialist service provision for the people of regional Australia.

Delivering a range of aged, disability, carer, child & family, mental health and clinical services, LiveBetter takes a holistic approach to working with customers seeking to ensure that customer needs and preferences are met. As well as service delivery LiveBetter assists customers with information, linking and referrals.

The major organisations that merged to form LiveBetter are CareWest [Central West, Orana, Far West, Northern and Riverina Murray regions of NSW], Excelcare [Central Queensland], Age Concern [Albury NSW], Family Link [Wagga Wagga NSW], There4U [Central Queensland], Home and Community Care services [Broken Hill], Translinc [Central West NSW] and Nambucca Valley Phoenix [Mid North Coast NSW]. Several other organisations had previously amalgamated with CareWest over the past ten years.

LiveBetter and its antecedent organisations have undergone a period of significant growth, with continuing growth in staff numbers, service capacity and diversity and geographic spread. To support this growth, LiveBetter invests heavily in corporate infrastructure and management systems as well as staff training and development.

LiveBetter employs approximately 1500 staff operating in offices, homes, preschool, respite centres and community hubs across regional and rural Queensland and NSW. Working alongside our staff are more than 250 volunteers who provide extra support and services to our customers and communities. Our annual revenue is now more than $90 million with strong growth forecast.

LiveBetter is positioned as one of the largest regionally-based providers of community services in Australia. Although we are a large organisation, we remain focused on ensuring programs and services are provided by local staff, and tailored to the individual needs of local people and communities.

Our Purpose: Enabling the people in regional rural and remote Australia to live their best lives.

Our Values

LiveBetter's Values guide the way we conduct ourselves. This includes how we interact with our clients, community and business partners and how we treat each other. LiveBetter's Values are:

- **Integrity:** We live out our values, are honest and ethical in all our dealings and are accountable for our actions.
- **Respect:** We value the individual. We recognise the rights and choices of the client, employees and the community. We encourage teamwork and support diversity within the team.
- **Cooperation:** We strive to identify and create value from partnerships and alliances with other organisations, agencies, businesses, communities and within our own organisation.
- **Empowerment:** We believe that individuals and communities should be encouraged and supported to realise their full potential.
- **Excellence:** We strive for excellence and best practice in all that we do as individuals, teams and as an organisation.

The Position

Position title:	**Support Worker**
Location:	
Job Type:	Casual / Full Time / Part Time
Reports to:	CLP Coordinator
Direct reports:	Nil

Key Position Responsibilities

This position is responsible for the provision of support to clients, including but not limited to, education, skills training, positive behavioral support and direct care to people with a disability and their support networks accessed through NDIS funding. This position is an integral part of supporting people living with a disability lead more independent lives and improve their access to the wider community.

Key Accountabilities

- Operate within delegation in a responsible manner.
- Purchase orders are completed for all expenditure and receipts provided for petty cash expenditure.
- All expenditure is approved and signed by CLP Coordinator before being forwarded to finance.
- All monies received from clients or services are forward to finance immediately for receipt.
- Develop and maintain effective networks and relationships with government and community organisations, families, and consumer groups.
- Adhere to organisational administrative policies and procedures.
- Contact CLP Coordinator at commencement of after-hours shift.
- If casual, submit and confirm all shift availabilities 1 week in advance to the CLP Coordinator.
- Submit and or confirm all requests for leave, resources, expenditure etc. to the CLP Coordinator.
- Report critical incidents and WHS issues immediately and complete documentation within 48 hours of incident.
- Contributing to a safe and non-discriminatory workplace.
- Client documentation completed and updated in CIMS is accurate and timely.
- Complete all data entry for LiveBetter's data base daily.
- Read and access policy and procedures manual during induction and as necessary.
- Contact CLP Coordinator direct for all leave absences e.g. sick leave etc.

- All Client Support is performed with strict adherence to the published Process documentation, a subsection of the LiveBetter Policies and Procedures.
- Assist in the dissemination of Client Service Information.
- Attend interagency forums as directed by CLP Coordinator.
- Support and guidance is sought from CLP Coordinator immediately in response to significant client issues.
- Support and guidance is sought from CLP Coordinator in response to routine client support.
- Attend regular meetings with CLP Coordinator regarding client support.
- Other related tasks as directed by management from time to time.

Performance Expectations

In addition to the key accountabilities outlined below, the incumbent is expected to perform their role in a professional manner with all skills, responsibility, delegation and aptitude to the level required under the award classification of this position.

The duties and responsibilities of the position are to be carried out in a manner that is consistent with the core values of LiveBetter; Teamwork, Fairness and Impartiality, Honesty and Respect. You are expected to conduct yourself in a manner that aligns with the below:

- Work effectively with the team. Strives to contribute to the overall success of the team and organisation. Work effectively in teams across boundaries.
- Are committed to social justice, opposes prejudice, dishonesty and injustice. Free from bias or favouritism; disinterestedness; equitableness; fairness; as, impartiality of judgment, of treatment, etc.
- Are passionate, committed and enthusiastic about the organisation and inspires a positive attitude to their work. Acts with integrity while promoting consistency among principles, values and behaviours.
- Respects, values and considers the opinion, circumstances, feelings and views of colleagues and clients. Is tactful and diplomatic when dealing with people.

Risk

All staff must be aware of operational and business risks.

They should;

- Provide input into various risk management activities assist in identifying risks and controls
- Report all emerging risks, issues and incidents to their manager or appropriate officer

Person Specification

Background and Experience

Essential

- Relevant tertiary qualifications/certificates in Disability or Individual Support.
- An understanding of the needs of people with disabilities and those who support them.
- High level verbal and written communication skills.
- Ability to work independently and a commitment to a team approach.
- Computer skills – MS Office.
- Knowledge and understanding of relevant NDIS policies and procedures and an ability to provide services in line with LiveBetter's Policy and Procedural guidelines.
- First Aid Certificate.
- Current Working with Children Check clearance.
- Current driver's license.
- Preparedness to undertake a National Criminal History check.

Desirable

- Previous experience working with people with an intellectual disability.

Other requirements

1. Pass a National Criminals History Check, Working with Children Check and a pre-employment medical assessment (including drug and alcohol screening).
2. Advise LiveBetter in writing of any conditions which may impact ability to carry out the responsibilities required of the role.
3. Ability to be flexible with work hours to meet reasonable demands of the position.
4. **Reasonable Travel:** Employees may be required to travel to client's premises, or some other location, as part of their job requirements. It is a condition of employment that employees agree to undertake any reasonable travel required in the performance of their duties

Remuneration

An appropriate remuneration package in line with the skills and experience of the successful candidate will be negotiated. Salary packaging opportunities are available.

I hereby acknowledge that I have received my Position Description and understand what my duties and responsibilities are:

IN THE FAIR WORK COMMISSION

Matter no. AM2018/26
S. 156 - Four yearly review of modern awards – social, community, home care and disability services industry award 2010

Statement of Robert James Steiner

I, Robert James Steiner, Disability Support Worker, of [redacted] in the State of New South Wales, say;

1. I am a member of the Australian Services Union, NSW & ACT Branch.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on 2 June 1996, I am 23.

4. I have a partner who I lived with. My partner is not a citizen of Australia and does not have her driver's license. She is not able to work, so I support both of us with my income. My partner also relies on me when she needs to be driven somewhere.

5. I also live with my parents, my grandparent and brother. I am the half-owner of our house which it mortgaged. I make mortgage payments from my income.

My work history

6. I have worked as Disability Support Worker since 7 October 2017. Before I worked as a Disability Support Worker I was employed Challenge Community Services as a Youth Worker for about one year.

7. I have a hold Certificate IV in Youth Work.

Current employment

8. On 7 October 2017, I commenced work with Butter Fish Services ('**Butter Fish**') as a casual disability support worker. I became a full-time employee on 6 July 2018. Butterfish is a disability support service operating in Newcastle and the Hunter Region. It provides services to both adults and children with a disability.

9. I am employed under *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award')**. I am paid $20.58 per hour. My union has advised me that I am being underpaid and will raise this as a dispute with my employer.

10. I work with several clients who have psychosocial disabilities: including autism, schizophrenia, and depression. Mostly I help my clients to living independently. This involves helping clients with day to day tasks, while also teaching them the skills they need to do those tasks for themselves. I will take clients to appointments or shopping. I will help them take their medication. I also provide some domestic assistance, such as house cleaning. I also support my clients to participate in community activities, like going to the beach. While I am caring for my clients I will teach them new skills, like using public transport, which will bring them closer to doing to do those things for themselves.

11. I do most of my work at my clients' homes or out with them in the community. I usually only attend my employer's offices for team meetings.

12. I live and work in a regional area. I live south of Newcastle in the Lake Macquarie area. My clients live in the city of Newcastle and the Hunter Valley towns of Maitland and Singleton. It can take more than an hour to drive between my home and my clients in the Hunter Valley.

My working patterns

13. I work an average of 38 hours each week with some overtime. I regularly work overtime and I also work on the weekend.

14. I work on a four week roster, which I generally receive one week in advance. I receive my rosters electronically through my employer's website. I usually work 8 hours each day. However, I can work as much as twelve hours depending on my roster or if I have been required to work overtime. I work sleepovers. Attached and marked **Annexure A** is a summary of my roster for the period between 6 November 2018 and 6 June 2019.

15. I am sometimes rostered to work a broken shift. If I work multiple shifts in one day it is most likely because I am working at multiple locations. My employer does not pay me for the time I spend travelling between work locations.

16. Below is a table setting out the occasions I worked a broken shifts for the period Friday, 23 November 2018 to Thursday, 6 June 2019.

Date	**Start**	**Finish**	**Hours**	**Hours between shifts**	**Hours of Duty**
Tuesday, 6 November 2018	6:00am	10:00am	4		
Tuesday, 6 November 2018	3:30pm	6:30pm	3	5.5	12.5
Wednesday, 7 November 2018	9:00am	10:30am	1.5		
Wednesday, 7 November 2018	3:30pm	5:30pm	2	5	7.5
Friday, 9 November 2018	9:00am	1:00pm	4		
Friday, 9 November 2018	3:00pm	8:00pm	5	2	11
Saturday, 10 November 2018	6:00am	11:00am	5		
Saturday, 10 November 2018	3:00pm	8:00pm	5	4	10
Tuesday, 13 November 2018	6:00am	1:00pm	7		
Tuesday, 13 November 2018	3:00pm	6:00pm	3	2	12
Thursday, 6 December 2018	9:30am	1:30pm	4		
Thursday, 6 December	2:30pm	7:30pm	5	1	10

2018					
Wednesday, 12 December 2018	9:30am	2:00pm	4.5		
Wednesday, 12 December 2018	3:00pm	7:00pm	4	1	10.5
Friday, 28 December 2018	6:00am	11:00am	5		
Friday, 28 December 2018	3:00pm	8:00pm	5	4	10
Wednesday, 2 January 2019	6:00am	7:15am	1.25		
Wednesday, 2 January 2019	3:00pm	7:15pm	4.25	7.75	10.75

Issues associated with unpaid travel time

17. I work long days, which I find tiring. I am routinely on duty for much longer than the time I am actually paid for. I often work for more than 10 hours a day, but a lot of that time will be unpaid. I do not always receive consecutive days off work. If I have a single day off, I will usually spend that time resting.

18. My days are longer than my rostered start and finish times. For example, in a normal day, I might start work at 6.00 am. I will have to wake up at 5.00 am or earlier to get ready for work. I will drive to work, and start my first shift. Then I will drive to my next appointment in unpaid time. I will work might then finish at 8.00pm. But my day is not done. It might take me an hour to drive home, which could take an hour. Then I will need to unwind and have dinner. I probably won't be able to get to bed before 10.00 pm. It is likely I will be rostered on at 6.00 am again.

19. I would prefer to be at home earlier, so I can spend time with your partner. My partner gets lonely with me being gone for so long. It can be difficult to see my friends. My friends work

the same kinds of jobs with rosters all over the place. We have to match up the time we have off if we want to see each other.

20 When I have time off, there are limits me on what I can do. It can be difficult to do chores because businesses might not be open when I am off work. I would prefer to work shorter hours, but I need to make sure I earn enough money to support me and my partner.

BEFORE THE FAIR WORK COMMISSION
MATTER NO. AM2014/286
S. 156 - Four yearly review of modern awards – Social, Community, Home care and Disability Services Industry Award 2010

Statement of Paul Edward O'Brien

I, Paul Edward O'Brien, Customer Service Engineer, Unit [redacted] in State of the New South Wales, say;

1. I am a member of the Australian Services Union, NSW & ACT (Services) Branch ('**ASU**'). I am a workplace delegate. I have been representing the ASU in national consultation, industrial disputes and bargaining.

Employment in the business equipment industry

2. I am employed by Canon Australia Pty Ltd ('**Canon**') as Customer Service Engineer. I have been employed by Canon for about 23 years.

3. I am employed under the *Canon Australia Pty Ltd. (Technical Consultants) Enterprise Agreement 2019* ('**Agreement**'). Attached and marked **Annexure A** is a copy of the Agreement. The reference instrument for the purposes of the Better Off Overall Test for the agreement is *Business Equipment Award 2010* ('**the Award**'). Attached and marked **Annexure B** is a copy of the Award.

4. I am a full-time employee. I work an average of 37.5 hours averaged over 28 days. I do not receive a roster because I have a normal start and finishing time. However, my employer is entitled to shift the span of hours to accommodate the needs of customers.

Payment for travel time

5. I install and service business equipment sold by my employer. I am employed to install and maintain Canon photocopiers and other business equipment.

6. I am assigned a region of operation by my employer. I am required to travel between work locations by my employer. This includes travelling to a customer's premises to perform work, picking up parts from the warehouse, attending my employers offices or workshops. I may be required to start and finish work at a customer's premises during my rostered ordinary hours.

7. I am what is known as a 'walking tech'. I am based in the central business district. I walk to and from my jobs. Some of my co-workers are 'driving techs', they have a larger area and are required drive between locations.

8. I spend a reasonable amount of time travelling between work locations each day. It is hard to estimate because it does vary and I am not required to keep track of it. It could be between 10 and 30 minutes travel for each job.

9. I am paid at ordinary time rates of pay for travel in excess of hours outside my ordinary hours of work but within my region of operations under clause 25 (a) of my Agreement. If I am travelling outside my region, I will be paid for all travel time outside my hours of work under clause 25(c) of my Agreement.

Characteristics of my sector

10. In my experience, most people who work in my industry are men. I believe that only one woman is covered by my Agreement.

11. This is supported by the Form F17 lodge by my employer, at the time the Agreement was made it covered 74 employees. Only one was a woman. Attached and marked **Annexure C** is a copy of the Form F17 – Employers statutory declaration in support of an application for approval of an enterprise agreement (other than a greenfields agreement) lodged by Canon on 22 February 2019.

12. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

DECISION

Fair Work Act 2009
s.185—Enterprise agreement

Canon Australia Pty Ltd
(AG2019/435)

CANON AUSTRALIA PTY LTD (TECHNICAL CONSULTANTS) ENTERPRISE AGREEMENT, 2019.

Business equipment industry

DEPUTY PRESIDENT SAUNDERS NEWCASTLE, 4 APRIL 2019

Application for approval of the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019.

[1] An application has been made for approval of an enterprise agreement known as the *Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019* (***Agreement***). The application was made pursuant to s.185 of the *Fair Work Act 2009* (***Act***). It has been made by Canon Australia Pty Ltd**.** The Agreement is a single enterprise agreement.

[2] The Employer has provided written undertakings (***Undertakings***). A copy of the Undertakings is attached in Annexure A to this decision. I am satisfied that the effect of accepting the Undertakings is not likely to:

(a) cause financial detriment to any employee covered by the Agreement; or

(b) result in substantial changes to the Agreement.

[3] The views of each person who the Fair Work Commission knows is a bargaining representative for the Agreement have been sought in relation to the Undertakings.

[4] Pursuant to subsection 190(3) of the Act, I accept the Undertakings.

[5] Subject to the Undertakings, I am satisfied that each of the requirements of ss.186, 187, 188 and 190 as are relevant to this application for approval have been met.

[6] The Australian Municipal, Administrative, Clerical and Services Union being a bargaining representative for the Agreement, has given notice under s.183 of the Act that it wants the Agreement to cover it. In accordance with s.201(2) of the Act, I note that the Agreement covers the organisation.

[7] The Agreement is approved and, in accordance with s.54 of the Act, will operate from 11 April 2019. The nominal expiry date of the Agreement is 3 April 2022.

DEPUTY PRESIDENT

Annexure A

IN THE FAIR WORK COMMISSION

FWC Matter No.:
AG2019/435

Applicant:

Canon Australia Pty Ltd

Section 185 – Application for approval of a single enterprise agreement

Undertaking - Section 190

I, Sara Marshall, Director, Human Resources, Communications and Facilities for Canon Pty Ltd give the following undertakings with respect to the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019 ("the Agreement"):

1. I have the authority given to me by Canon Australia Pty Ltd to provide this undertaking in relation to the application before the Fair Work Commission.

2. Canon Australia Pty Ltd undertakes that in the event of an inconsistency between the NES and the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019 and the NES provides a greater benefit to an employee, the NES provision will apply to the extent of the inconsistency.

3. This undertaking is provided on the basis of issues raised by the Fair Work Commission in the application before the Fair Work Commission.

Signature

28/3/19.

Date

Note - this agreement is to be read together with an undertaking given by the employer. The undertaking is taken to be a term of the agreement. A copy of it can be found at the end of the agreement.

CANON AUSTRALIA PTY LTD (TECHNICAL CONSULTANTS)

ENTERPRISE AGREEMENT, 2019

PART A – PRELIMINARIES

1. TITLE

This agreement shall be known as the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019.

2. TABLE OF CONTENTS

3. AREA, INCIDENCE AND PARTIES BOUND

a) This Agreement shall be binding upon Canon Australia Pty. Ltd. ('Canon') and positions classified within the "Technical Consultant" stream as reflected in Appendix B and the Australian Municipal, Administrative, Clerical and Services Union (**ASU**).

b) The parties agree that such employees who are engaged by Canon during the term of this Agreement will become a party to the Agreement. This Agreement replaces all other Agreements.

c) This Agreement is comprehensive and is intended to operate to the exclusion of the Business Equipment Award 2010 to the extent allowable by law.

4. DATE AND PERIOD OF OPERATION

a) The Agreement shall operate from the date the Fair Work Commission's approval notice advises the Agreement comes into operation and shall reach its nominal expiry date 3 years after the date of approval.

5. AIM OF AGREEMENT

a) The aim of this Agreement is to gain continuous improvement in productivity, efficiency, flexibility, communication and co-operation in the workplace.

b) The parties also recognise the necessity of adopting a consultative and participative approach to workplace reform to achieve change. In order to achieve this, a National Consultative Committee may operate in each State. In addition, a National Consultative Committee will operate on an 'as requested' basis.

6. NO EXTRA CLAIMS

a) It is a term of this agreement that the parties undertake not to pursue any extra claims during the life of this Agreement.

7. NATIONAL CONSULTATIVE COMMITTEE

a) Canon is committed to the on-going maintenance of a National Consultative Committee ('NCC') constituted by nominated management and elected employee representatives and Australian Services Union (ASU) delegate.

b) The NCC is a structured forum, whose purpose is to provide a forum for two-way communication between management and employees.

c) The members of the NCC reserve the right to communicate with their respective constituents with regard to any NCC matters.

d) Any requests by the representatives to communicate with their constituents shall not be unreasonably refused by management.

e) The NCC will determine its own Constitution.

8. INTRODUCTION OF CHANGE

a) All parties recognise that we work in a competitive and changing industry. As such, all recognise that there may be required changes to business operations, both by way of structural enhancements and skill development.

b) With this in mind, Canon is committed to providing secure employment for employees in a manner consistent with prudent management.

c) Canon acknowledges that some business decisions will impact on employees' personal and working lives and is committed to minimising any adverse impact to the extent that is practicable. The process described below aims to assist in this process.

d) Canon will consult with the employees and their union where Canon proposes to introduce:

(i) significant business initiatives or major changes, which is likely to have a significant effect on employees (including Canon policy which affects employment conditions); or

(ii) a change to their regular roster or ordinary hours of work, unless specifically contemplated by this Agreement,

managers will consult with the employees who may be effected by the proposed changes as early as practicable.

e) A significant effect on staff members will arise in circumstances such as major change in technology, outsourcing, or the composition, operation or size of Canon's workforce or in the skills required, the elimination or diminution of job opportunities.

f) Canon will consult with employees affected and their union on the introduction of the changes referred to at subclause 8 d), by providing information about the changes, the effect the changes are likely to have on staff, and where possible the measures to avert or mitigate the adverse effects of such changes on staff. Canon will give an opportunity for the relevant employees affected to provide their views on the impact of the changes (including any impact of a change to their regular roster or ordinary hours of work in relation to their family or caring responsibilities). Further, Canon will give consideration to matters raised by employees about the impact of the changes and give reasons for its decisions.

g) The relevant employees affected by major changes or changes to their regular roster or ordinary hours of work may appoint a representative for the purposes of this process.

9. NEW TECHNOLOGIES

From time to time Canon may implement new technologies as an aid to business improvements.

10. ACCESS TO RECORDS AND PRIVACY

a) All employees will be given a copy of this Agreement.

b) Canon agrees to provide a copy of this Agreement on request to any employee.

c) All employees shall have access to their personal file.

d) Whenever an appraisal is made by Canon in relation to an employee, then that employee shall be entitled to see and comment on such appraisal.

e) The Canon Australia group of companies is subject to statutory privacy obligations.

11. ETHICS

a) The contents of Canon's 'Code of Ethical Conduct' (as amended from time to time) is also part of this Agreement. Prior to amendment, the National Consultative Committee will be consulted. (Refer to handbook)

b) All employees covered by this Agreement will be given one month's written notice of change to make comments.

12. AGREEMENT FLEXIBILITY

a) Canon and an employee covered by this Agreement may agree to make an individual flexibility arrangement to vary the effect of terms of the Agreement if:

(i) the arrangement deals with 1 or more matters arising under any term of the Agreement;

(ii) the arrangement meets the genuine needs of Canon and the employee; and

(iii) the arrangement is genuinely agreed to by Canon and the employee.

b) Canon must ensure that the terms of the individual flexibility arrangement:

(i) are about permitted matters under section 172 of the Fair Work Act 2009; and

(ii) are not unlawful terms under section 194 of the Fair Work Act 2009; and

(iii) result in the employee being better off overall than the employee would be if no arrangement was made.

c) Canon must ensure that the individual flexibility arrangement:

(i) is in writing; and

(ii) includes the name of Canon and the employee; and

(iii) is signed by Canon and employee and if the employee is under 18 years of age, signed by a parent or guardian of the employee; and

(iv) includes details of:

1. the terms of the Agreement that will be varied by the arrangement; and
2. how the arrangement will vary the effect of the terms; and
3. how the employee will be better off overall in relation to the terms and conditions of his or her employment as a result of the arrangement; and

(v) states the day on which the arrangement commences.

d) Canon must give the employee a copy of the individual flexibility arrangement within 14 days after it is agreed to.

e) Canon or employee may terminate the individual flexibility arrangement;

(i) by giving no more than 28 days written notice to the other party to the arrangement; or

(ii) if Canon and the employee agree in writing - at any time.

PART B – WAGES, ALLOWANCES AND RELATED MATTERS

13. WAGES

a) Employees covered by this agreement will be paid on a Total Remuneration Cost (TRC) basis. This includes base salary, Superannuation Guaranteed Contribution (SGC), Annual Leave Loading and any other salary sacrifice items as elected by the employee and agreed to by Canon.

b) Minimum TRCs for each job classification are shown in Appendix A.

c) Notwithstanding the rates paid for various job classifications, factors which will be considered when placing individuals in the TRC band will include, but not be limited to, the following:

(i) the individual employee's past experience;

(ii) appropriate skills and qualifications;

(iii) overall job performance over time;

(iv) the individual employee's employment record with Canon; and

(v) any other relevant matters.

d) All TRC ranges will be reviewed, although not necessarily adjusted, on an annual basis. TRC range reviews will take account of the value of each job, Canon performance, Government legislation and market rates.

e) Unless otherwise agreed, all salaries will be paid by direct deposit to a bank, building society or credit union.

f) Salaries will be paid fortnightly. Salaries will be paid on a one week in advance, one week in arrears basis.

g) An employee may authorise Canon to deduct monies on a salary sacrifice basis. In the event that an employee requests Canon to make any such deductions, each instance will be confirmed in writing by the employee.

h) The minimum TRC increases for each employee are set out in Appendix A.

14. SUPERANNUATION

a) For the purpose of this clause, "Ordinary time earnings", is defined as the expressed base salary earned by an employee during a twelve month period. In the event that an employee's base salary is adjusted, Canon contributions are adjusted accordingly.

b) Canon will make superannuation contributions in accordance with the provisions of the Superannuation Guarantee (Administration) Act 1992 (Cth) and any other applicable legislation.

c) An employee may authorise Canon to make additional superannuation contributions to the fund, such additional contributions being deducted from the employee's earnings as a salary sacrifice.

d) The employee must specify an amount as a percentage of ordinary time earnings as defined above by which his or her salary is to be reduced ("the salary sacrifice").

e) Canon will continue to calculate the contributions required by sub-clause a) above on the basis of the employee's ordinary time earnings before the salary sacrifice is deducted.

f) The employee may revoke the salary sacrifice agreement or alter the amount to be deducted at any time.

g) All superannuation contributions will be made into a MySuper default fund selected by Canon unless otherwise advised by the employee of an alternate approved fund of the employee's choice. These do not include funds that require Canon to become a participating member of that fund.

h) Casual employees become members at the end of the month in which they first earn the amount prescribed under Federal legislation.

15. UNIFORMS

a) Canon will provide a uniform to employees annually. Canon requires employees to wear the provided uniforms.

b) In the event that Canon intends to change or alter any portion of the Canon uniform, Canon will consult the NCC on any such intended change.

16. FIRST AID ALLOWANCE

An employee holding a current first aid qualification from St Johns Ambulance or similar body, who is appointed by Canon to perform first aid duties, will be paid a first aid allowance of $22.05 per week.

The first aid allowance will increase to:

a) $22.05 per week effective from 1 March 2019;

b) $22.46 per week effective from 1 March 2020; and

c) $22.89 per week, effective from 1 March 2021.

17. MEAL BREAKS AND MEAL ALLOWANCES

a) Unless agreed by both parties, an employee shall not work for longer than five (5) hours without a meal break. The minimum meal break shall be 30 minutes. This time shall be unpaid.

b) An employee required to work two (2) hours or more overtime is entitled to be paid a meal allowance. If overtime extends a further four (4) hours, an additional meal allowance will be paid.

c) A meal allowance shall not be payable if Canon provides a meal.

d) The value of the meal allowance is $14.66 per meal.

The meal allowance will increase to:

(i) $14.66 per meal effective from 1 March 2019;

(ii) $14.94 per meal effective from 1 March 2020; and

(iii) $15.22 per meal, effective from 1 March 2021.

18. MOTOR VEHICLES / WALKING ALLOWANCE

a) Where a motor vehicle is required to perform normal duties, the Canon will at its option provide either a:

(i) motor vehicle as per the relevant Canon Australia Fleet Policy (as amended from time to time) which includes a fleet card to cover all running costs; or

(ii) suitable car / walking allowance as applicable to the position; or

(iii) kilometre allowance - for an employee who is required to use his/her motor vehicle to carry out the employers business on a casual basis they shall be paid an allowance of 90 cents per kilometre.

This allowance will increase to:

a) 90.00 cents per kilometre effective from 1 March 2019;

b) 92.00 cents per kilometre effective from 1 March 2020; and

c) 94.00 cents per kilometre, effective from 1 March 2021.

b) A walking allowance is paid to compensate for day to day travel expenses, together with the foregone benefit of driving a Canon motor vehicle during business hours and the private benefits associated with a Canon motor vehicle.

c) The walking allowance for the life of this Agreement will be $13,269 per annum (for part time employees and casual employees this will be on a pro-rata basis).

d) Walking allowances and motor vehicle allowances will not be payable, and Canon motor vehicles shall be returned during unpaid absences unless otherwise agreed with Canon.

e) Where a new Canon motor vehicle is provided the following shall apply (unless otherwise agreed with the employee):

(i) The vehicle shall have an ANCAP/NCAP rating of five (5) or greater;

(ii) The vehicle shall have an automatic transmission;

(iii) The vehicle shall have appropriate safety equipment including but not limited to reverse parking sensors, reversing camera, hands-free mobile phone capability, window tinting, cargo barrier, laptop charging port in cargo area and current first aid kit;

(iv) The vehicle shall have seating for five people;

(v) The vehicle shall have suitable secure parts carrying capacity;

(vi) The vehicle shall be available for Canon business use as and when required; and

(vii) The employee, and their spouse may (subject to being over 21 and holding an unrestricted driver's license for a minimum of 2 years which is not suspended or cancelled) use the vehicles for private non-business use within areas defined within Canon's Fleet Policy (as amended from time to time) unless otherwise provided within this agreement.

f) Canon will be responsible for the payment of all FBT costs associated with the provision or use of a Canon motor vehicle in accordance with this clause.

19. ELECTRICAL LICENCES

a) Where State legislation requires electrical licenses to be held in order to work on office equipment, Canon will pay any reasonable costs incurred in the initial acquisition and renewal of the electrical license for employees.

20. HIGHER DUTIES ALLOWANCES

a) Where an employee is required to perform duties or accept responsibilities in a role other than that of their substantive classification for a period of; 5 working days or greater for a Service Supervisor role or, 10 working days or greater for

all other roles, they shall be paid at the rate from day one which would be applicable if such work was performed on a permanent basis.

Where an employee is required to act in the role of a Supervisor, they shall be paid an annualised allowance of $5,900. This equates to $113.46 per week.

This annualised allowance will increase to:

(i) $5,900 (rounded) per year (or $113.46 per week) effective from 1 March 2019;

(ii) $6,000 (rounded) per year (or $115.38 per week) effective from 1 March 2020; and

(iii) $6,100 (rounded) per year (or $11.30 per week) effective from 1 March 2021.

b) For the purposes of this clause, the allowances and payments referred to above shall be paid on a pro rata basis for the period the employee acts in the higher role.

c) Rates of pay for other higher roles will be determined in line with Canon's Remuneration, Allowance & Subsidy policy.

PART C – HOURS OF WORK AND RELATED MATTERS

21. HOURS OF WORK

a) A work cycle means the pattern of daily start and finishing times as may be agreed between the employee and his or her Supervisor.

b) Ordinary hours means those hours worked in a work cycle for which the ordinary rate of pay is paid.

(i) The span of hours shall be between 6:00 am and 6:30 pm, Monday to Friday.

(ii) The ordinary hours of work shall average 37.5 hours per week within a work cycle not exceeding twenty eight (28) consecutive days.

(iii) Ordinary hours worked on a daily basis must not exceed an average of 7.5 hours per day within a work cycle not exceeding twenty eight (28) consecutive days, except by agreement, provided that the maximum hours worked shall not exceed twelve (12) hours per day.

(iv) Unless otherwise agreed, an employee's work cycle will commence at 8:30 am and will not be less than four (4) hours per day, except that the minimum period of four (4) hours will not apply to part-time or casual employees.

(v) Where any period of an employee's work cycle commences or finishes outside of the span of hours, a loading of 20% of the ordinary hourly rate of pay will apply to all time outside of the span of hours.

22. START OF DAY

a) It is an inherent condition of employment that an employee may be required to start and finish their work cycle at the customer's premises. It is acknowledged that for most employees, the variability in daily travel time from their principal place of residence to their first job requires due recognition to ensure scheduling flexibility is maintained without excessive periods of unpaid travel time being imposed on the employee. Acknowledging this, employees are expected to start work by their scheduled starting time (normally 8.30 am). Examples of work include;

(i) at customer's premises (after picking up parts if the additional travel time to the warehouse, drop point or storage lock up is less than or equal to fifteen (15) minutes);

(ii) picking up parts from warehouse, drop point or storage lock up if picking up parts would extend travel time to the customer premises by more than fifteen (15) minutes;

(iii) in office;

(iv) attending meetings;

(v) attending training; or

(vi) as directed by a Supervisor.

23. OVERTIME

a) Overtime is all time worked in excess of an employee's work cycle as defined in Clause 21.

b) Before requiring an employee to work overtime Canon must take into consideration the amount of overtime already worked in the period and the employee family responsibilities.

c) Overtime shall be calculated to the nearest fifteen (15) minutes of the total overtime worked in the work cycle.

d) All overtime worked Monday to Saturday shall be paid for at the rate of 150% of the employee's ordinary hourly rate.

e) All overtime worked on Sunday shall be paid for at the rate of 200% of the employee's ordinary hourly rate.

f) Subject to Clause 44, all overtime worked on public holiday shall be paid for at the rate of 200% of the employee's ordinary hourly rate.

g) An employee (other than a casual or part-time employee) who works so much overtime between the end of their daily work cycle and the commencement of their next work cycle, that they have not had at least ten (10) consecutive hours off duty between those times, shall be released after the completion of such overtime until they have had ten (10) consecutive hours off duty, without loss of pay for all ordinary working time occurring during the ten (10) hour break.

h) If, on the instruction of Canon, such employees resume or continue work without having had ten (10) hours off duty, they shall be paid at double time

until released from duty for such period and then be entitled to be absent until they have had ten (10) consecutive hours off duty without loss of pay.

i) All overtime must be approved prior to it being worked.

j) For the avoidance of doubt, where an employee is entitled to the allowance under clause 21.b)(v) or any other shift allowance, overtime will not apply for the hours during which the allowance is applicable.

24. TIME OFF IN LIEU / ROSTERED DAY OFF

a) Employees will be entitled to payment for overtime. Alternatively, time off in lieu of payment may be arranged subject to agreement of both the manager and the employee concerned.

b) Subject to agreement of both the manager and the employee concerned, any time off in lieu must be taken within four (4) weeks of having been worked. Failure to take the time off in lieu shall result in the overtime being paid to the employee in their next salary payment. Requests for time off in lieu will not be unreasonably refused by management.

c) Other than the restrictions in this clause, nothing in this agreement shall prohibit any flexibility in working arrangements to meet customer needs. A rostered day off (RDO) arrangement may be agreed to between a manager and individual or group where the arrangement meets customer and business needs.

25. TRAVEL AND ACCOMMODATION

a) Time spent travelling within an employee's region of operation to and from seminars, conferences, training, etc in excess of two (2) hours each way, which is outside the employee's agreed work cycle, will be paid at ordinary rates of pay. For the purposes of this clause an employee's region of operation is defined as the area where Canon provides direct service.

b) Time spent travelling outside an employee's region of operation to and from kick-offs, trips/travel organised as a reward or bonus, which is outside the employee's normal working hours, will not be paid.

c) For all other travel outside an employee's region of operation, all travelling time outside their ordinary hours of employment shall be paid at their ordinary rates.

d) All allowances and reimbursements will be as per Canon policy.

26. STAND-BY AND CALL-OUT

a) Employees who are rostered on to stand-by shall be paid a stand-by allowance of $13.09 for each hour for which they are rostered on to stand-by.

The stand-by allowance will increase to:

(i) $13.09 per hour effective from 1 March 2019;

(ii) $13.33 per hour effective from 1 March 2020; and

(iii) $13.58 per hour, effective from 1 March 2021.

b) Employees who are on stand-by must be available and able to work when they are called.

c) If an employee is called to work while on stand-by they shall be paid a minimum of three (3) hours.

d) Employees on stand-by who are called out shall be paid at the overtime rate. While receiving the appropriate overtime rate, the stand-by allowance will not be paid.

e) In the event that an employee on standby:

(i) Is called out and completes the work before midnight (including travelling time) they will be required to commence work by 8:30 am the following morning, provided that they have already had at least one and a half (1.5) hours break prior to being called out, otherwise the employee will commence work by 10 am the following morning.

(ii) Is called out and completes the work after midnight, then the employee is required to take a minimum break of ten (10) hours without loss of pay for the ordinary working time occurring during the ten (10) hour break;

(iii) Is called out after 5.00 am, they will continue to work until such time as they have completed their ordinary work cycle. However, they must take a thirty (30) minute meal break (on full pay) on the completion of the first five (5) hours worked.

f) Employees who are not on stand-by that are called out after having completed their normal daily work cycle will be paid for a minimum of four (4) hours at the overtime rate.

PART D – MODE OF EMPLOYMENT

27. CLASSIFICATION STRUCTURE

a) The employees covered by this Agreement are those employees classified in accordance with the Positions in Appendix B. All parties to this Agreement acknowledge that these Positions may need to be changed from time to time to accommodate the changing business needs. Any significant change will be made in accordance with Clause 8. Changes affecting a group of employees will be reviewed with the National Consultative Committee prior to implementation.

b) Employees will be notified of their classification prior to commencement of employment.

c) Employees shall carry out such duties as directed by Canon from time to time subject to the limits of their skills, competence and training.

d) Where Canon requires a employees to be seconded to a position utilising a different job title then, where possible, expressions of interest will be sought and discussed with individuals. Such voluntary secondments will be reviewed on a monthly basis.

e) Where no volunteer is forthcoming, Canon reserves the right to direct a employee to perform the required duties to meet operational requirements. In such circumstances the secondment will be reviewed on a monthly basis and will be for a maximum period of three (3) months.

28. JOB SHARE

a) Where two or more employees with similar skills seek to enter into a job share arrangement, such requests will not be unreasonably refused. In such a job share situation all tools of trade will need to be shared (this includes but not limited to laptop, phone, spares inventory and vehicle). The exchange of such tools will need to take place in the employee's own time to preserve the opportunity for 37.5 hours of work per week to be completed.

b) In the event that one job sharer resigns or is terminated Canon will make every attempt to locate a replacement job share partner. In the event no new job share partner can be found, the remaining job sharer will revert to a full-time position.

29. PROBATION

a) The purpose of the probationary period is to allow both Canon and the employee to assess the employment relationship and to decide whether to continue the employment beyond the probationary period.

b) Normally an employee may be engaged for an initial probationary period of three (3) months on the following basis:

(i) Canon will advise the employee in writing, prior to the commencement of their employment, of the applicability and length of the probationary period;

(ii) At any time during the probationary period, either party may elect to end the employment relationship without giving reasons by giving one weeks' notice of termination of the employment. The probation period may be extended by mutual agreement for an additional period of up to three months; and

(iii) Nothing in this clause affects Canon's right to dismiss a probationary employee without notice for misconduct which justifies summary dismissal.

30. PART-TIME EMPLOYMENT

a) Part time employment means a person employed to work less than an average of 37.5 hours a week within a work cycle not exceeding twenty eight (28) consecutive days.

b) The span of hours for a part time employee will be those outlined in Clause 21.

c) Overtime shall apply in accordance with clause 23 or any other relevant provision of this Agreement.

d) An employee employed on a part-time basis shall be paid an hourly rate based pro rata of the weekly rate for their appropriate classification.

e) Personal/carer's leave and annual leave entitlements shall be provided on a pro-rata basis.

f) Walking allowance shall be provided on a pro rata basis, if applicable.

g) Compassionate leave and long service leave shall be provided in accordance with the relevant legislation.

h) Part-time employees are entitled to public holidays only if the public holiday falls on their normal work day, and will be paid for the number of hours they would have received had they worked the public holiday in question.

i) A Part-time employee who is provided a motor vehicle by Canon may be required to return that vehicle on days that the employee is not working.

31. CASUAL EMPLOYMENT

a) Casual Employment means a person engaged by the hour and paid by the hour who may be dismissed or leave Canon's service with one (1) hours' notice. Casual employees are engaged on an 'as and when required' basis.

b) Casual employees will be paid a 25% loading on the relevant hourly rate for the work being done.

c) Casual employees are not entitled to paid leave of any kind, public holidays, or redundancy payments except as may be provided for in any applicable State or Federal legislation.

d) Walking allowance shall be provided on a pro rata basis, if applicable.

e) A casual employee who is provided a motor vehicle by Canon may be required to return that vehicle at times that the employee is not working.

PART E – WORKPLACE FLEXIBILITY

32. CHANGE OF WORK LOCATION

a) Canon requires the flexibility to re-balance the workforce and skills required across service delivery areas to meet operational and client service needs. In determining any such change of work location, Canon will have regard to the impact of any proposed change and an employee's personal circumstance, which will be determined in direct consultation with the employee(s) involved.

b) When any new work location arrangements are established (whether temporary or permanent), any such arrangement will be formally recorded and provided to the employee(s) involved. Any subsequent change from the established and recorded arrangements will require the same consideration and consultation process outlined above to be undertaken.

33. GOALS

a) Goals will be developed for each level of Technical Consultant. The following process will occur in developing and communicating the Technical Consultants' Goals:

(i) The National Consultative Committee will establish a working party.

(ii) The drafted Goals will be presented in each location with appropriate feedback being considered by the working party.

(iii) Once Canon has confirmed that the Goals meet business requirements, all affected employees will receive a copy.

b) The parties acknowledge and agree that Goals should be:

(i) Specific / Unambiguous;

(ii) Measurable;

(iii) Achievable;

(iv) Realistic; and

(v) Time Bound;

and that these 'SMART' goals are intended to meet business requirements and target reasonable and fair productivity improvements.

c) The Goals for each year will be in place in line with the published Canon Australia timetable.

d) Should there be reasons for this deadline not being achieved, those reasons will be communicated to the affected employees.

e) Existing Goals remain in place until the new Goals confirmed by Canon. This confirmation will be served as the presentation of the final document.

f) If there are outstanding issues in relation to the Goals, of a generic nature, then they are to be raised with the National Consultative Committee if it relates to a group of employees. Issues that affect a single individual may be pursued either through the National Consultative Committee or through Clause 39..

PART F – CESSATION OF EMPLOYMENT

34. TERMINATION OF EMPLOYMENT

a) On termination, all employees are entitled to superannuation benefits (as per the Trust Deed) plus their accrued Long Service Leave (as per the relevant

State Act) and pro rata Annual Leave. If an employee on termination owes any money to Canon, or any of its related companies, as a result of debt or because of theft, misconduct or failure to work out notice, Canon has the right to deduct the money from any benefits to which the employee may be entitled.

b) Termination By Canon

(i) In order to terminate the employment of an employee, Canon shall give the employee the notice indicated in the table below. If the employee is within their probationary period only one weeks' notice will be required. Employees over 45 years of age will receive an additional one weeks' notice unless sub-clause 34.e) applies.

Employee's period of continuous service with Canon	**Period of notice**
Not more than 1 year	At least 1 week
More than 1 year but not more than 3 years	At least 2 weeks
More than 3 years but not more than 5 years	At least 3 weeks
More than 5 years	At least 4 weeks

(ii) In the case of redundancy, all employees will receive four weeks' notice. If an employee is over 45 years of age, they will receive an additional weeks' notice.

(iii) Payment in lieu of notice may be made at Canon's discretion. All termination payments will be calculated using the employee's base salary at the time of termination.

(iv) Where an employee no longer has any paid leave entitlements and absences without pay have exceeded three (3) months in total over any 12 month period, and the employee is unable to provide a reasonable return date, Canon reserves the right to terminate employment.

c) Resignation By Employee

(i) In order to resign, the employee must give Canon the same period of notice as in Clause 34.b)(i). If the employee fails to work the required notice period, then Canon shall have the right to deduct from any monies payable an amount equal to the base salary the employee would have received had they have worked the notice.

(ii) Neither party has the right to use annual leave or long service leave during the notice period without the agreement of the other party. If an employee is sick during the notice period, personal/Carer's leave will not be paid unless a doctor's certificate is provided.

d) Abandonment of Employment

Should the employee fail to attend work for three (3) consecutive working days and not contact their supervisor / manager within those three days, then it will be assumed that employment has been abandoned. The employee can therefore be terminated without the required notice. However, before termination, Canon will make reasonable attempts to contact employees. The employee's last day of attendance shall serve as the last day of their employment for the purpose of calculating entitlements.

e) Summary Dismissal

Canon may dismiss any employee immediately and without notice for serious misconduct. Examples of serious misconduct include but are not limited to

theft, insubordination, neglect of duty, possession of, trafficking in, or use of illicit drugs (at work), or working under the influence of intoxicating liquor or drugs (whether illicit, prescription or over the counter medication). No payment in lieu of notice will be paid.

35. REDUNDANCY

a) Redundancy occurs where Canon Australia has made a definite decision that it no longer requires the job the employee has been doing to be done by anyone and that decision leads to the termination of employment of the employee, except where this is due to the ordinary and customary turnover of labour. Where practicable, expressions of interest for voluntary redundancy will be called for before a decision is made as to who will be retrenched. However, Canon reserves the right to select the employees who will be made redundant.

b) Redundancy does not apply:

(i) Where employment is terminated as a consequence of:

1. Resignation;
2. Dismissal due to conduct, capacity or performance;
3. Abandonment of employment;
4. Expiration of a fixed term contract, or completion of a specified project/task or tasks or maximum term contract;
5. Death;
6. Ill health;
7. Transfer of business (as that term is defined in the *Fair Work Act*) where suitable alternative employment is found for an employee within any of Canon's associated entities or another employer.

(ii) Where suitable alternative employment is found for an employee within Canon.

(iii) To the following categories of employees:

1 Probationary employees;
2 Apprentices;
3 Trainees whose employment under a traineeship agreement or an approved traineeship is for a specified period or is, for any other reason, limited to the duration of the agreement;
4 Employees engaged for a specific period of time or for a specified task or tasks;
5 Casual employees; and
6 Temporary employees.

For the purposes of this sub-clause b), 'suitable alternative employment' shall mean employment which;

1. Is paid at a rate not less than the employee's current hourly rate; and
2. Is within the employee's skills and competence to perform; and
3. Recognises the employee's service with Canon as service with the new employer; and
4. Is in terms and conditions that are substantially similar and no less favourable, considered on an overall basis, than the terms and conditions applicable to the employee at the time of ceasing employment with Canon.

36. MAXIMUM REDUNDANCY PAYMENT:

a) When a definite decision has been made that an employee is to be retrenched, that employee will be notified as soon as it is reasonably possible.

b) An employee who is retrenched will be entitled to the following redundancy pay:

Service	Entitlement
Less than 1 year	Nil
1 year to completion of 2 years	4 weeks
2 years to completion of 3 years	7 weeks
3 years to completion of 4 years	10 weeks
4 years to completion of 5 years	12 weeks
5 years to completion of 6 years	14 weeks
6 years to completion of 7 years	16 weeks
7 years to completion of 8 years	18 weeks
8 years to completion of 9 years	20 weeks
9 years to completion of 10 years	22 weeks
10 years to completion of 11 years	24 weeks

i) An additional two (2) weeks for each completed year of service will be paid for more than eleven (11) years' service.

c) Employees who commenced employment with Canon prior to 1 September 2015 and who have been employed by Canon continuously up to the date of redundancy are entitled to an additional loading of twenty-five percent (25%) on any redundancy payments if they are aged forty (40) years or more at the time their employment is terminated on the basis of redundancy.

d) The maximum amount payable to:

(i) an employee who is employed by Canon after 1 September 2015 or is under the age of forty (40) years at the time their employment is terminated due to redundancy, is twelve (12) months pay; or

(ii) an employee who commenced employment with Canon prior to 1 September 2015 and has been employed by Canon continuously up to the date of redundancy and is aged forty (40) years or more at the time their employment is terminated due to redundancy, is eighteen (18) months pay.

e) Time off of up to 7.5 hours each week to attend job interviews will be made available, however, proof of attendance may be required if payment for the time off is to be made.

f) Canon may make an offer of alternative employment to an employee who may choose to either accept or reject the offer.

37. TRANSFER OF BUSINESS

a) Where Canon proposes a Transfer of Business from Canon to another employer and:

(i) Canon and the new employer wish to retain all employees covered by this Agreement who are employed in the particular business which Canon proposes to transfer:

a) Expressions of interest to transfer to the new employer will be invited; and

b) If the number of expressions of interest exceeds or is less than the number of employees who the new employer wishes to employ, Canon will consult with the National Consultative Committee on how to determine those employees who will be offered transfer.

(ii) Canon and the new employer do not wish to employ all of the employees covered by this agreement who are employed in the particular business which Canon proposes to transfer:

a) Expressions of interest for voluntary redundancy will be called for;

b) If the voluntary redundancy process is undersubscribed then all employees who applied for voluntary redundancy will be successful in their application and Canon will consult with the National Consultative Committee on the selection process to be implemented by Canon to determine the additional employees to be made redundant. However, if the voluntary redundancy process is oversubscribed, then Canon will consult with the National Consultative Committee on the selection process to be implemented by Canon to determine the employees to be made redundant;

c) Following completion of the process in B. above, expressions of interest to transfer to the new employer will be invited from those employees who have not been made redundant or identified as redundant in B. above; and

d) If the number of expressions of interest arising from the process in C. above exceeds or is less than the number of employees who the new employer wishes to employ, Canon will consult with the National Consultative Committee on the selection process to be implemented to determine those employees who will be offered transfer.

b) Clause 37.d) will apply where:

(i) a Transfer of Business from Canon to another employer (new employer) has taken place; and

(ii) an employee has accepted and commenced employment with the new employer (transferred employee); and

(iii) under the terms of that employment the new employer has recognised the employee's prior continuous service with Canon for the purpose of all service related entitlements and assumed the employee's accrued but untaken entitlements to leave;

at any time prior to the nominal expiry date of this agreement.

c) In clause 37.d), the term "Accrued Entitlements" shall mean:

(i) the value of the transferred employee's accrued but untaken annual leave entitlements as at the date of the transfer; and

(ii) the value of the transferred employee's accrued but untaken long service leave entitlements as at the date of the transfer; and

(iii) the redundancy payment that the transferred employee would have received from Canon under the terms of this Agreement had they been entitled to redundancy pay as a result of the termination of their employment with Canon at the time of the transfer;

less any part of these entitlements actually paid to the transferred employee by Canon upon termination of their employment with Canon.

d) If, at any time within three (3) years of a transfer as defined in clause 37.c):

(i) the employment of the transferred employee with the new employer terminates; and

(ii) the transferred employee is entitled upon termination to receive a payment:

a) in lieu of accrued but untaken entitlements to annual leave;

b) in lieu of accrued but untaken entitlements to long service leave; or

c) of a redundancy payment under the terms of this Agreement,

but the new employer is unable to pay any or all of those amounts to the employee due to the insolvency of the new employer, Canon will ensure the transferred employee receives any of the Accrued Entitlements which the new employer is unable to pay.

However, Canon has no such obligation with respect to any entitlement the employee receives under the General Employee Entitlements and Redundancy Scheme or any replacement of or successor to, that scheme.

e) **Election to Receive Accrued Entitlements Upon Transfer Of Business**

Where a Transfer of Business takes place from Canon to another employer, and an employee accepts the offer of employment with the new employer, the employee may elect to receive upon termination of their employment from Canon:

(i) a payment in lieu of their accrued but untaken annual leave entitlements; and/or

(ii) if the employee would be entitled under the applicable long service leave legislation to a payment in lieu of long service leave upon termination of their employment with Canon, a payment in lieu of their pro rata long service leave accrual,

provided that such election may be made only where the new employer is not obliged under the Fair Work Act 2009 or any other statute to recognise these accrued or pro rata entitlements.

Where an employee has elected to receive payments under this clause 37.f):

(i) the new employer will not, to the extent permitted by the Fair Work Act or the applicable long service leave legislation, be required to recognise the accrued entitlements which have been paid out under this clause; and

(ii) the paying out of those entitlements by Canon will not mean that the offer of employment from the new employer was not suitable alternative employment, or not an offer on similar terms and conditions in which the employee's service with Canon was recognised, for the purposes of clause 35.

f) Where Canon proposes a Transfer of Business (as that term is defined in the Fair Work Act) from Canon to another employer and the new employer wishes to retain some or all of the employees covered by this agreement, Canon will consider, in consultation with the NCC, the payment of an incentive to employees who accept employment with the new employer.

g) For the purposes of this clause 37, "Transfer of Business" has the meaning given to that term in the Fair Work Act.

h) For the avoidance of doubt the provisions in Clause 36 are not applicable where the employee rejects an offer of employment with another employer:

(i) in which the terms and conditions are substantially similar and no less favourable, considered on an overall basis, than the terms and conditions applicable to the employee at the time of ceasing employment with Canon; and

(ii) which recognises the period of service which the employee had with Canon and any prior transmitter to be continuous service of the employee with the new employer (except to the extent leave entitlements are paid out by Canon on termination of the employee's employment with Canon).

PART G – DISCIPLINE AND RELATED MATTERS

38. DISCIPLINARY PROCEDURE

a) If Canon considers that the performance of an employee is unsatisfactory, Canon's representatives will:

b) Discuss the matter informally with the employee to ascertain the cause/reason for poor performance and discuss:

(i) the areas of the employee's performance which are unsatisfactory;

(ii) the reasons for the employee's unsatisfactory performance;

(iii) the steps available to Canon which would assist the employee to perform satisfactorily, which may include arranging for the employee to receive training or additional training or altering the employee's working conditions; and

(iv) the steps available to the employee to remedy the unsatisfactory performance.

c) During any such informal discussions, the employee may have a union delegate or witness of their choice. The representative of Canon will remind the employee of that entitlement at the beginning of the discussion.

d) If the problem continues, or after the informal discussion it is considered that the problem is of a serious nature, Canon will advise the employee in writing of:

(i) the areas of the employee's performance which are unsatisfactory;

(ii) Canon's response to any reasons offered by the employee for his or her unsatisfactory performance;

(iii) the steps which would assist the employee to perform satisfactorily;

(iv) the steps of the employee to remedy the unsatisfactory performance; and

(v) the time allowed for improvement before further assessment.

e) Where, after following the steps set out in paragraph a), b) and c) above, the required improvement has not occurred, the employee will be given a written warning that failure to improve performance within a given time may lead to the employee's dismissal from employment or transfer to a lower paid position, and steps necessary to be taken by the employee to improve their performance to a satisfactory level will be set out.

f) Where an employee is transferred to lower paid duties for reasons set out in d) above, the employee shall be entitled to the same period of notice of transfer as he/she would have been entitled to if his/her employment had been terminated, and Canon may, at Canon's option, make payment in lieu thereof of an amount equal to the difference between the former ordinary time rate of pay and the new lower ordinary time rates for the number of weeks of notice still owing.

39. DISPUTES AND GRIEVANCES

a) All parties agree to abide by the following procedure in the resolution of any dispute/grievance arising under this Agreement or the National Employment Standards.

b) The matter must first be discussed by the aggrieved employee(s) with the immediate supervisor/manager.

c) If not settled, the employee(s) will then discuss the matter with the next level manager arising between them.

d) If not settled, the employee will then discuss the matter with the Senior Manager – Direct Services and/or a member of the Human Resources Department (or a person designated by him/her).

e) If the matter is not resolved after all agreed steps have been taken, it must be submitted to either the Fair Work Commission or another agreed mediator who is independent of the parties to the Agreement, for the purpose of conciliation and mediation. Alternatively the parties may agree to go straight to 'f' below. For the purposes of this provision "party" includes an employee or group of employees.

f) If the matter is not resolved it must be submitted to the Fair Work Commission or an agreed arbitrator who is independent of the parties to the Agreement for arbitration. The Fair Work Commission may exercise the procedural powers in relation to hearings, witnesses, evidence and submissions which are necessary to make the arbitration effective. The decision of the member will bind the parties subject to either party exercising a right of appeal against the decision to a Full Bench.

g) Until the matter is determined normal work must continue where practical (this includes, but is not limited to, the employee complying with a direction given by Canon to perform other available work at the same workplace or a different workplace). No party shall be prejudiced as to the final settlement by the continuance of work in accordance with this procedure.

h) The parties must cooperate to ensure that these procedures are carried out expeditiously.

i) A party to a dispute or matter arising under this clause may appoint another person from an organisation, association or union to accompany or represent them in relation to carrying out any of the procedures, under this clause.

PART H – LEAVE ENTITLEMENTS

40. ANNUAL LEAVE

a) Each full-time employee shall accrue 150 hours (20 days) annual leave in respect of each twelve (12) months of service, and a pro-rata entitlement applies for part-time employees. Annual leave will be accumulated and be payable on a pro rata basis from the day of commencement.

b) Annual Leave will be taken within twelve (12) months of falling due and at a time agreed between Canon and the employee. As a general rule, leave should be taken at a time convenient to the work cycle of the department in which the employee works. Where possible annual leave should be taken in the same pattern as it is worked. Where agreement cannot be reached, then either party can require the leave to be taken with six (6) months' notice in writing.

c) No employee can accrue more than forty (40) days leave without written permission. Once the level exceeds forty (40) days then Canon or the employee may, by giving one (1) months' notice, require the employee take the leave in excess of this amount. As a last resort, Canon will also have the

option to pay out any leave in excess of forty (40) days in line with statutory requirements.

d) Pro rata annual leave may be taken in advance if Canon and the employee agree.

e) An employee and Canon may enter a separate written agreement to cash out a portion of an employee's entitlement to annual leave, provided that the employee has at least four (4) weeks of accrued annual leave available after the annual leave has been cashed out. Under any cashing out agreement, Canon will pay the employee the full amount that would have been payable to the employee had the employee taken the annual leave that the employee has forgone. All other annual leave accrued shall be taken by the employee in accordance with the provisions of this Agreement.

f) All accrued leave and pro rata leave will be paid on termination.

g) Annual leave loading is included in the Total Remuneration Cost (TRC), and shall not be paid as a separate entitlement. Existing employees employed by Canon prior to 1 July 2002 have the choice as to whether or not they will roll the leave loading into their TRC. For those employees, annual leave loading at the rate of 17.5% will be paid. Once an employee prior to 1 July 2002 has made the decision to roll it into their TRC, it cannot be reversed. All new employees after 1 July 2002, do not have this choice, and their leave loading will automatically be part of their TRC.

h) Full-time employees that are continuous shift workers who are regularly rostered to work on Sundays and public holidays are defined as shiftworkers for the purposes of the NES and are entitled to a base entitlement of 187.5 hours (25 days) annual leave in respect of each twelve (12) months of service (pro rata for part time employees pursuant to clause 30.e)).

41. PERSONAL/CARER'S LEAVE

Personal Leave

a) A full time employee shall be entitled to ten (10) days Personal Leave per year of service. Personal Leave accumulates on a pro rata basis for part-time employees. This clause does not apply to casual employees.

b) Personal Leave will be accumulated and be payable on a pro rate basis from the date of commencement.

c) The balance of Personal Leave not taken in any year shall accumulate.

d) If an employee is absent on Personal Leave, the employee should take all reasonable steps to advise their immediate supervisor of the absence as soon as possible. It is expected that this will be no later than one (1) hour after normal commencement time on that day. Such advice shall, as far as practicable, estimate the duration of the absence.

e) Where an employee falls sick whilst on annual leave, then Personal Leave, not Annual Leave is payable provided:

   (i) the employee has an entitlement to Personal leave; and

   (ii) satisfactory medical evidence is provided on the day of return from leave.

f) Accumulated Personal Leave will not be paid out on termination of employment for any reason including resignation and retrenchment.

g) A Medical Certificate from a registered medical practitioner (or Statutory Declaration) is required for:

   (i) any absence of two (2) or more consecutive days;

(ii) any single day absence where prior written notification has been given by the Department Manager to the individual employee;

(iii) any day before or after a public holiday or annual leave; and

(iv) Canon reserves the right to request medical evidence in lieu of a statutory declaration from any individual. This will occur when any unacceptable Personal leave pattern has been established or the manager has doubts about the genuine nature of the illness.

h) For any Personal Leave absence, the onus of proof remains with the employee.

Carer's Leave

i) Canon recognises that employees have commitments to their family, as well as having commitments to work. An employee, other than a casual employee, is entitled to use the employee's personal leave entitlement for the purpose of carer's leave which is subject to the person being either a member of the employee's immediate family or a member of the employee's household. Each day counts in line with Clause 21 b). (iii) Carer's leave may be taken by an employee to provide care and support to a member of the employee's immediate family or household who requires care or support because of either a personal illness or injury or an unexpected emergency affecting the member of the employee's immediate family or household. Carer's leave does not accrue.

j) The term *"immediate family"* includes the employee's spouse/partner (including a former spouse, de facto spouse/partner and a former de facto spouse/partner) and the following relatives of either the employee or the employee's spouse/partner being:

- Child (including adopted child, step child, ex nuptial child and adult child);
- Parent;
- Grandparent;
- Grandchild;
- Sibling;
- Aunt/uncle;
- Niece/nephew;
- Any step relation of the above kind, and;
- Anyone living in the same household.

k) The entitlement to use personal leave is subject to the production of a medical certificate or Statutory Declaration is required at the request of their supervisor.

l) The employee shall, wherever practicable, give their supervisor:

(i) notice, prior to the absence, of their intention to take leave;

(ii) the name and the relationship to the employee of the person requiring care;

(iii) the reasons for the taking of the leave; and

(iv) the estimated length of absence.

If it is not practical to give notice, the employee shall notify their supervisor as soon as possible.

m) Where an employee has exhausted their carer's leave entitlement in any year the employee is entitled to an additional two (2) days unpaid carer's leave per permissible occasion. This leave does not accrue.

42. LONG SERVICE LEAVE

a) The entitlement dates, amount and accrual of long service leave vary from State/Territory to State/Territory and in this regard the relevant legislation applicable in each State will apply except as may be provided for below.

b) All accrued leave must be taken within five (5) years of the full entitlement falling due. This may be extended to seven (7) years with the written agreement of Canon. An exception to this is an employee who is over fifty (50) years of age and who requests that his/her leave is preserved until retirement.

c) Long service leave must be taken at a suitable time agreed between Canon and the employee. As a general rule, however, leave should be taken at a time convenient to the work cycle of the department in which the employee works. Where agreement cannot be reached, either party can require the leave to be taken with twelve (12) months' notice in writing.

d) Long service leave cannot be taken in daily lots. A minimum of one (1) week's leave must be taken at any one time.

e) All employees are entitled to take their pro rata long service leave, by agreement, in accordance with the relevant State or Territory legislation or Canon policy, whichever is the more generous.

f) Where permitted by applicable State/Territory legislation and the Fair Work Act or any replacement of it, and in accordance with that legislation, long service leave entitlements may be paid out with the written agreement of Canon and the employee.

g) When an employee transfers from State/Territory to State/Territory, pro rata accrued leave (whether the person is eligible to actually take the leave or not) will transfer with him/her. From the date of the transfer, leave will accrue at the appropriate rate of the new location. The terms and conditions that apply to the entitlement dates, amount and accrual of long service leave, however, will be those terms and conditions that apply in the new location.

43. PUBLIC HOLIDAYS

a) With the exception of casual employees, all employees are entitled to the public holidays gazetted for that State or Territory without loss of pay. In addition all employees, except casual employees will receive two (2) Canon Days (one is at their Birthday, the second is at Christmas).

b) Where an additional public holiday is proclaimed or gazetted by a Commonwealth, State or Territory government, that additional day will be a public holiday in the location if it is to be observed generally by people throughout the State or Territory.

c) Where a public holiday falls on a Saturday or Sunday, the following Monday will be observed as the public holiday, if gazetted, unless the day is normally observed on the day that it falls (eg: Easter Sunday).

d) By agreement between Canon and the majority of employees covered by this Agreement in each location, other days may be substituted for the public holiday.

44. WORK ON A PUBLIC HOLIDAY

a) The parties agree that working a public holiday may arise due to Canon's operational requirements or the need to meet customer requests and that the need to work on a public holiday arises from time to time.

b) For the purposes of this clause, all work performed on any of the following public holidays shall be paid at the rate of 250% of the employee's ordinary hourly rate.

- New Year's Day;
- Australia Day;
- Easter[1];
- ANZAC Day;
- Christmas Day[2];
- Boxing Day (except S.A.);
- Proclamation Day (SA only)
- Queen's Birthday (on the day on which it is celebrated in a State or Territory or region of a State or Territory);

c) If an employee works on a public holiday other than as prescribed in Clause 44 a) above, then either double time will be paid for all time worked or a day in lieu may be taken at a suitable time agreed to by both parties. If a suitable day is not agreed upon within six (6) months of the public holiday having been worked, then either party can require the taking of the entitlement with one (1) months' notice.

45. PARENTAL LEAVE

a) Parental leave is available to all eligible employees, with at least twelve (12) months continuous service, who have care or responsibility for the child, in compliance with the National Employment Standards (NES) or Canon policy, whichever is the more generous. This leave entitlement also applies to circumstances of adoption.

b) Where an eligible employee has planned to take less than twelve (12) months parental leave and subsequently wishes to use the balance of the twelve (12) month entitlement, the period of leave may be lengthened once only by the employee, giving four (4) weeks' notice in writing before the end date of the original leave period. The notice must specify the new end date for the leave.

c) The period of leave may, with the consent of Canon, be shortened by the employee.

d) Where an eligible employee wishes to take more than twelve (12) months parental leave, the employee must apply in writing for Canon's approval. The request must be made at least 4 weeks before the end of the available parental leave period.

e) Provided the aggregate of any leave does not exceed fifty two (52) weeks, or where an extension is granted (104) weeks, an employee may, in lieu of or in conjunction with parental leave, take any annual leave or long service leave or any part thereof to which she/he is entitled.

f) Paid sick leave or other paid authorised absences (excluding annual leave or long service leave), shall not be available to an employee during her/his absence on parental leave.

g) Absence on parental leave shall not break the continuity of service of an employee, but shall not be included in calculating the period of service for any purpose.

h) An employee on parental leave may terminate employment at any time during the period of leave by giving two (2) weeks' notice.

i) An employee shall confirm the intention of returning to work by giving notice in writing to Canon of not less than four (4) weeks prior to the expiration of her/his period of parental leave.

j) If during parental leave absence, the employee wishes to undertake casual employment with Canon, they are entitled to do so without breaking their

[1] Easter shall mean the period of Friday to Monday inclusive
[2] Christmas shall mean from 5pm on Christmas Eve

parental leave. Any time worked during this period will be used to calculate length of service, including Long Service Leave entitlements. The hourly rate of pay in these circumstances will be determined by the classification of the role that individual is performing.

k) An employee shall have the right to defer up to no more than 50% of their pay prior to the commencement of Parental Leave.

46. COMPASSIONATE LEAVE

a) On each occasion Canon will allow up to three (3) days leave with normal pay to employees (other than casual employees) who suffer a death in the immediate family or household or where a member of the employee's immediate family or household has a personal illness or injury that poses a serious threat to his or her life. If the family member is overseas or in Australia and more than four (4) hours travelling time (by commercial aeroplane), an additional two (2) days may be granted if the employee is to go to the funeral.

b) The term *"immediate family"* includes the employee's spouse/partner (including a former spouse, de facto spouse/partner and a former de facto spouse/partner) and the following relatives of either the employee or the employee's spouse/partner being:

- Child (including adopted child, step child, ex nuptial child and adult child);
- Parent;
- Grandparent;
- Grandchild;
- Uncle/Aunt;
- Sibling;
- Niece/nephew; and
- Any step relation of the above kind; and
- Anyone living in the same household.

c) Where the absence coincides with a Public Holiday, only those compassionate days falling outside the Public Holiday will be paid as Compassionate Leave.

d) Compassionate Leave does not accumulate.

47. COMMUNITY SERVICE LEAVE

Community Service leave will be available in accordance with the requirements of the *Fair Work Act*.

48. STUDY LEAVE

Study leave will be available in accordance with Canon policy as varied from time to time. Canon policy applicable as at the date of this agreement will not be varied without consultation between Canon and the employees concerned.

49. JURY SERVICE

a) An employee must notify his/her manager as soon as possible of the date upon which he/she is required to attend for jury service.

b) Canon will allow time off work to employees who are required to serve periods of jury duty and will pay full-time employees their normal base salary during this period of absence. Part-time employees are entitled to receive payment if the Jury Service falls on their usual working day. Casual employees are entitled to be absent for Jury Service but will not receive any payment, unless required by law in the State in which the employee works.

c) Payments received by the employee, excluding travel expenses, must be paid to Canon through the Payroll Department.

d) Proof of attendance is required.

50. BLOOD DONORS LEAVE

An employee who elects to donate blood will be granted leave on full pay for the period of the leave required for each attendance to a maximum of four hours per year and proof of attendance must be supplied.

51. TRAINING

a) Staff training is considered important for each employee's personal development and for increasing the productivity and efficiency in Canon. To aid in this development, each staff member may be required to attend up to three (3) days training in each calendar year outside of their normal work hours.

b) Time off in lieu, or an additional payment for wages/salaries at the normal base rate of pay, (ie: not overtime rates), will be made for this time. Canon will be required to give a minimum of one (1) months' notice of such training.

52. UNIONS

a) Trade union membership is voluntary. Discrimination against or victimisation of individuals (including contractors) based on membership or non-membership of a union is prohibited. Unwanted pressure from employees or managers to either join or not join a trade union will lead to disciplinary action.

Canon will recognise as an accredited ASU Representative an employee where notification, in writing, has been given to Canon by the ASU.

Such employees will be allowed the necessary time during working hours to interview Canon on matters affecting the employees whom he/she represents, however, the ASU representative remains fully responsible for his/her own job performance.

Canon is only required to recognise a maximum of two union representatives at each location.

b) An accredited union official has the right to enter Canon premises provided:

(i) he/she is on legitimate union business;

(ii) he/she conducts himself/herself properly and does not interfere with work proceedings;

(iii) the site manager is given suitable notice;

(iv) the visit is during a meal break, outside the normal work hours of the establishment or permission is gained from the site managers; and

(v) he/she complies with all other applicable right of entry requirements of the Fair Work Act.

c) To be eligible for trade union training leave a person must:

(i) be the accredited ASU representative;

(ii) have at least twelve (12) months continuous service with Canon; and

(iii) apply in writing to the department manager at least one month prior to the leave.

An eligible employee will be granted up to five (5) days leave, with pay, each calendar year. A total of five (5) days leave per calendar year at any single location is the maximum leave that will be granted if there is one or two

representatives. The granting of leave is totally dependent upon Canon being able to make adequate staffing arrangements amongst current employees. Canon should be advised of the nature, content and duration of the course to be attended. Canon shall not incur any liability with respect to any expenses associated with or incurred by the employee attending the course. Should an employee who is granted leave, fail to attend the nominated course, Canon will be notified by the Union as soon as is practicable. Proof of attendance may be requested by Canon.

53. GPS TRACKING

a) Changes will not be made to the GPS Tracking Policy without consulting with impacted employees in accordance with Canon's consultation obligations in clause 8. For the avoidance of doubt the GPS Tracking Policy does not form part of this agreement. It will be reviewed annually. The GPS Tracking Policy can be found on the company intranet.

54. SIGNATORIES

This Agreement is made at Macquarie Park on the 21st day of February 2019.

Signed for and on behalf of **Canon Australia Pty. Ltd.**

IN THE FAIR WORK COMMISSION

FWC Matter No.:
AG2019/435

Applicant:

Canon Australia Pty Ltd

Section 185 – Application for approval of a single enterprise agreement

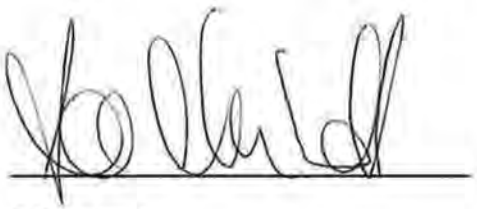
Undertaking- Section 190

I, Sara Marshall, Director, Human Resources, Communications and Facilities for Canon Pty Ltd give the following undertakings with respect to the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019 ("the Agreement"):

1. I have the authority given to me by Canon Australia Pty Ltd to provide this undertaking in relation to the application before the Fair Work Commission.

2. Canon Australia Pty Ltd undertakes that in the event of an inconsistency between the NES and the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019 and the NES provides a greater benefit to an employee, the NES provision will apply to the extent of the inconsistency.

3. This undertaking is provided on the basis of issues raised by the Fair Work Commission in the application before the Fair Work Commission.



Signature

28/3/19.

Date

ATTACHMENT B

Business Equipment Award 2010

This Fair Work Commission consolidated modern award incorporates all amendments up to and including 20 June 2019 (PR704120, PR707431, PR707628, PR709080).

Clause(s) affected by the most recent variation(s):

13—Casual employment

20—Classifications and adult rates

21—Exemptions

22—Allowances

Schedule D—Supported Wage System

Current review matter(s): AM2014/47; AM2014/190; AM2014/196; AM2014/197; AM2014/218; AM2014/300; AM2014/301; AM2015/1; AM2015/2; AM2016/8; AM2016/15; AM2016/17; AM2016/35

Table of Contents

[Varied by PR988401, PR994507, PR532630, PR544519, PR546288, PR557581, PR573679, PR582973, PR584081, PR609338, PR610182, PR701415]

Part 1—Application and Operation

1. Title

This award is the *Business Equipment Award 2010*.

2. Commencement and transitional

[Varied by PR988401, PR542141]

2.1 This award commences on 1 January 2010.

2.2 The monetary obligations imposed on employers by this award may be absorbed into overaward payments. Nothing in this award requires an employer to maintain or increase any overaward payment.

2.3 This award contains transitional arrangements which specify when particular parts of the award come into effect. Some of the transitional arrangements are in clauses in the main part of the award. There are also transitional arrangements in Schedule A. The arrangements in Schedule A deal with:

- minimum wages and piecework rates
- casual or part-time loadings
- Saturday, Sunday, public holiday, evening or other penalties
- shift allowances/penalties.

[2.4 varied by PR542141 ppc 04Dec13]

2.4 Neither the making of this award nor the operation of any transitional arrangements is intended to result in a reduction in the take-home pay of employees covered by the award. On application by or on behalf of an employee who suffers a reduction in take-home pay as a result of the making of this award or the operation of any transitional arrangements, the Fair Work Commission may make any order it considers appropriate to remedy the situation.

[2.5 varied by PR542141 ppc 04Dec13]

2.5 The Fair Work Commission may review the transitional arrangements in this award and make a determination varying the award.

[2.6 varied by PR542141 ppc 04Dec13]

2.6 The Fair Work Commission may review the transitional arrangements:

(a) on its own initiative; or

(b) on application by an employer, employee, organisation or outworker entity covered by the modern award; or

(c) on application by an organisation that is entitled to represent the industrial interests of one or more employers or employees that are covered by the modern award; or

(d) in relation to outworker arrangements, on application by an organisation that is entitled to represent the industrial interests of one or more outworkers to whom the arrangements relate.

3. Definitions and interpretation

[Varied by PR994507, PR997772, PR503625, PR545988]

3.1 In this award, unless the contrary intention appears:

[Definition of **Act** substituted by PR994507 from 01Jan10]

Act means the *Fair Work Act 2009* (Cth)

[Definition of **agreement-based transitional instrument** inserted by PR994507 from 01Jan10]

agreement-based transitional instrument has the meaning in the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)

[Definition of **award-based transitional instrument** inserted by PR994507 from 01Jan10]

award-based transitional instrument has the meaning in the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)

[Definition of **Commission** deleted by PR994507 from 01Jan10]

[Definition of **default fund employee** inserted by PR545988 ppc 01Jan14]

default fund employee means an employee who has no chosen fund within the meaning of the *Superannuation Guarantee (Administration) Act 1992* (Cth)

[Definition of **defined benefit member** inserted by PR545988 ppc 01Jan14]

defined benefit member has the meaning given by the *Superannuation Guarantee (Administration) Act 1992* (Cth)

[Definition of **Division 2B State award** inserted by PR503625 ppc 01Jan11]

Division 2B State award has the meaning in Schedule 3A of the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)

[Definition of **Division 2B State employment agreement** inserted by PR503625 ppc 01Jan11]

Division 2B State employment agreement has the meaning in Schedule 3A of the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)

[Definition of **employee** substituted by PR994507, PR997772 from 01Jan10]

employee means national system employee within the meaning of the Act

[Definition of **employer** substituted by PR994507, PR997772 from 01Jan10]

employer means national system employer within the meaning of the Act

[Definition of **enterprise award** deleted by PR994507 from 01Jan10]

[Definition of **enterprise award-based instrument** inserted by PR994507 from 01Jan10]

enterprise award-based instrument has the meaning in the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)

[Definition of **enterprise NAPSA** deleted by PR994507 from 01Jan10]

[Definition of **exempt public sector superannuation scheme** inserted by PR545988 ppc 01Jan14]

exempt public sector superannuation scheme has the meaning given by the *Superannuation Industry (Supervision) Act 1993* (Cth)

[Definition of **MySuper product** inserted by PR545988 ppc 01Jan14]

MySuper product has the meaning given by the *Superannuation Industry (Supervision) Act 1993* (Cth)

[Definition of **NAPSA** deleted by PR994507 from 01Jan10]

[Definition of **NES** substituted by PR994507 from 01Jan10]

NES means the National Employment Standards as contained in sections 59 to 131 of the *Fair Work Act 2009* (Cth)

[Definition of **on-hire** inserted by PR994507 from 01Jan10]

on-hire means the on-hire of an employee by their employer to a client, where such employee works under the general guidance and instruction of the client or a representative of the client

standard rate means the minimum weekly wage for a Level 4 Technician in clause 20

[Definition of **transitional minimum wage instrument** inserted by PR994507 from 01Jan10]

transitional minimum wage instrument has the meaning in the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)

3.2 Where this award refers to a condition of employment provided for in the NES, the NES definition applies.

4. Coverage

[Varied by PR994507]

4.1 This industry award covers employers throughout Australia in the business equipment industry and their employees in the classifications listed in this award to the exclusion of any other modern award.

4.2 **Business equipment industry** means the sale or lease and associated installation and servicing of business equipment such as computers, data processing equipment, photocopiers, facsimile machines, cash registers, accounting and adding machines, calculators and peripheral equipment associated with such equipment including keyboards, display screens, printers, routers and multifunction devices.

[4.3 varied by PR994507 from 01Jan10]

4.3 The award does not cover:

(a) an employee excluded from award coverage by the Act;

(b) persons wholly or mainly engaged in managerial positions;

(c) employees whilst undertaking formal training courses or schools in connection with their employment; or

[4.3(d) deleted by PR994507 from 01Jan10]

[4.3(e) renumbered as 4.3(d) by PR994507 from 01Jan10]

(d) employees of electrical contractors or manufacturers of business equipment.

[4.4 inserted by PR994507 from 01Jan10]

4.4 The award does not cover employees who are covered by a modern enterprise award, or an enterprise instrument (within the meaning of the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)), or employers in relation to those employees.

[4.5 inserted by PR994507 from 01Jan10]

4.5 The award does not cover employees who are covered by a State reference public sector modern award, or a State reference public sector transitional award (within the meaning of the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* (Cth)), or employers in relation to those employees.

[4.6 inserted by PR994507 from 01Jan10]

4.6 This award covers any employer which supplies labour on an on-hire basis in the industry set out in clause 4.1 in respect of on-hire employees in classifications covered by this award, and those on-hire employees, while engaged in the performance of work for a business in that industry. This subclause operates subject to the exclusions from coverage in this award.

[4.7 inserted by PR994507 from 01Jan10]

4.7 This award covers employers which provide group training services for apprentices and/or trainees engaged in the industry and/or parts of industry set out at clause 4.1 and those apprentices and/or trainees engaged by a group training service hosted by a company to perform work at a location where the activities described herein are being performed. This subclause operates subject to the exclusions from coverage in this award.

[4.8 inserted by PR994507 from 01Jan10]

4.8 Where an employer is covered by more than one award, an employee of that employer is covered by the award classification which is most appropriate to the work performed by the employee and to the environment in which the employee normally performs the work.

NOTE: Where there is no classification for a particular employee in this award it is possible that the employer and that employee are covered by an award with occupational coverage.

5. Access to the award and the National Employment Standards

The employer must ensure that copies of this award and the NES are available to all employees to whom they apply either on a noticeboard which is conveniently located at or near the workplace or through electronic means, whichever makes them more accessible.

6. The National Employment Standards and this award

The NES and this award contain the minimum conditions of employment for employees covered by this award.

7. Individual flexibility arrangements

[Varied by PR542141; 7—Award flexibility renamed and substituted by PR610182 ppc 01Nov18]

7.1 Despite anything else in this award, an employer and an individual employee may agree to vary the application of the terms of this award relating to any of the following in order to meet the genuine needs of both the employee and the employer:

(a) arrangements for when work is performed; or

(b) overtime rates; or

(c) penalty rates; or

(d) allowances; or

(e) annual leave loading.

7.2 An agreement must be one that is genuinely made by the employer and the individual employee without coercion or duress.

7.3 An agreement may only be made after the individual employee has commenced employment with the employer.

7.4 An employer who wishes to initiate the making of an agreement must:

(a) give the employee a written proposal; and

(b) if the employer is aware that the employee has, or reasonably should be aware that the employee may have, limited understanding of written English, take reasonable steps (including providing a translation in an appropriate language) to ensure that the employee understands the proposal.

7.5 An agreement must result in the employee being better off overall at the time the agreement is made than if the agreement had not been made.

7.6 An agreement must do all of the following:

(a) state the names of the employer and the employee; and

(b) identify the award term, or award terms, the application of which is to be varied; and

(c) set out how the application of the award term, or each award term, is varied; and

(d) set out how the agreement results in the employee being better off overall at the time the agreement is made than if the agreement had not been made; and

(e) state the date the agreement is to start.

7.7 An agreement must be:

(a) in writing; and

(b) signed by the employer and the employee and, if the employee is under 18 years of age, by the employee's parent or guardian.

7.8 Except as provided in clause 7.7(b), an agreement must not require the approval or consent of a person other than the employer and the employee.

7.9 The employer must keep the agreement as a time and wages record and give a copy to the employee.

7.10 The employer and the employee must genuinely agree, without duress or coercion to any variation of an award provided for by an agreement.

7.11 An agreement may be terminated:

(a) at any time, by written agreement between the employer and the employee; or

(b) by the employer or employee giving 13 weeks' written notice to the other party (reduced to 4 weeks if the agreement was entered into before the first full pay period starting on or after 4 December 2013).

Note: If an employer and employee agree to an arrangement that purports to be an individual flexibility arrangement under this award term and the arrangement does not meet a requirement set out in s.144 then the employee or the employer may terminate the arrangement by giving written notice of not more than 28 days (see s.145 of the Act).

7.12 An agreement terminated as mentioned in clause 7.11(b) ceases to have effect at the end of the period of notice required under that clause.

7.13 The right to make an agreement under clause 7 is additional to, and does not affect, any other term of this award that provides for an agreement between an employer and an individual employee.

8. Facilitative provisions

8.1 A facilitative provision provides that the standard approach in an award provision may be departed from by agreement between an individual employer and an employee, or the majority of employees in the enterprise or part of the enterprise concerned. Facilitative provisions are not to be used as a device to avoid award obligations nor should they result in unfairness to an employee or employees covered by this award.

8.2 Facilitative provisions in this award are contained in the following clauses:

(a) clause 27—Ordinary hours of work and rostering;

(b) clause 28—Special provisions for shiftworkers;

(c) clause 29—Meal breaks; and

(d) clause 34.2—Public holidays.

Part 2—Consultation and Dispute Resolution

9. Consultation about major workplace change

[9—Consultation regarding major workplace change renamed and substituted by PR546288, 9—Consultation renamed and substituted by PR610182 ppc 01Nov18]

9.1 If an employer makes a definite decision to make major changes in production, program, organisation, structure or technology that are likely to have significant effects on employees, the employer must:

(a) give notice of the changes to all employees who may be affected by them and their representatives (if any); and

(b) discuss with affected employees and their representatives (if any):

(i) the introduction of the changes; and

(ii) their likely effect on employees; and

(iii) measures to avoid or reduce the adverse effects of the changes on employees; and

(c) commence discussions as soon as practicable after a definite decision has been made.

9.2 For the purposes of the discussion under clause 9.1(b), the employer must give in writing to the affected employees and their representatives (if any) all relevant information about the changes including:

(a) their nature; and

(b) their expected effect on employees; and

(c) any other matters likely to affect employees.

9.3 Clause 9.2 does not require an employer to disclose any confidential information if its disclosure would be contrary to the employer's interests.

9.4 The employer must promptly consider any matters raised by the employees or their representatives about the changes in the course of the discussion under clause 9.1(b).

9.5 In clause 9:

significant effects, on employees, includes any of the following:

(a) termination of employment; or

(b) major changes in the composition, operation or size of the employer's workforce or in the skills required; or

(c) loss of, or reduction in, job or promotion opportunities; or

(d) loss of, or reduction in, job tenure; or

(e) alteration of hours of work; or

(f) the need for employees to be retrained or transferred to other work or locations; or

(g) job restructuring.

9.6 Where this award makes provision for alteration of any of the matters defined at clause 9.5, such alteration is taken not to have significant effect.

9A. Consultation about changes to rosters or hours of work

[9A inserted by PR610182 ppc 01Nov18]

9A.1 Clause 9A applies if an employer proposes to change the regular roster or ordinary hours of work of an employee, other than an employee whose working hours are irregular, sporadic or unpredictable.

9A.2 The employer must consult with any employees affected by the proposed change and their representatives (if any).

9A.3 For the purpose of the consultation, the employer must:

(a) provide to the employees and representatives mentioned in clause 9A.2 information about the proposed change (for example, information about the nature of the change and when it is to begin); and

(b) invite the employees to give their views about the impact of the proposed change on them (including any impact on their family or caring responsibilities) and also invite their representative (if any) to give their views about that impact.

9A.4 The employer must consider any views given under clause 9A.3(b).

9A.5 Clause 9A is to be read in conjunction with any other provisions of this award concerning the scheduling of work or the giving of notice.

10. Dispute resolution

[Varied by PR994507, PR542141; substituted by PR610182 ppc 01Nov18]

10.1 Clause 10 sets out the procedures to be followed if a dispute arises about a matter under this award or in relation to the NES.

10.2 The parties to the dispute must first try to resolve the dispute at the workplace through discussion between the employee or employees concerned and the relevant supervisor.

10.3 If the dispute is not resolved through discussion as mentioned in clause 10.2, the parties to the dispute must then try to resolve it in a timely manner at the workplace through discussion between the employee or employees concerned and more senior levels of management, as appropriate.

10.4 If the dispute is unable to be resolved at the workplace and all appropriate steps have been taken under clauses 10.2 and 10.3, a party to the dispute may refer it to the Fair Work Commission.

10.5 The parties may agree on the process to be followed by the Fair Work Commission in dealing with the dispute, including mediation, conciliation and consent arbitration.

10.6 If the dispute remains unresolved, the Fair Work Commission may use any method of dispute resolution that it is permitted by the Act to use and that it considers appropriate for resolving the dispute.

10.7 A party to the dispute may appoint a person, organisation or association to support and/or represent them in any discussion or process under clause 10.

10.8 While procedures are being followed under clause 10 in relation to a dispute:

(a) work must continue in accordance with this award and the Act; and

(b) an employee must not unreasonably fail to comply with any direction given by the employer about performing work, whether at the same or another workplace, that is safe and appropriate for the employee to perform.

10.9 Clause 10.8 is subject to any applicable work health and safety legislation.

Part 3—Types of Employment and Termination of Employment

11. Full-time employment

Any employee not specifically engaged as being a part-time or casual employee is for all purposes of this award a full-time employee, unless otherwise specified in this award.

12. Part-time employment

An employee may be engaged to work on a part-time basis involving a regular pattern of hours which average less than 38 hours per week. An employee so engaged will be paid, per hour, 1/38th of the weekly rate prescribed by clause 20 of this award for the work performed.

13. Casual employment

[Varied by PR579782, PR592117, PR606345, PR700548, PR700649, PR707431, PR707431]

13.1 An employer may engage employees on a casual basis in which case employment may be terminated by an hour's notice given either by the employer or the employee, or by the payment or forfeiture of an hour's wage as the case may be.

[13.2 varied by PR579782, PR592117, PR606345, PR707431 ppc 01Jul19]

13.2 A casual employee is one engaged and paid as such, and for working ordinary time will be paid, per hour, 1/38th of the weekly wage prescribed by this award for the work which the employee performs, plus 24%.

[13.3 inserted by PR700649 ppc 01Oct18]

13.3 A casual employee must be engaged and paid for at least 2 consecutive hours of work on each occasion they are required to attend work.

13.4 Right to request casual conversion

[13.4 inserted by PR700548 ppc 01Oct18]

(a) A person engaged by a particular employer as a regular casual employee may request that their employment be converted to full-time or part-time employment.

(b) A **regular casual employee** is a casual employee who has in the preceding period of 12 months worked a pattern of hours on an ongoing basis which, without significant adjustment, the employee could continue to perform as a full-time employee or part-time employee under the provisions of this award.

(c) A regular casual employee who has worked equivalent full-time hours over the preceding period of 12 months' casual employment may request to have their employment converted to full-time employment.

(d) A regular casual employee who has worked less than equivalent full-time hours over the preceding period of 12 months' casual employment may request to have their employment converted to part-time employment consistent with the pattern of hours previously worked.

(e) Any request under this subclause must be in writing and provided to the employer.

(f) Where a regular casual employee seeks to convert to full-time or part-time employment, the employer may agree to or refuse the request, but the request may only be refused on reasonable grounds and after there has been consultation with the employee.

(g) Reasonable grounds for refusal include that:

(i) it would require a significant adjustment to the casual employee's hours of work in order for the employee to be engaged as a full-time or part-time employee in accordance with the provisions of this award – that is, the casual employee is not truly a regular casual employee as defined in paragraph (b);

(ii) it is known or reasonably foreseeable that the regular casual employee's position will cease to exist within the next 12 months;

(iii) it is known or reasonably foreseeable that the hours of work which the regular casual employee is required to perform will be significantly reduced in the next 12 months; or

(iv) it is known or reasonably foreseeable that there will be a significant change in the days and/or times at which the employee's hours of work are required to be performed in the next 12 months which cannot be accommodated within the days and/or hours during which the employee is available to work.

(h) For any ground of refusal to be reasonable, it must be based on facts which are known or reasonably foreseeable.

(i) Where the employer refuses a regular casual employee's request to convert, the employer must provide the casual employee with the employer's reasons for refusal in writing within 21 days of the request being made. If the employee does not accept the employer's refusal, this will constitute a dispute that will be dealt with under the dispute resolution procedure in clause 10. Under that procedure, the employee or the employer may refer the matter to the Fair Work Commission if the dispute cannot be resolved at the workplace level.

(j) Where it is agreed that a casual employee will have their employment converted to full-time or part-time employment as provided for in this clause, the employer and employee must discuss and record in writing:

(i) the form of employment to which the employee will convert – that is, full-time or part-time employment; and

(ii) if it is agreed that the employee will become a part-time employee, the employee's hours of work fixed in accordance with clause 12 and, as applicable, clause 27.

(k) The conversion will take effect from the start of the next pay cycle following such agreement being reached unless otherwise agreed.

(l) Once a casual employee has converted to full-time or part-time employment, the employee may only revert to casual employment with the written agreement of the employer.

(m) A casual employee must not be engaged and re-engaged (which includes a refusal to re-engage), or have their hours reduced or varied, in order to avoid any right or obligation under this clause.

(n) Nothing in this clause obliges a regular casual employee to convert to full-time or part-time employment, nor permits an employer to require a regular casual employee to so convert.

(o) Nothing in this clause requires an employer to increase the hours of a regular casual employee seeking conversion to full-time or part-time employment.

(p) An employer must provide a casual employee, whether a regular casual employee or not, with a copy of the provisions of this subclause within the first 12 months of the employee's first engagement to perform work. In respect of casual employees already employed as at 1 October 2018, an employer must provide such employees with a copy of the provisions of this subclause by 1 January 2019.

(q) A casual employee's right to request to convert is not affected if the employer fails to comply with the notice requirements in paragraph (p).

14. School-based apprentices

[Varied by PR988401]

See Schedule C

15. Trainees

[15 varied by PR994507, PR593816 ppc 01Jul17]

The terms of this award apply to trainees, except where otherwise stated in this award. See also clause 20.4.

16. Absence from duty

[16 varied by PR994507 from 01Jan10]

Unless a provision of this award states otherwise, an employee not attending for duty will lose pay for the actual time of such non-attendance.

17. Abandonment of employment

[17 deleted by PR703315 ppc 20Dec18]

18. Termination of employment

[18 substituted by PR610182 ppc 01Nov18]

Note: The NES sets out requirements for notice of termination by an employer. See ss.117 and 123 of the Act.

18.1 Notice of termination by an employee

(a) This clause applies to all employees except those identified in ss.123(1) and 123(3) of the Act.

(b) An employee must give the employer notice of termination in accordance with **Table 1—Period of notice** of at least the period specified in column 2 according to the period of continuous service of the employee specified in column 1.

Table 1—Period of notice

Column 1 **Employee's period of continuous service with the employer at the end of the day the notice is given**	**Column 2** **Period of notice**
Not more than 1 year	1 week
More than 1 year but not more than 3 years	2 weeks
More than 3 years but not more than 5 years	3 weeks
More than 5 years	4 weeks

Note: The notice of termination required to be given by an employee is the same as that required of an employer except that the employee does not have to give additional notice based on the age of the employee.

(c) In paragraph (b) **continuous service** has the same meaning as in s.117 of the Act.

(d) If an employee who is at least 18 years old does not give the period of notice required under paragraph (b), then the employer may deduct from wages due to the employee under this award an amount that is no more than one week's wages for the employee.

(e) If the employer has agreed to a shorter period of notice than that required under paragraph (b), then no deduction can be made under paragraph (d).

(f) Any deduction made under paragraph (d) must not be unreasonable in the circumstances.

18.2 Job search entitlement

Where an employer has given notice of termination to an employee, the employee must be allowed time off without loss of pay of up to one day for the purpose of seeking other employment.

18.3 The time off under clause 18.2 is to be taken at times that are convenient to the employee after consultation with the employer.

19. Redundancy

[Varied by PR994507, PR503625, PR561478; substituted by PR706927 ppc 03May19]

NOTE: Redundancy pay is provided for in the NES. See sections 119–123 of the Act.

19.1 Transfer to lower paid duties on redundancy

(a) Clause 19.1 applies if, because of redundancy, an employee is transferred to new duties to which a lower ordinary rate of pay applies.

(b) The employer may:

(i) give the employee notice of the transfer of at least the same length as the employee would be entitled to under section 117 of the Act as if it were a notice of termination given by the employer; or

(ii) transfer the employee to the new duties without giving notice of transfer or before the expiry of a notice of transfer, provided that the employer pays the employee as set out in paragraph (c).

(c) If the employer acts as mentioned in paragraph (b)(ii), the employee is entitled to a payment of an amount equal to the difference between the ordinary rate of pay of the employee (inclusive of all-purpose allowances, shift rates and penalty rates applicable to ordinary hours) for the hours of work the employee would have worked in the first role, and the ordinary rate of pay (also inclusive of all-purpose allowances, shift rates and penalty rates applicable to ordinary hours) of the employee in the second role for the period for which notice was not given.

19.2 Employee leaving during redundancy notice period

(a) An employee given notice of termination in circumstances of redundancy may terminate their employment during the minimum period of notice prescribed by section 117(3) of the Act.

(b) The employee is entitled to receive the benefits and payments they would have received under clause 19 or under sections 119–123 of the Act had they remained in employment until the expiry of the notice.

(c) However, the employee is not entitled to be paid for any part of the period of notice remaining after the employee ceased to be employed.

19.3 Job search entitlement

(a) Where an employer has given notice of termination to an employee in circumstances of redundancy, the employee must be allowed time off without loss of pay of up to one day each week of the minimum period of notice prescribed by section 117(3) of the Act for the purpose of seeking other employment.

(b) If an employee is allowed time off without loss of pay of more than one day under paragraph (a), the employee must, at the request of the employer, produce proof of attendance at an interview.

(c) A statutory declaration is sufficient for the purpose of paragraph (b).

(d) An employee who fails to produce proof when required under paragraph (b) is not entitled to be paid for the time off.

(e) This entitlement applies instead of clauses 18.2 and 18.3.

Part 4—Minimum Wages and Related Matters

20. Classifications and adult rates

[Varied by PR988401, PR997901, PR509052, PR522883, PR536686, PR551609, PR566690, PR579782, PR592117; PR593816, PR606345, PR707431]

20.1 The definitions of the classifications referred to in this clause are set out in Schedule B—Classifications, Skill Levels and Definitions.

20.2 Adult employees

(a) The classifications and minimum rates for an adult employee other than trainees in clause 15 and employees receiving a supported wage clause 20.3 are set out in the following tables.

(i) Technical stream

[20.2(a)(i) varied by PR509052, PR522883, PR536686, PR551609, PR566690, PR579782, PR592117, PR606345, PR707431 ppc 01Jul19]

Classification	Rate per week $	Annual salary $
Technical employee		
Level 1	761.20	39,580
Level 2	790.80	41,122

Classification	Rate per week $	Annual salary $
Technician		
Level 3	818.00	42,536
Level 4	862.50	44,849
Level 5	915.90	47,627
Level 6	966.70	50,267

(ii) Clerical and Administration stream

[20.2(a)(ii) varied by PR509052, PR522883, PR536686, PR551609, PR566690, PR579782, PR592117, PR606345, PR707431 ppc 01Jul19]

Classification	Rate per week $	Annual salary $
Clerical and Administration Employee Level 1	791.30	41,150
Clerical and Administration Employee Level 2	818.50	42,562
Clerical and Administration Employee Level 3	862.50	44,849
Clerical and Administration Employee Level 4	940.90	48,926
Clerical and Administration Employee Level 5	1009.10	52,471

(iii) Commercial Travellers stream

[20.2(a)(iii) varied by PR509052, PR522883, PR536686, PR551609, PR566690, PR579782, PR592117, PR606345, PR707431 ppc 01Jul19]

Classification	Rate per week $	Annual salary $
Salesperson Level 1	840.20	43,692
Salesperson Level 2	921.70	47,929
Salesperson Level 3	1066.50	55,456

(b) Junior employees

Junior employees must be paid the following percentage of the appropriate adult wage rate:

(i) Technical steam

Age	Percentage of adult salary %
16 years and under	60
17 years	75
18 years and over	100

(ii) Clerical stream

Age	Percentage of adult salary
	%
16 years and under	55
17 years	65
18 years	75
19 years	87.5

(c) For the purposes of ascertaining weekly wage rates for each classification (as referred to in various clauses of this award, e.g. casual employment, part-time employment) the salaries in clause 20 must be divided by 52.

(d) Higher duties

An employee who is directed by the employer to perform work of a higher grade than that in which the employee is normally engaged must, provided the employee is capable of performing the higher grade work, be paid at the rate which would be applicable if such work was performed on a permanent basis. This clause will not apply where the employee being relieved is absent on annual leave or personal/carer's leave until the absence has exceeded one week at which time the employee must be paid for that week and any additional days.

20.3 Supported wage system

See Schedule D

20.4 National training wage

[20.4 substituted by PR593816 ppc 01Jul17]

(a) Schedule E to the *Miscellaneous Award 2010* sets out minimum wage rates and conditions for employees undertaking traineeships.

[20.4(b) varied by PR606345, PR707431 ppc 01Jul19]

(b) This award incorporates the terms of Schedule E to the *Miscellaneous Award 2010* as at 1 July 2019. Provided that any reference to "this award" in Schedule E to the *Miscellaneous Award 2010* is to be read as referring to the *Business Equipment Award 2010* and not the *Miscellaneous Award 2010.*

21. Exemptions

[Varied by PR997901, PR509052, PR522883, PR536686, PR551609, PR566690, PR579782, PR592117, PR606345, PR707431]

21.1 Exemptions for employees in the technical stream

[21.1 varied by PR997901, PR509052, PR522883, PR536686, PR551609, PR566690, PR579782, PR592117, PR606345, PR707431 ppc 01Jul19]

The following award provisions will not apply to an employee in the technical stream in receipt of a salary of $61,991 or higher:

(a) clause 20.2(d)—Higher duties;

(b) clause 22.1(c)—First aid allowance;

(c) clause 22.1(e)—Representation allowance;

(d) clause 22.1(g)—Area allowance;

(e) clause 22.1(h)—Living away from home allowance;

(f) clause 27—Ordinary hours of work and rostering;

(g) clause 28—Special provisions for shiftworkers;

(h) clause 29—Meal breaks;

(i) clause 30—Overtime; and

(j) clause 34.3—Payment for time worked on a public holiday.

21.2 Exemptions for employees in the clerical stream

Except as to:

(a) clause 31—Annual leave

(b) clause 32—Personal/ carers leave and compassionate leave

(c) clause 33—Community service leave, and

(d) clause 34—Public holidays.

the terms of this award will not apply to any employee in the Clerical stream who is in receipt of a salary which exceeds the appropriate rate prescribed in clause 20 in which they are employed by 10%.

21.3 Exemptions for employees in the commercial travellers stream

The following award provisions will not apply to employees in the commercial travellers stream:

(a) clause 20.2(d)—Higher duties; and

(b) Part 5—Hours of work and related matters.

22. Allowances

To view the current monetary amounts of work-related allowances refer to the Allowances Sheet.

[Varied by PR994507, PR998133, PR509174, PR523004, PR536807, PR551730, PR566831, PR579527, PR592279, PR606503, PR704120, PR707628]

22.1 Technical stream and Clerical stream

(a) Leading hands

The following allowance applies for all purposes of the award:

In charge of	Percentage of the standard rate per week extra
	%
2 to 5 employees	3.21
6 to 10 employees	4.75
More than 10 employees	6.20

(b) Motor vehicle allowances

(i) All means of locomotion required by an employer must be provided and maintained by the employer. Provided that any existing arrangements as to the payment of an allowance for kilometres travelled other than for business purposes may continue or be at the discretion of the employer. Provided that an employee will be required to ensure that a vehicle supplied by the employer is kept in a reasonably clean and tidy condition where such vehicle is used by the employee for the employee's own private purposes.

(ii) Where an employee, by arrangement with the employer, provides a motor vehicle for use in connection with the employer's business the employee must be paid for the use of such vehicle on the following basis:

[22.1(b)(ii)(A) varied by PR523004, PR536807, PR551730 ppc 01Jul14]

(A) If it is necessary for an employee to provide and/or use their own motor vehicle for each day to carry out assigned duties, the employee must be paid an allowance of $621.14 per month. Provided however that in the case of an employee who is assigned duties in a country territory, the employee must be paid an allowance of $719.22 per month.

[22.1(b)(ii)(B) varied by PR536807, PR551730 ppc 01Jul14]

(B) In addition an allowance of $0.34 must be paid per kilometre travelled during the course of business. This allowance will not apply to an employee in respect of distance travelled to the employee's normal place of employment or to the place at which work is to commence as the case may be, whichever the lesser unless the employee is required to transport tools or equipment or parts or reference materials to perform the work.

(C) The allowance must be paid each month and will cover the periods the employee is taking annual or sick leave entitlement in accordance with this award or is undertaking a training course or school of no more than three months duration, but will not include any period of long service leave.

(D) An employer must give one month's notice to an employee that the employee will not be required to use the employee's motor vehicle to carry out assigned duties. Provided that notice is not given by the employer to avoid payment of the motor vehicle allowance while the employee is on annual or personal/carer's leave or attending a training school.

[22.1(b)(ii)(E) varied by PR523004, PR536807, PR551730 ppc 01Jul14]

(E) An employee who is required to use their own motor vehicle to carry out the employer's business on a casual basis must be paid an allowance of $0.78 per kilometre.

(c) First aid allowance

An employee holding a current first aid qualification from St John Ambulance or a similar body and appointed by the employer to perform first aid duties must be paid a weekly allowance of 2.35% of the standard weekly rate for any week the employee is so appointed.

(d) Meal allowance

[22.1(d)(i) varied by PR998133, PR509174, PR523004, PR536807, PR551730, PR566831, PR579527, PR592279, PR606503, PR704120, PR707628 ppc 01Jul19]

(i) An employee must receive a meal allowance of $14.69 for each rest break prescribed in clause 30.3(d).

(ii) The meal allowance will not apply where the employer provides a meal to an employee on overtime or the employee lives in the same locality in which the employee is working and can reasonably return home for a meal.

(e) Representation allowance

Employees regularly expected to be engaged in technical service or technical support in the field on behalf of their employer must, in addition to the salary and any other allowance prescribed by this award, be paid a representation allowance of 2.18% of the standard weekly rate per week.

(f) Service centre allowance

(i) An employee who is required by the employer to accept responsibility for the company's premises together with equipment and other materials in the employer's depot or satellite service centre must be paid an allowance of 6.08% of the standard weekly rate per week.

(ii) A **depot** or **satellite service centre** means an establishment which falls within the definition of a registered shop under the terms of the appropriate State factories and shops legislation.

(g) Area allowance

(i) Where an employee is located or required to perform work in any of the areas specified below for a period exceeding five working days, such employee must be paid the appropriate allowance prescribed for each continuous week of service in that area:

[22.1(g)(i) varied by PR998133, PR523004, PR536807, PR551730, PR566831, PR606503, PR704120, PR707628 ppc 01Jul19]

Area	Per week extra $
Northern Territory	31.10
Mt Isa, Queensland	72.54
Broken Hill, New South Wales	36.38
That area of Western Australia, North of a line running East from Carrot Bay to the Northern Territory border	25.58
That area of Western Australia situated between latitude 24 degrees and a line running East from Carrot Bay to the Northern Territory border	21.98
That area within a line commencing on the coast at latitude 24 degrees, then East to the Northern Territory border, then South to the coast, then along the coast to a longitude 123 degrees, North to the intersection of latitude 26 degrees, then West along latitude 26 degrees	9.91

(ii) The above allowances are not payable when an employer provides an employee with accommodation or other similar benefit of at least an equivalent amount to that prescribed above for the relevant area and such will be in full satisfaction of the employer's obligation under this clause.

(iii) Northern Territory area allowance ceases to operate on 31 December 2014.

(h) Living away from home allowance

[22.1(h)(i) varied by PR998133, PR523004, PR536807, PR551730, PR606503, PR704120, PR707628 ppc 01Jul19]

(i) A living away from home allowance of $70.43 per day must be paid when an employee is required to spend a night away from their usual place of residence. Provided that when calculating the living away from home allowance the first and last days will count as one day.,

[22.1(h)(ii) varied by PR998133, PR509174, PR523004, PR536807, PR551730, PR566831, PR579527, PR592279, PR606503, PR704120, PR707628 ppc 01Jul19]

(ii) If it is necessary for an employee to travel for more than two and a half hours after their normal finishing time the employee will be entitled to a further meal allowance of $12.82 for the evening meal.

(iii) The allowances in clauses 22.1(h)(i) and (ii) are not payable in circumstances where they are provided by the employer.

22.2 Commercial Travellers stream

(a) Motor vehicle allowance

(i) Where an employee, by arrangement with the employer, provides a motor vehicle in connection with the employer's business, the employee must:

- be paid a motor vehicle allowance which will be determined in accordance with this clause; and
- be given at least one month's written notice of the employer's intention to terminate or alter such arrangement or instead must be paid the motor vehicle allowance referred to in this clause for one month.

(ii) The motor vehicle allowance referred to in this clause will be determined by agreement between the employer and the employee, subject to the following:

- such agreement will specify the amount of the allowance, the conditions under which it is payable or not payable and the frequency and method of payment.

(iii) where the employer provides the salesperson with a motor vehicle for use in the employer's business without cost to the employee, the employer will not be required to pay the motor vehicle allowance referred to in this clause. Provided that where a motor vehicle has been provided by the employer it will be fully maintained by the employer.

(b) New employee required to purchase vehicle

An employee who:

(i) at the time of their application for employment neither owned nor was in the process of acquiring the ownership of a motor vehicle by hire, purchase or otherwise;

(ii) informed the employer of the fact prior to their engagement;

(iii) was thereafter engaged on terms requiring them to provide a vehicle for use in their employment; and

(iv) did provide such vehicle and if the employer dismisses the employee within the first three months of employment, otherwise than for misconduct justifying summary dismissal, the employer must pay the employee the rate of remuneration prescribed by clause 20 for the unexpired portion of the period of three months and also pay them the motor vehicle allowance prescribed by this clause for a maximum of six months from the date of commencement of employment.

(c) Expenses and accommodation reimbursement

(i) All reasonable expenses actually incurred by an employee in connection with the employer's business, authorised by the employer and properly paid by the employee, must be reimbursed by the employer. Such expenses as can be reasonably anticipated must be advanced to the employee.

(ii) Without limiting the generality of clause 22.2(c)(i) the following will be deemed to be reasonable expenses and must be reimbursed by the employer:

(A) Approved entertainment expenses;

(B) Bridge, road and ferry tolls;

(C) The cost of reasonable hotel/motel accommodation when the employee is required to remain away from the employee's usual place of residence on any night and the cost of breakfast, a midday meal and an evening meal when the employee is, and is required to be, away from the employee's usual place of residence at the employee's usual time for taking such meal in pursuance of the performance of the employee's duties. Provided that when an employee is specifically directed to work after 6.00 pm on any one day, the employee must be reimbursed the reasonable expense actually incurred in obtaining an evening meal.

(D) In the event that an employee suffers injury or incapacity, necessitating the employee's return to the employee's usual place of residence, or to a hospital, the expenses actually incurred in returning thereto.

(E) Where air or rail travel is necessarily involved, the expenses for economy class air tickets or for first class rail tickets and for sleeping accommodation where available.

(F) Reasonable laundry expenses incurred by an employee after the employee has been away from his or her place of residence for more than one weekend in the course of his or her employment.

(G) Such expenses as the employer and the employee agree, either by the terms of the contract of employment or otherwise, to be reasonable expenses or to be expenses for which the employee should be reimbursed or paid.

(iii) Employees whilst travelling on their employer's business will be regarded as being "on duty" for all purposes of this award and for the purposes of all relevant State workers compensation legislation.

(d) Relocation allowance

(i) Where an employee is transferred to another location or another state, the cost of removal expenses reasonably incurred must be borne and paid for by the employer, provided that an employee who is transferred at their own request may be required to pay their own expenses.

(ii) Where such employee is directed by the employer to another locality for employment which can be reasonably regarded as permanent and involving a change of residence, and where the employee is in the process of buying a place of residence in that new location, the employee must be reimbursed for the cost of accommodation for a period not exceeding six weeks. Where the employee has difficulty in obtaining a place of residence, the abovementioned period may be extended to a period not exceeding three months. Provided that the employer is not

required to reimburse the employee where the employer provides accommodation at no cost to the employee.

(iii) Where an employee is not in the process of buying a place of residence, the employer must reimburse the employee for the cost of accommodation for a period not exceeding four weeks. Provided that the employer is not required to reimburse the employee where the employer provides accommodation for the employee at no cost to the employee.

(iv) The provision of the above will cease to apply immediately after the employee assumes their new place of residence or when the purchase has been completed, whichever is the sooner.

(v) For the purpose of this clause, accommodation will be limited to the provision of housing.

22.3 Adjustment of expense related allowances

(a) At the time of any adjustment to the standard rate, each expense related allowance will be increased by the relevant adjustment factor. The relevant adjustment factor for this purpose is the percentage movement in the applicable index figure most recently published by the Australian Bureau of Statistics since the allowance was last adjusted.

[22.3(b) varied by PR994507 from 01Jan10]

(b) The applicable index figure is the index figure published by the Australian Bureau of Statistics for the Eight Capitals Consumer Price Index (Cat No. 6401.0), as follows:

Allowance	Applicable Consumer Price Index figure
Meal allowance	Take away and fast foods sub-group
Living away from home and Area allowances	Domestic holiday travel and accommodation sub-group
Motor vehicle allowance	Private motoring sub-group

23. District allowances

[23 varied by PR994507; deleted by PR561478 ppc 05Mar15]

24. Accident pay

[24 varied by PR994507, PR503625; deleted by PR561478 ppc 05Mar15; new 24 inserted by PR571819 ppc 15Oct15]

24.1 Definitions

For the purpose of this clause, the following definitions will apply:

(a) **Accident pay** means a weekly payment made to an employee by the employer that is the difference between the weekly amount of compensation paid to an employee pursuant to the applicable workers' compensation legislation and the

employee's ordinary rate of pay (not including over award payments, shift loadings or overtime).

(b) **Injury** will be given the same meaning and application as applying under the applicable workers' compensation legislation covering the employer.

24.2 Entitlement

The employer must pay accident pay where an employee suffers an injury and weekly payments of compensation are paid to the employee under the applicable workers' compensation legislation for a maximum period of 26 weeks.

24.3 Calculation of the period

(a) The 26 week period commences from the date of injury. In the event of more than one absence arising from one injury, such absences are to be cumulative in the assessment of the 26 week period.

(b) The termination by the employer of the employee's employment within the 26 week period will not affect the employee's entitlement to accident pay.

(c) For a period of less than one week, accident pay (as defined) will be calculated on a pro rata basis.

24.4 When not entitled to payment

An employee will not be entitled to any payment under this clause in respect of any period of paid annual leave or long service leave, or for any paid public holiday.

24.5 Return to work

If an employee entitled to accident pay under this clause returns to work on reduced hours or to perform modified duties, the amount of accident pay due will be reduced by any amounts paid for the performance of such work.

24.6 Redemptions

In the event that an employee receives a lump sum payment in lieu of weekly payments under the applicable workers' compensation legislation, the liability of the employer to pay accident pay will cease from the date the employee receives that payment.

24.7 Casual employees

For a casual employee the weekly payment referred to in clause 24.1(a) will be calculated using the employee's average weekly ordinary hours with the employer over the previous 12 months or, if the employee has been employed for less than 12 months by the employer, the employee's average weekly ordinary hours over the period of employment with the employer. The weekly payment will include casual loading but will not include over award payments, shift loadings and overtime.

24.8 Other

This clause does not operate to diminish an employee's entitlement to compensation payments under the applicable workers' compensation legislation.

25. Payment of wages

25.1 Wages must be paid weekly, fortnightly, four-weekly, half-monthly, monthly or in accordance with existing practices, by cash or by cheque or to the credit of the employee's account in a bank or other recognised financial institution, or in any agreed combination of the foregoing.

25.2 Wages must be paid, either:

(a) according to the average number of ordinary hours worked per pay period; or

(b) by agreement with either the majority of employees or with an individual employee according to the actual ordinary hours worked each pay period.

25.3 Where wages are paid in cash, such payment must be made during normal working hours.

25.4 Upon termination of employment, the wages due to an employee must be paid on the day of such termination or forwarded by post on the next working day.

26. Superannuation

[Varied by PR994507, PR545988]

26.1 Superannuation legislation

(a) Superannuation legislation, including the *Superannuation Guarantee (Administration) Act 1992* (Cth), the *Superannuation Guarantee Charge Act 1992* (Cth), the *Superannuation Industry (Supervision) Act 1993* (Cth) and the *Superannuation (Resolution of Complaints) Act 1993* (Cth), deals with the superannuation rights and obligations of employers and employees. Under superannuation legislation individual employees generally have the opportunity to choose their own superannuation fund. If an employee does not choose a superannuation fund, any superannuation fund nominated in the award covering the employee applies.

(b) The rights and obligations in these clauses supplement those in superannuation legislation.

26.2 Employer contributions

An employer must make such superannuation contributions to a superannuation fund for the benefit of an employee as will avoid the employer being required to pay the superannuation guarantee charge under superannuation legislation with respect to that employee.

26.3 Voluntary employee contributions

(a) Subject to the governing rules of the relevant superannuation fund, an employee may, in writing, authorise their employer to pay on behalf of the employee a specified amount from the post-taxation wages of the employee into the same superannuation fund as the employer makes the superannuation contributions provided for in clause 26.2.

(b) An employee may adjust the amount the employee has authorised their employer to pay from the wages of the employee from the first of the month following the giving of three months' written notice to their employer.

(c) The employer must pay the amount authorised under clauses 26.3(a) or (b) no later than 28 days after the end of the month in which the deduction authorised under clauses 26.3(a) or (b) was made.

26.4 Superannuation fund

[26.4 varied by PR994507 from 01Jan10]

Unless, to comply with superannuation legislation, the employer is required to make the superannuation contributions provided for in clause 26.2 to another superannuation fund that is chosen by the employee, the employer must make the superannuation contributions provided for in clause 26.2 and pay the amount authorised under clauses 26.3(a) or (b) to one of the following superannuation funds or its successor:

(a) AustralianSuper;

(b) CareSuper;

[26.4(c) varied by PR545988 ppc 01Jan14]

(c) any superannuation fund to which the employer was making superannuation contributions for the benefit of its employees before 12 September 2008, provided the superannuation fund is an eligible choice fund and is a fund that offers a MySuper product or is an exempt public sector scheme; or

[26.4(d) inserted by PR545988 ppc 01Jan14]

(d) a superannuation fund or scheme which the employee is a defined benefit member of.

26.5 Absence from work

Subject to the governing rules of the relevant superannuation fund, the employer must also make the superannuation contributions provided for in clause 26.2 and pay the amount authorised under clauses 26.3(a) or (b):

(a) **Paid leave—**while the employee is on any paid leave;

(b) **Work-related injury or illness**—for the period of absence from work (subject to a maximum of 52 weeks) of the employee due to work-related injury or work-related illness provided that:

(i) the employee is receiving workers compensation payments or is receiving regular payments directly from the employer in accordance with the statutory requirements; and

(ii) the employee remains employed by the employer.

Part 5—Hours of Work and Related Matters

27. Ordinary hours of work and rostering

[Varied by PR529161]

27.1 Ordinary hours of work—day workers

(a) Subject to this award, the ordinary hours of work for day workers are to be an average of 38 per week, of no more than eight hours per day, between the hours of 6.30 am to 6.30 pm at the discretion of the employer on any day or all of the days of the week, Monday to Friday.

27.2 Flexibility in relation to day work hours

(a) The following forms of flexibility may be implemented in respect of all employees in a workplace or section/s thereof, subject to agreement between the employer and the majority of the employees concerned in the workplace or relevant section/s. Agreement in this respect may also be reached between the employer and an individual employee:

(i) the spread of hours (i.e. 6.30 am to 6.30 pm) may be altered by up to one hour at either end of the spread;

(ii) the days on which ordinary hours are worked may include Saturday and/or Sunday, subject to the penalties in clause 27.4 and 27.5;

(iii) in excess of eight hours and up to 12 hours of ordinary time may be worked per day, exclusive of meal breaks. The implementation of 12 hour days is subject to the provisions of clause 28.4 of this award.

(b) Where an agreement is reached by the majority of employees it will apply to all the employees in the workplace or section/s to which the agreement applies. This does not in any way restrict the application of an individual agreement.

(c) Where agreement is reached in accordance with this paragraph, the agreement must be recorded in the time and wages records.

27.3 Day work outside the spread of hours

Where a day worker works part of the ordinary hours outside:

(a) the spread of hours referred to in clause 27.1; or

[27.3(b) varied by PR529161 ppc 27Sep12]

(b) the spread of hours as varied in accordance with clause 27.2;

the employee is entitled to an allowance of 24.7% of the standard hourly rate for each ordinary hour worked outside the spread of hours. Where such ordinary hours are worked after the spread of hours prescribed in clause 27.1, such hours will be limited to a maximum of four days per week.

27.4 Working ordinary hours on Saturday

[27.4 varied by PR529161 ppc 27Sep12]

Day workers are entitled to an allowance of 59.2% of the standard hourly rate per hour for ordinary time worked on Saturday.

27.5 Working ordinary hours on Sunday

[27.5 varied by PR529161 ppc 27Sep12]

Day workers are entitled to an allowance of 82.95% of the standard hourly rate per hour for ordinary time worked on Sunday.

27.6 General conditions relating to hours of work for day workers and shiftworkers

(a) The arrangement of hours under clause 27 and shifts under clause 28, once determined may be altered as follows:

(i) by the employer giving one week's notice of the requirement to change the arrangement of hours or shifts;

(ii) by mutual agreement between the employees concerned and their employer;

(iii) by the employer giving 24 hours' notice to the employee in the case of an emergency; or

(iv) at the discretion of the employer, employees may be permitted to exchange shifts or days off to perform duty for another employee. In such circumstances the employer is not required to make any additional payment.

27.7 Rosters

Rosters will specify the commencement and finishing times of ordinary working hours for employees.

27.8 Casual and part-time employees

Casual and part-time employees are entitled to the hourly allowances set out in clause 27—Ordinary hours of work and rostering and clause 28—Special provisions for shiftworkers of this award, where applicable, for the hours that the employees work.

27.9 Special provisions for country employees

The provisions of clause 27—Ordinary hours of work and rostering and clause 28—Special provisions for shiftworkers of this award will not apply to employees covered by this clause provided that the hours of such work will not exceed an average of 38 per week, exclusive of meal breaks, Monday to Friday inclusive.

28. Special provisions for shiftworkers

[Varied by PR529161]

28.1 For the purposes of this award:

(a) **Standard shiftwork** means shiftwork performed:

- on shifts of not more than eight hours; or
- on shifts of more than eight hours but not more than 10 hours in accordance with clause 28.2(b)(i).

(b) **Non-standard shiftwork** means any arrangement of shiftwork of up to 12 hours per day worked over a seven day period Monday to Sunday, other than standard shiftwork.

(c) **Afternoon shift** means any shift finishing after 6.30 pm and at or before midnight.

(d) **Night shift** means any shift finishing after midnight and at or before 8.00 am.

28.2 Standard shiftwork

(a) Ordinary hours of work

(i) The ordinary hours of work for standard shiftworkers are to be an average of 38 hours per week.

(ii) The ordinary hours of work are to be worked continuously. Such hours will be worked at the discretion of the employer. Standard shiftworkers are entitled to a 20 minute meal break on each shift which will be counted as time worked.

(b) Flexibility in relation to standard shiftwork

(i) The following forms of flexibility may be implemented in respect of all employees engaged on standard shiftwork in a workplace or section/s thereof, subject to agreement between the employer and the majority of the employees concerned in the workplace or relevant section/s. Agreement in this respect may also be reached between the employer and an individual employee:

- the shift definitions in clause 28.1(a) may be altered by up to one hour at either end of the span of hours referred to in the definition;
- in excess of eight hours and up to 10 hours of ordinary time may be worked per shift.

(ii) Where an agreement is reached by the majority of employees it will apply to all the employees in the workplace or section/s to which the agreement applies. This does not in any way restrict the application of an individual agreement.

(iii) Where agreement is reached in accordance with this clause, the agreement will be recorded in the time and wages records.

(c) Afternoon and night shift allowances

[28.2(c) varied by PR529161 ppc 27Sep12]

The following allowances apply to standard shiftworkers (as defined).

(i) Employees are entitled to an allowance of 14.68% of the standard hourly rate per hour for time worked on an afternoon shift.

(ii) Except as provided for in clause 28.2(c)(iii), employees are entitled to an allowance of 17.59% of the standard hourly rate per hour for time worked on a night shift.

(iii) An employee who:

- during a period of engagement on shift, works night shift only;
- remains on night shift for a longer period than four consecutive weeks; or
- works on a night shift which does not rotate or alternate with afternoon shift or with day work so as to give the employee at least one third of the working time off night shift in each shift cycle;

is entitled to an allowance of 21% of the standard hourly rate, per hour for time worked on such night shift, instead of the allowance prescribed in clause 28.2(c)(ii).

(d) Rate for Saturday shifts

The minimum rate to be paid to a standard shiftworker for work performed between midnight on Friday and midnight on Saturday will be time and a half for the first four hours and double time thereafter. This extra rate is in substitution for and not cumulative upon the shift allowances prescribed in clauses 28.2(c)(i), (ii) and (iii).

(e) Rate for Sunday shifts

The minimum rate to be paid to a standard shiftworker for work performed between midnight on Saturday and midnight on Sunday will be double time. This extra rate is in substitution for and not cumulative upon the shift allowances prescribed in clauses 28.2(c)(i), (ii) and (iii).

28.3 Non-standard shiftwork

(a) Ordinary hours of work

(i) The ordinary hours of work for non-standard shiftworkers (as defined) are to be an average of 38 hours per week to be worked over a shift cycle which does not exceed 13 weeks in duration.

(ii) The ordinary hours of work are to be worked continuously at the discretion of the employer. Non-standard shiftworkers are entitled to a 20 minute meal break on each shift which will be counted as time worked.

(b) Allowance for non-standard shiftworkers

[28.3(b) varied by PR529161 ppc 27Sep12]

Employees are entitled to an allowance of 30% of the standard hourly rate, for each ordinary hour worked on a non-standard shift (as defined). The extra rate

in this clause is in substitution for and not cumulative upon the shift premiums prescribed in clauses 28.2(c), (d) and (e) and clause 27.

28.4 Twelve hour days or shifts

Implementation of 12 hour days or shifts is subject to the following:

(a) suitable roster arrangements being made, including a review process relating to such rosters; and

(b) adequate breaks being provided.

28.5 Daylight saving

For work performed on any shift which spans the time of introduction or cessation of a system of daylight saving as prescribed by relevant State legislation, an employee must be paid according to adjusted time (i.e. the time on the clock at the beginning of the shift and the time on the clock at the end of the shift).

28.6 Make-up time

A day worker or a shiftworker may elect, with the consent of the employer, to work make-up time under which the employee takes time off during ordinary hours, and works those hours at a later time, during the spread of ordinary hours provided in the award.

29. Meal breaks

29.1 Except as provided for in clause 29.2, where practicable, an employee will not be required to work for more than five hours without a break for a meal which must be for a period of not less than 30 minutes and not more than 60 minutes.

29.2 Flexibility in relation to breaks

(a) The following forms of flexibility may be implemented in respect of all employees in a workplace or section/s thereof, subject to agreement between the employer and the majority of the employees concerned in the workplace or relevant section/s. Agreement in this respect may also be reached between the employer and an individual employee:

(i) employees may work in excess of five hours but not more than six hours without a meal break (except in the case of 12 hour days or shifts);

(ii) meal breaks may be for a period of less than 30 minutes, but not less than 20 minutes.

(b) Where an agreement is reached by the majority of employees it will apply to all the employees in the workplace or section/s to which the agreement applies. This does not in any way restrict the application of an individual agreement.

(c) An employee directed by the employer to work in excess of five hours without a meal, or such period as extended in accordance with clause 29.2, will be paid at the rate of time and one half for the meal period and the employee will be permitted to have the employee's usual meal period without deduction from the employee's wage as soon as possible after the prescribed meal period.

(d) This clause will not operate outside an employee's ordinary working hours. Meal breaks during overtime are prescribed in clause 30—Overtime of this award.

30. Overtime

[Varied by PR994507, PR584081]

30.1 Overtime rates

(a) An employee who works in excess of or outside the employee's ordinary hours established in accordance with clause 27—Ordinary hours of work and rostering or clause 28—Special provisions for shiftworkers, of this award will be paid at the rate of time and a half for the first three hours and double time thereafter, until the completion of work.

(b) Provided that employees who are late starting or are absent for part of their ordinary hours on unpaid leave will complete their ordinary hours for that day prior to the entitlement to overtime.

30.2 Scheduling of overtime

The assignment of overtime by an employer will be based on the specific work requirements and the practice of one in, all in overtime will not apply.

30.3 Work on a day off

(a) Days other than Sunday

An employee required to work overtime on any day off that is not a Sunday will be paid in accordance with clause 30.1.

(b) Sunday

An employee required to work on a Sunday that is a day off will be paid double time for all work.

(c) Minimum payment

(i) An employee required to work overtime on a Saturday or Sunday will be paid for a minimum of four hours at the appropriate rate except where such overtime is worked prior to or at the conclusion of ordinary hours of work.

(ii) In such circumstances, the employee will receive payment at the rate prescribed in clause 30.1 for the actual time worked.

(d) Rest break during overtime

(i) An employee working overtime will be allowed a rest break of 20 minutes without deduction of pay after each four hours of overtime if the employee continues to work after such rest break.

(ii) An employee working overtime for two or more hours after the completion of ordinary working hours will receive a paid rest break of

20 minutes. This rest break is to be taken at the commencement of overtime and is to be paid at the employee's ordinary time rate.

(iii) An employer and employee may agree to a variation of this provision to meet the circumstances of the work at hand provided that the employer will not be required to make any payment in respect of any time allowed in excess of 20 minutes.

30.4 Call-back

(a) An employee recalled to work overtime after leaving work will be paid a minimum of four hours or where the employee has been paid for standing by in accordance with clause 30.5, the employee will be paid for a minimum of three hours at the appropriate overtime rate for each time recalled, except where the overtime is continuous (subject to a meal break) with the commencement or completion of ordinary hours.

(b) Provided that the employee will not be required to work the full four or three hours as the case may be if the job(s) recalled to perform are completed within a shorter period.

(c) Notwithstanding the above, where an employee is recalled within the four or three hour guarantee period, the four or three hours' minimum for the first recall will be cancelled and the employee will be paid up to the commencement of the second or subsequent recalls.

(d) The provisions of this clause will not apply in circumstances where an employee provides technical service or technical support over the telephone or via remote access arrangements.

(e) Overtime worked in circumstances specified in this clause will not be regarded as overtime for the purposes of clause 30.6.

30.5 Stand-by

[30.5(a) varied by PR994507 from 01Jan10]

(a) An allowance of 59.42% of the standard hourly rate per hour will be paid to an employee for the period the employer requires the employee to remain in readiness for a return to work outside the employee's ordinary hours.

(b) While receiving the appropriate overtime rate in accordance with clause 30.1 the stand-by allowance will not be paid.

30.6 Rest period after overtime

(a) When overtime work is necessary, it will wherever reasonably practicable be so arranged that employees have at least 10 consecutive hours off duty between the work of successive days.

(b) An employee (other than a casual or part-time employee) who works so much overtime between the termination of the ordinary work on one day and the commencement of the ordinary work on the next day that the employee has not had at least 10 consecutive hours off duty between those times will, subject to this clause, be released after completion of such overtime until the employee has had 10 consecutive hours' off duty without loss of pay for ordinary working time occurring during such absence.

(c) If on the instructions of the employer an employee resumes or continues work without having 10 consecutive hours off duty, the employee will be paid at double time until released from duty for such period and then is entitled to be absent until the employee has had 10 consecutive hours off duty without loss of pay.

(d) The provisions of this clause will not apply to call-backs or in circumstances where an employee provides technical service or technical support over the telephone or via remote access arrangements.

30.7 Technical service/support

(a) An employee required to work overtime providing technical service or technical support over the telephone or via remote access arrangements will be paid for each occasion that such work is carried out:

(i) for a minimum of half an hour at the appropriate overtime rate where such work commences between 5.00 am and 10.00 pm; or

(ii) for a minimum of one hour at the appropriate overtime rate where such work commences after 10.00 pm and before 5.00 am except where the overtime is continuous (subject to a meal break) with the commencement or completion of ordinary hours.

(b) Provided that, the employee will not be required to work the full half an hour or one hour as the case may be if the work which the employer requires to be performed is completed within a shorter period.

(c) Notwithstanding the above, where an employee is required to carry out further overtime work within the half an hour or one hour guarantee period, the half an hour or one hour minimum for the first work period will be cancelled and the employee will be paid up to the commencement of the second or subsequent work period.

(d) Overtime worked in circumstances specified in this subclause will not be regarded as overtime for the purposes of clauses 30.4 and 30.5.

30.8 Rates not cumulative

The rates prescribed in this clause are in substitution for and not cumulative upon the rates prescribed in clause 27—Ordinary hours of work and rostering and clause 28—Special provisions for shiftworkers.

30.9 Time off instead of payment for overtime

[30.9 inserted by PR584081 ppc 22Aug16]

(a) An employee and employer may agree in writing to the employee taking time off instead of being paid for a particular amount of overtime that has been worked by the employee.

(b) Any amount of overtime that has been worked by an employee in a particular pay period and that is to be taken as time off instead of the employee being paid for it must be the subject of a separate agreement under clause 30.9.

(c) An agreement must state each of the following:

(i) the number of overtime hours to which it applies and when those hours were worked;

(ii) that the employer and employee agree that the employee may take time off instead of being paid for the overtime;

(iii) that, if the employee requests at any time, the employer must pay the employee, for overtime covered by the agreement but not taken as time off, at the overtime rate applicable to the overtime when worked;

(iv) that any payment mentioned in subparagraph (iii) must be made in the next pay period following the request.

Note: An example of the type of agreement required by this clause is set out at Schedule I. There is no requirement to use the form of agreement set out at Schedule I. An agreement under clause 30.9 can also be made by an exchange of emails between the employee and employer, or by other electronic means.

(d) The period of time off that an employee is entitled to take is the same as the number of overtime hours worked.

EXAMPLE: By making an agreement under clause 30.9 an employee who worked 2 overtime hours is entitled to 2 hours' time off.

(e) Time off must be taken:

(i) within the period of 6 months after the overtime is worked; and

(ii) at a time or times within that period of 6 months agreed by the employee and employer.

(f) If the employee requests at any time, to be paid for overtime covered by an agreement under clause 30.9 but not taken as time off, the employer must pay the employee for the overtime, in the next pay period following the request, at the overtime rate applicable to the overtime when worked.

(g) If time off for overtime that has been worked is not taken within the period of 6 months mentioned in paragraph (e), the employer must pay the employee for the overtime, in the next pay period following those 6 months, at the overtime rate applicable to the overtime when worked.

(h) The employer must keep a copy of any agreement under clause 30.9 as an employee record.

(i) An employer must not exert undue influence or undue pressure on an employee in relation to a decision by the employee to make, or not make, an agreement to take time off instead of payment for overtime.

(j) An employee may, under section 65 of the Act, request to take time off, at a time or times specified in the request or to be subsequently agreed by the employer and the employee, instead of being paid for overtime worked by the employee. If the employer agrees to the request then clause 30.9 will apply, including the requirement for separate written agreements under paragraph (b) for overtime that has been worked.

Note: If an employee makes a request under section 65 of the Act for a change in working arrangements, the employer may only refuse that request on reasonable business grounds (see section 65(5) of the Act).

(k) If, on the termination of the employee's employment, time off for overtime worked by the employee to which clause 30.9 applies has not been taken, the employer must pay the employee for the overtime at the overtime rate applicable to the overtime when worked.

Note: Under section 345(1) of the Act, a person must not knowingly or recklessly make a false or misleading representation about the workplace rights of another person under clause 30.9.

31. Annual leave

[Varied by PR994507, PR567229, PR582973]

31.1 Annual leave is provided for in the NES.

31.2 Annual leave loading

[31.2(a) varied by PR994507 from 01Jan10]

(a) During a period of annual leave an employee will receive a loading calculated on the rate of wage prescribed in clause 20—Classifications and adult rates. Annual leave loading payment is payable on leave accrued.

(b) The loading is as follows:

(i) Day work

Employees who would have worked on day work only had they not been on leave—17.5% or the relevant weekend penalty rates, whichever is the greater but not both.

(ii) Shiftwork

Employees who would have worked on shiftwork had they not been on leave—a loading of 17.5% or the shift loading (including relevant weekend penalty rates) whichever is the greater but not both.

31.3 Annual leave in advance

[31.3 renamed and substituted by PR582973 ppc 29Jul16]

(a) An employer and employee may agree in writing to the employee taking a period of paid annual leave before the employee has accrued an entitlement to the leave.

(b) An agreement must:

(i) state the amount of leave to be taken in advance and the date on which leave is to commence; and

(ii) be signed by the employer and employee and, if the employee is under 18 years of age, by the employee's parent or guardian.

Note: An example of the type of agreement required by clause 31.3 is set out at Schedule G. There is no requirement to use the form of agreement set out at Schedule G.

(c) The employer must keep a copy of any agreement under clause 31.3 as an employee record.

(d) If, on the termination of the employee's employment, the employee has not accrued an entitlement to all of a period of paid annual leave already taken in accordance with an agreement under clause 31.3, the employer may deduct from any money due to the employee on termination an amount equal to the amount that was paid to the employee in respect of any part of the period of annual leave taken in advance to which an entitlement has not been accrued.

31.4 Close-down

[31.4 renamed and substituted by PR582973 ppc 29Jul16]

An employer may require an employee to take annual leave as part of a close-down of its operations, by giving at least four weeks' notice.

31.5 Definition of shiftworker

[31.5 varied by PR994507; substituted by PR567229 ppc 27May15]

For the purpose of the additional week of annual leave provided for in s.87(1)(b) of the Act, a **shiftworker** is a seven day continuous shiftworker who is regularly rostered to work on Sundays and public holidays.

31.6 Country employees

[31.6(a) varied by PR994507 from 01Jan10]

(a) Employees who are required by their employer to remain away from their usual place of residence on more than two nights in any week, Monday to Sunday inclusive, for each week of the working year, will in addition to the annual leave prescribed in s.87(1)(a) of the Act receive a further seven consecutive days' leave including nonworking days

(b) Where an employee operates in country areas as prescribed in clause 31.6(a) for only part of the time the employee will receive an additional leave entitlement on the basis of an extra half day's annual leave for each five weeks in any one year during which the employee is required to be away from the usual place of residence.

(c) This clause will not apply to employees undertaking training courses.

31.7 Excessive leave accruals: general provision

[31.7(a) varied by PR994507 from 01Jan10; 31.7 renamed and substituted by PR582973 ppc 29Jul16]

Note: Clauses 31.7 to 31.9 contain provisions, additional to the National Employment Standards, about the taking of paid annual leave as a way of dealing with the accrual of excessive paid annual leave. See Part 2.2, Division 6 of the Fair Work Act.

(a) An employee has an **excessive leave accrual** if the employee has accrued more than 8 weeks' paid annual leave (or 10 weeks' paid annual leave for a shiftworker, as defined by clause 31.5).

(b) If an employee has an excessive leave accrual, the employer or the employee may seek to confer with the other and genuinely try to reach agreement on how to reduce or eliminate the excessive leave accrual.

(c) Clause 31.8 sets out how an employer may direct an employee who has an excessive leave accrual to take paid annual leave.

(d) Clause 31.9 sets out how an employee who has an excessive leave accrual may require an employer to grant paid annual leave requested by the employee.

31.8 Excessive leave accruals: direction by employer that leave be taken

[31.8 deleted by PR567229 ppc 27May15; New 31.8 inserted by PR582973 ppc 29Jul16]

(a) If an employer has genuinely tried to reach agreement with an employee under clause 31.7(b) but agreement is not reached (including because the employee refuses to confer), the employer may direct the employee in writing to take one or more periods of paid annual leave.

(b) However, a direction by the employer under paragraph (a):

(i) is of no effect if it would result at any time in the employee's remaining accrued entitlement to paid annual leave being less than 6 weeks when any other paid annual leave arrangements (whether made under clause 31.7, 31.8 or 31.9 or otherwise agreed by the employer and employee) are taken into account; and

(ii) must not require the employee to take any period of paid annual leave of less than one week; and

(iii) must not require the employee to take a period of paid annual leave beginning less than 8 weeks, or more than 12 months, after the direction is given; and

(iv) must not be inconsistent with any leave arrangement agreed by the employer and employee.

(c) The employee must take paid annual leave in accordance with a direction under paragraph (a) that is in effect.

(d) An employee to whom a direction has been given under paragraph (a) may request to take a period of paid annual leave as if the direction had not been given.

Note 1: Paid annual leave arising from a request mentioned in paragraph (d) may result in the direction ceasing to have effect. See clause 31.8(b)(i).

Note 2: Under section 88(2) of the Fair Work Act, the employer must not unreasonably refuse to agree to a request by the employee to take paid annual leave.

31.9 Excessive leave accruals: request by employee for leave

[31.9 inserted by PR582973; substituted by PR582973 ppc 29Jul17]

(a) If an employee has genuinely tried to reach agreement with an employer under clause 31.7(b) but agreement is not reached (including because the employer refuses to confer), the employee may give a written notice to the employer requesting to take one or more periods of paid annual leave.

(b) However, an employee may only give a notice to the employer under paragraph (a) if:

(i) the employee has had an excessive leave accrual for more than 6 months at the time of giving the notice; and

(ii) the employee has not been given a direction under clause 31.8(a) that, when any other paid annual leave arrangements (whether made under clause 31.7, 31.8 or 31.9 or otherwise agreed by the employer and employee) are taken into account, would eliminate the employee's excessive leave accrual.

(c) A notice given by an employee under paragraph (a) must not:

(i) if granted, result in the employee's remaining accrued entitlement to paid annual leave being at any time less than 6 weeks when any other paid annual leave arrangements (whether made under clause 31.7, 31.8 or 31.9 or otherwise agreed by the employer and employee) are taken into account; or

(ii) provide for the employee to take any period of paid annual leave of less than one week; or

(iii) provide for the employee to take a period of paid annual leave beginning less than 8 weeks, or more than 12 months, after the notice is given; or

(iv) be inconsistent with any leave arrangement agreed by the employer and employee.

(d) An employee is not entitled to request by a notice under paragraph (a) more than 4 weeks' paid annual leave (or 5 weeks' paid annual leave for a shiftworker, as defined by clause 31.5) in any period of 12 months.

(e) The employer must grant paid annual leave requested by a notice under paragraph (a).

31.10 Cashing out of annual leave

[31.10 inserted by PR582973 ppc 29Jul16]

(a) Paid annual leave must not be cashed out except in accordance with an agreement under clause 31.10.

(b) Each cashing out of a particular amount of paid annual leave must be the subject of a separate agreement under clause 31.10.

(c) An employer and an employee may agree in writing to the cashing out of a particular amount of accrued paid annual leave by the employee.

(d) An agreement under clause 31.10 must state:

(i) the amount of leave to be cashed out and the payment to be made to the employee for it; and

(ii) the date on which the payment is to be made.

(e) An agreement under clause 31.10 must be signed by the employer and employee and, if the employee is under 18 years of age, by the employee's parent or guardian.

(f) The payment must not be less than the amount that would have been payable had the employee taken the leave at the time the payment is made.

(g) An agreement must not result in the employee's remaining accrued entitlement to paid annual leave being less than 4 weeks.

(h) The maximum amount of accrued paid annual leave that may be cashed out in any period of 12 months is 2 weeks.

(i) The employer must keep a copy of any agreement under clause 31.10 as an employee record.

Note 1: Under section 344 of the Fair Work Act, an employer must not exert undue influence or undue pressure on an employee to make, or not make, an agreement under clause 31.10.

Note 2: Under section 345(1) of the Fair Work Act, a person must not knowingly or recklessly make a false or misleading representation about the workplace rights of another person under clause 31.10.

Note 3: An example of the type of agreement required by clause 31.10 is set out at Schedule H. There is no requirement to use the form of agreement set out at Schedule H.

32. Personal/carer's leave and compassionate leave

32.1 Personal/carer's leave and compassionate leave are provided for in the NES.

32.2 Personal/carer's leave for casual employees

(a) Casual employees are entitled to be not available for work or to leave work to care for a person who is sick and requires care and support or who requires care due to an emergency.

(b) Such leave is unpaid. A maximum of 48 hours' absence is allowed by right with additional absence by agreement.

33. Community service leave

Community service leave is provided for in the NES.

34. Public holidays

34.1 Public holidays are provided for in the NES.

34.2 An employer and the employees may by agreement substitute another day for a public holiday.

34.3 Work on a public holiday or a substituted day must be paid at double time and a half. Where both a public holiday and substitute day are worked, public holiday penalties are payable on the holiday and the employee is entitled to not less than four hours' pay at penalty rates provided the employee is available to work for four hours.

35. Leave to deal with Family and Domestic Violence

[35 inserted by PR609338 ppc 01Aug18]

35.1 This clause applies to all employees, including casuals.

35.2 Definitions

(a) In this clause:

family and domestic violence means violent, threatening or other abusive behaviour by a family member of an employee that seeks to coerce or control the employee and that causes them harm or to be fearful.

family member means:

(i) a spouse, de facto partner, child, parent, grandparent, grandchild or sibling of the employee; or

(ii) a child, parent, grandparent, grandchild or sibling of a spouse or de facto partner of the employee; or

(iii) a person related to the employee according to Aboriginal or Torres Strait Islander kinship rules.

(b) A reference to a spouse or de facto partner in the definition of family member in clause 35.2(a) includes a former spouse or de facto partner.

35.3 Entitlement to unpaid leave

An employee is entitled to 5 days' unpaid leave to deal with family and domestic violence, as follows:

(a) the leave is available in full at the start of each 12 month period of the employee's employment; and

(b) the leave does not accumulate from year to year; and

(c) is available in full to part-time and casual employees.

Note: 1. A period of leave to deal with family and domestic violence may be less than a day by agreement between the employee and the employer.

2. The employer and employee may agree that the employee may take more than 5 days' unpaid leave to deal with family and domestic violence.

35.4 Taking unpaid leave

An employee may take unpaid leave to deal with family and domestic violence if the employee:

(a) is experiencing family and domestic violence; and

(b) needs to do something to deal with the impact of the family and domestic violence and it is impractical for the employee to do that thing outside their ordinary hours of work.

Note: The reasons for which an employee may take leave include making arrangements for their safety or the safety of a family member (including relocation), attending urgent court hearings, or accessing police services.

35.5 Service and continuity

The time an employee is on unpaid leave to deal with family and domestic violence does not count as service but does not break the employee's continuity of service.

35.6 Notice and evidence requirements

(a) Notice

An employee must give their employer notice of the taking of leave by the employee under clause 35. The notice:

(i) must be given to the employer as soon as practicable (which may be a time after the leave has started); and

(ii) must advise the employer of the period, or expected period, of the leave.

(b) Evidence

An employee who has given their employer notice of the taking of leave under clause 35 must, if required by the employer, give the employer evidence that would satisfy a reasonable person that the leave is taken for the purpose specified in clause 35.4.

Note: Depending on the circumstances such evidence may include a document issued by the police service, a court or a family violence support service, or a statutory declaration.

35.7 Confidentiality

(a) Employers must take steps to ensure information concerning any notice an employee has given, or evidence an employee has provided under clause 35.6 is treated confidentially, as far as it is reasonably practicable to do so.

(b) Nothing in clause 35 prevents an employer from disclosing information provided by an employee if the disclosure is required by an Australian law or is necessary to protect the life, health or safety of the employee or another person.

Note: Information concerning an employee's experience of family and domestic violence is sensitive and if mishandled can have adverse consequences for the employee. Employers should consult with such employees regarding the handling of this information.

35.8 Compliance

An employee is not entitled to take leave under clause 35 unless the employee complies with clause 35.

35A. Requests for flexible working arrangements

[35A inserted by PR701415 ppc 01Dec18]

35A.1 Employee may request change in working arrangements

Clause 35A applies where an employee has made a request for a change in working arrangements under s.65 of the Act.

Note 1: Section 65 of the Act provides for certain employees to request a change in their working arrangements because of their circumstances, as set out in s.65(1A).

Note 2: An employer may only refuse a s.65 request for a change in working arrangements on 'reasonable business grounds' (see s.65(5) and (5A)).

Note 3: Clause 35A is an addition to s.65.

35A.2 Responding to the request

Before responding to a request made under s.65, the employer must discuss the request with the employee and genuinely try to reach agreement on a change in working arrangements that will reasonably accommodate the employee's circumstances having regard to:

(a) the needs of the employee arising from their circumstances;

(b) the consequences for the employee if changes in working arrangements are not made; and

(c) any reasonable business grounds for refusing the request.

Note 1: The employer must give the employee a written response to an employee's s.65 request within 21 days, stating whether the employer grants or refuses the request (s.65(4)).

Note 2: If the employer refuses the request, the written response must include details of the reasons for the refusal (s.65(6)).

35A.3 What the written response must include if the employer refuses the request

Clause 35A.3 applies if the employer refuses the request and has not reached an agreement with the employee under clause 35A.2.

(a) The written response under s.65(4) must include details of the reasons for the refusal, including the business ground or grounds for the refusal and how the ground or grounds apply.

(b) If the employer and employee could not agree on a change in working arrangements under clause 35A.2, the written response under s.65(4) must:

(i) state whether or not there are any changes in working arrangements that the employer can offer the employee so as to better accommodate the employee's circumstances; and

(ii) if the employer can offer the employee such changes in working arrangements, set out those changes in working arrangements.

35A.4 What the written response must include if a different change in working arrangements is agreed

If the employer and the employee reached an agreement under clause 35A.2 on a change in working arrangements that differs from that initially requested by the employee, the employer must provide the employee with a written response to their request setting out the agreed change(s) in working arrangements.

35A.5 Dispute resolution

Disputes about whether the employer has discussed the request with the employee and responded to the request in the way required by clause 35A, can be dealt with under clause 10—Dispute resolution.

Schedule A—Transitional Provisions

[New Sched A inserted by PR988401 from 01Jan10; varied by PR994507, PR503625]

A.1 General

A.1.1 The provisions of this schedule deal with minimum obligations only.

A.1.2 The provisions of this schedule are to be applied:

[A.1.2 substituted by PR994507 from 01Jan10]

(a) when there is a difference, in money or percentage terms, between a provision in a relevant transitional minimum wage instrument (including the transitional default casual loading) or award-based transitional instrument on the one hand and an equivalent provision in this award on the other;

(b) when a loading or penalty in a relevant transitional minimum wage instrument or award-based transitional instrument has no equivalent provision in this award;

(c) when a loading or penalty in this award has no equivalent provision in a relevant transitional minimum wage instrument or award-based transitional instrument; or

(d) when there is a loading or penalty in this award but there is no relevant transitional minimum wage instrument or award-based transitional instrument.

A.2 Minimum wages – existing minimum wage lower

A.2.1 The following transitional arrangements apply to an employer which, immediately prior to 1 January 2010:

(a) was obliged,

[A.2.1(b) substituted by PR994507 from 01Jan10]

(b) but for the operation of an agreement-based transitional instrument or an enterprise agreement would have been obliged, or

(c) if it had been an employer in the industry or of the occupations covered by this award would have been obliged

by a transitional minimum wage instrument and/or an award-based transitional instrument to pay a minimum wage lower than that in this award for any classification of employee.

A.2.2 In this clause minimum wage includes:

(a) a minimum wage for a junior employee, an employee to whom training arrangements apply and an employee with a disability;

(b) a piecework rate; and

(c) any applicable industry allowance.

A.2.3 Prior to the first full pay period on or after 1 July 2010 the employer must pay no less than the minimum wage in the relevant transitional minimum wage instrument and/or award-based transitional instrument for the classification concerned.

A.2.4 The difference between the minimum wage for the classification in this award and the minimum wage in clause A.2.3 is referred to as the transitional amount.

A.2.5 From the following dates the employer must pay no less than the minimum wage for the classification in this award minus the specified proportion of the transitional amount:

First full pay period on or after	
1 July 2010	80%
1 July 2011	60%
1 July 2012	40%
1 July 2013	20%

A.2.6 The employer must apply any increase in minimum wages in this award resulting from an annual wage review.

A.2.7 These provisions cease to operate from the beginning of the first full pay period on or after 1 July 2014.

A.3 Minimum wages – existing minimum wage higher

A.3.1 The following transitional arrangements apply to an employer which, immediately prior to 1 January 2010:

(a) was obliged,

[A.3.1(b) substituted by PR994507 from 01Jan10]

(b) but for the operation of an agreement-based transitional instrument or an enterprise agreement would have been obliged, or

(c) if it had been an employer in the industry or of the occupations covered by this award would have been obliged

by a transitional minimum wage instrument and/or an award-based transitional instrument to pay a minimum wage higher than that in this award for any classification of employee.

A.3.2 In this clause minimum wage includes:

(a) a minimum wage for a junior employee, an employee to whom training arrangements apply and an employee with a disability;

(b) a piecework rate; and

(c) any applicable industry allowance.

A.3.3 Prior to the first full pay period on or after 1 July 2010 the employer must pay no less than the minimum wage in the relevant transitional minimum wage instrument and/or award-based transitional instrument for the classification concerned.

A.3.4 The difference between the minimum wage for the classification in this award and the minimum wage in clause A.3.3 is referred to as the transitional amount.

A.3.5 From the following dates the employer must pay no less than the minimum wage for the classification in this award plus the specified proportion of the transitional amount:

First full pay period on or after	
1 July 2010	80%
1 July 2011	60%
1 July 2012	40%
1 July 2013	20%

A.3.6 The employer must apply any increase in minimum wages in this award resulting from an annual wage review. If the transitional amount is equal to or less than any increase in minimum wages resulting from the 2010 annual wage review the transitional amount is to be set off against the increase and the other provisions of this clause will not apply.

A.3.7 These provisions cease to operate from the beginning of the first full pay period on or after 1 July 2014.

A.4 Loadings and penalty rates

For the purposes of this schedule loading or penalty means a:

- casual or part-time loading;
- Saturday, Sunday, public holiday, evening or other penalty;
- shift allowance/penalty.

A.5 Loadings and penalty rates – existing loading or penalty rate lower

[A.5.1 substituted by PR994507 from 01Jan10]

A.5.1 The following transitional arrangements apply to an employer which, immediately prior to 1 January 2010:

(a) was obliged,

(b) but for the operation of an agreement-based transitional instrument or an enterprise agreement would have been obliged, or

(c) if it had been an employer in the industry or of the occupations covered by this award would have been obliged

by the terms of a transitional minimum wage instrument or an award-based transitional instrument to pay a particular loading or penalty at a lower rate than the equivalent loading or penalty in this award for any classification of employee.

[A.5.2 substituted by PR994507 from 01Jan10]

A.5.2 Prior to the first full pay period on or after 1 July 2010 the employer must pay no less than the loading or penalty in the relevant transitional minimum wage instrument or award-based transitional instrument for the classification concerned.

A.5.3 The difference between the loading or penalty in this award and the rate in clause A.5.2 is referred to as the transitional percentage.

A.5.4 From the following dates the employer must pay no less than the loading or penalty in this award minus the specified proportion of the transitional percentage:

First full pay period on or after	
1 July 2010	80%
1 July 2011	60%
1 July 2012	40%
1 July 2013	20%

A.5.5 These provisions cease to operate from the beginning of the first full pay period on or after 1 July 2014.

A.6 Loadings and penalty rates – existing loading or penalty rate higher

[A.6.1 substituted by PR994507 from 01Jan10]

A.6.1 The following transitional arrangements apply to an employer which, immediately prior to 1 January 2010:

(a) was obliged,

(b) but for the operation of an agreement-based transitional instrument or an enterprise agreement would have been obliged, or

(c) if it had been an employer in the industry or of the occupations covered by this award would have been obliged

by the terms of a transitional minimum wage instrument or an award-based transitional instrument to pay a particular loading or penalty at a higher rate than the equivalent loading or penalty in this award, or to pay a particular loading or penalty and there is no equivalent loading or penalty in this award, for any classification of employee.

[A.6.2 substituted by PR994507 from 01Jan10]

A.6.2 Prior to the first full pay period on or after 1 July 2010 the employer must pay no less than the loading or penalty in the relevant transitional minimum wage instrument or award-based transitional instrument.

[A.6.3 substituted by PR994507 from 01Jan10]

A.6.3 The difference between the loading or penalty in this award and the rate in clause A.6.2 is referred to as the transitional percentage. Where there is no equivalent loading or penalty in this award, the transitional percentage is the rate in A.6.2.

A.6.4 From the following dates the employer must pay no less than the loading or penalty in this award plus the specified proportion of the transitional percentage:

First full pay period on or after	
1 July 2010	80%
1 July 2011	60%
1 July 2012	40%
1 July 2013	20%

A.6.5 These provisions cease to operate from the beginning of the first full pay period on or after 1 July 2014.

A.7 Loadings and penalty rates – no existing loading or penalty rate

[A.7.1 varied by PR994507 from 01Jan10]

A.7.1 The following transitional arrangements apply to an employer not covered by clause A.5 or A.6 in relation to a particular loading or penalty in this award.

A.7.2 Prior to the first full pay period on or after 1 July 2010 the employer need not pay the loading or penalty in this award.

[A.7.3 substituted by PR994507 from 01Jan10]

A.7.3 From the following dates the employer must pay no less than the following percentage of the loading or penalty in this award:

First full pay period on or after	
1 July 2010	20%
1 July 2011	40%
1 July 2012	60%
1 July 2013	80%

[A.7.4 inserted by PR994507 from 01Jan10]

A.7.4 These provisions cease to operate from the beginning of the first full pay period on or after 1 July 2014.

A.8 Former Division 2B employers

[A.8 inserted by PR503625 ppc 01Jan11]

A.8.1 This clause applies to an employer which, immediately prior to 1 January 2011, was covered by a Division 2B State award.

A.8.2 All of the terms of a Division 2B State award applying to a Division 2B employer are continued in effect until the end of the full pay period commencing before 1 February 2011.

A.8.3 Subject to this clause, from the first full pay period commencing on or after 1 February 2011 a Division 2B employer must pay no less than the minimum wages, loadings and penalty rates which it would be required to pay under this Schedule if it had been a national system employer immediately prior to 1 January 2010.

A.8.4 Despite clause A.8.3, where a minimum wage, loading or penalty rate in a Division 2B State award immediately prior to 1 February 2011 was lower than the corresponding minimum wage, loading or penalty rate in this award, nothing in this Schedule requires a Division 2B employer to pay more than the minimum wage, loading or penalty rate in this award.

A.8.5 Despite clause A.8.3, where a minimum wage, loading or penalty rate in a Division 2B State award immediately prior to 1 February 2011 was higher than the corresponding minimum wage, loading or penalty rate in this award, nothing in this Schedule requires a Division 2B employer to pay less than the minimum wage, loading or penalty rate in this award.

A.8.6 In relation to a Division 2B employer this Schedule commences to operate from the beginning of the first full pay period on or after 1 January 2011 and ceases to operate from the beginning of the first full pay period on or after 1 July 2014.

Schedule B—Classifications, Skill Levels and Definitions

[Sched A renumbered as Sched B by PR988401 from 01Jan10]

B.1 Technical services stream

B.1.1 Level 1 Technical Employee

(a) Classification requirements

An employee at this level must be capable of performing:

- routine mechanical/electro-mechanical/electronic assembly;
- is responsible for the quality assurance of the employee's own work;
- works under direct supervision either individually or in a team environment;
- exercises discretion within the employee's level and training;
- able to follow specific verbal/written instructions relating to assembly assignments;
- able to measure accurately;
- able to inspect products and/or materials for conformity with established operational standards; and
- operates all lifting equipment incidental to the employee's work.

(b) Duties

- repetition work on automatic, semi-automatic or single purpose machines or equipment;
- assembles components using basic written, spoken and/or diagrammatic instructions in an assembly environment;
- basic soldering or butt and spot welding; and
- may be directed to perform other duties consistent with training and skill levels required for this position.

B.1.2 Level 2 Technical Employee

(a) Classification requirements

An employee at this level must be capable of performing work above, beyond and including the requirements of a Level 1 Technical Employee:

- is responsible for the quality assurance of the employee's own work;
- works under routine supervision either individually or in a team environment;
- exercises discretion within the employee's level of skills and training;

- follows specific verbal/written instructions relating to repair assignments; and
- able to maintain records or reports in accordance with company procedures.

(b) Duties

- receiving, dispatching, distributing, sorting, checking, packing, documenting and recording of goods, materials and components other than repetitive packing in a standard container or containers in which goods are ordinarily packed;
- basic inventory control in the context of a production process;
- operation of mobile equipment including forklifts, hand trolleys, pallet trucks, overhead cranes and winches;
- routine maintenance of mechanical, electro-mechanical, or electronic business equipment; and
- may be directed to perform other duties consistent with training and skill levels required for this position.

B.1.3 Level 3 Technician

(a) Classification requirements

An employee at this level must be capable of performing work above, beyond and including the requirements of a Level 2 Technical Employee:

- able to perform basic technical duties in accordance with company procedures;
- is responsible for the quality assurance of the employee's own work;
- works under routine supervision either individually or in a team environment;
- understands and applies quality control techniques;
- exercises good interpersonal and communication skills;
- exercises limited discretion within the scope of this grade;
- performs non-technical tasks incidental to the employee's work;
- able to inspect products and/or materials for conformity with established operational standards;
- able to apply a logical approach to solving technical problems;
- able to maintain reports or records in accordance with company procedures;
- able to effectively communicate and to work with other technicians, technical employees and customers in technical service situations;
- able to work independently at a customer site as assigned; and
- able to perform technical duties in accordance with company procedures on basic equipment.

(b) Duties

- applies routine diagnostic procedures;
- performs option checkout to ensure proper equipment performance to meet company standards and customer expectations;
- resolves routine malfunctions where cause and correction are readily identifiable;
- performs preventative maintenance and repair service on demand and/or to agreed schedules;
- renders technical support in conformity with the manufacturer's/company procedures and specifications;
- assists other employees by skill sharing and the provision of advice and assistance;
- reviews the performance of equipment being serviced;
- runs routine diagnostics on printed circuit boards; and
- may be directed to perform other duties consistent with the training and skill levels required for this position.

B.1.4 Level 4 Technician

(a) Classification requirements

An employee at this level must be capable of performing work above, beyond and including the requirements of a Level 3 Technician:

- performs technical service, support and installation of equipment;
- services and installs networks and maintains communication facilities;
- performs non technical tasks incidental to the employee’s work;
- able to work under routine supervision either individually or in a team environment;
- able to work independently at customer site as assigned;
- demonstrates and applies greater knowledge of the company's product;
- sufficient for diagnosis of complicated hardware production faults;
- able to exercise limited discretion in deviating from standard practice to solve problems within area of experience;
- able to apply logical, methodical, analytical approach to isolate and solve complicated hardware problems; and
- able to effectively communicate and to work with other technicians, technical employees, managers and customers in technical support situations.

(b) Duties

- installation or relocation of hardware;
- assists in the provision of on-the-job training;
- assists in the analysis and preparation of component failure impact plans; and
- may be directed to perform other duties consistent with training and skills levels required for this position.

B.1.5 Level 5 Technician

(a) Classification requirements

An employee at this level must be capable of performing work above, beyond and including the requirements of a Level 4 Technician:

- applies specialised technical knowledge to problem solve difficult or complex situations;
- able to exercise broad discretion in defining and solving technical problems where alternative choices may be applicable within standard practice;
- able to perform varied technical duties involving the use of a wide range of alternative procedures;
- capable of providing technical guidance and assistance as part of a work team;
- capable of assistance in the provision of training, in conjunction with other support staff;
- able to work under general supervision either individually or in a team environment;
- able to use system level diagnostics to isolate and correct problems; and
- able to apply verbal and written communication skills.

(b) Duties

- handles more complex/critical equipment;
- operates diagnostic systems to debug and isolate problems; and
- may be directed to perform other duties consistent with training and skills levels required for this position.

B.1.6 Level 6 Technician

(a) Classification requirements

An employee at this level must be capable of performing work above, beyond and including the requirements of a Level 5 Technician and consistent with this award:

- demonstrates an ability to respond to issues such as complex, unusual, intermittent or undefined malfunctions;

- researches problems and recommends solutions;
- maintains contact with problem situations and assists until a satisfactory resolution is achieved;
- summarises problem resolution and follow-up requirements for management. communicates final status to local management prior to leaving site;
- demonstrates an ability to review background of problems and performs on-site technical activities;
- conducts technical product performance improvement projects;
- identifies procedures to improve service support delivery;
- exercises broad discretion in defining and solving technical problems which may require the development of new alternative approaches;
- applies logical, methodical, analytical approaches to isolate and solve complex problems;
- able to lead a small team;
- works under limited supervision; and
- able to handle the technical functions of all aspects of computer systems, networks and communications.

(b) Duties

- provides assistance with installation planning;
- provides guidance to customers on component failure impact and problem determination procedures;
- provides guidance to employees engaged at lower levels;
- responsible for customer satisfaction and quality of service provided;
- provides technical direction and guidance to customers;
- handles more complicated projects; and
- may be directed to perform other duties consistent with training and skills levels required for this position.

B.2 Clerical and Administration Stream

B.2.1 Clerical and Administration Employee Level 1

(a) Role definition

An employee at this level:

- works under direct supervision with regular checking of progress;
- applies knowledge and skills to a limited range of tasks; and

- performs work within established routines, methods and procedures that are predictable and which require the exercise of limited discretion.

(b) Indicative tasks

The following tasks are indicative of those performed by an employee at this level:

- prepare for work;
- complete daily work activities;
- apply basic communication skills;
- plan skills development;
- use business equipment;
- follow workplace safety procedures;
- operate a personal computer;
- develop keyboard skills; and
- follow environmental work practices.

(c) Qualifications

An employee who holds a Certificate I in Business or equivalent would be classified at this level when employed to perform the functions in the Role definition and taking into account the Indicative tasks.

B.2.2 Clerical and Administration Employee Level 2

(a) Role definition

An employee at this level:

- works under routine supervision with intermittent checking;
- applies knowledge and skills to a range of tasks; and
- usually performs work within established routines, methods and procedures, which involve the exercise of some discretion and minor decision making.

(b) Indicative tasks

The following tasks are indicative of those performed by an employee at this level:

- work effectively in a business environment;
- organise and complete daily work activities;
- communicate in the workplace;
- work effectively with others;
- use business technology;

- process and maintain workplace information;
- prepare and process financial/business documents;
- deliver a service to customers;
- provide information to clients;
- implement improved work practices;
- participate in workplace safety procedures;
- handle mail;
- produce simple word-processed documents;
- create and use simple spreadsheets; and
- participate in environmental work practices.

(c) Qualifications

An employee who holds a Certificate II in Business or equivalent would be classified at this level when employed to perform the functions in the Role definition and taking into account the Indicative tasks.

B.2.3 Clerical and Administration Employee Level 3

(a) Role definition

An employee at this level:

- works under limited supervision with checking related to overall progress;
- may be responsible for the work of others and may be required to co-ordinate such work;
- applies knowledge with depth in some areas and a broad range of skills; and
- performs work within routines, methods and procedures where some discretion and judgment is required.

(b) Indicative tasks

The following tasks are indicative of those performed by an employee at this level:

- exercise initiative in a business environment;
- organise personal work priorities and development;
- contribute to effective workplace relationships;
- contribute to personal skill development and learning;
- organise workplace information;
- produce business documents;
- maintain business resources;

- maintain financial records;
- recommend products and services;
- deliver and monitor a service to customers;
- maintain workplace safety;
- support innovation and change;
- maintain environmental procedures;
- produce texts from shorthand notes;
- produce texts from notes;
- produce texts from audio transcription;
- design and develop text documents;
- create and use databases;
- create electronic presentations;
- organise schedules;
- process payroll;
- process accounts payable and receivable;
- maintain a general ledger;
- support leadership in the workplace;
- participate in work teams;
- support operational plans;
- provide workplace information and resourcing plans;
- support continuous improvement systems and processes;
- deliver and monitor a service to customers; and
- support a workplace learning environment.

(c) Qualifications

An employee who holds a Certificate III in Business or equivalent would be classified at this level when employed to perform the functions in the Role definition and taking into account the Indicative tasks.

B.2.4 Clerical and Administration Employee Level 4

(a) Role definition

An employee at this level:

- works without supervision, with general guidance on progress and outcomes sought;

- may be responsible for the organisation of the work of others;
- applies knowledge with depth in some areas and a broad range of skills;
- performs a wide range of tasks, and the range and choice of actions required will usually be complex; and
- performs work within routines, methods and procedures where discretion and judgment is required for both self and others.

(b) Indicative tasks

The following tasks are indicative of those performed by an employee at this level:

- develop work priorities;
- establish business networks;
- develop teams and individuals;
- analyse and present research information;
- maintain business technology;
- co-ordinate business resources;
- report on financial activity;
- promote products and services;
- co-ordinate implementation of customer service strategies;
- monitor a safe workplace;
- promote innovation and change;
- implement and monitor environmental policies;
- show leadership in the workplace;
- manage effective workplace relationships;
- lead work teams;
- implement operational plan;
- implement workplace information system;
- implement continuous improvement;
- develop teams and individuals;
- produce complex texts from shorthand notes;
- produce complex business documents;
- develop and use complex databases;
- develop and use complex spreadsheets;

- organise meetings;
- organise business travel;
- administer projects; and
- prepare financial reports.

(c) Qualifications

An employee who holds a Certificate IV in Business or equivalent would be classified at this level when employed to perform the functions in the Role definition and taking into account the Indicative tasks.

B.2.5 Clerical and Administration Employee Level 5

(a) Role definition

An employee at this level:

- may be responsible for the planning and management of the work of others;
- applies knowledge with substantial depth in some areas and a range of skills which may be varied or highly specific;
- applies knowledge and skills independently and non-routinely; and
- exercises considerable judgment and initiative.

(b) Indicative tasks

The following tasks are indicative of those performed by an employee at this level:

- manage personal work priorities and professional development;
- provide leadership in the workplace;
- establish effective workplace relationships;
- facilitate work teams;
- manage operational plan;
- manage workplace information systems;
- manage quality customer service;
- ensure a safe workplace;
- promote continuous improvement;
- facilitate and capitalise on change and innovation;
- develop a workplace learning environment;
- manage the establishment and maintenance of a workgroup network;
- manage meetings;

- plan or review administration systems;
- manage payroll; and
- manage business document design and development.

(c) Qualifications

An employee who holds a Diploma which is recognised within the Business Services Training Package or equivalent would be classified at this level when employed to perform the functions in the Role definition and taking into account the Indicative tasks.

B.2.6 Interpretation

The indicative tasks set out in Schedule B.2 are aligned to the units of competency in Business Services Training Australia's endorsed competency standards in the Business Services Training Package (BSB2001). In the event of a dispute over the meaning of the indicative tasks the relevant standards will be used to assist interpretation.

B.3 Commercial Travellers Stream

B.3.1 **Trainee Salesperson** means an employee engaged in accordance with the provisions of clause 15 of this award and who has not been assigned a sales quota and who is undertaking training as a Salesperson.

B.3.2 **Salesperson** means an employee who has undertaken an appropriate course of training and who has been assigned a sales quota for the sale of, and/or the soliciting of orders for business equipment and operating supplies therefore within one of the undermentioned levels:

(a) **Salesperson Level 1** means a salesperson who has been assigned a quota for the sale of all other forms of business equipment and operating supplies therefore which have not been referred to elsewhere in this clause.

(b) **Salesperson Level 2** means a salesperson who, without limiting the generality of the undermentioned types of business equipment has been assigned a quota and is engaged predominantly in the sale of the following electronic business equipment:

- accounting machines;
- billing (and/or invoicing) machines;
- data transceiving equipment;
- magnetic tape encoders and storage equipment;
- units of peripheral equipment and/or terminal equipment capable of on-line connection to, but excluding, the central processing unit (CPU); and
- visible record computers.

(c) **Salesperson Level 3** means a salesperson who has been assigned a quota predominantly for the sale of business equipment specifically designated as a digital computer and not referred to elsewhere in this clause.

Schedule C—School-based Apprentices

[Sched B renumbered as Sched C by PR988401 from 01Jan10]

C.1 This schedule applies to school-based apprentices. A school-based apprentice is a person who is undertaking an apprenticeship in accordance with this schedule while also undertaking a course of secondary education.

C.2 A school-based apprenticeship may be undertaken in the trades covered by this award under a training agreement or contract of training for an apprentice declared or recognised by the relevant State or Territory authority.

C.3 The relevant minimum wages for full-time junior and adult apprentices provided for in this award, calculated hourly, will apply to school-based apprentices for total hours worked including time deemed to be spent in off-the-job training.

C.4 For the purposes of clause C.3, where an apprentice is a full-time school student, the time spent in off-the-job training for which the apprentice must be paid is 25% of the actual hours worked each week on-the-job. The wages paid for training time may be averaged over the semester or year.

C.5 A school-based apprentice must be allowed, over the duration of the apprenticeship, the same amount of time to attend off-the-job training as an equivalent full-time apprentice.

C.6 For the purposes of this schedule, off-the-job training is structured training delivered by a Registered Training Organisation separate from normal work duties or general supervised practice undertaken on the job.

C.7 The duration of the apprenticeship must be as specified in the training agreement or contract for each apprentice but must not exceed six years.

C.8 School-based apprentices progress through the relevant wage scale at the rate of 12 months progression for each two years of employment as an apprentice.

C.9 The apprentice wage scales are based on a standard full-time apprenticeship of four years (unless the apprenticeship is of three years duration). The rate of progression reflects the average rate of skill acquisition expected from the typical combination of work and training for a school-based apprentice undertaking the applicable apprenticeship.

C.10 If an apprentice converts from school-based to full-time, all time spent as a full-time apprentice will count for the purposes of progression through the relevant wage scale in addition to the progression achieved as a school-based apprentice.

C.11 School-based apprentices are entitled pro rata to all of the other conditions in this award.

Schedule D—Supported Wage System

[Sched C renumbered as Sched D by PR988401 from 01Jan10; varied by PR994507, PR998748, PR510670, PR525068, PR537893, PR542141, PR551831, PR568050, PR581528, PR592689, PR606630, PR709080]

D.1 This schedule defines the conditions which will apply to employees who because of the effects of a disability are eligible for a supported wage under the terms of this award.

[D.2 varied by PR568050 ppc 01Jul15]

D.2 In this schedule:

approved assessor means a person accredited by the management unit established by the Commonwealth under the supported wage system to perform assessments of an individual's productive capacity within the supported wage system

assessment instrument means the tool provided for under the supported wage system that records the assessment of the productive capacity of the person to be employed under the supported wage system

disability support pension means the Commonwealth pension scheme to provide income security for persons with a disability as provided under the *Social Security Act 1991*, as amended from time to time, or any successor to that scheme

relevant minimum wage means the minimum wage prescribed in this award for the class of work for which an employee is engaged

supported wage system means the Commonwealth Government system to promote employment for people who cannot work at full award wages because of a disability, as documented in the Supported Wage System Handbook. The Handbook is available from the following website: www.jobaccess.gov.au

SWS wage assessment agreement means the document in the form required by the Department of Social Services that records the employee's productive capacity and agreed wage rate

D.3 Eligibility criteria

D.3.1 Employees covered by this schedule will be those who are unable to perform the range of duties to the competence level required within the class of work for which the employee is engaged under this award, because of the effects of a disability on their productive capacity and who meet the impairment criteria for receipt of a disability support pension.

D.3.2 This schedule does not apply to any existing employee who has a claim against the employer which is subject to the provisions of workers compensation legislation or any provision of this award relating to the rehabilitation of employees who are injured in the course of their employment.

D.4 Supported wage rates

D.4.1 Employees to whom this schedule applies will be paid the applicable percentage of the relevant minimum wage according to the following schedule:

Assessed capacity (clause D.5)	Relevant minimum wage
%	%
10	10
20	20
30	30
40	40
50	50
60	60
70	70
80	80
90	90

[D.4.2 varied by PR994507, PR998748, PR510670, PR525068, PR537893, PR551831, PR568050, PR581528, PR592689, PR606630, PR709080 ppc 01Jul19]

D.4.2 Provided that the minimum amount payable must be not less than $87 per week.

D.4.3 Where an employee's assessed capacity is 10%, they must receive a high degree of assistance and support.

D.5 Assessment of capacity

D.5.1 For the purpose of establishing the percentage of the relevant minimum wage, the productive capacity of the employee will be assessed in accordance with the Supported Wage System by an approved assessor, having consulted the employer and employee and, if the employee so desires, a union which the employee is eligible to join.

D.5.2 All assessments made under this schedule must be documented in an SWS wage assessment agreement, and retained by the employer as a time and wages record in accordance with the Act.

D.6 Lodgement of SWS wage assessment agreement

[D.6.1 varied by PR994507; PR542141 ppc 04Dec13]

D.6.1 All SWS wage assessment agreements under the conditions of this schedule, including the appropriate percentage of the relevant minimum wage to be paid to the employee, must be lodged by the employer with the Fair Work Commission.

[D.6.2 varied by PR994507; PR542141 ppc 04Dec13]

D.6.2 All SWS wage assessment agreements must be agreed and signed by the employee and employer parties to the assessment. Where a union which has an interest in the award is not a party to the assessment, the assessment will be referred by the Fair Work Commission to the union by certified mail and the agreement will take effect unless an objection is notified to the Fair Work Commission within 10 working days.

D.7 Review of assessment

The assessment of the applicable percentage should be subject to annual or more frequent review on the basis of a reasonable request for such a review. The process of review must be in accordance with the procedures for assessing capacity under the supported wage system.

D.8 Other terms and conditions of employment

Where an assessment has been made, the applicable percentage will apply to the relevant minimum wage only. Employees covered by the provisions of this schedule will be entitled to the same terms and conditions of employment as other workers covered by this award on a pro rata basis.

D.9 Workplace adjustment

An employer wishing to employ a person under the provisions of this schedule must take reasonable steps to make changes in the workplace to enhance the employee's capacity to do the job. Changes may involve re-design of job duties, working time arrangements and work organisation in consultation with other workers in the area.

D.10 Trial period

D.10.1 In order for an adequate assessment of the employee's capacity to be made, an employer may employ a person under the provisions of this schedule for a trial period not exceeding 12 weeks, except that in some cases additional work adjustment time (not exceeding four weeks) may be needed.

D.10.2 During that trial period the assessment of capacity will be undertaken and the percentage of the relevant minimum wage for a continuing employment relationship will be determined.

[D.10.3 varied by PR994507, PR998748, PR510670, PR525068, PR537893, PR551831, PR568050, PR581528, PR592689, PR606630, PR709080 ppc 01Jul19]

D.10.3 The minimum amount payable to the employee during the trial period must be no less than $87 per week.

D.10.4 Work trials should include induction or training as appropriate to the job being trialled.

D.10.5 Where the employer and employee wish to establish a continuing employment relationship following the completion of the trial period, a further contract of employment will be entered into based on the outcome of assessment under clause D.5.

Schedule E—National Training Wage

[Sched D renumbered as Sched E by PR988401; substituted by PR994507 from 01Jan10; varied by PR997901, PR509052, PR522883, PR536686, PR545787, PR551609, PR566690, PR579782; deleted by PR593816 ppc 01Jul17]

Schedule F—Part-day Public Holidays

[Sched F inserted by PR532630 ppc 23Nov12; renamed and varied by PR544519 ppc 21Nov13; renamed and varied by PR557581, PR573679, PR580863, PR598110, PR701683 ppc 21Nov18]

This schedule operates where this award otherwise contains provisions dealing with public holidays that supplement the NES.

F.1 Where a part-day public holiday is declared or prescribed between 7.00pm and midnight on Christmas Eve (24 December in each year) or New Year's Eve (31 December in each year) the following will apply on Christmas Eve and New Year's Eve and will override any provision in this award relating to public holidays to the extent of the inconsistency:

(a) All employees will have the right to refuse to work on the part-day public holiday if the request to work is not reasonable or the refusal is reasonable as provided for in the NES.

(b) Where a part-time or full-time employee is usually rostered to work ordinary hours between 7.00pm and midnight but as a result of exercising their right under the NES does not work, they will be paid their ordinary rate of pay for such hours not worked.

(c) Where a part-time or full-time employee is usually rostered to work ordinary hours between 7.00pm and midnight but as a result of being on annual leave does not work, they will be taken not to be on annual leave between those hours of 7.00pm and midnight that they would have usually been rostered to work and will be paid their ordinary rate of pay for such hours.

(d) Where a part-time or full-time employee is usually rostered to work ordinary hours between 7.00pm and midnight, but as a result of having a rostered day off (RDO) provided under this award, does not work, the employee will be taken to be on a public holiday for such hours and paid their ordinary rate of pay for those hours.

(e) Excluding annualised salaried employees to whom clause F.1(f) applies, where an employee works any hours between 7.00pm and midnight they will be entitled to the appropriate public holiday penalty rate (if any) in this award for those hours worked.

(f) Where an employee is paid an annualised salary under the provisions of this award and is entitled under this award to time off in lieu or additional annual leave for work on a public holiday, they will be entitled to time off in lieu or pro-rata annual leave equivalent to the time worked between 7.00pm and midnight.

(g) An employee not rostered to work between 7.00pm and midnight, other than an employee who has exercised their right in accordance with clause F.1(a), will not be entitled to another day off, another day's pay or another day of annual leave as a result of the part-day public holiday.

This schedule is not intended to detract from or supplement the NES.

Schedule G—Agreement to Take Annual Leave in Advance

[Sched G inserted by PR582973 ppc 29Jul16]

Link to PDF copy of Agreement to Take Annual Leave in Advance.

Name of employee: _____

Name of employer: _____

The employer and employee agree that the employee will take a period of paid annual leave before the employee has accrued an entitlement to the leave:

The amount of leave to be taken in advance is: ____ hours/days

The leave in advance will commence on: ___/___/20___

Signature of employee: _____

Date signed: ___/___/20___

Name of employer representative: _____

Signature of employer representative: _____

Date signed: ___/___/20___

[If the employee is under 18 years of age - include:]

I agree that:

if, on termination of the employee's employment, the employee has not accrued an entitlement to all of a period of paid annual leave already taken under this agreement, then the employer may deduct from any money due to the employee on termination an amount equal to the amount that was paid to the employee in respect of any part of the period of annual leave taken in advance to which an entitlement has not been accrued.

Name of parent/guardian: _____

Signature of parent/guardian: _____

Date signed: ___/___/20___

Schedule H—Agreement to Cash Out Annual Leave

[Sched H inserted by PR582973 ppc 29Jul16]

Link to PDF copy of Agreement to Cash Out Annual Leave.

Name of employee: _____

Name of employer: _____

The employer and employee agree to the employee cashing out a particular amount of the employee's accrued paid annual leave:

The amount of leave to be cashed out is: ____ hours/days

The payment to be made to the employee for the leave is: $_____ subject to deduction of income tax/after deduction of income tax (strike out where not applicable)

The payment will be made to the employee on: ___/___/20___

Signature of employee: _____

Date signed: ___/___/20___

Name of employer representative: _____

Signature of employer representative: _____

Date signed: ___/___/20___

Include if the employee is under 18 years of age:

Name of parent/guardian: _____

Signature of parent/guardian: _____

Date signed: ___/___/20___

Schedule I—Agreement for Time Off Instead of Payment for Overtime

[Sched I inserted by PR584081 ppc 22Aug16]

Link to PDF copy of Agreement for Time Off Instead of Payment for Overtime.

Name of employee: _____

Name of employer: _____

The employer and employee agree that the employee may take time off instead of being paid for the following amount of overtime that has been worked by the employee:

Date and time overtime started: ___/___/20___ ____ am/pm

Date and time overtime ended: ___/___/20___ ____ am/pm

Amount of overtime worked: _____ hours and _____ minutes

The employer and employee further agree that, if requested by the employee at any time, the employer must pay the employee for overtime covered by this agreement but not taken as time off. Payment must be made at the overtime rate applying to the overtime when worked and must be made in the next pay period following the request.

Signature of employee: _____

Date signed: ___/___/20___

Name of employer representative: _____

Signature of employer representative: _____

Date signed: ___/___/20___

ATTACHMENT C

About the F17 statutory declaration

Employer's statutory declaration in support of an application for approval of an enterprise agreement (other than a greenfields agreement)

About enterprise agreements

Enterprise agreements are agreements made at the enterprise level that contain terms and conditions of employment.

The Fair Work Commission (the Commission) assesses and approves enterprise agreements. It can also assist in the process of making agreements and can deal with disputes arising under the terms of an agreement. Before the Commission can approve an agreement, it must be satisfied that the agreement meets the requirements for approval set out in the Fair Work Act 2009, including that the employees will be 'better off overall' under the agreement than they would be if the relevant award applied.

For information about the process that employers and employees must follow to make an enterprise agreement see Guide – Making an enterprise agreement on the Commission's website.

Who can use this form

Use this form if:

- a Form F16 – Application for approval of an enterprise agreement (other than a greenfields agreement) has been or is being lodged with the Commission **and**
- you are an employer that is covered by the agreement (or an officer or authorised employee completing this form for an employer).

Lodgment and service of your completed form

1. **Within 14 calendar days** after the agreement is made, you must lodge with the Commission:

   ☐ This statutory declaration **and**

   ☐ A copy of the notice of employee representational rights (see question 2.4) **and**

   ☐ Copies of any materials provided to employees to notify them of the time and place at which the vote was to occur and the voting method to be used (see question 2.6) **and**

   ☐ Copies of any materials used to explain to employees the terms of the agreement and the effect of those terms (see question 2.7) **and**

   ☐ Copies of any materials used to ensure the explanation was provided in an appropriate manner taking into account the particular circumstances and needs of the relevant employees (see question 2.8).

   If you are lodging this form at the same time as the Form F16, you can use the Commission's Online Lodgment Service. Alternatively, you can lodge the form by post, fax, email or in person at the Commission office in your state or territory, either at the same time as the Form F16 or separately.

   Each employer that will be covered by the agreement must notify employees who will be covered by the agreement that an application has been made to the Commission for approval of

the agreement. Notification should be made through the usual means that are adopted by the employer for communicating with employees.

2. **As soon as practicable** after this statutory declaration is lodged with the Commission, you must **serve a copy** of this statutory declaration on:

   - each other employer that is covered by the agreement **and**
   - each employee organisation that was a bargaining representative **and**
   - any employee bargaining representative of whom you are aware.

Where to get help

Commission staff & resources

Commission staff cannot provide legal advice. However, staff can give you information on:

- Commission processes
- how to make an application to the Commission
- how to fill out forms
- where to find useful documents such as legislation and decisions
- other organisations that may be able to assist you.

The Commission's website www.fwc.gov.au also contains a range of information that may assist.

Throughout this form

This icon appears throughout the form. It indicates information to help you complete the form.

Legal or other representation

Representation is where another person (such as a lawyer or employee of a union or employer organisation) speaks or acts on a party's behalf in relation to a matter. There is no requirement to be represented at the Commission. A party will need the permission of the Commission member dealing with the matter if the party wishes to be represented by a lawyer or paid agent at a conference or hearing, unless the lawyer or paid agent is:

- an employee or officer of the party, or
- a bargaining representative that is representing the party, or
- an employee or officer of an employee or employer organisation, an association of employers, or a peak council, that is representing a party.

If you represent a party in proceedings you will need to make sure you are well prepared.

Glossary of common terms

Applicant – This is the person or organisation making an application.

Party – A party is an Applicant, a Respondent or another person or organisation involved in a matter or case that is brought to the Commission.

Respondent – The person or organisation responding to an application made by an Applicant.

Service – Serving a document means giving a copy of the document to a person or organisation, usually to the other party to the matter. You can serve a document in a number of

ways, including by email, fax, express or registered post, or in person. Parts 7 and 8 of the Fair Work Commission Rules 2013 deal with service.

Privacy

The Commission collects the information (including personal information) provided to it in this form in order to deal with the application for approval of the agreement. The information will be included on the case file, and the Commission may disclose the information to the other parties to this matter and to other persons. For more details of the Commission's collection, use and disclosure of this information, please see the Privacy notice for this form, or ask for a hard copy to be provided to you.

Remove this cover sheet and keep it for future reference – it contains useful information.

Form F17 – Employer's statutory declaration in support of an application for approval of an enterprise agreement (other than a greenfields agreement)

Fair Work Act 2009, s.185; Fair Work Commission Rules 2013, rule 24 and Schedule 1

This is a statutory declaration in support of an application to the Fair Work Commission for approval of an enterprise agreement under Part 2-4 of the Fair Work Act 2009.

STATUTORY DECLARATION

Statutory Declarations Act 1959

I,

Name	Lisa Bounds		
Postal address	PO Box 313		
Suburb	North Ryde		
State or territory	NSW	**Postcode**	1670
Occupation	Senior Human Resources Business Partner		

make the following declaration under the *Statutory Declarations Act 1959:*

Part 1 – Preliminary

1.1 What is the name of the employer?

Legal name of employer	Canon Australia Pty Ltd
Employer's ACN (if a company)	66 005 002 951
Employer's trading name or registered business name	
Employer's ABN	

1.2 Is the employer a "designated emergency management body" as defined in s.195A(4) and (5) of the Fair Work Act 2009?

☐ Yes

☒ No

1.3 What is the name of the agreement?

Write the name exactly as it appears in the title clause of the agreement.

Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2019.

1.4 Has a scope order, a low paid authorisation or a majority support determination been issued in relation to the agreement?

☐ Yes

☒ No

If you answered **Yes** – Provide the unique print number (PR) and the date the order was made

Print number

Date of order

Part 2 – Requirements for approval

Nominal expiry date

2.1 What is the nominal expiry date of the agreement? What is the number of the clause in the agreement that specifies the date?

See section 186(5) of the Fair Work Act 2009. The nominal expiry date must not be more than 4 years after the day on which the Commission approves the agreement.

Nominal expiry date	Clause 4
Clause number	3 years after the date of approval.

Scope of the agreement

2.2 Does the agreement cover all the employees of the employer?

See s.186(3) and s.186(3A) of the Fair Work Act 2009. The Commission must be satisfied that the group of employees covered by the agreement was fairly chosen.

☐ Yes

☒ No

If you answered **No** – What group of employees is covered by the agreement and what group of employees is not covered? Explain why you think the Commission should be satisfied that the group covered was fairly chosen. If appropriate, describe how the group of employees covered is geographically, operationally or organisationally distinct.

The group of employees covered by the Agreement are employees who are engaged by Canon throughout Australia who are classified within the Technical Consultants/Senior Tehcnical Consultant stream that is outlined at Appendix B of the Agreement. (see also clause 3 of the Agreement).

This group was fairly chosen because of their operational distinctness as the employees primarily carry out the same fundamental role of servicing business equipment throughout Australia that is located at customer premises. The roles are the same across all locations and States.

In addition, these employees spend most of their time travelling to various sites, and carry most of their tools and spare parts with them. They are not physically located in a Canon office.

The group is also operationally distinct as they report through our Services & Support function, reporting to Supervisors and subsequently Service Managers.

2.3 What was the notification time for the agreement?

The notification time is defined in s.173(2) of the Fair Work Act 2009. The notification time is the time when: the employer agrees to bargain, or initiates bargaining, for the agreement; or a majority support determination in relation to the agreement comes into operation; or a scope order in relation to the agreement comes into operation; or a low-paid authorisation in relation to the agreement that specifies the employer comes into operation.

Notification time

On Friday 14 September 2018, Canon and the ASU agreed to enter bargaining in relation to the terms of a new agreement, which would replace our existing agreement following it's expiry.

2.4 What steps did the employer take to give notice of the right to be represented by a bargaining representative to each employee who will be covered by the agreement and is employed at the notification time for the agreement?

See section 173 of the Fair Work Act 2009 and the prescribed notice of employee representational rights in Schedule 2.1 of the Fair Work Regulations 2009. The employer must take all reasonable steps to give the prescribed notice to each employee who will be covered by the agreement and is employed at the notification time for the agreement. The employer must give the prescribed notice as soon as practicable, and not later than 14 days, after the notification time.

Describe each step taken and state the date on which it was taken.

You must lodge a copy of the notice given to employees with this form. If multiple notices were provided, explain why.

Steps taken	**Date**
A Notice of Employee Representational Rights (in accordance with s.173 of the Fair Work Act and Schedule 2.1 of the Fair Work Regulations 2009) was provided to all employees to be covered by the Agreement on 17 September 2018. A copy of the Notice/Email (**Notice**) is **attached as Attachment B.** The steps taken to give the Notice to each employee was to send the Notice to all employees to be covered by the Agreement on 17 September 2018 via email. The email account to which the Notice was sent was each individual employees' Canon email account. As noted above at section 2.2, the employees to be covered by the Agreement perform the fundamental role of servicing business equipment at various customer sites and, as such, they spend most of their time working remotely and are not physically located in a Canon office. This means the primary method of communication between Canon and the employees to be covered by the Agreement is via their Canon email. All employees to be covered by the Agreement have access and use their Canon email account on a regular basis via either their Canon provided mobile device, and/or laptop.	17 September 2018

Agreement genuinely agreed

2.5 What steps were taken by the employer to ensure that the relevant employees either:

a. were given a copy of the written text of the agreement and any other material incorporated by reference in the agreement during the access period, or

b. had access to a copy of the above materials throughout the access period?

See section 180(2)(a) of the Fair Work Act 2009. The employer must take all reasonable steps to ensure relevant employees are given or have access to the materials at the specified time. The 'relevant employees' are defined in s.180(2) as the employees employed at the time who will be covered by the agreement. The 'access period' is defined in s.180(4) as the 7-day period immediately before the start of the voting process for the agreement.

Describe each step taken and provide the date on which it was taken.

Step taken	Date
In addition to the matters set up in 2.7.	
An email was sent to all employees to be covered by the Agreement notifying them that a web page was available on Canon's intranet that contained copies of: - a clean copy of the Agreement (after all the changes agreed between Canon and the bargaining representatives had been made from the existing 2015 Agreement); - a marked up version of the Agreement (for comparison which indicates all of the changes that had been made from the existing 2015 Agreement); and - documents referred to within the Agreement, comprising: 1. Canon Australia Fleet Policy 2. Canon's Remuneration, Allowance & Subsidy Policy 3. Canon's Travel & Entertainment Policy 4. The Superannuation Trust Deed 5. Canon Study Leave Policy 6. GPS Tracking Policy 7. Parental Leave 8. Code of Conduct All employees to be covered by the Agreement have access and use their Canon email account on a regular basis via either their Canon provided mobile device, and/or laptop. Further, all employees covered by the Agreement have remote access to Canon's intranet 24/7.	21 January 2019
Canon's intranet web page Pixel was updated to include a copy of the revised Agreement (both a clean copy and a marked up copy) and the documents referred to within the Agreement.	21 January 2019

2.6 What steps did the employer take to notify the relevant employees by the start of the access period of:

a. the time and place at which the vote was to occur, and

b. the voting method to be used?

See s.180(3) of the Fair Work Act 2009. The employer must take all reasonable steps to notify relevant employees by the specified time.

Do not simply state that the relevant employees were notified by the specified time. Describe the steps taken and the information given to employees, and provide the date on which it was taken. Also lodge copies of any materials that were provided to employees to notify them of the time and place at which the vote was to occur and the voting method to be used.

Step taken and the information given	**Date of step**
Steps taken were as follows:	
1. An email was sent out on 24 January 2019 to all employees covered by the Agreement confirming the voting date, time, place and voting method. As noted in 2.4 above, all employees to be covered by the Agreement have access and use their Canon email account on a regular basis via either their Canon provided mobile device, and/or laptop. Further, all employees covered by the Agreement have remote access to Canon's intranet 24/7.	24 January 2019
2. Ballot conducted on the 8th of February 2019	8 February 2019

2.7 What steps were taken by the employer to explain the terms of the agreement, and the effect of those terms, to the relevant employees?

See section 180(5)(a) of the Fair Work Act 2009. The employer must take all reasonable steps to ensure the explanation is given to relevant employees.

Do not simply state that the terms of the agreement were explained to relevant employees. Describe the steps taken and what was explained, and provide the date on which each step was taken. Also lodge copies of any materials that were used to explain to employees the terms of the agreement and the effect of those terms.

Step taken and the explanation given	**Date of step**

Steps taken were as follows:

1. On 14 September, Canon sent an email to all employees covered by the Agreement notifying them that we would be entering into Good Faith Bargaining with the union and representatives for a new agreement.	14 September 2018
2. Notice of representational rights was sent by Canon.	17 September 2018
3. Canon then set up fortnightly meetings to engage and bargain in good faith with the union, other bargaining representatives and employees.	16 October 2018/
4. Further Canon and its leadership team, then had meetings in each of the local Canon Branch offices with all the employees covered by the Agreement to discuss the log of claims from both the union and the individual representatives, and to seek to understand from any employees covered by the Agreement if they had feedback or questions about the Agreement, log of claims and the terms of the Agreement.	30 October 2018/ 14 November 2018/ 27 November 2018/

A total of 6 road show/information sessions were run by Canon. The dates, locations and times of the road shows/information sessions are set out directly below:

Date	City
18 October	Canberra
19 October	Melbourne/Clayton
25 October	Sydney CBD
26 October	Macquarie Park
1 November	Adelaide
2 November	Perth

At each road show/information session, the Canon representative delivered a PowerPoint presentation which explained the terms of the Agreement and the current log of claims for which we were negotiating, and confirmed for the employees the effect of those terms to the employees, and in addition explained to the employees covered by the Agreement, that the majority of the current Agreement was not being renegotiated for the purposes of renewal, and actually that the union had put forward a proposal to roll-over the current terms of the Agreement. These sessions gave the employees covered by the Agreement access to the Canon representative and provided for a good understanding of the differences between the Agreement and the proposed new enterprise agreement.

At the conclusion of each road show/information session, Mrs Rebecca Ullman, General Manager, Services and Support (**Mrs Ullman**), made herself available to answer individual questions from employees on a one-on-one basis.

In addition to the above, after each bargaining session, the Employee Bargaining Representatives had local meetings in each branch, to discuss process, log of claims and agreement terms, including how they were different from the 2015 Agreement.

An email was sent to the employees covered by the Agreement on 29 November, detailing the proposed changes and sought feedback from the employees covered by the Agreement, including seeking questions where employees covered by the Agreement may not have understood the terms. Feedback could be made in person, with Mrs. Ullman, Lisa Bounds, Senior HR Business Partner, or Paul Gravina, Senior Manager Direct Services, or via email, as all employees to be covered by the Agreement have access and use their Canon email account on a regular basis via either their Canon provided mobile device, and/or laptop.

Feedback was received from 6 of the employees covered by the Agreement, in relation to the application of the remuneration increase via a pool, and the use of email to update the employees covered by the Agreement, for which the employee felt that all updates should come via the Employee Bargaining Representative. Noted. The Employee Bargaining Representative were asked verbally to go back to the employees covered by the Agreement to seek feedback, and provide that to Canon.

On 5 December, 2018 a final document was circulated with the Union and the Employee Bargaining Representatives, to confirm alignment of the proposed Agreement pre vote, and to seek final feedback from the employees if there were questions pertaining to the terms of the Agreement via the Employee Bargaining Representatives.

5 December 2018

5. An email was sent on 24 January 2019 to all employees to be covered by the Agreement which contained links to:
    - a clean copy of the Agreement (after all the changes agreed between Canon and the bargaining representatives had been made from the existing 2015 Agreement);
    - a marked up version of the Agreement (for comparison which indicates all of the changes that had been made from the existing 2015 Agreement); and
    - documents referred to within the Agreement, comprising:

    1. *Canon Australia Fleet Policy*
    2. *Canon's Remuneration, Allowance & Subsidy Policy*
    3. *Canon's Travel & Entertainment Policy*
    4. *The Superannuation Trust Deed*
    5. *Canon Study Leave Policy*
    6. *GPS Tracking Policy*
    7. *Parental Leave*
    8. *Code of Conduct*

6. This email notified employees to be covered by the Agreement that Canon would welcome feedback from all the employees covered by

the Agreement and if there were any parts that the employees did not understand or had questions about they could seek support from either Rebecca Ullman, General Manager Services & Support, or Lisa Bounds, Senior HR Generalist.

8. No employees to be covered by the Agreement are under the age of 21 years old.

9. Canon is not aware of any employees for whom English is not spoken and written on a regular basis. In that regard, all employees to be covered by the Agreement are required to have a sufficient proficiency in the English language that allows them to communicate with Canon's customers in English and communicate with Canon via email in English (using a Canon provided mobile device and laptop) to receive instructions with respect to the allocation and performance of their duties. As such, none of the employees to be covered by the Agreement have difficulties in understanding written or verbal communications in the English language.

2.8 When the employer explained the terms of the agreement, and the effect of those terms, to the relevant employees, what was done to take into account the particular circumstances and needs of the relevant employees?

See s.180(5)(b) of the Fair Work Act 2009. The employer must take all reasonable steps to ensure that the explanation is provided in an appropriate manner. Examples of employees whose circumstances and needs are to be taken into account include employees from non-English speaking backgrounds, young employees and employees who don't have a bargaining representative.

Do not simply state that the employer took reasonable steps to ensure the explanation was provided in an appropriate manner. Describe the steps taken, identifying the relevant group of employees addressed, and provide the date on which each step was taken. Also lodge copies of any materials that were used to ensure the explanation to employees was provided in an appropriate manner (if not lodged in response to question 2.7).

Step taken	Relevant group of employees addressed	Date of step
	Canon is not aware of any employees covered by the Agreement for whom English is not spoken and written on a regular basis	
	No employees covered by the Agreement were under the age of 21 years.	

2.9 Provide the following dates:

See ss.173, 181, and 182 of the Fair Work Act 2009.

Event	Date
The last date that a notice of the right to be represented by a bargaining representative ("notice of employee representational rights") was given to an employee who will be covered by the agreement and is employed at the notification time for the agreement.	17 September 2018
The date voting for the agreement commenced (that is, the first date that an employee was able to cast a vote).	8 February 2019
The date that the agreement was **made** (that is, the date on which the voting process by which the employees approved the agreement concluded).	8 February 2019

2.10 Provide the following details about the vote on the agreement:

See s.53 of the Fair Work Act 2009. An enterprise agreement covers an employee if it is expressed to cover the employee.

At the time of the vote, how many employees were covered by the agreement?	74
How many of these employees cast a valid vote?	70
How many of these employees voted to approve the agreement?	59

Interaction with the National Employment Standards

2.11 Do any terms of the agreement exclude in whole, or in part, the National Employment Standards?

See Part 2-2 – National Employment Standards of the Fair Work Act 2009.

☐ Yes

☒ No

If you answered **Yes** – List the terms below.

2.12 Are any terms of the agreement detrimental to an employee in any respect when compared to the National Employment Standards?

☐ Yes

☒ No

If you answered **Yes** – List the terms below.

Right of entry

2.13 Does the agreement contain any terms that deal with the rights of officials or employees of employee organisations to enter the employer's premises?

See ss.186(4) and 194(f) and (g) of the Fair Work Act 2009. Terms providing entitlements to enter premises to investigate suspected contraventions or hold discussions with employees, or for the exercise of a State or Territory occupational health and safety right, are unlawful if they are not in accordance with Part 3-4 of the Fair Work Act 2009.

☒ Yes

☐ No

If you answered **Yes**– List the clauses in the agreement dealing with entry to premises below.

Clause 52 UNIONS

Unlawful terms

2.14 Does the agreement contain any of the following kinds of terms? Tick the relevant box below if the agreement does contain that kind of term:

☐ discriminatory terms (as defined in s.195)

☐ objectionable terms (as defined in s.12)

☐ terms dealing with employee rights in relation to unfair dismissal (see s.194(c) and s.194(d))

☐ designated outworkers terms (as defined in s.12)

☐ terms that deal with the taking of industrial action that are inconsistent with Part 3-3 of the Fair Work Act 2009 (see s.194(e))

☐ terms that do not comply with the superannuation contribution requirements for default fund employees (see s.194(h))

☐ objectionable emergency management terms (as defined in s.195A)

If you have ticked any of the above, list the relevant terms of the agreement below.

Required terms

2.15 Provide the clause numbers in the agreement for the following required terms:

Required term	Clause number
Dispute resolution procedure (see s.186(6))	Clause 39
Flexibility term (see s.202(1) and s.203)	Clause 12

Consultation term (see s.205(1) and s.205(1A))	Clause 8

Particular types of workers

2.16 Are employees covered by the agreement also covered by a modern award that defines or describes them as shiftworkers for the purposes of the National Employment Standards?

See s.196 of the Fair Work Act 2009. The Commission must be satisfied that the agreement defines or describes the employees as shiftworkers for the purposes of the National Employment Standards.

☒ Yes

☐ No

If you answered **Yes** – does the agreement define or describe the employees as shiftworkers for the purpose of the National Employment Standards?

☒ Yes – List the clause(s) in the agreement that define shiftworkers for the purposes of the National Employment Standards.

☐ No

Clause 40(h)

2.17 Tick the relevant boxes below if the agreement:

☐ covers any pieceworkers (see s.197)

☐ covers any outworkers (see s.200)

☐ contains terms for school-based apprentices or trainees that provide for loadings in lieu of paid leave or paid absence (see s.199)

If you have ticked any of the above, list the relevant clause(s) of the agreement below.

Part 3 – Better off overall test

See s.186(2)(d) and s.193 of the Fair Work Act 2009.

The *better off overall test* requires the Commission to be satisfied, as at the time the application for approval of the agreement by the Commission was made, that each award covered employee, and each prospective award covered employee, would be better off overall under the agreement than the relevant modern award.

Modern awards

3.1 List the modern award(s), if any, that cover the employer and any of the employees covered by the agreement.

You should include the MA number for each award. This number can be found using the title search on the find an award search facility on the Commission's website.

Business Equipment Award 2010 [MA000021]

Translating classifications

3.2 Are any of the employee classifications in the agreement different from the classifications in any of the modern award(s) listed in your answer to question 3.1?

☒ Yes

☐ No

If you answered **Yes** – For each modern award, use the following table to identify how the classifications in the agreement correspond to the classifications in the modern award.

Name of modern award:

Classification in modern award	**Corresponding classification in agreement**
Business Equipment Award 2010 Classification	Comparable Agreement Level
Technical Employee Level 1	Trainee
Technical Employee Level 2	Customer Service Technician
Technician Level 4	Customer Service Engineer
Technician Level 6	Senior Customer Service Engineer

Attach additional tables if there is more than one modern award.

Improvements and reductions

3.3 Does the agreement contain any terms or conditions of employment that are *more beneficial* than equivalent terms and conditions in the modern award(s) listed in question 3.1?

☒ Yes

☐ No

If you answered **Yes** – List the terms and conditions of the agreement that are **more beneficial** than equivalent terms and conditions in the modern award(s). Your answer should indicate whether all or only some of the employees are affected and, if only some employees are affected, identify the groups of employees affected. Include relevant clause numbers.

See attachment A

3.4 Does the agreement confer any entitlements that are not conferred by the modern award(s) listed in question 3.1?

☐ Yes

☒ No

If you answered **Yes** – List the entitlements conferred by the agreement that are **not conferred** by the modern award(s). Your answer should indicate whether all or only some of the employees are affected and, if only some employees are affected, identify the groups of employees affected. Include relevant clause numbers.

3.5 Does the agreement contain any terms or conditions of employment that are *less beneficial* than equivalent terms and conditions in the modern award(s) listed in question 3.1?

☐ Yes

☒ No

If you answered **Yes** – List the terms and conditions of the agreement that are **less beneficial** than equivalent terms and conditions in the modern award(s). Your answer should indicate whether all or only some of the employees are affected and, if only some employees are affected, identify the groups of employees affected. Include relevant clause numbers.

3.6 Does the agreement omit any entitlements that are conferred by the modern award(s) listed in question 3.1?

☐ Yes

☒ No

If you answered **Yes**– List the entitlements conferred by the modern award(s) that are **omitted** by the agreement. Your answer should indicate whether all or only some of the employees are affected and, if only some employees are affected, identify the groups of employees affected. Include relevant clause numbers.

3.7 Does the agreement contain any terms or conditions of employment different to those under the modern award(s) listed in question 3.1, which you have not already identified in your answers to questions 3.3 to 3.6?

☐ Yes

☒ No

If you answered **Yes** – List these terms and conditions. Your answer should indicate whether all or only some of the employees are affected and, if only some employees are affected, identify the groups of employees affected.

Exceptional circumstances (where the agreement fails the better off overall test)

3.8 If you think that the agreement does not pass the better off overall test, are there exceptional circumstances the Commission should consider when deciding whether approving the agreement would not be contrary to the public interest?

Section 189 of the Fair Work Act 2009 sets out when the Commission may approve an enterprise agreement that does not pass the better off overall test.

☐ Yes

☒ No

If you have answered **Yes** – Explain what the exceptional circumstances are.

Part 4 – Statistical information

This information is necessary for the Commission to assess whether the employer took all reasonable steps to ensure that the terms of the agreement, and the effect of those terms, were explained to the relevant employees and the explanation was provided in an appropriate manner taking into account the particular circumstances and needs of the relevant employees, for example:

(a) employees from culturally and linguistically diverse backgrounds;
(b) young employees;
(c) employees who did not have a bargaining representative for the agreement. (s.180 (5) and s.180(6) of the Fair Work Act 2009).

In addition, this information is collected to enable the General Manager of the Fair Work Commission to comply with the statutory reporting obligations in s.653 of the Fair Work Act 2009 and to be provided to the Department of Employment for inclusion in the Department's Workplace Agreements Database.

4.1 What is the primary activity of the employer?

For example music retailer, plumbing contractor, steel fabricator, etc.

Business services

4.2 Tick the relevant boxes for the states or territories this agreement will be operating in.

☒ Australian Capital Territory

☒ New South Wales

☒ Northern Territory

☒ Queensland

☒ South Australia

☐ Tasmania

☒ Victoria

☒ Western Australia

☐ An external territory

4.3 Of the employees covered by this agreement, how many employees are in the following demographic groups?

Demographic group	Number of employees
Female	1
Non-English speaking background	Not aware
Aboriginal or Torres Strait Islander	0
Disabled	0

Demographic group	Number of employees
Part-time	0
Casual	0
Under 21 years of age	0
Over 45 years of age	63

4.4 List the full name(s) of all collective agreement(s) (including ID numbers) that presently apply to any employees covered by this agreement.

Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement, 2015.

The employer covered by this previous enterprise agreement is Canon Australia Pty Ltd. The agreement ID number is AE417507.

Consent to contact by researchers

The Fair Work Commission undertakes research with participants in agreement approval matters to ensure a high quality process. Some research may be undertaken by external providers on behalf of the Fair Work Commission.

Do you consent to the contact details provided on page 1 of this form being provided to an external provider of research services for the sole purpose of inviting you to participate in this research?

☒ Yes

☐ No

Signature of person making the declaration

A statutory declaration must be made before a **prescribed person**. For a full description of prescribed persons please see the Commission's Guide – Statutory declarations on the Commission's website.

I understand that a person who intentionally makes a false statement in a statutory declaration is guilty of an offence under section 11 of the *Statutory Declarations Act 1959*, and I believe that the statements in this declaration are true in every particular.

Signature

Declared at (place) Macquarie Park in the state of NSW

on (day) of (month) (year)

Before me,

Signature of person before whom the declaration is made

Full name of person before whom declaration is made

Qualification of person before whom declaration is made	
Address of person before whom declaration is made	
Suburb	
State or territory	**Postcode**
Phone number	

Note 1: A person who intentionally makes a false statement in a statutory declaration is guilty of an offence, the punishment for which is imprisonment for a term of 4 years – see section 11 of the *Statutory Declarations Act 1959*.

Note 2: Chapter 2 of the *Criminal Code* applies to all offences against the *Statutory Declarations Act 1959* – see section 5A of the *Statutory Declarations Act 1959*.

					Agreement, whereas they would not have under the Award
Rest period after performing overtime duty	23(g) and 23(h)	• Employees should have at least **ten** consecutive hours off duty between work on successive days. Full-time employees only will be paid at ordinary rates for any hours not worked to allow them to have the 10 hour break. • If an employee resumes without 10 hours break the employee will be paid double time and is then entitled to be absent until the employee has had 10 consecutive hours off duty without loss of pay.	30.6, 21.1,	• Employees should have at least **ten** consecutive hours off duty between work on successive days. Full-time employees only will be paid at ordinary rates for any hours not worked to allow them to have the 10 hour break. • If an employee resumes without 10 hours break the employee will be paid double time and is then entitled to be absent until the employee has had 10 consecutive hours off duty without loss of pay. • Does not apply if the employee's salary is more than $60,185 per annum • Does not apply to call-backs or in circumstances where an employee provides technical service or technical support over the telephone or via remote access arrangements	Yes – under the Agreement, there is no exclusion in the event of call backs or where work is performed via phone or remote access arrangements, nor is there an exclusion based on salary

Comparison between the Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement 2019 and the *Business Equipment Award 2010*

Description	Canon Australia Pty Ltd (Technical Consultants) Enterprise Agreement 2019		*Business Equipment Award 2010*		Better Off under Agreement than Award?
Provision	**Clause**	**Description**	**Clause**	**Description**	

Standby allowance	26	• Employees rostered on stand by will be paid a stand by allowance of $13.09 for each hour. The allowance will increase as follows:
		  • 1 March 2019 - $13.09 per hour
		  • 1 March 2020 - $13.33 per hour
		  • 1 March 2021 - $13.58 per hour
		• Employees on standby who are called to work are entitled to a minimum payment of 3 hours
		• Employees on standby who are called to work are entitled to payments at overtime rates
			30.5	• An allowance of 59.42% of the standard hourly rate for a level 4 technical employee will be paid to an employee for the period the employer requires the employee to remain in readiness for a return to work outside the employee's ordinary hours
				• The allowance is $11.96 per hour
				• Employees on standby who are called to work are entitled to a minimum payment of 3 hours
				• The allowance is not paid while the employee is receiving overtime pay
					• Yes – call back provisions are the same
					• Despite the fact the hourly allowance is lower, the higher hourly rates of pay received by employees under the Agreement more than compensates for the difference.
					• Employees also receive the Additional Benefits

Call back	26	• Employees who are not on stand-by but that are called back to work are entitled to payment for 4 hours at the overtime rate • Employees on standby who are called to work are entitled to a minimum payment of 3 hours at overtime rates	30.4	• An employee recalled to work overtime after leaving work will be paid a minimum of four hours • An employee on stand by will be paid for a minimum of three hours at the appropriate overtime rate for each time recalled	Yes – there is also no exclusion under the Agreement where the work is performed over the phone or via remote access arrangements

Form F18 – Statutory declaration of employee organisation in relation to an application for approval of an enterprise agreement (other than a greenfields agreement)

Fair Work Act 2009, s.185; Fair Work Commission Rules 2013, rule 24 and Schedule 1

This is a statutory declaration in support of an application to the Fair Work Commission (the Commission) for approval of an enterprise agreement under Part 2-4 of the Fair Work Act 2009.

STATUTORY DECLARATION

Statutory Declarations Act 1959

I,

Name	Linda White		
Postal address	Ground Floor, 116 Queensberry Street		
Suburb	Carlton South		
State or territory	Victoria	**Postcode**	3053
Occupation	Assistant National Secretary		

make the following declaration under the *Statutory Declarations Act 1959:*

1. I am an officer or authorised employee of the following employee organisation (the Union):

Name of Union	Australian Municipal, Administrative, Clerical and Services Union

2. This declaration relates to an application for approval of the following enterprise agreement (the Agreement):

Name of Agreement	Canon Australia Pty Ltd (Technical Consultants) Agreement 2019
Name(s) of employer(s) to be covered by the Agreement	Canon Australia Pty Ltd

3. Is the Union a bargaining representative for the Agreement?

See s.176 of the Fair Work Act 2009. An employee organisation will be a bargaining representative if it has a member who will be an employee covered by the Agreement (unless the employee has appointed another person as his or her bargaining representative or has revoked the status of the organisation as his or her bargaining representative) and the organisation is entitled to represent the industrial interests of the employee in relation to work to be performed under the Agreement.

☒ Yes
☐ No

4. Does the Union want to advise the Commission about whether it supports approval of the Agreement?

☒ Yes
☐ No

5. If you answered yes to question 4 – Does the Union support approval of the Agreement by the Commission?

☒ Yes
☐ No

If you answered **No** – Specify the grounds on which the Union opposes approval of the Agreement, using numbered paragraphs.

Attach additional pages if necessary.

6. Does the Union want to advise the Commission about whether it agrees with one or more statements in an employer's statutory declaration (the Employer's Declaration)?

☒ Yes
☐ No

If you answered **Yes**- Provide details of the Employer's Declaration.

Name of person who made the Employer's Declaration	Sarah Marshall
Date of Employer's Declaration	22/02/2019

7. If you answered Yes to question 6- Set out the statements which the Union wishes to advise it agrees and disagrees with and state why the Union agrees or disagrees with them, using numbered paragraphs.

The union agrees to all the statements in the Canon form 17

Attach additional pages if necessary.

8. Does the Union give notice pursuant to s.183 of the Fair Work Act 2009 that it wants the Agreement to cover it?

☒ Yes
☐ No

Consent to contact by researchers

The Fair Work Commission undertakes research with participants in agreement approval matters to ensure a high quality process. Some research may be undertaken by external providers on behalf of the Fair Work Commission.

FAIR WORK COMMISSION

BEFORE THE FAIR WORK COMMISSION
MATTER NO. AM2014/285
S. 156 - Four yearly review of modern awards – Social, Community, Home Care and Disability Services Industry Award 2010

STATEMENT OF DEBORAH LEE ANDERSON

I, Deborah Lee Anderson, Shared and Supported Living Co-ordinator of [redacted], The Leisure Life Village in the State of New South Wales, say;

1. I am a Delegate of the Australian Services Union, New South Wales.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on 17 July 1958, I am 61 years old.

4. I am single and live with my aged mother to help support her. My mother is 81 and I assist her by doing the shopping and taking her out on weekends to visit her specialist.

My work history

5. I have worked as a Shared and Supported Living Co-ordinator since on or about 14 June 2018.

6. I hold a Certificate 4 in Youth and Community, a Diploma in Community Services, a Certificate 2 in Frontline Business Management, and Certificate 2 in Leadership.

7. During the early years of my life I was raising my children and worked part time on and off as a bar attendant. This was over a period of about 25 years, although for about 2 years at the end of this period I worked as a teacher's aide at Lake Macquarie High School. I then worked as a teacher's aide at Toogoolawa, a private school for disadvantaged youth, for about three years.

8. In 2013, I entered the Social and Community Services sector when I began work with Life Without Barriers as a Disability Support Worker. In June 2016, I was employed by St Vincent de Paul as an NDIS Local Area Co-ordinator. In June 2018 when I returned to work with Life Without Barriers in my current role as a Shared and Supported Living Co-ordinator. Life Without Barriers is a not for profit community organisation and a registered NDIS provider.

Current employment

9. On 18 June 2018, I commenced work with Life Without Barriers as a Shared and Supported Living Co-ordinator. I am a full time employee. Attached and marked **Annexure A** is a copy of my contract of employment.

10. I am employed under the *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award')**. I am paid a yearly salary of $74,865.75.

11. I manage up to 30 frontline staff in two group homes. One group home has five high needs medical clients. These client's needs are constantly changing. I must continually monitor their needs to make sure we meet their requirements. The second home has two women with their own particular needs and compliance requirements.

12. Managing two homes in different physical locations makes it difficult to monitor and ensure compliance in both places. It is common for me to wake up through the night with worries about what hasn't been done. I monitor emails in personal time on weekends and evenings, when not rostered on, because management still send emails at this time and I feel obliged to stay on top of things and to do work outside hours unpaid

13. My job involves many different tasks:

    a. This includes overseeing rostering, conducting formal supervisions, finding staff to fill roster gaps as needed, conducting team meetings, and interviewing frontline staff for vacancies.

    b. I am also responsible for ensuring staff are up to date with training; monitoring and writing incident reports and monitoring follow up actions; monitoring Work Health and Safety systems and practices: conducting work cover processes: and monitoring restricted work practices. I also have to ensure that all compliance documentation is in line with NDIS Commission requirements.

    c. I am responsible for ordering the stationary requirements of the houses; placing orders for client medical supplies; (e.g. incontinence, ventral stomach (peg) feeding requirements): arranging house maintenance: and ensuring first aid compliance.

    d. I liaise with external services for the clients, (eg medical practitioners, therapists, dieticians, dentists), and am responsible for ensuring that their recommendations are endorsed and followed, (eg a transfer procedure). I also monitor client finance processes, monitor medications to ensure they are in place and current, and notify staff of any medication changes.

My hours of work

14. I work 76 hours over a fortnight on weekdays starting at 8.00 am until 4:30 pm. My pattern of daily work doesn't change. However, I am also on a rotating roster to perform On Call duties which can overlap my regular hours and extend well beyond them. I only receive a roster for my on call duties.

15. I am usually rostered to be on call once a week. If I am rostered to be on call during the week my normal hours of work will change. I will start work at 11.30 am and finish at 8.00 pm. I will start on call duties 5.00 pm and finish at 8.00 am the following morning. This means that there is a three hour overlap between starting my on call duties and the end of my normal rostered work. However, there are still urgent tasks that need to be done, and no-one else takes over those tasks in my place. Staff and management still contact me during this period. I usually start begin working at around 8.00 am, even if I am not rostered to start until 11.30 am. I am sometimes rostered to be on call on weekends. Then I will be rostered between 9.00 am and 9.00am.

16. Attached and marked are copies of my on call roster for the period 17 June 2019 to 16 December 2019.

On Call Duties

17. When I am rostered on call, I am expected to perform a wide range of duties. Typically, this includes responding to emergencies, administrative tasks such as rostering, providing phone advice and assisting less experienced staff with their issues. However, I can be called for any reason. I have to make an assessment over the phone of what action should be taken. I am

also responsible for reporting and recording all incidents. On a busy shift this can mean continuing after the shift to ensure all incidents have been logged and recorded.

18. When I am on call, I will usually take calls from staff at group homes when another staff member has not turned up or a staff member becomes sick and has to leave work early. I will then find another staff member to fill in for the absent staff member. This can require calling many people. It is not unusual for me to make up to 12 calls to find an available person. I am also required to contacting our labour hire agency when agency staff do not attend work as they were rostered. I will also rearrange rosters that flow on from this change to manage overtime and breaks.

19. Ultimately, if there are no staff available to cover a shift then I have to cover the absent workers duties. This means I will need to return to the workplace and directly support our clients. I must also continue responding to 'on call' calls after I have been recalled to work. This has happened twice so far since starting on the on call roster in August 2018.

20. Being on call also involves assisting staff to find information. This may require contacting other staff to find out where the information is located. It also involves advising on medication issues, and recommending corrective action when equipment is not functioning correctly.

21. I am also required to assist staff in our group homes to deal with emergencies that arise. For example, when clients have escalated behaviour, such as becoming violent or have seizures. This requires talking the staff through the situation, helping resolve the issue, ensuring incident reports are made, and logging the occurrence.

22. I am paid an above Award allowance of $30.00 when I am rostered on call between Monday and Friday, and $50.00 when I am rostered on call on weekends and public holidays. When I am working while rostered on call I am paid at the rate of time and half for the first 2 hours and double time after that.

Other work outside of rostered working hours

23. I am not usually required to work out of hours unless I am rostered to be on call. If I am contacted out of hours, this is usually just a telephone call from a new coordinator or a more junior staff member with a quick enquiry. There is no overt expectation from my employer to do this work. However, there is a clear expectation that I will be available to answer calls from management outside of working hours. But this does not happen very often and has only minor impact on me.

Impact of on call work

24. When I am on call, I cannot leave my home as I need to have phone, internet and computer access. I must also be ready and able to respond to any requests for work. I cannot go anywhere nor do anything else. This is particularly difficult on weekends when doing an on call shift from 9am until 9am. This causes high anxiety for me as I could be called out to any site to handle difficult incidences. This has occurred 3 times so far, and once resulted in me having to do a 23 hour shift. This can also result in me being required to attend at two places at the one time which is highly stressful as I can't go to a house to attend an incident when I am already attending an incident at another house.

The Australian Business Industrial remote response claim

25. I have been show a copy of ABI's remote response draft determination. I understand that it means that from 5pm until 10pm at night, I could be called to respond to an issue and I may only be paid for 15 minutes. There is no obligation for my employer to roster me to be on call.

26. I am greatly concerned by this proposal. The proposed 15 minute minimum engagement is completely inadequate payment for the inconvenience and stress involved with being contacted out of hours. You can never know what call may come through. It could be enormously inconvenient. What if I was out with a family member and I received a call that required me to attend a house? What would I do with my family member? How could this payment reimburse me for the significant imposition on my family life.

27. I was not previously considering leaving my job, but if something like this proposal was brought in as compulsory I would seriously consider leaving the industry. Doing work out of hours is only worthwhile for the additional pay it provides. Without significant remuneration to provide for not just the time involved, but the inconvenience as well, it is not worthwhile doing this work.

WE
LIFE WITHOUT BARRIERS
VE

Item 15	Personal/Carers Leave	10 days for each 12 months of service (pro-rated for part time employees), accrued and cumulative in accordance with the National Employment Standards.
Item 16	Guarantee of Annual Earnings	Not applicable
Item 17	Termination Notice Period after expiration of Probationary Period	The Employee or Organisation will provide 4 weeks' written notice to the other party of their intention to terminate employment. If the Employee is at least 45 years of age at the time of Termination of Employment and has completed at least 2 years' continuous service at the time the notice is given, the Organisation will increase the notice period by 1 additional week. The Organisation may provide payment in lieu of the equivalent notice period or part thereof.
Item 18	Tool of Trade Vehicle	A tool of trade vehicle is provided to the position outlined in Item 4 of Schedule 1. As per the Vehicle Eligibility & Allowances Policy Guideline, a tool of trade vehicle is required to meet the inherent requirements of the position. The allocation of this vehicle is subject to change by the Organisation. Tool of trade vehicles may be utilised for personal use in accordance with the Fleet Management Policy, however they do not form part of an employee's remuneration package and the vehicle is to be made available for use by others in the Organisation as required. Utilising a tool of trade vehicle for business travel restricts you from claiming kilometre reimbursements.

LIFE WITHOUT BARRIERS
VE

1. APPOINTMENT

1.1 Commencement

a) Subject to the terms of this Agreement, the Organisation appoints the Employee to the Position set out in Item 4 of Schedule 1 and the Employee accepts that appointment (**the Employment**).

b) The Organisation will employ the Employee from the Commencement Date specified in Item 1 of Schedule 1 until the Employment is terminated by either party in accordance with this agreement.

c) Subject to the terms of this Agreement, the appointment is for the term outlined in Item 6 of Schedule 1.

1.2 Prior Employment or Agreements

a) This Agreement replaces all previous contracts of employment and other employment arrangements between you and the Organisation.

b) Where this Agreement replaces an existing employment Agreement, the Organisation will recognise continuity of service and your period of prior service with the Organisation for the purposes of all employment related entitlements. For the purpose of calculating your period of continuous service with the Organisation, your employment by the Organisation is deemed to have commenced on the date listed in Item 7 of Schedule 1.

1.3 Probation

a) From the Start Date the Employee is subject to the probationary period specified in Item 10 of Schedule 1.

b) During the probationary period, either the Organisation or the Employee may terminate the Employee's employment by giving one (1) weeks' notice in writing or, in respect of the Organisation, payment in lieu of such notice.

1.4 Reporting

a) The Employee will report to the Position described in Item 8 of Schedule 1 or such other position as nominated by the Organisation.

1.5 Work Location & Travel

a) Due to the nature of services provided by the Organisation, the Employee may reasonably be required to travel to and perform work at various work sites or locations at the Organisation's discretion. The Employee will not be entitled to any additional remuneration for such travel, but travel expenses for approved travel will be paid for by the Organisation in accordance with the Organisation's travel policies.

1.6 Hours of Work

a) The Employee's ordinary hours of work are set out in Item 9 of Schedule 1. The Employee may be required to work reasonable additional hours as required to fulfil the requirements of their role. The Organisation may require the Employee to work varying hours each week in order to satisfy the requirements of their position. In this case the Organisation may average the ordinary hours of work over a period of time greater than one week. This averaging period is outlined in Item 9 of Schedule 1.

b) The organisation may vary these hours from time to time after giving a minimum of 7 days' notice to the Employee

c) The Employee's Total Fixed Remuneration includes compensation for all hours the Employee is required to work. The Employee is not entitled to receive payments for reasonable additional hours worked.

WE
LIFE WITHOUT BARRIERS
VE

2. PROBITY, CONDITIONS AND CONSENTS

2.1 Probity

a) The Organisation is committed to the safety and protection of clients we support. This means that we need to make sure that all employees, whether in client-facing roles or not, do not pose any risk to our clients or to the Organisation. To ensure this, all employees, must undergo suitability and probity checks in accordance with State and Federal legislation and internal policy requirements.

b) The employee promises to obtain and maintain the probity checks and relevant Federal and State based clearances listed in Item 12 of Schedule 1, and any other checks as reasonably required by the Organisation.

c) This offer of employment is conditional upon the Organisation receiving satisfactory probity and Federal and State based clearances from the Employee. If such clearances are not provided, the offer of employment may be withdrawn.

d) The Organisation may unilaterally terminate this Agreement if the Employee is unable to obtain or maintain satisfactory probity and Federal and State based clearances by providing the notice period prescribed in clause 6.1 of this Agreement or payment in lieu of notice.

2.2 Conditions of Employment

a) The Employee must have the necessary skills and experience to carry out the duties and responsibilities referred to in the Position Description.

b) The Employee must be competent to properly carry out their duties and any representations as to qualifications, experiences, skills and employment history must be true and correct. The Organisation may at any time request reasonable evidence of the Employee's ability to meet these requirements.

c) In addition to clause 2.2 (b), it is a condition of employment that the Employee maintains the specific qualifications, licences, and professional admissions set out in Item 11 of Schedule 1. Additionally, the Employee may be required to undertake mandatory training in order to meet the inherent requirements of the role as listed in the Position Description. Failure by the employee to maintain the qualifications or satisfactorily complete mandatory training for any reason (including suspended qualifications) may result in the Organisation terminating this agreement in accordance with clause 6.1.

d) The Employee must be eligible to work in Australia and meet all Australian immigration requirements to work in the position set out in Item 4 of Schedule 1.

2.3 Consent

The Employee consents to all or any acts or omissions by or on behalf of the Organisation (whether occurring before or after this consent is given) which infringe or may infringe any of the Employee's Moral Rights in relation to any works and other Intellectual Property Rights described in clause 5.2 made or created by the Employee in the course of the Employee's employment with the Organisation. Furthermore, the Employee acknowledges that as a result of providing such consent, the Employee waives their right to bring any Moral Rights claim against the Organisation.

2.4 Extent of consent

The Employee's consent under this clause is irrevocable and extends to:

a) the Organisation's licensees and successors in title in respect of the Works; and

b) any person authorised by the Organisation or its licensees or successors in title to do acts comprised in the copyright for the Works.

2.5 Genuine consent

The Employee acknowledges that the consent in this clause is a genuine consent given under Part IX of the *Copyright Act 1968* (Cth) and has not been induced by duress or any false or misleading statement.

3. EMPLOYEE'S DUTIES

3.1 General and alternative duties

The Employee will serve the Organisation in the Position set out in Item 4 of Schedule 1 and perform the Duties set out in the Position Description. The Employee may reasonably be directed to perform alternative duties within the Employee's skills, capabilities and expertise as required.

3.2 Client Care

A primary duty of all employees, whether directly client facing or not, is to ensure the delivery of service to clients is of the highest quality. We expect all employees to contribute to our clients feeling safe and respected and to make sure they are cared for and protected from abuse, neglect and exploitation. All employees have a responsibility to report the inappropriate, or suspected inappropriate, treatment of clients to their manager.

3.3 Work Health, Safety and Environment

The Employee is obliged to follow all reasonable and lawful instructions, policies and procedures relating to health, safety, and the environment as directed by Officers or duly authorised delegates.

3.4 Fitness for Duty

a) The Employee must maintain the required fitness for duty necessary to perform the inherent requirements of the Position.

b) Where the Organisation has concerns about the Employee's fitness for duty or capacity to perform the inherent requirements, the Organisation may direct the employee to undergo a medical assessment by a nominated registered medical practitioner at the Organisation's expense. Any resulting recommendations or diagnosis provided by the registered medical practitioner may be relied upon by the Organisation to determine the Employee's ongoing ability to safely perform the terms of this agreement.

3.5 Additional duties

The Employee must:

a) devote the whole of the Employee's time, attention and skill during Ordinary Hours of Work and at other times as reasonably necessary, to the duties of office;
b) faithfully and diligently perform the duties and exercise the powers entrusted to the Employee from time to time;
c) promote the interests and prosperity and enhance the reputation of the Organisation;
d) comply with all reasonable and lawful orders and directions given to the Employee by the Organisation;
e) notify the Organisation of any charges or convictions gained during the course of the Employment;
f) comply with the Organisation's policies and procedures as amended from time to time;
g) not be engaged or interested in any other business or occupation (whether paid or unpaid), accept appointments as a director or other officer of any corporation or to the boards of committees or charities without the prior written consent of the Organisation; and
h) promptly disclose any breaches of the Organisation's policy and procedures including any serious misconduct or wrong doings (including but not limited to your own, other employees, volunteers, carers and/or external representatives to the Organisation).

4. REMUNERATION AND ENTITLEMENTS

4.1 Total Fixed Remuneration

a) Unless agreed otherwise, the Employee's Total Fixed Remuneration is comprised of the following:

i. Base Remuneration as set out at Item 5 of Schedule 1;
ii. Superannuation payable at 9.5%; and
iii. any additional benefits set out at Item 5 of Schedule 1.

b) The Total Fixed Remuneration (including the Base Remuneration, Superannuation and Additional Benefits) as set out in Item 5 of Schedule 1, is expressed as the full-time equivalent remuneration for the Position. Part-time employees will receive a pro-rata amount of the Total Fixed Remuneration based on the Ordinary Hours of Work as outlined in Item 9 of Schedule 1.

c) The Organisation will pay to the Employee the Base Remuneration component (pro-rata for part-time employees) of the Total Fixed Remuneration by electronic funds transfer on a fortnightly basis into the Employee's nominated account.

d) The Employee may apply to receive part of the Total Fixed Remuneration by way of other benefits which can be lawfully provided by the Organisation, in accordance with any relevant policies of the Organisation, as varied from time to time. The Employee may apply to receive these benefits, provided that:
i. the election is consistent with any policy of the Organisation, as varied from time to time; and
ii. the costs of the election to the Organisation (including any liability for Fringe Benefits Tax) do not result in the total payments and benefits being paid or provided to the Employee exceeding the Total Fixed Remuneration.

e) The Employee's Base Remuneration as set out at Item 5 of Schedule 1 includes and absorbs all entitlements the Employee may have to any and all minimum rates of pay, loadings, allowances, penalty rates or overtime payments (other than as set out in this Agreement) that arise under any statute, any applicable modern award or any other applicable industrial agreement.

f) Any remuneration set out at Item 5 of Schedule 1 that is in excess of the minimum rate of pay under any applicable statute or applicable industrial instrument may be set-off against (ie be taken to satisfy) any other monetary obligations imposed by that statute or instrument.

g) The rates used for calculating any set-off will be the relevant rates contained in the applicable instrument or prescribed under the applicable statute.

4.2 Superannuation

a) The Organisation will make superannuation contributions in accordance with the Employer Superannuation Component and for any additional amounts elected by the Employee to any complying superannuation fund nominated in writing by the Employee or, if no fund is nominated by the Employee, the Organisation's nominated superannuation fund provider at the time.

b) The Employee's Total Fixed Remuneration will be altered with any changes to the Employer Superannuation Component as provided by relevant legislation.

4.3 Expense Benefit Payment

a) As a Public Benevolent Institution, the Employee may be eligible to benefit from tax savings by packaging a portion of their Base Remuneration.

b) The Organisation bears no responsibility or liability, nor has any discretion as to whether you are eligible to receive this benefit. We recommend you seek independent advice in relation to the Expense Benefit Payment and any such matters.

4.4 Review

a) The performance of the Employee and the amount of the Base Remuneration may be reviewed as part of an annual review process which takes effect at such times as the Organisation in its absolute discretion determines throughout the Employment in accordance with Organisation policies. There is no expectation that remuneration will increase as a result of the annual review.

b) In undertaking such a review the Organisation may take into account all circumstances that it considers relevant, including but not limited to the performance of the Employee, the performance of the Organisation, the prevailing economic conditions, the Organisation's business requirements and the Organisation's capacity to pay.

4.5 Annual leave

a) The Employee will be entitled to Annual Leave as outlined in Item 14 of Schedule 1 and in accordance with the entitlements provided by the Fair Work Act or any subsequent legislation. Annual Leave will be accrued progressively throughout the year.

b) Where possible, Annual Leave is to be taken at times agreed between the parties, having regard to the Organisation's operational requirements.

4.6 Long service leave

The Employee will accrue Long Service Leave in accordance with the Governing Law of the State set out in Item 13 of Schedule 1 and any relevant Organisation policy.

4.7 Personal/Carer's leave

The Employee is entitled to paid Personal/Carers leave as outlined in Item 15 of Schedule 1 and in accordance with the entitlements provided by the Fair Work Act or any subsequent legislation.

4.8 Other leave

All other leave, including unpaid leave, compassionate leave, parental leave, parental partner leave, and community service leave, will be provided to the Employee in accordance with the Organisation's policy or the Fair Work Act, whichever is more generous.

4.9 Public holidays

The Employee will be entitled to paid absence from work on the public holidays referred to in the Fair Work Act. The Organisation may request the Employee to work on a public holiday and this will be a matter for discussion between the Employee and the Organisation at the time of any such request.

4.10 Guarantee of Annual Earnings

The Employee is not provided with a Guarantee of Annual Earnings

5. PROTECTION OF BUSINESS

5.1 Confidentiality Obligations

a) Employee's obligations

The Employee must:

i. keep any **Confidential Information** which the Employee has received (whether before the date of this Agreement and in whatever capacity) secret and confidential, except to the extent that the Employee is required by law to disclose it;
ii. take all reasonable and necessary precautions to maintain the secrecy and prevent the disclosure of any Confidential Information;
iii. refrain from using or attempting to use Confidential Information in any manner which will or may cause or be calculated to cause injury or loss to the Organisation or its customers or clients; and
iv. not, except in the ordinary and proper course of employment with the Organisation, use or disclose or allow to be used or disclosed any Confidential Information to any third party without the prior written consent of the Organisation.

b) Survival of obligations

The Employee's confidentiality obligations survive the termination of this Agreement.

5.2 Ownership of Intellectual Property Rights

a) Ownership

i. Subject to any written agreement to the contrary, all Intellectual Property Rights created by the Employee solely or jointly with others in the course of the Employee's employment automatically vest in the Organisation.
ii. Employee must disclose Inventions.
iii. The Employee must disclose to the Organisation the full details of any Invention. The Employee agrees that all rights in such Invention will belong to the Organisation.

b) Assistance

The Employee must at the request and expense of the Organisation do all things necessary or desirable to vest in the Organisation or its nominee absolutely as legal and beneficial owner all rights, title and interest in:

i. any Intellectual Property Rights created by the Employee in the course of the Employee's employment, including executing any documents which are reasonably required by the Organisation; and
ii. any Invention, including securing patent or other protection anywhere in the world and executing any documents which are reasonably required by the Organisation.

c) Inventions

The Employee must not disclose or make use of any Invention with external parties without the Organisation's prior written consent.

d) No prejudice

The Employee will not do or fail to do any act which would, or might, prejudice the rights of the Organisation under this clause.

e) Survival of obligations

The Employee's intellectual property obligations survive the termination of this Agreement.

6. TERMINATION AND SUSPENSION

6.1 Notice of Termination

a) This Agreement may be terminated at any time by either the Organisation or the Employee giving the notice prescribed in Item 17 of Schedule 1, or by the Organisation giving the Employee pay in lieu of notice for part or all of the notice period

b) Following the giving of notice by the Organisation or the Employee, the Organisation at it discretion do any of the following (or a combination thereof):

i. make payment in lieu of part or all of the notice period

ii. require the Employee to perform alternative or no duties

iii. require the Employee not to attend work

6.2 Immediate Termination – Summary Dismissal

The Organisation may terminate this Agreement immediately without notice, if the Employee commits any act constituting serious misconduct including, but not limited to, acts of dishonesty, theft, fraud, violence, serious breaches of occupational health & safety procedures, wilful disobedience, breach of duty, or persistent breaches of the Organisation's policies or provisions of this Agreement.

6.3 Return of Equipment

On termination of this Agreement the Employee must return to the Organisation all property of the Organisation including all Confidential Information, books, any physical means of storing the Organisation's Confidential Information such as, but not limited to: laptops, tablets, mobile phones, discs or USB sticks, documents, papers, materials, credit cards, cars and keys held by or under the control of the Employee.

6.4 Deductions

Subject to law, the Organisation has the right to seek to recover any sums owed to the Organisation. The Employee agrees to provide authorisation to the Organisation in writing to deduct from their pay or otherwise recover any amounts owing to the Organisation.

6.5 Suspension

The Organisation may suspend the Employee from their Employment for any period on full pay, including to investigate any concerns the Organisation has regarding the Employee's performance or conduct, or a suspected breach of this Agreement. The Employee must continue to comply with all terms of this Agreement and the policies and procedures of the Organisation during the period of suspension.

6.6 Termination for Redundancy

In the event the Employee's employment is terminated on the basis of redundancy, the Employee will be entitled to a severance payment in accordance with the Fair Work Act.

7. GENERAL

7.1 Policies, Procedures and Code of Conduct

a) The Employee agrees to comply with the Organisation's policies and procedures.

b) These policies, procedures and code of conduct may be amended and varied by the Organisation from time to time. It is the obligation of the Employee to ensure they understand the terms and conditions of the Organisation's policies and procedures and maintains currency with these policies and procedures as they may change from time to time at the organisation's discretion.

c) The employee acknowledges and accepts that the Organisation's policies and procedures are not incorporated into this Agreement and do not form part of the Employee's contract of employment.

7.2 Governing law

This Agreement is governed by the laws of the State detailed in Item 13 of Schedule 1.

7.3 Severance

If a clause is void, illegal or unenforceable, it may be severed without affecting the enforceability of the other provisions in this Agreement.

7.4 Continued operation

Despite any change to the Employee's place of work, position description, Duties, Remuneration or any matters contained in Schedule 1, this Agreement will continue to apply to the parties unless otherwise agreed in writing.

7.5 Entire Agreement

This Agreement supersedes all previous agreements or representations in respect of the Employee's employment by the Organisation and embodies the entire Agreement between the parties.

7.6 Amendment

This Agreement can only be amended by agreement in writing by both parties. Any understanding, agreement, representation or warranty outside of this Agreement which relates to the Employee's employment has no effect unless it is an agreement in writing, with terms duly authorised by a relevant delegate of the Organisation, and signed by both parties.

7.7 Effect of waiver

The waiver by either party of a breach of any provision may not be held to be a waiver of any later breach of the provision or a waiver of the provision itself.

8. DEFINITIONS

In this Agreement, unless the context of the clause indicates an alternative intention:

Agreement means this agreement.

Award means the *Social, Community, Home Care and Disability Services Industry Award 2010*, or any subsequent Award.

Business Day means any day that is not a Saturday, Sunday or Public Holiday.

Commencement Date means the date set out in Item 1 of Schedule 1.

Confidential Information means the confidential information of the Organisation relating to the Organisation or its operations or business affairs and includes, but is not limited to:

a) financial information and policies, business plans, strategic plans, acquisition or business expansion plans, pricing policies and reporting procedures of the Organisation whether relating to past, present or future operations of the Organisation;
b) the Organisation's past, present and future client information, including client identity and terms of dealing with specific clients;
c) the Organisation's past, present and future supplier information, including supplier identity, price for supply, terms and conditions of supply and the value of accounts to suppliers;
d) the Organisation's past, present and future employee information, including terms of employment and remuneration packages;
e) information marked as confidential or which the receiving party could reasonably regard as confidential; and
f) the Organisation's general know-how and procedures whether or not marked as confidential;
g) but Confidential Information does not include information which:
    i. is legally in the public domain or is generally known or is available by publication; or
    ii. the receiving party either already possesses at the time of disclosure to it by the disclosing party or independently acquires except through a breach of an obligation of confidentiality by any third party.

Duties means the duties described in the Position Description.

Employee means the person listed in Item 3 of Schedule 1.

Employer Superannuation Component means the contributions the Organisation is required to make to a complying superannuation fund as a result of the operation of the *Superannuation Guarantee (Administration) Act 1992* and the *Superannuation Guarantee Charge Act 1992*.

Fair Work Act means the *Fair Work Act 2009* (Cth).

Intellectual Property Rights means all present and future rights to:

a) trademarks, trade names, domain names, logos, set-up, patents, inventions, registered and unregistered design rights, copyrights, circuit layout rights, and all similar rights in any part of the world (including know-how); and
b) where the rights referred to in paragraph a) are obtained or enhanced by registration, any registration of such rights and applications and rights to apply for such applications.

Invention means any discovery, invention, design, development, technique, idea, method, secret process, system or improvement made or discovered by the Employee (alone or with others) during the course of the Employee's Agreement with the Organisation, in connection with or in any way affecting or relating to the

Organisation's operations or capable of being used or adapted for use by the Organisation or in connection with its operations.

Materials means all things brought into existence by the Employee in the course of their employment by the Organisation including inventions, ideas, discoveries and improvements (whether patentable or not); information and data, designs, drawings, presentations, proposals, reports, lists, plans and software.

Moral Rights means the right of attribution of authorship, the right not to have authorship falsely attributed, the right of integrity of authorship, or any other similar rights arising under any statute, including the *Copyright Act 1968* (Cth).

Ordinary Hours of Work means the hours stated in Item 9 of Schedule 1.

Organisation means Life Without Barriers ACN 101 252 171.

Position means the position set out at Item 4 of Schedule 1.

Probity is an assessment of the Employee's suitability and clearance to perform the role. This assessment includes a review of the Employee's national criminal history and police record and any other State based checks as legislated by governing law or in accordance with the Organisation's policies and procedures.

Total Fixed Remuneration means the Employee's Total Fixed Remuneration, as set out in Item 5 of Schedule 1.

Work means the performance of the Duties in the course of employment.

8.1 Interpretation

In this Agreement, headings are for convenience only and do not affect the interpretation of this Agreement and, unless the context otherwise requires:

a) a reference to termination of this Agreement includes a reference to termination of the Employee's contract of employment;
b) the singular includes the plural and vice versa;
c) words that imply a gender include all other genders;
d) a word that is derived from other parts of speech and grammatical forms of a word or phrase defined in this Agreement have a corresponding meaning;
e) an expression that implies or refers to a natural person includes any Organisation, sovereign state, government, government department or agency, partnership, joint venture, association, unincorporated association, corporation or other body corporate and vice versa;
f) a reference to a statute, regulation, proclamation, ordinance or by-law includes all statutes, regulations, proclamations, ordinances or by-laws amending, consolidating or replacing it, whether passed by the same or another government agency with legal power to do so, and a reference to a statute includes all regulations, proclamations, ordinances and by-laws issued under that statute; and
g) a reference to a document or agreement includes all written amendments or supplements to, or replacements or novation's of, that document or agreement.

Position Title:	Shared & Supported Living Coordinator

Position Purpose & Scope

Purpose & Objective	The Shared & Supported Living Coordinator ensures that customers who require a high level of support are enabled to live in their home, and in their community. The role coordinates and delivers a range of supports that reflect the customer's individual needs and goals as described in their Service Agreement. The Shared & Supported Living Coordinator is responsible for engaging with customers, families, guardians and other key stakeholders so as to facilitate a cohesive, quality and inclusive support system around the customer. The incumbent takes a leadership role in organising, supervising and coaching support workers around a customer or group of customers.	
Business Unit	Client Services	
Reporting Relationships	**Direct Manager**	Shared and Supported Living Manager
	Direct Reports	Between 1-30 (this comprises F/T, P/T, casual workforce) *the number of direct reports will depend upon program / operational requirements*
Delegated Authority	Level 8 - Specific delegations are outlined in the Delegation of Authority Schedule - http://intranet.lwb.local/su/practiceandquality/qa/Pages/Delegations.aspx	

Organisation Purpose & Values

Our Purpose	To partner with people to change lives for the better.
Our Values	Our Values state our beliefs. They define our purpose and drive everything we do. Our Values fuel our passion for working with people and by living our Values, we are in a better position to champion opportunities for the people we work with and support. All people engaged by Life Without Barriers are required to uphold our Values of; *Responsive*, *Imaginative*, *Courageous*, *Respectful* and *Relationships*.
Our Stance on Child Safety & Wellbeing	Every day, Life Without Barriers offers support and care to children. We want each and every one of those children to feel as safe and respected as they should. We all have a responsibility to make sure their safety comes first – and that they're well cared for, protected from abuse and given the respect they deserve.

Key Responsibilities

Support Customers	• Work within relevant legislation, LWB policy and procedures and the National Disability Service Standards to ensure that Shared & Supported Living supports are delivered which reflect the customer's Service Agreement with LWB. • Engage with customers to build rapport and understand their needs, preferences and expectations; where required, work directly with customers • Ensure that direct support is delivered, as far as possible, by the support worker who best matches the customer in terms of relevant skills, capability and interests.

	• Build positive relationships with stakeholders by:
	  ○ working directly families, guardians and mainstream services to enhance opportunities for the customer in their communities
	  ○ engaging with health professionals, support coordinators, community, other agencies and other stakeholders including advocate
	• Actively develop and maintain an environment and ecology that balances the needs of any other customers who share the same residence; for example type of residence, compatibility.
	• Monitor, and where appropriate, adjust support based on the customer's changing needs.
	• Advocate where required with the NDIA, support coordinators, families, guardians and other stakeholders to respond to customer changing needs or goals.
	• Respond to feedback and complaints promptly.
	• Routinely utilise the established mechanisms, including client scheduling system, technical solutions and documentation systems to ensure that support is provided, outcomes are recorded and a transparent and accountable service is delivered.
	• Complete service satisfaction activities as directed by manager

Team Leadership	• Provide guidance, supervision and support to direct support staff. • Promote a positive environment through demonstrating good communication and interpersonal skills and appropriate peer support. • Model appropriate conflict resolution, communication and positive behaviour management skills. • Escalate any issues of concern to the manager immediately, where a serious risk of harm or to reputation is apparent
Organisational Responsibilities	• Communicate and act in ways that are consistent with Life Without Barriers Values of *Responsive*, *Imaginative*, *Courageous*, *Respectful* and *Relationships* • Provide an environment free of abuse, harm and exploitation for people we support • Support and promote the work of Life Without Barriers, maintaining a positive image of the organisation in accordance with the level of position. • Comply with all Life Without Barriers policy, code of conduct, procedures and practices, external funding body requirements and legislation. • Apply and uphold the principles of a respectful, inclusive and diverse workplace, free from discrimination, harassment or bullying • Adhere to organisational and legislative Health, Safety and Environment requirements.

Required Knowledge, Skills & Experience

Qualifications & Licenses	• Minimum Cert IV or equivalent in Disability, Mental Health or Community and Social Services • First Aid Certificate • Current driver's license
Required Experience	• Demonstrated experience in similar role and / or relevant experience in providing and improving customer support/service

	• Demonstrated experience in supporting complex customers (clients) • Demonstrated experience in working both independently and as part of a team • Demonstrated coordination and leadership experience • Demonstrated experience in managing competing priorities and to deliver outcomes within agreed timeframes and quality standards
Essential Knowledge & Skills	• An excellent understanding of the principles of the National Disability Insurance Scheme (NDIS) and relevant legislation • Demonstrated commitment to customer choice, inclusion and quality practice • Demonstrated knowledge of contemporary disability practice approaches including but not limited to, positive behaviour support, medication management and complex medical management. • Demonstrated leadership and coaching skills, with the ability to build a shared understanding of, and commitment to the organisation's Purpose and Values • The ability to work collaboratively and in partnership with a range of stakeholders including customers, peers, employees, external organisations, funding bodies and government agencies • Ability to support organisation-wide initiatives that support Life Without Barriers' Purpose and Values • Excellent verbal and written communication skills • Demonstrated understanding and / or ability to use Data Bases and Microsoft Office suite of programs, for example Outlook, Word and Excel • Ability to work in a complex environment and respond appropriately to high risk or critical events and situations • Demonstrated problem solving and conflict management skills and an ability to think creatively and use initiative

Additional Requirements & Conditions

Probity Requirements	All positions within Life Without Barriers will be required to undergo probity checks including criminal record checks and working with children checks (where relevant to the position) and as outlined in their Contract of Employment.
Work Hours	As per Contract of Employment, the incumbent may be required to work reasonable additional hours to fulfil the requirements of the position. To fulfil the requirements of the position the incumbent may be required to be on-call and / or work an alternating work pattern e.g. day and afternoon pattern on a fortnightly basis.
Travel	The position may require the incumbent to travel to various work locations to discharge the responsibilities of the position

BEFORE THE FAIR WORK COMMISSION
MATTER NO. AM2014/286
S. 156 - Four yearly review of modern awards – Social, Community, Home Care and Disability Services Industry Award 2010

STATEMENT OF JUDITH WRIGHT

I, Judith Wright, Union Official, of [redacted], in the State of New South Wales, say;

1. I am the Deputy Secretary of the Australian Services Union, NSW & ACT (Services) Branch ('**the NSW Branch**'). I am also a member of the Australian Services Union National Executive. I have held these positions since April 2015. I have been an official of the Branch for ten years. Prior to taking up the position of Deputy Secretary, I was a Senior Industrial Officer from 2009 then Assistant Secretary responsible for industrial services from 2012.

2. Prior to working for the NSW Branch I practiced as a solicitor in New South Wales then New Zealand.

3. I have responsibility, amongst other things, for the legal and industrial activities of the NSW Branch. I have significant experience dealing with the Social and Community Services Sector (SACS), in:

    a. Being responsible for ten years for the NSW Branch's Industrial Services Team which provides advice and representation to ASU members in the SACS sector in relation to workplace grievances, disciplinary matters, unfair dismissal cases, Award and Agreement entitlements, classification issues, workplace health and safety, discrimination and bully and harassment matters.

    b. Representing SACS members in Enterprise Bargaining.

    c. Appearing in the Fair Work Commission in a range of matters affecting SACS members including disputes, adverse action and unfair dismissal matters, and the 2012 and 2015 SCHADS Award Reviews.

4. In my position as Senior Industrial Officer, I was involved in the Social, Community and Disability Services Industry Equal Remuneration Case. I worked extensively on the case from the time the application was lodged in March 2010 until the final order was made in June 2012. I briefed and instructed Counsel throughout the hearing, organised all of the workplace

inspections in New South Wales, attended all of the workplace inspections in New South Wales and Queensland, prepared all of the witness statements for witnesses based in New South Wales and the ACTU and some in other states and territories, engaged all of the expert witnesses called by the ASU and assisted with research and written submissions.

5. I have been shown the submissions filed by the Australian Business Industrial on 2 July 2019. I note that at paragraph 5.2, they assert that clause 25.5(f) '*already applies to a significant part of the disability services sector, as it applies to services provided to people with a disability in their home.*' They base this assertion on the description of '*Home Care Sector*' at clause 3.1 of the *Social, Home Care and Disability Services Award 2010* ('**the Award**').

6. Clause 25.5(f) does not apply to any part of the Disability Services sector, it only applies to employees classified under Schedule E of the Award as Home Care employees. Employees providing disability services are properly classified under the Social and Community Services Sector classification definitions (Schedule B of the Award). This work is distinct from work carried out by home care employees (covered by Schedule E of the Award) for people with a disability.

7. Clause 3 of the Award relevantly describes the Social and Community Sector as follows:

> ***social and community services sector*** *means the provision of social and community services including social work, recreation work, welfare work, youth work or community development work, including organisations which primarily engage in policy, advocacy or representation on behalf of organisations carrying out such work and the provision of disability services including the provision of personal care and domestic and lifestyle support to a person with a disability in a community and/or residential setting including respite centre and day services. To avoid doubt, an employee will not be precluded from being engaged under Schedule B, instead of another schedule, merely because they provide services in a private residence or in outreach.* (emphasis added)

8. Disability services involves the provision of personal care and domestic and lifestyle support and/or training to a person with a disability including in a community setting whether residential or non-residential, a respite centre, a day service facility or in a private residence where work in that residence involves either teaching, promoting or maintaining living skills, client, advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.

9. Disability services (classified under Schedule B of the Award) can be distinguished from the provision of home care services to people with a disability (classified under Schedule E). These are roles where the workers only provide personal care for a client.

10. The distinction between Home Care employees and Social and Community Services employees undertaking disability services was the subject of controversy during the Equal Remuneration Case 2010-2012. In that case, the Australian Federation of Employers and Industries sought to clarify that the proposed Equal Remuneration Order did not apply to employees covered by Schedule E of the Award.

11. The parties came to an agreed position, which was filed by AFEI and marked as Exhibit AFEI 6. Attached and marked **Annexure A** is a copy of Exhibit AFEI 6.

JUDITH WRIGHT

Dated: 12 September 2019

ANNEXURE A

EXHIBIT: AFEI 6

Extract from transcript: 11 February 2011 — PN5572–PN5583

AFEI Letter to ASU: 9 February 2010

ASU Letter to AFEI: 22 February 2011

Extract from transcript: 3 February 2011 — PN3155–PN3177

Extract from Witness Statement – Sally McManus: ASU Exhibit 34 – page 21 and 22

PN5572

JUSTICE GIUDICE: Very well. In the circumstances, what we'll do is vary the timetable to provide for the New South Wales government to file submissions by 30 March and for the Victorian - I'm sorry. Just a moment. What date does the caretaker period commence?

PN5573

MS DOUST: The caretaker period commences on 4 March.

PN5574

JUSTICE GIUDICE: Yes. So what I had in mind was an extra couple of days only which would take it to 2 March for the New South Wales submissions.

PN5575

MS DOUST: We would be grateful for that, your Honour.

PN5576

JUSTICE GIUDICE: In relation to Victoria, then that will be 21 March.

PN5577

MS DOYLE: Yes, your Honour.

PN5578

JUSTICE GIUDICE: Otherwise the timetable will not be varied. Yes, any other matters? Mr Warren, yes.

PN5579

MR WARREN: Your Honour, one short matter. I raised prior to the luncheon adjournment, I indicated there was a difficult issue that the AFEI had. We've had some discussions over the luncheon adjournment and it appears to have been resolved. In short frame, it grew out of the cross-examination of Mr Di Troia and his evidence with respect to the coverage of the home care industry by this proposed order. A letter has been written by AFEI to Mr Harvey. I understand that Mr Harvey or his union will be responding to AFEI next week in writing and that may well resolve the matter and we will inform the tribunal of that resolution.

PN5580

JUSTICE GIUDICE: Right.

PN5581

MS DOUST: I have (indistinct) relates to the questionnaires that Ms Lowson raised earlier on. I think she indicated that it's proposed to have them. I'll ultimately post it to the web site if that occurs on the basis that they de-identify (indistinct) witnesses who have been treated. That became contentious if we (indistinct) basically supported that position, but as I understand it there's going to be some more discussions occurring anyway between Ms Lowson and Mr Warren.

PN5582

JUSTICE GIUDICE: Yes.

PN5583

MS LOWSON: Your Honour, could I just put on the record my thanks to Judith Wright and Keith Harvey for the work that they've done during the course of these proceedings; in particular juggling witnesses and re-scheduling matters and arranged a couple of matters that has helped the matter proceed more smoothly.

Australian Federation of Employers & Industries

9 February 2010

Mr Keith Harvey
National Industrial Officer
ASU National Office
Ground Floor, 116 Queensberry St.,
Carlton South VIC 3053

Via email: kharvey@asu.asn.au

Dear Mr Harvey,

Re: FWA Matter No.: C2010/3131 – Application for Equal Remuneration Orders

We write with regard to the above matter and in particular seek clarification of the intended scope of the Equal Remuneration Order (ERO) sought by the applicants.

We note with concern that the evidence of Mr David Di Troia given in cross examination to Fair Work Australia on 3 February 2010 (PN3170) indicated that he understood the application is intended to cover employees in the Home Care Industry.

We note also that, whereas the Social, Community, Home Care and Disability Services Industry Award 2010 contains a separate classification structure for Home Care Employees (Schedule E), the amended application dated 23 December 2010 does not.

The Home Care Industry, in our view, is comprised of a significant number of *for profit* organizations which operate on a fee for service basis without assistance through government funding.

We request, as a matter of urgency, clarification as to whether it is the intention of the applicants that the ERO sought by the applicants apply to the Home Care Industry.

If you require any further information, please call me on (02) 9264 2000.

Yours faithfully,

Tony Doyle

Tuesday, 22 February 2011

Mr T Doyle
Manager – Workplace Relations
AFEI

By email: Tony.doyle@afei.org.au

Dear Mr Doyle,

Re: FWA Matter No.: C2010/3131 – Application for Equal Remuneration Order – Home care employees

I refer to your letter dated 9 February 2010 [sic].

The intended scope of the Application is clearly defined in paragraphs 3 and 4 of the Amended Application filed on 23 December 2010. It covers employers and employees engaged in:

> *The provision of personal care and domestic and lifestyle support and/or training to a person with a disability including in a community setting whether residential or non-residential, a respite centre, a day service facility or in a private residence where work in that residence involves either teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.* [See definition of Disability Services Sector at paragraph 3.1 of the Amended Application].
>
> and/or
>
> *The provision of social and community services including social work, recreation work, welfare work, youth work or community development work, including organisations which primarily engage in policy, advocacy or representation on behalf of organisations carrying out such work.* [See definition of Social and Community Services Sector at paragraph 3.1 of the Amended Application].

The Application is not intended to cover employers and employees of "the home care sector" as defined in paragraphs 139 and 140 of Exhibit 34 (witness statement of Sally McManus) as follows:

> *There are some roles where workers are supporting people with a disability or an aged person which do not fit the definition of "disability services sector" or "social and community services sector" work. Therefore, these roles do not fall under the classification definitions in Schedule B of the Order sought in this matter. These are roles where the workers only provide personal or physical support for a client. A typical example of this is the type of support required for clients who have a physical disability but do not have an intellectual disability.*

Paul Slape

Assistant National Secretaries
Greg McLean
Linda White

For example, a person who depends on a wheelchair may need assistance getting out of bed, showering, dressing and with housework. However, they may not need and are not provided with other support such as living skills. These clients would live in their own homes and otherwise live independently. The workers who provide this role would be considered to work in the home care sector.
The same example could be given where workers are providing only personal care, domestic assistance or home maintenance for an aged person in their own homes. These workers are part of the home care sector.

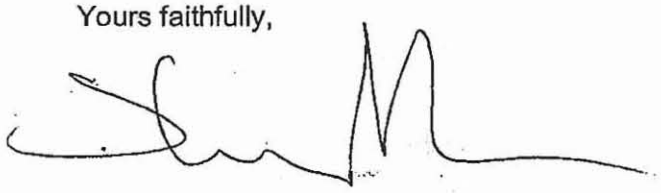
However the Application does cover the following work which may be performed at a client's home and which falls within the definitions of Disability Services Sector and/or Social and Community Services Sector:

- The provision of personal care and domestic and lifestyle support and/or training to a person with a disability involving either teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.
- Provision of outreach or home visiting for aged people to identify needs or to provide support of a social or welfare nature, which could include support with organising appointments, monitoring medications, assistance with communication, meal planning, accompaniment on outings and the coordination of home care services.
- Recruiting and organising volunteers or paid workers to visit aged people in their homes as part of overcoming social exclusion.

We understand that the term "Home Care Industry" has different meanings in different parts of Australia so we trust that the contents of this letter makes clear the scope of the Application.

Please contact me if you require further clarification.

Yours faithfully,



Keith Harvey
National Industrial Officer

PN3155
JUSTICE GIUDICE: Defer it, yes, very well. All right, we'll adjourn now until 2 o'clock.

<SHORT ADJOURNMENT [12.56PM]

<RESUMED [2.04PM]

PN3156
MS LOWSON: Your Honours, Commissioners, the next witness is David Di Troia.

PN3157
JUSTICE GIUDICE: Yes.

<DAVID DI TROIA, SWORN [2.05PM]

<EXAMINATION-IN-CHIEF BY MS LOWSON [2.05PM]

PN3158
MS LOWSON: Would you tell the tribunal your current occupation?---I'm the branch secretary of the LHMU's South Australian branch.

PN3159
Did you, for the purpose of these proceedings, prepare a statement?---Yes, I have.

PN3160
Do you have a copy of that with you?---Yes, I do.

PN3161
Can I just take you to paragraph 24 of that statement?---Yes.

PN3162
There's a reference there in the first line to "local government sector". Do you see that?---Yes, I do.

PN3163
Is that meant to refer to the state government sector?---Yes, the word "local" should be replaced with the word "state".

PN3164
With that amendment, is the content of your statement otherwise true and correct to the best of your knowledge and belief?---Yes.

PN3165
I tender that statement.

PN3166
JUSTICE GIUDICE: It will be exhibit ASU39.

EXHIBIT #ASU39 STATEMENT OF DAVID DI TROIA

PN3167
MS LOWSON: Yes, thank you, your Honour. I have no further questions.

<CROSS-EXAMINATION BY MR WARREN [2.07PM]

PN3168

MR WARREN: Mr Di Troia, you mention in your evidence in paragraph 2 of your statement that you speak of your branch membership. Does your branch membership spread across government and non-government employees, the non-government employees being in the SACS sector?---Yes, it does.

PN3169

So when you speak in paragraph 2 of your branch membership records - "64 per cent of these members are women" - that's a mix. Those women you are therein referring to are a mix of both SACS and government employees? ---I believe so.

PN3170

In paragraphs 3, 4 and 5 at least, you mention the home care classification stream. Is it your position that persons employed in home care would be covered by the order sought in these proceedings?---That's my understanding.

PN3171

Could I take you to annexure A to your statement please, Mr Di Troia?---Yes.

PN3172

Are you familiar with the enterprise agreements therein contained?---Other than seeing a final copy of those documents at the time of signing, I've not had any involvement in the negotiations of those agreements listed in attachment A. What I can say is that since tendering my statement in relation to the Minda agreement, I had some involvement in finalising the new agreement.

PN3173

There has been a new agreement?---Yes, there has.

PN3174

If I could just take you to attachment A?---Yes.

PN3175

I want to put a proposition to you. If you're unable to answer it, please say so. I'm suggesting to you that the enterprise agreements listed as Anglicare, Hills Community, Community Living Options, La Vida, Elizabeth Bowey Lodge, Helping Hand Aged Care, all specifically have a capacity of the employees covered by those agreements to have beneficial concessional tax with respect to fringe benefits tax within the agreements?---Look, I'm not in a position to answer that.

PN3176

You're not in a position because you don't have particular knowledge of those agreements?---I don't have the knowledge of what I'm suggesting you're putting to me - is that there are some salary sacrifice arrangements.

PN3177

Yes?---I'm not aware as to the actual arrangements when it comes to salary sacrificing.

The Nature of Work in the Disability Sector

132. Over the last fourteen years of being an official at my Branch, I have had extensive interaction with workers and employers in the disability sector. I have visited many workplaces where our members in the disability sector work; these include residential facilities, day program facilities and offices. I have had discussions with hundreds of workers in the disability sector, I have met many clients who use the services our members work in, I have had discussions with all the major employers in the sector in NSW and been directly involved in many industrial disputes in the disability sector. For these reasons, I am very familiar with nature of work undertaken by our members in the disability sector in NSW.

133. Since November 2008 I have been a member of the National People with Disabilities and Carer Council. I was appointed by the Federal Government to this Council whose role is to advise the Australian Government on the needs of people with disability, their families and carers. Through this role, I have met and had many discussions with employers in other States, as well as people who advocate for service users (or clients) of these disability services.

134. According to our membership records our Branch has about 2000 members employed in the disability sector.

135. I have read the witness statements of W59, W60, W64, W65, W66, W67, and Lloyd Williams. The nature of the work they describe accurately reflects the work performed by the members of our Branch in the disability sector. There are some differences in terminology only, for example, in NSW residential services for people with disabilities are referred to as "group homes", not "community residential units".

136. W60 works at Kirinari Community Services (Kirinari). She works both in NSW and in Victoria. I have visited workplaces and met members and clients from Kirinari in Albury, the Blue Mountains and Inverell. I have also been involved in negotiating their enterprise agreements over many years. The nature of the work W60 describes is the same as the work performed by residential disability sector workers throughout NSW. The only differences are differences that come about because of the particular mix of clients.

137. Workers in the disability sector develop or implement individual or person plans for each of the clients they support.

138. Many workers in the disability sector will perform duties that are of a personal care nature, however this is only part of their role. They implement personal plans that cover all aspects of a person's life. They also perform work that includes teaching, promoting or maintaining living skills, client advocacy, promoting or supporting community access and social inclusion.

139. There are some roles where workers are supporting people with a disability or an aged person which do not fit the definition of "disability services sector" or "social and community services sector" work. Therefore, these roles do not fall under the classification definitions in Schedule B of the Order sought in this matter. These are

roles where the workers *only* provide personal or physical support for a client. A typical example of this is the type of support required for clients who have a physical disability but do not have an intellectual disability. For example, a person who depends on a wheelchair may need assistance getting out of bed, showering, dressing and with housework. However, they may not need and are not provided with other support such as living skills. These clients would live in their own homes and otherwise live independently. The workers who provide this role would be considered to work in the home care sector.

140. The same example could be given where workers are providing *only* personal care, domestic assistance or home maintenance for an aged person in their own homes. These workers are part of the home care sector.

141. There are roles within the social and community sector where workers will be providing outreach or home visiting aged people to identify needs or to provide support of a social or welfare nature. These workers are part of the social and community services sector. Similarly, there are roles within the social and community sector that involve recruiting and organising volunteers or paid workers to visit aged people in their homes as part of overcoming social exclusion. These workers are considered part of the social and community services sector. In NSW these workers are funded by the Home and Community Care (HACC) program or Federal Government Aged Care packages funding.

Public Sector Awards

NSW

142. The following public sector awards apply to persons performing the same or similar work as performed in the SACS industry in New South Wales:

a. *Crown Employees (New South Wales Department of Ageing, Disability and Home Care) Community Living and Residential Award* – applies to Disability Support Workers and Team Leaders employed by the New South Wales Department of Ageing, Disability and Home Care;

b. *Crown Employees (Administrative and Clerical Officers - Salaries) Award 2007* - applies to Case Workers employed by the Community Services NSW, Client Service Officers employed by Housing NSW and Alcohol & Other Drug Officers, Welfare Officers and Accommodation Support Officers employed by Corrective Services NSW;

c. *Health & Community Employees Psychologists (State) Award 2008* – applies to Mental Health Workers (psychologist) and Sexual Assault Counsellors employed by NSW Department of Health;

Annexure B.

BEFORE THE FAIR WORK COMMISSION

MATTER NO. AM2014/286

S. 156 - FOUR YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

Statement of Emily Flett

I, Emily Flett, Youth Worker, of Unit 7, [redacted] in the State of Victoria, say;

1. I am a member of the Australian Services Union, Victorian and Tasmanian Authorities and Services Branch

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. I was born on the 25th of November 1981.

4. I have a partner. We have been together for eight years. We are hoping to buy a house and live together soon.

My work history

5. I am a qualified youth worker. I have a Bachelors of Youth Work from Victoria University and Certificate IV in Child, Youth and Family Intervention.

6. I have worked in the community sector for about sixteen years. I have worked at Anglicare Victoria for most of that time. I have worked at other organisations in the youth work sector and community services roles but I have always maintained some type of employment with Anglicare.

Current employment

7. Since 2015, I have worked with Anglicare Victoria as After Hours Practitioner. I am a part-time employee. Attached and marked **Annexure A** is a copy of my position description

I am employed under *Social, Community, Home Care and Disabilities Services Industry Award 2010* (**'the Award'**). I am classified as Social and Community Services Employee Level Level 6 (Social Worker Class 3)

8. I am paid $42.36 per hour. With overtime I earn approximately $80 – 85K per year.

9. I work in a dedicated team that provides after hours on call support to staff, volunteers and young people in our care. We work from the Anglicare Offices in Collingwood, we respond to phone calls from all regions of the metro area. This position tests you out because you get a variety of calls every night, some of these calls are day to day issues, such as staffing matters, but we spend a lot of our time providing risk mitigation and managing crisis. The position is relatively senior as it holds a large amount of responsibilities and Anglicare staff calling in can use this management structure for support, guidance and direction, while out of hours for their regular line manager.

10. Anglicare created our dedicated on-call team to address the impact of on call work on staff performing their regular duties during the day time and to reduce impacts on them as previously, house managers, specialist practitioners and other frontline staff were required to be on call.

Now this work has been given to our team so appropriate breaks can be structured in to a roster and we reduce burnout on valuable staff.

11. We often support staff members who need advice and support about how to proceed with dealing with young people with volatile behaviours. Another important part of my work is dealing with emergency referrals, where we need to urgently find a safe place for a young person in a case of family or guardian break down. In that case, I will try to find a place for them in one of our residential facilities or emergency foster care. I will also need to conduct an assessment of risk, I will consider the care needs of the young person, and judge whether we have the resources to safely meet those needs.

12. I am also available to provide advice to youth workers with basic troubleshooting or we might just refer the caller to one of our employer's policies dealing with the issue. The After Hours Practitioners in our team help youth workers to apply trauma informed theory and assist in seeing the young person in context. Youth workers are professionals who draw on a wide range of knowledge and skills in their work, if there is a grey area, we assist them to find a solution that is in the best interest of young person. This feels like important work that involves risk mitigation for our young people, our staff and the organisation.

13. We a responsible for ensuring that policies, legislation and best practices are followed, when staff are calling in for assistance around how to manage a situation. If there is a Quality of Care Investigation the After Hours Practitioner's on call notes as used as evidence along with other relevant client case notes. Our documentation has been used in court when the investigation proceeds to that end.

My hours of work

14. I work according to a rotating roster fortnightly roster. I have a line in the roster, with all my shifts fixed and I am able to plan well in advance around these shifts as my contract is ongoing for each shift in the fortnight. I can tell if I'm rostered on for Christmas or another public holiday easily. I am contracted to work 41 base hours each fortnight, but a component of my work hours are as re-call hours as this is the nature of my job.

15. My roster follows this pattern:

    a. I will work my ordinary hours at the Anglicare Victoria offices in Collingwood. I will commence work at some time between 4.30 pm and 7.30 pm depending on my rostered hours.

    b. I will finish work late at night, often around 11.00 pm. I have a break, in which I drive home, un-paid for 1 hour.

    c. Then I will be on call from 12.00 pm to 9.00am. I am not expected to return to the workplace when I am on call. Instead I will respond to issues by telephone or by computer. We refer to this period of the shift as 'Recall'. I am then paid at a re-call rate and if I receive no calls at all I will not be paid – but I will have had some sleep so a win there!

    d. At the end of the re-call shift at 9am, I will then have a 10 hour break between the end of my on call period and the start of my next shift.

16. I am paid two hours pay at double time when I receive a call and no more if I receive 20/30 calls in that same period, once I get a call in the next call block after the two hours I will again be paid another two hour block. I believe this is an above award condition, I understand that it

was necessary for my employer to offer this condition to attract sufficiently skilled staff to the after hours on call team.

17. The number of Recall hours I work each week fluctuates and is most defiantly seasonal, calls are quiet over winter for the most part. I usually work between 10 and 15 hours Recall each fortnight and this greatly subsidises my low part-time base hours and brings me closer to full time wages.

18. Attached and marked **Annexure B** are copies of my roster for the period [7-9-19] to [*20-9-19*] & [24-8-19] to [6-9-19]

Roster Changes

19. Each worker in my team has a line on the roster. We have set days and nights that rotate over a long period of time according to fixed pattern. We all know when we will be working. This is important for many of the other people in my team because many of us have caring responsibilities. But it is also important for me because it helps ensure that I have work/life balance. Without a fixed roster it is hard to be a shift worker and participate in social events and sporting clubs. We very rarely try to change or swap our shifts. If Anglicare does change the roster, we have a mini-meltdown in the office and it causes much distress.

20. I am worried that if rosters could be changed by agreement at any time, I would be pressured to change my shifts to accommodate my employer. We have a sense of duty to keep the place running. A good example of this was in April 2019. Anglicare Victoria had restructured the on call team to centralise the work that was done by the regional North West After hour's team in the Collingwood office. This required roster changes. We felt incredible pressure to adhere to whatever the organisation told us they needed to do, even if it would cause us problems. We just tried to adapt and have come across to the central roster. We have all lost income doing this, we are now working more nights for less money.

Impact of on call work

21. When I work through the night on call, I feel exhausted the following day. I find it is different from working a shift when you are awake through the night. In the morning, you just feel like you are jetlagged as you have only slept in parts and will need to sleep again later in the day once the mornings duties are finalised and you go off shift.

22. The following day after a night shift I can't do the things I like to do. I cannot exercise at a high level, my balance is affected, I cannot ride my motorbike or pushbike. I also find it harder to engage with my partner friends and family. I find that I don't have the energy to socialise, so I tend to withdraw a little bit and miss out.

23. I find that I do not get that regular connection with my partner in an undisturbed space. It is tricky to maintain a relationship when my working patterns are one of the reasons I do not live with my partner. When I am on call, we cannot share the same bed: or he would just be on call with me. That would be unfair to him.

24. I also find it hard to access to fresh and healthy food. This is one thing I really notice. I cannot go to the supermarket after work, because supermarkets are not open late at night. So I do a lot of food preparation to make sure I have healthy food to eat. But this is different from having access to fresh fruit and vegetables as you would after work 9-5pm.

25. I am always weighing up if this job is worth it. I can guarantee that if I was paid any less I would not do this job. Instead, I would take a small pay cut and work as a case manager for similar money and I would still be working hard, but at least I would be working normal hours

in line with my partner friends and family. It's the balance of the eight hour day, it looks after you. If your working hours are not in balance like that you need some sort of special conditions, there is a reason they call it a penalty rate, because you are paying a personal penalty to be working at 3am.

Position details

Position	After Hours Practitioner
Program	After Hours Service
Classification	SCHADS Award Level 6 (Social Worker Class 3) (Classification will be dependent on qualification and years of experience within the relevant field consistent with the SCHADS Award)
Hours	Part Time or Full Time applications will be considered
Hours per week	Base Hours + OnCall and Recall Allowances
Duration	Ongoing
Fixed term end date	N/A
Location	Collingwood Requirement to complete outreach if required.
Reporting Relationship	Team Leader After Hours Service
Effective date	

Overview of program

Anglicare Victoria are establishing a new Afterhours response team, which will provide an out of business hours crisis response service to relevant program areas. Programs will include but not be limited Residential Care, Home Based Care, Lead Tenant, Youth Refuge and Targeted Care Packages.

This afterhours service will provide high quality risk assessment, advocacy, and will coordinate and manage any complex issues which arise out of business hours.

This support will be provided to clients, staff and volunteers and will primarily be provided by telephone, however in person responses will also occur as needed.

Position Objectives

Anglicare Victoria

This section has the position objectives of the position. A maximum of four to six objectives is regarded as sufficient. Please delete rows that are not required.

1.	Be part of a team who delivers a high quality afterhours emergency response to staff, clients and volunteers who present with a range of complex and high risk issues across a range of programs areas.
	Provide immediate response, support, intervention, information, guidance and if required direct care to clients, staff and volunteers.
	Manage and respond to incoming referrals, as well as make any relevant outgoing referrals.
	To work within a professional framework and complete professional documentation as required.
	To provide an in person response if required.

Key responsibilities

This section has the key responsibilities of the position. A maximum of seven responsibilities is regarded as sufficient. Please delete rows that are not required. Focus on the key responsibilities of the role and don't list every task and duty.

The key responsibilities are as follows but are not limited to:

	Be an active part of the emergency afterhours roster, which includes evening, weekend and OnCall/ReCall work, both over the phone and in person when required
	Provide high quality risk assessment and emergency responses to staff, client and volunteers, across a range of services, including statutory services. This will require both phone and in person responses as required.
	Conduct risk assessments to determine the current and ongoing risks, as well as negotiate with relevant stakeholders (including but not limited to: DHHS, Police, Hospitals etc) to implement a response which is in the best interests of all involved.
	Complete timely, accurate and appropriate case notes, CIMS reports and statistical documentation, as well as engage in staff meetings, supervision and other relevant professional forums.
	Work with the team to enable continual improvement to the new service model to further extend our commitment to improving the lives of children, young people and their families.

Key Selection Criteria

The Key Selection Criteria are based on role specific requirements ***and*** the Anglicare Victoria Capability Framework. Applicants are required to provide a written response to ***both*** a) and b).

a) Role specific requirements

Applicants are required to provide a written response to the role specific requirements. The five criteria are to be addressed individually (no more than 2 pages in total).

	1. Tertiary qualifications, preferably in social work, psychology or behavioural sciences or equivalent.
	2. Excellent understanding and experience working within the child protection, placement and support, and family service system, including a sound understanding of relevant legislative and policy framework.
	3. Ability to demonstrate excellent communication and negotiation skills, both over the phone and in person, in complex and demanding situations.
	4. Experience in working in fast paced, high pressured situations, which includes triaging complex issues, and negotiating with other stakeholders including statutory services.
	5. Highly developed skills in risk assessment and responding to and managing complex, high risk and critical incidents across statutory and other services, including over the phone and in person responses.
	6. Excellent knowledge of, and experience in the application of relevant theoretical approaches that underpin casework practice to vulnerable children, young people and families.
	7. Highly developed written and organisation skills.

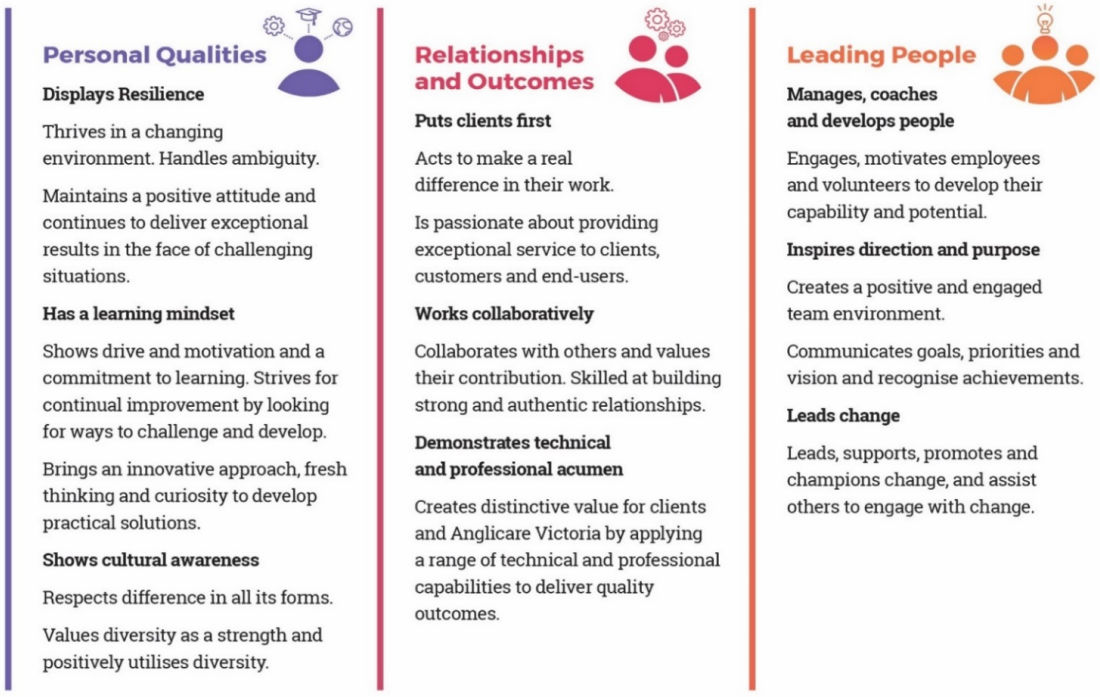
Key Selection Criteria (continued)

b) Anglicare Victoria Capability Framework

Applicants are required to provide a written response to the Anglicare Victoria Capability Framework. Applicants are to describe how they demonstrate the characteristics in each of the two capability groups; **Personal Qualities and Relationship and Outcomes** (no more than 1 page in total).

The Anglicare Victoria Capability Framework describes the capabilities required to meet the expectations of clients, colleagues and communities in today's changing environment.

These capabilities work together to provide an understanding of the knowledge, skills and abilities required of all employees.



Occupational health & safety (OHS)

Anglicare Victoria is committed to ensuring the health and safety of its employees and any other individuals present in our workplaces.

In achieving and maintaining workplace health and safety, Anglicare Victoria will apply best practice in OHS in accordance with statutory obligations at all times.

All Anglicare Victoria employees, contractors and volunteers are required to:

- take reasonable care for their own health and safety and for that of others in the workplace by working in accordance with legislative requirements and the company's OHS policies and procedures
- take reasonable care their actions or omissions do not adversely affect the health and safety of themselves and others
- cooperate with any reasonable directions, policies and procedures relating to health and safety in the workplace
- report all injuries, illness or 'near misses' to their Supervisor or Manager
- participate in relevant health and safety training based on roles and responsibilities
- as required, participate in the development and implementation of specific OHS hazard and risk management strategies.

In addition to the above, positions with supervision or management responsibility are required to ensure a safe and healthy work environment for all employees, clients, contractors and visitors. This can be achieved by ensuring all people are aware of and have access to OHS policies, procedures, training and reporting systems

Cultural Safety in the Workplace

Anglicare Victoria recognises the important and unique contribution Aboriginal and Torres Strait Islander employees make by bringing their unique skills, knowledge and experience to the workplace. They also contribute important insight into how Anglicare Victoria can provide for and engage with Indigenous clients and communities more effectively.

Our Reconciliation Action Plan (RAP) and Workforce Strategy outlines Anglicare Victoria's commitment to leading and facilitating sustainable employment, training, retention and career development opportunities for Aboriginal and Torres Strait Islanders people.

Conditions of employment

- Salary and conditions are in accordance with the click to select. Salary packaging is offered with this position.
- All offers of employment at Anglicare Victoria are subject to a six month probationary period. The staff member will be asked to participate in an annual performance review linked to objectives set out for the position.
- All offers of employment are subject to a satisfactory Criminal History Check, a current Driver's License and an Employment Working with Children Check prior to commencement.

Expert Report of Dr. James Stanford

Fair Work Commission

Four-Yearly Review of Modern Awards:

AM2018/26 Social, Community, Home Care and Disability Services Industry Award 2010

September 2019

Table of Contents

Glossary of Acronyms

ABS – Australian Bureau of Statistics

DSW – Disability Support Worker

NDS – National Disability Services (peak body of disability service providers)

NDIA – National Disability Insurance Agency (agency empowered to administer the NDIS)

NDIS – National Disability Insurance Scheme

NILS – National Institute of Labour Studies

QSF – Quality and Safeguarding Framework

RCM – Reasonable Cost Model

RTO – Registered Training Organisation

SACS – Social and Community Services (classification stream in SCHDA Award)

SCHDS – Social, Community, Home Care and Disability Services

SCHDS Award – Social, Community, Home Care and Disability Services Industry Award

TTP – Temporary Transformation Payment

Summary

1. I am Economist and Director of the Centre for Future Work, a labour market policy research institute based in Sydney, NSW, and associated with the Australia Institute. I have 25 years of professional experience in applied labour market research and policy analysis. My full curriculum vitae is appended to this report (Attachment A).

2. The purpose of this report is to provide my expert opinion on the following four questions addressed to me by the Australian Services Union, as part of its instruction letter to me dated 27 August 2019 (Attachment B):

   "1. What training, skills and qualifications are required by the disability sector?
   2. What is the connection between the terms and conditions of the SCHDS Award, including broken shifts and unpaid travel time, and the disability sectors' ability to attract a sufficient number of appropriately skilled workers?
   3. Is the disability sector able to attract a sufficient number of appropriately skilled workers?
   4. Are there any implications for quality of care?"

3. My expert opinion is based primarily on original research which I conducted as a co-investigator of two significant research projects examining changes in the nature and conditions of work for disability support workers (DSWs) in the wake of the roll-out of the new National Disability Insurance Scheme (NDIS).

4. The first of these original research projects involved qualitative interviews with 19 front-line DSWs (including service coordinators and local area coordinators) working in the Hunter region of NSW, along with subsequent analysis of the data and development of policy conclusions and recommendations. This work was conducted jointly with Prof. Donna Baines (formerly Chair of the School of Social Work at the University of Sydney, now Director of the Department of Social Work at the University of British Columbia) and Dr. Fiona Macdonald (Vice-Chancellor's Senior Research Fellow in the

School of Business at RMIT University). To date this research work has led to the publication of four reports (three of which were subject to formal academic peer-review), which are appended to this expert submission, and are listed in the Bibliography:

i. Baines and Macdonald (2019; Attachment C)
ii. Baines, Kent and Kent (2019; Attachment D)
iii. Baines, Macdonald, Stanford and Moore (2019; Attachment E)
iv. Baines, Macdonald and Stanford (forthcoming; Attachment F).

5. The second original research project involved an investigation into the intensifying skills and training requirements faced by the disability services workforce as the sector increases its overall activity to meet the operational targets of the NDIS. This project also developed a proposal for a new system for financing ongoing training requirements for workers in the sector (both new recruits and longer-term workers). This work was conducted jointly with Dr. Rose Ryan: then an independent labour market researcher and analyst, now Manager of the Workforce and Workplace Evidence and Insights Branch of the New Zealand Ministry of Business, Innovation and Employment. Two key publications arising from this research are also appended to this submission and listed in the Bibliography:

i. Ryan and Stanford (2018; Attachment G)
ii. Stanford (2018; Attachment H).

6. My expert opinion is also based on my own further exploration of published literature, official statistical data, and government policy documents. That review of external resources was conducted in part as input to the two original research projects described above, and in part to supplement my knowledge in preparation for this expert opinion. The sources which I consulted in the course of that research, and which are referred to in my report, are listed in the Bibliography.

7. My report is organised according to the following structure. Part I provides a general review of the labour market for disability services work in Australia, in the wake of the roll-out of the NDIS and consequent significant expansion in demand for disability services. This section highlights some of the major challenges facing workforce development in the sector, and some of the specific consequences arising from the observed increase in the instability and precarity of work in the industry. Part II discusses in turn the four specific questions addressed to my attention by the Australian Services Union. The Conclusion of this report summarises and restates my views.

8. As will be discussed in more detail in this report and the supporting attachments, it is clear that work in the disability support services industry is being dramatically transformed as a result of the implementation of the NDIS. The individualised, market-based system which the NDIS uses to deliver services to participating clients is creating a profound fragmentation and instability in the nature of delivered services. Demand for specific services fluctuates constantly due to changes in the number of clients, their approved budgets, their specific choices of services, and other factors. In the context of the NDIS's unit-price model for funding disability services provision, this instability imposes financial uncertainty on the agencies and employers which undertake to provide these services. In turn, those agencies are attempting to shift the resulting uncertainty and risk associated with fluctuations in demand and other causes of revenue fluctuations onto their employees, through the imposition of increasingly insecure and unstable employment relationships, rostering practices, and compensation. A clear consequence of this structural shift in the nature of work in the sector has been a marked increase in precarious work practices in various forms, including: casualisation, increased part-time employment, irregular and discontinuous shift assignments, requirements that DSWs work in multiple locations (often in the course of a single day, and often working inside clients' private residences), and the expectation that DSWs provide private or informal transportation services in the course of their work (including transporting clients, in some cases without compensation).

9. This observed deterioration in the stability of work in disability services occurs in the context of the sector's need to undertake a substantial increase in the total number of people working in the sector. The full roll-out of the NDIS is anticipated to increase employment in the sector by some 70,000 full-time equivalent positions. That represents an approximate doubling of the sector's workforce over the coming transition period (as the new system is rolled out).[1] In addition to recruiting a large number of new workers to the sector, the industry faces the related challenge of quickly developing the skills and capacities of those workers – many of whom will have never worked with people with disabilities before. Given this daunting workforce development challenge, the deteriorating quality and stability of work in the industry can only exercise a counterproductive influence. Many of the front-line workers we interviewed as part of our original research (most of whom had several years of experience in the sector) were considering leaving the industry altogether in response to intolerable insecurity and deteriorating conditions. Without urgent measures to enhance the stability, conditions, and compensation associated with these jobs, it is unlikely that the industry will be able to recruit and retain the motivated, trained workers that will be essential if the NDIS is to meet its goal of providing high-quality, individualised service to all Australians with disabilities.

10. In the context of the deep challenges of labour force development in this rapidly growing industry, myself and my co-investigators identified several specific issues which are undermining the predictability, stability, and fairness of work in the sector. Two of the specific problems we identified are now being considered in the course of this Four-Yearly Review of the SCHDS Industry Award: the problem of discontinuous or "split" shifts, and the financial and other burdens associated with increasingly onerous requirements on DSWs to provide transportation services as part of their normal work (including using their own vehicles, often without compensation, and often to transport clients).

[11] Productivity Commission, 2017a, pp. 36-37.

11. In my judgment, the increasingly common practice of scheduling DSWs to work split or broken shifts considerably undermines the quality and sustainability of work in disability support services. Hourly wages in this industry are generally relatively low, and hours are already uncertain and often inadequate. If, on top of that unappealing starting point, workers are now expected to divide their working days between multiple even-shorter shifts, then the effective hourly wage received for their labours is reduced even further (once account is taken of the transportation time, preparation time, and other fixed costs associated with performing any single engagement of work).

12. Similarly, the requirement that DSWs perform informal and often uncompensated transportation services as part of their work days also imposes an additional burden on workers whose conditions and compensation are already challenging. With workers commonly being required to travel to places other than a central office or agency, often visiting multiple locations in the course of a day, the relative burden of transportation time becomes more severe. Our qualitative research confirmed that DSWs are commonly required to transport clients in their own vehicles (often without clear rules and practices regarding safety equipment, insurance, and other costs), and that compensation practices for both travel time and vehicle use are inconsistent. If DSWs are going to be required to undertake these transportation-related functions as a normal feature of work, the whole industry needs to quickly adopt and implement fair, transparent and safe practices and procedures: including fair compensation for all transportation time other than normal commutes to a single regular place of work, full compensation and insurance for the use of personal vehicles for work-related transportation, employer provision of adequate safety features and insurance, and adequate training for DSWs in the safe operation of vehicles while supervising clients. Including these requirements in the SCHDS Award is the most appropriate and effective way to ensure that the sector improves its practice in this regard.

13. These two problems (split or broken shifts and uncompensated transportation time) can interact to reinforce the negative impact on DSWs. Workers who are required to travel (without compensation) to and from several different locations in the course of a day

(often including clients' private homes), with paid work time often split across discontinuous shifts, will experience a doubly negative impact on their effective hourly wages.

14. On the other hand, addressing and ameliorating these two burdensome problems in the current pattern of disability support work holds the prospect of a dual benefit for the sector. First, reforms in these areas would enhance the fairness and quality of work for those already employed in this occupation. Second, they would lessen the negative impact of job insecurity and unreasonable scheduling and compensation practices on the industry's already-daunting recruitment and retention goals. If the disability services sector is serious about successfully meeting the challenge of building a high-quality, well-trained, and motivated workforce to achieve the goals of the NDIS, it must move quickly to resolve some of the most egregious and unsustainable work practices currently experienced by many DSWs. Addressing these two specific shortcomings would mark an important first step in that broader challenge.

Part I: General Condition of the Disability Services Workforce Under the NDIS

15. Disability support services constitutes one of the fastest-growing industries in Australia. This is largely a result of the historic increase in social resources being devoted to the provision of these services under the NDIS. Once fully rolled-out, the new scheme will allocate an estimated $22 billion per year (shared across federal and state governments) to supporting Australians under 65 with a wide range of disabilities in accessing support services. It is anticipated that some 475,000 Australians under 65 will be receiving services under the NDIS once it is fully rolled-out; at present, about 300,000 individual clients are registered,[2] implying that the system is about two-thirds of the way toward full implementation.

16. Comprehensive and consistent statistics describing the disability services workforce are difficult to attain. The Australian Bureau of Statistics does not define a disability services sector in its regular labour market surveys and statistics; the sector is lumped in with other health and social service occupations in the large Health Care and Community Services sector (Australia's largest employer).[3] Conditions of work differ greatly between different sub-sectors and occupations within that broad umbrella category, and hence it is impossible to generalise from that broader data regarding the specific employment patterns and practices in disability services.

17. One useful source of data has been developed by the National Disability Services peak body (which represents many disability service providers). This database is derived from the Workforce Wizard employment platform which NDS has supported, as part of the industry's efforts to recruit and match prospective workers.[4] This data set is not comprehensive; at present it covers approximately 45,000 workers (NDS, 2018b, p.4),

[2] See NDIS (2019a) and Cluff (2019).
[3] Even in the more detailed breakdowns of labour force statistics reported by the ABS (such as Labour Force, Australia, Detailed, Quarterly, Catalogue 6291.0.55.003), the definition of sub-categories is not sufficiently disaggregated to permit the isolation of disability services.
[4] See NDS (2018b).

perhaps half of the current disability services workforce. But its sample is sufficiently broad to provide reasonably robust indicators of broad patterns in employment practice.

18. Key conclusions derived from the NDS data regarding employment and work practice include:

    a. About 80% of employees in the sector work part-time (NDS, 2018b, p.5).
    b. Women account for about 70% of the disability services workforce (NDS, 2018b, p.15).
    c. Casual and fixed-term employees account for over one-half of all jobs; permanent positions account for less than one-half of all jobs (NDIS, 2018b, p.5).
    d. Fewer than 10 percent of the disability support workforce are employed on a full-time and permanent basis.[5]
    e. 44 percent of disability service workers are 45 years or older – making the sector's workforce one of the oldest of any sector in Australia's economy (NDS, 2018a, p. 46).
    f. Turnover in the industry is very high: over one-quarter of workers change jobs in the course of a year (NDIS, 2018b, p. 9).[6] That is approximately three times higher than the average turnover rate in the overall Australian labour force.[7]
    g. Average hours of work are low and highly variable. Workers covered by the database worked an average of 22 hours per week in the March 2018 quarter (NDS, 2018b, p. 10). Some workers work very short hours, and many workers experience regular fluctuations in their hours of work.

19. The NDS data also confirm that, in the face of increasing demand driven by the NDIS rollout, there is strong growth in employment in the sector of around 11 percent per year

[5] NDS (2018a, p.23) reports that only 35 percent of permanent employees (which in turn make up just 19 percent of the total workforce) are employed on a full-time basis, implying that just 7 percent of the workforce work in permanent full-time positions.
[6] The NDS (2018b) report does not directly report an annual turnover figure, but it can be derived from data presented on quarterly turnover for casual and permanent employees. The average quarterly turnover rate across those two categories is approximately 6.5%, implying an annual turnover rate of over 25%. This conclusion is affirmed explicitly in an earlier version of the NDS report (NDS, 2018a, p. 18).
[7] See Australian Bureau of Statistics (2019, 'Summary'), which reports average annual turnover of 8.5% among Australian employees in the 12 months ending in February 2019.

(NDS, 2018b, p.7). However, even this rapid expansion will be inadequate to meet the expected need for the disability services workforce to double by the time the NDIS roll-out is complete.

20. While positive, this employment growth masks two significant concerns. The first is that growing employment is being driven almost entirely by a growth in casual employment. The growth in casual employment in the sector was 26 percent per year, compared to just a 1.3 percent per year increase in permanent employment (NDS, 2018b, p.7). Virtually all the new jobs in the sector, therefore, are casual. Secondly, turnover issues remain a huge concern – exacerbated by the rapidly ageing cohort of more experienced workers, and the unattractive conditions and compensation of most jobs.

21. The Productivity Commission has also attempted to assemble a statistical portrait of the disability services workforce, in the face of the unavailability of precise data from conventional sources (Productivity Commission, 2017a and 2017b). The Commission developed its own estimates of employment numbers, qualifications, and other workforce characteristics by interpolating and disaggregating ABS data covering broader categories of employees. Key findings from the Productivity Commission's analysis include:
    a. Over half of all workers in the sector possess a Certificate III or IV as their highest qualification (Productivity Commission, 2017b, p. 334).
    b. About 60% of disability support workers work part-time – twice as large a proportion as in the overall Australian workforce (Productivity Commission, 2017b, p. 333).

22. Providing services to a large and growing population of registered NDIS clients as the system is rolled-out will require many tens of thousands of new workers. It is estimated that the sector's workforce will have to approximately double in order to meet the needs of the NDIS, growing by approximately 70,000 full-time equivalent positions.[8] Since most DSWs are employed on a part-time basis, this implies a much larger total number

[8] Productivity Commission (2017a), pp. 36-37.

of individuals who must be recruited to work in the sector.[9] The growth in disability services employment is therefore projected to account for about one in five of all new jobs created in Australia over the period of the transition.[10]

23. One feature of the new system is its emphasis on individual choice in developing support plans and accessing desired resources. Registered clients meet with NDIS planners who identify and evaluate their needs, and determine overall individual budgets for their care and support. The clients then (on their own, supported by family members, or with the formal support of paid coordinators) identify and contract with suppliers to provide the desired services. Services are funded on a unit basis by the NDIS, following a schedule of prices which are reviewed and adjusted annually.

24. Traditionally, disability support services were provided by a mixture of government departments and charitable, religious or community agencies. The latter were funded primarily on a block- or grant-based basis by governments to perform specified services in their respective communities, typically supplemented by charitable donations. Under the new marketised NDIS system, funding for services now depends on each agency's success in contracting with individual clients to provide their services under their respective individual plans. This transition from block- or charitable funding to requiring agencies to successfully "market" their services to individual service users has proven very challenging for many of these agencies, some of which have experienced financial crisis, reduced their staff, and even entered liquidation.[11] The NDS annual Business Confidence Survey (NDS, 2016) found that 22 percent of providers reported a financial loss in the previous year, with immediate impacts on supervision and training provision. Many reported that they would not be able to continue to provide services at currently NDIA-set unit prices, and would have to reduce the quality of their services if prices did not improve.

[9] With DSWs working an average of just 22 hours per week (para. 18 above), this implies a need to recruit over 120,000 workers in order to provide an additional 70,000 full-time equivalent positions.
[10] Productivity Commission (2017b), p. 331.
[11] See, for example, Campbell (2018) and Lenaghan (2016).

25. Research regarding initial experience under the NDIS confirms that providers are experiencing severe difficulties in recruiting new staff to even maintain existing operations, let alone scale up to the dramatic degree implied by forecasts of fully rolled-out NDIS operations.[12] This challenge has been exacerbated by inadequate conditions of work in the sector: most workers are engaged in casual, part-time, and irregular positions; staff turnover is high; and there has been a consequent reduction in the availability of training (including in-house supervision and support) provided for employees – just as new workers need more skills to fulfil the goals of the NDIS. This situation poses significant challenges for the quality of service received by NDIS participants, for the job quality and opportunities of disability support workers, and for the organisational stability and financial viability of providers.

26. I was a co-investigator on an original qualitative research project to investigate the impact of the NDIS on the quality and stability of jobs in disability services work. The research involved structured interviews with front-line DSWs in the Newcastle, NSW region (one of the first regions to experience the trial roll-out of the NDIS model). The data gathered through this research confirmed widespread and acute concerns with the fragmentation and insecurity of work under the new system.[13] This research identified eight broad categories of concern on the part of these front-line workers, including:

    a. The new system is not providing sufficient support for participants with intellectual and other cognitive disabilities, including in designing and managing their individualised programs of care;
    b. DSWs are experiencing increased instability and precarity in their jobs, elevated levels of mental and physical stress, and irregular hours and incomes;
    c. New workers joining the disability services sector are often less skilled, less trained, less experienced, and sometimes reluctant;

[12] Other research documenting these growing challenges experienced by workers under the NDIS include Macdonald and Charlesworth (2016), Cortis *et al*. (2017), and Macdonald *et al*. (2018),
[13] Findings of this original research are detailed in Baines and Macdonald (2019); Baines, Kent and Kent (2019); Baines, Macdonald, Stanford and Moore (2019); and Baines, Macdonald and Stanford (forthcoming). These four publications are attached to this submission in full.

d. DSWs experience particular challenges working in the private realm of NDIS clients' homes;
e. The informal and inconsistent provision of transportation and other necessary support functions to NDIS clients results in a significant shift of costs and risks to workers;
f. DSWs are experiencing increased levels of violence in their work;
g. Relationships with managers have changed dramatically under the new system, undermining effective supervision, coaching, and training; and
h. Worker turnover, given the insecurity of work and income and the challenging conditions of work, is extreme.

27. Despite expressing a strong commitment to the profession of disability services in general, and the goals of the NDIS in particular, several of our research participants (most of whom were long-term employees in the sector) expressed an expectation that they would leave the industry, due to the intolerable nature of some of these problems.

28. These first-hand reports of dissatisfaction with conditions of work in the industry, and a growing risk of departure from the sector, reinforce aggregate data regarding high rates of turnover in the disability services sector. NDS (2018b) reports average job turnover of over 25% of workers per year in disability services (derived from NDS, 2018b, p. 9), about three times as high as turnover in the overall labour force (ABS, 2019, Summary).

29. It is important to note that two of the most commonly-expressed problems encountered in our qualitative research relate directly to the topics under consideration in this Four-Yearly Review of the SCHDS industry Award. Multiple interviewees reported the great difficulties of managing very unstable and unpredictable shift and roster schedules, and balancing the demands of such unpredictable work with their other family and community responsibilities. The assignment of DSWs to work discontinuous shifts, often in diverse locations, greatly exacerbates the personal cost and stress of this instability in work. The time spent in traveling to and from work under these split or broken shifts, and the often wasted time between these short periods of work, has the

effect of greatly reducing the effective hourly income associated with this work – as well as imposing considerable stress on the workers and their families.

30. Similarly, multiple interview participants expressed strong concern about the growing requirements to perform transportation services as part of their jobs as DSWs. It is now common to require DSWs to use their own personal vehicles – both to travel to multiple sites of work, and in many cases to transport NDIS clients. Reported practices are highly inconsistent regarding compensation for the costs involved in that use (with some participants instructed by employers to claim these costs as business expenses on their income tax returns, rather than being directly reimbursed). Provision of safety equipment, appropriate insurance, and training in the safe operation of vehicles while supervising clients (who may have pressing and immediate needs),[14] was also found to be inadequate or non-existent.

[14] This challenge is particularly acute for DSWs transporting clients with intellectual, cognitive, or complex needs, who may require immediate attention from their carers.

Part II: Responses to Specific Questions Addressed

31. In this section of my export opinion I will respond in turn to the four specific questions addressed to me in the letter of instruction received from the Australian Services Union.

A. Training, skills and qualifications required by the disability sector

32. The disability services workforce is very diverse. Some workers are specialised professionals who have obtained advanced education and qualifications. Some workers do not possess any formal post-school training or qualifications at all.

33. One important concern regarding the implementation of the NDIS, given its reliance on decentralised and individualised decisions regarding service provision, is the extent to which financial and cost-cutting pressures may steer the industry toward the provision of lower-cost services by workers with less formal training and qualifications.

34. The NDIS is still developing its approach to regulating the registration and qualifications of service providers. At this point there is no required qualification or registration procedure for individual DSWs employed at service-providing firms or agencies.[15] Effective 1 July 2020, workers in certain specified roles will need to be screened and receive a check (similar to existing checks for people working with children).[16] But there is no required formal training or qualification for people to be hired as DSWs. This means that individuals working in these roles may have no formal training or qualification in this occupation.[17]

[15] Agencies and organisations providing disability support services must register with the NDIA and, where relevant, state governments. And of course, some specialised health services are covered by NDIS funding, and the allied health professionals delivering those services are covered by the same regulations and qualification requirements that normally apply to their respective professions. For individuals employed in general disability support work, however, similar regulations and requirements are absent.
[16] NDIS Quality and Safeguards Commission (2019).
[17] The State of Victoria is considering a system of mandatory registration and accreditation for disability support workers that would be the first step toward regulating qualifications for DSWs. See Department of Premier and Cabinet of Victoria (2017).

35. A common misperception about work in disability services is that it is unskilled and that workers in the industry do not need any special qualifications to work there. This stands in contrast to the view of clinicians, social workers, disability specialists and participants themselves: namely, that this work requires sophisticated communications skills, a high level of emotional intelligence, and (depending on the complex and varied needs of the participant) specialist knowledge (for example, in relation to particular medical conditions, dealing with challenging behaviour, or understanding the side-effects of medications). In addition to multiple and complex needs, people with disabilities may also need support in managing multiple and complex interactions with government and non-government agencies in the course of addressing their housing, medical, and educational support needs.

36. At present there is no requirement for disability support workers to have any minimum industry-relevant qualification. However, analysis of the skills and qualifications of the existing workforce in the lead-up to the introduction of the NDIS confirms that many are in fact very well-qualified. In 2010, a survey undertaken by the National Institute of Labour Studies (NILS, 2010, p. 129) found that 72 percent of non-professionals working in the industry held a nationally recognised Certificate III or IV qualification, with 48 percent of these holding a Certificate IV in Disability. Although not compulsory, the NDIA advises registered providers that a Certificate III or similar is desirable for support roles (Windsor and Associates, 2014b), and the industry as a whole regards the Certificate III as a minimum base-level qualification.

37. In addition to those holding these industry specific qualifications, a high proportion of the current workforce also have additional tertiary level qualifications. An online survey of 300 respondents undertaken by the Australian College of Community and Disability practitioners between November 2016 and March 2017 found that 31 percent held a Bachelor's or Master's degree or graduate Diploma, 28 percent held a Diploma-level qualification, and 38 percent had Certificate III or IV level qualifications.[18] The Productivity Commission estimated that over 80% of the current workforce in aged and

[18] Australian College of Community and Disability Practitioners survey, cited in Ryan and Stanford (2018, p. 24). The survey did not indicate whether the qualifications were directly related to disability services.

disability care roles possess some form of tertiary qualification (Productivity Commission, 2017b, p. 334).

38. Unfortunately, despite the significant qualifications possessed by the current workforce, evidence collected by NDS (2018b) indicated that most new recruits to the sector do not possess any formal qualification in disability services work. Just one in five new recruits to the industry in 2017 held a Certificate III designation in disability services or higher qualification (NDS, 2018b, p.19).

39. Similarly, citing Department of Employment survey research, the Productivity Commission reported that 89% of employers in the disability and personal care field indicated that a certificate-level qualification was essential for the job (Productivity Commission, 2017b, p. 339). Contradicting this view, however, over one-quarter of responding employers indicated that they regularly hire workers with no formal qualifications.

40. The gap between the broadly-shared view that high-quality disability services work requires workers with specialised tertiary qualifications, and the fact the most new recruits do not possess such skills (in the context of the rapid expansion of disability services provision under the NDIS) indicates a looming crisis in both quality of work (for workers in the industry) and quality of care (for NDIS participants). It also constitutes prima facie evidence that the industry needs to improve its "offer" to prospective employees. It is impossible to imagine that the requisite number of qualified, skilled and motivated workers could be attracted to this industry, given the unappealing or even intolerable conditions and insecurities which they would face in their new jobs.

41. We may now consider some of the current vocational education offerings that are presently available in Australia for prospective workers who wish to specialise in disability services work. Two qualifications in the sector are recognised nationally as part of the formal Vocational Education and Training (VET) framework. These two qualifications are:

a. *CHC 33015: Certificate III in Individual Support (Disability)*;
b. *CHC 43115: Certificate IV in Disability Support.*

42. For a Certificate III, students must undertake 7 core and 6 elective Units of Competency; and complete 120 hours of work experience (including completing a set of written and practical tasks in the workplace).

43. Defined qualifications for the sector are overseen by SkillsIQ (the Skills Service Organisation that covers the disability support sector as part of the wider community and social services area). No higher-level qualification vocational pathways are formally defined for disability support work, although many people working in the sector have higher-level qualifications in health or allied health disciplines (such as nursing and social work).

44. For a workforce that is low-paid and works a limited number of hours, there are significant barriers to enrolment and completion of vocational qualifications. There are a large number of private RTOs offering these and other relevant training packages (including some larger employers that have their own internal training and development divisions); and a considerable amount of training is undertaken in publicly-funded TAFEs. The costs of courses vary from provider to provider (and may depend on government-determined eligibility for funding requirements), but can range upwards of $2,000. A compulsory work placement (of 120 hours), with workplace assessments, is also required, along with course work. There is no reliable evidence about the extent to which those completing these qualification are employed during the course of their training (i.e. people may complete courses on a pre-employment basis); whether they pay the costs of their own training; and whether costs of attendance (including paid time off) are met by their employer.

45. In recognition of the need for workers to complete some minimal level of training to work in the sector, an accredited induction skill set, *CHCSS00081 Induction to Disability*, was approved in 2015. It comprises four units of competency from the Health and the Community Services Training Packages, all focused on NDIS-specific aspects of

broader care work. The *Induction to Disability* skill set is designed for newly appointed disability support workers. It can be included as credit towards completion of the Certificate III Individual Support (Disability) or other national qualifications. However, take-up of this program by employers has so far been relatively rare.

46. In my original research with Ryan on the unmet skills needs of the disability services sector (Ryan and Stanford, 2018), we identified the instability of employment arrangements, the low wages, and the absence of defined and regulated career paths as key barriers inhibiting current and prospective disability support workers from accumulating more formal training. We proposed several measures to help improve and stabilise working conditions, and suggested that efforts to regulate more closely the job classifications and qualifications of different roles in the industry could reinforce efforts through other channels (including changes to the SCHDS Award) to develop better jobs.

47. Finally, it is worth considering further how the implementation of the new market-driven, individualised structure of the NDIS is affecting the industry's skills requirements. Indeed, the NDIS pricing model has had significant consequences for training and development in the sector. One of the major concerns has been a reduction in the time allocated for training within agencies, as a result in part of the lack of resources to support these broader overhead functions under the NDIS's unit-pricing model. Team meetings having all but disappeared; supervision has been severely curtailed; and many casual workers have been newly-employed with almost no supervision at all. These concerns are corroborated by employers, over a third of whom agree that support staff are not paid to attend regular team meetings or attend training and development activities (Cortis *et al*., 2017).

48. A well-trained workforce is essential for achieving the quality of support promised by the system, but the experience so far in Australia supports international findings (Iancono, 2010) that consumer-directed delivery models tend to pay little attention to the need for long-term workforce development. Market forces cannot autonomously resolve these fundamental shortcomings; it will require pro-active regulation, attention and fiscal support to mobilise the ongoing investments in skills upgrading that the sector

requires. One of those pro-active initiatives would be to stabilise working hours, incomes, and conditions, to make the prospect of a career in disability services more appealing, and hence motivate the entry of additional recruits. Moreover, by stabilising and regulating work, opportunities are opened up to attach greater formal training requirements to job classifications and career paths.

B. Connection between the terms and conditions of the SCHDS Award, including broken shifts and unpaid travel time, and the disability sector's ability to attract appropriately skilled workers

49. The SCHDS Award plays an important role in establishing a benchmark of minimum wages, working conditions, and practices that applies across the broader community and human services sector, in line with the general Modern Awards objective to "provide a fair and relevant minimum safety net of terms and conditions."[19] Without the influence of the Award, there is no doubt that the downward pressure on job stability, compensation, and working practices that has been evident in the sector as it transitions toward the NDIS would be even more intense and damaging. The provisions of the Award clearly moderate the extent to which the fiscal pressures and operational flux associated with the roll-out of the new system have impacted on the stability and quality of work for disability service workers.

50. The unit price framework specified by the NDIS for disability services (under the NDIS's Reasonable Cost Model, RCM) makes explicit reference to the need of disability services agencies and employers to at least meet the minimum conditions specified in the Modern Award.[20] The price guides published by the NDIA proscribe maximum hourly payments for different categories of support (with slight variations depending on time of day, complexity of support needs and for remote locations). Those hourly payments explicitly require that all costs of providing support by a support worker employed under the SCHDS Award by a "reasonable" service provider be

[19] Fair Work Act, Section 134(1). The full text of the Award is at Fair Work Commission (2019).
[20] NDIS participants with self-managed plans can determine their own prices for contracted services, presumably in negotiation with providers.

included in the cost base. However, since the roll-out of the NDIS began, the realism of this pricing model in relation to the true costs of providing support, and the transparency of the decisions made in respect of price-setting, have come under increasing criticism (Cortis *et al*., 2017; McFadden, 2017).

51. Many agencies report challenges in covering the costs of those minimum standards from within the unit prices specified under the NDIS. For example, one survey of approximately 130 registered NDIS providing organisations found that current pricing levels do not enable them to meet the obligations specified under the SCHDS Award, to recruit or retain staff, and/or to cover the costs of support workers travelling between clients (Cortis and Blaxland, 2017, p. 10). In this regard, inadequacies in the NDIS fiscal system – including both inadequate unit price levels, and the deeper failure of the unit price system to allocate sufficient resources for overhead and infrastructural tasks (like training, supervision, and consultations among staff) clearly establishes a negative context for the development of a skilled, motivated disability services workforce.

52. Partly in response to these criticisms, the NDIA has recently announced some significant revisions to unit prices under its RCM, effective 1 July 2019.[21] These changes include:[22] price increases for various services (ranging between 1 and 5% for most services); adjustments to pricing for group activities; a new Temporary Transformation Payment (TPP) to supplement revenue for registered providers during the transition to the NDIS;[23] and an expansion of allowable transportation charges for some services (in some cases, such as core support services, allowing for up to 30 minutes travel time charged for traveling to an appointment in urban areas, and up to 60 minutes in regional areas).[24]

53. These changes will incrementally improve the ability of service providers to cover reasonable and necessary costs for their workers, as well as for overhead functions (like

[21] See NDIS (2019b).
[22] See Naufal (2019).
[23] The TPP will be phased out over time.
[24] Workers providing capacity building supports can charge more travel time, including return trips to their central place of work.

staff meetings, training and supervision). But they will clearly not eliminate the fiscal "squeeze" on the ability of the industry to meet the needs of NDIS clients, while simultaneously respecting the minimum standards set out in the SCHDS award, let alone aspiring to set higher standards in work practice. In particular, allowing providers to charge participants for things like travel and non-face-to-face overhead activities will mean little if participants' personal budgets are still unrealistically constrained; without additional funding to participants, these changes in allowable billing may simply force clients to abandon certain aspects of their personal programs in order to stay within their respective budgets.

54. While the SCHDS Award contains important provisions which protect DSWs from some of the worst potential consequences of the industry's shift toward a more fragmented, irregular, and market-driven mode of service delivery, features of the Award have nevertheless permitted and facilitated the growth in insecurity and precarity which has been confirmed by our original research. In particular:

a. The SCHDS Award has permitted the growing use of casual labour, which now accounts for most employment in the sector (and virtually all new hires). Casual workers are not protected by many of the same basic provisions (for example, regarding stability in shift scheduling or entitlements to notice of termination or redundancy pay) as permanent workers.
b. The SCHDS provisions for minimum call-out periods are weak; casual DSWs can be engaged for as little as 2 hours at a time, and there is no minimum call-out period for part-time workers.[25] The absence of stronger rules on minimum call-out has clearly facilitated the evolution of work in disability services toward discontinuous, unstable, and irregular hours of work.
c. The Award also allows employers to assign "broken shifts" (with one or more uncompensated non-meal breaks within any 12-hour period), to both permanent and casual employees in disability services, with no penalty.[26] This also facilitates the fragmentation and disruption of normal work schedules, complicates the challenges

[25] Sections 10.3 and 10.4.
[26] Section 25.6.

facing disability service workers to maintain health work-life balance, and undermines their effective hourly compensation (since time between portions of broken shifts typically occurs at sub-optimal locations and times of the day, thus preventing workers from experiencing full "value" for their leisure time).

55. Our original research noted the importance of the growing burden of transportation-related duties in contributing to the insecurity of work for DSWs, adding to their stress and safety risks, and undermining their effective hourly compensation. On this matter, the SCHDS Award is also clearly incomplete in establishing minimum safety net protections. It broadly specifies that the required use of a private vehicle for work purposes must be compensated by employers at $0.78 per kilometer.[27] However, our original research has indicated that this provision is not uniformly applied in practice.[28] The SCHDS Award is silent on the other important problems we discovered regarding DSWs' performance of transportation services, including inadequacy of necessary safety equipment and insurance, and inadequacy of training in safe operation of vehicles for work purposes. These issues are especially important when workers are required to transport clients in their own vehicles. Nor does the Award discuss issues regarding extra costs related to damage of personal vehicles during work use (which was also identified as a major concern by participants in our original research).

56. Finally, and perhaps most importantly, the Award presently does not specify minimum standards of practice regarding compensation for workers in work-related travel. Given the fragmentation of work assignments under the NDIS, and the increasingly common requirement that DSWs must travel to their clients – in some cases to multiple locations in the course of a day – work-related transportation is occupying a growing share of DSWs' total time. This is especially true for the casual employees who now make up the majority of employees. Failure to compensate workers for this often-onerous transportation time (a practice, again, that was confirmed in our original research with

[27] Section 20.5.
[28] See Baines, Macdonald and Stanford (2019), pp. 22-26.

front-line workers[29]) thus translates into a substantial reduction in effective compensation. To describe an extreme example, if a part-time worker were required to attend to 4 different clients in the course of a day, with each visit compensated for one hour, and requiring 1 hour of travel or non-compensated down time between assignments[30] plus 30 minutes travel at each end of the day, then the worker spends a total of 8 hours time to perform 4 hours of compensated work. Thus their effective compensation per hour spent working or getting to work is cut in half relative to the nominal amount specified in the Award: to under $11 per hour for a worker at the SACS Grade 1 level. Allowing employers free reign to organise work in such a fragmented, inefficient and unfair manner will only further degrade effective conditions and compensation in the sector, and clearly exacerbate the challenges of recruitment and retention.

57. Note that the hyper-flexibility permitted by the SCHDS Award in shift scheduling, short assignments, broken shifts, and required but uncompensated travel time serves to eliminate the incentive or pressure on employers to try to organise work in the most efficient and stable manner. From the employer's perspective, there is little if any incentive to avoid scheduling work in small, discontinuous blocks (motivated, presumably, by the fragmented and unpredictable nature of demand from clients), nor to geographically plan the assignment of appointments to minimise travel time. When something is "free" (in this case, the disruption and uncompensated time of workers), it will not be treated with value and used efficiently. The weakness of the SCHDS Award in addressing these problems of instability and unpredictability in working arrangements is thus clearly facilitating the further fragmentation and destabilisation of work in the sector.

58. Other ways in which the framework determined by the SCHDS Award does not fully regulate working conditions and practices in the industry include the fact that it applies

[29] See Baines, Macdonald and Stanford (2019), pp. 22-26.
[30] Since the shifts can be broken without penalty, there is no requirement for the employer to align assignments in an efficient and continuous manner, so it would be unusual for the timing of assigned visits to perfectly align with travel schedules.

only to employees in the sector (not to independent service providers, contractors, and suppliers), and the fact that NDIS participants with self-managed plans are able to negotiate their own prices for contracted services (and hence are not directly bound by the minimum compensation and practice standards specified in the SCHDS Award, unless they contract with registered providers who are themselves bound by the Award).

59. In my judgment the two proposed revisions to the SCHDS Award – to specify penalty wage rates in cases of split or broken shifts, and to require minimum payment at normal rates for work-required transportation services – are both well-justified responses to problems of work fragmentation and unfairness that were documented in our original research, and in other studies. They would represent small, partial but important steps in addressing the growing fragmentation of work in this sector: a trend that is undermining the quality of work life for DSWs, the quality of service for clients, and the fundamental economic efficiency of agencies and employers.

60. In addition to these important reforms, the Commission, the Fair Work Ombudsman, and the industry need to pay more attention to regular enforcement of the Award's provisions. Our original research indicated that even existing provisions of the Award regarding transportation (such as the requirement to compensate workers for use of their personal vehicles) are not always applied in practice.

C. Disability sector's ability to attract a sufficient number of appropriately skilled workers

61. As our original research, and other published literature, has confirmed, the profound and growing instability and precarity of working arrangements in the disability services sector is clearly contributing to the industry's workforce development challenges. With good reason, potential and motivated new recruits have grave doubts about their ability to earn a decent, stable living in this industry, or their ability to balance work and family/life commitments in a sustainable and healthy manner (given the constant turmoil they should expect to experience in their working lives). By endorsing and facilitating this degradation and destabilisation of work, the SCHDS Award as presently specified is

clearly failing to address this growing challenge – despite its incremental benefits in establishing and improving minimum standards and practices in some important areas. I expect that the sector's recruitment and training difficulties will become more acute over time, as the demand from NDIS participants grows, as the sector becomes even more casualised, as disability service jobs become even more precarious, and as the existing cadre of more experienced and skilled workers continues to exit the industry (due to normal retirement or to premature departure as a result of intolerable conditions).

62. At present, the majority of new workers recruited to work in the sector do not possess any formal qualification in disability services work. According to the NDS (2018b) database, just one in five new recruits to the industry in 2017 held a Certificate III designation in disability services or higher qualification (NDS, 2018b, p.19).

63. This suggests that new recruits to the industry have considerably less training and qualifications than the existing workforce (as described by the Productivity Commission, 2017b, p. 334). This finding is consistent with the findings of the original qualitative research I conducted with Baines and Macdonald (Baines, Macdonald and Stanford, 2019, pp. 18-21), which similarly reported that incoming recruits had relatively weak qualifications and capacities; this resulted in an increase in workloads, responsibilities, and stress for existing more senior workers (who had to try to fill in tasks which new recruits were unable to perform).

64. The relatively less-skilled nature of new recruits reinforces the urgency of developing and funding ongoing training programs to enhance the skills and capacities of new recruits. It also underlines the importance of trying to stabilise the existing workforce and reduce turnover, thus preserving the skill base and human capital of current DSWs. Finally, it certainly reinforces the conclusion that the industry is unable, given its current practices, to attract the skilled workers that will be required to meet the expanded service delivery needs associated with the NDIS.

65. There is additional empirical evidence confirming that employers in the sector face major challenges in attracting new workers to the industry. The NDS (2018b) database indicates that four-fifths of all agencies attempted to hire new staff during the March 2018 quarter (NDS, 2018b, p.21). Of those, nearly one-third were unable to fill all the vacancies they advertised for, and unfilled positions accounted for 25% of all advertised positions (NDIS, 2018b, p. 22). Some agencies advertise permanently for new recruits, with no limit on hiring – in essence hiring all the new staff they can find.

66. In the March 2018 quarter, 43% of employers with unfilled vacancies cited an absence of suitable qualified candidates as the main reason for their unsuccessful recruitment effort (NDS, 2018b, p. 23). That was up sharply from 29% answering the similar question a year earlier, attesting to the increasing recruitment challenges facing the industry. Employers also cited the requirement "to work flexible hours in order to fit shifts that align with client needs" as another factor in their recruitment challenges (NDS, 2018b, p. 22).

67. At present, in conclusion, it is clear that the disability services sector is not meeting the challenge of recruiting, retaining and training a workforce of suitably qualified and motivated disability service workers that will be essential to meet the laudable goals of the NDIS. Part of the problem in this regard clearly rests with inadequacies in the structure and funding model of the NDIS itself. But part of the problem also related directly to the practices of disability agencies and providers, which are shifting the risks and uncertainties associated with the new system onto the backs of their workers. In most respects the SCHDS Award has permitted and facilitated this shifting of risk and uncertainty, and in so doing is contributing to a situation in which the quality of work and the quality of care in this sector are both damaged.

68. Disability sector employers can rightly complain about the failures of current NDIS funding practices to allow for normal costs of high-quality, sustainable service delivery: including inadequate allowances for training, supervision, and other overhead staff functions; and an unrealistic and extreme unit pricing system which fails to recognise that it is impossible to organise disability services work without down time, travel time,

and non-face-to-face time. But if providers are allowed to respond to those pressures by simply shifting the resulting costs, risks, and instability to workers, the long-run result will certainly be a workforce that is unstable, demoralised, and unqualified. Moreover, pressure to fix the underlying problem (flaws in the design of the NDIS pricing and delivery models) will be dissipated. It is unreasonable to expect DSWs to effectively subsidise the operation of an inadequately designed and funded system, through their own precarious and intolerable working conditions.

69. In this regard, by establishing firm benchmarks for fair and sustainable work practices in this rapidly-changing industry, and preventing employers from forcing DSWs to "pay" for the resulting fragmentation and uncertainty, these reforms to the SCHDS Award will contribute to the longer-run task of improving NDIS design. Agencies may have to go back to the NDIA (as part of the annual unit price review process) to argue for additional resources to account for changes in the SCHDS Award (regarding fair compensation for broken shifts and transportation time).[31] But that is necessary in a system which is still "finding its way" in building a fiscal system within which high-quality disability services can be sustainably provided.

D. Implications for quality of care

70. There is a well-established relationship reported in peer-reviewed international research from a range of disciplines that the quality of care provided to recipients of various human services depends importantly on the stability, tenure, training, and motivation of the caring workforce.[32] Improving the quality and appeal of jobs in human and caring services occupations will thus have a direct and necessary impact on improved quality of care. As summed up by the Organisation for Economic Cooperation and Development,

[31] The 2019 adjustments to unit pricing will provide some additional resources to address those problems.
[32] Representative examples of this extant literature from education, health care, aged care, disability services, and other caring industries include: Aiken *et al*. (2002); Dieleman and Harnmeijer (2006); Steinwachs *et al*. (2003); Kashen *et al.* (2016); Geisler *et al*. (2019); Carr (2014); Hotta (2007); Baines and Armstrong (2015); and Molineuvo *et al.* (2014).

"measures to improve retention can have a good return on investment, such as lower turnover, higher job satisfaction and better quality of care."[33]

71. In the specific context of disability services provision in Australia, accumulating evidence paints a similar picture that high levels of staff turnover; inadequate training, especially of new staff; inadequate opportunities for supervision and support of workers; inadequate systems for exchanging information between DSWs; inadequate provisions for transportation services related to accessing services; and other shortcomings in service delivery are all serving to negatively affect the quality of service and care received by NDIS participants.[34]

72. Our original research interviews with front-line workers under the NDIS in the Newcastle region revealed several ways in which instability and fragmentation of work, high staff turnover, inadequate and unfair compensation, inadequate training, inadequate supervision and support, and unreasonable requirements on staff all directly undermined the quality of service and care which DSWs are able to provide to their clients. Some of these specific channels of impact on quality of care include:

a. DSWs who work broken shifts in multiple locations rarely attend a central office or agency site, which prevents them from accessing information about clients or conferring with colleagues on treatment strategies (Baines, Macdonald and Stanford, 2019, pp. 28-30).
b. Very high staff turnover exacerbates problems with underskilled new workers, who do not have the skills or experience to address complex needs, consequently resulting in a higher burden of responsibility on the remaining more senior staff (Baines, Macdonald and Stanford, 2019, pp. 18-21).
c. The requirement that DSWs transport clients in their own vehicles creates situations where DSWs cannot simultaneously meet their clients' needs and safely operate their vehicles (Baines, Macdonald and Stanford, 2019, pp. 22-26).

[33] OECD (2008), p. 199.
[34] Concerns regarding quality of care under the NDIS, and the connection between quality of care and the stability and conditions of work, are discussed by Cortis (2017), pp. 41-42; United Voice (2017); Ryan and Stanford (2018), pp. 33-34; and Australian Service Union (2019).

d. Working without peer support in clients' private homes exposes DSWs to greater risk of violence and safety issues, and there is no opportunity to consult with or get support from colleagues in difficult situations (Baines, Macdonald and Stanford, 2019, pp. 21-22).

73. In sum, there is no doubt that the increasing fragmentation and insecurity of work for DSWs under the NDIS, the pattern of inadequate training, supervision and team support, and the very high staff turnover experienced in the industry, are having negative consequences for the delivery of high-quality disability support services, and thus defeating the ambitious goals of the NDIS. It is incumbent on all stakeholders in the system – including funders, managers of agencies, workers and their unions, clients and their advocates, and regulators – to find ways to stabilise the pattern of work in the sector. This will have many positive impacts on the quality of service and care received by participants in the system.

Conclusion and Declaration

74. My original research (in conjunction with co-investigators) of working practices, working conditions, and training needs in disability services work under the NDIS has confirmed that the new system is having a major negative effect on the stability and quality of work. In particular, work has been increasingly casualised, working hours have become highly irregular and fragmented, training and staff supports are sadly inadequate, and (as a result of these problems) staff turnover is very high.

75. This general finding is confirmed by my review of the extant academic, statistical and policy literature regarding negative trends in job stability, turnover, training and supervision for disability service workers, and the resulting negative impacts on both the retention and quality of the disability services workforce and the quality of care for people with disabilities.

76. The very important and laudable ambitions of the NDIS to provide disability services in a more respectful, democratic, and flexible manner will be squandered without urgent attention to the emerging crisis in the stability and quality of work in the sector. Urgent attention should be given by all stakeholders to the priority of improving job quality, stability, training, and compensation as a precursor for attracting and retaining the skilled, motivated workforce that is essential to the future success of the scheme.

77. To this end, I find the proposed amendments to the SCHDS Award to be modest, incremental, and sensible. They would make a small but important difference in stabilising jobs and schedules, preventing the further needless fragmentation of work, and somewhat improving fairness in compensation practices. Much more needs to be done to address the issues of precarity and fragmentation in disability service work, but these two steps would constitute a significant step in the right direction.

78. I have made all the inquiries that I believe are desirable and appropriate and no matters of significance that I regard as relevant have, to my knowledge, been withheld from the Commission.

Signed:

Dr. James Stanford

Sydney, Australia

✧✧✧✧✧

1. Current Status:

Economist and Director, Centre for Future Work
The Australia Institute
Level 1, Endeavour House, 1 Franklin Street
Manuka ACT 2603, Australia

Harold Innis Industry Professor (fractional appointment)
Department of Economics, McMaster University
Hamilton, Ontario, L8S 4L8, Canada

Honorary Professor, Department of Political Economy
University of Sydney
Sydney 2006 Australia

2. Education:

Graduate Faculty, New School for Social Research, New York (1990-95)
Ph.D. in Economics

Degree conferred in 1995.
Dissertation: *Social Structures, Labor Costs, and North American Economic Integration*.
Areas of concentration: international economics, macroeconomics, labour economics.

University of Cambridge, Cambridge, U.K. (1985-1986)
M.Phil. in Economics
Degree conferred with distinction in 1986.
Areas of concentration: labour economics, macroeconomics.

University of Calgary, Calgary, Alberta (1979-1984)
B.A. (Hons.) in Economics
Degree conferred with distinction in 1984.

3. Employment History:

Centre for Future Work, The Australia Institute, Sydney, Australia (2016-present)
Economist and Founding Director.
Responsible for research, publication, public commentary, and fund-raising for research centre addressing labour market and employment policy issues.

McMaster University, Department of Economics, Hamilton, Canada (2015-present)
Harold Innis Industry Professor, Department of Economics (fractional appointment).
Responsibilities: teaching postgraduate courses in economic policy, co-supervising graduate students, participation in funded research.

Unifor, Toronto, Canada (1994-2015)
Economist, and Director of Economic, Social and Sectoral Policy.
Canada's largest private sector trade union (formerly Canadian Auto Workers).
Responsibilities: macroeconomic, labour market, fiscal, and trade policy analysis; collective bargaining and corporate research; union strategy; member education.
Oversaw union's policy development, co-managed department with 7 total staff.
Continuing role as economic advisor to Unifor's leadership team.

Brookings Institution, Washington DC (1992-1993)

Research Fellow, Economic Studies Program.
Conducted research project on quantitative models of the economic effects of North American free trade.

Canadian Union of Public Employees, Ottawa (1989-1990)

Research Assistant, Research Department.
Responsibilities: macroeconomic and fiscal policy analysis; collective bargaining research; pension planning.

Canadian Energy Research Institute, Calgary (1986-1989)

Research Economist.
Responsibilities: world oil demand and supply modelling and market analysis; analysis of electricity industry regulation and deregulation.

4. Professional Organizations:

Member, Canadian Economics Association.
Member, Economic Society of Australia.
Steering Committee Member and Past Chairperson, Progressive Economics Forum.
Founding Member, World Economics Association.
Member, Former Steering Committee Member, Union for Radical Political Economics.

5. Scholarly and Professional Activity:

5.1 Academic Journals:

Member, Editorial Board, *Studies in Political Economy*, 1999-present (Canada's leading political economy journal).

Member, Editorial Board, *Labour – Le Travail*, 2003-2017 (Canadian labour studies and labour history journal).

Have served as peer reviewer for several other academic journals, including the *Cambridge Journal of Regions, Economies, and Society*; the *International Review of Applied Economics*; *Canadian Public Policy*; *Economic and Labour Relations Review*; and the *Journal of*

Australian Political Economy.

5.2 Other Academic Activity:

Honorary Professor, Department of Political Economy,
University of Sydney, Australia, 2016-present.

Visiting Scholar, School of Population Health,
University of Melbourne, Australia, 2006-2007.

Adjunct Professor and Council Member,
Centre for Research on Work and Society (renamed Global Labour Research Centre),
York University, Toronto, 1997-2007.

Co-Chair, Working Group on Labour Market Regulation and Deregulation,
Centre for Research on Work and Society, York University, Toronto, 1998-2002.

5.3 Government and Policy Bodies:

Member, Jobs and Prosperity Council, Government of Ontario, 2012-2013.

Technical Expert, Ontario Workplace Safety and Insurance Board Funding Review,
2010-2011.

Vice Chair, Ontario Manufacturing Council, Government of Ontario, 2007-present.

Member, Board of Directors,
Public Policy Forum, Ottawa, 2004-2010.

Member, Expert Panel on Business Innovation,
Council of Canadian Academies / Industry Canada, 2007-2009.

Member, Mayor's Independent Fiscal Review Panel,
City of Toronto, 2007-08.

Canadian Automotive Partnership Council (CAPC), Industry Canada,
Co-Chair, CAPC International Trade Committee, 2002-2015.

Selected Specialist on Budgetary Estimates,
House of Commons of Canada, Finance Committee, 2004-2006.

Member, Minister's Advisory Committee on Air Policy Issues,
Ministry of Transportation, Government of Canada, 1996-1997.

Co-Chair, Marketing, Investment and Finance Task Force,
Machinery, Tool, Die and Mould Industry Sectoral Partnership Initiative,
Government of Ontario, 1994-1995.

Co-Chair, Export Development Task Force,
Electrical and Electronics Industry Sectoral Partnership Initiative,
Government of Ontario, 1994-1995.

5.4 Community and Voluntary Activities:

Member, Members' Council, and Research Associate,
Canadian Centre for Policy Alternatives, Ottawa, 1996-present.

Chair, Advisory Board, Ontario Office, Canadian Centre for Policy Alternatives,
Toronto, 2012-2015.

Member, Advisory Committee, *leadnow.ca*, 2011-2015 (internet social activist organization).

Director (2002-15) and Member of Advisory Committee (2015-present), Canadian Foundation for Economics Education.

Member, Steering Committee and Co-Author, Alternative Federal Budget Project,
Ottawa, 1995-2015.

6. Main Areas of Research Interest:

Economic structure and sectoral policy: Impact of resource and commodity cycles on economic and industrial structure; industrial and sectoral development strategies under globalization; environmental constraints, environmental policy, and industrial structure.

Precarious work, unions, and new models of organization: Economic and social effects of trade unions and collective bargaining; impact of economic changes and globalization on union power; new forms of union organizing and collective representation; collective organization in precarious and non-standard work; relationships between technology, productivity, union power, and inequality.

Globalization, trade policy, and economic modelling: Economic impacts of trade policy and new free trade agreements; critique of neoclassical models of international economic integration; national industrial policy and global supply chains; alternative trade and development policies.

7. Honours and Awards:

Progressive Economics Forum (2018)
"Galbraith Prize," for lifetime contribution to progressive economic research and pedagogy.

Ontario History and Social Science Teachers Association (2015)
"Outstanding Canadians Leadership Award," for economic literacy initiatives.

Canadian Civil Liberties Association (2012)
Award for outstanding "Public Engagement," for economic commentary and economic literacy initiatives.

Canadian Association of Labour in Media (2011)
Best Public Advocacy Video in 2010, awarded for "The Curious Case of the Missing Recovery" (dir. Michael Connolly, 12 minutes).

Public Policy Forum Testimonial Award (2011)
Award for noteworthy contributions to public policy in Canada.

New Unionism Network (2009)
Best Labour Book of 2008, awarded for *Economics for Everyone: A Short Guide to the Economics of Capitalism* (London: Pluto Books).

Frieda Wunderlich Memorial Award, New School for Social Research (1995)
Awarded for best dissertation by a non-U.S. graduating Ph.D. student.

SSHRC Post-Doctoral Fellowship, York University (1994)
Awarded for two years, "Institutional Structures and North American Economic Integration." (Fellowship declined in favour of position with Canadian Auto Workers.)

Leo Model Research Fellowship, Brookings Institution, Washington D.C. (1993-94)
Awarded for quantitative study of the economic consequences of the NAFTA.

Social Sciences and Humanities Research Council, Doctoral Fellowship (1991-1995)
Four-year award to support doctoral studies in economics.

Eberstadt Prize Fellowship, New School for Social Research (1990-1993)
Three-year award to support doctoral studies in economics.

National Journalism Award, Canadian Petroleum Association (1991)
Best feature article prize, for magazine article on Canadian natural gas exports.

Letter of Distinction, University of Cambridge (1986)
Awarded for highest grades in M.Phil. graduating class.

Commonwealth Scholarship (1985-1986)
Award to support M.Phil. studies in economics.

8. Teaching Experience:

Australian Council of Trade Unions, Australia (2016-present)
Designed and taught 5-day and 2-day residential courses on "Economics for Unionists" as part of The Union Education Foundation programme.

Dept. of Economics, McMaster University, Hamilton, Canada (2016-2018)
Postgraduate seminar course in economic policy (fractional position).

University Guest Lectures
Delivered dozens of guest lectures, both undergraduate and postgraduate, in economics, political economy, and economic policy at universities around the world, including: Renmin University (Beijing), University of Sydney, University of Melbourne,

University of Strathclyde, University of Wisconsin in Madison, University of Vermont, New School for Social Research, University of Massachusetts at Amherst, University of Toronto, York University, Ryerson University, University of British Columbia, University of Guelph, Trent University, Laurentian University, University of Western Ontario, King's College (London, Canada), and Queen's University (Canada).

Unifor, Toronto, Canada

Designed and taught annual courses from 2006 through 2015 on "Economics for Trade Unionists" in on-line, classroom, and residential settings.

Other Labour Movement Education

Have designed and taught courses, based on my book *Economics for Everyone: A Short Guide to the Economics of Capitalism*, for other labour organizations including the Australian Council of Trade Unions (ACTU), International Transport Workers Federation (ITF), the Canadian Labour Congress (CLC), the Australian Manufacturing Workers Union (AMWU), and the New Zealand Council of Trade Unions (NZCTU), in classroom and residential settings.

Eugene Lang College, New York City (1992)

Undergraduate Instructor, Social Sciences Department: Introductory economics.

Graduate Faculty, New School for Social Research, New York (1991)

Teaching Assistant, Economics Department: Postgraduate macroeconomics.

University of Calgary, Calgary, Alberta (1987-1988)

Undergraduate Instructor, Economics Department: Microeconomics, macroeconomics.

9. Postgraduate Students Supervised or Examined:

Phillipe J. Scrimger, Ph.D., Industrial Relations, Université de Montréal, successfully completed, 2018."The Distributive Effects of Trade Unionism: A Look at Income Inequality and Redistribution in Canada's Provinces." External examiner.

Martin Duck, M.A., Political Economy, University of Sydney, successfully completed, 2016. "The Australian Resource Boom: Consolidating Neoliberal Hegemony." External examiner.

Natasha Heenan, M.A. (Research), Political Economy, University of Sydney, successfully completed, 2018, "The Radical Political Economy of Tourism in Emerging Countries," committee member.

Nicholas Falvo, Ph.D., Public Administration, Carleton University, successfully completed, 2015. "Three Essays on Social Assistance in Canada: A Multidisciplinary Focus on Ontario Singles." Committee member.

Troy Henderson, M.A. (Research), Political Economy, University of Sydney, successfully completed, 2014. "The Four-Day Workweek as a Policy Option for Autralia." External examiner.

Freya Kodar, LLM, York University, successfully completed, 2002. "Corporate Law, Pension Law and the Transformative Potential of Pension Fund Investment Activism." Committee member.

10. Research Funding:

2018-. Partner, FASS Strategic Research Grant, University of Sydney, "Class in the 21st Century: Australia's New Political Economy of Assets," Lisa Adkins, Melinda Cooper and Martijn Konings, P.I.'s.

2016-2018. Collaborator, SSHRC Partnership Development Grant, $199,740, "Austerity and its Alternatives," Stephen McBride, P.I., McMaster University.

2015-2018. Community Partner, SSHRC Partnership Program, $2,496,543, "Mapping the Power of the Carbon-Extractive Corporate Resource Sector," Willian Carroll, P.I., University of Victoria.

2015-2016. Collaborator, SSHRC Partnership Development Grant, $200,000, "Productivity, Firms, and Incomes," Michael Veall, P.I., McMaster University.

2014-2016. Collaborator, SSHRC Partnership Development Grant, $170,962, "Policy Engagement at Multiple Levels of Governance: A Case Study of the Minimum Wage/Living Wage Policy Community," Bryan Evans, P.I., Ryerson University.

2012. Applicant, Metcalf Foundation, $25,000, for Ontario office of the Canadian Centre for Policy Alternatives, Living Wage Initiative.

2012-2016. Executive Member, Automotive Partnership Council and SSHRC, $2,011,000, "Manufacturing Policy and the Canadian Automotive Sector: Analysis and Options for Growth, Sustainability and Global Reach," Charlotte Yates, P.I., McMaster University.

2012-2016. Community Partner, SSHRC Partnership Program, $2,500,000, "On the Move: Employment-Related Geographical Mobility in the Canadian Context," Barbara Neis, P.I., Memorial University.

2004-2006. Community Partner, SSHRC New Economy Program, $900,000, "Restructuring Work and Labour in the New Economy," Norene Pupo, P.I., York University.

2001. Applicant and Conference Co-chair, SSHRC Conference Grant, $12,500, "Challenging the Market," York University.

2000-2003. Community Partner, SSHRC Globalization and Social Cohesion Initiative, $600,000, "Strengthening Canada's Environmental Community Through International Regime Reform," EnviReform, John Kirton, P.I., University of Toronto.

1998-2000. Collaborator, SSHRC Research Development Initiative, $90,000, "Defining the Public Domain," Daniel Drache, P.I., York University.

11. Peer-Reviewed Publications:

11.2 Book Chapters:

Jim Stanford (forthcoming). "Dimensions and Implications of the Slowdown in OECD Business Investment," in Louis-Phillipe Rochon and Hassan Bougrine, eds., *Essays in Honour of Marc Lavoie and Mario Seccareccia* (Cheltenham: Edward Elgar).

Jim Stanford (forthcoming). "Staples Dependence Renewed and Betrayed: Canada's 21st Century Boom and Bust," in Mark Thomas, Leah Vosko, and Carlo Fanelli, eds., *Change and Continuity: Canadian Political Economy in the New Millennium* (Montreal: McGill-Queen's University Press).

Jim Stanford (2019). "The North American Free Trade Agreement: History, Structure and Prospects," in Jonathan Michie, ed., *Handbook of Globalization* (Oxford: Oxford University Press, 3rd edition), pp. 272-303.

Jim Stanford (2019). "The Great Stagnation and the Failure of Business Investment," in Dieter Plehwe, Moritz Neujeffski, Stephen McBride and Bryan Evans, eds., *Austerity: 12 Myths Exposed* (Berlin: Social Europe), pp. 1-9

Jim Stanford (2018). "'Fair Go' No More: Australian Neoliberalism and Labour Market Policy," in Damien Cahill and Phil Toner (eds.), *Wrong Way: The Legacy of Reform* (Carlton: Black Inc.), pp. 166-185.

Stanford, Jim (2016). "Is More Trade Liberalization the Remedy for Canada's Trade

Woes?," in Stephen Tapp, Ari Van Assche and Robert Wolfe, eds., *Redesigning Canadian Trade Policies for New Global Realities* (Montreal: Institute for Research on Public Policy), pp. 435-452.

Stanford, Jim (2014). "Why Austerity?", in Donna Baines and Stephen McBride, eds., *Orchestrating Austerity: Impacts and Resistance* (Halifax: Fernwood), pp. 198-209.

Stanford, Jim (2014). "Adding Value to Canada's Petroleum Wealth: A National Economic and Environmental Priority," in Clement Bowman and Richard Marceau, eds., *Canada: Becoming a Sustainable Energy Powerhouse* (Ottawa: Canadian Academy of Engineering), pp. 25-46.

Stanford, Jim (2014). "The Experience of Neoliberalism in New Zealand: The View From Afar," in David Cooke, Claire Hill, Pat Baskett, and Ruth Irwin, eds., *Beyond the Free Market: Rebuilding a Just Society in New Zealand* (Auckland: Dunmore).

Stanford, Jim (2013). "The Economic Consequences of Taxing and Spending," in Alex Himelfarb and Jordan Himelfarb (eds.), *Tax is Not a Four-Letter Word* (Kitchener: Wilfred Laurier University Press), pp. 17-38.

Murnighan, Bill, and Jim Stanford (2013). "'We Will Fight This Crisis': Auto Workers Respond to an Industrial Meltdown," in Hugh Chessire and Tim Fowler (eds.), *Labour, State and Crisis* (Ottawa: Red Quill), pp. 129-165.

Stanford, Jim (2011). "The North American Free Trade Agreement: Context, Structure and Performance," in Jonathan Michie, ed., *The Handbook of Globalization* (Cheltenham, U.K.: Edward Elgar), 2nd edition, pp. 324-355.

Stanford, Jim (2010). "What Determines Wages? Income Distribution in the Surplus Tradition," in Hassan Bougrine, Mario Seccareccia, and Ian Parkers (eds.), *Introducing Microeconomic Analysis: Issues, Questions, and Competing Views* (Toronto: Emond Montgomery).

Stanford, Jim (2010). "What Drives Investment: A Heterodox Perspective?", in Hassan Bougrine and Mario Seccareccia (eds.), *Introducing Macroeconomic Analysis: Issues, Questions, and Competing Views* (Toronto: Emond Montgomery), pp. 101-115.

diCarlo, Angelo, Chad Johnston, and Jim Stanford (2010). "Canada's Labour Movement in Challenging Times: Unions and their Role in a Changing Economy," in Norene Pupo, Dan Glenday, and Ann Duffy (eds.), *The Shifting Landscape of Work* (Toronto: Thomson Nelson).

Stanford, Jim (2005). "Reform, Revolution, and a Bottom Line that Has to Add Up: Balancing Vision and Relevance in the Alternative Budgeting Movement," in Haroon Akram-Lodhi, Robert Chernomas, and Ardeshir Sepehri (eds.), *Globalization, Neo-Conservative Policies, And Democratic Alternatives: Essays In Honour Of John Loxley* (Winnipeg: Arbeiter Ring).

Stanford, Jim (2005). "Industrial Policy in an Era of Free Trade: What Isn't, and Is, Possible?", in Mark Setterfield (ed.), *Interactions in Analytical Political Economy: Theory, Policy and Applications* (Armonk, N.Y.: M.E. Sharpe), pp. 114-139.

Stanford, Jim (2004). "Testing the Flexibility Paradigm: Canadian Labor Market Performance in International Context," in David R. Howell, ed., *Fighting Unemployment: The Limits of Free-Market Orthodoxy* (Oxford: Oxford University Press).

Stanford, Jim (2003). "The North American Free Trade Agreement: Context, Structure and Performance," in Jonathan Michie, ed., *The Handbook of Globalization* (Cheltenham, U.K.: Edward Elgar).

Gindin, Sam, and Jim Stanford (2003). "Canadian Labour and the Political Economy of Transformation," in Wallace Clement and Leah F. Vosko (eds.), *Changing Canada: Political Economy as Transformatio*n (Montreal: McGill-Queen's University Press).

Stanford, Jim (2001). "Social Democratic Policy and Economic Reality: the Canadian Experience," in Philip Arestis and Malcolm Sawyer (eds.), *The Economics of the Third Way: Experiences from Around the World* (Cheltenham, U.K.: Edward Elgar), pp. 79-105.

Stanford, Jim (2001). "RRSPs and Reality: The Economic Consequences of Financial Inequality," in Edward Broadbent (ed.), *Democratic Equality: What Went Wrong?* (Toronto: University of Toronto Press).

Stanford, Jim (2000). "A Reality Check," in L. Ian MacDonald (ed.), *Free Trade: Risks and*

Rewards (Montreal: McGill-Queen's University Press).

Stanford, Jim (1998). "Openness with Equity: Regulating Labour Market Outcomes in a Globalized Economy," in Dean Baker, Gerald Epstein, and Robert Pollin (eds.), *Globalization and Progressive Economic Policy* (Cambridge: Cambridge University Press).

Stanford, Jim (1998). "The Rise and Fall of Deficit-Mania: Public-Sector Finances and the Attack on Social Canada," in Wayne Antony and Les Samuelson (eds.), *Power and Resistance: Critical Thinking About Canadian Social Issues* (Halifax: Fernwood).

Stanford, Jim (1996). "Discipline, Insecurity, and Productivity: The Economics Behind Labour Market 'Flexibility'," in Jane Pulkingham and Gordon Ternowetsky (eds.), *Remaking Canadian Social Policy* (Halifax: Fernwood).

Stanford, Jim (1995). "The Permanent Recession and Canada's Debt: The Fiscal Context of Social Reform," in Daniel Drache and Andrew Ranachan (eds.), *Warm Heart, Cold Country: Fiscal and Social Policy Reform in Canada* (Ottawa: Caledon Institute).

Stanford, Jim (1993). "North American Economic Integration and the International Regulation of Labor Standards," in Bruno Stein (ed.), *Proceedings of New York University 46th Annual National Conference on Labor* (Boston: Little Brown).

Stanford, Jim (1989). "Future Capacity Additions," in K. Morgan MacRae (ed.), *Critical Issues in Electric Power Planning in the 1990s* (Calgary: Canadian Energy Research Institute).

11.3 Journal Articles:

Jim Stanford (forthcoming). "A Turning Point for Labour Market Policy in Australia," *Economic and Labour Relations Review*.

Jim Stanford (2018). "The Declining Labour Share in Australia: Definition, Measurement, and International Comparisons," *Journal of Australian Political Economy* 81, pp. 11-32.

Stanford, Jim (2017). "The Resurgence of Gig Work: Historical and Theoretical Perspectives," *Economic and Labour Relations Review* 28(3), pp. 382-401.

Stewart, Andrew, and Jim Stanford (2017). "Regulating work in the gig economy: What are the options?", *Economic and Labour Relations Review* 28(3), pp. 420-437.

Stanford, Jim (2017). "Automotive Surrender: The Demise of Industrial Policy in the Australian Vehicle Industry," *Economic and Labour Relations Review* 28(2), pp. 197-217.

Stanford, Jim (2017). "U.S. Private Capital Accumulation and Trump's Economic Program," *Real-World Economics Review* 79, pp. 74-90.

Stanford, Jim (1997). "Topsy-Turvy Economics," in Marilyn Spink (ed.), *Bad Work: A Review of Papers on 'Right-to-Work Laws* (Toronto: Centre for Research on Work and Society).

Stanford, Jim (1997). "Disappearing Deficits and Incredible Interest Rates: Canada's Hollow Economic Victories," in Bruce Campbell and John Loxley (eds.), *The Alternative Federal Budget Papers* (Ottawa: Canadian Centre for Policy Alternatives).

Stanford, Jim (1997). "Growth, Interest and Debt: Canada's Fall from the Fiscal Knife-Edge," in Bruce Campbell and John Loxley (eds.), *The Alternative Federal Budget Papers* (Ottawa: Canadian Centre for Policy Alternatives).

Stanford, Jim (1994). "Economic Frameworks and Free Trade," in Jan Joel (ed.), *Building a Vision* (Regina: University of Regina).

Stanford, Jim (1993). "Investment," in Duncan Cameron and Mel Watkins (eds.), *Canada Under Free Trade* (Toronto: Lorimer).

12.4 Magazine Articles:

Stanford, Jim (2013). "Canada's Sluggish Labour Market and the Myth of the Skills Shortage," *Academic Matters: The Journal of Higher Education* (November).

Stanford, Jim (2011). "Foreign Exchange and the Canadian Dollar: A Primer," *Relay* 31, pp. 22-27.

Stanford, Jim (2010). "Financial Literacy: Getting Beyond the Markets," *Education Canada* 50(4), Fall, pp. 21-25.

Stanford, Jim (2006). "To Convert Economic Growth Into Well-being," *Policy Options* 27(4), pp. 34-38.

Stanford, Jim (2004). "The Dark Side of Debt Reduction," *Policy Options* 25(4), pp. 22-25.

Stanford, Jim (1991). "When the Ship Doesn't Come In," *Perception: Journal of the Canadian Council on Social Development*, Winter, pp. 28-31.

12.5 Popular Economics Writing and Commentary

I have written hundreds of shorter economic articles and commentaries in a range of outlets, including major newspapers, specialist magazines, electronic media, blogs, and other platforms.

Since 2000 I have published economics columns in the *Globe and Mail* newspaper, Canada's most prominent daily newspaper. I have written economic commentary articles for numerous other newspapers, including the *Financial Times, New York Post, National Post, Ottawa Citizen,* and *Toronto Star*.

I am regularly sought for economic comment by mainstream print and broadcast media in Australia, Canada and internationally.

I am an active and effective participant in social media. My Twitter and Facebook accounts (@jimbostanford and Jimbo Stanford) have over 20,000 followers combined.

I contribute economic commentary to a variety of on-line platforms, including the *Progressive Economics Forum* and *Real-World Economics Review* blog sites.

13. Conference Papers and Lectures:

13.1 Peer-Reviewed:

Sept. 2018 "Historical and Theoretical Perspectives on Gig Work."
Union of Radical Political Economists
University of Massachusetts, Amherst

June 2018 "The Future of Work is What We Make It."
Progressive Economics Forum Panel
Canadian Economics Association, Montreal

Feb. 2018 "Technological Determinism and the Future of Work."
Keynote Address, Association of Industrial Relations Academics of Australia and New Zealand, Canberra

Dec. 2017 "The Declining Labour Share: Empirical and International Perspectives."
Society of Heterodox Economists, University of NSW, Sydney

Dec. 2016 "Theoretical and Historical Perspectives on the 'Gig' Economy."
Society of Heterodox Economists, University of NSW, Sydney

March 2016 "When an Auto Industry Disappears:
Australia's Experience and its Lessons for Canada."
Automotive Policy Research Centre, King City, Ontario

July 2015 "Industrial Policy in the Auto Industry:
National Interests, Regional Production, and Global Supply Chains."
USyd/ASSA Workshop, University of Sydney, Australia
Industrial Policies in the Era of Globalisation and Financialisation

June 2013 "The Stylized Facts and Economic Analysis of Foreign Direct Investment."
Institute for Research in Public Policy Panel
Canadian Economics Association, Montreal

June 2012 "Analytical Foundations of the Distinction Between the 1% and the 99%."
Canadian Economics Association, Calgary

Nov. 2011 "Financialization and the Business Strategies of Non-Financial Corporations: The Case of Air Canada."
International Confederation of Associations for Pluralism in Economics,

Third Global Congress, Amherst, Massachusetts

May 2009 "Financialization, Production, and Ideology."
Fourth Annual CLPE Conference: Knowledge in Labour, Work & Action
York University, Toronto

May 2009 "Financial Meltdown, Financial Recovery:
Does Bay Street Matter to Main Street at All?"
Canadian Economics Association, Toronto

Dec. 2006 "Unions and Labour Market 'Flexibility': Beyond the Jargon."
Society of Heterodox Economists, University of NSW, Sydney

Sept. 2004 "Controlling Pensions? Or Controlling Capital?"
Center for Economic Policy Analysis, New School for Social Research

Aug. 2004 "Canada's Auto Industry: Smokestack Industry or High-Tech Winner?"
Canadian Association for Business Economics, Kingston, Ont.

June 2004 "How Low Should We Go? Federal Debt Reduction in Canada."
Canadian Economics Association, Toronto

May 2003 "Labour Market 'Flexibility' and Canada-U.S. Comparisons."
Canadian Economics Association, Ottawa

May 2003 "Industrial Policy In An Era of Free Trade: What Isn't, and Is, Possible?"
Analytical Political Economy Conference, Trinity College, Hartford

Nov. 2002 "Reform, Revolution and a Bottom Line That Has to Add Up."
International Symposium in Honour of John Loxley
University of Manitoba

May 2002 "An 'Auto Pact' That's Perfectly Legal: A System of Taxes and Grants to Promote Auto Investment and Production in Canada."
Canadian Economics Association, Calgary

Nov. 2000 "Flexibility, Regulation and Demand:
International Labor Market Comparisons and the 'OECD Hypothesis'."

Centre for Economic Policy Analysis Seminar
New School for Social Research, New York

Sept. 1998 "Canada's Paper Economy: What Does it Actually Do?"
Fifth Annual Economic Policy Conference
Laurentian University, Sudbury

Mar. 1998 "The Dubious Economics of Debt Repayment."
Annual Policy Conference,
Canadian Association for Business Economics, Ottawa

July 1996 "Openness With Equity: Regulating Labor Markets in an Open Economy."
Conference on Globalization and Progressive Economic Policy,
Economic Policy Institute, Washington DC

Oct. 1993 "Socio-Economic Regimes and Economic Competitiveness."
Conference on New Directions in Analytical Political-Economy
University of Vermont

Mar. 1993 "Alternative Approaches to Modeling Free Trade."
Eastern Economics Association, Washington DC

Jan. 1994 "Socio-Economic Regimes and Economic Competitiveness."
Annual Meetings of the Allied Social Sciences Association, Boston

Apr. 1995 "The Impact of Real Competitiveness on Monetary Policy
and Exchange Rates in an Open Economy."
Conference on Money, Financial Institutions, and Macroeconomics,
York University, Toronto

June 1995 "Discipline, Insecurity, and Productivity."
7th Biennial Canadian Social Welfare Policy Conference,
University of British Columbia, Vancouver

13.2 Invited and Keynote Lectures:

May 2018 "The Future of Work and the Future of Pensions."

Keynote Address, International Federation of Employment and Pension Benefits, Ottawa

Sept. 2017 "Work and Inequality."
Keynote Address, T.J. Ryan Foundation Conference, Queensland University of Technology, Brisbane

Aug. 2017 "What's New About the Gig Economy, Anyway?"
Annual Employment Relations Keynote Lecture, University of Western Australia, Perth

Nov. 2016 "Theoretical and Historical Perspectives on the 'Gig' Economy."

CONFIDENTIAL

Dr Jim Stanford
Economist and Director of the
Centre for Future Work at the Australia Institute

By email: jim@tai.org.au

Dear Dr Stanford

Re: Four Yearly Review of Modern Awards – AM2018/26 Social, Community, Home Care and Disability Services Industry Award 2010

As part of the current 4 yearly review of modern awards being conducted by the Fair Work Commission, there is a review of the *AM2018/26 Social, Community, Home Care and Disability Services Industry Award 2010* ('**SCHDS Award**').

You are retained by the Australian Services Union ('**ASU**') to prepare a written report containing your expert opinion in relation to the connection between the conditions that apply to disability services employees under the SCHDS Award and the difficulty experience by the disability sector in attracting the required numbers of appropriately qualified, skilled and experienced workers.

In this letter, we set out:

(a) background information;

(b) your ethical duties;

(c) the questions your expert report must address;

(d) the form of your report; and

(e) information about timing and communication.

A Background Information

The ASU represent workers covered by the SCHDS Award. The Commission is reviewing the SCHDS Award as part of the 4 yearly review.

The *SCHDS Award* covers, amongst other types sectors, disability services. Disability services involve the provision of personal care and domestic and lifestyle support and/or training to a person with a disability. Disability can be provided in a community setting, whether residential or non-residential, a respite centre, a day service facility or in a private residence where work in that residence involves either teaching, promoting or maintaining living skills, client, advocacy, promoting or supporting community access and social inclusion or developing or assisting in developing care or support plans including assessment of client needs.

The 4 yearly review of modern awards concern broadly the consideration of whether current modern awards meet the *Fair Work Act* 2009 ('the Act')

modern award objectives. The ASU is advancing a number of claims in this matter, including a penalty rate of 115 per cent of their ordinary hourly rate for employees who work a broken shift and for employees undertaking disability services work to be paid for reasonable travel time between different work locations.

To avoid doubt, we confirm that we do **not** seek your opinion as to the appropriateness or otherwise of any of the variations sought by any party including the ASU.

B Duty

You are engaged by the ASU to assist the Commission by providing your expert opinion in accordance with the terms of this and any other letter of instruction. Your overriding duty is to assist the Commission. You are not an advocate for the Union.

Enclosed with this letter is a copy of the Federal Court of Australia's *Practice Note GPN-EXPT: Expert Evidence Practice Note.* Although you are not formally bound by the *Practice Note*, as a matter of proper practice we adopt the terms of the *Practice Note* when engaging expert witnesses before the Commission and ask that you as a condition of your retainer comply with it. Please read the *Practice Note* carefully.

C Your opinion

You are asked to provide your opinion on the following questions:

1. What training, skills and qualifications are required by the disability sector?
2. What is the connection between the terms and conditions of the SCHDS Award, including broken shifts and unpaid travel time, and the disability sectors' ability to attract a sufficient number of appropriately skilled workers?
3. Is the disability sector able to attract a sufficient number of appropriately skilled workers?
4. Are there any implications for quality of care?

D Form of your report

Your role is to assist the Commission by providing your expert opinion in accordance with this letter of instruction. Please address your report to the Fair Work Commission.

In order to ensure your report can be used easily at the hearing of this matter, we ask that you include the following matters in the report:

1. a brief summary of your opinion or opinions at the beginning of the report, this would take the form of a summary of the answers to the questions asked in Part C;

2. a glossary of any specialised terminology;

3. references to any literature or other materials cited in support of your opinions. Please use a uniform citation method throughout the report. If you use parenthetical referencing (Chicago-style citation), please provide pinpoint citations where applicable;

4. a bibliography;

5. numbered paragraphs and page numbers, and headings where appropriate; and

6. margins of at least 2.5 centimetres, and line spacing of at least 1.5 points, with 12 points between paragraphs.

Please annex to your report:

7. a detailed curriculum vitae, setting out the study, training, and experience that establishes your expertise in relation to the issues raised by these instructions; and
8. this letter of instruction (and any additional written instructions) and all attachments.

At the conclusion of your report, please include a declaration to the following effect:

I have made all the inquiries that I believe are desirable and appropriate and that no matters of significance that I regard as relevant have, to my knowledge, been withheld from the Commission.

E Communications and timing

Timing

Your report is due to be filed in the Commission on **24 September 2019**.

Communication

Please note that all communications between yourself and the ASU can, on request, be provided to the employer parties and the Commission. This includes any draft of your report, including your working notes.

Yours faithfully

Michael Robson
National Industrial Officer

AUSTERITY and its ALTERNATIVES

Zero-Sum Social Policy

Going Gig and the Australian National Disability Insurance Program

McMaster University

ABOUT US

Austerity and its Alternatives is an international knowledge mobilization project committed to expanding discussions on alternatives to fiscal consolidation and complimentary policies among policy communities and the public. To learn more about our project, please visit www.altausterity.mcmaster.ca.

Austerity and its Alternatives is funded through the Partnership Development stream of the Social Sciences and Humanities Research Council (SSHRC).

About the Authors

Donna Baines (donna.baines@sydney.edu.au)

Fiona Macdonald (fiona.macdonald@rmit.edu.au)
Donna Baines is a Professor and Chair of Social Work and Social Policy at the University of Sydney, and Fiona Macdonald is a Senior Research Fellow at RMIT University.

Report designed by the Centre for Communicating Knowledge at Ryerson University (excluding cover page).

Introduction

The disability rights movement views disability as socially constructed and has long sought full social inclusion through increased respect, autonomy and control for those with disabilities (Howard et al., 2015; Williams, 2014). Australia's newly introduced National Disability Insurance Scheme (NDIS) establishes a cash-for-care model which some see as a radical step towards social inclusion, though evidence from the early roll-out of the NDIS shows that many service users have serious concerns with the scheme and (Warr et al., 2017, p. 8) and workers are experiencing the privatization and marketization of their work (Cortis et al., 2017). Although Australia's policy context is unique, it joins other European and North American countries that have pursued individualised funding.

Prior to the NDIS, most workers in the Australian disability sector were employed in organisations and were protected by: a sector-wide industrial Award; a significant level of unionisation; and employers who paid, at least ideological, tribute to a non-profit ethos of social care and fairness. The NDIS model means that people with disabilities to use their individualized funding package to either work with a case manager to assemble services to meet their needs or hire their own staff and act as their own director of services. Either process recasts care workers as highly casualised and precarious, and increasingly working in gig market conditions.

Australia's industrial relations regime's enforcement pathways are increasingly convoluted as service users may be both client and employer, making it difficult to raise concerns about hours, wages or conditions. For the most part, small scale employers have little or no experience with, knowledge of, or capacity to enforce employment standards, health and safety legislation and other regulations offering protection to employees. This places workers in a murky grey zone where they seem to exist outside of regulatory protections within the context of marketised "social" care and fragmented, gig-like work places.

The paper contributes to our understanding of the drivers behind emerging gig labour markets by exploring the zero-sum game precipitated by social policy aimed at expanding human rights in the context of marketized care and individualisation of service users. The paper begins with a short discussion of the NDIS, human rights, the disability sector, the regulatory context, and changes in the sector under the new NDIS policy. The paper then outlines methods and is followed by a presentation of findings, discussion and conclusions.

The Disability Sector and the Regulatory Context (Disability Sector and the Workforce)

Similar to other wealthy countries, from the 1970s onwards, deinstitutionalisation resulted the closure of most public institutions intended for people with disabilities (Howard et al. 2015). Prior to the NDIS most disability

services were provided by non-profit organisations; most received 60–80% of their income from government in the form of block funding (Williams, 2014). Though under-funding plagued this arrangement, disability organisations provided a range of services including: recreation, everyday activities and employment; accommodation and community living; respite and family support; and advocacy, referral and public education.

The minimum pay and conditions for disability workers are set out in the Social, Community, Home Care and Disability Services Award. However, the Award differentiates between disability and other care workers in community services which has exerted a downward pressure on the Award. For example, under the Award, workers classified as 'home care' workers have a minimum engagement period of one hour compared to two hours for 'disability support' workers. This and consumer demand have resulted in employers calling for all shift minimums to be one hour and means that they prefer to hire into the category of home care worker (Macdonald and Charlesworth, 2016).

Union density in the disability services sector is relatively strong. However, due to underfunding, few organisations have had an enterprise agreement. Where there are agreements these do not often provide for above-award wages, rather they provide for improved conditions. In the new fragmented context of the NDIS, organisations are pushing for change in order to meet the demand for short shifts, short notice shifts, varied tasks, personal preferences and new risks and skills (Macdonald and Charlesworth, 2016).

Short Description of the NDIS

The NDIS is argued to be Australia's largest social reform since the introduction of universal national healthcare (Gilchrist, 2016). The NDIS introduces a national system of funding through a cash-for-care model for 'people with permanent and significant disability, their families and carers' (NDIS, 2013). Combined, funding for assistance with daily living and assistance with civic and social participation account for three quarters of NDIS funding to support individuals, with these two activities accounting for 76.5% of funding for people aged over 25 in 2018 (National Disability Insurance Agency [NDIA] 2018, p. 6). In other words, most NDIS funding pays for wages for frontline disability support workers to provide in-home, gig-like direct care.

After receiving their assessment and funding package, people with disabilities can opt to: i) employ and supervise their own employees in which case the employees do not need to be registered with the National Disability Insurance Agency; ii) work with a third party plan management provider registered with the NDIA in which case only the plan management provider needs to be registered with NDIA; or iii) have their plan managed by NDIA in which case all service providers need to be registered (NDIS Registered Providers of Supports Rules, 2013). Until the recent introduction of a Code of Conduct for all workers providing NDIS-funded

supports only employees of registered service providers were subject to any regulatory oversight by the NDIA. The Code of Conduct sets out obligations for workers does nothing to diminish the clear incentive for informal, low wage and unregulated work under two of the three options outlined above, as self-managed individual service users and non-NDIA care managers seek to extend funding packages as far as possible (though even so, this may or may not be adequate to individual needs and wants).

A further way that employment rights are undermined involves the fragmented and unregulated worksites. Rather than being organisation- and group-based, most of the work under the NDIS is located in people's private homes. Feminist scholars have long identified that care work in the private sphere is largely invisible, keeping wages low or non-existent and making it difficult to assess or regulate (Folbre 2009; Meagher, 2003). Evidence from European countries further confirms that cash-for-care policies introduce new demands for flexibility, travel between multiple work locations, very short working hours, and may be a cover for deepening austerity policies (Cunningham and Nickson, 2010; Glendinning, 2012; Christensen, 2012).

Short notice shifts, multiple job holding, dispersed work sites and short-term work assignments (less than an hour) signal an important shift from a largely, publicly funded, nonprofit delivered, organisation-based employer to a quasi-gig or on-demand economy (van Doorn, 2017; Friedman, 2014). Gig work has thus far been mostly found in the arts, entertainment, delivery and private domestic work. However, it is increasingly seen in care work in various forms and acts as a mechanism for reproducing gender and racial inequities (Aliosi, 2015; van Doorn, 2017).

While there is no debate as to whether a new service model was essential for people with disabilities, the pro-market, cash-for-care that characterizes the NDIS interprets the achievement of these goals exclusively through a market lens. As with individualised and marketised care systems, under the NDIS individual care users are constructed as consumers empowered through the exercise of consumer choice to buy care (Brennan et al., 2012, p. 378; Productivity Commission, 2017, 2011).

Methods

Qualitative, in-depth, semi-structured, audio-taped interviews, using an interview guide, were undertaken with 39 disability sector workers in one of the early-roll-out regions. The sample was 70% female which is slightly lower than the sector (80%; Martin and Healy, 2010) and all had higher education and/or training. They ranged in length of employment from 1.5 to 30 years, with majority having 8+ years of experience in the sector.

Findings

Drawing on the words of the workers, this section will address the strongest themes in the data, namely: increased precarity and a gig economy-like working conditions; less training and skill in the labour force; and working short shifts in private homes.

Increased Precarity and Gig Economy Working Conditions

In contrast with the workforce prior to the NDIS, all research participants reported that employment had become increasingly temporary with undependable hours, lowered earnings and conditions, and increased overall precarity. As one long term disability worker observed, "They don't want full time workers. What they say is we need to have flexibility …because clients could come and go now with their choice." Another worker added, "Every single person working at my agency is casual …no permanent. In my old agency, almost everyone was permanent." Organisations exclusively employing casual staff can save costs in terms of sick leave and can dismiss staff more easily to cut costs. Casualisation also makes it more possible for employers to schedule work around shorter periods of service provision and more variability in the timing of services (early morning and late night), and location (private homes).

Characteristic of gig economies, short notice of shifts and short shifts were particularly disruptive. As one long time worker noted, "My stress and fatigue are both way up. I've been living on the phone for shifts, some of which I get less than two hours' notice for." Other workers noted that apps notifying workers of their constantly changing shifts and hours were a commonplace aspect of their employment, suggesting a further shift to on-demand work, platform labour market. As one long-term worker noted, "all our rosters are electronic" and constantly changing meaning that worker never "know exactly what shifts you're gonna have that week because something will just randomly change".

The data show that costs were shifted to workers in a number of ways including travel costs between multiple and widely dispersed job sites (service users' homes). After her employer refused her travel claim, one worker was told that she should consider each private home to be her worksite, regardless of how much distance or travel time was between them, "we don't pay kilometres. That's deemed your workplace". Travel time is also usually unpaid, with workers expected to use their own cars and claim mileage as a reduction on their income tax return.

Workers were also expected to cover the cost of meals and other activities accompanying service users, and to, as one worker put it "model appropriate behaviour" for the service users, while shouldering their own costs. Summing it up for a number of the research participants, one worker noted, "We as workers are

expected to pay for ourselves so out of my day, I might earn $250.00 but $50.00 of my pay needs to go on being able to support that person in the NDIS to those activities." These additional costs are, in effect, a cut to wages and a subsidy to the employer.

Though much of the disability sector has tried and tries to operate on an ethos of care and equity, the research participants were disturbed by new trends emphasizing profit over support for service users and generating divisions between staff and management. In a number of instances, employers made it explicit to frontline workers that the culture of the workplace had changed to one of ensuring that every interaction with clients was charged and chargeable, otherwise it had to be eliminated. One worker received the following instructions from her manager regarding billing service users for phone calls - - even when no one answers, "you call them, you charge 'em. If they don't answer, you write it down and you charge 'em. And you charge 15 mins because that's the minimum you can charge."

Despite a significant level of alienation and instability, many workers continued to find satisfaction in working with people with intellectual and other cognitive disabilities and to try to make the NDIS system work. Though two workers told us that they felt it was likely that they would soon be fired because they refused to abandon the principles of equity and support, other workers told us that the job still held meaning because, "You can put things in place for people that can give them hope". Despite the challenges posed by inadequate funding and short notice shifts, most workers found rewards in, as one worker put it, "Watching [] the participants reach their goals." Another long-time frontline worker summed up the feelings of most research participants thusly, "I love working with the people. I love making their lives… as high quality as we can".

However, it was notable how many workers were thinking of leaving the sector entirely: some planned early retirement, others sought a career change, while others had no definite plans other than to seek a job they could like. Part of this intention to leave was based on working conditions, but for most workers it was also based on no longer feeling part of a job where one feels appreciated and where one could find meaning. In the words of another long-time worker, "It is chaos. It's awful. We really tried to raise all these issues that we could foresee was gonna happen and it seemed to fall on deaf ears of the state and government and now we're seeing all those things that we feared."

The revolving door of casual staff, a lack of training and supervision, and increased distance between management and workers exacerbated the stressed and sometimes dangerous situations noted above, putting workers in a position where they felt replaceable and disposable. A senior worker summed it up for the bulk of the research participants by observing, "morale has never been lower".

Less Training and Skill in the Labour Force

Prior to the NDIS, there was time and funding for training and upgrading as well as supervision and meetings, "we would have regular staff meetings, training days, staff development days…That's gone. We get told there's no money for it". Participants noted that their employers now have very limited requirements for hiring new staff, whereas previously skills, formal education and experience were definite perquisites. The lack of training and experience presented risks for the new labour force, service users and existing staff. As one long time worker observed, "Because I have more experience than most of the staff, I get all the hard guys. They are all one-on-ones (one staff to one client) because they need that much support. They have complex needs and the work is always hard work. No down time or variety." This makes the work more draining and adds to workplace stress and unsafe conditions. However, temporary and casual staff are less likely to complain as they need to position themselves positively in order to be assigned to future shifts.

Private Working in Private Homes

Though an increasing portion of the disability labour force works in service users' homes, there is no way to assess whether private homes are safe or appropriate worksites. The constantly shifting pool of on-demand workers made for a more hazardous work environment as casual staff cannot possibly know the service users, their preferences or triggers. Workers reported knowing little or nothing beyond the service user's name and address when they showed up for a shift. Noting an overall increase in workplace injuries, one worker quipped, "Nothing major, just black eyes, broken noses, the normal sort of things with people just being out their routine, not knowing the support workers and the support workers not knowing clients."

One research participant noted a lowered likelihood of accurate reporting because workers all needed more shifts and feared reprisals if they reported incidents, "Some workers are scared to complain about challenging behaviours from the clients, to the client or the family or the agency. The workers don't want to upset anyone, or they might not get more shifts."

Discussion and Conclusions

Some characteristics of the former disability sector remain constant in the new NDIS context: particularly the commitment of workers to the service users and/or social equity and justice; the gendering of the workforce; and the increasingly poor wages and conditions. Most of these constants remain because, ironically, social justice, gender, unpaid work and poor wages were seen as unimportant to a piece of legislation addressing the human rights of a very marginalised population that had long been treated inequitably. As a result, the work force and many disability service providers have lost out in a zero-sum game in which some people

with disabilities experience increased autonomy and self-determination while others experience diminished life choices and reduced quality of service. This is largely because the NDIS was conceived of narrowly as an exclusively market solution to a complex and pressing human rights issue.

A truncated, marketized version of human rights played an ideological role in convincing service users, the public and workers that management and the state need to drive down workplace protections and weaken employment regulations in order to meet the commercialised needs of vulnerable populations. By embracing a pro-market ideology, the NDIS sets the terms for a zero-sum game involving the emergence of a precarious labour market with significant gig-like, on-demand economy aspects and a temporary workforce that lacks the constancy, supervision or training to properly support the autonomy and self-determination of all people with disabilities. Current employment regulation seems ill-equipped to defend disability workers and governments are more interested in containing costs and fostering private markets than in protecting a highly gendered, increasingly precarious labour force. Though our conclusion is tentative, based on just this example, the evidence suggests that zero-sum games, in which a few wins and many lose, may be a feature of social policy change in market-driven contexts, such as the NDIS, and that current workplace protections mean little in the context of restructuring and marketisation.

'Off My Own Back': Precarity on the Frontlines of Care Work

Donna Baines

Paul Kent
Australia

Sally Kent
Australia

Abstract

Hailed by some as representing the 'most profound change in Australian disability history', care work in the disability sector under the new National Disability Insurance Scheme is described by one frontline worker as 'a massive swing towards a casual workforce and a massive cultural shock'. This firsthand account draws on 13 pages of unsolicited hand-written notes from a long-time, frontline care worker and his wife, as well as an in-depth interview and subsequent telephone and email conversations. The article gives voice to the experience of the frontline as disability workers grapple with almost complete casualization of their work, as the state retreats from its role in regulating employment and protecting workers in favour of the marketization of services and the advancing of the human rights of people with disabilities.

Keywords

care work, casualization, National Disability Insurance Scheme, precarity, privatization, risk transference

Hailed as representing the 'most profound change in Australian disability history' (Reddihough et al., 2016: 66), the National Disability Insurance Scheme (NDIS)

provides individual funding packages aimed at increased human rights, choice and autonomy for people with disabilities (Williams, 2014). Failing on two counts, service users have serious concerns with the NDIS and feel that their views and those of their families and carers are often overlooked, while Warr et al. (2017: 8–9; see also Productivity Commission, 2017) found numerous workforce problems including 'staff shortages, high turnover of staff and staff working as planners with limited experience of working in the disability sector'.

The workforce in the disability sector has been covered by a set of employment regulations known as the Social, Community, Home Care and Disability Services Industry Award (2018) as well as some union protection including enterprise-level collective agreements. However, like the third sector in Australia as a whole, the disability sector is undergoing rapid restructuring and casualization (Meagher and Goodwin, 2015; Productivity Commission, 2017).

The Australian state assumes three contradictory and conflicting regulatory roles in this sector: defender of the human rights of people with disabilities; defender of minimum employment standards; and key driver of precarity and market processes, which largely subsume the first two roles (see also Jaehrling et al., 2018; Kallenberg, 2012 on precarity). While disability rights movements sought new systems of support based on individuals' lifetime goals and strengths, the NDIS model interprets these goals exclusively through a market lens. This places workers in a situation where the conditions of their work are driven down within the context of marketized care and fragmented workplaces.

This article draws on the data provided by a disability worker with many years' experience in the field, Paul,[1] and his wife, Sally. As Paul explained, he and Sally hoped their perspectives might help us 'understand the way that the NDIS changed my work and how it's impacting on me'. The qualitative data paint a portrait of frontline workers, many of whom are drawn to the sector to give support to this particular marginalized population, however rather than find meaning and satisfaction in this work, the sector is in the throes of uncertainty where casualization and heightened stress co-exist in a changing landscape of: precarious, fragmented and highly commodified labour; risk transference (from government to frontline workers and service users); decreased wages; and growing personal costs for frontline workers. The article briefly reviews the context in which Paul's story plays out and relevant sociological debates. A note on methods is followed by an introduction to Paul and Sally.

Brief review of contexts and debates

The rights of people with disabilities have been debated across the social sciences with the majority advancing a social disability model that promotes a human rights agenda and full social inclusion (Howard et al., 2015; Thill, 2015; Thomas, 2007). Claiming to ensure human rights, and provide expanded choice and improved quality, individualized models of funding services are commonplace among neoliberal welfare states, existing for some years in the UK, Canada and other industrialized countries, though just recently introduced in Australia (Fawcett and Plath, 2014; Lymbery, 2014; Thill, 2015). Individualized funding is intended to incentivize the development of an array of

disability services competing for clients in an open, private market (Cunningham and James, 2009).

Consistent with the risk economy literature (Beck, 2006; Beddoe, 2010), these programmes represent a shift in risk and responsibility from the government to individual citizens, in the form of frontline employees and care recipients (Giddens, 1999; Howard et al., 2015; Lymbery, 2014). The recommodification of labour (Greer, 2016; Rubery et al., 2018) works hand-in-glove with the downloading of risk, generating a sector where new workers accept precarity and insecure employment as 'normal' and long-time workers argue that 'things were better before', including permanent employment, reasonable hours and income and better care provided to people with disabilities.

Alberti et al. (2018: 450) argue that precarity is an ill-defined term that provides little clarity to a range of processes and conditions 'with potentially negative political implications'. Instead, they encourage the study of the drivers and patterns of precarization, particularly management and the state (Alberti et al., 2018: 450). In the NDIS as the state plays the multiple roles as a driver of the marketization of disability services and, simultaneously, as a defender of minimum work standards and human rights. Management also drives the precarity agenda by pressuring governments for less employment regulation and the diminished power of unions in order to redevelop the labour market in this sector as low wage, insecure and less regulated or unregulated.

A specific driver of precarization under the NDIS is the loss of block funding from governments to organizations. With people with disabilities suddenly in receipt of personalized funding, relatively stable, long-term organizations lost clients and were compelled to market themselves to cash-carrying individuals with multiple desires and requirements for support and activities. Many long-term organizations are struggling to survive (Productivity Commission, 2017) and the sector has seen the rapid growth of for-profit, non-profit organizations and 'pop-up' providers, many of which have little or no experience in providing social services or fulfilling their obligations as employers.

At this early stage of the NDIS, very little is known about how this rapidly changing world of work is experienced at the frontline. The balance of this article speaks to that gap through the voice of a long-term disability support worker and his wife caught up in the vast restructure. This article will also comment on and attempt a very preliminary contribution to the theory of drivers and patterns.

Method note

The author originally met Paul as part of a larger, qualitative study undertaken in conjunction with one of Australia's unions. The union's official position, and that of the workers interviewed, is strong commitment to service users' human rights and autonomy, and ongoing optimism that this may still happen under the NDIS, despite growing evidence of problems. The union plans to protect enterprise-level agreements and defend conditions and wages, though this is proving difficult in the fragmented context of business failures, amalgamations and multiple new organizations.

Paul arrived at his interview with 13 pages of handwritten notes; nine were written by him and three by Sally. These notes were written entirely on their own initiative because, as Paul explained, they wanted the researchers to get a clear picture of what

was going on for workers in the sector and he was not sure he would remember everything he wanted to say during the interview. Paul asked Sally if she would like to contribute her 'take on things' in the form of written notes. Sally is the more highly credentialed and educated half of the couple and Paul told us that he 'really values her opinion'. Both sets of notes were thoughtful and insightful, with Sally's providing slightly more analysis and overview and Paul's providing more on-the-spot detail. The handwritten notes were a surprise to the researchers but proved to be very useful during the hour-long, audio-recorded, semi-structured, qualitative interview with Paul and subsequent email and telephone discussions over the course of more than six months. One of the researchers proposed this article and initiated a subsequent email exchange with Paul and Sally. Other team members were over committed and encouraged the development of this article but demurred further involvement. The author undertook a close analysis through multiple readings and comparisons of the notes, the interview transcripts, email exchanges and telephone calls with Paul and Sally. The final text was reviewed and approved by Sally and Paul, with various edits and comments added.

Paul is in his mid-50s and started working in the disability sector 10 years ago, employed by a long-standing, non-profit agency that provided community support to people with intellectual disabilities. Until recently, Paul liked his work and found it rewarding. He has been active within the union and is concerned about the rights of workers and service users.

Sally is of a similar age and has steady employment as a care professional. She is very involved in her community and with volunteer commitments. Though Paul expresses pride in her community work, his unpredictable schedule means that they have very little time together at a point in their personal lives where they feel they have a lot to process.

Previously, Paul worked in a day programme that provided community activities and support to people with intellectual disabilities. He misses his regular schedule and steady wages, as well as his colleagues and the service users he worked with for many years. Due to upheavals in the sector, Paul started employment with a new company, just three weeks before our interview, after 10 years' steady, full-time employment with the same company. Phone calls and emails after the interview confirmed that the sector continues to be, as Paul quipped, 'in chaos'.

Consistent with unmediated workers' accounts, the next section is in the words of Paul and Sally. The article starts with Paul's story and moves on to Sally's. The stories are organized according to the strongest themes in the notes and transcript, which parallel themes found in the literature and other transcripts for this project.

Paul's and Sally's stories

Paul

My stress and fatigue are both way up. I've been living on the phone for shifts, some of which I get less than two hours' notice for. Like this week, I got three shifts with less than two hours' notice. I have completely irregular hours.

It's irregular, irregular. It is impossible to plan and impossible to feel you know what's facing you the next day, let alone the next week. It makes me feel not valued and my self-esteem is plummeting. My family suddenly has questionable financial security, if any. I am venting a lot more at home and that leads to marital disharmony as my wife tries to cope with me.

The NDIS is a massive swing towards a casual workforce and a massive cultural shock. My first week I had 18 hours and the second week I had 12. I used to work 40 hours a week, regular. I'd prefer 40 hours if I could get them. At my age I want to squirrel away as much as I can.

Every single person working at my agency is casual and that's the nature of the beast nowadays. There's 53 casual workers at my new agency, no permanent. In my old agency, almost everyone was permanent.

It's also a very, very young workforce, they're all new to the industry, very few skills. Most of the staff are 18 to 20 with no experience with people with disabilities. At this stage, the workforce is very, very green; very, very raw. This throws a disproportionate amount of responsibility on the few staff with skills, like me.

Because I have more experience than most of the staff, I get all the hard guys. They are all one-on-one (one staff to one client) because they need that much support. They have complex needs and the work is always hard work. No down time or variety.

Some of the new staff get all the easy clients where you go have a cup of tea and watch a film with them. I get it that they (the employer) want to ease some of the new people into the job but they can't burn the rest of us out working constantly one-on-one with complex guys and no variety or option to work with the happy, smiley, easy people.

The individualization of risks. I've mostly been in day programmes in the past, out in the community. Now, sometimes I'm in a group home. I work with these really new staff and even though I'm new to group home work, I see hazards they don't see. Like, one of our guys, he's got these behaviours. One of them is throwing things, mostly pots. So, every meal we get out as many pots as we need and then as soon as we are finished with them, we go lock them in the storeroom. And, I am thinking this is ridiculous. We've got a tool box with sharps in it lying around. He has self-harmed with a spoon before, so I am thinking the box could be thrown and the sharps are not safe to have around anyone, particularly him.

So, I said, 'there's a big friggin' metal tool box there, why can't he just pick that up and hit someone with it, if he can throw a pot, he can throw the box'. They just said, 'well he hasn't done that yet. He throws pots.' The tool box has a handle, it's easier to throw. I'm thinking, we aren't keeping anyone safe this way. Why wait until someone gets hurt? But just they shrug me off.

Talking to staff across the sector, I am hearing of an increase in assaults on staff, mainly due to staff putting themselves in dangerous situations due to inexperience and no training. Nothing major, just black eyes, broken noses, the normal sort of things with people just being out of their routine, not knowing the support workers and the support workers not knowing clients.

Some of the younger guys and girls, some of the less experienced people will get right in people's faces and you can just see the client's eyes, you think no, no, no, no. I've tried

to get them both to back down. I say to the client, 'Tell you what, watch your TV, mate.' And then to the staff, 'I need a hand, can you come and help me for a minute', and then, say privately, 'Back off, you put him in a corner, his only option is to cave or to lash out and you're gonna get hit, he's not gonna cave.'

I heard a new staff talking to one of our guys, right up in his face and it's, 'Go away, get away, fuck off', from the client, over and over. And, I'm thinking, there's red flags all over the place, back away, give him some space. But, he didn't so he (the client) kicked nine holes in his bedroom door. That was okay cos it's not self-harm or hurting us but it's still not good because he's under stress and really unhappy, and we are wondering what's next.

I heard one young staff boast about her injuries, like a badge of honour. Her exact words were, 'He didn't break my nose like so and so, he only gave me two black eyes.' This is what gets discussed, instead of 'Shit, what went wrong? Did I do something wrong? What did I misunderstand? What can we do better next time? What can we learn? How can we keep everyone safer?'

These situations could be avoided with a bit of training and supervision. But, the NDIS doesn't provide for ongoing supervision or upskilling, so no one seems to get better at this stuff. It's not just this company, they're not the worst but they've got a bit to learn, it's really scary with some of the people in the community with guys looking after them and they just don't have the knowledge or the inclination.

I'm generally under employed but I think it will build up because they've been trying me out with different people (service users) and so far, I've been a good fit. The problem is that I keep getting sent to work with people I know nothing about, and that can make it bad for everyone.

Like yesterday at 7.10 a.m. I get a call, 'Hi Paul, are you able to work today? The shift is 9 a.m. to 1 p.m., very easy-going client.' When I got there I find out he had schizophrenia and depression and tried to attempt suicide this year. I met him at his house and went in totally cold. No information from the agency. He is the one who gave me his background, at the top of his voice. Told me and all of the town. I said, 'How about we go sit somewhere quiet and talk about this?' I should have that information from the agency before I go in to see him. How can I keep him, or me, safe if I don't know? It is fraught with danger!

The only way I get information on the clients is if I go into the head office on my own time and read the files. There is no paid time for it. The NDIS only pays for face-to-face time, no prep time. With short notice and new clients I usually can't manage to get to the office before my shift. Plus, the files are not always where they are supposed to be or they are incomplete and I have to hunt all over the office. I came in unpaid, off my own back, before I started working with three of my new clients. Since then, I've worked with another two clients without any access to their files. The communication and information systems are very poor. We keep being promised new systems and better communication but it is a bit ad hoc at the moment.

I had three guys, three consecutive days who had schizophrenia, two were also depressed, and two were self-harmers. They are really complex guys with complex needs but I knew nothing about it until I walked through the front door at the start of my shift. A lot of new clients have entered the sector or are changing service providers for the first time in years. There is very poor, scant background provided to staff. I sometimes

wonder if previous service providers withhold some of the information in the hopes that the new provider will fail to do a good job and the cash cow, sorry I mean, client will come back to the first agency.

Shifting the costs to workers. A big issue is use of private cars. Prior to the NDIS, I worked a regular shift that saw me use a company car and get paid one hour each way to get to a client. Used to see a client every Saturday, which was at time and a half because it was the weekend rate. That meant I got three hours' pay for the two hours of driving. With the introduction of the NDIS, I'm casual and don't get the weekend rate anymore. Plus, I have to use my own car to drive 126 kilometres with no payment for the driving time. On top of that my car was soiled in a number of times, and I had to cover the cleaning cost.

Also, when I asked about claiming my kilometres they said, 'Oh, no, don't claim against the company, claim it on tax and get more.' I'm thinking, how the hell does that work? The company is singing that song and all the young ones are saying 'yeah, okay'. I'm thinking, no, I'll claim it off the company, thanks. I'll lose a third of it in tax but I'll get two-thirds up front. If I put in my tax I'm only gonna get a third and also every cent I get off you, a couple of cents go into my [pension], so I'll be putting it through them.

I also have to pay my own costs when a client wants to eat out. I always brown bag my meals but I am supposed to model appropriate social behaviour when we are out in the community, so I am supposed to buy a meal and eat with him. The cheapest option at the venue we went to was $21. So, I was obviously out of pocket. I handed in receipts in person and the company said we aren't paying for them anymore. WTF! But they still want me to buy meals to model appropriate behaviour.

With this casual, almost transient workforce, there is greater turnover of staff. Which is easy for the companies to just keep filling the jobs over and over, because they don't hire people with great skills in the first place, so they don't replace them with people with any great skill. Most staff work across a multitude of companies to get enough hours per week. So, this means staff are often not available to work because they are working elsewhere.

In my old job, yeah, there was a bit of recognition, a bit of esteem for what you did. Now, not so much. One of my bosses, her words were, 'We lost a really good worker', and I said, 'Oh, that's a pity.' She says, 'Oh, well, support workers come, support workers go', and I couldn't help myself, I said, 'Well, with an attitude like that you've gotta wonder why.'

I'm not feeling the love. To be honest, there's not a whole lot I like about my job at the moment. I'll give it 12 months and then if it's not any better, I'm gone.

Sally

From my perspective as a partner of someone who has worked in the sector for a long time, it's clear that more uncertainty faces the workers each day when they go to work: which clients will they work with; which programme; which location; and which colleagues will they work with? The agencies are staffing with more casuals, who are unable to do many things, due to lack of training. This puts more responsibilities on workers who are trained, like Paul. This makes him much more stressed when he comes home.

Agencies used to staff mostly with permanent staff who had skills and were highly dedicated. These permanents would really get to know the clients, their likes and dislikes, and keep things safe and supportive. Now the agencies want any remaining permanent staff to reduce their contracted hours and become casual. That's what everyone is these days; casual.

So, you end up in a situation where less staff with less training and less familiarity with the clients are working with more people, with serious disabilities. It is very frustrating for workers and the people with disabilities.

Also, the system has no money in it to pay for anything but direct service to service users. So, there is much less paid prep time or none, and clients are dropped off earlier and picked up later which means that staff have to stay back with the clients with no compensation. Shift turnovers are also on the worker's own time and notes are often written at home rather than at work or during work time as there is no time allotted.

Another thing that we've all noticed is that the agencies have dropped their hourly wage rate but they want more staff, which doesn't appeal to skilled workers. They are used to better conditions and better pay. The agencies are expecting more work for less pay.

Transportation is also full of problems now. Kilometre limits are often exceeded for appointments that Paul has to take clients to and there is no compensation for the extra. Some family members also expect to be taken where they want to go, like Paul is their care provider. And, he is supposed to claim parking on his tax claim, not from the company, which is just not right. Transportation used to be covered by the agency and it still should be. It is both the workers and the service users who are hurt by this new transportation policy.

Challenges of working in the private realm of home. Working one-on-one with families in their own homes is another a new problem. Paul used to work in the community centre, now he works in people's own homes. In the community centre, everyone followed basic rules of drop off times, pick up times, appropriate behaviour, start time, end time, etc. In this new situation, some families have unrealistic expectations of what can be done in a day and what the client is capable of, and there are no rules or guidelines they have to follow. There is nothing Paul can do in an immediate situation if people are acting inappropriately in their own homes.

For example, families don't always acknowledge when a shift is finished and don't let the staff person leave. Or don't come home on time to take over. On one shift, Paul had to work four extra hours waiting for a family member to return home to a client who was unstable and could not be left alone. Paul finally had to tell the family that he would have to leave the client alone if no one came home to take over. He shouldn't have to deal with this kind of terrible decision or insist that family members take care of their own. This places too much responsibility on workers. In another case, a client was very afraid to be left alone and so Paul could not leave until a family member finally showed up.

Some workers are scared to complain about challenging behaviours from the clients, to the client or the family or the agency. The workers don't want to upset anyone or they might not get more shifts. This means that the agency doesn't get accurate information on the clients' behaviours or on what might be brewing. It means that they can't make

good plans or support clients properly. Team leaders/managers tend to brush off comments by workers about clients, saying they are just 'having a bad day' or that 'it's just a personality clash'. They don't care if the support workers are injured or disheartened. They can always get someone else to take their place; more often than not, they are not trained or have very limited training, and don't stay in the job long anyway. In this new agency where Paul works, there seems to be even less care for staff members if they are injured. We heard of one example where a client didn't want to use his walking aids but then had to grab hold of the worker for stability, causing injury to the worker. But workers are too scared to say they are injured or they won't get further shifts. There are examples of workers not getting further shifts even after they recover from injury, so no one wants to report.

Conclusion

Three conflicting roles of the state were noted earlier in this article, namely as: the defender of the human rights of people with disabilities; a regulator of employment, defending or maintaining standards; and the key driver of precarity and market processes, which largely subsume the first two roles. The accounts above substantiate a hierarchy of rights at play within the marketized, personalized-funding actualities of care work in the NDIS, in which choice and protections are pitted against each other in a zero-sum game. Within the NDIS, clients are remade as individual consumers and their human rights are putatively realized within commercialized transactions with a changing kaleidoscope of largely unskilled, low pay care givers. The frontline of care work is remade as insecure and casual, with numerous costs and risks downloaded on the worker, who is required to 'model appropriate behaviour' regardless of the costs or degradation. These stories show that Paul was frustrated with his work but did not shirk his responsibilities or put clients in jeopardy, despite the disruption to his life, sense of self-esteem or level of exploitation. The data also showed that Paul and Sally experienced increased stress in their family life and longed for greater employment stability.

This account contributes tentatively to theory concerning the drivers and patterns of precarity (Alberti et al., 2018) by observing that, in the unfolding experience of the NDIS, human rights have been subsumed to the larger goal of marketizing care and recommodifying labour (Greer, 2016; Rubery et al., 2018). Human rights played an ideological role in convincing service users, the public and workers that the needs of a vulnerable population could be best met if management and the state drove down workplace protections in order to meet the commercialized needs of vulnerable populations. This article also contributes to empirical studies on precarity by suggesting that this zero-sum game may be an aspect of care work in the context of neoliberalism in which the human rights of service users and workers are in increasing conflict and growing jeopardy.

Research that matters.
Centre for FutureWork

About The Australia Institute

The Australia Institute is an independent public policy think tank based in Canberra. It is funded by donations from philanthropic trusts and individuals and commissioned research. We barrack for ideas, not political parties or candidates. Since its launch in 1994, the Institute has carried out highly influential research on a broad range of economic, social and environmental issues..

Our Philosophy

As we begin the 21st century, new dilemmas confront our society and our planet. Unprecedented levels of consumption co-exist with extreme poverty. Through new technology we are more connected than we have ever been, yet civic engagement is declining. Environmental neglect continues despite heightened ecological awareness. A better balance is urgently needed.

The Australia Institute's directors, staff and supporters represent a broad range of views and priorities. What unites us is a belief that through a combination of research and creativity we can promote new solutions and ways of thinking.

Our Purpose – *'Research That Matters'*

The Institute publishes research that contributes to a more just, sustainable and peaceful society. Our goal is to gather, interpret and communicate evidence in order to both diagnose the problems we face and propose new solutions to tackle them.

The Institute is wholly independent and not affiliated with any other organisation. Donations to its Research Fund are tax deductible for the donor. Anyone wishing to donate can do so via the website at https://www.tai.org.au or by calling the Institute on 02 6130 0530. Our secure and user-friendly website allows donors to make either one-off or regular monthly donations and we encourage everyone who can to donate in this way as it assists our research in the most significant manner.

About the Centre for Future Work

The Centre for Future Work is a research centre, housed within the Australia Institute, to conduct and publish progressive economic research on work, employment, and labour markets. It serves as a unique centre of excellence on the economic issues facing working people: including the future of jobs, wages and income distribution, skills and training, sector and industry policies, globalisation, the role of government, public services, and more. The Centre also develops timely and practical policy proposals to help make the world of work better for working people and their families.

About the Authors

Prof. Donna Baines is Director of Social Work at the University of British Columbia, and former Chair of Social Work at the University of Sydney. Dr. Fiona Macdonald is Vice-Chancellor's Senior Research Fellow in the School of Management at RMIT University. Dr. Jim Stanford is Economist and Director of the Centre for Future Work at the Australia Institute, based in Sydney. Jessie Moore completed her BSW Honours at University of Sydney and worked as a Research Assistant on this project.

The authors would like to acknowledge the research participants who donated their time and insights to this project. We also thank the NSW/ACT Branch of the Australian Services Union and the Public Service Association of NSW for their cooperation on the project. Financial support from the Paid Work in Cash-for-Care: Australia in Comparative Perspective Project (Australian Research Council Project DE 160100543) and the Austerity and its Alternatives Project (Social Sciences and Humanities Research Council of Canada) is also gratefully acknowledged.

Summary

With the goal of providing choice and upholding the human rights of people with disability, the National Disability Insurance Scheme (NDIS) constitutes a historic change to the provision of disability services in Australia. The system was initially trialed in four regions, beginning in 2013. Since 2016 the system has been rolling out across the country, and is presently about two-thirds of the way toward its expected ultimate enrolment.[1] In addition to fundamentally altering how people with disability interact with the care system, the NDIS is also producing enormous changes in the nature of work and employment in this important and rapidly-growing sector of the economy.

There is tremendous opportunity for disability service workers associated with the new system, which will allocate tens of billions of dollars of additional public funding for disability care work, and lead to the creation of an estimate 70,000 new full-time equivalent positions in the field over the first years of its operation.[2] But there are also tremendous risks facing workers in the profession, as the delivery of services shifts from a traditional block-funded agency-based model to an individualised, market-based system. Disability service workers are facing a whole new set of pressures arising from the NDIS's market-driven approach, including:

- Instability in work and income, associated with fluctuations in demand for work from individual participants.
- Unpaid work associated with traveling to and from clients, performing various overhead and administrative tasks, etc.
- Inadequacies in the NDIS's "unit price" model of establishing cost parameters for particular care functions or services.
- An absence of institutional support for training, supervision, mentoring, and professional development (since agencies have few resources under the NDIS pricing system to provide these broader functions).

[1] Cluff (2019). At present the system is intended to cover Australians under 65 with a range of specified physical, intellectual, and other disabilities. Once fully rolled-out, an estimated 475,000 Australians with disabilities will be covered.

[2] Productivity Commission (2017), p. 323.

- High levels of staff turnover, made worse by the lack of training and support given to the new workers recruited to meet the rapid expansion in service delivery as the NDIS is rolled out.[3]

In the extreme, many disability support workers end up working under especially precarious, "gig"-type arrangements: waiting to be instructed (often via digital platforms or smart phone) to attend the next client, with no continuity or stability in work, and no capacity to fully develop their professional capacities. A disability services program that organises support in the same manner as digital platforms organise fast food delivery or taxi services, is not likely to achieve the high standards of respectful, individualised support that the NDIS's architects hoped for. And it will also be a very challenging place to earn a living.

To gather direct evidence regarding the impact of the present NDIS delivery model on working conditions, job stability, skills acquisition, and quality of care, this report analyses 19 personal interviews conducted with NDIS-funded disability support workers (DSWs) and case managers, regarding their experience under the new system. The interviews were conducted with workers in NSW, most of whom work in the Hunter region – one of the four sites for the initial NDIS trials. Hence the interview subjects have a relatively long period of experience with the new system – which can hopefully inform (and caution) participants in the program in other parts of Australia.

The qualitative interviews with front-line staff identified several major challenges and problems associated with disability support work under the NDIS, that should be considered carefully by policy-makers and agencies. The most important and concerning insights gleaned from the interviews include the following:

1. The new system is not providing sufficient support for participants with intellectual and other cognitive disabilities, including in designing and managing individual programs of care;

[3] Other research which has also documented the challenges facing workers under the NDIS include Baines and Macdonald (2019), Baines, Kent and Kent (2019), Macdonald and Charlesworth (2016), Cortis et al. (2017), Macdonald et al. (2018), and Ryan and Stanford (2018). NDS (2018, p.14) reports an average turnover rate in the disability workforce of close to 5% per quarter for permanent staff, and nearly twice that high for casual staff; therefore, about one in four disability service workers leave their jobs in any given year (for a "churn" rate about three times higher than in the overall workforce; ABS Catalogue 6226.0).

2. DSWs are experiencing increased instability and precarity in their jobs, elevated levels of mental and physical stress, and irregular hours and incomes;
3. New workers joining the disability services sector are often less skilled, less trained, less experienced, and sometimes reluctant;
4. DSWs experience particular challenges working in the private realm of NDIS clients' homes;
5. The informal and inconsistent provision of transportation and other necessary functions to NDIS clients results in a significant shift of costs and risks to workers;
6. DSWs are experiencing increased levels of violence in their work;
7. Relationships with managers have changed dramatically under the new system, undermining effective supervision, coaching, and training; and
8. Worker turnover, given the insecurity of work and income and the challenging conditions of work, is extreme.

The report concludes that the insecurity of the workforce and the ongoing churn of workers will greatly undermine the development of the labour force which is essential to make the most of this historic innovation in social policy. Other expert reviews have already indicated that the effective roll-out of the NDIS is being negatively affected by inadequacies in recruiting and retaining a suitably qualified, motivated, and compensated workforce.[4] Our interviews provide corroborating case-study evidence for this concern from the front lines of disability service delivery. They show that the potential of the NDIS to enhance the lives of people with disability, and to establish a high-quality and flexible service industry, could be squandered without urgent attention to the quality and stability of work. The problem has many sources: including the market-based method of service provision established under the NDIS, inadequacies in funding and compensation, the lack of a systematic strategy and resources for training and upgrading, and inadequate support for participants with intellectual disabilities to successfully formulate and manage their own plans.

It is impossible to envision the delivery of high-quality, respectful, and responsive disability services, if the people employed to deliver those services are treated merely as disposable productive "inputs." And the promise of dignity and individual program design that was so central to the rationale for the NDIS will be betrayed, without urgent and systematic investments in the quality, skills, and stability of disability services work. To that end, the report concludes with several broad policy

[4] See, for example, Productivity Commission (2017), Joint Committee (2018), and Ryan and Stanford (2018).

recommendations aimed at ensuring that disability services work can become the respected, valued, and productive vocation that so many of its workers dream of.

Introduction

The Australian NDIS will eventually provide services to an estimated 475,000 participants, at an estimated cost of $22 billion Australia per year (Productivity Commission, 2017). Claiming to respect the human rights of people with disability, and to provide expanded choice and improved quality in service delivery, individualised models of funding disability services have been implemented in several neoliberal welfare states. For example, this approach has been utilised for some years in the UK, Canada and some other industrialised countries; with the introduction of the NDIS, it is now being introduced in Australia (Lymberry, 2014; Reddihough et al., 2016; Thill, 2015).[5] In theory, individualised funding is supposed to spark the development of an array of disability services providers, all competing to attract clients[6] in an open, competitive market (Cunningham and James, 2009). Like any other market (again, in theory), this competitive pressure will purportedly ensure highest-quality, customized service delivery, while restraining costs.

However, even in its initial years of roll out, the NDIS quickly encountered delays and operational problems, sparking far-reaching critiques from many stakeholders – including participants, workers, and long-standing disability service agencies. The Productivity Commission (2017) has concluded that the initial timetable for participant intake cannot be met; it noted in particular that the disability sector workforce is growing much too slowly to meet demand (p. 211). A study by Warr *et al*. (2017) found numerous workforce problems including "staff shortages, high turnover of staff and staff working as planners with limited experience of working in the disability sector" (p. 9). Other recent research and surveys of employers and employees in the disability services sector have documented similar problems, including:

[5] Of course, the individualised, market-based model of service delivery has been tried in several other areas of Australian public services, including employment services, vocational education, and child care – typically with disastrous results. For critiques of these other experiments with marketised human service delivery, see Australian Council of Social Service (2018), Hill and Wade (2018), and Toner (2018).

[6] Many terms are used for people using disability services including: service users; consumers; community members; people; participants; and clients. For clarity, and because it designates the capacity to hire and terminate services, the term "client" is used in this report, though we acknowledge the lack of consensus regarding appropriate and respectful terminology. Similarly, we acknowledge there is also a variety of terminology used in referring to the service provided to people with disabilities (including "support", "care" and "service").

- The costs of minimum entitlements for workers (including basic wages and conditions as specified under the relevant Modern Awards) cannot be adequately covered under the current NDIS pricing schedule (Cortis *et al*., 2017; McFadden, 2017; Worthington, 2016);
- Jobs in the sector are marked by very high levels of part-time work, irregular hours, casualisation, and independent contracting (United Voice, 2017; Ryan and Stanford, 2018; Australian Services Union, 2019);
- There is inadequate funding for agencies to pay for necessary supervision and training (Cortis, 2017; Ryan and Stanford, 2018);
- Workers have inadequate time to perform tasks that are necessary to high-quality support, and this negatively affects the quality of care provided to participants (Cortis *et al*. 2017; National Disability Services 2017).

The Warr *et al*. (2017) study found that service users also expressed serious concerns with their experience with the scheme, feeling that their views (and those of their families and carers) were often overlooked in the rush to approve individual plans and enrol participants – all within strict financial constraints (p. 8). As Howard *et al*. (2017) note, the NDIS early roll out created a situation where a human rights empowerment strategy for people with disabilities was immediately confronted with the realities of fiscal austerity and a competitive market; this placed service users, workers and communities in jeopardy, and clearly undermined the original, laudable goals of the program.

The Social, Community, Home Care and Disability Services Industry (SCHADS) Modern Award (2018) sets out minimum "safety-net" pay and conditions for the disability support workforce. Over and above these minimum conditions, unions in some workplaces have been able over the years to gain further benefits for workers through enterprise-level collective agreements. However, like the Australian non-profit sector as a whole, the disability services sector has suffered from chronic under-funding by governments for contracted services for many years – long before the NDIS was ever contemplated (Productivity Commission 2010, p. 280-281). This made collective bargaining for improved wages and conditions difficult in most workplaces.[7] While the community sector as a whole has been undergoing rapid restructuring and

[7] In some cases, especially in government-run facilities and large and better-funded agencies, unions were able to negotiate significant improvements in pay and conditions for DSWs, above the Awards. Those workplaces, however, constituted the exception to a general pattern of low-wage, precarious work – and those historic gains are now in jeopardy as much of that work is transferred to smaller or non-profit agencies as a result of the cost-sharing arrangements of the NDIS.

casualisation of the workforce in recent years (Meagher and Goodwin, 2015), the changes to the disability services sector under the NDIS are especially far-reaching and disruptive.

The fiscal basis for service provision is being changed from block-funding and grants, to a model based on attracting and retaining enough individual participants as customers to cover both direct costs of purchased services and the infrastructure and overhead of the overall operation. With the elimination of stable, core funding, even long-standing agencies have been pressured to restructure employment relations, reduce training and supervision functions, and allocate enormous resources to marketing services and attracting "paying customers" – a costly and peripheral function which was not even necessary under the former funding model. This sea change in financing structure is driving further casualisation, outsourcing, and individualisation in employment relationships for service workers, and demonstrably undermining wages and employment conditions (Cortis *et al*, 2017; Macdonald *et al*, 2018; NDS, 2017; Productivity Commission, 2017).

The Australian government has assumed three contradictory and conflicting regulatory roles as the NDIS has been rolled out, and this mission confusion has exacerbated the deterioration in employment stability and working conditions. The government is charged with the responsibility to defend the human rights safety of people with disability; to establish a framework and rules for the defence or maintenance of minimum labour standards (through the SCHADS award and, in some cases, through enterprise bargaining); and to implement the market-based delivery process for the whole scheme. These goals and responsibilities are clearly contradictory; in practice, the latter goal has largely subsumed and overwhelmed the first two (see also Macdonald and Charlesworth, 2016).

Methodology

To further investigate the challenges posed to the quality of work by the market-based delivery model of the NDIS, researchers from RMIT University, the University of Sydney and the Centre for Future Work undertook and analysed 19 semi-structured, qualitative interviews in 2018 with frontline disability support workers, including service coordinators and Local Area Coordinators. All research participants worked with people with intellectual or other cognitive disabilities or psycho-social disabilities, and many worked with clients with complex needs.

The overwhelming majority of the interviewees had more than 5 years of experience in the profession (one had 25 years' experience). Two of the interviewees were relatively new to the sector, with less than 2 years of experience.[8]

The interviewees were employed in various locations in New South Wales. All of them were performing work that was compensated through the new NDIS system.

Drawing on an interview guide, research participants were asked broad questions about their experience of working in the NDIS, as well as any relevant past experience working in this sector. The interviews ranged in length from 15 minutes to 1.25 hours. They were audio recorded, transcribed and analysed for similarities and differences, until patterns could be discerned and themes confirmed (Glesne, 2015; Kirby *et al*., 2006). Field notes were also taken at the time of the interviews, and folded into data analysis.

Requisite ethics approval for the research was received from each of the institutions involved.

[8] Some details have been changed to protect confidentiality.

Major Findings of the Interviews

The following themes emerged most strongly from the qualitative data collected through the interviews:

1) At present, the NDIS system does not provide adequate support for people with intellectual and other cognitive disabilities, including support to allow the successful design and implementation of individual service plans.
2) DSWs are experiencing increased precarity, stress and irregular hours in their work. Two key factors contributing to that problem include:
    a. Casualisation of work arrangements.
    b. Poor communication with managers and clients.
3) New entrants to the DSW workforce, recruited to help meet the rapid growth in demand associated with the NDIS roll-out, are inadequately skilled and trained, with very little experience working with people with disabilities. Sometimes these workers are reluctant recruits to the industry – seeing it as fall-back career path when other work opportunities did not eventuate. Two key dimensions of this set of problems include:
    a. The consequences of reliance on an underdeveloped, undervalued labour force.
    b. The influx of low skill, young workforce implies more challenging work for more experienced workers, as well as greater vulnerability for new staff.
4) DSWs experience several specific risks and problems from performing their work in the private realm of clients' homes.
5) Time and expense related to transportation (to clients' homes and other locations of work) shift a significant burden of costs to workers, that is uncompensated in many cases. There are other costs that are also shifted to workers, not recognised in the NDIS unit price model and in normal wages.
6) Several workers report increased risk of violence in the context of individualised care, working in clients' homes, and working without adequate training, supervision and support.
7) Workers reported sub-optimal, often counterproductive relationships with their managers – who were also grappling with severe challenges and constraints as their own jobs evolved in the wake of the new funding and operational systems.

8) High rates of worker turnover in the sector undermine any efforts to address these problems through training, mentoring, and experience.

We explore each of these themes in further detail below, drawing on exemplar quotes from the original data to illustrate and confirm the findings.

1. SYSTEM PROVIDES INADEQUIATE PLANNING SUPPORTS FOR PEOPLE WITH INTELLECTUAL AND OTHER COGNITIVE DISABILITIES

The research participants expressed strong support for the goals of the NDIS. The goals of empowerment, choice, and respect for the human rights and dignity of people with disabilities were broadly shared and endorsed. However, the majority of workers also reported that the NDIS "does not feel like it is designed for people with intellectual disabilities" (as distinct from physical and other medical disabilities). People with intellectual and cognitive disabilities had great difficulty negotiating the complex and bureaucratic processes and hurdles involved in designing and implementing individual support plans (Collings *et al*. 2016); they also were less capable of advocating for themselves in that process than other people with disabilities. The system therefore left many people with intellectual and cognitive disabilities with under-funded plans (particularly for transportation and activities), no one to advocate for them, fewer access to needed resources and supports (especially for people with complex issues), less effective choice (in contrast to the promised emphasis in this system on individual choices), and more instability and uncertainty in support schedules and providers.

This quote echoed the concerns of many of our research participants:

> "The NDIS is not designed for people with intellectual disabilities. There's a lot greater need for case management than people with … physical disabilities. [People with physical disabilities] do okay in the NDIS; have the intellectual capacity to advocate for themselves and navigate the system."

Another worker added:

> "Our guys have an intellectual disability, [so] they don't have a voice. They're the ones who're losing out...These guys we support are the ones that are getting the money taken off them because they can't speak up. It's like a tier system with people with disabilities, and people with intellectual disabilities are on the bottom tier."

Referring to the NDIS administration:

> "They truly don't seem to be aware of people with intellectual disabilities."

This marginalisation of some people with disabilities was confirmed by other repeated findings in the data, particularly regarding the casualisation and instability of the workforce – and the resulting consequences in limiting and reducing choice for clients.

2. DSWS ARE EXPERIENCING INCREASED PRECARITY, STRESS AND IRREGULAR HOURS

a) Casualisation of work arrangements.

All research participants reported that disabilities services employment has become increasingly precarious. In many cases, *all* the front-line staff in the interviewee's agency were casual; no one was permanent except management. The contrast with the workforce prior to the NDIS was striking. As one long-term worker in disability services noted:

> "Every single person working at my agency is casual and that's the nature of the beast nowadays. There's 53 casual workers at my new agency, no permanent. In my old agency, almost everyone was permanent."

This often exclusive reliance on casual employment allows agencies to save costs for paid sick leave and holiday; they can also dismiss or reallocate staff more easily, whether to meet fluctuations in client demand or to discipline employees. In essence, a casualised employment system devolves the risks of fluctuations in demand to employees, by making it possible for employers to continuously schedule and

reschedule work around the varying demands arising from the individualised service provision system. Moreover, since there are fewer group activities, and shorter units of service provision (often as short as an hour with a particular client), the individualised service model imposed a higher degree of variability in the timing of services.

Another long-time worker questioned her agency's explanation for why they continue to hire casual staff:

> "They don't want full time workers. What they say is we need to have flexibility because we don't know, clients could come and go now with their choice. But they don't go. They don't go anywhere, once they are with us."

Of great concern to the research participants, casualisation was seen to have serious consequences for consistency of support, and for increased violence and workplace injury (as discussed further in section 6 below). For clients with intellectual and cognitive disabilities, it is well-known that frequent turnover and disruptions in staffing and support routines enhances the risks of emotional turmoil and conflict. As one worker noted:

> "We all know that 'routine is king' in the disability world and swapping up or changing up staff constantly can create challenges for both clients and staff… In the past three weeks, I've seen this lead to damage to property from clients and self-harm. Makes the work harder for everyone. Makes it stressful and depressing. Where is service user choice in all this? It's nowhere. We are all in the same boat: the work is harder and the clients' needs aren't being met!"

Some workers told us that prior to the NDIS, their employers tried to ensure that each worker was assigned a mixed caseload of people: including those with challenging behaviours, and those without. This allowed for more sociability for clients, and variable intensity of demands for workers – as opposed to burdening workers with the constant high intensity of working exclusively with people with complex needs. While long-time staff in the sector generally have the skills and experience to work with people with complex needs, it can be exhausting and stressful. An additional layer of complexity is that many of the new staff have no experience or training to work with

complex behaviours. Research participants expressed concerned that this means that "people with complex needs often struggle finding workers because people decline to work with them." In this clear and unintended manner, choice is being *reduced* for clients as a result of a fragmented, unplanned delivery system – rather than being expanded.

As one interviewee poignantly put it:

> "Most of the negative stuff that has happened is because they've said, 'We don't get the money that we used to get. We're not getting money for this.' I've often said, 'The NDIS has come in, we've got more choice to do less.'"

Casualisation also implies unpredictable schedules and incomes for workers, which adds to their stress experienced on the job and at home. As one long-time worker noted:

> "It is impossible to plan and impossible to feel you know what's facing you the next day, let alone the next week. It makes me feel not valued and my self-esteem is plummeting. My family suddenly has questionable financial security, if any. I am venting a lot more at home and that leads to marital disharmony as my wife tries to cope with me."

Similarly, another worker noted:

> "My stress and fatigue are both way up. I've been living on the phone for shifts, some of which I get less than two hours' notice for."

Because of the shift to a unit pricing fiscal system, disability service agencies now face constant instability in their revenue flows. If individual clients change or cancel their requests for service, the agencies' revenue flows will also change. Agencies try to grapple with the financial effects of this instability by passing the risks of fluctuating demand onto their workers. Staff planning and rostering has therefore become less stable, more haphazard, and more subject to sudden changes. This instability in revenue is a direct consequence of the NDIS's unit-based funding model. But if employers are allowed to transfer the instability solely onto workers – whose ability to earn a livelihood now depends

on fluctuations in client demands that are clearly beyond their control – then the challenges facing the sector in recruiting and retaining high-quality staff will become all the more daunting.

b) Poor communication with management and clients.

Many research participants expressed concern that there were very few, if any, systems for ensuring that staff had access to client files and other necessary information before they started to work with them. The information in these files is critical to ensuring continuity of care, good programming, and safety for clients, the community and the workers. However, the only way most workers have access to this information was to use their personal, unpaid time to travel to head office to review files before assignments to meet with clients.

One long term worker noted:

> "The only way I get information on the clients is if I go into the head office on my own time and read the files. There is no paid time for it. The NDIS only pays for face-to-face time, no prep time. With short notice and new clients I usually can't manage to get to the office before my shift."

Other research participants added that files were often incomplete, missing or lost, making the unpaid trip to headquarters futile and even more frustrating. Unreliable communication between workers, managers, and clients also exacerbated the instability in scheduling. Workers did not always know about changes or cancellations in their work assignments, resulting in additional insecurity and wasted time. The individualisation of work assignments and poor communication between clients, managers and DSWs created many challenges in responding to unexpected events, delays or problems.

One long-time worker phrased the issue as follows:

> "If they get caught out shopping or there's a car accident and they're held up and things like that it puts pressure on that worker if he's gotta go to another client so it's important that there's good communication. But then it often puts pressure on the next person they're supposed to

> go to and they get really crabby because it's getting to that where you're supposed to be with me, I needed you that time and you weren't there."

3. NEW DSW RECRUITS ARE LESS SKILLED, LESS TRAINED, INEXPERIENCED AND SOMETIMES RELUCTANT

a) Underdeveloped, under-valued labour force.

The Productivity Commission (2017) notes that the NDIS labour force is under-developed and not growing fast enough to meet demand. This means that many agencies seem prepared to recruit almost anyone, including people with few skills and possibly little interest in the sector beyond having a job. Interviewees all expressed serious concern about this situation, as well as the lack of resources devoted to training:

> "You get casual people coming through being support workers that have got no idea, no training, there's not much training available."

Experienced, skilled workers expressed alarm at the general reduction in skill and experience among their colleagues:

> "It makes you feel very devalued in your work. It really feels like they're dumbing down our role, I guess."

Another senior worker expressed concern regarding the inadequacy of qualifications for new staff:

> "At the moment, our HR manager, she advertises for Cert 3 but everyone I've spoken to, none of them have got Cert 3. They're all literally, one was working at KFC last Friday night and yet he's out with complex kind of behaviours."

Another way this devaluing occurs is in recruitment. In the past, staff were often drawn to the sector because of their commitment to the service user population, and/or a sense of social justice ethics. Some experienced staff believe some new recruits to the sector are coerced through the threat of loss of Newstart Allowance if they do not apply for and accept the jobs – even though they may have little interest in working with people with disabilities and few relevant skills. This does not make for quality care or a positive work environment.

As one long term worker observed:

> "A lot of them have had no choice but then to take up positions because they've been on the dole and they're not interested or trained. They don't pay attention to clients, they're not giving them the quality of service; they spend more time on their phones than talking to the clients."

b) Low-skill, young recruits create more challenges for experienced workers, and greater vulnerability for new staff.

The new workforce in NDIS-funded services provision was described as "very, very green", young, low skill and inexperienced. This resulted in even greater workload and work intensity for experienced staff, who were required to support and compensate for the limited capacities of newer workers.

Noting this dynamic, one long time worker observed:

> "Because I have more experience than most of the staff, I get all the hard guys. They are all one-on-ones (one staff to one client) because they need that much support. They have complex needs and the work is always hard work. No down time or variety."

This makes the work more draining and adds to workplace stress. Another long-time worker commented:

> "I remember when I first started in the field as a support worker and we used to get a lot of students from universities and that, and you can tell

> the difference – the quality was there, their attention to the clients were there but under the NDIS it's just…nah. They're just basically hiring anyone because we need the workers."

As will be discussed below, this leads to more stressed and dangerous conditions for all workers: both new recruits and veterans. This seems to undermine the goals of human rights and self-determination which are meant to be core to the NDIS. The story below is typical of the sector at this point, and highlights how inexperienced workers are put in positions where they do not have the skills to handle complex situations and hence, unintentionally, increase the likelihood of workplace stress and conflict:

> "I heard a new staff talking to one of our guys, right up in his face. I hear, 'Go away, get away, fuck off,' from the client, over and over. And, I'm thinking, there's red flags all over the place, back away, give him some space. But, he didn't so he [the client] kicked holes in his bedroom door. In a way, that was okay cos it's not self-harm or hurting us. But it's still not good because he's under stress and really unhappy, and we are wondering what's next."

Lacking appropriate training and supervision, new staff have few opportunities to improve their skills. This can lead to a culture of bravado, rather than a culture of support. One long-time worker related the following example:

> "I heard one young staff boast about her injuries, like a badge of honour. Her exact words were, 'He didn't break my nose like so and so, he only gave me two black eyes.' This is what gets discussed, instead of 'Shit, what went wrong? Did I do something wrong? What did I misunderstand? What can we do better next time? What can we learn? How can we keep everyone safer?'"

As another long-time worker noted, "These situations could be avoided with a bit of training and supervision".

Lack of knowledge and experience among new, untrained staff can create safety issues for both workers and clients alike. As one interviewee reported:

> "We've had near misses. We've had wandering out on the road. In my own experience, I like parents, I like people that have had children not only because there's the parental aspect to your care, you're thinking of other things that young kids aren't. Eighteen and nineteen year olds, they're not thinking of which side of car to load particular participants in and out of; they're not thinking of where they're parking for a particular client in a busy strip or a quiet place. Just different things like that. I know they seem trivial but they lead to accidents, they lead to mistakes."

Many workers highlighted that the NDIS does not provide adequate funds within the unit price structure for regular training of staff. Hence, in most agencies, training opportunities for newly hired staff range from minimal to non-existent:

> "Very little. We get our first aid. It's up to us to go and find a Cert 3 or whatever like that."

In almost all cases, workers had to pay for their own work-specific training and all upgrading. This lack of support for training and upskilling was very frustrating for workers encountering new clients with complex behaviours, and wanting to further develop appropriate skills. This problem was seen as all the more acute in light of the sector's new, inexperienced labour force.

4. CHALLENGES OF WORKING IN THE PRIVATE REALM OF CLIENTS' HOMES

Working one-on-one with families in their own homes poses many serious challenges for workers (Flanagan, 2019). Many DSWs had worked primarily in community programs with groups. Now, many workers are assigned to work in clients' own homes. In a community centre context, basic rules of drop-off times, pick-up times, appropriate behaviour, etc. were regularly understood and followed by clients, family and staff.

In the new situation of in-home work, in contrast, some families have unrealistic expectations of what can be done in a day and what the clients are capable of. There is a lack of clarity regarding rules or guidelines they must be followed. The work occurs in an individualised setting, with no colleagues or supervisors who a DSW can call on for

support or direction. There is little workers can do in an immediate situation if people are acting inappropriately in their own homes.

As one research participant told us:

> "Families don't always acknowledge when a shift is finished and don't let the staff person leave. Or don't come home on time to take over… In some cases, clients are very afraid to be left alone or too unstable to be left alone and so we can't leave until a family member finally shows up."

5. TRANSPORTATION: SHIFTING THE COSTS

Problems with transportation arrangements for NDIS clients figure prominently in the experiences related by our interviewees. These problems can be broadly classified into two main areas. The first is that clients are not provided with sufficient funds to cover transportation needs associated with activities they may be used to doing, or that they would like to start. Prior to the NDIS, transportation costs were often covered by community agencies, typically pooled across a number of clients – making travel and activities both safer and more cost effective. Under the NDIS, in contrast, each client has their own budget for travel; for many clients, especially those in regional areas, that budget runs out quickly. Moreover, by requiring clients to "trade off" service choices in order to stay within a fixed budget, the NDIS system encourages clients to downgrade the importance of good transportation services – or, perhaps even worse, to dip into funds allocated for clinical or core supports in order to subsidise transport costs. This pattern is very concerning to both clients and DSWs, since choice of activity is meant to be a cornerstone of the NDIS. True choice requires a fiscal regime which recognises the importance of transportation for people with disabilities – allowing them to get out of their homes, engage in community activities, and access specialised services. At present the system is clearly not providing adequate resources to meet that need.

Many of our interviewees reported that their clients often forego activities because of inadequate transportation funding – and this in turn results in more intense demands imposed on staff to meet clients' needs with less access to outside activities or resources. In one agency, most clients were allotted funding for 100 kilometres of transportation per week. As one worker put it:

> "If we stuck rigidly to the hundred kilometres a week, they wouldn't go anywhere hardly. From where we live in …, you can't go anywhere for under 30 or 40 kilometres a trip return. That's just the most basic community access. It gets gobbled up very quickly."

These clients are not living in remote areas where distances would be even longer. However, under the NDIS, even they have had to curtail their outings. As one worker noted regretfully, "It's very tight already and they simply can't go out every day."

Kilometre limits are often exceeded for appointments that staff are required to take clients to, and there is no compensation for those extra unfunded distances when workers are expected to use their own cars. According to one worker:

> "Some family members also expect to be taken where they want to go, like we are the care providers for the whole family."

The perverse trade-off between transportation costs and other budget items in each client's personal plan can lead to clients sacrificing core services and supports just in order to finance desired or necessary transportation:

> "A lot of participants have been taking their travel money out of their core support so that then means that families aren't really getting the correct respite hours or the participant's not getting the correct one-on-one supports."

The second major problem with transportation arrangements under the new system is that a large proportion of DSWs are now being required to use their private vehicles to visit clients' homes (or other locations of work), and in many cases even to transport their clients. In many of these instances no compensation is provided for this transportation functions: neither for the cash outlays associated with providing this private transportation (including petrol, maintenance, insurance and registration, and vehicle amortisation), nor for the workers' time spent traveling to meet their clients. Several interviewees reporting that their vehicles sustained serious soiling or damage in work-related use; some also reported no longer feel safe using their own vehicles to transport clients:

> "I've had a situation…, one of the guys shoved a CD in my CD player and it was scratched and he did it a few times and ended up jamming the mechanism and it cost me about 400 bucks and they wouldn't reimburse me cos I couldn't specifically prove that that had happened. That's the thing you're faced with there."

> "I had my car soiled a few times, some guy wanked on it, some guy tried to wank in it... So that's the reality there that with the contract."

We received numerous and consistent reports about employers pressuring DSWs to use their own vehicles for work-related transportation functions. In many cases it was reported this requirement is now built into initial employment contracts. There is widespread confusion about workers' responsibility for providing a vehicle, and for their responsibilities regarding ancillary requirements such as insurance:

> "We got dragged into a special meeting. It wasn't a reprimand, it was a compliance meeting to remind us that contractually, we're obligated, we signed that the use of our vehicles was, in fact, mandatory; that we couldn't cherry pick our clients; there was another issue, none of which related to me at all but I can see how they're gonna use that in the future. Originally, I said, 'I don't comprehensively insure my car because it's just a piece of garbage. It's a little $600.00 run around and it wasn't worth the comprehensive insurance,' so I've never included my vehicle in the fleet but then they said, 'No, you don't have to be comprehensively insured, we cover that.' I thought, that's the first I've ever heard of it and it's written in our contract that it says that our vehicles need to be comprehensively insured."

> "Work now are looking to cut back anywhere they can to squeeze a profit or a dollar to actually run. As far as we're now limited to use of vehicles; there's no choice now. If we don't like it, we leave. If you don't wanna use your own car, get another job."

> "If you don't use our own vehicle, you won't be working. They're not playing ball, they're not being nice about it, they're not even hiding it anymore. They've said, 'This is in your job description.' It's not in the

> job description. It says, you may have to use your own vehicle. Now they're saying, 'No, you have to.'"

> "Now we're expected to provide our own phones, our own cars, our own resources, our own supervision and pretty much pay if there's things that participants that we're working with would like to go to, we're expected to pay, too, ourselves."

Some workers reported that their employers reimbursed their vehicle expenses at various rates per kilometre; some reported that NDIS clients were actually charged a higher rate for those worker-provided travel services than the workers were reimbursed (with the margin retained by the agency, perhaps to cover administrative costs related to the transportation services, or to help defray general overhead costs). But some workers indicated that they were not reimbursed at all for the use of their own vehicles for work-related transportation:

> "Previously I had a company car, got paid an hour each way for transit, being Saturday that was time and a half so there was three hours' pay. When NDIS came in there was no longer the ability to use a company vehicle hence there was no payment for travel so I was doing 126ks in my vehicle for no compensation plus losing that three hours pay."

Reimbursement for the workers' time spent driving clients, or driving between different clients, was also reported to be inconsistent.

Some workers indicated that their employers told them to claim parking and client transportation costs as an employment expense on their tax returns, rather than being reimbursed directly by the company. Of course, claiming transportation costs as a deduction (even where it is legally allowed and adequately documented) does not fully recompense DSWs for those out-of-pocket costs.[9] As one research participant expressed:

> "Transportation used to be covered by the agency and it still should be. It is both the workers and the service users who are hurt by this new transportation policy, which is just not right."

[9] Deducting transportation costs through the income tax return will result in partial reimbursement at the rate at which the worker pays marginal tax; since DSWs are generally low-paid and part-time, that rate is low (and in some cases even zero).

The expectation that workers spend their own time transporting themselves and clients in the course of work that may inevitably involve multiple trips to multiple locations in a single day,[10] and moreover that they provide their own means for this transportation, without compensation, is an extraordinary and unusual imposition on these workers. This practice would not be tolerated in most other sectors of the economy; it occurs in the case of disability services only because of the relatively powerless position of both the clients and the workers, and the fragmented, inadequately-funded nature of the program.

The requirement that DSWs transport their clients in their personal vehicles also raises significant safety concerns, related to the quality of the vehicle, inconsistent installation of necessary safety equipment (such as fire extinguishers and first aid kits), and the difficulty of driving a vehicle while simultaneously supervising a client with intellectual or cognitive disabilities. As one worker put it:

> "Our car's not suitable for the guys… They did quite an amount of damage to our cars; when we're driving in our cars there's no partition so we're put at danger while we're driving… You're supposed to be driving, you should not have to be watching the people in the back. You should have a hundred per cent attention on the road and to be put in a position to drive with trying to see if people are taking their seat belts off. It's not safe."

6. INCREASED RISK OF VIOLENCE AGAINST WORKERS

Research participants regularly reported an increased incidence of violence against workers and property after the roll-out of the NDIS. This occurred alongside and despite a generally lowered likelihood of accurate reporting of violent incidents – because of the casualisation and fragmentation of disability services work. Insecure workers are generally anxious to attain more shifts and feared reprisals if they reported incidents; moreover they have less access to reporting procedures given the general lack of supervision and support, and their common assignment to work by themselves in locations away from any central office or agency.

[10] Of course, it is common to expect workers to travel to and from a single place of work at their own expense. But when a job involves traveling to several or various workplaces to perform different units of work, clearly there is a responsibility for the employer to both arrange and compensate for that additional transportation burden.

As one long-time worker noted:

> "Some workers are scared to complain about challenging behaviours from the clients, to the client or the family or the agency. The workers don't want to upset anyone, or they might not get more shifts."

The revolving door of casual staff makes for a more stressed work environment, as DSWs cannot possibly adequately come to know their clients, their preferences or their triggers. Some workers tried to diminish workplace assaults, despite acknowledging an overall increase in their frequency. As one worker put it:

> "Nothing major, just black eyes, broken noses, the normal sort of things with people just being out their routine, not knowing the support workers and the support workers not knowing clients."

That such serious violence could somehow be normalised for workers, who are implicitly expected to "put up" with violence as a sign of their commitment to their clients, is a shocking indictment of the lack of resources, supervision and support which is provided to DSWs under the NDIS's marketised model.

The chronic lack of training and supervision for workers clearly contributes to the increased frequency of dangerous situations. As another research participant told us:

> "Team leader/managers tend to brush off comments by workers about clients, saying they are just 'having a bad day' or that 'it's just a personality clash'. They don't care if the support workers are injured or disheartened. They can always get someone else to take their place; more often than not, they are not trained or have very limited training, and don't stay in the job long anyway."

The frequency of violence from clients, the general absence of reliable reporting systems, and the inadequacy of training, support and back-up for DSWs are all exacerbated by the fragmented model of service delivery inherent to the NDIS's marketised model. In a system in which workers and agencies must "hustle" for business, work is performed in fragmented and geographically dispersed locations, and agencies and employers have sparse resources (given the unit price model) to provide essential overhead functions (like training in how to handle violence), violence

becomes a normalised but unnecessary feature of the work. This represents a very serious failure of the current system.

7. DETERIORATING MANAGEMENT RELATIONSHIPS WITH WORKERS

Early disability services provision arose from the needs of clients and communities, and was most often provided according to a non-profit ethos of care and equity. In contrast, our research participants were disturbed by new trends that emphasized profit over support, and consequently generated wider divisions between staff and management. Some supervisors continued to provide strong and consistent support for their frontline workers. However, the profit motive and pressure for cost-cutting unleashed under the NDIS has created a deterioration in relationships that feels unethical and demoralising for many of the workers.

This comment from one support coordinator reflects widely-shared feelings expressed by our research participants:

> "You think you're going to something with the full belief that you can help change things for people… We can make things a bit more tolerable for their condition, but we're told we can't do that. Even a courtesy phone call, we can't do it unless we can get paid for it."

Employers made it explicitly clear to front-line workers that the culture of the workplace had to change: workers had to ensure that every interaction with clients was charged and chargeable, otherwise it had to be eliminated. This close focus on cost and profit did not sit well with the professional and personal ethics of long-time workers, who had spent their work lives trying to make a positive difference in the lives of people with disabilities. It seemed especially incongruous in the case of long-standing non-profit agencies – which had traditionally operated on a public and community service mandate, but now were being forced (by the unit price model) to act like other "businesses."

A particularly poignant example was provided by a support coordinator, whose manager told her to "drop clients and stop helping them" once their support coordination budget had been used up – even when the clients' needs remained unmet. In a similar vein, another worker told us:

> "My boss said, 'You need to look at things a lot different. It's about money. There's morals and ethics and then there's the organisational standards and you need to bring them down to the same level,' and I said, 'How can I change my morality that I've had for 28 years previous to starting this role to suit an organisation? I can't do that, and I don't think it's ethical…"

Despite this ethical conflict, because of their casual status and resulting economic insecurity, many workers were afraid to speak up to managers or express concerns; they feared that their shifts would be cut instantly. These concerns dovetailed with a sense that workers were not appreciated by many management groups; workers reported a growing mentality among their managers that "everyone is replaceable. One long time worker summed it up bluntly: "Attitudes from management are basically, you're not an asset anymore."

New and long-time staff also commented on the adversarial climate that more frequently seems to pervade their organisations. As one long term worker noted:

> "There's now a very big us-and-them in our organisation. Very big. They deny it but there is a very big us and them [sustained] by certain members of management. There's no objectiveness."

Favouritism was a widespread concern, with some workers feeling that shifts and clients with complex needs for support were not evenly or fairly distributed. Along with infrequent or non-existent supervision, this vulnerability increased workers' sense of demoralization and stress.

Inadequate conflict resolution was also identified as a problem in a number of organisations. One worker found himself unable to resolve issues with a manager and asked four times for mediation, which was supposed to be available to all staff. However, none was provided. This had negative impacts on his stress levels and health. As the worker put it:

> "I asked three more times for conflict resolution over the space of three months, finally it got to a point where I was so anxious before getting to work I felt like I was vomiting, I started medication."

8. HIGH TURNOVER IN AN INSECURE SECTOR

Despite widespread demoralization and instability, many workers continue to seek satisfaction in working with people with intellectual and other cognitive disabilities, and trying to make the new NDIS system work. Two workers told us that they felt it was likely that they would soon be dismissed, because they refused to abandon the principles of equity and support that they felt defined their work. However, other workers told us their jobs still held positive meaning because, "You can put things in place for people that can give them hope".

Despite the insecurity of working hours and incomes, the challenges posed by inadequate funding for transportation, and the pervasive risk of violence, most workers still were motivated by (as one worker put it) "watching … the participants reach their goals." Another worker expressed a similar positive commitment to their work:

> "I like getting them out and about to places. I love hearing 'he's never done that before.' Love that. I love hearing 'how did you do that?' I get chuffed every time."

A long-time frontline worker summed up the feelings of most research participants thusly:

> "I love working with the people. I love making their lives, it sounds really cliché, making their lives as high quality as we can".

This commitment to client care, despite the difficulties faced by DSWs, is extraordinary. However, it was also notable how many of our interviewees were considering leaving the sector entirely. Some planned early retirement, others were seeking a career change (such as moving into management or administration), while others had no definite plans other than to seek a different job they could like and sustainably perform. As one long time frontline worker told us:

> "To be honest, there's not a whole lot I like about my job at the moment. I'll give it 12 months and then if it's not any better, I'm gone."

Part of this common intention to leave the profession was based on working conditions. For most workers, however, it also reflected the loss of a feeling of being appreciated and finding meaning in their jobs. In the words of another long-time worker:

> "In my old job, yeah, there was a bit of recognition, a bit of esteem for what you did. Now, not so much. I'm not feeling the love."

These personal reflections from our interviewees thus underline the empirical data indicating high job turnover rates in this sector.[11] Needless to say, given the already-inadequate training systems for newly-recruited DSWs, the reluctant departure from the sector of many long-time, more experienced will only exacerbate the problems of skill and capacity faced under the NDIS. Most frustrating is the fact that most of these workers support the goals of the NDIS and would prefer to stay in their current occupation, if those immediate problems (such as inadequate training and supervision, unfair transportation arrangements, risks of violence, and others) could be resolved.

[11] Data compiled by NDS (2018) indicate that roughly one-quarter of disability service workers leave their jobs in any given year. That is approximately three times as many as the average job turnover rate in the labour force as a whole (ABS Catalogue 6226.0).

Conclusions and Policy Responses

Interviews with front-line workers and case managers working in NDIS-funded disability services delivery strongly indicate a system that is experiencing rapid change and instability. Until the advent of the NDIS, services for people with intellectual disabilities were most commonly provided through direct public departments, or by agencies supported with block-funding government grants (supplemented by incremental funding from charitable donations and other sources). While jobs in the sector have never been lucrative, the previous approach did provide a significant number of relatively secure, permanent employment opportunities to workers. That allowed them to develop their skills, progress along defined career paths, and build more stable relationships with service users over time.

In contrast, the new delivery model under the NDIS has been characterised by the rapid casualisation of work, alongside the fragmentation and individualisation of supports to many NDIS clients. Especially vulnerable in this regard have been people with intellectual and other disabilities. Typically, they would have previously received most support from a single organisation, and/or attended specialist day services. Now they are expected to arrange for complex programs of services and support on an individual basis: working within a personal budget, trading off various services and supports to meet the financial constraint, and holding ultimate responsibility themselves for the coherence and success of their treatment and support program. Many clients are experiencing great uncertainty and instability in their disability support services as a result. This places both clients and DSWs in a highly vulnerable position. Both are grappling to find their way within a fragmented, market-based system that in many ways fails to meet its core motivating goals: to reduce the vulnerability of people with disabilities, to respect and enhance their self-determination, and to move them from the margins into the mainstream of society. Highly dedicated DSWs are trying to fill the gaps that clearly exist in the new system, yet the whole system is predicated on the narrow assumption that clients must be charged for every interaction and service. This commercialization of support and interpersonal relationships undermines the social fabric of inclusion and full participation. Meanwhile, failures in the unit price model are threatening the sector's capacity to invest in crucial overhead and infrastructure functions: not least including staff training, supervision, and even safety.

Workers are compelled by employers and the system to "price out" every interaction they experience with clients, while clients are left without the consistent and capable support they require due to a highly unstable, underdeveloped and insecure labour force. Especially acute in this regard is the lack of training for new staff in complex needs and behaviours associated with many clients with intellectual and cognitive disabilities. In addition, with transportation costs charged to each client and often delivered informally (including in workers' own vehicles), rather than pooled over community programs and provided by specialists, many clients quickly deplete their travel funds. As a result, clients are forced to cut out needed activities and services, due to inadequate access to transportation – and DSWs are compelled to subsidise transportation costs through the often uncompensated use of their own vehicles, on their own time.

It is hard to imagine how the laudable goals of voice and empowerment can occur within this increasingly cost-focused, under-resourced, commercialised space. Overall, workers reported a very strong sense that the NDIS as it stands was not well-designed for people with intellectual disabilities. The ongoing churn and turnover among the disability service workforce, and the instability and even financial crisis experienced by many agencies,[12] will surely further delay the development of the much larger labour force that will be required to fulfil the NDIS's vision.[13]

A great deal of ongoing dialogue, research and policy development will be required in coming years to address the realised shortcomings of the current NDIS plan design, and implement reforms that will allow the scheme's laudable objectives to be met more completely. We limit our policy recommendations in this report to specific measures that would help to address the severe problems in job instability, inadequate training, and unfair and often dangerous work arrangements that were highlighted by our interviews with front-line workers under the NDIS. In addition to undermining both the quality of work for DSWs and the quality of support for NDIS clients, these problems are also clearly making it even harder to recruit a motivated, high-quality workforce to this rapidly-growing industry.

[12] Many agencies have reduced staff and taken other dramatic measures to respond to the financial instability they have experienced under the NDIS; see, for example, Campbell (2018) and Lenaghan (2016).

[13] The Productivity Commission (2017) has already warned that the growth of a qualified workforce is far behind schedule, and new workers lack the skills and experience necessary to provide high-quality services to the .

To this end, we propose the following broad recommendations:

1. MORE STABILITY IN WORK AND SCHEDULES

With the dramatic shift toward individualised support plans, funded through a fragmented market-based regime, disability support workers have experienced a gut-wrenching destabilisation in their work lives. Hours of work and incomes have become highly precarious. Wages, which were never lucrative for most of the workforce, have been suppressed under the constraints of inadequate unit prices and the financial crises experienced by many agencies as the transition to the NDIS continues. They have been left to their own devices in most cases to deal with the challenges and risks of supporting clients with complex needs. Basic support services from their employers, including basic supervision, case management, information sharing, and scheduling, are inadequate and inconsistent. And value-added opportunities for training and career advancement are rare.

The workers we interviewed are both passionately committed to the well-being of their clients, and still hopeful about the potential of the NDIS to meet their clients' needs in a more respectful, flexible and democratic manner. But despite this continued dedication, the turmoil and insecurity of providing these essential services under the NDIS's fragmented, market-driven delivery model are taking a severe toll, and leading many seasoned workers to exit the industry (or seriously consider exiting it) altogether. If there is to be any hope of attracting the requisite workforce, possessing adequate motivation and skills, to support 475,000 potential registered clients once the NDIS is fully rolled-out, there is an urgent need to improve the quality and stability of work in this sector.

Specific and incremental reforms which could contribute to higher-quality, more stable jobs in disability support services would include:

- Improving basic standards for minimum engagement periods, continuity of engagement, reasonable notices of roster and scheduling changes, and stability in weekly hours of work. Individuals cannot be expected to build sustainable careers in jobs which do not offer reasonable regularity in scheduling and income. In response to the fragmentation and uncertainty of client demand for NDIS-funded services, employers in the sector are increasingly meeting staffing needs through piecemeal unit-based assignments. This results in very short shifts, discontinuous or "split" shifts, and continuing uncertainty in work patterns that imposes

tremendous stress on both work and home life for DSWs. Workers cannot be expected to fully absorb the instability of client demand resulting from the individualised, market-based model of NDIS delivery through instability and fragmentation in their own work and income.

- Changes in the funding model to allow agencies and employers to provide adequate infrastructure and support services for their workers. Sufficient allowances for these functions, which are essential to support DSWs in their jobs, must be built into the overall NDIS funding structure; that will most likely require the implementation of new revenue streams beyond the revenues currently generated through the unit price system (which do not provide an adequate or stable source of funds for those broader overhead tasks).
- Providing workers with secure opportunities to express their opinions, priorities, and grievances, and to advocate (including through collective bargaining) for improvements in wages, working conditions, management systems, and policies. Avenues in this regard could include the establishment of multi-employer, region-wide or even sector-wide collective bargaining processes. The regularisation of employee voice and representation will also help sectors in the agency build more consistent and professional management structures, which have clearly deteriorated under the organisational and financial turmoil experienced since the NDIS was implemented.

2. ACCESS TO TRAINING FOR BOTH NEW RECRUITS AND LONGER-TERM EMPLOYEES

The disability services workforce must grow very quickly to meet the needs associated with the full roll-out of the system across Australia. The coming large increase in the sector's workforce implies enormous up-front training investments. Incoming workers immediately need basic induction and orientation training to work with people with disabilities, and learn fundamental prerequisites (such as the NDIS code of conduct, basic health and safety procedures, and more). Then they need an opportunity to acquire foundational skills through formal training programs (preferably provided through public and recognised non-profit providers, with a particular reliance on TAFEs). In our judgment, this basic training should be a regulatory requirement for newly recruited workers under the NDIS, enforced through some system of mandatory registration and certification (perhaps overseen through the NDIS's Quality and Safeguards Commission).

Beyond these initial training requirements, those who choose to make disability services their long-term career should also have access to ongoing training and professional upgrading. Those opportunities for advanced training should be matched with clear paths for acquiring formal qualifications over time, and entering more advanced job classifications (with corresponding increases in pay) to reflect those accumulating skills. Providing the opportunity for lifelong training and upgrading, within the context of a more regulated professional structure for the industry, would help to provide disability support workers with similar opportunities and responsibilities as are currently associated with other allied health professions.

Initial experience with the roll-out of the NDIS unit price system has confirmed that agencies have been starved of resources to provide even the most basic infrastructure and overhead services for their workers. This means it will be impossible to organise and fund consistent, high-quality training opportunities through the unit price model. Instead, agencies and registered providers need to be provided with block funding to support those functions and meet minimum professional standards. Individual workers could also accumulate personal credits for training, as they provide more hours of NDIS-funded service[14] -- and this could provide an additional source of revenues to support ongoing training.

3. FAIR TREATMENT OF TRANSPORTATION TIME AND COSTS

The widespread expectation that disability support workers are responsible for transportation time and costs (even when traveling between multiple clients), and in many cases responsible for transporting clients, imposes a very unfair and unsustainable burden on workers whose wages and conditions are already low. Moreover, the informal and often non-compensated private provision of transportation services by DSWs raises important issues of safety for workers, clients and the public.

Clear and consistent policies regarding the provision of transportation services by DSWs should be described and enforced through sector-wide regulatory bodies –

[14] Ryan and Stanford (2018) propose a system of portable training credits which would be assigned to individual workers even when they work for various employers in the sector, or even directly for NDIS clients; in this way, ongoing training could be guaranteed despite the highly mobile, individualised nature of the delivery system.

including through the NDIA itself, and through the Fair Work Commission's oversight of standards spelled out in relevant Modern Awards. Specifically,

- Where DSWs are required to provide their own vehicles for transporting themselves between clients, and/or transporting clients to activities or appointments, this requirement must be explicitly communicated at time of employment. The employer must be responsible for providing ancillary equipment, safety improvements, and insurance.
- Expenses related to the operation of a private vehicle for transportation from the normal workplace to and from meeting clients, and/or expenses related to the transportation of clients, must be directly compensated by employers on a generous basis (meeting or exceeding the benchmark specified in the SCHADS award). Time spent by DSWs in such transportation must also be fully compensated according to regular wage scales.
- The application of these practices will also be shaped by the implementation of stronger standards regarding minimum engagement periods (discussed above). In particular, the assignment of multiple visits to workers in a single day or shift, and/or the requirement that workers make more than one trip to work in a day (resulting from discontinuous or split shifts) must include fair allowance for excess transportation time (Macdonald *et al*. 2018).
- Damage incurred to vehicles in the course of work-related travel (to and from meeting clients, and/or transporting clients) must be fully compensated by employers.
- DSWs required to provide transportation services should be trained in the safe operation of vehicles while supervising clients, and procedures governing unsafe situations (such as driving while a client requires assistance or attention) must be communicated and respected.

4. BETTER SUPPORT FOR SERVICES WORK IN PRIVATE HOMES, AND BETTER TRAINING AND SUPPORT FOR DEALING WITH VIOLENCE

Another area of flagrant risk and unfairness reported by several of our interviewees is the challenges and safety risk of working with clients in the private realm of clients' homes. In addition, our interviewees expressed a distinct rise in the incidence of violence in their jobs under the NDIS system. It is clear to us that more training is required for DSWs to be more aware of safety and other risks in those situations, and to be better-supported by their employers and managers in confronting those risks.

Specific measures which could help to address these problems include:

- More training for all DSWs required to work in clients' homes in evaluating the safety of those environments, and recognising and responding to dangerous situations.
- More systematic and efficient systems for sharing information between clients, their families, managers, and case workers about clients' needs and challenges. Time spent by DSWs in accessing and managing that information must be compensated (rather than requiring workers to obtain and process case files, often from offices which they don't normally visit in the course of their work, on their own time).
- More effective and well-understood safety and back-up protocols to supports DSWs who encounter violent, dangerous or overwhelming situations with their clients, including generous entitlements to paid leave and support services.

* * * * *

Reforms such as those recommended above are ambitious, and will require a deep rethink of some of the fundamental assumptions and structures of the NDIS as it is currently being implemented. Specifically, the limits of the unit price model underlying the scheme at present must be recognised and addressed. It is unrealistic to expect that agencies can provide the critical infrastructure and overhead services essential to the development and maintenance of a high-quality workforce, on the basis of tiny "margins" (for management, overhead, training, etc.) built into NDIS unit prices which are already inadequate to cover many of the basic costs of service provision. Moreover, instability in the volume of NDIS work being charged (due to fluctuations in demand from clients, clients losing access to funds, etc.) inhibit the extent to which unit price revenues could ever fund quality workforce development infrastructure.

In this regard, running a national disability services system cannot be treated like any other "business": whereby entrepreneurs harvest surplus from ongoing unit revenues to cover their management, overhead and profits. Our recommendations suggest a very different approach must be taken to paying for the fundamental building blocks of a higher-quality disability support services system. And that must start with the front line workers whose passion, skills, and reliability are utterly indispensable to realising the lofty founding goals of the NDIS.

Zero-Sum Social Policy, Going Gig and the Australian National Disability Insurance Program

Australia's newly introduced National Disability Insurance Scheme establishes a cash-for-care model that pits the human rights of people with disabilities against the employment rights of care workers, generating a zero-sum game that sees the emergence of gig labour markets, a downward spiral in wages and conditions, and concerns about quality of care. This article introduces the concept of pro-market/gig market to analyse this state-led initiative to restructure a largely publicly funded, non-profit workforce into a privatised, casualised, and fragmented one.

Keywords: care work; cash-for-care; precarity; pro-market/gig-market; privatization; nonprofit

The disability rights movement views disability as socially constructed and has long sought full social inclusion through increased respect, autonomy and control for those with disabilities (Howard et al., 2015; Thill, 2015; Williams, 2014). Introduced across the country in 2018, the National Disability Insurance Scheme (NDIS) establishes a cash-for-care model which some see as a radical step towards social inclusion, though evidence from the early roll-out of the NDIS (starting in July, 2016) shows that many service users have serious concerns with the scheme and feel that their views and those of their families and carers are often overlooked (Warr et al., 2017, p. 8; Howard et al., 2015).

Prior to the NDIS, most workers in the Australian disability sector were employed in organisations and were protected by a sector-wide industrial Award (government-business union agreement covering the sector), a significant level of unionisation, and employers who paid, at least ideological, tribute to a nonprofit ethos of social care and fairness. The NDIS personalised funding model requires people with disabilities to use their individualized funding package to either work with a case manager to assemble services to meet their individual needs or to hire their own staff and act as their own director of services. Either process recasts care workers as highly casualised and precarious, often with multiple employers.

Though Australia's relatively strong industrial relations regime should protect workers, enforcement pathways are increasingly convoluted as service users may be both client and employer, making it difficult to raise concerns about hours, wages or conditions. This is particularly the case since most workers identify strongly with the human rights and equity aspects of the NDIS mission and hesitate to critique initiatives that might improve service users' lives. For the most part, small scale employers and isolated workers have little or no experience with, knowledge of, or capacity to enforce employment standards, health and safety legislation and other regulations protecting employees.

Drawing on data collected from workers in an early pilot region that started in July 2016, this article grapples with the question of whether the workforce has been harmed in this new policy context. This question is under-girded by a further question, namely whether harming workers is an acceptable way to advance social justice objectives. The article explores the zero-sum game precipitated by social policy aimed at expanding human rights in the context of highly marketized care, individualisation of service users, underfunding and the erosion of protections for care workers.

The article also contributes to our understanding of the drivers behind the new labour market. As part of this theory, the article introduces the concept of pro-market/gig market to analyse the dynamics of this state-led initiative to restructure a largely publicly funded, non-profit sector with a relatively stable, usually permanent, developed labour market into one in which the work is highly casualised and increasingly features short-term, on-demand shifts (van Doorn, 2017; Friedman, 2014; Author A, 2019). The article also contributes to labour process theory (Braverman, 1994; Thompson, 2010) where shifts in control are taking place at multiple levels and involve multiple players. Although Australia's policy context is unique, it joins other European and North American countries that have pursued individualised

funding. This article aims to contribute insights and preliminary theorizing that may be useful in other contexts and countries.

The article begins with a short discussion of the NDIS, human rights, the disability sector, the regulatory context, and changes in the sector under the new NDIS policy. The article then outlines theory and methods and is followed by findings. The article ends with discussion and conclusions.

Background and Contexts

i) Disability Sector and the Workforce

Deinstitutionalisation in the 1970s was the first step on the path to greater realization of human rights for people with disabilities[1] (Howard et al. 2015; MacKinnon and Coleborne, 2003). Post-institutionalisation, but prior to the NDIS, most disability services were provided by non-profit organisations (particularly faith-based and parent-led organisations) and received 60–80% of their income from government in the form of block funding (PwC, 2012: 15). Disability organisations provided services including recreation, everyday activities and employment, accommodation and community living, respite and family support; advocacy, referral, and public education. Prior to the NDIS the disability workforce consisted of roughly 68,700 employees in 2000 organisations with 73% employed in the nonprofit sector, 21% in the public sector, and 6% in the private for-profit sector (Martin and Healy, 2010: 126–127). Most worked in direct care and support, over 80% were women and over 80% of the workforce had further education, most commonly a certificate or college-level credential (Martin and Healy, 2010: 126–127).

The NDIS

The NDIS is argued to be Australia's largest social reform since the introduction of universal national healthcare (Gilchrist, 2016; Productivity Commission, 2017). Like personalised funding in the UK, the NDIS introduces a national system of funding through a cash-for-care model for 'people with permanent and significant disability, their families and carers' (NDIS, 2013). This system replaces the organisation-based system of funding described above. Funding for assistance with daily living and assistance with civic and social participation accounting for 76.5% of funding in 2018 (National Disability Insurance Agency, 2018, p. 6), meaning that most NDIS funding pays for wages for the frontline care work of disability workers.

Two forms of under-funding have long plagued disability funding: 1) underfunding services in relation to the needs of people; and 2) underfunding of contracted services (Productivity Commission, 2010: 135, 281). These problems have continued under the NDIS, with government acknowledging widespread problems in terms of worker shortages due to low wages and poor conditions (Productivity Commission, 2017). In their exhaustive report on pricing and quality, Cortis et al. (2017) argue that cost containment underlies the NDIS where prices, and thus funding for people with disabilities, has been set too low, providing an incentive to pay lower wages (see also, Williams, 2014). Cortis et al. (2017) assert that, "Prices do not account for what is required to deliver high quality services, and arrangements are not fully enabling disability support workers to deliver services which are personalised, co-ordinated, responsive or safe (p. 1)." The ripple effect of low pricing is extensive: it is hard to attract or retain workers; there is no incentive for workers to upskill; and no monies for supervision, training or support.

The minimum pay and conditions for disability workers are set out in the Social, Community, Home Care and Disability Services Award. However, as Cortis et al. (2017) argue, pricing has been set too low to meet Award minimums, let alone to cover the costs of those employers committed to paying above the Award. In addition, the Award differentiates between disability and other care workers, with home care having a minimum engagement period of one hour compared to two hours for a disability support worker. This and consumer demand have resulted in employers calling for shift minimums to be one hour or less and means that they prefer to hire into the category of home care worker rather than the longer minimum shift disability services worker (Author B, 2016). In addition, the Equal Pay decision in 2012 that recognised the gendered undervaluation of care work did not apply to 'home care' workers though they may do the same or similar work as workers who are covered by the equal pay increases (Charlesworth, 2012). In the context of the new NDIS, few protections exist for workers and strong incentives exist for employers and service users to reduce costs as far as possible, generating greater precarity for workers and uncertain quality and choice for people with disabilities (Author B, 2018).

The amount of funding each disabled person receives is determined by a professional assessment. After receiving their assessment and funding package, people with disabilities can opt to: i) employ and supervise their own employees in which case the employees do not need to be registered with the National Disability Insurance Agency (NDIA); ii) work with a third party provider registered with the NDIA in which case only the plan manager needs to be registered; or iii) have their plan managed by the NDIA in which case all service providers have to be registered (NDIS, 2013). The first two options provide a clear incentive to pay low wages as Award and other regulatory protections do not apply and cash-strapped service users need to stretch their funding as far as possible. While it may be logical to seek the best

value for money, it systematically undermines employment rights and gains in this highly gendered sector.

A further way that workers' rights and gains are undermined involves new fragmented and unregulated worksites. Rather than being organisation- and group-based, much of the work under the NDIS is located in people's private homes. Service users are now required to cover their own travel costs to and from programs, whereas in the past, the disability organisation often covered these costs. This means service users carefully assess travel and likely deny themselves activities in order to contain costs.

Feminist scholars have long identified that care work in the private home is largely invisible, keeping wages low or non-existent and making it difficult to improve or regulate (Folbre 2009; Meagher, 2003). Experience in the UK confirms this trend in poorly regulated cash-for-care systems, as well as increasingly blurred lines between paid care work and the unpaid domestic work traditionally expected of women, contributing to further informalisation of care work and the gendered undervaluation of this work (Hussein and Manthorpe, 2014). Evidence from European countries shows that cash-for-care policies also introduced new demands for flexibility, travel between multiple work locations, very short working hours, and may be a cover for deepening austerity policies (Cunningham and Nickson, 2010; Glendinning, 2012; Christensen, 2012). Under the NDIS, an increasing number of workers are multiple job holders and/or work in multiple worksites, hence unpaid travel time seriously undercuts wages and adds to the growing precarity of the workforce (Author B, 2018).

Short notice shifts, multiple job holding, dispersed work sites and short-term work assignments (less than an hour) signal an important shift from a largely publicly funded, nonprofit delivered, organisation-based employer to a privatized, quasi-gig or on-demand economy (van Doorn, 2017; Friedman, 2014). Gig economies are characterized by temporary

employment where workers are remade as independent contractors rather than employees, and organisations exist primarily to interface between service users and short- term providers. Gig work has thus far been mostly found in the arts, entertainment, delivery and private domestic work. However, it is increasingly seen in care work and acts as a mechanism for reproducing gender and racial inequities (Aliosi, 2015; van Doorn, 2017).

The IT apps and digital platforms associated with gig work have extended into NDIS work. Author B (2015) has documented the emergence of uber-like, digital platforms through which service users can recruit disability workers. Though these parts of the disability labour market are currently under-developed in Australia, this article argues that with its exclusive focus on market solutions, the NDIS prepares the ground for a gig labour market/on-demand service market. In this case, ironically, a social policy aimed at empowerment has ushered in the undermining of employment regulation in a highly gendered arena, remaking the gain of one group (people with disabilities able to advocate effectively for themselves) into the loss for many workers and other people with disabilities who are less able to assert themselves in this new, competitive environment.

Market-driven Social Policy

While there is little or no debate as to whether a new service model was essential for people with disabilities, the cash-for-care model is just one of many models for improved service provision (Kvist and Fritzell, 2011; Williams, 2014; Cristiano et al., 2016; Martinelli, 2017). While disability rights movements sought new systems based on an individuals' lifetime goals and strengths, the NDIS model interprets the achievement of these goals exclusively through a market lens. As with individualised and marketised care systems, under the NDIS

individual care users are constructed as consumers empowered through the exercise of consumer choice to buy care (Brennan et al., 2012, p. 378; Productivity Commission, 2011).

Theory

Preliminary theorizing in this article will draw on labour process theory (LPT), a meso-level theory that assists in the analysis of the social relations of control and power in the workplace (Thompson, 2010; Thompson and Smith, 2009), including the power of workers and of management to negotiate the conditions and wages of work. Originating in the work of Braverman (1974), LPT analyses the avenues through which power and control are played out between management and workers. In the context of care work some of these shifts include: ongoing sector restructuring; New Public Management and austerity; precarious work; wages, conditions and work organisation; as well as the gendering of the sector and gender's connection to unpaid labour (Aronson and Smith, 2009; Carey, 2007; Cunningham et al., 2013; Glendinning, 2012). This article supplements an LPT argument that social service restructuring has been 'pro-market/non-market' (Author A, 2004), by arguing that under the NDIS, it has become pro-market/gig market.

Since the mid-1980s, governments have privatized, down-sized and contracted-out human services. These processes are pro-market in that they extend and legitimize private market ideology, logics and practices, even in realms (such as the public and non-profit sectors) where they would previously have been an anathema (Author A, 2004). The processes are simultaneously non-market in that government funded, contracted-out services continued to run on a not-for-profit basis, that is, no surplus is produced though ongoing cost cutting is demanded (Author A, 2004). Thus, these services remain nominally outside the profit model.

The NDIS policy is pro-market; it is underscored by the assertion that the private providers are the most adept and mobile in meeting the vast and diverse needs and wants of service users (Harris, 2014). The policy simultaneously delegitimizes the government as a provider of disability services with all state-provided disability services closing across Australia (Author B, 2018; Mavromaros et al., 2018). By exclusively funding service users, the NDIS also removes government as a direct funder of disability services. The NDIS policy makes the ground ready for the expansion of a gig economy in disability services, with the aggressive emergence of very short work periods (sometimes less than an hour, with some service users arguing that shifts should be as short as 20 minutes); multiple job holding; no paid travel time; multiple work assignments in a single day; very short notice (often a few hours or less) and a constantly changing rota of workers and work assignments. These reduced conditions of work and the reduced capacity of workers to resist and negotiate these conditions, represents a shift in workplace power from workers to management.

Methods

Qualitative, in-depth, semi-structured interviews, using an interview guide were undertaken with 39 disability sector workers in one of the early-roll-out regions (the roll-out started in July 2016). The interviews took place in a central location. They were audio-taped, transcribed and analysed for patterns and themes (Kirby et al., 2005). Research participants were recruited through an open call distributed by unions in the sector. Interviewees were asked questions regarding changes in their work under the NDIS, challenges, successes, and where they saw themselves in the future. The sample was 70% female which is slightly lower, and all had higher education and/or training. They ranged in length of employment from 1.5 to 30 years, with majority having 8+ years of experience.

Ethics approval was received at the universities involved. Limitations of the study include its small sample size, the possible bias in its union-linked recruitment strategy, and qualitative method, which precludes generalisation but permits insights which may be valuable across a number of contexts and conditions.

Findings

Drawing on exemplar quotes, this section will address the strongest themes in the data, namely: increased precarity and a gig economy-like working conditions; less training and skill in the labour force; and the challenges of working multiple short shifts in private homes.

Increased Precarity and the Gig Economy Working Conditions

In contrast with the workforce prior to the NDIS, all research participants reported that employment had become increasingly temporary with undependable hours, lowered earnings and conditions, and increased overall precarity. As per labour process theory, this precarity represents a shift in workplace power as workers lose dependable wages and schedules, and experience increased personal and income insecurity. As one long term disability worker observed, "Every single person working at my agency is casual …no permanent. In my old agency, almost everyone was permanent." Another worker added, "They don't want full time workers. What they say is we need to have flexibility because we don't know, clients could come and go now, it's their choice."

Organisations exclusively employing casual staff can more easily reduce costs in terms of sick leave and dismissing staff. Casualisation also makes it more possible for

employers to schedule work around shorter periods of service provision and more variability in the timing of services (early morning and late night) and location (private homes).

Characteristic of gig economies, short notice of shifts and short shifts were particularly disruptive. As one long time worker noted, "My stress and fatigue are both way up. I've been living on the phone for shifts, some of which I get less than two hours' notice for." Other workers noted that apps notifying workers of their constantly changing shifts and hours were a commonplace aspect of their employment, suggesting a further swing to an on-demand work, platform labour market. As one long-term worker noted, "all our rosters are electronic" and constantly changing meaning that workers never "know exactly what shifts you're gonna have that week because something will just randomly change".

The new, gig-like, short, solo shifts generated serious concerns about quality of care and the likelihood that workers will have any information on service users' needs, preferences and plans. However, as Cortis et al. (2017) note, there is little or no funding for supervision or administration under the NDIS. Instead, research participants subsidized the system by using their own unpaid time to review case files and connect with supervisors on specific service user issues. Reflecting the experience of most workers and representing a reduction in workplace control, one long term worker told us, 'The only way I get information on the clients is if I go into the head office on my own time and read the files. There is no paid time for it. The NDIS only pays for face-to-face time, no prep time. With short notice and new clients, I usually can't manage to get to the office before my shift." Other research participants added that files were often incomplete, missing or lost, making the unpaid trip to headquarters futile, more frustrating and further jeopardizing service quality and consistency.

The data show that costs were shifted to workers in several ways including travel costs between multiple and widely dispersed job sites (service users' homes). After her

employer refused her travel claim, one worker was told that she should consider each private home to be her worksite, regardless of how much distance or travel time was between them, "we don't pay kilometres. That's deemed your workplace". Representing an additional reduction in workplace control, workers expected to use their own cars and claim mileage as a reduction on their income tax return.

Research participants argued that the organisation should cover the cost of mileage as it adds to overall income which plays into pension contributions and should be a cost of doing business, not a cost born by the individual worker. As one research participant observed, "Transportation used to be covered by the agency and it still should be. It is both the workers and the service users who are hurt by this new transportation policy, which is just not right." Workers were also expected to cover the cost of meals and other activities accompanying service users, and to, as one worker put it "model appropriate behaviour" for the service users, while shouldering their own costs. Summing it up for several research participants, one worker noted, "We as workers are expected to pay for ourselves so out of my day, I might earn $250.00 but $50.00 of my pay needs to go on being able to support that person in the NDIS to those activities." These additional costs are, in effect, a cut to wages, a subsidy to the employer and reflect the reduced power of workers.

Though much of the disability sector has aspires to operate on a nonprofit ethos of care and equity, the research participants were disturbed by new trends emphasizing profit over support for service users and generating divisions between staff and management. In a number of instances, employers made it explicit to frontline workers that the culture of the workplace had changed to one of ensuring that every interaction with clients was charged and chargeable, otherwise it had to be eliminated. One worker received the following instructions from her manager regarding billing service users for phone calls - - even when no one

answers, “you call them, you charge ‘em. If they don’t answer, you write it down and you charge ‘em. And you charge 15 mins because that’s the minimum you can charge.”

Another poignant example can be seen in a story provided by a support coordinator whose manager told her “drop clients and stop helping them” once their support coordination budget had been used up, even when the clients’ needs remained unmet. In a similar vein, another worker told us, “My boss said, ‘You need to look at things a lot different. It’s about money. There’s morals and ethics and then there’s the organisational standards and you need to bring them down to the same level,’ and I said, ‘How can I change my morality that I’ve had for 28 years previous to starting this role to suit an organisation? I can’t do that…”

Research participants also reported an “everyone’s replaceable mentality” coming from managers who had previously been supportive. Underscoring diminished worker control in the workplace, one long time worker noted that, “Attitudes from management are basically, you’re not an asset anymore.” New and long-time staff also commented on the adversarial climate that seemed to pervade many organisations. As one long term worker noted, “There’s now a very big us and them in our organisation. Very big… There’s no objectiveness.” In a further example of shrinking workplace power, favouritism was a widespread concern with most workers feeling that shifts and service users with complex needs were not evenly distributed. This, as well as infrequent or non-existent supervision, increased workers’ sense of alienation and stress.

Despite a significant level of instability and frustration, many workers continued to find satisfaction in working with people with disabilities. Though two workers told us that they felt it was likely they would soon be fired because they refused to abandon the principles of equity and support, other workers told us that the job still held meaning because, “You can put things in place for people that can give them hope”. Despite the challenges posed by inadequate funding and short notice shifts, most workers found rewards in, as one worker put

it, “Watching [] the participants reach their goals.” Another worker expressed a similar experience, “I like getting them out and about to places. I love hearing ‘he’s never done that before.’ Love that. I love hearing ‘how did you do that?’ I get chuffed every time.” A long-time frontline worker summed up the feelings of most research participants thusly, “I love working with the people. I love making their lives… as high quality as we can”.

However, it was notable how many workers were thinking of leaving the sector: some planned early retirement, others sought a career change, while others had no definite plans other than to seek a job they could like. As one long time frontline worker told us, “I’m leaving disabilities. I’m actually training in counselling, so I don’t intend to stay in disabilities. I don’t wanna be in that world. I don’t see it as very safe for my clients and the people with disabilities, but certainly not safe for workers”. Another added, “a lot of people are just going, we’re hanging around for maybe a year or two and then we’re going.’’ Part of this intention to leave was based on working conditions, but for most workers it was also based on no longer feeling part of a job where one feels appreciated and where one could find meaning. Reflecting a widespread sense of growing powerlessness, another long-time worker told us, “It is chaos. It’s awful. We really tried to raise all these issues that we could foresee was gonna happen and it seemed to fall on deaf ears of the state and government and now we’re seeing all those things that we feared.”

The revolving door of casual staff, a lack of training and supervision, and increased distance between management and workers exacerbated the stressed and sometimes dangerous situations noted above, putting workers in a position where they felt disposable and unable to change things. Higher and mid-level managers also seemed disposable in this rapidly changing environment, with workers noting, “managers don’t seem to last, nobody seems to know anyone”. One participant reported that her place of employment had three CEOS in the last five years, “they will just fill positions and then if they fall through, they fall

through. They'll just bring in someone else". A long-time casual worker noted further that, "it's not a great industry to work in…they're supposed to be a caring, nurturing sort of industry, looking after people yet they just treat their staff so terribly." A senior worker summed it up for the bulk of the research participants by observing, "morale has never been lower".

Less Training and Skill in the Labour Force

The NDIS generated increased demand for disability workers, particularly home care workers. This new workforce in the NDIS was described as new, young, low skill and inexperienced. Prior to the NDIS, there was time and funding for training and upgrading as well as supervision and meetings, "we would have regular staff meetings, training days, staff development days…That's gone; there's no money for it". Participants noted that their employers now have very minimal requirements for hiring new staff, whereas previously skills, formal education and experience were definite pre-requisites. As one worker noted, "I remember when I first started in the field as a support worker and we used to get a lot of students from universities and that and you can tell the difference – the quality was there, their attention to the clients were there but under the NDIS it's just…nah. They're just basically hiring anyone because we need the workers." Experienced skilled workers expressed alarm at this trend and reflected a further axes of diminished workplace control, "It makes you feel very devalued in your work. It really feels like they're dumbing down our role."

The lack of training and experience presented risks for the new labour force, service users and existing staff. As one long time worker observed, "Because I have more experience than most of the staff, I get all the hard guys. They are all one-on-ones (one staff to one

client) because they need that much support. They have complex needs and the work is always hard work. No down time or variety." This makes the work more draining, adds to workplace stress and unsafe conditions and represents a further shift in control to management. Temporary and casual staff are less likely to complain as they need to position themselves positively in order to be assigned to future shifts.

Private Working in Private Homes

Though an increasing portion of the disability labour force works in service users' homes, there is no way to assess whether private homes are safe or appropriate worksites. The constantly shifting pool of on-demand workers made for a more hazardous work environment as staff were unfamiliar with the service users, their preferences or triggers. Workers reported knowing little or nothing beyond the service user's name and address when they showed up for a shift. Noting an overall increase in workplace injuries, one worker quipped, "Nothing major, just black eyes, broken noses, the normal sort of things with people just being out their routine, not knowing the support workers and the support workers not knowing clients." Reduced workplace safety and their inability to stop it a further aspect of decreased worker control.

One research participant noted that it was less likely that the casual workforce would report workplace injuries because they all needed more shifts and feared reprisals: "Some workers are scared to complain about challenging behaviours from the clients, to the client or the family or the agency. The workers don't want to upset anyone, or they might not get more shifts."

Service users' families were sometimes an additional source of workplace stress and risk, and there was little that workers could do if people were acting inappropriately in their

own homes. Some families had unrealistic expectations of what could be completed in a day and what the service user was capable of, and there were no rules or guidelines they were required to follow. As one research participant told us, "Families don't always acknowledge when a shift is finished and don't let the staff person leave. Or [they] don't come home on time to take over." He continued, "In some cases, clients are very afraid to be left alone or too unstable to be left alone and so we can't leave until a family member finally shows up."

Discussion and Conclusions

Various aspects of the former disability sector remained constant in the early roll-out area studied. This included: the commitment of workers to the service users and/or social equity and justice; the gendering of the workforce; the expectation of unpaid work; and the increasingly poor wages and conditions. Within the legislation, the human rights of people with disabilities were recognised at the level of discourse but not at the level of pricing. The gender undervaluation of care work remains constant with the failure of government to price NDIS at levels where Award rates or above could be paid. This reflects a sidelining of the rights of the highly gendered labour force and continued gender inequity.

Self-determination and autonomy for people with disabilities can flourish in contexts where staff have stable employment, supportive supervision and fair wages (Kvist and Fritzell 2011). However, by embracing a pro-market ideology, the NDIS set the terms for a zero-sum game involving a precarious labour market with significant gig-like, on-demand economy aspects and a temporary workforce that lacks the constancy, supervision or training to properly support the autonomy and self-determination of all people with disabilities.

Figure 1 (below) highlights various aspects of this zero-sum game by detailing changes in the policy arena as the disability sector moved from a largely publicly funded non-

profit labour market to a quasi-gig economy. The term quasi-gig is used to underscore the similarities with an on-demand labour market as can be seen in the NDIS emerging labour market - - very short shifts; split shifts; short notice of shifts; multiple employers; unpaid travel time; working primarily alone in private homes; the use of IT apps to notify workers of shifts and employers acting primarily as an interface between service users and workers. In terms of differences from the gig economy, some workers have been remade as private contractors, particularly higher credentialled workers, though most continue to work for organisations, where they have been remade as fragmented, precarious and casualised, while management has increased workplace control.

Figure 1 contributes to labour process theory by analysing the shifts in workplace control, precipitated by changing work organisation and the new policy and regulatory context. The data analysed in this article suggests that the government instigated massive restructure precipitated a zero-sum game in which, like poker, there are a few winners and many losers. The first policy arena analysed in Figure 1 is human rights. In 2011, the Inquiry into Disability Care and Support (Productivity Commission 2011) recommended the establishment of a national scheme to replace existing policies that were not ensuring the rights and wellbeing of people with disabilities. A commendable central plank of the NDIS is recognition of the right of people with a disability to be at the centre of decision-making and planning for their life (Productivity Commission 2011). However, the cash-for-care model, introduced with the NDIS, precipitated the massive restructuring of the labour market discussed above, in which some people with disabilities appear to be experiencing human rights, while those left behind include people with intellectual and other cognitive disabilities, families with very young children, Indigenous people, and people living in rural and remote settings (Howard et al 2015; Warr et al. 2017). The on-balance column in Figure 1, row one, notes that service users, who can advocate for themselves or have an effective advocate, have

made human rights gains (Productivity Commission, 2017). Unfortunately, those without advocacy remain on the margins of this commercialized policy project. The on-balance column also adds the loss of rights for workers, an indication of the cynical trade-off between the rights of various groups within the NDIS.

Figure 1. Moving from non-profit labour market to gig economy, managed market

Policy Arena or Specific Regulation	Change	Yes/No shift in control	From whom/to whom	On-Balance
Human rights	NDIS – individualised funding	Yes	From organisations to specific service users who are effective advocate or have access to an effective advocate	Significant gain for some service users Significant loss for organisations Significant loss for workers
Employment regulation	NDIS – individualised funding & mostly casual employment	Yes	From organisations to individual service users (only those who can advocate for themselves or have an effective advocate), or From workers to individual service users (only those who can advocate for themselves or have an effective advocate)	Significant gain for some service users Significant loss for organisations Significant loss for workers
Sector-wide award (SCHCDS)	Casualised workforce, multiple employers (many non-standard); few standardised workplaces	Yes	From union (and workers) to management & service users who act as employers From union (and workers) to informal, pop-up organisations	Significant loss for unions & their members Harder to organise & represent fragmented sector

In labour process theory, as the second row in Figure 1 shows, these dynamics have resulted in significant losses in workplace control in the form of decreased employment conditions, regulation and protection. This produces a significant transfer of control from workers to management and, indirectly, to the state as the lowball funder who sets the terms for this outcome but without having to step in to directly orchestrate the changes. Governmentality analyses identify these processes as "governing at a distance" in which the state exerts control through policy setting rather than hands-on operations (Rose et al., 2006). A shift in control from organisations to individual service users, who are effective advocates or have an effective advocate, is also observable as a shift in control from workers to this specific group of service users.

The policy and regulatory context in the NDIS are set by the Australian state which assumes three contradictory and conflicting regulatory roles: defender of the human rights of people with disabilities; defender of minimum employment standards; and key driver of precarity and market processes (Jaehrling et al., 2018). By providing continued low pricing and individual funding, the state acts as a key driver of precarity and casualisation while simultaneously distancing itself from responsibility to defend minimum employment standards for a highly gendered, low wage labour force.

Another driver of precaritization under the NDIS is the loss of block funding from governments to organisations. With people with disabilities suddenly in receipt of personalised funding and required to pay for their own services and transportation, relatively stable, long-term organisations lost most of the clients who once partook of group programs and supports in which transportation costs were covered by block funding. These organisations were compelled to remake themselves as providers of largely home-based, individualised services and market themselves to cash-carrying individuals with multiple requirements for support. Many long-term organisations are struggling to survive

(Productivity Commission, 2017) and the sector has seen the rapid growth of for-profit, non-profit organisations and "pop-up" providers, many of which have little or no experience in providing social services or fulfilling their obligations as employers. Unions have difficulty contacting workers in this rapidly restructuring sector and even employers once seen as progressive, are pushing for changes to enterprise agreements and the SCHADS Award (Author B, 2018).

The third row of Figure 2 captures some of this dynamic. The on-demand, quasi-gig work means that workers have multiple workplaces and generally work alone, in service user's homes. This makes it difficult for workers to communicate with each other or share concerns, both of which tend to build shared analyses that can lead to union participation (Simms, 2007). It also makes it difficult for unions to communicate with workers or to be part of their everyday work lives. This results in a shift in control from the union (and workers) to management. It also represents a shift in control from the union to informal, pop-up organisations that may not be aware of or interested in meeting the terms of the SCHADS Award. The balance column notes the losses for unions and workers.

This article extends our understanding of labour process theory by adding the concept of pro-market/gig market to signal the shift from the non-market mandate that previously undergird the largely non-profit disability services sector. Instead, a pro-market/gig market has propelled forward by government policy. The effect is that permanent work is destabilized, better working conditions and better wages are replaced with on-demand/gig work, impermanence and fragmentation. A truncated, marketized version of human rights (Stainton, 2002; Ife, 2012) played an ideological role in convincing service users, the public and workers that management and the state need to drive down workplace protections and employment regulations in order to meet the commercialised needs of vulnerable populations. Current employment regulation seems ill-equipped to defend disability workers and

governments are more interested in containing costs and fostering private markets than in protecting a highly gendered, increasingly precarious labour force. Though our conclusion is tentative, based on just this example, the evidence suggests that zero-sum games, in which a few wins and many lose, may be a feature of social policy change in market-driven contexts, such as the NDIS, and that current workplace protections for care work mean little in the context of restructuring and marketisation.

The Australia Institute
Research that matters.
Centre for FutureWork

About The Australia Institute

The Australia Institute is an independent public policy think tank based in Canberra. It is funded by donations from philanthropic trusts and individuals and commissioned research. We barrack for ideas, not political parties or candidates. Since its launch in 1994, the Institute has carried out highly influential research on a broad range of economic, social and environmental issues..

Our Philosophy

As we begin the 21st century, new dilemmas confront our society and our planet. Unprecedented levels of consumption co-exist with extreme poverty. Through new technology we are more connected than we have ever been, yet civic engagement is declining. Environmental neglect continues despite heightened ecological awareness. A better balance is urgently needed.

The Australia Institute's directors, staff and supporters represent a broad range of views and priorities. What unites us is a belief that through a combination of research and creativity we can promote new solutions and ways of thinking.

Our Purpose – *'Research That Matters'*

The Institute publishes research that contributes to a more just, sustainable and peaceful society. Our goal is to gather, interpret and communicate evidence in order to both diagnose the problems we face and propose new solutions to tackle them.

The Institute is wholly independent and not affiliated with any other organisation. Donations to its Research Fund are tax deductible for the donor. Anyone wishing to donate can do so via the website at https://www.tai.org.au or by calling the Institute on 02 6130 0530. Our secure and user-friendly website allows donors to make either one-off or regular monthly donations and we encourage everyone who can to donate in this way as it assists our research in the most significant manner.

About the Centre for Future Work

The Centre for Future Work is a research centre, housed within the Australia Institute, to conduct and publish progressive economic research on work, employment, and labour markets. It serves as a unique centre of excellence on the economic issues facing working people: including the future of jobs, wages and income distribution, skills and training, sector and industry policies, globalisation, the role of government, public services, and more. The Centre also develops timely and practical policy proposals to help make the world of work better for working people and their families.

www.futurework.org.au

About the Authors

Dr. Rose Ryan has worked in employment relations and workplace practices in Australia and New Zealand for over 30 years, including work for several universities and senior policy roles in the NZ public service.

Dr. Jim Stanford is Economist and Director of the Centre for Future Work.

This report was commissioned by the NSW Branch of the Australian Services Union.

NDIS	National Disability Insurance Scheme
NDS	National Disability Service (provider peak body)
QSF	Quality and Safeguarding Framework
RCM	Reasonable Cost Model
RTO	Registered Training Organisation
SCHADS	Social, Community, Home Care and Disability Services modern award
SSO	Skills Services Organisation

Summary

The NDIS Act is often described as the largest social reform in Australia since the introduction of Medicare in 1975 (Productivity Commission, 2017; Cortis et al., 2017). It was designed to provide a nationally consistent approach to the provision of services, supports and activities to people with disabilities aged from birth to 65 years of age. Employment in the sector is experiencing significant growth, at a time when public expectations about the quality of service provided through the system's individualised packages of support are higher than ever.

A person-centred model of support (consumer-directed support) had been adopted as part of the NDIS. A funding envelope for each consumer is determined by an assessment of individual needs. Eligible individuals participate in a planning process, and individualised support packages are developed and funded for them. A Quality and Safeguarding Framework (QSF) has been developed to support the quality of service delivery. Policy statements have reiterated the need for a highly skilled and qualified workforce that will deliver high quality services in line with the needs determined in individual plans, and the requirements of the QSF.

Evidence from both Australia and internationally, from the disability support sector and from other human service industries, demonstrates conclusively that high quality support services are dependent on high quality employment standards and training for those who provide those services. Implementation of the NDIS has relied on the sector to recruit, retain and train the growing pool of workers with the required skills to meet the challenges of consumer-directed support. To maximise the potential of the NDIS to deliver a suite of high-quality, individualised services to hundreds of thousands of individual participants, the system desperately needs a strong and immediate strategy to facilitate ongoing investments in workforce development, training, and job quality. This strategy must ensure:

- Wages and working conditions attractive enough to recruit and retain tens of thousands of new workers.
- Good job quality, including employment security, autonomy and recognition.
- The development of a range of appealing career paths in the sector, so that workers can see a positive long-term future working in this field.
- A systematic strategy for training, qualifications and workforce development.

New recruits must be supported to demonstrate their prior skills and learning, and attain additional training for which they are recognised and credited. And all disability

support workers must have access to ongoing training, to broaden and update their skills throughout their careers, accumulate more credentials, and pursue recognised career paths.

Unfortunately, research regarding the initial experience with the NDIS demonstrates that insufficient attention has been paid to the importance of workforce training and development, as a crucial precondition for high quality service delivery. Specifically, research is revealing that providers experience difficulties in recruiting new staff; that conditions of work have become more difficult; that most workers are engaged in casual, part-time, and irregular positions, and that staff turnover is horrendously high; and that there has been a consequent reduction in the quantity of training (including in-house supervision and support) provided for employees, just as workers need more skills to fulfil the goals of the NDIS. This situation poses a significant risk for the quality of life and safety of NDIS participants, for the job quality and opportunity of disability service workers, and for the organisational stability and success of providers.

Inadequacies in the pricing/costing model at the heart of the NDIS are a central factor in these inadequate outcomes in the realm of skills and training. Specified costs for individual packages of support supposedly include a component for training of workers, along with other workforce and administrative overhead costs. But the resources allocated to these activities within the NDIS pricing model are woefully inadequate, based on outdated and incorrect assumptions about the range and level of skills, knowledge and competencies needed to successfully perform work in the sector. Moreover, there is no clear and consistent strategy for defining qualifications, and ensuring that workers get the training they need.

Increased investment in training for disability support workers is important for improving the lives of people with disability. Some of the skills needed by disability support workers are general ones – but they still need to be learned; and people with disabilities deserve to be provided with the assurance, through recognised qualifications, that those providing them with support have achieved a recognised level of competency. Moreover, some people with disabilities have diverse, complex and varying needs. Providing individualised supports under the NDIS needs a workforce that can provide specialist as well as generalist skills; and also be highly adaptive in response to the individual and changing needs of each person they support.

Achieving the full positive potential of the NDIS, and ensuring that participants receive the high-quality, individualised services that the scheme was intended to provide, will require a thorough commitment to high-quality, well-funded training for everyone working in the system. A far-reaching change in culture is necessary, one that

recognises the value of ongoing and substantive investments in training and professional development as the foundation for delivery of high quality support services. This will require a comprehensive and systematic approach to training. In short, the sector needs a holistic, ecosystem approach to meeting its skills challenges, through a system of qualifications and career paths with internal consistency and integrity, supported by a national infrastructure for developing, delivering, quality-assuring, certifying, funding and tracking training. Benefits for workers, participants and providers from this approach would include the promotion of high industry standards, making the industry a more attractive place to work, establishment of clear and more stable career structures, and a better basis for workforce planning.

This paper describes the dimensions of the skills and training challenge facing the disability services sector as the NDIS is rolled out. It proposes a comprehensive strategy for addressing training needs, including both immediate induction and foundation programs to provide new entrants to the workforce with basic skills and qualifications, and an ongoing portable scheme through which disability service workers accumulate regular entitlements to training opportunities – and then utilise those entitlements to undertake career-long training in the specialised topics which they choose. A well-defined and regulated structure of qualifications and career paths will assist workers in leveraging that ongoing training into ongoing occupational progression. Workers will come to see this sector as one offering great opportunities for learning, training, advancement, and compensation – rather than as an industry dominated by irregular, unsupported, and often isolated short-term "gigs." That will lay the foundation for a more successful recruitment and retention strategy by service providers, as well as for much higher-quality service provision to people with disabilities.

This report has been developed on the basis of analysis of official statistics, published research, and original interviews with key informants. Our recommendations include:

- Ensuring that training is directed towards nationally recognised and transferable certifications, overseen by industry-recognised authorities, and integrated with career pathways for workers in the sector.
- Linking the accumulation of training to the establishment and implementation of minimum training requirements for specific types of support.
- Large-scale roll-out of induction training to ensure that new hires have basic levels of skill, knowledge and experience prior to working with NDIS participants.
- Registration of NDIS-funded disability support workers, in part to facilitate ongoing accounting of their training credit accumulations.

- Establishing a separate and protected Capacity-Building Fund, housed within the NDIA, to fund training activity across the sector – including courses for individual workers, and group training and capacity-building at the organisational level.
- Implementing an ongoing system for workers to accrue portable entitlements for training, based on the number of hours that they have delivered NDIS-funded supports, transferable across providers and jurisdictions; and ensuring workers have the opportunity to utilise those credits in accumulating ongoing qualifications.
- Developing a new planning and administrative body, the Disability Services Training Administration (located within the NDIS Quality and Safeguards Commission), to oversee training standards, curriculum development and qualification benchmarks across for the sector, in collaboration with existing VET regulatory authorities.

The paper also presents preliminary fiscal estimates regarding the costs associated with the establishment and operation of this system. It confirms that the costs of providing essential, recognised, and portable training opportunities for NDIS workers would represent a very small fraction of incremental costs of operating the NDIS.

The training program would be phased in over five years, funded through the Capacity Building Fund (jointly endowed by the Commonwealth and State governments in line with the overall NDIS cost-sharing model). This independent funding stream would be established parallel to the unit pricing system that governs NDIS-funded services, rather than being funded from margins embedded within those unit prices (a system which has already proved unworkable). Costing simulations indicate that all elements of the training program (including induction, foundation, and ongoing portable training entitlements for individual workers, the creation of the DSTA, and funding for organisation-level training initiatives) could be funded for a total cost averaging about $190 million per year. Compared to the anticipated $22 billion annual cost of the NDIS once fully rolled-out, this represents an investment of less than one cent for each dollar of total payments. That is a very small investment indeed in the skills, qualifications, and career paths that will be essential to realise the NDIS's full potential: both as a system for delivering high-quality care to participants, and as a source of rewarding, high-value work for service providers.

I. Introduction and Overview

The importance of training and human resource development has been high on government policy agendas for decades. Recognised as a tool for both industry and national economic development, governments have made significant investments in education and training from early-childhood through to higher education.[1] However, some areas of the economy have missed out on this commitment, with little attention paid to the need for training and skill development. In these sectors, many jobs are low-paid and insecure, work is perceived as unskilled or low skilled, and the little training available is often limited to narrowly defined "competencies."

Some sectors have experienced significant skills shortages as a result of this inattention and underinvestment; and organisational exposure to various operational and legal risks has increased as a result of employing insufficient numbers of skilled staff. Nowhere is this more true than in the disability sector, and related fields (including Aged Care Support and Mental Health Support) in the broader community services field. There is no denying the human importance of the work performed in these sectors. But funders and providers have not made adequate recognition of the need for ongoing high-quality training, to support service workers in performing their tasks with the utmost of skill, safety, and respect for people with disability.

In this context, the passage of the National Disability Insurance Scheme (NDIS) Act in 2013 poses enormous challenges and opportunities to a sector which was already underinvesting in skills and training. The NDIS has been described as the largest social reform in Australia since the introduction of Medicare in 1975 (Productivity Commission, 2017; Cortis et al, 2017). It has been designed to provide a nationally consistent approach to the provision of services, supports and activities to people with disabilities aged from birth to 65 years of age. Employment in the sector is growing more rapidly than any other sector; employers are competing with other areas of community services in an effort to recruit and retain workers. This labour supply challenge is being experienced at a time when public expectations about the quality of supports are higher than ever. The sector has been unable to attract sufficient numbers of suitable new employees to meet this increasing demand, let alone to ensure that they have adequate skills and training. The importance of training and workforce skill development to respond to these labour market demands has had a

[1] We note that some parts of the education and training system have benefited from this attention to a greater extent than others. In particular, and of relevance to this report, funding for vocational education and training (VET) has fallen well behind that for higher education in Australia; as have increases in enrolments (cited in Noonan, 2016: pp13 and 19).

surprisingly low profile in public discussions about the NDIS, its goals, and its challenges.

This report focuses on issues related to the supply and demand for skilled labour in the disability sector, and proposes the development of a comprehensive system for investing in ongoing training and skills development. The key components of this system include:

- A mandatory induction/orientation to the industry, and minimum qualifications as a pre-requisite for on-going employment.
- A portable training entitlement that allows workers within the sector to both gain initial qualifications, and then participate in on-going professional development through their entire careers.
- The stipulation of nationally recognised qualifications linked to the Australian Qualifications Framework (AQF), delivered and assessed by public and non-profit training bodies accredited under the Australian Skills Quality Authority (ASQA).
- The definition of clear pathways into advanced qualifications and specialisations, which can guide disability workers in advancing their careers over time (as they accumulate skills and qualifications), and linked to clear classifications in pay and job responsibilities.
- The establishment of a new body, the Disability Services Training Authority, operating within the NDIS's Quality and Safeguarding Commission, and including representatives of people with disabilities, to work in collaboration with existing VET regulatory agencies to develop curriculum, establish qualification benchmarks, and manage the portable training entitlement system.

Research for this report has been conducted on the basis of analysis of official statistics, publicly available policy documents, other published research reports, and original interviews with key informants working in the sector.

The report documents the skills and training challenges facing the current workforce (including barriers to access, current levels of skill, and working conditions), among the wide range of other challenges faced by this growing sector. It suggests a need for increased levels of training across the industry as a whole, which can be best met by developing an integrated training "ecosystem" within the sector to support current and future skills needs.

Section II of the report describes the current disability services workforce, including reviewing existing training practices and documenting the challenges faced during

NDIS implementation. Section III provides an overview of the design, structure and implementation of the NDIS. Section IV discusses in more detail the implications for skills development of the NDIS, identifying the system's current treatment of training needs and its shortcomings. Section V then provides a proposal for a comprehensive training structure within disability services, including all its key components: initial induction and foundation skills, ongoing portable training opportunities, and a regulatory and funding structure underpinning both. This section also discusses the key fiscal parameters of the proposed system. Section VI provides a summary of conclusions and proposed strategies for winning support from all stakeholders (including government) for including a commitment to ongoing, high-quality training as a core component of the NDIS.

II. The Disability Support Services Sector

Describing the disability support services sector is a challenging task, given the incredible transformation that it is undergoing in the wake of the introduction of the NDIS. In addition to state-based disability support services, the sector has always relied heavily on not-for profit service providers, often faith-based. Common categories of service provision included general and specialist services, residential support services, accommodation support, day programs, respite services and transition to work programs. Funding was provided by both the State and Commonwealth levels of government, based largely block funding for specified levels of service provision. This funding generally constituted around 60-80% of total income; with many organisations supplementing their income from charitable donations (PWC, 2012). Block funding meant that providers managed their income based on organisation-specific policies and strategies, including the costs of employing (and training) staff. Currently, it is estimated that there are around 2,000 disability service providers nationally (NDS, 2016). The sector is growing rapidly, however, and competition for the available workforce is fierce – a situation that is exacerbated by simultaneous growth also occurring in aged care, mental health and community services sectors.

WORK AND WORKERS IN THE DISABILITY SUPPORT SECTOR

The work undertaken by the disability support workforce, all the more so under the NDIS, is incredibly diverse and varied. It involves work with people living with disability, providing a person-centred approach to support in a residential, home or community-based environment. Disability support workers may work alongside families and community workers, allied health professionals, diversional therapy assistants, mental health workers, peer support workers, and professionals in mainstream health and education services, or they could be lone workers to deliver services that support the active social and economic participation of NDIS participants in the life of the community and in the Australian economy (Skills IQ, 2017b).

One of the key findings of the 2011 Productivity Commission report which was influential in the design of the NDIS, was that there were no reliable estimates of the exact size of the disability serevices workforce (Productivity Commission, 2011). Since

then, with assistance from government, National Disability Services[2] has introduced *Workforce Wizard*, an on-line tool, to collect and analyse workforce data entered quarterly by human resource managers and executives within the disability support sector. Key information sought includes types of employment, organisational growth, turnover rates, working hours and age and gender distribution of the workforce (NDS, 2017). The first report based on this tool was released in July 2017, with an update published in February 2018 (NDS, 2018), based on a total sample of over 35,000 disability support workers.

Data attained through the NDS tool confirm that the disability support workforce is extraordinarily concentrated in casual, part-time, and very insecure positions. Most recent data (NDS 2018) indicates that 81 percent of the workforce are in part-time positions. 42 percent of workers fill casual jobs. Staff turnover is extremely high: around 25 percent per year for the workforce as a whole, and over 35 percent per year among casual employees. The average number of hours that employees work in the course of a week is low and falling: down to just over 20 hours per week. Fewer than 10 percent of the disability support workforce are employed on a full-time and permanent basis.[3] Many workers work irregular hours in multiple locations; research indicates many do not receive minimum legal compensation (including for time spent traveling between locations, and other essential job functions; see Macdonald et al. 2018). The workforce reflects a high concentration of women workers, and older workers: 70 percent are women, and 44 percent are 45 years or older (making the sector's workforce one of the oldest of any sector in Australia's economy). The advancing age of the existing disability support workforce only reinforces the need for a comprehensive and ongoing training system for the industry, in order to replace the skills and experience of those older workers who will be retiring within the next few years. In contrast to disability support workers, allied health workers in the sector tend to be younger (64% are aged between 25 and 45), and are much more likely to be employed on a permanent basis.

The precarious instability of work in the sector highlights the need for a systematic and comprehensive approach to training. It is impossible to imagine that the NDIS will be able to fulfil its potential in improving the lives of people with disabilities, on the basis of a workforce that is so overwhelmingly employed in casual, part-time, high-turnover roles. Workers need an opportunity to accumulate skills, and that requires some basic assurances of stability and predictability in future employment. By providing disability

[2] National Disability Services is Australia's peak body for non-government disability service organisations, representing around 1100 service providers.

[3] NDS (2018) reports that only 35 percent of permanent employees (which in turn make up just 19 percent of the total workforce) are employed on a full-time basis, implying that just 7 percent of the workforce fills permanent full-time positions.

support workers, even those working for multiple employers or moving to new positions, with a mechanism to accumulate recognised and portable qualifcations, the training strategy proposed here could play an important role in stabilising and uplifting the whole sector's employment practices.

The NDS data also confirm that, in the face of increasing demand driven by the NDIS rollout, there is strong growth in employment in the sector of around 11 percent per year (NDS, 2018). While positive, this growth masks two significant concerns. The first is that growing employment is being driven almost entirely by a growth in casual employment. The growth in casual employment in the sector was 26 percent per year, compared to just a 1.3 percent per year increase in permanent employment (NDS, 2018). Secondly, turnover issues remain a huge concern.

High turnover rates are exacerbated by recruitment difficulties. In the March 2017 quarter, 76 percent of responding organisations had advertised a vacancy to fill a direct support worker role. Of these, 35 percent remained unfilled, with higher than average unfilled vacancies in Western Australia, Victoria, and South Australia. The most common reasons given for difficulties in filling vacancies was a lack of suitable or qualified candidates. This general response masks issues that reflect the unwillingness of candidates to accept employment in the sector in line with the wages and conditions being offered. These include poor wages and conditions of employment, lack of permanent and full-time roles, and the necessity of working irregular/non-social hours and shift work. Other difficulties in finding candidates reflect the greater focus on meeting the individualised needs of people with disability – for example, 22 percent of responses noted that the unfilled roles involved specific job skills (e.g. experience in gardening or horticulture, community access support, etc.), specific demographic characteristics (such as experience working with a specific cultural background), or other skills (such as dealing with people with challenging behaviours) that may be difficult to match with suitable applicants. There is also some evidence of a shift in what employers believe constitutes a "suitable and willing" candidate: providers are placing more emphasis on hiring people with attitudes and values that meet specific participant requirements, as part of complying with NDIS policy to offer choice and control to people with disability. All of these factors reinforce the conclusion that this sector desperately needs a comprehensive training strategy to provide the workforce with all the skills (both general and specific) necessary to fulfil the promise of the NDIS.

III. Implementation of the NDIS

As noted earlier, implementation of the NDIS is probably the most significant social reform in Australia for several decades. The model of services on which the NDIS is based has several distinctive features:

- It adopts a person-centred model of support. Individuals apply for an assessment of eligibility, and once this is determined, they are enrolled. Following this, support packages based on individualised planning are developed and funded.
- It is an insurance-based scheme, assessing costs and funding requirements based on actuarial estimates of life-time participant needs. This includes early investment and intervention in order to facilitate independence, social and economic participation; and to reduce the need for long-term support.

Discussions prior to the introduction of the NDIS Act noted the need for significant change in the sector in order to support achievement of its policy objectives. This involved the creation of a disability support sector "market" with new providers and new types of service offerings. This would allow consumers greater choice in the provision of services based on their individual and local needs. Consumer-directed support[4] reflects the evolution in service delivery models internationally, where funding is allocated to individuals or families to purchase services to meet personal needs and preferences rather than accessing standardised services (MacDonald & Charlesworth, 2016). The new model has had significant implications for service providers: they must provide new forms of support, adjust to a more competitive market, and manage the costs of employing staff to meet increasing demand. In addition, there are consequent implications for training and skill development, canvassed in the next section of this report.

The NDIS started in July 2013 in four trial sites, and was gradually extended; with roll-out starting progressively in the rest of Australia from 1 July 2016. Full roll-out is expected to be completed by 2019-20. Over the course of this transition an estimated 475,000 participants are expected to be enrolled. Uncertainty remains regarding the precise quantum of new employment that will be generated as the roll-out continues, but all observers agree that the program will require a huge expansion in the disability support workforce. In 2016, the former Chair of the NDIA Board claimed the system would need up to 70,000 new full-time equivalent workers over the coming three years – about one in five of the new jobs estimated to be created in Australia during

[4] The model is variously referred to in the literature as cash-for-care, individualised funding or personalised care.

the transition period – and this estimate has been repeated by other analysts (eg. Productivity Commission, 2017, p. 323.). This employment growth is happening at the same time as providers are engaged in significant organisational change as they adjust to new service delivery, funding, and marketing arrangements.

The scale of this undertaking is enormous and complex – and not surprisingly has encountered a number a road-blocks. A recent report from the Productivity Commission noted that roll-out is falling behind anticipated targets (Productivity Commission, 2017), with transitional issues posing risks to the integrity of the scheme. In particular, a focus on meeting targets for participant intake has resulted in lack of attention to the development of high quality plans for participants, slower than expected growth in new services, and insufficient growth in the employment of disability support workers. At the same time, information collected by NDS shows that although demand for support services is growing rapidly, 38 percent of providers are unable to keep up with demand, with the key reason being an inability to attract suitably qualified applicants for jobs (NDS, 2016).

In addition to the challenge of increasing the sheer number of workers, providers have also been required to adjust to new funding arrangements, and a new quality assurance framework. Details of these are outlined below. These in turn have had significant implications for training and workforce development, which are dealt with in the next section of this report.

THE NDIS FUNDING MODEL

As noted above, once an individual's eligibility for the NDIS has been determined, participants participate in a planning process with an NDIS representative. The purpose of this planning is to determine the reasonable and necessary supports needed for the participant to experience lives as full and engaged as possible. This is reflected in an individual support plan, and funding is allocated on the basis of what supports are needed. Participants then choose (in line with their plan) what supports they wish to purchase, and who will manage their funding. They have the option to select a registered provider to manage and provide their support, or can self-manage their funds (including directly employing support workers). In actuality, only 7 percent of participants self-manage their plans, with 58 percent opting to have registered providers managing their plans and providing support; and the remainder opting for a mix of agency- and self-management (Productivity Commission, 2017).

Individual plans and packages of support can include capital items (such as assistive technologies) but the two main categories of support involving disability support

workers are *Assistance with Daily Living* (e.g.; assistance with self-care activities) and *Assistance with Social and Community Participation* (e.g.; access to and participation in recreational activities). Where providers employ disability support workers to provide these supports, they invoice the NDIA and are paid out of the participant's individual account.

The basis of payment is derived from a "Reasonable Cost Model" (RCM), which determines prices to be paid for various categories of support. Price guides have been published by the NDIA and consist of maximum hourly payments for different categories of support (with slight variations depending on time of day, complexity of support needs and for remote locations). Hourly payments explicitly require all costs of providing support by a support worker employed under the Social, Community, Home Care and Disability Services (SCHADS) Award by a "reasonable" service provider to be included. Over the period of roll-out, the realism of the pricing model in relation to the costs of providing support and the transparency of the decisions made in respect of price-setting has come under increasing criticism, not only from providers and academics (NDS, 2016; Macdonald and Charlesworth, 2016) but also from the Productivity Commission (2017).

The most robust analysis of the RCM has been undertaken by Cortis et al 2017, whose interest was in exploring the impact of the RCM on disability support providers and workers. Based on an analysis of the assumptions underpinning the RCM, they clearly demonstrate that set prices fail to recognise the nature and value of disability support work (pp. 22-27). This has had significant consequences for employment and training in the sector. Based on a survey of CEOs from registered providers, and interviews and survey responses from disability support workers, identified problems include:

- The pricing model assumes that workers, on average, are paid at Level 2.3 of the SCHADS award.[5] Under the award, this is the minimum pay point for workers with a Level III qualification; it applies to workers undertaking largely routine work with readily available guidance and assistance. Evidence from employer surveys, in contrast, suggests that they regarded this as an entry-level (rather than an "average") rate. Experienced support workers are employed in higher classifications under the award, and employers need to provide advancement opportunities for these staff in order for them to be retained. Thus the pricing model vastly underestimates the average pay rate for disability support workers.
- The base hourly rate for disability support workers assumes that 95% of a worker's time (excluding annual and personal leave time) is spent in direct

[5] Classification levels refer to classification for Social and Community Services workers.

participant contact. This allows for just 3 minutes of every hour paid to cover all activities that need to be completed to provide quality supports and comply with the requirements of the award. These include the need for breaks for workers, communication with other team members (for example, handovers at shift changes, or in relation to new NDIS participants), meetings, administration requirements (such as completing shift notes), travel time, and time needed for training, supervision, team meetings and general professional development. The woefully inadequate amount of time allowed for non-contact time activities that are required as part of providing quality support results in support workers frequently working additional hours on an unpaid basis (Macdonald et al., 2018).

- Supervisors are expected to be paid on average at Level 3.2 of the SCHADS Award, with an expected ratio of one supervisor to 15 staff or even higher.[6] Survey evidence from both employers and workers, however, suggests that supervisors are more likely to be paid at Level 4 or above; and with ratios around 1:10. This is based on SCHADS award requirements that set limitations on the number of people that can be supervised by any one person and the level of complexity needed for supervision. Thus the supervisory ratios and rates assumed by the RCM are clearly out of line with current industry practice. In addition, given that the sector is employing many workers who have no previous experience, it is reasonable to expect supervisory ratios to be lower than this in order to provide adequate oversight of their work while they are learning the job. Thus, the pricing model again fundamentally underestimates the costs incurred by providers in providing the training and supervisory support necessary for delivering high quality services.
- An allowance of 15 percent for corporate overheads is allowed for in the RCM. This includes the costs of governance, training, staff development and back office support. Cortis et al (2017, p.47) cite international literature demonstrating how "… the excessive pursuit of administrative efficiency has caused a steady, self-perpetuating practice of cost-cutting in organisations, which in turn harms not-for-profits and their service users." Unrealistic pricing of corporate overheads in the NDIS pricing model limits the extent to which organisations can provide staff cover when people attend training courses, hold staff meetings, and engage in continuous improvement of their organisational practices.

[6] The high incidence of part-time work implies that supervisors would likely end up supervising a larger number of employees according to this formula, based on supervisory ratios defined in FTE terms.

Generally, the analysis suggests that the RCM significantly underestimates the costs of employing both support workers and supervisors, to the point where a provider survey found that two-thirds of employers disagreed or strongly disagreed that NDIS pricing allowed them to meet their obligations under the award, or to be able to pay rates necessary to allow them to attract and retain quality support staff (NDS, 2016). Providers were also strongly of the view that the RCM vastly underestimates both the time needed by support workers and supervisors to deliver quality supports and the range of other costs that providers incur in delivering services.

As a consequence, the sector is experiencing significant issues in financial performance. The NDS annual Business Confidence Survey (NDS, 2016) found that 22 percent of providers reported a financial loss in the previous year, and that this had an immediate impact on supervision and training provision. Many reported that they would not be able to continue to provide services at currently NDIA-set prices, and would have to reduce the quality of their services if prices did not improve. Similar findings are reported as part of the Disability Services National Benchmarking Project being completed at the University of Western Australia (Gilchrist & Knight, 2017). This showed a drop in net profit margins (relative to total income) earned by disability service providers: from 4.4 percent to 3.5 percent from 2014-15 to 2015-2016; more worrisome, if disability-related donations and bequests were removed from income, the margin falls effectively to zero. The report notes that providers are paying the costs of transitioning to the new system from their own resources (donations, financial reserves, sale of assets) or by incurring debt. It concludes that many services are likely to close within 2-3 years, or change their service offerings away from disability support to aged care or other human services which offer higher returns (Gilchrist & Knight, 2017, p. 5).

IMPROVING QUALITY

The delivery of high quality supports to people living with disability has been one of the key policy aims of the NDIS. Measures put in place to do this include the Quality and Safeguarding Framework, mandatory Terms of Business for registered providers (mostly focused on provider business processes), and a Code of Conduct (yet to be finalised) for providers and support workers.

The Quality and Safeguarding Framework (QSF) was foreshadowed from earliest policy discussions, and a draft framework was released early in 2015 by the Disability Reform Council. Following extensive consultations around Australia, it was finalised and released in December 2016 (Department of Social Services, 2016). The framework includes both developmental measures to help strengthen the capabilities of people

with disability, disability workers and suppliers of supports under the NDIS, and preventative and corrective measures to ensure appropriate responses to problems that arise.

QSF measures are targeted at individual NDIS participants, as well as the workforce and providers. In relation to workforce skills, the framework includes the following components:

- Developmental: Building a skilled and safe workforce – with the attitudes and skills that meet the needs of participants.
- Preventative: Screening workers – to help ensure that they keep people with disability safe and ensuring workers have the skills for specific roles through provider quality assurance and registration.
- Corrective: Monitoring worker conduct through screening, serious incident reports, complaints and breaches of the Code of Conduct.

Action taken by government to give effect to these measures, however, has been predominantly focused on preventative and corrective measures, rather than developmental ones. The draft Framework sets out an expectation that recruiting and training staff is the employer's responsibility (Department of Social Services, 2016, p. 55), noting the importance of employers ensuring that workers have the right attitudes, knowledge and skills to effectively support participants. It rejects the importance of qualifications being held by people doing support work in favour of the view that the right "attitudes" are more important. It does, however, propose the introduction of a compulsory orientation/induction module for the sector, for registered providers and their employees, as well as registered sole traders. Providers would be required to demonstrate that their workers have undertaken or are scheduled to complete the induction module, either as an e-learning module or as part of their workplace induction and training processes. Thus the QSF introduces for the first time training and development requirements for the sector, but leaves the responsibility for addressing these solely with providers.

Essentially, the Quality and Safeguarding Framework demonstrates a very passive attitude toward the task of quality assurance and workforce development. It is heavily reliant on screening, and investigating complaints and incidents; instead of a positive approach to workforce development that would prevent incidents from arising in the first place. An alternative would place emphasis on investment for capacity-building: attracting people into the industry by supporting long term development of a skilled workforce through providing opportunities for training to allow workers to deliver high quality services that make a difference in the lives of people with disability. We deal in more detail with our prescriptions for addressing this challenge later in this report.

A similar attitude is evident in the discussion paper on the proposed Code of Conduct released by the Department of Social Services in May 2017. The proposed Code is based on a number of national and international frameworks and regulations, aimed at upholding the rights of people with disability as people and as citizens. It includes reference to the need for providers to ensure that staff have appropriate supervision and training to make sure that support workers are able to identify, monitor and act when situations arise that could result in breaches of the Code. This would need to cover training both about the Code itself, and the service standards that they have been expected to comply with. However, it has already been noted that the RCM constrains the extent to which providers are currently able to provide training to staff, in this or any other area.

The draft Code also appears to be based on a simplistic view of ethics and integrity in caring occupations. While there are some behaviours that are clearly unacceptable, it is not uncommon for situations to arise in which a degree of ambiguity is present, and where workers may be required to exercise judgement. Providing quality support under the NDIS requires a degree of familiarity and trust between participants and their support workers which requires time, continuity of care and team coordination. The very nature of the personal relationship between the support worker and the NDIS participant (which may be close enough at times that the participant and support worker see their relationship as akin to a familial one) may involve complexities and ambiguities that support workers may find difficult to navigate. Resolution may require the worker to be able to discuss these issues with a supervisor or manager, in a supportive environment, without fearing that their employment may be at risk. It will require the evolution of practice standards over time, as the industry comes to understand the issues being faced on a day-to-day basis by workers.

In the end the Code places primary responsibility on workers, as the people with day-to-day responsibility for meeting support needs, for meeting the established standards. In addition, there appears to be no provision for a complaints process to involve the worker concerned, or to appeal against an unfavourable decision. Without additional investment in both initial and ongoing training on the rights of people with disability and the practice standards that support workers need to comply with, and an open and positive workplace culture that encourages support workers to be open about any queries they may have about how to deal with situations that they are facing, it is highly likely that it will be workers themselves who experience the consequences of complaints or investigations. This in turn may increase the risk for providers who potentially could find themselves in breach of employment law for failing to properly train support workers – who may later face sanctions for breaches of the Code of Conduct.

A more systematic approach to training in these areas would provide the knowledge and protections that workers need to ensure that they act in compliance with the Code, and gain thorough understanding of how their organisation approaches compliance with the Quality and Safeguarding Framework. Initial approaches give the impression that the NDIS is approaching service quality through a reactive and punitive approach. A pro-active focus on systematic, high quality and nationally consistent processes for training disability support workers in these issues would reduce risk for both workers and providers. While screening and rigorous complaints processes may be necessary, in the absence of high quality initial and on-going training they are unlikely to achieve the positive working environment that is so essential for providers and support workers to fulfil their duties to the utmost.

SUMMARY

The implementation of the NDIS has brought about significant change in the disability support sector. The roll-out requires a substantial rate of workforce growth (likely doubling total employment) over the next 5 years. However, providers are not able to attract suitably qualified workers into the sector; poor pay and working conditions, weak employment security, and limited access to training and development opportunities are significant factors behind this failure. At the same time, pricing caps introduced through the NDIS restrict the ability of sector providers to overcome any of these underlying conditions. While the provision of high quality services is at the heart of the success of the NDIS, little attention or resourcing has been provided to assist providers to recruit and train the new workforce. The Productivity Commission has warned that insufficient workforce growth poses a risk to a successful full roll-out, and will compromise the quality of support that has been promised to people living with disability.

IV. Training, Skills and Qualifications

Quite apart from the rapid growth in employment, there is a need for NDIS workers to be adequately skilled. In this section, we examine the level of skills and training of the existing workforce and the qualifications that are currently available to disability support workers. We then proceed to examine the skills implications of consumer-directed support, those initiatives that have been put in place to support sector development, and the implications of the NDIS pricing model and QSF for training and development in the sector. These set the backdrop for proposals set out in the final section of this report, to develop a nationally based skills ecosystem for the sector.

A common misperception of work in disability services is that it is unskilled and that workers in the industry do not need any special qualifications to work within it. This stands in contrast to the view of clinicians, social workers, disability specialists and participants themselves : namely, that this work requires sophisticated communications skills, a high level of emotional intelligence, and (depending on the complex and varied needs of the participant) specialist knowledge (for example, in relation to particular medical conditions, dealing with challenging behaviour, or understanding the side-effects of medications). In addition to multiple and complex needs, people with disabilities may also need support in managing multiple and complex interactions with government and non-government agencies in the course of addressing their housing, medical, and educational support needs. Internationally it has been argued that many disability services workers do not have the necessary skills or supports required to engage in daily work settings that are varied and demanding (Iancono, 2010). In the Australian context, research has also expressed concerns about the ability of support workers to meet workplace demands (see for example, Health Workforce Australia, 2014), particularly in relation to people with intellectual and cognitive disabilities and other complex needs.

At present there is no requirement for disability support workers to have any minimum industry-relevant qualification. However, analysis of the skills and qualifications of the existing workforce in the lead-up to the introduction of the NDIS confirms that many are in fact very well-qualified. In 2010, a survey undertaken by the National Institute of Labour Studies (NILS, 2010, p. 129) found that 72 percent of non-professionals working in the industry held a nationally recognised Certificate III or IV qualification, with 48 percent of these holding a Certificate IV in Disability. Although not compulsory, the NDIA advises registered providers that a Certificate III or similar is desirable for support

roles (Windsor and Associates, 2014b), and the industry as a whole regards the Certificate III as a base-level qualification. In addition to those holding these industry specific qualifications, a high proportion of the current workforce also have additional tertiary level qualifications. An online survey of 300 respondents undertaken by the Australian College of Community and Disability practitioners between November 2016 and March 2017 found that 31 percent held a Bachelors or Masters degree or graduate Diploma, 28 percent held a Diploma-level qualification, and 38 percent had Certificate III or IV level qualifications.[7]

VOCATIONAL EDUCATION AND TRAINING IN THE SECTOR

There are two qualifications in this sector that are recognised nationally as part of the formal Vocational Education and Training (VET) framework – *CHC 33015: Certificate III in Individual Support (Disability)*, and *CHC 43115: Certificate IV in Disability Support.*[8] For Certificate III, students must undertake 7 core and 6 elective Units of Competency; and complete120 hours of work experience (including completing a set of written and practical tasks in the workplace). Qualifications for the sector are overseen by SkillsIQ[9] (the Skills Service Organisation that covers the disability support sector as part of the wider community and social services area); Certificate III programs are presently offered by 476 different registered training providers[10] (RTOs), while Certificate IV

[7] Australian College of Community and Disability Practitioners survey, 2016 (unpublished). The survey did not indicate whether the qualifications were directly related to disability services.

[8] Certificates at Levels III and IV (of the Australian Qualifications Framework) are made up of agreed Units of Competence within an agreed training package. In this instance the disability qualifications are made up of agreed Units of Competence from the Health and Community Services training package. While there are expectations about the amount of time that it is expected that students will be able to complete the qualification in (6 months for Level III and 1 year for Level IV), in reality these can vary significantly based on modes of delivery.

[9] SkillsIQ is the Skills Service Organisation (SSO) covering workers providing direct client care and support to individuals, including in the disability sector. The role of SSOs in the Australian VET system is to develop and review training packages, in line with decisions made by Industry Reference Committees about future training needs in specified industry sectors. The relevant Industry Reference Committee for the Disability Support Sector is the Direct Client Care and Support Industry Reference Committee. The Committee consists of 2 employer representatives, 6 representatives from peak bodies, 2 representatives from Registered Training Organisations, 3 union representatives and 1 government representative. The two qualifications that are specific to the disability are included in the Community Services Training Package, which is one of 10 training packages that SkillsIQ is responsible for.

[10] In the Australian VET system, RTOs are registered by Australian Skills Quality Authority (ASQA) to deliver VET services. Registration requires assessment against quality standards both for providers and for courses offered. Only RTOs can deliver recognised qualifications that are accredited under the Australian Qualifications Framework, and are periodically reviewed by ASQA for quality assurance purposes. We recognise that the quality of teaching and assessment offered by RTOs in the sector is of concern to some employers, but this is largely a result of underfunding and the failed experiment of private market delivery of VET.

programs are offered by 225 RTOs. No higher-level qualification vocational pathways are formally defined for disability support work, although many people working in the sector have higher-level qualifications in health or allied health disciplines (such as nursing and social work).

For a workforce that is low-paid and works a limited number of hours, there are significant barriers to enrolment and completion of vocational qualifications. There are a large number of private RTOs (including some larger employers that have their own associated training and development arms), but a considerable amount of training is undertaken in publicly-funded TAFEs. The costs of courses vary from provider to provider (and may depend on government-determined eligibility for funding requirements), but can range upwards of $2,000. A compulsory work placement (of 120 hours), with workplace assessments, is required, along with course work. There is no reliable evidence about the extent to which those completing these qualification are employed during the course of their training (i.e. people may complete courses on a pre-employment basis); whether they pay the costs of their own training; and whether costs of attendance (including paid time off) are met by their employer.

In recognition of the need for workers to complete some minimal level of training to work in the sector, an accredited induction skill set,[11] *CHCSS00081 Induction to Disability*, was approved in 2015. It is currently offered by 280 RTOs and comprises four units of competency from the Health and the Community Services Training Packages, all focused on NDIS-specific aspects of the cultural change needed in the sector. These are:

- CHCCCS015 - Provide individualised support
- CHCCOM005 - Communicate and work in health or community services
- CHCDIS007 - Facilitate the empowerment of people with disability
- HLTWHS00 - Follow safe work practices for direct client care.

The *Induction to Disability* skill set is designed for newly appointed disability support workers. It can be included as credit towards completion of the Certificate III Individual Support (Disability) or other national qualifications. Take up of this program by employers has so far been relatively rare.

[11] A "skill set" is not a qualification in its own right, but is made up of Units of Competence that have been developed for a qualification. The fact that students have completed those Units of Competence is recorded, and students receive a Certificate of Attainment when they have completed all Units within a skill set.

OTHER TRAINING IN THE SECTOR

In addition to these nationally recognised training qualifications, several other training initiatives have been developed in the sector over recent years.

An additional orientation program, the *Disability Induction eLearning Program,* has been developed by the NDS. It is available through *Carecareers* (a web-based platform associated with the NDS), and is designed for potential as well as newly recruited employees. It consists of five modules that can be completed on-line, in a space of around 4-5 hours, and is largely an introduction to the principles of person-centred support. It has primarily been designed as an introductory training resource for employers, and the pricing structure for access to the modules reflects this.[12] Unsurprisingly, the vast majority of those completing the program are enrolled through organisations. Anecdotally, this is said to reflect the fact that some larger organisations are enrolling all newly recruited staff as a matter of course, with some also using it as part of pre-employment screening tools.

The NDS eLearning induction is a course rather than a qualification: it is not recognised within the Australian Qualifications Framework, and has no formal assessment requirements. Its role is limited to being an information and awareness raising tool for prospective and new employees about the principles underpinning services being offered to people with disability. Anecdotal evidence suggests that it is typically used in isolation from nationally recognised training packages. Two additional concerns with the program were also noted by previous participants: it can be completed on-line without any opportunity to discuss the content with an experienced worker or supervisor, and it does not include any work placement component to expose new workers to the reality of disability support work.

In addition to these induction initiatives, two internet based “hubs” have been established that provide support workers (including those new to the sector) with a range of information about courses, an introduction to the principles of the NDIS, and a catalogue of workshops, webinars and on-line learning opportunities that they could pursue. [13] Anecdotal evidence suggests that some providers are establishing committees and reference groups to identify training needs and are also putting employer-specific training in place. Little is known about the number of these courses, how many people attend them and the quality of teaching, learning and assessment. In addition, a number of providers are making increased use of digital and on-line learning. While these have the advantage of reaching a larger number of people

[12] Single user access costs $50; groups of 10-50 users are charged at $45 per user; and larger organisations can pay a flat fee for a corporate licence for unlimited users for 12 months.

[13] https://www.ndp.org.au/learning-hub and https://www.carecareers.com.au/courses/

(particularly people in remote areas) at a lower cost than face-to-face training, they may also contribute to support workers feeling isolated from their colleagues and others in the industry. Some employers are dealing with this by holding staff conferences, in which large groups of staff are brought together, and training makes up a significant component of these events.

SKILLS IMPLICATIONS OF CONSUMER DIRECTED SUPPORT

Earlier in this report we noted some of the implications on training and development of the NDIS rollout – particularly as a result of the pricing model and new mechanisms for ensuring service quality. This section goes into more detail on those issues:– namely, the implications of the consumer-directed funding model for the skills of the workforce; and the need to recruit increasing numbers of disability support workers, many of whom will have no previous knowledge of the sector. It also summarises the limited initiatives that have been put in place to support skills development as the NDIS was rolled-out, and how these represented lost opportunities to invest in genuine training. Lastly we analyse how the pricing model and the quality and safeguarding framework are undermining in practice the goal of developing highly qualified workforce, delivering high-quality services.

As noted earlier, the introduction of consumer-directed support has implications for workforce skills. Because packages of activities and supports are designed around the individual needs of people with disability, the skills needed by the workers supporting them can vary widely. This has led to a perception in the industry that worker "attitudes" are considerably more important than formal training and qualifications in delivering high quality supports. We strongly disagree with this sentiment and argue that to employ people without qualifications (or at least undergoing training) poses an unacceptable level of risk to those that they are supporting, as well as undermining the quality of jobs in the sector. Consumer-directed support requires a wide range of skills. These range from essential areas of knowledge required by all workers in the sector, skills and competencies (foundation knowledge) needed by anyone engaged in direct contact with people with disability, and more advanced skills and knowledge required by people providing support for people with specific conditions or disability-related needs.

There are some general areas of knowledge that all disability support workers must possess regarding the NDIS and the principles on which it is based – irrespective of whatever other skills and qualifications they have. This includes the insurance values underpinning the NDIS, the commitment to increasing community and economic

integration and participation, and the promotion of independence and self-management for people with disability (Windsor 2014b). As noted earlier, these knowledge areas are included in the recognised skill set developed from Units of Competence that are part of the Health and Community Services Training Package, that can be recognised in worker accounts on the Australian Qualifications Framework and can built on to complete the Certificate III or IV qualification.

The nature of consumer-directed support also requires support workers to have a range of other skills however, and the changing nature of these has been considered by both employer and worker organisations. Surveys of workers undertaken by both the Australian Services Union and the College of Community and Disability Practitioners note the importance of "soft" skills such as an understanding of person-centred and human rights approaches to disability support, interpersonal skills, verbal communication, active listening and being able to manage challenging behaviours. Others, required by workers to undertake changed roles demanded by the introduction of the NDIS, include record-keeping, written communication, time management, computer skills and financial management.

Questions about the ability of support workers to meet the needs of people with complex physical and emotional health needs have also been raised; and responding appropriately to these challenges is one of the key aims of the new training system we propose. This requires support workers to have more advanced skills in aspects of support needed by individuals with specific conditions (eg. autism spectrum disorder, motor-neurone diseases, and others). Some workers may have a particular interest in developing expertise and specialist skills. If the NDIS is to adequately respond to the needs of people with complex needs, training pathways that extend beyond Certificate IV into Diploma and Advanced Diploma level (and corresponding career opportunities that reflect those qualifications) are needed.

In general, the policy shift to consumer-directed support requires a re-think of the knowledge and skills required by the disability support workforce. SkillsIQ, in association with its Industry Reference Committee, is the organisation whose formal role it is to forecast skills requirements for the future. Over recent years, it has undertaken several research projects, based on both an examination of the literature, and interviews with industry stakeholders. Based on an industry stakeholder survey about the skills that would be most needed in the next 3-5 years, interpersonal skills, customer service, communication skills, technological fluency, leadership and flexibility were seen as most crucial (SkillsIQ 2017b),[14] as summarised in Table 1 below. This list

[14] Although this survey was carried out across all industries, 258 of the 1,480 respondents identified themselves as providing direct client care and support services.

of required skills has a high degree of congruence with the skills identified in our discussions with key informants (including several existing disability support workers).

Table 1:

Skills Required by Workers Delivering Care and Support Under Consumer-Directed Support Models

Flexibility (with work times and roles)
Person - centred approaches
Technical proficiency
Cross-sectoral skills and ability (generalist skills and shared competencies for cross - sectoral support)
Understanding the interface between the health sector, aged care and the disability sector
Time management
Understanding about relevant systems and schemas (particularly for 'wrangler' or 'coordinator' roles)
Record keeping (including budgets)
Ability to work independently, autonomously
Strong interpersonal skill set (to build trust and nurture relationships)
Developed communication skills
Cultural competence
Emotional intelligence
Advocacy skills
Customer service skills
Client engagement and enablement - focused
Leadership and management skills
Responsive to the needs of the local market.

Source: Adapted from SkillsIQ 2017a.

The SkillsIQ report notes, however, that there is limited empirical evidence about how these skills are used in practice by workers while performing a support role (SkillsIQ 2017a). In addition, Skills IQ argues that some skills that will be needed have not yet been properly specified. For example, given the need for support to be delivered across specialist services, mainstream services and in collaboration with family and community support, one of the skills most critical in the future is the ability to work across sectors in support of the personal goals of people with disability.

Based on its comprehensive analysis of literature, skills forecasts based on internal expertise, reports on the introduction of the NDIS and interviews with providers involved in NDIS trial sites and other NDIS stakeholders, SkillsIQ has proposed a model (summarised in Figure 1, below) for training needs analysis for the disability support sector, organised into several major domains of knowledge and expertise. It proposes that this model form the basis for empirical research over time to ascertain those skills and competencies that are most necessary for support workers to deliver high quality supports. Importantly, by cross-matching these domains against nationally recognised accredited training, the model establishes a foundation for the establishment of a skills ecosystem for the sector, based on vocational pathways (and corresponding career structures) for workers in the disability support sector.

FUNDING FOR SECTOR DEVELOPMENT

The consumer-directed support model also has significant implications for the nature of relationships between people with disability, providers and support workers; and has required what has been rightly described as a culture shift in the industry. In support of this shift, in 2015 the NDIA set out an integrated market, sector and workforce strategy as a vision of what it expected a "mature" and robust disability support market would look like, and how it would function (NDIA, 2015).

The workforce development aspects of the strategy include a number of dimensions. In addition to vastly increased workforce numbers, there is a need for a changing workforce profile that could respond to the needs of a diverse participant base (e.g.; ability to respond to the needs of people of different ages, ethnicities, and needs); and that could meet newly expressed and more complex needs for support. All of these changes would require an innovative approach to workforce management, developing new and differentiated functions and roles, re-designing work and re-deploying workers, and new models of supervision and management.

The integrated strategy is very much based on the recognition that a quality workforce is essential for the delivery of quality services. A Sector Development Fund was put in place in support of the strategy, to assist participants, providers and the overall workforce to transition to the new operational environment. This fund provided $149M over a period of 5 years (2012-13 – 2016-17) to be directed towards a mix of workforce, provider and participant development needs:

- Increase the capacity of people with disability and their families to exercise choice and control, both in engaging with the NDIS, and in purchasing supports in an open market in order to realise their aspirations.
- Develop a market capable of providing the necessary supports required for full scheme.
- Increase the mix of support options and innovative approaches to provision of support.
- Increase the disability services workforce, making it more diverse and better equipped to meet the needs to people with disability.
- Develop an evidence base to inform an insurance approach to disability support (Department of Social Services, 2015, p. 5).

Despite the acknowledged centrality of a skilled workforce in delivering high quality support, an examination of the operation of the Fund suggests that workforce development requirements were viewed as secondary to community, provider and participant capacity building. The operational guidelines were specific in preferencing

innovative projects that did not duplicate any activity previously funded. This meant that the fund could not be used for ensuring that the workforce had nationally recognised qualifications, and ignored the fact that a critical aspect of expansion of the workforce for sector development simply included a need to scale up existing training provision for new recruits. In addition, a large proportion of funds available through the Sector Development Fund were provided to State-level authorities for disbursement. States applied local priorities for the allocation of funds, while the national priority for ensuring an increased number of skilled workers was left unaddressed. This represented a significant lost opportunity. While the existing system for training disability support workers in nationally recognised qualification may have its faults, providers largely support it as a means of training workers in the necessary skills to undertake disability support work. Had more of the fund been allocated to support development and acquisition of nationally recognised qualifications, this may have helped to addressed some of the problems around recruitment and retention that providers are facing now.

The Fund was additionally intended to support the development of new models of supervision and work organisation. This led to the allocation of $5M of the Sector Development Fund to establish the *Innovative Workforce Fund* to fund projects across four funding streams:

- Redesigning support worker roles and testing new work roles.
- Streamlined practices in areas such as human resource management, recruitment and retention of staff and workforce practices.
- Use of technology in workforce practices.
- Workforce development in rural and remote areas.

Of the total $5M funding, $1M was paid to the NDS to administer and manage a competitive application process. There was maximum funding of $200,000 for each funded project and all projects were required to be completed by June 2018. Two funding rounds have been held. The first, announced in July 2017, provided funding to 21 providers, with funding to an additional eight providers announced later in the year. Only headline information is available, however, on the specifics of these projects,[15] and only a minority appear to be directed towards innovation that will provide tangible benefits for the workforce. Neither is information available about plans for evaluations of projects against the objectives of the Sector Development Fund.

[15] See https://www.dss.gov.au/grants/grants/closed-funding-rounds/innovative-workforce-fund-management

Overall, many questions should be asked about whether the Fund has represented good value for money. There is evidence that administration of the Fund has been highly unstable, with administration being undertaken by the Department of Social Services from 2012-13; moving to the NDIA in 2013; and being transferred back to the Department in 2014. Little aggregate information is available on what projects have been funded, the extent to which they have achieved each of the five outcomes that the Fund was directed towards achieving, and why some outcomes were accorded higher priority that others (for example, provider development as opposed to workforce development). As a whole, use of the Sector Development Fund has been a lost opportunity to take a nationally consistent approach to systematic training of a large number of newly recruited workers necessary to support sector development over the long term.

While the integrated strategy for sector development set out by the NDIS was laudable, in many ways it represented "magical thinking": lacking understanding of the operation of real labour markets or the complexity of organisational and industry-wide change and development. For example, the strategy suggests that providers could demonstrate innovative models of service delivery that "…make better use of the talent and skills of the workforce and to stimulate innovation" (NDIA, 2015, p. 21). While the involvement of the workforce has been demonstrated in a number of industries to make a significant contribution to innovation in work processes and organisation, this is most likely to occur in workplaces where workers have a full-time and well-paid job, a degree of employment security that results in them being invested in the future of the organisation, and successful experience with expressing their collective voice in organisational decision-making processes.

ADDRESSING QUALITY ISSUES

As noted earlier, the most important indicators of quality in caring professions relate to the training of staff. This includes both induction and initial foundation training; and the establishment of workplace support for ongoing professional development (such as supervision, reflective practice and opportunities for team support). The draft QSF and Code of Conduct are based on preventative and corrective components of the Framework, rather than developmental ones. This is likely to create a reactive quality culture, focused on screening and complaints, rather than a proactive strategy that supports skills development and capacity building. Essentially the difference between the two is the difference between quality control processes (in which services are measured against whether they meet participant expectations, based on a "tick box" approach) and quality assurance (in which services are measured against a diverse range of quality indicators and processes designed to limit the risk of service failure).

The quality goals for the NDIS are unlikely to be achieved without building a strong induction and training infrastructure that provides all workers in the industry with the skills and knowledge to deliver support services informed not only by knowledge about the principles of the Act, but also by up-to-date and accurate information about the participants to whom they are providing support and working in collaboration with family members and other specialist and mainstream providers. The risks of not doing so can be immediate and consequential. We note, for example, the findings of a recent Coronial Inquiry,[16] where lack of training and back-up for support workers, and poor workplace systems and procedures were implicated in a death at a residential facility.

The draft Code of Conduct in particular has significant implications. It includes reference to the need for providers to ensure that staff have appropriate supervision and training to make sure that support workers can identify, monitor and act when situations arise that could result in breaches of the Code. However, the ASU, in its submission to the Senate Standing Committee on Community Affairs (ASU, 2017), presented evidence showing that only 12 percent of workers felt they were adequately informed about the draft Code. Training needs to address this: providing both information about the Code itself, and the service standards that workers are expected to comply with. However, there are a number of other aspects of the draft Code which exacerbate the risks associated with an inadequate training infrastructure. These include:

- Lack of consultation with workers and their representatives in the development of the draft Code.
- The need to ensure procedural fairness in dealing with any complaints that are made against a worker alleging a breach of the Code.
- Adjustment to the pricing arrangements to ensure that workers and providers have sufficient time to be informed about and meet their quality and safeguarding obligations.

TRAINING IMPLICATIONS

As noted previously in this report, the NDIS pricing model has had significant consequences for training and development in the sector. The most significant of the concerns voiced by workers was a cut-back in the time allocated for training; team meetings having all but disappeared; supervision has been severely curtailed; and large numbers of casual workers are being newly employed with almost no supervision at all. These concerns were corroborated by employers, over a third of whom agreed that

[16] http://www.coroners.justice.nsw.gov.au/Documents/Veech_findings_redacted.pdf.

support staff were not paid to attend regular team meetings or attend training and development activities (Cortis et al., 2017).

Inadequate training and support to do the job will have immediate consequences for quality support services. It means that support workers do not have adequate information to provide support for some NDIS participants, particularly those with complex needs. Neither do they have time to meet with other workers in a support team; or with other people in their organisation. All this is viewed by workers as important for reducing their sense of isolation, for sharing information about those to whom they are providing support, and developing new ideas and strategies about innovative practices.

The reality is that rhetoric about the need for a well-skilled workforce as an essential part of the NDIS has never been matched by the reality of implementation. A well-trained workforce is essential for achieving the quality of support promised by the system, but the experience so far in Australia supports international findings that consumer-directed delivery models tend to pay little attention to the need for long-term workforce development. Market forces cannot autonomously resolve these fundamental shortcomings; it will require pro-active attention and fiscal support to lead the ongoing investments in skills upgrading that the sector requires.

V. A New Model for Training and Qualifications in Disability Services

The previous sections identify existing skills and training practices in the Disability Support Sector; including issues and challenges arising out of the NDIS roll-out. This section looks forward, making recommendations to strengthen training and development as a foundation for delivery of high quality disability support services. We argue in favour of a more systematic approach to training investment, based on the needs of the sector as a whole and creating a comprehensive skills "ecosystem". Significantly increased government funding for training is needed over the long term in order to achieve the quality of service that has been promised as part of the NDIS. The argument here is for a systematic and holistic approach; based on the following elements:

- Ensuring that investment is directed towards nationally recognised training, overseen by industry-recognised authorities, and builds integrated career pathways for workers.
- Large-scale roll-out of induction and foundation training to ensure that new hires have a minimum level of skill and knowledge as they start work with NDIS participants.
- Mandatory minimum qualifications and registration of disability support workers
- Establishing a separate and protected Capacity-Building Fund, housed within the NDIA, to fund training activity across the sector – including courses for individual workers, and group training and capacity-building at the organisational level.
- Implementing an ongoing system for workers to accrue portable entitlements for training, based on the number of hours that they have delivered NDIS-funded supports, transferable across providers and jurisdictions; and ensuring workers have the opportunity to utilise those credits in accumulating ongoing qualifications.
- Developing a new planning and administrative body, the Disability Services Training Administration (located within the NDIS Quality and Safeguards

Commission), to oversee training standards, curriculum development and qualification benchmarks across for the sector, in collaboration with existing VET regulatory authorities.

THE IMPORTANCE OF A NATIONAL TRAINING FRAMEWORK

There is a need for large-scale and long-term investment in training for the disability support sector to support implementation of the NDIS. Without this, the sector cannot attract sufficient numbers of workers to provide either the quantity or quality of support services needed in order to meet increasing demand. Inability to attract labour is symptomatic of a poorly functioning labour market in the industry. Lack of specified minimum skills requirements means that barriers to entry are low, even for people who have few employment alternatives. It sends a signal to prospective employees that the work is undemanding, when in fact this is far from the truth. Unrealistic expectations about what is required of workers in turn leads to high turnover. In addition, many potential employees are discouraged by poor wages and conditions in relation to work demands, lack of employment security and few opportunities for advancement.

The importance of training for high standards of service delivery in the sector is not contested. The roll-out of the NDIS is based on a well-established evidence base that high quality services support the achievement of life-time goals by individuals living with a disability. Nevertheless, international studies suggest that the skills and training of support workers can shape whether these changes improve or worsen the position of NDIS participants. In particular, three main factors have important effect: the extent to which cost containment underpins the scheme, the regulation and monitoring of service delivery, and the regulation of employment (Macdonald and Charlesworth, 2016, p.629). In the Australian case, evidence collected so far suggests that quality of plans is being compromised in an attempt to meet quantitative targets (Productivity Commission, 2017). In addition, it is the disability support workforce itself that will shoulder the costs of increased flexibility for NDIS participants, with many of the risks associated with increased flexibility (e.g.; last minute changes to the hours during which support is delivered) being transferred from organisations to workers (Cortis et al., 2013).

Australia's Vocational and Education Training (VET) system has evolved significantly over the past 50 years, in response to changing economic and social conditions. One of the most significant of those changes has been the shift from state-based systems to a national training system from 1992 onwards. There were very good reasons for doing

this, which remain relevant today. In particular, having a training system operating at the level of the Commonwealth efficiently delivers qualifications to address national labour shortages, and helps to achieve portability of VET skills across the nation, thus promoting labour mobility (Bowman and McKenna, 2016). It also ensures consistency in training outcomes, so that individuals do not face barriers when moving between jurisdictions and jobs. Bowman and McKenna (2016:43) go on to summarise other advantages of a national system as being:

- *responsiveness*: to industry, individual and community needs.
- *equity*: of access, participation and outcomes for individuals.
- *quality*: in training delivery and learning outcomes.
- *efficiency and public value*: for government-funded VET to be efficiently priced and steered to skills areas that support job outcomes, where this would not be the case if left entirely to enterprises and individuals.
- *sustainability*: by funding the VET system through shared investment by governments (where there is public value), enterprises (private value) and individuals (private value).
- *transparency*: to enable better understanding of the VET system among students so they are able to navigate the system and make informed decisions.

The Australian system can also be placed in the context of the development of VET systems world-wide to respond to the changing economic conditions of the 21st century. As Stanley (2016: p.125) notes, these have often been based on the need for professional standards to be recognised across national borders. Most countries have developed systems for licensing professional standards through accreditation and registration of both training organisations and workers themselves. Training organisations can only be registered where they can provide evidence that they have the capacity to deliver graduates of VET that can meet the standards set by employers across the industry. This commonly includes requirements related to a robust training infrastructure, suitably qualified instructors, course entry requirements and other requirements considered appropriate for effective outcomes.

The foundation for training in the disability support sector should be rooted in national qualifications, accredited on the Australian Qualifications Framework, developed by the appropriate industry regulatory authority on the basis of Units of Competence taught by Registered Training Organisations that have been quality assured by ASQA. The argument that having a national system in place reduces local flexibility cannot be sustained. Bowman and McKenna (2016) have pointed to the advantages of the dynamic tension that exists between consistency and flexibility. For example, providers with a NDIS participant base with specific needs (e.g. meeting the needs of a particular demographic group, or people with a specific type of disability) can provide training for

additional skill sets, on top of the general skills required by all disability support workers.

It is essential that the RTOs registered to deliver qualifications do so to the highest standards possible, and in this area there is room for improvement. We appreciate that the existing VET system in Australia, generally and within the disability support sector, is not without its detractors. Some of these problems have occurred as a result of underinvestment in VET. However, opportunistic behaviour by private, for-profit providers has also contributed to exploitation of vulnerable groups of workers (Myconos et al, 2016; Noonan, 2016). International evidence has also suggested that smaller for-profit training establishments deliver poorer educational outcomes as a result of under-capitalisation poor connections to the wider needs of the industry (Stanley, 2016). In respect of the disability support sector in Australia, particular concerns have been raised about the quality of assessment. We therefore suggest the need for attention to be paid to the following issues identified by the industry:

- Tutors within VET programmes are expected to have practiced the skills that they are teaching to students. Because of the newness of consumer-directed support, there are a limited number of tutors currently working in TAFEs and other RTOs who have experience in this way of working. Efforts must be taken to ensure that tutors (and senior practitioners in provider organisations who are supervising students completing initial training programs) have sufficient knowledge and skills in this area to be able to work with and assess students.
- Compulsory workplace placements have a high degree of support within the industry. However, the quality of assessment of workplace-based competencies may need to be given greater consideration to ensuring validity and reliability. In particular, workers need to be able to not just demonstrate their competency in undertaking specific tasks; but also to demonstrate that they have task management skills (planning and organising, balancing conflicting demands); contingency management skills (knowing how to respond to unexpected events, correcting problems) and job environment management skills (interpersonal skills, team working) that allow skills transfer across different providers (Stanley, 2016, p.132).
- Given the poor experience with private vocational training in Australia, funding should be limited to publicly funded TAFEs and selected not-for-profit RTOs (especially those affiliated to non-profit providers).
- Billett et al (2015) notes that the current VET system is geared towards entry-level learners, participating in training shortly after completing school. This is not the case for workers in the disability support sector, some of whom may be participating in learning having left compulsory schooling some years in the

past, and some of whom may use English as a second language. The needs of older and CALD learners may also need to be specifically addressed by TAFEs and other RTOs in order to facilitate successful engagement with learning by a workforce that is expected to be more diverse in the future.

- There is a need for vocational pathways that extend beyond Certificate IV. We note that the Community Services Training Package already includes some Diplomas and Advanced Diplomas, but these assume a career pathway that moves from direct support into supervisory, policy or management roles. While these are important, there is also a need for pathways into advanced "vocational streams"[17] with higher skills or specialisations at Levels 5 and 6 of the Australian Qualifications Framework, that can be applied in direct support roles (rather than in supervisory roles). Given the increasing concern in Australia with greater continuity across the VET and Higher Education sectors, this would allow workers, if they so choose, to build skills in their chosen areas in ways that could ultimately be recognised for University level study (for example as clinicians). There is an opportunity to do this through the Direct Client Care and Support Industry Reference Committee, on which both the Australian Services Union and the Health Services Union are represented. In particular, electives at this level could be developed to enable workers to develop support specialisations – for example in support for people with particular conditions, or demographic groups.

We believe that with these improvements (and in particular limiting funding to public and selected non-profit training providers), the current national system offers the best hope for building a supportive infrastructure to train the large number of new workers that are entering into the disability support sector.

Recommendations:

1. All recognised foundation training for the industry should be based on qualifications that are registered through the Australian Qualifications Framework.
2. All training should be conducted by public or selected non-profit RTOs, and quality audits undertaken by ASQA to ensure that RTOs have the training infrastructure to deliver educational outcomes that are of the highest possible

[17] "Vocational streams" require and understanding of the knowledge, skills and attributes underpinning related occupations; and stakeholder collaboration and cooperation on workforce issues across a range of institutions (such as government, employers and unions) in a sector (Yu, 2015).

level of quality. Incremental funding should be prioritised towards TAFES as the highest-quality publicly funded RTOs.

3. Vocational pathways available to workers should be extended through the development of qualifications at Diploma and Advanced Diploma level on the Australian Qualifications Framework.

INDUCTION INTO THE INDUSTRY

The draft Quality and Safeguarding Framework recommends the introduction of a compulsory industry induction, to provide a basic knowledge base essential for working in the industry. We are strongly in support of this proposal. The industry desperately needs to recruit more workers, and to retain those workers over time, to avoid a high proportion of organisational resources being spent in constantly recruiting staff. In addition, a number of newly employed workers have had little or no contact with the industry in the past, and are therefore being employed in a completely unfamiliar environment. Anecdotal evidence reports many newly engaged workers leaving the industry after a very short period of time on the job, having been "thrown in at the deep end." Universal induction would provide newly engaged workers with more comfort and confidence as they embark on the learning curve of their new roles.

Regarding the content of induction training, we noted earlier that there are two existing "induction" packages available for the industry. In our view, these two packages represent very different notions of what constitutes an "induction". While the NDS package provides some very basic information about disability support, it does not equip workers with skills and knowledge that would enable them to work in even the most basic jobs in the industry.

The accredited skill set put in place in 2015, tied as it is to the Australian Qualifications Framework, provides a more substantive foundation for induction training that goes some way to providing workers with the skills and knowledge that adequately equip them to successfully carry out entry-level positions. We believe, however, that the content of this skill set should be extended in two areas. The first of these would be educating workers about the requirements of the Code of Conduct, providing them with a good understanding of their obligations and what is expected of them. The second is the introduction of a workplace placement for completion of the induction skill set, ensuring that new workers have some contact, under supervision, with people with a disability, and an understanding of the service standards that are expected of

them in relation to that person. We further recommend that all discussions on the content of induction training should include representatives of NDIS participants.

Regarding training delivery, we note that currently the Induction course is delivered via 280 different existing RTOs. Given the large number of employees that will need to enrol in the induction program over a short period of time, capacity building support will be required to train additional industry trainers to deliver induction training; this is especially true within workplaces employing large numbers of new staff, and in rural and remote regions that currently have limited access to RTOs.

Enrolment in induction training should be available on a pre-employment basis for prospective employees considering a career in the industry. This would allow people who have an interest in working in the industry, but who are uncertain or unconfident, to get a better understanding of what work in the industry involves. The workplace component would need to be managed through connections between RTO trainers and local workplaces. This would also deliver advantages to employers, who may be more willing to employ someone who has invested some of their own time in having commenced an induction programme. The cost of induction training for people who have not been hired in a disability support role would be borne by themselves, or by employers who choose to use the induction program as a pre-employment screening mechanism.

Compulsory induction should be completed within 6 months of commencing a job in disability support; workers would not be able to work with clients without close supervision until the induction was completed. New employees would be paid for the time spent on the induction program.

Recommendations:

4. That the content of the new compulsory induction be reviewed (in consultation with all stakeholder organisations, including representatives of people with disabilities) to ensure that it includes a workplace component, and information about the requirements on workers under the proposed new Code of Conduct. Assessment standards should also be introduced to ensure that the learning objectives are achieved by all students completing the induction.
5. That it should be compulsory for employers to support workers to successfully complete the induction programme within 6 months of being newly employed.

OCCUPATIONAL REGISTRATION AND MANDATORY MINIMUM QUALIFICATIONS

As discussed above, there is a strong case for requiring disability support workers to achieve foundation qualifications recognised under the Australian Qualifications Framework. A separate question is whether employment in the industry should be conditional on the achievement of these qualifications; and whether registration on the basis of holding a relevant qualification is necessary. Occupational licensing is common in a number of areas – health care, education from pre-school through to secondary schooling), social work, real estate, and across most trades (e.g.; building and construction, plumbing, electrical work). Occupational licensing requires workers employed in a job to demonstrate that they are suitably qualified to work in that occupation/industry, having achieved a nationally (or internationally) recognised qualification prior to employment in the sector.

Occupational licensing has been the subject of discussions in the disability sector for some time. In the early 2010s, the NDS established a project entitled *Roadmap to a Sustainable Workforce*, which amongst other things, considered entry requirements for the disability sector workforce (Windsor and Associates, 2014b). The working party whose discussions formed the basis of the report noted that most employers already had in place basic training and induction to ensure compliance with regulations associated with the disability sector – including manual handling, first aid, infection control, administration of medication, food safety, fire safety, and health and safety. It also noted considerable interest in developing a standardised industry-based approach to induction, for the purposes of managing costs, improving quality and reducing duplication of training to facilitate the movement of workers between employers. While the desirability of this as a basic minimum qualification for entry into the sector was recognised, the introduction of the NDIS made it more difficult. Creation of an explicitly competitive market between service providers meant that inevitably providers would use initial induction and training to embed organisation-specific service standards and values to differentiate them from their competitors. In addition, the philosophy of the NDIS, based on consumer-directed support, implies that while workers require a common core of knowledge, the needs of individual people with disability vary, and so inevitably must the skills needed by their support workers. As noted earlier, however, it has now been proposed that an industry induction be made compulsory.

Suggestions for a mandatory minimum condition of entry for the industry have been controversial within the industry. This is despite the fact that, as discussed earlier, almost 80 percent of the current workforce have already completed some form of

vocational or tertiary training (Macdonald and Charlesworth, 2016, pp. 636-637). For example, the 2011 Productivity Commission report recommended against a qualifications requirement or compulsory training for disability support workers (Productivity Commission, 2011, p. 693). The NDS's *Roadmap to a Sustainable Workforce* project (NDS, 2014) also argued for maintaining low barriers to entry to the disability support workforce, despite recognising that training was critical for the maintenance of quality.

In our view, however, these expose the half-hearted commitment of many industry observers to training. While nominally acknowledging the importance of training to the quality of delivered services, these approaches nevertheless focus on containing costs more than optimising service quality. Overall it is difficult to escape the conclusion that opposition to mandatory qualifications is not based on the desirability of minimum standards per se, but rather motivated by reducing the costs for employers associated with training in the context of the current, inadequate NDIS pricing model.

Concerns with the cost of training can be addressed through increased funding to support high-quality training and a modern, flexible regime of qualifications, such as is proposed in this report. Input from NDIS participants and their organisations into the definition of minimum qualifications would also be important in ensuring that the workforce better matches the needs of participants as the training and qualifications system is implemented. Others have expressed concern about the unreliable quality of vocational education provided through "fly-by-night" private VET providers (in the wake of the VET fee-help scandals and other instances of private market failure in vocational training). Again, the solution to these problems is not to abandon the goal of minimum qualifications for workers who provide such critical human services, but rather to ensure that the training system is organised around reliable, high-quality public institutions which deliver training on the basis of a public policy mandate (rather than to earn quick profits); this is why the training system proposed here is centred around public and selected non-profit vocational training.

In this respect, an important precedent has been set by the Victorian Government's announcement that it will establish an independent, legislated registration and accreditation scheme for the disability support workforce in that State.[18] This decision emerged from a 2016 Parliamentary Inquiry into Abuse in Disability Services, following which the government announced a "zero tolerance" approach to the abuse of people with disability. This approach to managing the risk of abuse highlighted, in their view,

[18] See https://www.vic.gov.au/ndis/registration-and-accreditation-scheme-for-victoria-s-disability-workforce.html.

the necessity of a registration process to ensure that only workers with sufficient skills and competencies work within the industry. The registration and accreditation scheme is expected to help drive continuous improvement, especially as the disability workforce grows so quickly. The consultation paper makes a clear connection between satisfying the needs of the workforce and the delivery of high quality services. It sets out goals for the disability workforce as including:

- Workers uphold participant rights and treat them with compassion and respect.
- Disability work attracts talented, compassionate people.
- Workers can build a productive and rewarding career in the disability sector.

These goals will be met through a regulatory system that has the following functions, based on international practice in similar jurisdictions:

- Setting enforceable qualifications for entry into the profession and for registration.
- Pre-registration screening (e.g.; police checks, worker screening).
- Accredited education and training programmes (as discussed earlier).
- Maintaining a public register of qualified workers.
- Providing practice guidelines.
- Monitoring ongoing fitness to practice.
- Managing complaints and disciplinary issues.
- Managing prosecutions.
- Collecting and analysing workforce data for the purposes of service and workforce planning.

While the decision to include registration and accreditation requirements in Victoria has been made, a consultation process is asking for feedback from the sector to ensure that the system operates in a way which supports the needs of the workforce, providers and participants. In particular, it raises questions about whether registration should be required for all workers in the industry (including those working in specialist services where there are already existing accreditation processes; and workers who do not have direct contact with NDIS participants); or should be targeted at those performing high risk work (such as those working with those who are particularly vulnerable, participants requiring medication, and people for whom personal services are being performed). Discussion is also being held about whether distinct classes of registration may be needed. For example, provisional registration could be offered to those who are working in the industry and completing an initial qualification under supervision.

Secondly, consideration is being given to whether registration should be mandatory or voluntary. In either case, registration (with public access to the register) would provide assurances that a worker has met registration standards; and only those workers would have the right to use one or more reserved professional titles (e.g.; Registered Disability Support worker). Under a mandatory registration scheme, only registered workers would be able to be employed. Under a voluntary registration scheme, service providers would be entitled to offer employment to unregistered workers (except workers who have lost their registration as a result of misconduct), but those workers would not be able to use reserved professional titles. This would send a signal to NDIS participants that workers were not registered and provide them with more informed choice about the level of skills and knowledge that a worker has.

Introducing a new comprehensive system for accreditation and registration based on minimum qualifications for disability support workers will require time, and transition arrangements will be necessary for workers already employed in the field. In particular, workers who have been working in the industry must have ample opportunity to have their existing experience and skills formally recognised. In addition, many new workers bring to the job skills and knowledge that they have gained in other contexts. Australia's VET system has existing processes for recognition of prior learning (RPL), to give workers credit for skills and knowledge they already possess. Efforts to support workers to apply for RPL in relation to the Units of Competence that will be included within Certificate III and IV qualifications for disability services.

Recommendations:

6. That an accreditation and registration regime be introduced to support improvements in quality standards in the disability sector. Registration should be based on the achievement of a minimum foundation qualification at Certificate III level; with the proviso that newly employed workers enrolled in a Certificate III could apply for provisional registration for up to 18 months.

A CAPACITY BUILDING FUND FOR THE SECTOR

This report is based on the premise that the culture in the industry around training needs to be changed significantly. A systematic approach to training investment, based on the development of a skills ecosystem formed around nationally recognised qualifications, is essential for achieving the outcomes of the NDIS. As we have noted earlier, many workers in the sector experience difficulties in accessing training. Barriers

to access include the cost of training, and finding time to study given long hours of work as pertinent. In addition, many casual workers (who comprise 42 percent of the total workforce; NDS, 2018) miss out on training entirely. While many employers have systems in place for on-job training, much of it is perfunctory and employer-specific, meaning that even where workers are experienced, they are not able to demonstrate their skills to a new employer. While the Certificate III is recognised nationally, and a significant proportion of long-term workers in the industry have completed this qualification, we note concern expressed in the sector about the variable quality of training and assessment (including in RTOs).

Finding the financial resources to support employee training is always a challenge for employers in Australia. This is particularly the case in health, community and social services where the prices paid for services are tightly controlled by government agencies. Within the disabiilty sector, this has been made worse with the introduction of the NDIS pricing model. As noted earlier, this has severely limited the aspiration of providers to provide induction and training. Over half of CEOs disagree or strongly disagree that the NDIS provides pathways for staff to advance their careers; and workers identify restricted time for training as a key consequence of the roll-out (Cortis et al., 2017).

There is a strong case for funding training and professional development for the sector from a separate and ring-fenced Capacity Building Fund that is not tied to participant plans. The Capacity Building Fund would be jointly funded by the Commonwealth and State levels of government (in line with the current cost-sharing model for other NDIS services), and integrated with existing NDIS fiscal structures. At the current time, training is supposed to be funded out of participant accounts, on the basis of tiny margins built into the NDIS unit prices. Quite apart from the fact that prices for supports are inadequate for covering non-contact activities in general, this situation creates an unnecessary competition for resources between NDIS participants and the workers who provide them with services; participants should be guaranteed that workers delivering their services are sufficiently trained and qualified to do their job, but not at the expense of the resources allocated to their individual plans.

The challenges to be addressed by the Capacity Building Fund (CBF) are significant, given the underinvestment in training that is a legacy of the roll-out of the NDIS to date, combined with the need to increase the scale of the system's operations in the coming years. The Fund would have two broad areas to direct investment:

- Funding directed towards training individual disability support workers to develop their skills and knowledge on the basis of nationally recognised qualifications. Individual training opportunities would be delivered in three

stages: induction training, foundation training, and an ongoing portable training entitlement to facilitate career-long training and upgrading.

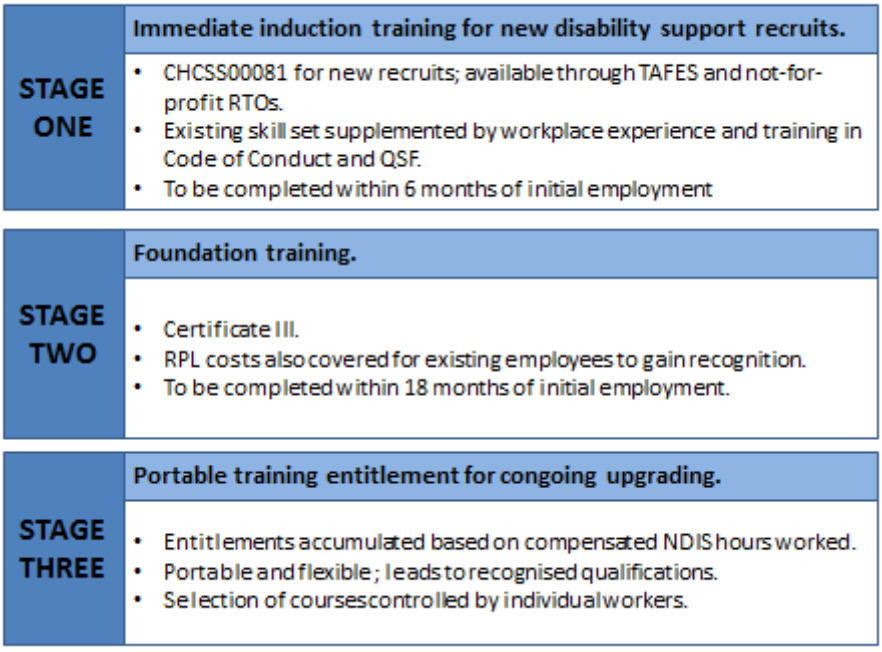
- Funding for building training and professional development capacities in the industry as a whole, at an organisational level. This would provide fiscal support to providers to build their internal capacity to deliver high-quality supervision and professional development in support of quality standards within their workplaces. It would also support the development of training capacity within RTOs to deliver training to workers in the skills associated with the NDIS's consumer-directed model.

The specific functions associated with these two areas are described in further detail below.

Individual capacity building

Because of the scale of investment necessary, we suggest the need for individual training in three stages, as summarised in Figure 2. The first stage would be provision of basic induction training for new recruits to disability support roles. This would be closely followed, in Stage 2, by larger-scale funding for those new hires (if they stay with their jobs) to complete foundation qualifications (Certificate III) at public or selected non-profit RTOs, as will now be required under our proposed mandatory

Figure 2: Three Stages of NDIS Training



qualifications scheme. Then, in Stage 3, investment is directed towards ongoing and continuous upgrading of the qualifications of workers throughout their careers, through a portable training entitlement.

Ensuring coherence and quality within this three-stage structure will require planning and close administrative oversight. Therefore, we also recommend the establishment of a Disability Services Training Administration (DSTA) to oversee the CBF's training investments, coordinate with other agencies within the vocational education and training system, and oversee administration of accumulation and spending of training credits (through individual training accounts for each disability support worker).

Stage One: Induction to Disability

There is an urgent need for an increase in the numbers of workers with sufficient skills to be employed in the industry. Through the CBF, the NDIA would cover the full cost of compulsory induction training in order to address the urgent need for recruitment of a skilled workforce. There is precedent for this approach, in federal government's funding provided for people training for early childhood education during the early 2000s (see Noonan, 2016).

The intent of the investment is to ensure that:

- Funding is delivered separately from the NDIS pricing model (which pays for delivered services).
- A large number of new recruits can access and complete training in a short time.
- Providers have certainty about the quality of teaching/learning/assessment that new hires are receiving.
- Workers that have successfully completed the training have a better understanding of the service requirements that are expected of them; and having achieved an accredited qualification are incentivised to consider a long-terms investment in their employment in the sector.

Stage Two: Foundation Qualifications

In addition to immediate induction training, newly recruited workers must also gain a complete foundation in the knowledge and skills to enable them to provide the high quality, flexible, and individualised supports expected by the NDIS. We recommend the introduction of a registration scheme for disability support workers based on a minimum qualification level at Certificate III level. The NDIA's CBF would cover the cost of in-class teaching and resources (including wage continuation for the workers enrolled in the course); wages paid during on-the-job placement time would be

covered by the employers. Stage 2 funding would also cover the cost for existing workers to have previous training and work experience assessed through the RPL process, to further boost the number of workers with formal foundation-level qualifications.

Stage Three: Portable Training Entitlement for Continuous Upgrading

Stage Three would address the need for developing specialised and advanced vocational streams for the industry, on the basis of ongoing and continuous upgrading of credentials and career paths. This would be achieved by:

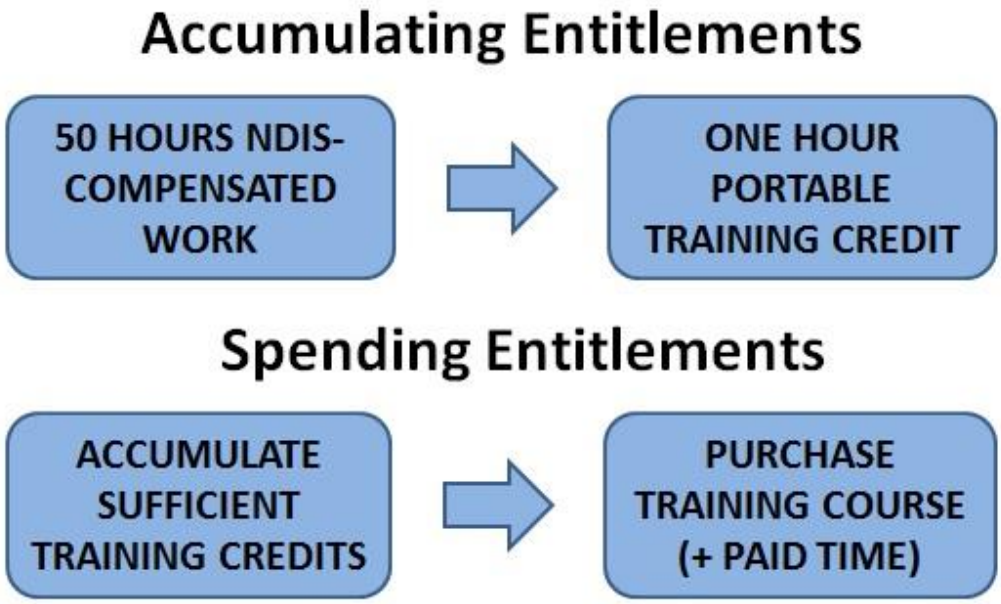
- Establishing an entitlement to paid training, vested with each individual worker, accumulated on the basis of NDIS-funded hours worked.
- Establishing corresponding vocational qualification pathways that extend beyond Certificate IV into specialist Diploma, Advanced Diploma, and University-level qualifications.
- Defining specialised and sub-specialised career paths, integrated with graduated pay scales, so that workers can ultimately get credit for their accumulating qualifications.

To this end, we propose the introduction of a training entitlement, with all workers (including those working on a casual basis) accumulating credit for one hour of paid training, for every 50 hours of NDIS-compensated work. These credits would be "banked" through individual accounts maintained by the DSTA, allowing workers to gain credit for work performed for various or multiple employers. At a 1-for-50 rate of accumulation, this scheme would allow an employee working average hours of work in the industry (around 20 hours per week, according to NDS, 2018) to engage in one 3-day training course (or 21 hours of training) per year. Credits could only be "spent" on Units of Competence that are part of the Australian Qualifications Framework, and delivered through public or selected non-profit RTOs.

Upon becoming employed in a disability support role, workers would supply their unique student identifier (already required as part of the national education and training system) and details of existing qualifications to the DSTA. The DSTA would then create a learning account for each individual, searching previous training records to identify any Units of Competency that might allow the worker to apply for RPL. Workers and their employers would then be notified of the requirement to enrol in and complete the *Induction to Disability* skill set within 6 months. Employers would be required to complete quarterly returns identifying how many hours of NDIS-compensated work each worker has worked over the course of the previous quarter, and their pay; this record of hours worked is converted into credits for paid hours of training at the 1-to-50 ratio. These credits are available to "purchase" training in the

future, with workers choosing the specific topics and timing for training; workers would be paid for the time spent in training by the NDIA (through the CBF), at the average rate of pay they experienced on NDIS-compensated work over the previous year. Once a worker enrols in a qualifying course, credits would be "debited" against a workers account (see Figure 3).[19]

Figure 3: Accumulating and Spending Entitlements



Many other professions have also established requirements and funding mechanisms to support career-long training and upgrading by workers, on the basis of a certain number of required development days each year (including teachers, many medical and allied health occupations, and others). The proposal here to establish a system to support continuous upgrading for disability support work follows the same logic: in an occupation in which the skills and knowledge of service providers is essential to safe and quality care, it is essential that those providers have opportunity to continuously upgrade those skills, develop specialisations, and keep up with new knowledge and leading practices in their field. Of course, the accumulation and spending of training credits as described would be a minimum entitlement only. Should workers and/or providers elect to make additional investments in training above the minimum entitlement at their own expense, that is acceptable, and those additional qualifications (so long as they are attained at approved public and non-profit RTOs) would be fully recognised within the sector's vocational qualification system.

[19] We propose that participation in Induction and processes for RPL are not offset against training credits.

There are several important benefits of this portable training entitlement system. Newly-hired workers will begin accumulating training credits as soon as they have completed their required foundation certificate;[20] existing employees would begin accumulating credits as soon as the scheme is implemented. Disability support workers accumulate credits for work with any employer (including if they work for multiple employers); they would even accumulate credits when providing services as sole traders directly to individual NDIS participants. This flexibility and continuity is essential because of the fluid and insecure work practices that typify the sector, all the more so as the NDIS market system is implemented. Workers employed on a casual basis, or who switch employers (for example, because of changes in personal circumstances for the participants they were working for), or workers providing services directly to NDIS participants (rather than being employed by a provider organisation), are all equally able to accumulate training credits.

The portable training entitlement system is also fully compatible with the flexible, individualised model of service which underpins the whole NDIS model. After all, the NDIS is organised on the principle that services must be tailoured to the specific needs of each participant. For that goal to be realised, it is essential that the workforce providing those services is fully capable of providing a comprehensive range of needed, individual services. This will require ongoing upgrading and development of specialised career paths in dozens of specific sub-disciplines. By endowing individual disability support workers with the opportunity to customise their own advanced vocational path and qualifications, informed by the emerging needs of NDIS participants communicated through the market system, the portable training entitlement system will play a critical role in developing a workforce that can meet the expectations of flexible, individualised care that motivated the creation of the NDIS in the first place.

A critical component of this program is to develop a system of qualifications and matching career paths in a systematic and integrated way. Existing workers who do not have a qualification equivalent to the Certificate III or IV with disability specialisms will be encouraged to complete those or an equivalent qualification (or apply for RPL) as a priority; new workers will be required to complete one within the first 18 months of their employment. Once those basic qualifications have been completed, workers then have personal flexibility in how to use their accumulating training credits. They could be used to pay for any relevant skill sets and qualifications under the Australian Qualifications Framework, or alternatively to undertake specialist courses in specific conditions affecting people with disability, therapists using different modalities, other training that may assist participants with specific needs, or relevant personal

[20] Costs associated with the induction and foundation courses offered to new workers in the sector are directly covered by the CBF, not paid through the individual training accounts.

development activities which individual workers may be interested in. In conjunction with existing VET governance practices, higher-level qualification pathways will be defined so that workers' ongoing training can be reflected in recognised, portable qualifications.

Sector capacity building

In addition to these three stages of training opportunities for individual employees, the program would also provide direct funding to provider organisations for selected workplace-level training initiatives, as well as establishing a system to consistently administer course curriculum and related qualifications. There are two specific sector-wide priorities which would be addressed and supported by the CBF:

The first is to address concerns that have been expressed regarding the variable and inconsistent quality of training and assessment in existing training programs for disability services, and about the ability of existing RTOs to teach the new competencies associated with the NDIS model of consumer-directed support. The CBF would support up-front investments in curriculum, resource, and professional development by publicly-funded and selected non-profit RTOs to upgrade their capacities in these areas.

There is an even greater need for ongoing investments to ensure that provider organisations are able to provide continuous training and supervisory support to their workforce as the transition occurs to the NDIS delivery model. Priorities would include the development of practice standards, establishing new systems for team meetings and supervision, and more.

Support by the CBF for these organisation-level capacity enhancements would be delivered on a grant basis, with interested provider organisations and RTOs submitting applications, and resources allocated from budgeted amounts by an independent jury of sector experts appointed by the DSTA.

Recommendations:

7. That an independent Capacity Building Fund be established under the NDIA, jointly endowed by the Commonwealth and State governments, separate from the funding mechanisms associated with the NDIS unit pricing system.
8. The Capacity Building Fund would cover the full costs of compulsory induction and foundation training for newly hired disability support workers (and the cost

of completing RPL procedures for existing workers), as a means of quickly boosting the number of skilled workers in the industry.

9. The Capacity Building Fund would also cover the costs of a portable training entitlement system, under which disability support workers accumulate credits for paid training hours and then utilise those credits to enrol in qualifying courses.
10. The Capacity Building Fund would also fund organisation-level investments in training capacity, by both public and qualifying non-profit RTOs, and by disability service providers.

COST ESTIMATES

Cost simulations have been developed to estimate the fiscal dimensions of the training program, including estimates for each of the major components, based on reasonable assumptions regarding the number of participants, benchmark training costs, and other parameters.

Several studies have estimated that the overall disability services workforce will double in size in coming years as a result of the full roll-out of the NDIS. This will involve the recruitment and placement of 70,000 new full-time equivalent (FTE) positions. We assume that initial "surge" in hiring is completed over the first four years, following which the flow of new recruits to the industry slows to a steady-state rate of 5,000 per year. Our costing simulations assume that two-thirds of the NDIS workforce consists of individuals performing broadly-defined disability support functions – excluding those in otherwise recognised and regulated allied health professions (who are already integrated into well-defined training and qualifications regimes of their own), and those performing other tasks and functions which do not generally involve direct disability support skills (including office and administrative staff, transportation services, maintenance, etc.). Based on existing average working hours in the sector, we assume that FTE positions are converted into headcounts at a ratio of 1.5. For the induction and foundation stages of training, we assume that all new workers will complete these programs. For the portable training entitlement, we assume a 90 percent utilisation rate of earned credits.[21]

[21] Of course, the goal of the program is maximum take-up of earned credits, but in reality some small proportion of entitlements will never be utilised due to workers exiting the industry, scheduling issues, etc.

Stage One: Induction

This is a minimal induction training package provided to new workers starting with NDIS providers. It would involve 30 hours of on-line and face-to-face orientation to the goals and principles of the NDIS, and core features such as the code of conduct and basic safety practices; and 20 hours of supervised contact with people with disabilities.

We assume the time in training is paid according to Level 2(1) of the SCHADs award induction pay classification (currently just under $25 per hour), and a relatively small per student cost for course resources and materials ($250 per student); given the large number of students participating, course resources and instruction can be developed and delivered at large scale, with consequent savings in unit cost. We assume the program would train 70,000 new inductees over the first four years (representing two-thirds of the estimated 105,000 new hires, equivalent to 70,000 FTE workers, entering the sector). The stage one induction program would thus cost $30 million per year for the first three years, $15 million in the fourth year, and $7.5 million per year thereafter (as the mass induction program was reduced to a steady stream of 5000 new inductees per ytear).

Stage Two: Foundation (Certificate III)

This foundation entry-level course would be required for all new disability support workers within the first 18 months of their employment in NDIS-funded service delivery (unless they already possess relevant Certificate III or IV qualification or equivalent RPA). The *Induction to Disability* Skill Set (described above, to be completed within the first 6 months of employment) would count toward this Certificate III qualification. The course involves 90 hours of classroom training, and 120 hours of workplace training and assessment. The classroom time would be paid at workers' normal hourly wage.[22] Teacher, resource, and material costs are assumed to equal $500 per participant (including administration). This represents a cost per participant of just under $3000, or total costs of about $60 million per year for the first three years. After the first 70,000 recruits receive their foundation training, annual costs decline to just under $15 million per year (for an assumed ongoing inflow of 5,000 workers per year).

Stage Three: Portable training entitlement

The largest element of the comprehensive NDIS training program would be the portable training entitlement system, through which NDIS-providing workers would

[22] The costings assume an average wage slightly higher than the induction-level SCHADs 2 induction pay, at $27.50 per hour, recognising that some participating workers will have already begun advancing through the industry pay scale

accumulate credits toward additional training through the normal course of their work. Training credits are earned as workers complete NDIS-funded work – whether with a provider-employer, or even directly for NDIS participants (working as sole traders). Workers can choose how and when to allocate accumulated credits toward additional training. The resulting credentials would be recognised and portable between employers, and count toward recognised qualifications (Certificate III and IV qualifications, as well as the diploma-level and higher vocational pathways which will be developed as the system is implemented).

Credits would cover the teacher, resource, and material costs associated with the courses, as well as paying the worker their normal hourly wage for time spent in the courses (assessed at the average hourly NDIS-funded compensation received by them during the previous 12 months, as recorded by the DSTA). Workers would earn credit for one hour of funded training, for every 50 hours of NDIS-compensated work.[23] This accumulation rate would be sufficient to allow an NDIS worker logging average weekly hours (currently around 22 hours per week, according to NDS estimates) year-round to undertake one three-day (21-hour) course per year.

Allowing for $750 per course in teaching, resource, and material costs for a typical 3-day course,[24] and with paid time in the classroom evaluated at an average hourly rate of $35, this results in a total cost of around $1500 for a typical 3-day course. This represents around 3% of the annual salary, superannuation, and overhead costs for a typical NDIS worker. The cost, pro-rated over the worker's yearly NDIS workload, would add about $1.30 to the total NDIS-charged hourly cost of their services (less than 2%).

We assume that the portable training entitlement stage of the program will require five years to reach full operation (as workers accumulate new credits, and then identify preferred courses and qualifications to pursue). Once fully phased-in, a total of over 120,000 workers would be entitled to paid training opportunities, at an average rate of three paid days per year. The estimated total cost of the program would thus grow from $36 million in the first year, to $182 million per year once fully phased-in.

[23] For new workers, accumulation of credits would begin once they have completed the induction and foundation stages of training described above (since those programs are funded directly by government). For existing workers, accumulation of credits would begin immediately upon commencement of the program.

[24] The cost per student for teaching is higher on an ongoing basis than for the entry-level Induction, because of the more specialised, smaller-scale training contemplated.

Total costs:

We have also allowed for administrative expenses of $5 million per year for the Disability Services Training Authority (sufficient to cover 25 FTE staff plus operational expenses) and related functions. We have also provided for organisation-level investments in training, also financed through the Capacity Building Fund, of $10 million per year. All costs are covered by the NDIA through its CBF (endowed jointly by the Commonwealth and State governments).

The training program proposed here is ambitious, aimed at meeting the pressing need for skills and qualifications for the growing disability services workforce: including rapid skilling of the large numbers of new recruits coming into the sector, and career-long training and upgrading opportunities for the whole workforce. The immediate costs for induction and foundation courses are significant in the first years of the program, but then abate to modest ongoing levels (required to train a smaller steady-state flow of new recruits to the industry in future years). The costs for the ongoing portable training entitlement are more significant, but take some years to phase in. On average over the first five years of the program, total costs (including administrative and overhead expenses) average just over $190 million per year. The fiscal estimates are detailed in Table 2.

The total cost of the NDIS is currently estimated to reach $22 billion for fiscal 2019-20,[25] and more in subsequent years. Therefore, the combined expenses for all three stages of the training program, combined with new administrative costs and organisation-level investments, amounts to less than 1 percent of the expected costs of the overall NDIS. In other words, this proposal would involve an investment of less than 1 cent, for each dollar of overall NDIS funding, to develop high-quality skills and qualifications for this ambitious new social program. This is a small investment indeed, given the close relationship between the quality of service delivery, and the skills and capacities of the disability services workforce.

[25] See Tale and Buckmaster (2015).

Table 2 Fiscal Estimates for Disability Services Training Program ($ million)							
	Costing Assumptions	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**	**5-Year Average**
Stage 1	105K headcount (70K FTE); 2/3 disability support workers; 100% utilisation; 70K trained over 4 yrs, then 5K per yr; 50 hours at $25 + $250 course cost.	$30.0	$30.0	$30.0	$15.0	$7.5	
Stage 2	105K headcount (70K FTE); 2/3 disability support workers; 100% utilisation; 70K trained over 4 yrs, then 5K per yr; 90 hours @ $27.50 + $500 course cost.	$59.5	$59.5	$59.5	$29.8	$14.9	
Stage 3	210K headcount (140 FTE); 2/3 disability support; 90% utilisation; phase in to 123K per year trained by year 5; 21 hours per worker per year @ $35 + $750 course cost.	$36.5	$73.0	$109.5	$145.9	$182.4	
Disability Services Training Authority		$5.0	$5.0	$5.0	$5.0	$5.0	
Organisation-Level Investments		$10.0	$10.0	$10.0	$10.0	$10.0	
Total		**$141.0**	**$177.5**	**$214.0**	**$205.7**	**$219.8**	**$191.6**

IMPLICATIONS FOR THE SCHADS AWARD

A comprehensive new approach to investment in training will have implications for entitlements currently specified in the SCHADS modern award that applies to , including job classifications and pay structure. The SCHADS pay grid covers a range of direct disability support functions, but it is relatively truncated: there is limited opportunity for direct service providers (as opposed to supervisors and managers) to move up in classification and pay. Furthermore,, Cortis et al's (2017) analysis of the NDIS pricing model suggests that providers are often paying above the minimum pay rates specified in the SCHADS grid, because of the challenge of retaining valued and skilled workers.

In a tightening general labour market, exacerbated by the challenges of recruiting suitably qualified workers for the sector, there may be upward pressure on wages. In the context of the highly constrained NDIS pricing model, this implies that financial

pressures on providers will get even worse. While we recognise that the existing bargaining environment is not in the control of any single party, over time it is reasonable to expect that increased training across the sector (as envisioned under our proposal) should lead to higher pay rates, and a more comprehensive grid of classifications (related to the growing set of qualifications possessed by disability support workers). In other words, the SCHADS system of classifications will need to be extended commensurate with the acquisition by more workers of advanced vocational qualifications; there may also arise a need to ensure parity with workers in other health-related industries. A continual review of the NDIS pricing structures in relation to competencies, qualifications and career paths will be necessary in order to ensure that providers are able to both address their costs in relation to employment standards and improve quality standards.

Another implication of the proposed training scheme for the SCHADS award is the need to specify in the award that workers have a clear and protected right to use their accumulated training hours, and to enrol in courses that they choose.

Recommendations:

11. That parties to the SCHADS award consider how to develop and implement an extended structure of classifications and pay that will reflect the accumulating advanced vocational qualifications attained by disability support workers under the proposed portable training entitlement.
12. That the SCHADS award explicitly recognise the right of disability support workers to utilise their paid training entitlements in working hours, on course and vocational streams of their choice.

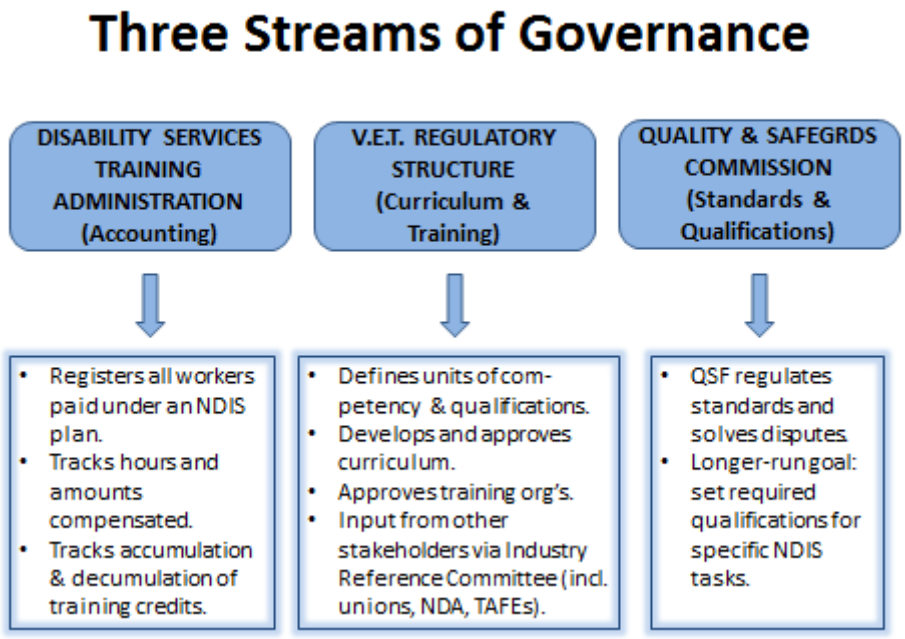
THE DISABILITY SERVICES TRAINING ADMINISTRATION

Our proposals for a new “ecosystem” of training and career-long upgrading in the disability support sector will require consistent oversight, an integrated capacity to account for entitlement s, and an ongoing liaison with the NDIA and the AQF. We propose the establishment of a Disability Services Training Administration (DSTA), located within the NDIS’s Quality and Safeguards Commission, to perform four specific functions:

- Ensure that quality and safeguarding standards set by the Commission are supported by initial and on-going training of the disability support workforce, particularly in response to regulatory requirements.
- Work with existing VET authorities operating in the sector to ensure and maintain relevance of qualifications, develop skills pathways that extend beyond Level IV, and facilitate the achievement of a high quality learning environment through RTOs.
- Administer individual learning accounts for disability support workers, including determining the financial value of training credits.
- Champion cultural change within the sector in respect of investment in training and skills development.

The regulatory model envisioned would require the coordination of three channels of responsibility, as summarised in Figure 4:

Figure 4: Regulatory Structure for Proposed NDIS Training Regime



While the DSTA would be located within the NDIS Quality and Safeguards Commission, it should maintain a degree of independence in its governance arrangements. Accordingly we recommend that the strategic direction and workplan of the DSTA be overseen and coordinated by a Steering Committee that includes the voices of people with disability, a representative group of industry stakeholders (including workforce representatives) and those currently involved in overseeing and delivering training for workers employed in the Disability Support sector.

Recommendations:

13. That the Quality and Safeguards Commission include an independently constituted Disability Services Training Administration (DSTA), with responsibility for tracking the portable training entitlement for workers across the disability support sector, and regulatory oversight of curriculum, training and quality assurance (in collaboration with relevant VET authorities).

VI. Summary and Conclusions

The NDIS is world-leading in its approach to providing supports to people with disabilities. Achieving its vision, however, requires an available workforce that understands the philosophy and values underpinning the NDIS and has the skills and training necessary to deliver the services that are required. It also requires high trust relationships between participants and their support workers, relationships that can only be built up over time, in a context of stable, high-quality work. Current policy settings place a large degree of responsibility on disability support workers, without providing them with the support or quality working conditions they need to deliver high quality services. This is particularly the case in respect of training and skill development. While the necessity of a skilled workforce is nominally acknowledged in NDIS policy documents, the reality is that this goal requires more meaningful funding, leadership, and commitment. Immediate investments are needed simply to recruit and train the large number of additional workers that are needed for the national roll-out in coming years. In the longer term, investment is also needed to ensure continuous upgrading of the skills and qualifications of the workforce. We have argued that this requires a change in the culture of the industry, including a core commitment by its government funders, that recognises training as an investment, and not just a "cost". Initial and ongoing training must be seen as a necessary part of delivering high quality support services to people with disability.

The proposal developed here for a comprehensive, well-funded training system fits well with the flexible nature of service delivery envisioned under the NDIS. Workers undertake a range of different tasks, for different NDIS participants, depending on shifting needs and demand patterns. Without a training ecosystem that recognises and adapts to that highly mobile work context, the industry will chronically underinvest in training and skills provision, to the detriment of both workers and participants.

Australians with disabilities are excited about the positive potential of the NDIS to meet their needs in a more respectful, flexible, and individualised manner. Society as a whole should be proud of the shared commitment that has been made to better meeting the needs of people with disabilities, and recognise that society will be much stronger thanks to better support and fuller participation. This positive potential, however, is put at risk by a failure to recognise the contribution made to this goal by a dedicated and skilled workforce, securely employed and paid fairly, and capable of delivering the best-quality services possible.

The training and skills development structure that has been described here is feasible, pragmatic, and affordable, and consistent with the founding vision that motivated the development and implementation of the NDIS. By emphasising that a commitment to quality benefits all participants in the sector – people with disabilities, workers, providers, and ultimately government itself – a consensus can be built that investing a very small proportion of total costs (less than a cent in each dollar of NDIS funding) in ongoing training will help to achieve the full potential that the NDIS's architects hoped for.

LIST OF RECOMMENDATIONS

1. All recognised foundation training for the industry should be based on qualifications registered through the Australian Qualifications Framework.
2. All training should be conducted by public or selected non-profit RTOs, and quality audits undertaken by ASQA to ensure that RTOs have the training infrastructure to deliver educational outcomes that are of the highest possible level of quality. Incremental funding should be prioritised towards TAFES as the highest-quality publicly funded RTOs.
3. Vocational pathways available to workers should be extended through the development of qualifications at Diploma and Advanced Diploma level on the Australian Qualifications Framework.
4. That the content of the new compulsory induction be reviewed (in consultation with all stakeholder organisations, including representatives of people with disabilities) to ensure that it includes a workplace component, and information about the requirements on workers under the proposed new Code of Conduct. Assessment standards should also be introduced to ensure that the learning objectives are achieved by all students completing the induction.
5. That it should be compulsory for employers to support workers to successfully complete the induction programme within 6 months of being newly employed.
6. That an accreditation and registration regime be introduced to support improvements in quality standards in the disability sector. Registration should

be based on the achievement of a minimum foundation qualification at Certificate III level; with the proviso that newly employed workers enrolled in a Certificate III could apply for provisional registration for up to 18 months.

7. That an independent Capacity Building Fund be established under the NDIA, jointly endowed by the Commonwealth and State governments, separate from the funding mechanisms associated with the NDIS unit pricing system.
8. The Capacity Building Fund would cover the full costs of compulsory induction and foundation training for newly hired disability support workers (and the cost of completing RPL procedures for existing workers), as a means of quickly boosting the number of skilled workers in the industry.
9. The Capacity Building Fund would also cover the costs of a portable training entitlement system, under which disability support workers accumulate credits for paid training hours and then utilise those credits to enrol in qualifying courses.
10. The Capacity Building Fund would also fund organisation-level investments in training capacity, by both public and qualifying non-profit RTOs, and by disability service providers.
11. That parties to the SCHADS award consider how to develop and implement an extended structure of classifications and pay that will reflect the accumulating advanced vocational qualifications attained by disability support workers under the proposed portable training entitlement.
12. That the SCHADS award explicitly recognise the right of disability support workers to utilise their paid training entitlements in working hours, on course and vocational streams of their choice.
13. That the Quality and Safeguards Commission include an independently constituted Disability Services Training Administration (DSTA), with responsibility for tracking the portable training entitlement for workers across the disability support sector, and regulatory oversight of curriculum, training and quality assurance (in collaboration with relevant VET authorities).

JOINT STANDING COMMITTEE ON THE NATIONAL DISABILITY INSURANCE SCHEME

Thursday, 14 June 2018

Members in attendance: Senators Gallacher, Steele-John and Mr Andrews, Ms Husar.

Terms of Reference for the Inquiry:

To inquire into and report on:

Market readiness for provision of services under the NDIS, with particular reference to:

a. the transition to a market based system for service providers;

b. participant readiness to navigate new markets;

c. the development of the disability workforce to support the emerging market;

d. the impact of pricing on the development of the market;

e. the role of the NDIA as a market steward;

f. market intervention options to address thin markets, including in remote Indigenous communities;

g. the provision of housing options for people with disability, with particular reference to the impact of Specialist Disability Accommodation (SDA) supports on the disability housing market;

h. the impact of the Quality and Safeguarding Framework on the development of the market;

i. provider of last resort arrangements, including for crisis accommodation; and

j. any other related matters.

WITNESSES

BREBNER, Associate Professor Christine (Chris), Dean of Education, College of Nursing and Health Sciences, Flinders University

HAYWARD, Professor David, Director, Future Social Service Institute

STANFORD, Dr Jim, Economist and Director, Centre for Future Work, Australia Institute

Evidence from Dr Stanford was taken via teleconference—

Committee met at 09:31

CHAIR (Mr Andrews): I declare open this hearing of the Joint Standing Committee on the National Disability Insurance Scheme for the inquiry into market readiness under the NDIS. These are public proceedings, although the committee may determine, or agree to a request, to have evidence heard in camera. I remind all witnesses that in giving evidence to the committee they are protected by parliamentary privilege. It is unlawful for anyone to threaten or disadvantage a witness on account of evidence given to a committee, and such action may be treated by the Senate as contempt. It is also contempt to give false or misleading evidence to a committee.

If a witness objects to answering a question, the witness should state the ground upon which the objection is taken and the committee will determine whether it will insist on an answer, having regard to the ground which has been claimed. If the committee determines to insist on an answer, a witness may request that the answer be given in camera. Such requests may be made at any other time.

Could I please remind those contributing that you cannot divulge confidential, personal or identifying information when you speak. If you wish to supplement your evidence with written information, please forward it to the secretariat after the hearing.

I welcome Associate Professor Chris Brebner, from Flinders University; Professor David Hayward, from the Future Social Service Institute; and, from the Centre for Future Work, Dr Jim Stanford. Do you have any comments to make on the capacity in which you appear?

Prof. Hayward: I'm a professor of public policy at RMIT University as well as being the director of VCOSS-RMIT Future Social Service Institute.

CHAIR: Thank you. Could I invite you, if you would like, to make some opening comments.

Prof. Brebner: The rollout of the NDIS has had an impact on service providers in South Australia. We've been running a project, funded by the Department of State Development, in northern Adelaide looking at the development of the allied health workforce in the northern suburbs through placement engagement. We've partnered with eight different service providers in northern Adelaide and have also interviewed a large number of key stakeholders about their experiences. What we've found is that there's been a significant impact on the training of allied health professionals to work in the service context for people with disabilities. We've found that people have been withdrawing placement opportunities for students to have work-integrated learning experiences, primarily because they're very anxious about billing compliance within the NDIA framework.

They're also talking about the short-term nature of plans for individuals with disabilities impacting on the services that they deliver and therefore how they integrate students into those. And they're concerned that the billing mechanisms do not promote best practice for allied health service delivery, and therefore they do not wish to involve students in those services. For example, interpreters are not able to be charged for, say for families who speak a language other than English in the home—they're not able to provide services in those languages and actually bill for those services.

We've found that a high level of anxiety is being communicated to students, and this anxiety is about financial distress due to uncertainties about payment, and that's enhanced by some of the problems around the payment of fees and delays in payments. And there has been significant uncertainty about plans. With plans rotating on a three-monthly or one-yearly basis, that's making it very difficult for people to plan their services.

We see a need to train students to be flexible service providers in a disability context in this new market-style environment. So we need some clarity and consistency for service providers about the plans and the services they can offer and how they can bill for those. We'd recommend explicitly being able to bill for student-led services, as long as they're providing adequate supervision for those students. We'd also recommend flexible pricing for services that are delivered to enable innovative models of service delivery. Thank you.

CHAIR: Thank you. Professor Hayward?

Prof. Hayward: I will begin by acknowledging the traditional owners of the land on which we meet, the Wurundjeri people of the Kulin nations, and pay my respects to elders past, present and future. The Future Social

Service Institute has the objective of looking at the workforce issues that confront health care and social assistance.

There is a graph that I could happily distribute to people, indicating our main concern. It's an eye-catching graph because the most significant growth in the labour force over the next five years and the past 10 years has been in that broad healthcare and social assistance workforce. Over the next five years, it'll grow by about a quarter of a million, Australia wide, and the next fastest growing segment of the workforce will be professional scientific services.

I raise that as an issue because most people aren't aware of the rapid growth of this sector. Yesterday's financial review picked it up, but they carried it in a way that was misleading in that they only talked about it as 'health care'. It's health care and social assistance.

The driver of the growth is the NDIS—that's No. 1—and, I think, in particular, the ageing of the population structure. In Victoria it's family violence reform and also other community services reform. But what we are looking at is a rapid growth of what we call the social economy. It's the fastest-growing part of the Australian economy. It is being driven very heavily by government funding, but what's happening is that the workforce is not being looked at in a uniform way. If you look at what's happening in Victoria, there is now a commitment to a gold-plated family-violence workforce, and a strong commitment towards professionalisation and new qualifications, requiring the primary workforce to have at least a social work qualification.

If you look at aged care and the federal government's recently convened task force looking at aged-care workforce issues for the future, chaired by John Pollaers from Melbourne university, his conclusion is that it's time to dramatically improve the pay, conditions and qualifications for the aged-care workforce. His argument is that, without that, there is no way on earth we will meet the needs of generating an extra million people working in aged care by 2050, and he's recommending a significant amount of improvement in working conditions.

Sitting in the middle of that is the disability workforce. One thing that has struck me about the NDIA and the NDIS is that there has been too little attention paid to the disability workforce and the qualifications needed, and not just at the vocational level but at the higher education level. Last week, I heard Professor Pollaers talk at a CEDA conference, and he made the point that he has talked to the NDIA about the need to dramatically improve pay and conditions across the sector. His view is that the NDIA has been distracted by other concerns, but he can't wait, he said. So he's pushing ahead with mechanisms to make the aged-care sector the most attractive part of the workforce to be in. I think what's going to happen is that, over time, without serious attention being paid to it, we'll be looking at a crisis in the workforce in this most important sector. Without a really good workforce in disability, and without a really impressive set of pay and conditions to make it every bit as attractive as family violence, aged care or other parts of the community services workforce, the NDIS will not meet its objectives. So that's really our basic argument.

I want to finish by making the point that I think that making it far worse at the moment are the qualifications that are available through vocational education. They are not fit for purpose. The more consultation we do, the more it is really clear that they have been degraded over the years. And it's no wonder that people with disabilities say that people with those cert IIIs and cert IVs that are coming out are not the sort of people who should be working in the sector. They say repeatedly that often people have cert IIIs and cert IVs but don't have the values needed to work in the sector. That tells you that the curriculum is not fit for purpose. If people are coming out with cert IIIs and cert IVs and diplomas and they aren't able to treat people with disability in a dignified and good way, that means that the curriculum is failing, and it's failing critically. With that, I'm happy to take any questions on my submission.

CHAIR: Thanks, Professor Hayward. Dr Stanford?

Dr Stanford: Thank you very much to the committee. I'm very grateful for the opportunity to meet with you, even by teleconference. I wish I could be there in person. I'll be speaking mostly today from a report which we published in April this year and which we developed in conjunction with the New South Wales branch of the Australian Services Union. I do want to acknowledge the work that was done by my co-author on that report, Dr Rose Ryan, who is unable to join us today.

The gist of our report I think builds very much on the previous two opening statements. We do want to address both the potential of the NDIS to meet the needs of people with disability in a flexible, individualised and respectful manner, as is the intent of the decentralised, market-oriented delivery model on which the NDIS is based. But we also recognise the challenges of doing that, in the context of a workforce that, in part as a result of that market-based delivery model, neither experiences stability in job and employment patterns nor has access to ongoing training and skills-acquisition opportunities. What we've tried to do is to develop an innovative model for

how, within the context of the market based system, workers who are providing those services would have opportunities, both when they join the industry and on a career-long basis, to acquire skills and credentials that would improve their jobs but, most importantly, improve the quality of service that is delivered to participants in the program.

The full report of course has been tabled with the committee, but I think what I'd like to do is just to summarise the main features of the training model that we would propose. We imagine a system based on three tiers of training. The first tier would be induction training, consisting of a minimal orientation and training for new recruits to the industry of 50 hours training total, 30 in the classroom and 20 in a supervised work setting. The second tier would be a foundation level of training that, in our judgement, should be compulsory training and recognition of a credential for people to work in this field, that would be equivalent to a certificate III level of training from the existing vocational education and training system, that would consist of 90 hours of classroom training and 20 hours of supervised on-the-job training.

The third tier—and, I think, the most important and innovative aspect of our proposal—would be to establish an entitlement for workers providing disability services funded under the NDIS for a portable training entitlement. As they work in the field and accumulate experience, they would gain entitlement to certain numbers of hours of paid training. The training would be covered, and they would be paid their average wage while they were taking the training. We've proposed setting this entitlement at a ratio of one hour of paid training entitlement for every 50 hours of work performed under an NDIS compensated service. This would work out so that a person working average hours in disability services provision—as you're aware, the incidence of both casual and part-time work in this sector is very high. Average hours are currently between 20 and 22 hours of work per week. Someone working at that average would gain entitlement to three days of paid training per year. We think that is on a par with other human service professions which are also required to conduct ongoing training and skills development as part of their part responsibilities.

In addition to establishing the fiscal mechanisms that would provide for this entitlement, including a system for tracking how many hours registered providers of disability services are working and tracking their growing entitlements to the paid training leave as they work through their careers, we would also need to see a parallel development of career paths, classifications and pay tiers that would match the accumulation of credentials that this system would allow. This is because, of course, in a field as diverse as disability services, there are all kinds of specialised services and specialised areas that people in the field will want to concentrate on. But if they're going to have the proper incentives to do that, even though the cost of the training will be covered and they will be paid their normal wages while they're doing it, they have to know that the training will be reflected in growing credentials for themselves and growing opportunity to match those credentials with defined, specialised career paths and pay classifications. That would be an important and complicated parallel task in addition to just providing the training opportunities.

We've done some rough costings of the proposal—of all three tiers of our proposed training system. The costing is described and the assumptions are described in the full paper. The bottom line is that we think it's a very incremental and modest investment in the capacity of the NDIS workforce to make the most of the promise of this system. In fact, if we want to realise the potential of a flexible, individualised service delivery model, as was hoped, we are going to have to provide the people providing those services with sufficient stability and quality in their job and the opportunity to accumulate ongoing skills and credentials.

We estimate the total cost, on average, over the first five years would be around $190 million per year in total. That would cover all three of the tiers of training we're imagining, plus the cost of administration, including a very close relationship with the qualifications management system within the NDIS, as well as continuing some funding for training provided at the group level by major providers. So that $190 million per year works out to less than one per cent of the expected total cost of the NDIS.

We think it would be best for that to be provided through a separate stream of funds rather than trying to build the cost of this training into the unit price system of the NDIS. In experience, embedding a certain unit cost for training within the overall unit price, first of all, creates an unnecessary competition for resources between the workers getting the training and the participants, and, secondly, it has just been very inadequate. So we will propose a separate stream of funding we call a capacity-building fund to cover the three tiers of training, plus the associated administration. It's an innovative proposal that fits with the spirit of the NDIS for a flexible, individualised model of service delivery but one that recognises that will not on the basis of the digital platform that matches workers with participants as if you were ordering fast food from Deliveroo. That's the downside risk of this current model. Instead, we're proposing a model where workers would have the capacity to increase their skills and qualifications throughout their careers.

That's a summary of our proposal, and I look forward to your questions and discussion. Thank you again.

CHAIR: Thank you Dr Stanford. I will lead off to whoever would like to respond. It seems to me that there are at least three areas of concern here: the first is the quantity of the training—the number of people available to do the work; the second is the quality aspects; and the third is the pricing, which has an impact on both the others. Can I start with the numbers. On current provision of training, is there any ability to estimate what the shortage might be when it's fully rolled out if we don't do something more?

Prof. Hayward: We have done some modelling where we reckon it's somewhere around a 6,000 to 10,000 shortfall per annum, but that's across the social and community services—it's not just disability. Unfortunately, one of the things that are most frustrating is that we're looking at this rapidly growing part of the economy but the data just aren't there to tell us all the answers that we'd like. It just reflects the fact that it was previously thought of as welfare, but I think now we're increasingly realising it's actually a crucial part of the economy, and it's time for the data to catch up to need.

Senator GALLACHER: The Productivity Commission indicated that no matter what the training or the growth in the workforce in Australia is achieved the workforce in forward would need to be supplemented by immigration. Do you have a view on that?

Prof. Hayward: The Productivity Commission sort of hedged its bets a bit. I think that what it was saying was that in the short term there's a need to be pragmatic about it, and I agree with that, but I think what they've also hinted at is—and it's something we've found—that attracting young people into this sector is by no means easy, partly because people are caught with images of the past rather than what the future might look like. We've invested heavily in renewing the curriculum and making sure it's a really enjoyable experience. With the students that we've had we've had a really high rate of completion—95 per cent of the students have completed. If you have a look across the system at the moment, with the vocational qualifications about 35,000 students a year start but only about 10,000 finish. That's about as inefficient a system as I could possibly imagine. Just imagine if you were able to close that gap, but you're not going to close the gap under the current system, because too much of the qualifications and the organisations delivering them aren't fit for purpose.

CHAIR: That dropout rate seems to be much higher than is generally the case across tertiary studies.

Prof. Hayward: It is. Sadly, there's been a counterargument put up: 'That's because people are putting their toe in the water. They've got what they've wanted out of it and then they've decided they don't want to continue.' That's a terrible answer. If universities had a completion rate that low we'd be slammed, quite appropriately. It's a very, very inefficient way. Imagine all the costs of enrolling people and doing all that sort of stuff for them to drop out. This curriculum should be really exciting. One of the great things we've found from our cert. III students is that they've said they'd begun doing the course and they weren't sure whether they'd do disability or aged care, but they so enjoyed the experience—because we're getting people from industry to come and talk to them, people from, say, Women with Disabilities Victoria. We've had some really eye-catching presenters. They've gone off to film nights, they've met film producers who are producing films on disability advocacy. And they've said this has changed their whole view of the world. Their whole view of people with disability has shifted. Instead of seeing people with disability as the 'other' they see them as people, and it's altered their whole—so what your seeing is an education experience that's given them a sense of humanity. How good is that? I was thinking of these very young women predominantly from disadvantaged backgrounds. Wouldn't you want everybody to have that experience? I would.

CHAIR: Is that figure of 6,000 to 10,000 per annum a standard figure, year after year, or does it compound?

Prof. Hayward: Yes. Remember it's across the sector. Aged care and disability are the two big ones. Aged care has the really big challenge, but disability is sitting in there too. It's been thrown a little bit off balance because of the argument put forward by disability advocates that it's about choice and control, so we've taken attention away from what that—the flip side is what are the workforce needs? What do we need in terms of people who have got the skills that are required?

I should add one other point. We're caught up with a very modernist view of education at the moment where we think about certificates, diplomas and degrees. The latest thinking in tertiary education is: how can you break down qualifications into microcredentials? How could you get little bits of qualifications? Begin with this: the ethics of care. It's a little unit that might take, say, 20 hours with a microcredential and a badge that comes with it. Work for a little period of time and then come back and build up another microcredential. Then, after a period of time, what you might have is the equivalent of a degree that enables you to come in and go out and pick up majors and minors that enable you to work across what I think is a really exciting, rapidly growing workforce, if that

Predictability and control in working schedules

Dr Olav Muurlink B.A. (Hons.) M.Phil. Ph.D. MAPS

Biography:

Dr Muurlink is a member of the Australian Psychological Society and the Working Time Society (Switzerland). He is a senior lecturer in organisational behaviour at Central Queensland University (Brisbane), and Senior Research Fellow (adjunct) at Griffith University (Griffith Institute of Educational Research). Dr Muurlink is a member of the Central Queensland University's Academic Board, and the Human Research Ethics Committee. He is also chair of management of the international charity Co-operation in Development (Australia) Inc (CO-ID), and head of country, Bangladesh, of CO-ID and has held management positions in manufacturing and media companies in Australia and overseas.

Previously Dr Muurlink has held positions at the University of St. Andrews' Environmental Policy and Research Unit lead by Professor Terence Lee FBPsS, and Griffith University's Centre for Work, Organisation and Wellbeing, and was later later senior research fellow at the Centre for Learning Futures. He has also held senior management positions in manufacturing and media firms.

His PhD studies were conducted at Griffith University under the supervision of health psychologist Associate Professor Frances O'Callaghan and Emeritus Professor Drew Nesdale. He gained his undergraduate qualification at Charles Sturt University winning the 1990 University Medal, completing his masters at the Psychological Laboratory at the University of St Andrews with distinction on a project relating to the perception of risk.

1.0 Overview

This report relates to the current four-yearly review of modern awards being conducted by the Fair Work Commission, in particular common issue proceedings concerning part time employment (AM2014/197) and casual employment (AM2014/196) ('the Common Issue Proceedings'). These proceedings include claims to vary the part time work provisions in the Social, Community, Homecare and Disability Services Industry Award 2010, Aged Care Award 2010 and Nurses Award 2010 ('The Awards'). This report includes a

- review of work on scholarly work on unpredictable patterns of work and the effect of a roster on workers' well-being (with an emphasis on material that is specific to the types of workers covered by the above Awards); and

- review of scholarly work on the impact of lack of control over patterns of work on workers' well-being (with an emphasis on material that is specific to the types of workers covered by the above Awards);

2.0 The literature search

Comprehensive searches were conducted using search terms commonly and internationally associated with non-standard shifts and working patterns. In addition to the searches (including wild card searches) conducted in Google Scholar (see Table 1) a further non-exhaustive search on "control over * hours" was conducted. This search was not exhaustive because comprehensive searches returned too many results to enable complete coverage.

Note that while perhaps a decade ago it would be considered inappropriate to base scholarly literature reviews on Google Scholar searches alone, there has been a significant shift in thinking in the last decade. Early studies criticised the coverage of Google Scholar, but more recently, it has become clear that Google Scholar has matched or overtaken rivals. For example, Gehanno et al in 2012 reanalysed searches in 29 systematic Cochrane reviews (the gold standard of reviews with a medical focus) and found that ***100%*** of articles drawn from specialist medical databases were found in Google Scholar (Gehanno, Rollin, & Darmoni, 2013). This is in addition to earlier studies already confirming its superiority in accessing less mainstream scholarly material (Falagas, Pitsouni, Malietzis, & Pappas, 2008).

3.0 Unpredictability and its correlates

In Australia, there is relatively little regulation pertaining to the amount of consecutive hours worked, or the minimum length of rest periods, relative to for example, the US and Europe. However, regardless of regional variation, there is little focus on the *predictability* of work patterns. Australian working patterns continue to follow an international trend toward greater variety. Where once the police officer or nurse stood apart in terms of their working hours, now there is a large and growing cohort of workers from a range of occupational categories whose work day is characterised by unpredictability and lack of control over work hours, in addition to lack of real or perceived job security. In Australia in the twenty year period from 1982 alone, the percentage of all employees who were casual more than doubled to 27.3% (Campbell, 2004) and these casual workers generally over-represent the number of workers who experience a unsteady ‘beat’ in their working week. The ABS (2009) notes, for example, that variability in working days is more than twice as common amongst casual employees (24%) than other employees (11%).

I will deal in this section, as cleanly as possible, with the issue of unpredictability/ variability/flexibility/inconsistency in working patterns, and separately with the issue of control, but the two broad constructs are closely related in practice.

The arhythmicity of the working week for an increasingly large proportion of workers contrasts with the traditional regular seven-day work/rest ‘beat’ (Zerubavel, 1989, p. 136) which forms the basis on which we have traditionally considered occupational health and safety. This “weekly rhythm” (Almeida, 2004, p. 128) is influenced by work schedules (Zerubavel, 1989), as well as other factors, including social norms and conventions, and biological parameters such as the circadian and other ‘clocks’ that govern our response to light and the seven day week.[1]

[1] There is evidence, for example, of a circaseptum (seven-day) rhythm evident in both human, animal and even plant (Duca, 2015) studies.

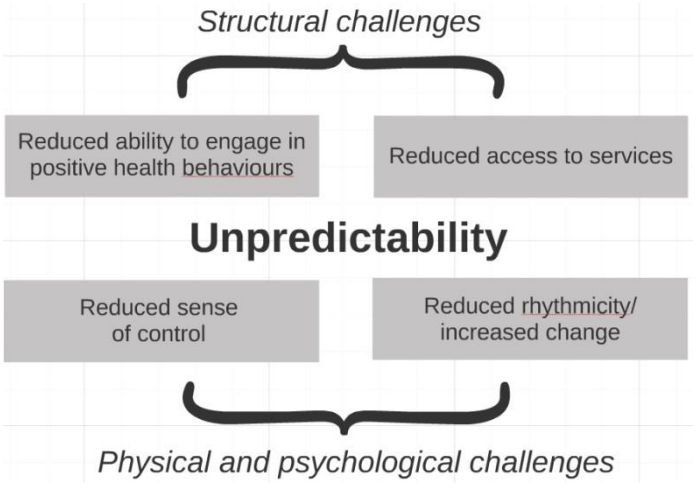
Contrast the increasingly complex working week (featuring night work, shift work, weekend work, overtime, compressed working weeks and on-call patterns) with the relatively predictable and steady beat of non-working life: Saturday sport, children's school hours, television or public transport scheduling. Not surprisingly, then, rhythmicity has clear implications for a worker's ability to maintain work-life balance. Increased variability in working hours has not been matched by increased flexibility in non-work activities. Hofäcker and Konig (2013) found that rather than the quantum of working hours, *this* issue was critical in predicting work-life conflict.

"Flexibility" is a broad term that does not specify *for whom* the flexibility exists, and who controls that flexibility and it is important to make the distinction between worker and employer-controlled variability. Giovanni Costa, a past chairman of the International Commission of Occupational Health Scientific Committee on Shift work and Working Time, thus prefers to split 'flexibility' into two terms, two very different ways of looking at non-standard working schedules. One, which Costa et al (2006) calls 'variability', reflects employer control over working hours designed to respond to the evolving requirements of the business and service sector. By contrast, 'flexibility' refers to "individual *workers'* discretion and autonomy to adjust working hours to reduce work-life conflict and better accommodate other activities needs and responsibilities' (Costa et al., 2006, p. 56). The two have an almost opposite relationship with employee control, variability tending to reduce it, flexibility tending to increase it. Flexibility is thus often associated with employee wellbeing[2] while variability is high on the list of desired employer outcomes. The US Survey of Employers in the Low Skill Labor Market report that applicants' willingness to be flexible about work hours is prominent in employer's preferences for low-skilled new hires (Acs & Loprest, 2008).

Unpredictability in the workplace has a range of corollaries for employee physical, psychological and social health (see Figure 1). I will first focus on two aspects of unpredictability that relate to *structural* changes in time management.

[2] Costa et al found in fact using a sample of 21,505 European workers, that health and psychosocial well-being were favourably associated with higher flexibility and lower variability. Notably, flexibility was the *strongest* predictor of job satisfaction.

Figure 1: Overview of the challenges posed by unpredictable or less predictable work schedules.



3.1 Structural challenges to health posed by unpredictability in time scheduling

Firstly, it results in the reduction of employee ability to engage in positive health behaviours. If work has a predictable 'beat', health behaviours can be more easily synchronised with work, for example family meal times and team sports (Sargent et al 2015). Unusual hours tend to be significantly associated with an increase in smoking and alcohol consumption (Bushnell, Colombi, Caruso, & Tak, 2010) and lack of exercise (C. Thomas & Power, 2010), and are reliably associated with long term increases in BMI, particularly in countries such as Australia and the US. Some of these consequences of irregular work patterns, such as drinking alcohol, may have secondary health impacts, for example, further increasing sleep impairment (Vitello, 1997) which in itself has health consequences.

Crouter and Maguire (1998) refer to the clash between different schedules as closing "windows of socialisation" but equally, erratic schedules close windows of self-care. Bittman's careful diary studies (2005) using ABS data, for example, finds that those who work on Sunday, for example, are less able to undertake activities usually associated with Sunday, notably sleeping in and undertaking personal care activities such as doing one's teeth or eating with family members. The minutes 'lost' in these traditional non-work periods of the week are not fully recovered elsewhere in the week (Bittman, 2005; Craig & Brown, 2015). Higher wage individuals, however, are able to recover 'lost' time more effectively; for lower wage earners, there is less elasticity in a 24-hour schedule. As Ennis (1968) suggested in the wake of dramatic increases in employment in the 1960s, "higher level occupations …[may] have the same amount of leisure time [now as previously]because they spend less time (but maybe more money_ on maintenance-nurturance" (p. 556), spending money for example on cleaning services to 'buy back' time. Time and money have long been linked in scholarly literature in disciplines as distinct as economics and psychology. "Consumers not only spend time and money to

acquire products and services but also often use time as a substitute for money and vice versa" (Jacoby, Szybillo, & Berning, 1976, p. 320). So for lower paid workers, these changes to work schedules have amplified work-life balance implications.

Secondly, unpredictability may reduce the ability of the individual to access services that follow a predictable 'beat'. These may include, relatively more trivially, access to health maintenance services such as gyms or good quality food options (as opposed to fast food options, which tend to have higher degree of accessibility regardless of time), or more significantly, access to medical facilities. There is evidence that workers who experience accidents at non-standard hours may well suffer a worse fate than those who work during standard working periods. Crowley et al (2009) reviews a number of relatively recent studies of death rates by day, suggesting that higher mortality rates are associated with poorer treatment available on the weekends in hospitals. This may be due to lower staffing on weekends, or it may be due to those who are present at hospitals on weekends are suffering from greater weariness accumulated during the working week. (The weariness effect on medical professional's effectiveness is measurable: Thomas et al (2012) found a relationship between the number of hours a surgeon worked—independent of all other variables—and the increased risk of complications when performing pulmonary lobectomies for example, while Virtanen et al (2009) found relationships between work stress and hours and hospital-associated infection in patients.) Studies by Crowley and others on off-peak mortality (e.g. Bell & Redelmeier, 2001; Epstein, Barmania, Robin, & Harbord, 2007; Hamilton, Mathur, Gemeinhardt, Eschiti, & Campbell, 2010) suggest that medical services are not evenly spread around the clock or the calendar week.

4.0 Physical and psychological challenges of unpredictability

4.1 Reduced sense of control

The overwhelming evidence from health psychology is that a sense of control (which needs to be distinguished from actual control, even though the two concepts are clearly related) is one of the most critical psychological variables in both directly and indirectly determining health responses to stressors such as work conditions. I will review some of the larger studies that relate specifically to control in the workplace, however, more generally, a stronger sense of control is associated with better health outcomes, fewer symptoms, faster recovery from illness, and even longer life (Lachman & Weaver, 1998a). Animal studies confirm that depriving even laboratory animals of control over the environment will lead to premature and sometimes otherwise unexplained death (Gatchel, Baum, & Singer, 1980).

Even small amounts of 'actual' or 'perceived' control can have significant and measurable impacts on health outcomes, and to anticipate a later section of this report, *change* in degree of control (in particular a reduction) can itself be negative, while higher levels of stress combined with loss of control (as in the animal studies alluded to earlier) can have catastrophic effects. When residents at another nursing home had their feelings of choice and personal responsibility over pot plants in their rooms curtailed, Rodin and Langer (1977) even observed a significant increase in mortality, an

early study that influenced the later inclusion of control in epidemiological studies of occupational health.

Work stress is in fact now commonly defined as a combination of work *demand* with work *control* (Karasek et al., 1998), and a significant component of this sense of control relates to *control over work hours.* Perceived control over working hours correlates highly with overall sense of job control, (Ala-Mursula, Vahtera, Kivimäki, Kevin, & Pentti, 2002). Job control is thought to ameliorate the role that job demands place on human health, with a job that places high demand on the worker without concomitant high job control regarded as high strain work, which has in turn been associated with a very broad range of negative physical and psychological health outcomes: coronary heart disease (Kivimäki et al., 2012), dementia in late life (Wang, Wahlberg, Karp, Winblad, & Fratiglioni, 2012), depression (Siegrist, 2008) and illness determined through absenteeism (Niedhammer, Sultan-Taïeb, Chastang, Vermeylen, & Parent-Thirion, 2012) and disability pensioning (Laine et al., 2009).

One of the most significant epidemiological studies looking at control in the workplace, Kopp et al (Kopp, Skrabski, Szántó, & Siegrist, 2006), is worth examining in greater detail. Working with a very large Hungarian dataset, the Kopp team found that low levels of perceived control at work, along with job insecurity and a high weekend workload were the best of the working-time predictors of premature cardiovascular disease mortality for men, and also highly predictive for women. The Kopp studies (Kopp et al., 2006; Kopp, Skrabski, Szekely, Stauder, & Williams, 2007) are particularly well assembled, although their measure of control is a single item "how much can you influence what happens in your working group?" Control at work is likely to be multidimensional (Loudoun, Muurlink, Peetz, & Murray, 2014; Wergeland & Strand, 1998). However—remarkably—this single item measure of control was the second strongest work-related predictor amongst female and male workers of premature death from cardiovascular disease (Kopp et al 2006) and the single most powerful predictor of female ischaemic heart disease mortality. To put this in perspective, the correlation between the strongest single demographic or behavioural predictor, education and premature death from heart disease is between 0.385 and 0.599, while the correlation between control and heart disease lies between 0.188 and 0.344. Education increases sense (if not reality) of control, and when factoring education and other classically-associated variables such as drinking and smoking into account, unusual hours and low control at work still accounts for upwards of 10% of the variation in death rates from heart disease. In modelling predicting death, this is an extraordinarily large proportion

In an earlier Kopp study (Kopp et al 2005), the same job control was examined in relation to common measures of depression and the WHO wellbeing score. In bivariate analysis the connection between control on the one hand and depression and wellbeing was very significant. In multiple regression models, where other factors are taken into account, sense of control (and job security) remained an important predictor of wellbeing, but not of depression, although other studies show depressive symptoms *are* associated with depressive symptoms, after adjusting for age and gender (e.g. Steptoe, Tsuda, & Tanaka, 2007). In the Kopp study job control and security were the most important work-related determinants of wellbeing (ahead of working hours, income, job satisfaction or work troubles). It is important to note that depression in and of itself is an independent risk factor in the development of cardiovascular disease.

There are studies, not surprisingly, looking at the issue of control over work scheduling in the care sector specifically. An Australian study (Pisarski, Lawrence, Bohle, & Brook, 2008) found that nurses who judged their work environment as more controllable reported reduced work-life conflict and superior psychological well-being, with the work-life conflict finding particularly robust. Karhula et al (2013) measured job control with Karasek's Job Content Questionnaire and used job strain at a ward level rather than an individual level to do their comparisons. This reduces the subjective element of measuring control and demand. Job strain was associated with cognitive and physical workload perceptions. Sense of control has also been strongly associated with another, less direct marker of wellbeing: intention to leave the profession and absenteeism. Dalton and Mesch (1990) found that both markers of discontent went down when a system of nurse-controlled flexible rostering operated consistent with findings elsewhere that nurse sense of control is associated with lower turnover intentions (Weisman, Alexander, & Chase, 1981) in common with findings from other professions.

While the evidence that lack of control over work characteristics has serious health consequences, there is also a more positive body of evidence emerging that employees given greater control over, for example, work scheduling, can experience positive outcomes. These outcomes are also measurable in terms of outcomes valued by employers (such as lower turnover and greater productivity).

Barton et al. (1993) examined individual choice and shift system tolerance, finding greater tolerance was associated with greater control over work hours[3]. Either regular or flexible (worker controlled) rostering was found to lead to a greater sense of control than irregular or rotating shifts. In a more recent example from the work setting, however, Garde et al (2012) implemented self-rostering in employees, and found favourable consequences for health, stress and recovery, without changing actual working hours. In a study of police officers, Vila (2006), analogously found that those who preferred to work evening hours did not experience the same negative effects as those who were assigned to shift work non-voluntarily. More generally, Costa et al's (2006) analysis of a European dataset of 21,505 participants – a Third European Survey on Working Conditions found that *flexibility* had positive effects on health. Mikko Harma (2006), a specialist in working time at the Finish Institute for Occupational health[4], believes that other than regulating overtime or excessive hours and provisioning more sleep-friendly principles into roster design, the best way to decrease the negative health effects of work hours in general would be to "increase individual work-time control" (Härmä, 2006, p. 502).

However, another overarching variable here is socioeconomic status, or at least job role. Control over work variables, not surprisingly is significantly determined by rank: that is, more senior positions (often associated with higher income) perceive that they have greater control over their work conditions. Where lower income workers perceive a high sense of control, their health levels are remarkably comparable to that of higher income workers (Lachman & Weaver, 1998b). Control requirements may also differ by occupational level. Stein (2015) looked at different occupational levels within the US

[3] Wilson (2002) recommends that regular shift rotas are superior due to the ability of staff to organise personal and social lives, and I will deal specifically with the issue of regularity and change.

[4] Prof. Harma's recent work includes examinations of shift ergonomics/working hours in nurses.

health care profession, ranging from physicians to certified nursing assistants and showed how different kinds of control over work hours impacted differently on different occupational levels. Stein found, for example, that physicians were stressed by having the *ability* to work extra hours, while for low level workers, the desire to work fewer hours than 'offered' was a significant stressor. An hours mismatch was not a significant stressor for higher levels of health care workers, while supervisor pressure was not a significant stressor for entry-level positions—possibly because lower level employees have different expectations of supervisor behaviour.

These findings about control are so universal as to be considered almost a rule. The exact mechanism by which sense of control impacts on human health is not fully understood, however. It does appear to relate to coping resources, and these differ between individuals. "The emotional impact [of stress]," Frankenhaeuser found, is "determined by the person's cognitive appraisal of the severity of the demands in relation to his or her own coping resources" (Frankenhaeuser, 1986, p. 101). Amongst the resources that the individual can draw on (apart from wealth in giving sense of freedom and control) is support offered by supervisors or colleagues which can help ameliorate the impacts of a uncontrolled or uncontrollable work environment (Pisarski et al., 2008).

There are a number of work scheduling variables that have been associated with sense of control. A qualitative study of casual employees in five star hotels in Sydney found marked differences sense of control between permanent and casual staff (Bohle, Quinlan, Kennedy, & Williamson, 2004). Lower sense of tenure may be a contributing cause for the negative impacts of unusual work schedules (Brogmus, 2006). In a study of Scandinavian nurses, Abrahamsen et al (Abrahamsen, Holte, & Laine, 2012) note that "under-employed nurses frequently take extra shifts at short notice to reach desired working hours" (p. 70). For these workers, increased irregularity in hours may be a function of their choice. These choices may have idiosyncratic reasons not associated with working hours. In studies I have co-authored of heavily over-worked shift workers, it is obvious that there is always a proportion of staff, for example, which *prefers* to work nights, not for the additional money, but because of the absence of supervisory staff.

In the following section I will be examining the role of sleep in mediating unpredictability of work practices in determining health, but it is worth pointing out that studies show that sense of control over work variables has itself been related to key sleep quality (Smith & Iskra-Golec, 2003).

4.2 Change and arhythmia

Like control, change has a long relationship in the scholarly literature with negative health effects. There are a number of studies looking specifically at major (divorce, marriage, moving house and so on) and minor changes in life showing significant associations with negative health outcomes. These studies, such as the Americans' Changing Lives Study, tend to show a close relationship between socioeconomic status and negative life events that constitute major changes, and that a simple 'count' of

negative life events is positively associated with mortality (Lantz, House, Mero, & Williams, 2005). Remarkably, minor life events ('hassles') also retain this significant relationship with serious health outcomes (DeLongis, Coyne, Dakof, Folkman, & Lazarus, 1982). This relationship between change and health outcomes holds true for psychological outcomes such as depression (Kendler et al., 2010) or physical health outcomes such as breast cancer, with Lillberg et al (2003) suggesting immunologic and other hormonal changes, or changes, as I proposed earlier, in positive health behaviours that in turn could trigger negative health effects. Change is also capable of directly interrupting sleep, and circadian disruption in turn is a well-established pathway to health impacts.

However, a new US study (Tamaki, Bang, Watanabe, & Sasaki, 2016) found that even sleeping in a new bed takes at least a day's accommodation, associated with an increase in relatively unconscious levels of *vigilance*, and it is the issue of perpetual vigilance associated with not knowing when work will commence that I want to emphasise here.

4.3 On-call or standby work

A particular category of variable work that I will emphasise in this report is 'on call' or 'standby' work, as it is a common work practice in the care sector and beyond. On call work has been predominantly studied in the area of 'high value' professions, particularly in medicine (medical technologists, doctors, midwives), but also transport and marine (ship engineers, junior airline pilots, tug boat pilots) and IT workers (Nicol & Botterill, 2004a). On-call work, like casual work itself, is no longer a rarity, with over a quarter of Australian workers having an on-call component to their work (ABS, 2012)

On-call or standby work is often not an optional choice, but an operational requirement, used to ensure particular essential hours of duty or tasks are covered. On-call work requires the worker to subsume control over lifestyle choices to allow the ability to respond to work requirements, "limiting behaviours…to activities that would not interfere with their ability to work" (Nicol & Botterill, 2004a, p. 1). Studies have focused heavily on work-life balance and domino impacts on family and home life of on-call work patterns, however there is also a substantial emerging literature on the role of being on call on physical health.[5] Some of these impacts may, when separated out, be *positive*: for example, on-call surgeons are forced to restrict alcohol intake in order to be able to respond to work requirements as required. The 'unique' negative impacts of on-call work appear to be related to the requirement to remain alert and available to being called to work, and not surprisingly, this requirement impacts on sleep.

[5] The two areas of impact are of course not independent. Emslie et al's UK study of 2176 full time white collar bank employees found that work-life conflict strongly predicted self-reported physical symptoms including minor psychological problems, and did so equally for men and women (2004).

The research into 'on-call' workers is focused quite heavily, but not exclusively, on the medical industry. For example, Tucker et al (2010) found that on-call work was associated with increased work-life interference and psychological strain. A series of studies of British GPs, while focused on job satisfaction showed that until GP co-operatives (designed facilitate out-of-hours calls) were introduced in the 1998, on-call at night in particular was either the most or second most stressful aspect of their jobs (Cooper, Rout, & Faragher, 1989; Sibbald, Enzer, Cooper, Rout, & Sutherland, 2000; Sutherland & Cooper, 1992).

There are a series of studies looking at on-call work and sleep. A comparison by Richardson et al (2007) of doctors sleeping on site at a hospital, between those who were on-call and those who were protected from being woken found poor sleep efficiency and poorer quality sleep in the former category findings replicated to a significant degree in sleeping-off-site studies (e.g. Jay, Thomas, Weissenfeld, Dawson, & Ferguson, 2008) and in laboratory studies where on-call vigilance is replicated (Wuyts et al., 2012). In other words, the anticipation of being woken up is sufficient to disturb sleep quantity and quality, and the degree of uncertainty appears to exacerbate this effect (Ferguson, Paterson, Hall, Jay, & Aisbett, 2016). Smithers' (1995) study of organ transplant co-ordinators found that on-call impacts on sleep spilt over to periods when workers were *not* on call, suggesting that sleep patterns established during periods of disruption have inertia.

Outside the health industry, Pilcher et al (2000) looked at on-call work patterns and sleep of 198 train engineers, using a diary method, and a timescale of 14 days. The study methodology is solid, but the response rate was low (around 25%) allowing the possibility that only the worse effected are over-represented (or underrepresented) in the study. They found that those on-call were more likely to report sleep related problems, and interestingly found that being on-call *at home* was, if anything worse than being on-call at other locations (e.g. worker 'bunks' on site), possibly because the presence of family interfered with the worker's ability to implement sleep patterns that would conform with on-call requirements. In a major review of health impacts of on-call work (focused away from the medical industry), Nicol and Botterrill (2004) identified 16 papers of relevance. The authors (Nicol & Botterill, 2004b) conclude that on-call work poses a risk to psychological health in particular.

The research finds that even when workers are *not* working, they are not sleeping or resting as effectively as a result of being on-call. Torsvall and Åkerstedt (1988) using objective and subjective measures of sleepiness in a study of ship engineers, found that on-call workers experienced higher levels of sleepiness during the day following an on-call period, and a decrease in the quality of sleep . These effects were largely independent on whether or not they *had* been called to work. The authors reported that being on-call was associated with apprehension, uneasiness and anxiety. These impacts once might be 'passed on' to those living with or near the worker. A French study of electrical and gas engineers found that on-call work also impacted on family life (Imbernon, Warret, Roitg, Chastang, & Goldberg, 1993).

Ferguson et al's very recent re-examination of the issue (Ferguson et al., 2016) expands the evidence by looking at laboratory evidence where the factors in causal relationships

are better controlled, but the scale of the outcome variables are necessarily obtained. To be clear, it is possible in a laboratory to examine the impact of on-call work (recreated for the laboratory) on outcomes such as sleep or attention, but not to, say heart disease (although other studies have shown long term relationships between sleep disruption and heart disease). The laboratory evidence confirms that being 'on call' appears to equate to being vigilant: the apprehension of being woken up impacts on quality of sleep. Other researchers have also shown that early morning shifts are associated with "apprehension of difficulty wakening" in cabin crew (Kecklund, Åkerstedt, & Lowden, 1997), and the association between shorter sleeps and apprehension about waking was echoed in the recollections of on-call fire and emergency service workers (Paterson, Aisbett, & Ferguson, 2016).

A Swedish study of ship engineers, while using a smaller sample than some of its rival studies, did have a more objective measure of sleep disruption (Torsvall & Åkerstedt, 1988), using electroencephalogram (EEG) and electrocardiogram (ECG) recordings and subjective ratings, providing evidence that subjective ratings *are* a reliable measure of sleep disruption (something I have confirmed in my own sleep laboratory work) (Korompeli et al., 2016). Interestingly, the Swedish study established that disruption to sleep often occurs during the anticipatory phase. That is, workers experience disrupted sleep *before* their sleep is actually disrupted. Being on-call, thus involves the brain being switched 'half on' to receive call signals, something this team found in previous research with ship engineers (Torsvall, Castenfors, Åkerstedt, & Fröberg, 1987).

The issue of naps—short sleeps of less than four hours—is relevant here, with on-call workers more likely to engage in brief 'catch-up' sleeps. Most sleep researchers agree that naps of at least 4 hours in length can partially or fully restore eroded functioning (Krueger, 1989). However, if sleep occurs in shorter lengths over a period of 24 hours, its effectiveness is degraded, even if the total quantum of sleep over a whole 24 hour period is the same (Naitoh & Angus, 1987). Thus, the process of 'grabbing a quick nap' to recover sleep may not be entirely successful.

Turning to impacts other than sleep[6], one of the better longitudinal studies, albeit tracking participants for a total of two weeks (one week on-call and one week not on-call) found no differences in cortisol (a marker of stress) but found significant increases in irritation and a reduction in mood and social activities, household activities, and low-effort activities (Bamberg, Dettmers, Funck, Krähe, & Vahle-Hinz, 2012). Bamberg et al's study focused on a relatively low stress work—software administrators--but found the effects were independent of whether or not the workers were *actually* called to work.

[6] It is important to note that sleep has serious implications for both physical and mental health. Apart from the direct physiological consequences noted elsewhere in this report, studies show that even restricting daily sleep by as little as 30 minutes can make significant differences to outcomes such as vigilance that have personal and societal health implications (Dinges, 1990; Harrison & Horne, 2000) such as accidents and failure to maintain proper self or other-care.

A small handful of studies have examined the impact of on-call work on mental health, again with an emphasis on the medical profession. The studies rely on self-report, using either questionnaires or mood diaries. Chambers (R Chambers & Belcher, 1994; Ruth Chambers & Campbell, 1996) conducted studies looking at anxiety and depression in two published studies in the 1990s. The studies showed on-call night work was associated with depression and anxiety, roughly equally predictive in male and female GP samples. This is correlational data, which does not in itself provide strong evidence. Measuring outcomes such as mental health *at the same time* as measuring (presumably) causal factors (such as on-call work) does not allow one to firmly establish causation. Similarly, Rout, Cooper and Rout's (1996) 'one-shot' questionnaire study uses terms such as 'predictors of health' to describe correlates (Rout, Cooper, & Rout, 1996). A better test of the impact of on-call work on mental health was a French study of male gas and electrical employees because a comparison was conducted between on-call workers and those working in similar roles but *not* on-call. The study produced the weakest 'mental health' impacts, but psychological and global wellbeing were significantly worse, and family and social wellbeing were severely impacted (Imbernon et al., 1993).

Studies have also looked at the impact of on-call work on personal security, and seem to indicate that workers in on-call professions *feel* significantly more at risk (Masterson, Ashcroft, & Shah, 1994).[7] Some cross-sectional studies do offer a degree of longitudinal strength. Heponiemi et al (2016) used a large panel of over 2500 physicians, and found that those who had been on call for more than 40 hours per month experienced highly significantly more distress than those not on call, and were more likely to indicate they were considering leaving their job. Lindfors et al (2006) sampled 60% of all working Finnish anaesthetists finding highly significant relationships between on-call workload and stress symptoms. One of the very few true longitudinal studies of on-call work, again conducted in the health sector, found that being on-call, independent of a range of other variables was significantly associated with the outcome measured in this study, musculo-skeletal disorders (Trinkoff, Le, Geiger-Brown, Lipscomb, & Lang, 2006)

4.4 Newness in work practices

Part of the problem here, as noted as the outset of this section, is that change *per se* presents a challenge. An influential article by Stinchcombe (1965) introduced the term the 'liability of newness' to the lexicon. Stinchcombe's focus was organisational: new organisations require bedding down before they become robust. His point can be easily transferred to individuals, and the evidence that newness is a liability is extensive.

Cornélissen et al (2008) for example show that frequent *change* in exposure to light (associated with changes in shift patterns) is associated with mortality in a number of species—not just humans. Adaptation to change is not immediate, and inconsistent patterns of change do not assist the process. An individual worker's body clock adjusts after 10 or more night shifts in a row (much in the manner of jet lag) (Hakkinen, 1969). Not surprisingly, *rotating* shift work even more than shift work *per se* is associated with objectively measured illness (Nicholson, Jackson, & Howes, 1978) and stable patterns

[7] These subjective feelings, as with the issue of control, may have objective health implications.

are thought to be associated with lower negative impacts of night shift work (Ahasan, Lewko, Campbell, & Salmoni, 2001).

Adaption is also occurring at a behavioural level, and again, takes time. Change in the workplace is generally accompanied by risk, and no change accompanied by a gradual reduction in risk (as much as 1.5% a year). Askenazy's (2001)analysis suggests a 1.5% annual reduction in workplace injuries and illnesses in the US during the 1970s, a period characterised by stagnant workplace reform, was contrasted by a sharp spike (as much as 10% a year) during periods of change in workplace practices in the 1980s.

In coming to these conclusions, Askenazy's (2001) relied on a meta-analysis of American Bureau of Labor Statistics Occupational Safety and Health Administration data. His focus was on a basket of practices known in the management literature as "high performance practices". These practices include job rotation, team work, contract work, flexible work hours, and unusual work hours. Askenazy's (2001) narrowly focused on injuries rather than illnesses. Askenzay argues that after an initial period of increase in autonomy, the long term effects are a diminution of autonomy and an intensification of work (see also Skorstad, 1994).

His analysis concludes that "the adoption of high performance practices seems correlated with a dramatic increase in occupational injuries and illnesses" (p. 485)[8]. The increase is in the order of 30%, which is reasonably consistent with the order of effect noted elsewhere in this report.[9] However, his analysis is muddied by having poor empirical linkage between particular work practices and particular outcomes. He says "the logic of flexible production is to reduce waste, to maximise the use of production factors, notably labour, so as to reduce downtime and enhance the pace of work" (p. 490),

Haouas and Yagoubi (Haouas & Yagoubi, 2008) conducted a similar study to Askenazy's, focusing on a single large representative Tunisian sample of 2000 workers. The Haouas and Yagoubi study has the advantage of addressing each captured form of 'flexible' work practices separately, and the nature of the dataset also controls for characteristics of the job, such as industry and firm size. An overview of results is shown in Table 2. The authors note that flexible hours *per se*[10] are not associated with injury, but the study finds a strong relationship between flexible work forms and psychological strain. Psychological strain, it should be noted, has been linked with workplace injury in a large (N=21,505) study of European workers by Costa and Sartori (2006).

[8] Askenazy's use of the word "dramatic" probably relates more to the statistical significance of the increase rather than the order of the increase itself.

[9] Not all studies find a relationship between non-secure, non-stable working time practices and occupational health. For example, Guest and Clinton (2006) in a study of 642 workers in the UK, found the association between temporariness and a sense of job insecurity, with no significant impact on wellbeing.

[10] Probably what Costa (2006) called variability, not flexibility .

Table 2: Impact of various flexible work forms on injury rates

	Correlation	Significance
Part-time work	0	NS
Flexible hours	0.002	NS
Night work	0.036	NS
Overtime	0.046	p<.05
Weekend work	0.071	p<.01
Job rotation	0.078	p<.01
Short term contract	0.11	p<.01

NS= not significant Source: Hauoas and Yagoubi (2008)

In relation to part-time and casual work, there are definite 'liabilities' in relation to worker vulnerability to accidents. The rate of occupational accidents in the first year of employment (regardless of part-time status) is substantially higher than for experienced workers (Jeong, 1997), and one Turkish study showed that 32.5% of occupational accidents happen in during the first hour of work (Ünal, Gök, & Gök, 2008) as workers become accustomed to routines. Smith et al's meta-analysis similarly showed risks associated first shift of a series of shifts (Smith, Folkard, Tucker, & Macdonald, 1998). There is a limit to which 'newness' can be seen as a liability, however. With overload and associated fatigue being in itself a significant factor in predicting injuries and other negative health outcomes for workers, a study by Alamgir et al (Alamgir, Yu, Chavoshi, & Ngan, 2008) found that injury rates for full-time nurses and care aides, per 100 person years, was greater than for part-time or casual staff. This relationship held after adjusting for age and gender (N. I. Thomas et al., 2006), and almost certainly relates to risks that rise at the end of shifts or longer working weeks, due to fatigue.

4.5 Gender effects

Hofäcker and Konig (2013) found that irregularity and unpredictability of working hours is associated with work-life conflict for both genders. The Hofäcker and Konig study takes advantage of the 2010 European Social Survey which includes large nationally representative samples of workers in 26 countries. Their study finds that short-notice overtime accounts for a significant amount of variance in the relationship between long working hours and negative effects on work-life balance. The issue of control also shows itself in effects for poor fit between actual working hours and working hour preferences leading to particularly strong effects on work-life imbalance for men. Women, it seems, suffer disproportionately when it comes to issues of synchronicity of working hours with their partners. Working women with a husband who experience less predictable working hours are more likely to experience greater difficulties with their own reconciliation of family tasks and employment. Finally, Hofäcker and Konig (2013) found a positive impact for job security, reducing work-life-conflict for both genders, but particularly for men.

There is a literature focusing specifically on the impact of irregular work hours on marital satisfaction and other aspects of family life. Studies tend to indicate that 'ordinary' day workers experience greater job and marital satisfaction and social integration (Frost & Jamal, 1979; Khaleque & Rahman, 1984; Newey & Hood, 2004; Simon, 1990), while those who work non-standard hours experience greater marital strain (Hughes, Galinsky, & Morris, 1992; Mills & Täht, 2010; Perry-Jenkins, Repetti, & Crouter, 2000; Rogers & May, 2003).

Some studies have observed domino effects in terms of child behaviour (Joshi & Bogen, 2007), despite studies showing that parents, particularly mothers, work hard to shield children from the strains caused by parental work-life conflict. Amongst men, an Australian study showed that the main predictor for working fathers not being involved with their children is working in excess of 40 hours a week (Jeffery, Luo, Kueh, Petersen, & Quinlivan, 2015), but such relationships are much weaker for women. Non-standard work practices can of course also be used to *enhance* contact between parents and children. For example, a recent large Dutch study shows how couples desynchronized schedules to facilitate 'tag-team' parenting in dual-income parents (Täht & Mills, 2012).

Interestingly, the majority of studies tend to find that the impact of rotating/night shifts on relationship quality is overall greater for women (Perry-Jenkins, Goldberg, Pierce, & Sayer, 2007; Raudenbush, Brennan, & Barnett, 1995). However there are exceptions to this pattern (e.g. Barnett, Brennan, Raudenbush, & Marshall, 1994; Keizer & Schenk, 2012; Rogers & May, 2003).

These effects may be significantly dependent on the degree of synchronisation between partners' working patterns; however it is logical that irregularity in patterns on the part of one or both partners working hours will have desynchronisation as a consequence. Simon's (1990) study, for example, details a range of problems associated with poor integration of partner waking and sleeping cycles include challenges relating to parental roles, sexual activity and eating routines. The degree of difficulty of reconciling partners' working hours may be dependent on the stage of the week being examined. For example, Schneider et al (Schneider, Ainbinder, & Csikszentmihalyi, 2004) found no gender effect for stress during the normal working week, but evidence of stress emerged on weekends, particularly for women.

5.0 Conclusions

Responses to stressful events are not fixed, but depend on their meaning for the individual (Thompson, 1981) and when psychologists talk about individual control they almost invariably talk about *sense of* control or *perceived* control, not 'real' levels of control. It has long been established that manipulating behavioural control in the laboratory or beyond leads to significant increases in physiological arousal and self-report of negative arousal, particularly during the period prior to the aversive event (Thompson, 1981), but while this arousal may govern responses to measures of variables such as 'job satisfaction' or 'burnout', they are also very probably a marker of physiological changes in the human endocrinal system.

I have focused, where possible, on evidence directly specific to the health and care sector. It is important to note that the health and care sector, due to the 24-hour nature of many tasks within the sector, is also closely tied, both empirically and in the public mind, with shift work, but it is important to disentangle shift work from irregular or unpredictable work.

Shift work (even regular, predictable shift work) is associated independently with deleterious effects on human health (for a landmark review, see Costa, 2003) and WHO's International Agency for Research on Cancer Monograph Working Group in 2007 went further, declaring that circadian disruption is "probably carcinogenic"(Cornélissen et al., 2008). If one *adds* variability and unpredictability to shift work, for example with the addition of rotating shift work, then the impacts are amplified. For example, in a study of steel workers, Nicholson and Jackson (1978) found that multiple rotations (as well as weekend work) were associated with objectively measured illness and stable patterns of consecutive night shifts are thought to be associated with lower negative impacts of night shift work (Ahasan et al., 2001).

Irregularity, on-call and flexible work practices have been heavily linked in the literature with work-life imbalance, and the impact is particularly strong for women—and thus has particular relevance to the care sector, where there is a significant continuing gender imbalance in favour of women (Zurn, Dal Poz, Stilwell, & Adams, 2004). When events that constitute ' life' follow a relatively regular beat, and are not flexible (for example, school play times, or sporting fixtures) reconciling 'life' with work becomes inevitably more difficult when work becomes less predictable and regular.

Amongst the 'life' aspects that are most critical for physical and psychological health are positive health behaviours or habits that are ruptured by irregular work demands (including social links with the community, sporting activities, and healthy eating). The link between irregular hours or unusual work schedules and outcomes such as smoking, drinking and weight gain, is also very well established. Perhaps less well established is the disadvantage that this sector of workers suffer in relation to access to services, or the same quality of service. There is an emerging literature on the increased risk of sub-standard health services offered to those who experience a health event for example on Saturdays and Sundays.

While work-life balance is one of the impacts that workers subjectively notice first when work becomes less regular or predictable, I have focused relatively more attention on the less intuitively 'obvious' challenges posed by irregular or unpredictable work practices. I have focused most closely on two particular challenges: the issue of control, and the issue of change.

It is highly likely that these two factors are the root of many of the negative health effects that emerge in broad-scale epidemiological studies of work practices and health. Control is a variable that is rarely excluded from analysis when studies are planned in the field of health psychology; such is its importance in determining the impact of interventions. The dominant set of models on the impact of work on health, all sourced in Karasek's foundation work (Karasek, 1979) has *control* at its centre. Evidence is that level of control in a work context can predict everything from depression to cardiovascular disease to a highly significant degree. *Change*, in Karasek's models, is

cast as a demand variable, i.e. a stressor. Demand without control is a recipe for ill health and dissatisfaction.

Apart from being a general challenge to the human adaptability (with implications for workplace accidents for example) change also predicts sleep disturbance. In the section headed "newness in work practices" I summarise some of the better evidence relating to flexible work practices and their impact on injury rates. **Control and change are *the* two key psychosocial dimensions of work, and as noted in the research summarised in this report, have significant predictive power in determining a wide variety of health outcomes.** Control is particularly relevant for staff in relatively junior positions within care settings, and for these staff, I recommend particular care is taken with interfering with the predictability of work, as it is likely to compound existing problems associated with uncontrollability in the workplace.

DECLARATION.

I have made all the inquiries that I believe are desirable and appropriate and that no matters of significance that I regard as relevant have, to my knowledge, been withheld from the Commission.

Olav Titus Muurlink

EDUCATION

2002 **PhD, Griffith University**
Social Psychology (Evidence of Escape in Cognitive Dissonance Studies)

Examiners: Professor Michael Leippe, John Jay College of Criminal Justice, New York (formerly of Illinois State, and a Fellow of the Association for Psychological Science and the Society of Experimental Social Psychology) and Emeritus Professor Cindy Gallois, University of Queensland.

Supervisors were Professor Drew Nesdale (recently retired) from Griffith University and Associate Professor Frances O'Callaghan, at Griffith University Gold Coast.

1993 **MPhil (Coursework), University of St. Andrews**
Psychology (Health, Cognition, Clinical, Developmental)

Supervisor was the late Professor Terence Lee FBPsS

Awarded "with distinction", equivalent to First Class Honours.

1991 **BA (Hons), University of Queensland (Australia) Communications**
Awarded First Class Honours

1990 **BA, Charles Sturt University**
Psychology
Awarded the University Medal

EMPLOYMENT HISTORY

Current roles

2014- **Senior Lecturer, Organisational Behaviour, Central Queensland University, Brisbane Campus**

2014 **Senior Research Fellow (adjunct)** Griffith Institute of Educational Research.

2000 Chairman, Management Committee, Co-operation in Development (Australia) Inc

Role description: Member of the management committee since 1994. Management committee has oversightof one of the first Australian charities to be established in Bangladesh (in the first 100 of all charities established since the founding of the new nation in 1971). CO-ID is a medium-sized charity (paid staff of 170; voluntary management committee, 15) and student body of 12,750 full time year 1-7 students. It has built and operates one of the largest private primary school systems in Bangladesh, delivering the full national curriculum. Students are often the first in their family for generations to be able to read or write. As chairman of the management committee, I oversee governance, policy development, media liaison (which has seen media coverage ranging from ABC's *Australian Story* to the *Herald Sun*), and regularly visit Bangladesh for audit purposes. I oversaw the process whereby CO-ID was granted tax deductible gift recipient status with the Australian Tax Office, the first purely overseas-focused charity in many years to achieve this status.

Previous, academic:

2013-2014 Research Consultant, CIRA Research (since November, 2013)

Providing support services, including data analysis, survey design, case study handling, academic writing assistance, and methodological advice to academic clients. The consultancy also provides transcription services, Qualtrics, SPSS, R, and graphic design assistance for paper-based surveys. Clients ranged from individual academics to university administration.

2013-2014 Senior Research Fellow, Centre for Learning Futures, Griffith University (since August 2013)

Supervisors: Professors Alf Lizzio and Keithia Wilson.
Role description: Handling quantitative and qualitative analysis of models of first year student attrition, university-wide dataset.

2010-2014 Research Fellow, Centre for Work, Organisation and Wellbeing, Griffith University (since Feb 2010)

Supervisors: Professors David Peetz (academic supervisor), Professor Adrian Wilkinson, and Associate Professors Georgina Murray and Keith Townsend.
Role description: Work and stress research projects, spanning a number of fields: project management, quantitative analysis and report and article authoring on the continuing Australian Coal and Energy Survey (ACES) examining shiftwork and its psychological and physical health impacts in a large longitudinal mixed partner survey; project management, quantitative and qualitative analysis and authoring on the New Workplaces project, examining management of firms under growth stress, and innovation in human resource management.

1991-1992 Researcher, Social Policy Research Unit, University of St. Andrews,

Role description: Principal Researcher of psychological component of report published by Robens Institute, University of Surrey, for the British government in relation to public willingness to pay to electricity utilities to reduce the risk of nuclear power. Supervised by Professor Terence Lee, I also worked on projects relating to perceptions of communication brochures for the British Forestry Commission, and the perception of household radon risk for the British government (the NRPB).

Previous, non-academic:

1999-2009 Managing director of Free Media Pty Ltd (1999-2009)

Role description: Founding publisher and managing editor of the *Southern Free Times* (now owned by the Victorian-based Star News Group), and founder of the Pressstream heatset printing facility. I managed a large staff across two states and a number of publications in Brisbane, Kingaroy, Warwick and the Gold Coast. The role required working closely with journalists, graphic artists, printers, accountants and other staff, as well as suppliers and clients. The role was highly challenging, involving co-ordinating the output of a number of weekly publications, as well as handling external printing clients. Major achievements include project management of the installation of the only heatset four colour press outside metropolitan Australia on a greenfields site on the Warwick Crown Industrial Estate. It was a multi-million dollar project that attracted national industry attention.

(Media link: www.swug.com.au/downloads/SWUG_sunco200712.pdf)

1998-2008 Director/Marketing director Wyco International/T.T. Merino (Australia) (1998-2008)

Role description: These companies were export-orientated manufacturers and processors, with markets in China, the UK, Greece, Italy, Switzerland, Denmark and Sweden. Broad ranging roles including developing strategy, market research, grant applications, personnel management.

1989-1990 Pacific correspondent, World Information Service on Energy.

Role description: Reporting on issues relating to nuclear and alternative energy and uranium mining in Australia for a small news service based in Amsterdam. Contributor to Roger Moody's *The Gulliver File*, an encyclopedia of the corporate world of uranium mining, picked as one of *The Guardian* (UK) newspaper's Top Ten Green books for 1993.

ACADEMIC ENGAGEMENT

……

2016 **Member, Academic Board,** Central Queensland University. Elected by national poll of academic staff.
2016 **Member, Human Ethics Committee,** Central Queensland University. By invitation.
2016 **Member, Bachelor of Business Review Advisory Committee,** Central Queensland University. By invitation.
2015 **Member, Campus Life Committee,** Central Queensland University, Brisbane Campus. By invitation.

Curriculum Vitae, Olav Titus Muurlink

TEACHING EXPERIENCE

2016- Research Methods (postgraduate), Introduction to Management (undergraduate), Contemporary Organisational and HRM Studies (undergraduate), Human Resource Development (undergraduate).

2014- Organisational behaviour subjects at undergraduate and postgraduate level, Central Queensland University

2012- presented guest lectures and workshops, including on The Psychology of Leisure and the Social Psychology of Leisure for Dr Maureen Harrington at Griffith University, and lectures for HDR students and junior staff at QUT on creativity, research strategy at University of Queensland, Griffith University, Jagganath University, the University of Dhaka, the Institute of Statistical Research and Training, and Central Queensland University.

1993, convened full-year Introduction to Psychology course at Sophia College, Warwick (students graduated to second year at the University of Southern Queensland).

PHD SUPERVISION

Completed: *Alex Roper.*

Topic: The use of sport as an instrument of attitude change in Malaysian society. Co-supervised with Prof. Chris Auld.

Ongoing:

Ben French. Topic: First year course enhancement strategies, retention and performance in B.Bus courses, Griffith University. Co-supervised with Dr Richard Copp. PhD.

Shane Doyle Topic: Leadership development in senior police. Co-supervised with Dr Shelley Wakefield. PhD.

Vipada Charoensuk Topic: Extravert/Introvert Personality Characteristics Affect Consumer Taste Preferences and Behaviour in a Public Food Consumption Context. Masters by research.

Samantha Dunham Topic: Emotional labour in managers.

Pratima Durga Topic: The children of shiftworkers.

AWARDS

Best Oral Presenter, Public Health Foundation, 2015.

Student Voice Award, 2015, Central Queensland University.
University Medal, 1990, Charles Sturt University.
Australian Postgraduate Award, 1996.
Griffith University Postgraduate Top-Up Award, 1996.

RESEARCH INTERESTS

Health psychology, occupational health and organisational behaviour, attitude and behavioural change, shift work, education and innovation.

POSTDOCTORAL TRAINING

2012	*Structural Equation Modelling using AMOS*, three-day course, Griffith University Gold Coast, November 2012.
2011	*Multiple Regression*, ACSPRI course, week-long course, University of Queensland, June 2011.
2010	*Responsibilities of being a Research Higher Degree Supervisor*, Griffith University.
2009	*Managing the supervisory process*. One day symposium, presented by Dr Calvin Smith. Griffith University
2009	*Copyright, teaching and research*. Presented by Mark Magener.
2009	Two-day induction, tutoring, 2009.

Computer and programming skills:

Programming:	Windows Interactive Language
Statistical:	SPSS
Other:	Quark XPress (advanced), Indesign (advanced), Remark data entry automation, Qualtrics

PROFESSIONAL AFFILIATIONS

……..

Member, Australian Psychological Society

Member, Centre for Work, Organisation and Wellbeing, Griffith University.

Member, Griffith Institute of Educational Research.

Member, Working Time Society.

Associate Editor, Journal of Management History (2016-) (A ranked).

Member, College of Reviewers, Higher Education Research and Development (A ranked)

Reviewer for the *International Journal of Small Business*, the *International Journal of Climate Change*, *Community Work and Family,* and the *Interdisciplinary Journal of Economics and Business Law*.

Independent Pricing Review

NATIONAL DISABILITY INSURANCE AGENCY

Final Report | February 2018

Contents

Executive Summary

THE NDIS AND PRICING

The National Disability Insurance Scheme (NDIS) is a new way of providing support for 460,000 Australians with permanent and significant disabilities ('participants'). It represents a fundamental shift in how disability support is delivered. Under the NDIS, participants can exercise choice and control by purchasing their supports directly from providers. This means funding of disability supports will no longer take place through block funding for providers, but rather through individualised support funding for participants.

Once the NDIS reaches maturity, it is intended that the market itself will set the price of supports. However, temporary price controls are needed to ensure participants can access affordable supports, while the market is still growing. The National Disability Insurance Agency (NDIA) uses price caps on many supports and services to regulate price, but striking the right balance is challenging. If prices are set too high, this will encourage the supply of supports, but reduce the purchasing power of participants and negatively impact the sustainability of the NDIS. If prices are set too low, this could lead to a supply shortfall in the market and compromise participant outcomes.

Some providers of disability supports and other stakeholders have expressed views that current price caps are too low and are hindering market development. These issues have been raised in submissions by providers to the NDIA, as part of the NDIA FY2017/18 Price Review, as well as to the Productivity Commission as part of the review of NDIS costs.

THE INDEPENDENT PRICING REVIEW PROCESS

In June 2017, the Board of the NDIA commissioned McKinsey & Company to undertake an Independent Pricing Review (IPR) to investigate the appropriateness of the NDIA's pricing strategy and approach, and the suitability of current price levels for supports and services. The scope of the IPR was defined by the NDIA Board in the Terms of Reference (TOR):

1. Provide recommendations in relation to improved pricing effectiveness, including but not limited to:
   - National versus regional pricing
   - Pricing of services with different levels of complexity
   - Pricing of respite services
   - Thin and undersupplied markets, particularly in regional and remote areas
   - Relative provider efficiencies, including overheads
   - Adequacy of provider returns
   - Effectiveness of the Hourly Return approach used to set prices

2. Provide recommendations in relation to the potential early deregulation of price in more mature sub-markets and the glide path for the eventual deregulation of price more generally.

Over the last six months the IPR team has conducted its review, including extensive consultations with stakeholders – providers, peak bodies, the NDIA, academics, and state and territory governments. Through the provider consultation process, the IPR team engaged with over 1000 individuals across Australia through 10 open forums, 9 webinars and 45 one-on-one interviews, to understand how providers have been responding to current price settings. The IPR team also undertook detailed analyses of provider economics, market development and NDIA data. This report provides a summary of the evidence gathered by the IPR team, and 25 recommendations for changes to the NDIA's pricing approach and policies. Recommendations are grouped by the items in the Terms of Reference.

FEEDBACK FROM CONSULTATION

Key issues raised by providers and other stakeholders in submissions and during the consultation process were:

- The NDIS requires a significant change in providers' operating models and there are administrative costs associated with transition; as well as opportunities to improve the efficiency of the NDIA's systems and processes, for example, the online portal.
- Current loadings for complex participants do not fully reflect the additional costs of serving these participants, such as higher wages for a more skilled workforce, additional time required for training and reporting, and higher supervision ratios. In addition, there is no clear definition of what constitutes 'complex', and as a result the high intensity loading is applied inconsistently.
- Current travel allowances do not adequately cover the costs of provider travel and participant transport in regional areas and isolated communities.

Other issues were raised in relation to specific support types:

- In attendant care, some providers, who have historically been funded by state-administered block funding, are struggling to adjust their business models to operate under the NDIS unit-funding model and the current level of price caps. To operate profitably within the price caps requires improved levels of utilisation and overheads; and better matching of skills to participant needs.
- In therapy, the existing single price point does not reflect the diversity in therapy supports and the travel allowance is insufficient for some participants in regional areas. In addition, limiting therapists to recover the costs from a maximum of 2 hours of cancellations per year is imposing additional costs on some therapists.

Additionally, issues regarding the price setting process and the opportunity for innovative price setting were raised, including:

- The price setting process could be more transparent, and providers would appreciate earlier communication of changes to price level and/or structure to refresh service agreements and adapt operating models.

- Some providers and participants expressed the desire for the NDIA to explore outcomes-based approaches to pricing on the basis that would create better incentives to improve outcomes than the current hourly rate approach.

KEY FINDINGS AND SUPPORTING EVIDENCE

To address the issues raised by providers and other stakeholders during consultation, and to assess whether current price caps are adequate, the IPR team looked at three sources of evidence: evidence of market development/supply shortages; provider economics and operating models; and benchmarks of comparable schemes.

The key findings of the IPR are:

- While there is not yet evidence of generalised supply shortages, data on market development is mixed and there are certain markets for which undersupply is a risk in the future:
  - Across support types, provider entry and exit data suggests market growth is keeping pace with demand and utilisation data does not provide compelling evidence of supply shortages:
    - The rate of growth of month-to-month provider registration outpaced the rate of growth of participant registration throughout 2017.
    - Utilisation data from the trial sites suggests lower than expected utilisation was driven by participants being unfamiliar with the NDIS and how to use their supports, rather than a supply shortage.
  - In the attendant care market, there is not yet compelling evidence of participants being unable to access supports, but there are signals that are concerning, including a significant proportion of providers that currently have unprofitable operating models.
  - There are cohorts of participants for which supply shortages are high-risk due to the increased cost of service provision and limited availability of workforce, including those who: are in outer regional, remote or very remote areas; have complex needs; are from culturally and linguistically diverse backgrounds; are Aboriginal and Torres Strait Islander Australians; or have acute care needs such as in crisis situations.
- While some providers have operating models that are profitable at current price points, many are struggling, particularly traditional providers delivering attendant care supports:
  - In the attendant care market, there is significant variation (from <$40 to $55+ per hour) in the cost of service delivery between providers. There are examples of low cost models that are profitable at current price points, including the online platform model and lean-operating model. However, many traditional providers are struggling to operate profitably at current price points. This is attributable to a combination of factors: higher overheads; challenges in adapting to unit pricing and NDIA systems improvement opportunities; lower utilisation of workers; and higher labour costs.
  - In therapy, the single price point is working for some providers, such as physio and speech therapy providers and many sole traders. However, it is not working so well for some others, such as psychological therapy for more complex participants.

  - In Supported Independent Living (SIL), Support Coordination and Plan Management, feedback indicates that most providers can operate profitably at current price caps/benchmarks for lower complexity participants. However, the rollout of a more accurate SIL pricing process may make it more challenging for providers to cross-subsidise other supports in the future.

- Benchmarking of NDIA support price caps against comparable schemes highlighted that the NDIA price is broadly aligned with prices of accident compensation schemes, including the Transport Accident Commission and WorkSafe, although market prices for some similar aged care services are higher.

RECOMMENDATIONS

Ultimately, the test of whether the price caps set by the NDIA are adequate is whether participants can access the quality supports and services required to achieve their goals. While there is not yet evidence of widespread supply gaps occurring, the Scheme is in a state of transition and rapid growth, and the situation could change quickly. Further, the absence of supply gaps does not diminish the fact that the current price caps are challenging, and many providers are unable to operate profitably within those price caps. Providers and participants have raised concerns that where providers are unable to supply services at a given price level, new supply will not be made available quickly enough to ensure that participants have access to an adequate level of support.

To proactively manage the key risk of supply gaps, the IPR team proposes three steps for the NDIA to undertake. Firstly, the NDIA should collect and analyse a broader set of indicators of market development and participant outcomes to both better monitor the risk of supply gaps and build institutional capacity to avert supply challenges through market intervention.

Secondly, the NDIA should implement appropriate amendments to price loadings and policies, to improve the economics of efficient providers and reduce the risk of supply shortages in high-risk markets – particularly rural and remote, and highly complex participants. Those changes include:

- Adding a third tier to the complexity loading of 10%, to account for higher level of skills/experience of workers and additional training required.
- Allowing providers to charge up to 45 minutes of travel time in rural areas, and quote for services in isolated regions.
- Changing the cancellation policy to allow providers to charge participants for cancellations after 3pm on the day before the service.
- Removing the $1000 travel cap for therapy supports and aligning the travel policy with attendant care travel policy.
- Changing the therapy prices to better reflect different therapy types, and introducing a second tier of pricing for therapy assistants.
- Addressing specific NDIA systems and processes, such as portal functionality and quoting, to enable providers to reduce administrative tasks and overhead costs.

Finally, the NDIA should assess the implementation of a temporary price supplement to the attendant care price cap to address short-term issues with provider economics. The IPR team's assessment is that while generalised supply gaps have not occurred to date, there is a material risk of gaps emerging over the next year. Demand will continue to rapidly increase as new participants enter the Scheme, and many providers are struggling to operate a surplus at the price cap with their current operating model. There is a risk that profitable providers will not grow quickly enough to supply the services required. The IPR team proposes a model of Transitional Support for Overheads (TSO) in the form of a 2-3% increase in the price cap of 1:1 attendant care for the next 12 months. This would apply in addition to the normal annual indexation of the price cap. This adjustment reflects what the IPR team believes are reasonable cost improvement assumptions for most providers to achieve in the near term. The exact quantum of the TSO should be a policy decision the NDIA makes in view of other more targeted interventions government will undertake in the next 12 months to mitigate the risk of supply shortages. There should be a review in 12 months to determine whether any level of temporary support is required for a further period. The expectation is that 12 months is a reasonable timeframe for providers to make the necessary changes to their business models, and for the NDIA to assist and encourage the development of efficient and effective alternative supply options (e.g. e-marketplaces), so that the TSO would not need to be renewed.

Longer term, the development of a competitive marketplace should enable changes to the Scheme's current pricing model of price caps and fee-for-service. The IPR team's recommendations include actions that the NDIA can take to pilot and prepare for different pricing models. Firstly, the NDIA should conduct a trial of outcomes-based pricing. This is an appealing alternative to input-based pricing as it encourages providers to maximise outcomes, rather than the volume of services provided. However, it is significantly more complex and requires strong baseline data and measurement systems. A trial would provide valuable learnings on how this approach might be implemented in some supports.

Deregulation of pricing remains an appropriate goal, but there is not yet a clear path towards reaching it. To better prepare the market and the NDIS for deregulation, the IPR team proposes strengthening and monitoring provider and participant readiness, including investing in key infrastructure, such as an e-market. Trialling price deregulation in one geography or support type market will also help the NDIA collect more detailed information on the impact of deregulation on market development and participant outcomes.

IMPLICATIONS

In developing its recommendations, the IPR team has sought to address provider concerns in a way that best balances potential trade-offs between participant outcomes, market development and Scheme sustainability. The effectiveness and efficiency of pricing mechanisms and levels was considered, subject to available data. Some recommendations go directly to changing the effective price, such as Temporary Support for Overheads (TSO) and a new complexity loading for very complex participants; some target root causes of the problems, such as changes to cancellation and travel policies; and some propose stronger market monitoring and intervention capabilities. Each of these recommendation types will have different impacts on the three Scheme aspirations: better participant outcomes; a growing market with innovative supports; and a financially sustainable scheme.

In the aggregate, the IPR team estimates that the above recommendations will have a potential financial impact of ~$250-420m per annum over the next 12 to 24 months, will alleviate some of the financial pressure currently placed on some providers, and will improve participant outcomes by addressing challenges that are impacting some providers' abilities to deliver quality services. Cost estimates have been made on the best data available. However, data will remain incomplete until the Scheme becomes more mature. As a result, the IPR has made a number of assumptions leading to a wide range of estimates.

Beyond the next 24 months, the IPR team believe it is possible to implement the IPR recommendations and manage the Scheme so that it is financially sustainable and within the current budget estimates. Approximately 50% of the total cost implication of the IPR recommendations is temporary and will therefore not have an adverse impact on the Scheme's longer-term financial sustainability. Also, as the Scheme matures, the NDIA should be able to offset any financial impact of these recommendations by appropriately assessing their effectiveness and efficiency. For example, as evidence develops as to which interventions are most effective in reducing costs associated with complexity, it should be possible to reduce the number of complex participants and provider costs and prices. It should also be possible to encourage more local providers in rural and remote areas that will assist in reducing travel costs. There should also be some savings from introducing tiered therapy pricing.

1 Introduction

1.1 OVERVIEW OF THE NDIS AND NDIA

The National Disability Insurance Scheme (NDIS) is a new scheme designed to change the way supports and services are provided to Australians with significant and permanent disabilities ('participants'). By 2020, the NDIS will provide about 460,000 people with the reasonable and necessary supports they need to live an ordinary life. The NDIS is currently in the transition period, with participants entering the Scheme according to an agreed phasing plan.

The National Disability Insurance Agency (NDIA) is the statutory authority responsible for administering the NDIS. The NDIA has three external aspirations (NDIA aspirations):[1]

1. Facilitate outcomes of economic and social independence and deliver an exceptional service for participants, and their families, carers and providers ('better participant outcomes').
2. Work with participants and other stakeholders to facilitate the growth of a market of adequate size, quality and innovation ('a growing market with innovative supports').
3. Deliver a financially sustainable scheme based on insurance principles within agreed funding ('a financially sustainable Scheme').

1.2 THE ROLE OF PRICE

The NDIS represents a fundamental shift in the way disability supports are provided. Under the NDIS, people with disability will be able to exercise choice and control over the supports they receive. This way of providing supports and services requires a transition from a prior model of block funding for providers, to individualised funding for supports for participants.

In a mature market, participants exercising choice and control will drive the price of supports, and in turn drive competition and innovation among providers. This is an important feature of the NDIS. However, where the market is not sufficiently mature and where there is an imbalance in bargaining power between participants and providers, price regulation helps ensure value for money for participants.

The NDIA sets price caps for many supports. The price of supports has implications for the NDIA aspirations, and trade-offs may be required among them (see Exhibit 1). For example, higher prices may encourage the supply of supports, but reduce the purchasing power of participants and negatively impact Scheme sustainability, whereas lower prices may increase value for money but lead to a supply shortfall in the market. Ultimately, the test of whether the price caps set by the NDIA are adequate is whether participants can access quality supports and services required to achieve their goals.

[1] NDIA: *Corporate Plan 2017-21*. The Corporate Plan outlines four aspirations for the NDIA: three 'external aspirations' and one 'internal aspiration', which is to build a high performing NDIA.

EXHIBIT 1

Impact of price on three Scheme aspirations

1.3 BACKGROUND AND SCOPE OF THE IPR

Some providers of disability supports and other stakeholders have expressed concerns that some of the current price caps are constraining market development and outcomes for participants. These concerns were raised in submissions to the NDIA, as part of the NDIA FY2017/18 Price Review, as well as to the Productivity Commission as part of its review of NDIS costs. In June 2017, the Board of the NDIA commissioned McKinsey & Company to undertake an Independent Pricing Review (IPR) to understand the significance of provider concerns, and create an evidence base to inform decision making and help to mitigate the risk of future supply shortages as the NDIS transitions to full scheme. The objective of the IPR was to investigate the appropriateness of NDIA's current pricing strategy and approach, and assess the suitability of current price levels for supports and services.

The scope of the IPR was defined by the NDIA Board in the Terms of Reference:

1. Provide recommendations in relation to improved pricing effectiveness, including but not limited to:
   - National versus regional pricing
   - Pricing of services with different levels of complexity
   - Pricing of short-term accommodation (respite) services

- Thin and undersupplied markets, particularly in regional and remote areas
- Relative provider efficiencies, including overheads
- Adequacy of provider returns
- Effectiveness of the Hourly Return approach used to set prices

2. Provide recommendations in relation to the potential early deregulation of price in more mature sub-markets and the glide path for the eventual deregulation of price more generally.

Pricing of specialist disability accommodation (SDA) was excluded from the scope of the IPR on the basis that there was separate work being undertaken by the NDIA on this topic.

This report provides a summary of the evidence and findings from provider consultation and analysis conducted by the IPR team (Sections 2 and 3), and presents recommendations against each item of the IPR Terms of Reference (Section 4).

1.4 PHASES OF THE IPR

Phase 1 (Jul-Aug 2017): Review of submissions and NDIA documents and initial assessment of provider economics

The first phase of work consisted of reviewing and analysing the NDIA's market stewardship role, building a provider economics/cost model, and analysing supply challenges likely to emerge at the sub-market level. Submissions to the NDIA and the Productivity Commission were reviewed and documented, to identify priority issues for further consultation.

The IPR team also conducted analysis of comparable schemes, e.g. Accident Compensation, Aged Care, and State-funded disability – to assess NDIA prices versus other relevant sectors.

Phase 2 (Sep-Oct 2017): Provider consultation and evaluation of options

Phase 2 focussed on engaging with providers and other stakeholders. The IPR team held ten provider forums in: Adelaide (SA), Townsville (QLD), Melbourne (VIC) (2), Darwin (NT), Canberra (ACT), Sydney (NSW) (2), Newcastle (NSW) and Campbell Town (TAS), with ~800 individuals attending in total. In addition, nine online forums were held, with a total of 270 individuals joining from across Australia.

The IPR team engaged individually with 45 NDIS and aged care providers, and participated in working groups with providers, peak bodies, advisory groups, and state and territory governments. This included multiple consultations with the Independent Advisory Council (IAC) representing participants.

Though no formal written submissions were requested, many providers chose to submit supporting evidence/documentation to the IPR. In total ~20 written submissions were received from across the sector; this was in addition to the submissions made to the Productivity Commission and NDIA FY2017/18 Price Review.

Phase 3 (Oct-Nov 2017): Development of draft recommendations

The third phase of work focused on summarising findings, conducting further analysis and developing draft recommendations. The consultation phase highlighted examples of providers operating profitably at current price points, as well as examples of providers who find the current price points very challenging. Phase 3 involved collecting data on different operating models to identify features of models that are working, and key drivers of cost in models that are not. The IPR team engaged with providers to identify options for solutions that would help improve provider economics.

In considering solution options, the IPR assessed the appropriateness of options in achieving NDIA's three aspirations- better participant outcomes, a growing market with innovative supports, and a financially sustainable scheme. Implications of the recommendations were assessed, and the effectiveness and efficiency of pricing mechanisms and levels were considered, subject to available data.

Phase 4 (Dec 2017): Syndication and refinement of recommendations and preparation of final report

The final phase of the IPR involved testing of recommendations with providers and other stakeholders and preparation of the final report. The implications of recommendations were identified and quantified, where possible, in terms of impact on the three NDIA aspirations. Estimates of costs were made based on the best information available. Given a lack of appropriate data as the Scheme matures, the IPR made several assumptions to inform estimates of costs, leading to wide ranges in estimates presented in this report.

1.5 ACKNOWLEDGEMENTS

The IPR team is grateful for the cooperation of many providers and representatives of peak bodies, member groups and state and territory governments, who generously gave up their time to meet with the team and provide input to the IPR. The IPR would like to especially thank the 45 providers who met one-on-one with the IPR team and shared detailed financial information, modelling and analysis, as well as the IAC that invited the IPR to join four of its meetings.

The IPR team would also like to acknowledge the many individuals within the NDIA who shared their expertise and helped the team understand current practices related to pricing and work underway in the NDIA.

Further, the IPR team would like to thank AlphaBeta Advisors who provided support to McKinsey & Company throughout the entirety of the IPR.

2 Input from submissions and consultation

The IPR team examined input from various sources, including:

- Written submissions to the Productivity Commission report on NDIS Costs; the NDIA FY2017/18 Price Review; and the IPR team.
- Face-to-face consultation with providers to the NDIS; providers in adjacent sectors such as aged care; peak bodies including the Independent Advisory Council (IAC) representing participants; state and territory governments; and academics.

Provider submissions to the Productivity Commission report on NDIS Costs and the NDIA FY2017/18 Price Review had different areas of focus. The Productivity Commission sought responses on pricing with a holistic view of the disability market, whereas the NDIA FY2017/18 Price Review sought responses focused on specific modelling assumptions detailed in the *2017 Price Review – Discussion Paper*.

The objective of consultation undertaken through the IPR was to identify a comprehensive list of issues and challenges faced by providers that the IPR team could test for significance and impact on the NDIA aspirations: improving participant outcomes, growing a market with innovative supports, and a financially sustainable scheme. To do this, the IPR team consulted with over 1000 provider representatives through provider forums; and consulted individually with 45 providers that are broadly representative of the disability market, including providers across NDIS support types, large and small providers, providers with new service models, providers delivering services in regional and remote areas, and new entrants with potential to scale in size.

This section of the report records the challenges and opportunities raised by stakeholders – as was committed to do during consultation, prior to testing their significance on the NDIA aspirations. Actions being taken to address some of these challenges, as advised by the NDIA, are also recorded. Section 3, *Key findings and supporting evidence*, details evidence the IPR team sought to test, challenge and validate opportunities, including those raised by providers, that are within the scope of the TOR. Section 4, *Recommendations*, outlines the IPR team's recommendations to address the challenges and opportunities raised by providers and other stakeholders, underpinned by further analysis and data to support how these recommendations assist the NDIA in achieving its three aspirations.

The IPR team recognises that not all challenges and opportunities raised by providers are specifically within the scope outlined in the TOR. However, where these challenges are likely to have a flow on impact on provider economics, they have been noted below. Other challenges that are less likely to impact on provider economics, but could assist the NDIA to improve participant outcomes, will be raised separately with the NDIA.

Feedback received during consultation can be summarised into four areas:

- Increasing price loadings to adequately cover the cost of service delivery for rural and remote geographies, participant cohorts, and support types (see Section 2.1 below).
- Reducing the cost of administration for providers by improving the NDIA's provider-facing systems and processes (see Section 2.2).

- Increasing the emphasis on policies that support the development and growth of the market, including a greater focus on participant outcomes (see Section 2.3).
- Improving aspects of participant planning quality and consistency that would assist provider economics as well as participant outcomes (see Section 2.4).

While discussions with providers centred around challenges they are facing, most expressed their strong support for the reforms and objectives of the NDIS, and aspirations of the NDIA, as well as the positive work underway by the NDIA to achieve these aspirations and address provider challenges. Several providers were also excited about their success in developing new business models that could work successfully in helping participants achieve their objectives, and improve their outcomes, in a financially sustainable way.

The remainder of this section summarises provider and other stakeholder feedback on the following topics:

- 2.1 Provider economics
- 2.2 NDIA processes and systems
- 2.3 Market growth and development
- 2.4 Planning process.

2.1 PROVIDER ECONOMICS

Many providers raised challenges with the assumptions included in the NDIA's *2017 Price review – Discussion Paper*, which detailed the input assumptions to be used by the NDIA to model the price of attendant care (a combined category comprising Assistance with Daily Living and Assistance with Social and Community Participation). In Section 3 – *Key findings and supporting evidence*, the IPR team tests these challenges by benchmarking against other schemes, and examining effective models that are working in the market, as well as those that are not working.

These providers considered that the NDIA should continue to refine the following assumptions:

- The wage assumption. The NDIA assumes that the disability support worker will be employed at a level 2.3 under the Social, Community, Home Care and Disability Services Industry Award (SCHADS Award). Some providers believe the assumption is low and does not allow for career progression. Other providers commented that they pay higher wages due to Enterprise Bargaining Agreements (EBA) or a more mature workforce. By way of contrast, some providers commented that they are successfully operating in a consistent way with the wage assumption, utilising different mixes of part-time/full-time employee models, casual employment and accessing new talent pools.
- The utilisation assumption for support workers. The NDIA assumes a utilisation level of 95% for disability support workers. Some providers believe this level of utilisation is difficult to achieve. Some providers that consulted with the IPR reported that 80-85% utilisation of direct support staff is typical. By way of contrast, some are achieving 95% to 100% utilisation.

- The utilisation assumptions for supervisors. The NDIA assumes a 1/15 supervision ratio, and a utilisation level of 95% for supervisors. Some providers believe this level of supervision is difficult to achieve, and that it does not allow sufficient time to undertake quality/compliance requirements and support worker management. Others are finding that they do not require the level of supervision of 1/15 to offer quality support to the participants they serve.
- The overhead assumption. The NDIA assumes an overhead level of 10%, which equates to 15% if a provider is not subject to payroll tax. Some providers are finding it difficult to achieve this level of overheads, particularly those with higher expenditure on training, reporting and participant engagement during transition. While the Department of Social Services (DSS) and states and territories have provided funding to support transition, some providers claim this is insufficient – given that the participant-driven service model requires most providers to make new investments in areas such as training, IT, marketing, and recruiting. Further, some providers noted that NDIS processes contribute to higher overheads, e.g. through lost administration time associated with information and communication technology (ICT) challenges. By way of contrast, some providers reported that they are currently able to achieve an overhead level of 10%.

Providers also raised issues related to the higher cost of service provision for certain cohorts of participants. This includes participants living in remote areas, with complex needs, and those requiring Assistive Technology (AT). More specifically, they considered that the NDIA should consider the following:

- Remote loadings are not sufficient for some remote areas where there are high costs-to-serve due to factors including extra travel time, lack of infrastructure and facilities, and the cost of deploying/housing a workforce. In some cases, such as for communities in the Northern Territory, air travel and overnight accommodation is necessary to reach participants, and this cannot be claimed from the NDIA.
- Travel is also a concern in some regional areas, as providers are not being fully remunerated for travel in all circumstances.
- The differentiation in price levels for support workers serving participants with complex needs is not sufficient to cover the costs of a higher skilled worker with increased qualifications or experience, which some providers believe are required to provide high quality support to these participants. Some providers expressed a view that the current price could discourage providers, both existing and new entrants, from serving participants with complex needs and instead focus on those that can be served with a lower cost support model.

The NDIA has recently announced the development of an independent provider benchmarking function to generate important strategic information both for providers and the NDIA. The initiative seeks to collate and share market knowledge on the cost structures and pricing of providers. Participating providers will receive information that enables them to understand how they are performing relative to their peers, and where there are specific opportunities for organisational improvement. The data generated by the project will be at an aggregate and anonymised level, and will provide government with a clearer sense of what is happening in the sector, and where intervention by the NDIA may be necessary.

2.2 NDIA PROCESSES AND SYSTEMS

Providers raised challenges relating to additional overhead costs associated with operating in the NDIS, which they believe are partly attributable to NDIA processes and systems. Opportunities identified by providers for the NDIA to improve system and processes include:

- Reducing the administrative load when providers interact with the NDIS, including the one-time costs associated with pre-planning and quoting (where applicable) when a participant enters the NDIS, and ongoing administration such as billing, invoicing, and reporting. For example:
  - Improve the functionality and efficiency of the Provider Portal, as they consider errors are still occurring and can be time consuming to resolve.
  - Increase the speed at which SIL quotes can be created and processed. Some providers commented that they have submitted reports between 100-200 pages in length as part of the additional information they consider is required for 'above benchmark' SIL quotes, while other providers reported that they have waited up to 3 months to receive a response from the NDIA on SIL quote outcomes.
  - The quoting process for Assistive Technology and home modifications can disadvantage the provider developing the initial quote, as they are required to spend more time and effort to develop a quote together with a participant, typically in-home, and often an assessor, usually an occupational therapist. As the NDIA requires at least 3 quotes, additional providers are sent the initial quote to develop their own quote in isolation from the participant and assessor. This advantages subsequent providers by giving them the opportunity to undercut the initial quote due to the reduced cost of quote development.
- Improving the clarity and consistency in communication of policies to providers. Some providers commented that they spend significant amounts of time contacting the NDIA, and become frustrated with the inconsistency of responses from NDIA staff. Others commented that they're increasingly satisfied with NDIA staff responses.
- Increasing the transparency of the price setting process, and the timeliness of communications relating to price changes, to allow providers sufficient time to update service agreements prior to pricing changes coming into effect.

The NDIA has advised the IPR team that they have made several improvements in the design and functionality of the Provider Portal in the last 12-18 months in response to feedback from providers. However, the NDIA also recognises there are opportunities to further improve functionality and provider experience, and will continue focusing on this as part of its ongoing work. The NDIA also has two projects underway to address the challenges providers are facing relating to SIL: the SIL Tool project, and the SIL Redesign project. Data from the NDIA shows the SIL Tool has reduced the processing time for SIL quotes by up to 50%, however additional improvements will be required for the NDIA to achieve its target of a 14-day turnaround time.

2.3 MARKET GROWTH AND DEVELOPMENT

Providers raised issues about price levels inhibiting the growth and development of a skilled workforce. Some providers believe there is a risk of supply shortage as demand increases towards Full Scheme, and there are anecdotal reports that some providers are choosing to reduce their services or not grow beyond their existing service levels due to pricing constraints. Some providers believe there is also potential that new participants and participants with complex needs could have difficulty finding a service provider if the market is not growing at the necessary rate to meet demand. At the same time, these providers recognise there are also new providers entering the market and some other existing providers are expanding their services. Providers suggested:

- Setting prices at a point that allows providers to attract and retain a more skilled workforce to care for participants with complex needs. Some providers serving participants without complex needs also raised this as an issue, as they are having difficulty attracting highly skilled workers necessary for some categories of service.
- Explicitly allowing a provision for training, as some providers believe the utilisation assumption used in modelling is not sufficient to cover enough time for training, in addition to other non-client facing activities such as incident management, administration and reporting. This issue is more pronounced for providers serving participants with complex needs.
- Developing market infrastructure to increase the ability for the market to grow. For example, there is no functioning e-market, and participants vary in their abilities to exercise choice and control.

Some participants and providers suggest that the hourly rate approach to pricing does not provide sufficient incentives to improve outcomes and consistent adherence to insurance principles. Specifically, they requested the NDIA to consider the following:

- An approach to pricing consistent with an outcome focus. Prices are currently focused on units of care in hours. The IAC and some providers would like to see an incentive in the pricing structure for providers to reduce a participant's support needs over time. While the focus on units of care helps to ensure participants receive a defined number of service hours, it can also inhibit innovation by limiting flexibility in how participant packages can be spent.
- A more consistent adherence to insurance principles that focuses on early investment to reduce participant needs over time and reduce their lifetime cost to the NDIS. Participant plans should be looked at more holistically to understand how a greater investment in capital supports such as Assistive Technology and home modifications could reduce the need for other supports. Looking at capital supports in combination with opportunities to reduce other supports, and focusing on quality as well as price could improve outcomes for participants, as well as assist the sustainability of the NDIS.

The NDIA has advised the IPR team that it has identified initiatives to expand its monitoring and support of market development. It is developing a market assessment framework, which seeks to bring together disparate data sources and metrics into a coherent assessment process. It is also investing in a benchmarking function to share market knowledge and identify opportunities for providers to improve their businesses. The NDIA is also focused on

increasing its understanding of how the NDIS is affecting participant outcomes through regular surveys and participant consultation. For example, the Short-form Outcomes Framework questionnaire has helped the NDIA build a baseline understanding of participant outcomes during the NDIS transition period.

2.4 PLANNING PROCESS

The planning process is not formally within the scope of the IPR, as defined in the TOR. During consultation, issues were raised by providers about how the quality and consistency of plans could be improved to positively impact both participant outcomes and provider economics, both initial plans and plan reviews:

- Improving the planning process to support NDIA planners and Local Area Coordinators (LACs) to consistently capture all the needs of a participant to deliver quality plans for participants. This can reduce the time and resources providers invest to help some participants rectify issues with their plans such as correcting plan errors and submitting additional documentation to justify the need for additional funding in participant budgets. It can also help reduce the time providers spend educating participants and their families on how to engage with the NDIA and LACs, including how to utilise their plans with providers. These improvements will benefit participant outcomes by ensuring they have sufficient funds for specific functions. It is recognised by providers that there will always be more opportunities to improve plans, and the role of the NDIA is to improve the capabilities of its planners over time in identifying and planning for all needs of participants and how to improve outcomes.
- Improving the consistency in timing and communications for plan reviews, to make sure providers are aware reviews are taking place. This would help providers understand when they may need to update service agreements with participants, and alert them to when there could be service continuity issues if there are changes to a participant's funding allocation across different supports.

The NDIA has advised the IPR team that significant improvements are underway to the planning process to address many of the challenges raised by providers, and are currently being implemented as part of the Participant and Provider Pathways Review. Piloting has commenced in Victoria in December 2017, with improvements including:

- A significantly re-designed planning process to make it easier for participants to see how their goals have been recorded and linked to community, other government services and funded supports.
- Face-to-face planning meetings with an LAC, an NDIA planner and a participant to improve plan quality and educate participants and their families on how to utilise participant packages.
- Participants being able to see a working version of their plan as it is developed and the opportunity to ask questions and provide feedback during the planning meeting, to allow for any queries to be discussed and addressed before the plan is finalised.
- The use of simple language to improve communication.

Some providers argue that the challenges described in this section are having an impact on their abilities to operate at a sufficient surplus in the sector. In Section 3 – *Key findings and supporting evidence*, and Section 4 – *Recommendations*, the IPR team has worked with the providers, the NDIA and other stakeholders to explore the challenges raised by providers that are within the scope of the TOR, to provide a sufficient evidence base to justify the need for action, and propose recommendations relating to pricing that can be adopted by the NDIA to address these challenges.

3 Key findings and supporting evidence

To address the issues raised by providers and other stakeholders during consultation, and to assess whether current price caps are adequate, the IPR team looked at three sources of evidence:

- **3.1. Evidence of market development and shortages in supply,** including analysis of the available market data such as utilisation rates, rates of market entry and exit, and market surveys.
- **3.2 Provider economics and models,** including detailed bottom-up analysis of providers' costs-to-serve and comparison with the hourly rate model.
- **3.3 Benchmarks from other schemes,** including comparison of NDIS prices to state accident compensation schemes and the Commonwealth's aged care and veterans' support programs.

3.1 MARKET DEVELOPMENT

Close to 11,000 service providers have been approved to cater to participants in the NDIS, with approximately 5,000 service providers already active in supplying support services.[2] Many of these service providers are small suppliers, with 60% of active providers catering to fewer than 10 clients each. The larger providers account for most of the Scheme expenditure to date. Approximately 70% of NDIS payments have been to providers which cater to 100 or more participants each.[3]

The IPR team recognises that the provider market landscape is likely to change significantly in response to providers shifting to a new consumer-driven, unit funded environment. For example, the current provider landscape for in-home attendant care, a significant support type in the Scheme, is dominated by not-for-profits and medium to large providers.[4] Going forward, new providers, many of whom are likely to be for-profit organisations, and could leverage technology innovatively, are expected to enter the market, having identified a profitable niche or operating model. Some existing providers will exit the support category because they cannot adjust to this new market landscape, while providers who successfully adjust their operating models are likely to expand to meet demand. It is unclear how quickly this market adjustment and new provider entry will occur. A dynamic and responsive approach to monitoring the market will be critical to ensuring there is sufficient and quality supply to allow participants to continue to receive safe and quality supports.

The key test of whether current prices are adequate is whether participants can access the quality supports and services needed to achieve their goals, as defined and funded in their

[2] National Insurance Disability Agency: *National Insurance Disability Scheme COAG Disability Reform Council Quarterly Report* (30 September 2017).

[3] Analysis based on NDIS payment data.

[4] Not-for-profits consist of 62% of the disability sector, while 88% of in-home attendant care service volume in 2016-17 was delivered by medium to large providers.

plans. Market data on participant and provider behaviour and intent offers the most direct evidence of whether current prices are consistent with this test. Analysis of provider entry and exit rates, utilisation rates, and participant outcomes reveals a market that is, to date, providing the supply required to match demand. However, this evidence is not unequivocal. Gaps in the available data and the volatility of a transitional and rapidly growing market mean that this data does not yet provide certainty as to whether participants will be able to continue to access the supports they need into the future.

The remainder of this section examines the available data sources on market development:

Provider entry and exit data

Provider entry and exit data offer evidence of a market that is growing to meet demand. The number of registered providers more than doubled in FY16/17. The rate of growth of quarter-to-quarter provider registration has outpaced the rate of growth of participant registration throughout 2017. In the latest quarter, provider registrations grew by 21%, with a total of 10,507 providers currently registered in the Scheme.[5]

In the trial regions, less than 15% of providers decreased or ceased supply during the trial, whereas 30% of providers increased supply or entered after the trial began (FY13/14 to FY15/16).[6] The existence of some provider exits is also not in itself an indication of inappropriate prices. It is to be expected that as providers adjust to the NDIS, some will be unable to make enough changes to their business models and operations to supply services at an efficient price, while others will choose to specialise in some supports but exit other supports. It is also important to recognise that providers may have been willing to invest in the trial to test whether they could develop an effective model, so limited exits during trial may also not be predictive of future provider behaviour.

Participant utilisation data

Another key data point – utilisation – also does not provide compelling evidence of supply shortages. The utilisation rate is the share of a participant's budgeted supports that has been used. The average utilisation rate across the Scheme in FY16/17 was 66%, which is well below the expected utilisation of the Scheme at maturity of 85-95%.[7] However, the available evidence suggests that it is more likely caused by participants being unfamiliar with the Scheme and how to use their supports, rather than a supply shortage. In the trial sites, the average utilisation rate also started low, at 64%, but increased to 75% in the final year, reaching 80% in some sites. This change occurred without a reduction in the average size of plans, discounting the possibility that individual plans simply became more restrictive, despite the number of participants increasing as the trial progressed. Evidence from transition also indicates that the utilisation rate increases as participants spend more time in the Scheme and move onto their second and subsequent plans. The share of participants with high utilisation rates (>75%) almost doubles from first to subsequent plans. There is little participant survey

[5] National Insurance Disability Agency: *National Insurance Disability Scheme COAG Disability Reform Council Quarterly Report* (30 September 2017).

[6] Analysis based on NDIS payment data.

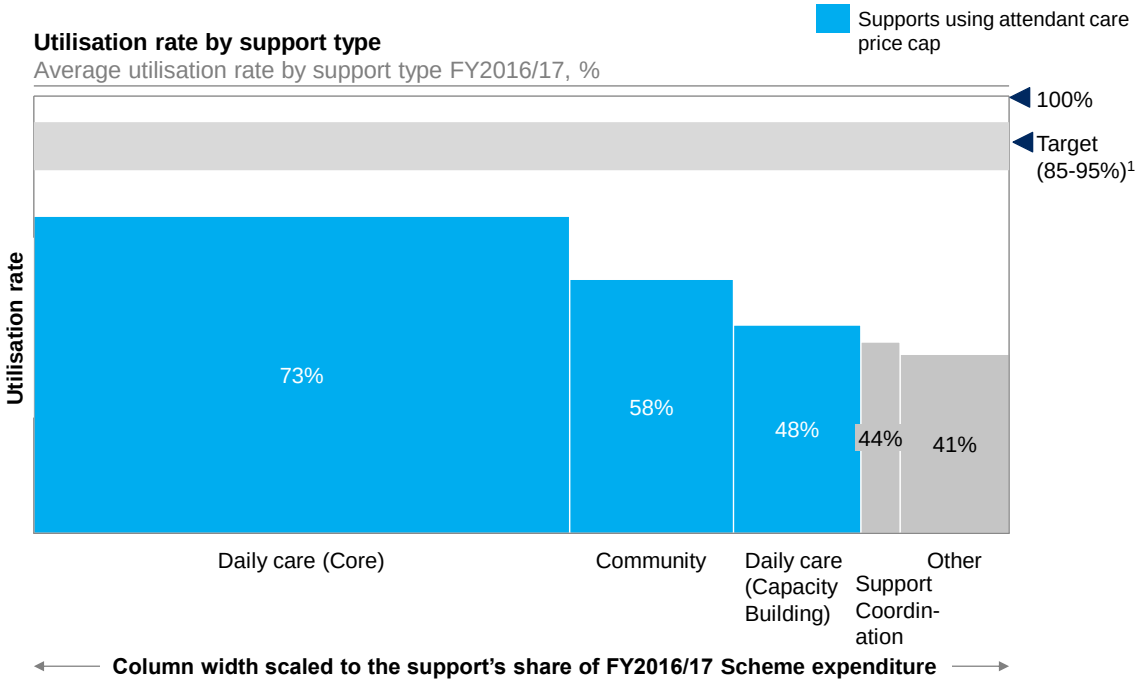
[7] Average utilisation rate for FY16/17 as at December 2017. Utilisation rates continue to increase after the end of the period being measured due to delays in claims and payment processing, so it is likely the final average utilisation rate for FY16/17 will be higher.

data to understand the drivers of this utilisation rate. Surveys during the NDIS trial showed that 27% of NDIS participants had at least some difficulty in accessing supports for which they had funding. More recently, baseline outcomes performance reported quarterly by the NDIA shows that 68% of participants nominate having no difficulty in accessing health services they require. However, a similar metric for NDIS services is not reported.

Analysis of utilisation by support type shows utilisation rates are highest in the largest support types and supports using attendant care, with the category of core daily care support services having a utilisation rate of 73% (Exhibit 2). This category includes support services such as assistance with daily living. Other support types reliant on attendant care, like assistance with social and community participation ('Community') and support for capacity building daily activities, have the next highest utilisation rates. The lowest utilisation rates are in capital and intermediary supports, which are of concern but are less likely to represent an imminent shortfall in critical supports.

EXHIBIT 2

Average utilisation of daily care (core) supports was higher than any other support type



1 Target utilisation rate estimated based on consultation with the NDIA and review of annual budget papers.
SOURCE: Scheme Actuary, FY17 utilisation data by support category

Aggregate analysis of firm entry/exit and utilisation data is complemented by anecdotal evidence of new private sector investment and innovation. For example, firms such as HireUp and BetterCaring[8] have made large investments to build new digital infrastructure to provide services in the disability services market. Such upfront investments offer evidence of the private sector's willingness to invest in this market. Similarly, the state government in New South Wales sold its Home Care business for $114 million, indicating the willingness of private capital to enter the disability services market.

Participant survey data

An evaluation of the NDIS trial by the National Institute of Labour Studies (NILS) revealed most participants found supports for which they had funding. This survey was initiated in 2014 and therefore covers more of the early experience of the Scheme. Approximately 73% of participants responded that they were able to access all supports for which they had funding. The average number of different supports accessed by participants has increased to 3.3 from 2.2 since the introduction of the Scheme, and 44% of participants report having greater choice and control over the supports they do receive since their enrolment in the NDIS. [9]

More recent measurement of participant outcomes reveals that 71% of participants believe that the NDIS has helped the level of choice and control they experience. 75% of participants identify the NDIS as having helped their daily living conditions, and 63% identify that it has helped their social, community, and civic participation.[10]

Evidence of provider intent

Other factors point to significant challenges as the Scheme continues to grow. The Productivity Commission acknowledged several studies that point to a potential future shortfall in supply to meet projected demand, with current workforce growth rate estimated between 6-13% versus a required growth rate of 18%. However, this can partly be explained by the ramp-up in demand that is expected, i.e. future growth rates are expected to be higher than current growth rates. The Productivity Commission also identified several participant cohorts for which a shortfall in supply is a risk. These included participants in remote and very remote areas and participants with complex needs. While there is not yet evidence of a shortfall in supply occurring across the Scheme, this is a risk that needs to be closely monitored.

Furthermore, some providers reported to the IPR team during its consultation process that they were drawing on surpluses and other funding sources, and cross-subsidising some support types, to continue to serve participants while they transition. They are concerned as to whether they can achieve a sustainable operating model in the future. Some major providers also reported that due to challenging economics operating in the Scheme, they are not accepting new participants for some services and are planning to reconsider their support

[8] Better Caring is not a registered provider under the NDIS, but has a profitable operating model in the disability services market supporting self-managed participants.

offerings in 2018. Ongoing close market surveillance and liaison with providers will be essential for identifying the intention of large providers to exit or reduce services.

3.2 ANALYSIS OF PROVIDER ECONOMICS

The financial sustainability of providers in the NDIS is critical to ensuring ongoing supply of supports to participants. While providers may be able to absorb losses for a period, operating in the NDIS needs to be attractive in the long term for enough providers to meet the growth in demand.

To understand the economics of providers in the NDIS, the IPR team gathered evidence from various sources, including a detailed cost-to-serve analysis of a sample of NDIS providers. The IPR team is grateful for the cooperation of many providers, who generously shared detailed financial information to enable the team to analyse their costs-to-serve.

The remainder of this section examines the evidence available on the following:

- 3.2.1 Cost of transitioning to the NDIA
- 3.2.2 Overview of provider economics across support types
- 3.2.3 Provider economics in attendant care

3.2.1 Cost of transitioning to the NDIS

For providers across all support types, the cost of transitioning to the NDIS and interacting with the NDIA's systems and processes added materially to their cost base and affected their short term financial position.

Moving to a unit-funded, consumer-driven environment has required providers to employ new staff to process payments and invest in IT systems and marketing. Some providers estimate that these costs have added 1.5% to their annual expenditure.[11] This is detailed further in Section 4.6.1.

Improving the NDIA's systems and processes related to the portal and planning as articulated in Section 4.6.2, would reduce administrative costs and cash flow risk. Anecdotal evidence indicates that these improvements could amount to ~0.5% of total annual expenditure for some providers.[12] Anecdotal evidence also indicates that the cumulative effect of unapproved SIL quotes, unresolved portal errors and expired plans has resulted in cash flow risk for some providers; one large provider submitted that at one point they were owed ~10% of their total revenue in services unclaimed. The IPR team has been advised by the NDIA that substantial improvements to the portal have been made in the last 12-18 months, and the NDIA currently has a significant program of work underway, the Provider Pathway Project, to review and address the issues noted above.

[11] Based on 45 one-on-one interviews with providers in September 2017, in which three large providers (revenue > 50 million in FY16/17) gave detailed evidence of these costs.

[12] Based on 45 one-on-one interviews with providers in September 2017, in which three large providers (revenue > 50 million in FY16/17) gave detailed evidence of these costs.

3.2.2 Overview of provider economics across support types

Across all support types there were examples of providers operating profitably, and examples of providers struggling (see Exhibit 3).

EXHIBIT 3

Provider cohorts where pricing is working economically versus where it is challenging

Support type[1]	Working economically	Challenging
Assistance with daily life and social/ community participation (36.1%)	▪ Tech-enabled for-profit providers serving participants with lower complexity needs or strong informal supports ▪ Some incumbents with economies of scale ▪ New entrants with lean operating models	▪ Providers serving complex participants or operating in low density areas ▪ Providers with more qualified, specialist or experienced workforces ▪ Providers with EBAs that are more generous than the Award
Short term accommodation (1.7%)	▪ (Limited) Providers serving less complex participants with lower care ratios	▪ Providers serving complex participants ▪ Providers operating on weekends/ holiday periods/ overnight
Therapy (5.0%)	▪ Some therapy providers (e.g. sole traders in physio, speech) ▪ Providers in high density, metro areas	▪ Remote/rural areas where lots of travel is required ▪ Some psychotherapy service providers
Life skills and support coordination (5.3%)	▪ Support coordination and plan management providers for low complexity participants ▪ Some employment service providers	▪ Providers serving complex participants, where plans do not adequately cover coordination activities undertaken
Supported independent living (39.0%)	▪ Some SIL providers, as SIL is a quoted item	▪ Providers serving complex participants with onerous quoting requirements ▪ Emergency/crisis situations

SOURCE: Provider Consultation, Sep-Oct 2017

In Supported Independent Living (SIL), Therapy, Support Coordination and Plan Management, analysis indicated that most providers can operate profitably at current price points/benchmarks. However, the costs involved in meeting quoting requirements and delays in approving quotes in SIL are impacting provider overheads.[13] In addition, the rollout of the new SIL pricing process may reduce surpluses that providers are generating, and reduce their ability to cross-subsidise other services.

In attendant care, there was a higher proportion of providers who submitted they were unable to operate profitably. Given the emphasis from providers on the challenges associated with profitably delivering attendant care, the IPR team conducted detailed analysis of provider economics for this support type.

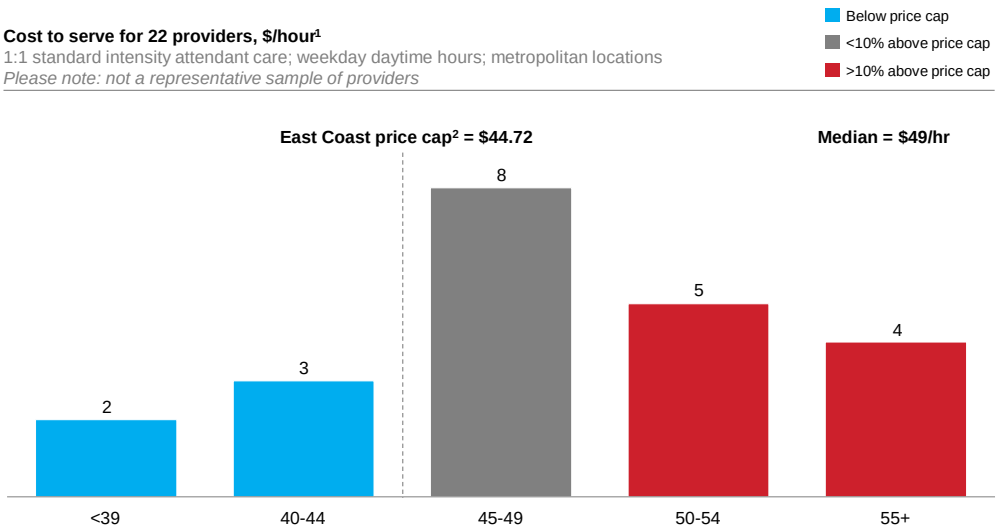
13 Anecdotal evidence from provider consultation indicates that SIL quoting requirements can be onerous: some providers have submitted reports of 100-200 pages in length to justify above benchmark quotes. NDIA data indicates that the average time to approve a SIL quote in Jul-Sept 2017 was 40 days, down from 107 days pre-July 2017.

3.2.3 Provider economics in attendant care

There is significant variation in the cost of service delivery for attendant care between providers. For the 22 providers who shared their financials, costs-to-serve ranged from under $40 to $55+ per hour for standard intensity weekday support (see Exhibit 4).[14]

EXHIBIT 4

Distribution of provider costs-to-serve for attendant care



1 Based on 22 providers who provided costings information for 1:1 standard intensity attendant care as part of the IPR or the 17/18 Price review. Some providers submitted a cost to serve based on actual data that represented their actual workforce mix. Where a provider submitted a cost to serve that assumed an 100% permanent or 100% casual workforce, and where the IPR had information about their workforce mix of permanent v casual staff, the IPR team adjusted their costings to reflect their true workforce mix. 2 Price cap for VIC, NSW, QLD and TAS. The 'East Coast' price cap is shown here as this is the cap that applies to most providers on this chart. The price cap for ACT, SA, WA and NT is $45.54.

This variation is attributable to differences in operating models and different cost structures across providers:

- For providers with more mature and formally highly qualified workforces, or who are bound by more generous working conditions and pay scales compared to the SCHADS award and pay scale, base labour wages were a key differential cost driver.
- For providers with heavier supervision structures, the cost of supervision was a key differentiating cost driver.
- For providers in regional geographies, travel was often a key cost driver.
- For providers with predominantly casual workforces, workforce utilisation was significantly easier to manage.

14 While the IPR's sample of 22 medium to very large providers was not comprehensive or representative of the market, the IPR was limited by the information providers were able to provide.

- There was significant variation in the cost of corporate or indirect overheads between providers, with expenditure on corporate overheads as a percentage of direct labour costs ranging from less than 10% to over 20%.[15]

For a more detailed summary of key drivers of differences in costs between providers, see Appendix A.

Participant characteristics can also influence provider economics. Margins were more compressed (or negative) for providers operating in areas with low density of participants, e.g. rural, remote and very remote areas, and for those serving participants with complex needs. On the other hand, the profitability of some providers can be in part attributed to their focus on specific participant segments. Providers who serve participants at the lowest end of the complexity spectrum often have lower labour and supervisory costs. These providers submitted that it is not necessary to pay a highly qualified or trained worker to deliver attendant care supports to participants that are not medically or behaviourally complex, for whom the risk of incidents is extremely low. Rather what they focussed on ensuring was that they had support workers with the right mindset, compassion and soft skills to deliver high quality support.[16] Providers who serve participants with predictable and high volumes of care are also able to operate profitably in attendant care, because workforce rostering and utilisation is easier to manage.

While a substantial number of providers assessed are not yet able to operate profitably at the current price cap, there are some providers who submitted they are able to deliver 1:1 standard intensity attendant care at a sustainable surplus, while complying with their award or enterprise agreement obligations. These providers often have lean operating models, leverage technology successfully, or are sole traders. Some of these providers have operated in the sector for some time, while others are new providers that entered the disability space in response to the NDIS opportunity.

- **Traditional providers with lean operating models:** Some traditional providers who run extremely efficient operations and have achieved a degree of scale are able to operate profitably. These providers exhibited some, or all, of the following characteristics: lean corporate overheads facilitated by effective investments in IT systems; effective rostering systems and a mix of casual and permanent staff to maximise staff utilisation; and/or a supervision model where supervisors only focus on quality assurance and co-ordination, while rostering work is done by a separate team. Providers in this group submitted they can achieve corporate overheads of ~10% of direct labour costs. Providers in this group who hire predominantly casual workers can maximise the amount of time their workers perform client-charging work and achieve 95+% workforce utilisation rates. These

[15] Data based on information from 22 providers who provided detailed financial information to the IPR. Corporate overheads refers to costs that are not directly attributable to client care (e.g. IT, HR, rent, marketing, business development, senior management salaries).

[16] This is particularly relevant in the context that there will be more than 100,000 people who receive NDIS funding who did not previously receive disability funding, A segment of the 100 000 new participants will have a psychosocial disability and may need highly qualified workers to support them. A segment of the new participants whom will have lower packages relative to participants who were existing recipients of State block funding, are likely to be at the lower complexity end of the spectrum. For these participants, a support worker with the right mindset may be more appropriate than a highly qualified worker.

working models provide insights on tactics that can be used by struggling traditional providers to improve their financial performance.

- **Tech-enabled providers**: These providers serve participants via online platforms, which allow participants to book and manage their own care schedule directly, reducing the work required to be completed by a provider and minimising corporate overheads. Support workers are typically casual, allowing providers to achieve high utilisation levels, as staff will only work when there is known demand from a participant. These providers estimate their cost of service delivery is up to ~20% lower than the current price cap. These providers also leverage technology to manage quality and safety: customers are able provide feedback after every shift online and an algorithm helps detect potential problems with service quality or customer satisfaction. However, this operating model relies on participants or their carers having the capacity and desire to manage their own supports. These providers currently only serve a small proportion of the market, and while this model appears to hold significant potential, it is unclear as yet what percentage of the standard intensity attendant care market this model will be able to serve at full Scheme.
- **Sole traders:** Sole traders can deliver attendant care significantly below the current price cap. This is because a self-employed support worker does not incur the supervisory or corporate overhead expenses of a small provider. While sole traders currently deliver less than 1% of service volume in in-home attendant care market, the emergence of e-marketplaces connecting self-employed care workers and participants could see a significant growth in this group of providers.[17]

The IPR believes these profitable and successful operating models offer valuable lessons to learn from for other providers who are struggling.

3.3 BENCHMARKING WITH COMPARABLE SCHEMES

There are several other State and Commonwealth schemes in Australia that offer comparable supports to their participants, including state accident compensation schemes and the Commonwealth's aged care sector. There is also significant overlap in the provider markets that service these other schemes. For example, ~90% of providers in one of the benchmarked schemes are also registered NDIS providers.[18]

To assess the adequacy of NDIS price caps for various supports, the IPR team benchmarked prices against available prices in the other schemes. The IPR team undertook detailed benchmarking for attendant care and therapy supports. Attendant care was chosen given the large proportion of Scheme spend attendant care represents, and given the recent scrutiny on the price cap for 1:1 attendant care (see Section 4.6.3.1). Therapy supports was chosen

[17] NDIA data. Sole-traders that are registered NDIS providers can serve all NDIS participants, whereas sole traders that are not registered NDIS providers cannot serve Agency-managed participants.

[18] McKinsey analysis, conducted by checking providers in the comparable scheme with NDIS registration data.

because the single NDIS price cap for therapy appeared to be inconsistent with the multiple price levels, and structure, of other comparable schemes.

3.3.1 Attendant care

Benchmarking the unit price of 1:1 attendant care under the NDIS with comparable schemes is complicated by a variety of factors: each scheme has a different funding model, different cohorts of clients, different business rules associated with care delivery (e.g. travel rules, cancellation policy, funding for training), and different fee structures (e.g. weekly price cap versus hourly price caps, composite versus time differentiated price caps). For instance, the Transport Accident Commission (TAC) and Worksafe have composite price caps in which the price cap for 1:1 care does not vary for time of the day or day of the week. By way of contrast, the NDIS rates are specific to the time of the day and day of the week. While TAC and Worksafe attendant care standard price caps do not vary for complex participants, the NDIS price caps differentiate for 'higher intensity' and 'standard intensity' prices.

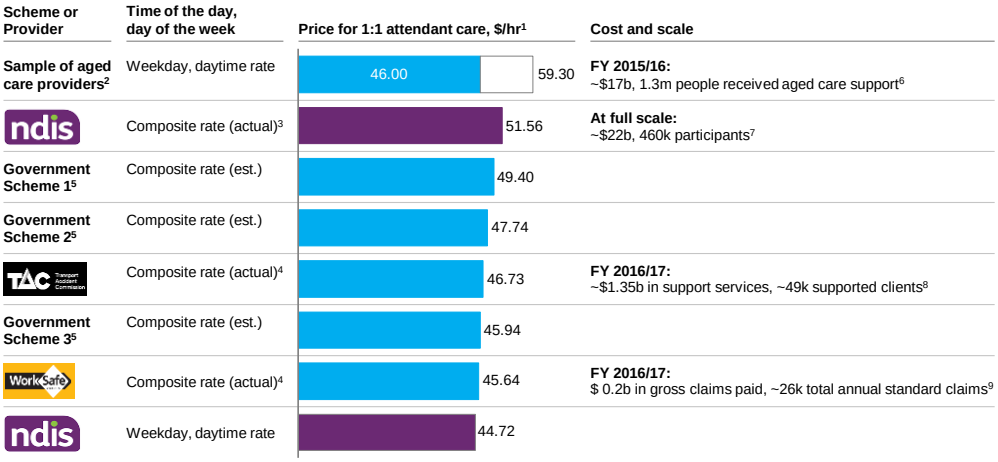
It is also important to recognise that other government schemes such as the TAC and Worksafe are significantly smaller than the NDIS, and revenue from these schemes is less likely to be the primary source of revenue for providers. Further, providers under other government schemes such as Worksafe are often guaranteed they will serve a participant for a set amount of time, and this demand certainty allows providers to manage their business and workforce planning more efficiently.

Despite these limitations in comparing across schemes, benchmarking is nonetheless useful to understand whether NDIS prices are broadly aligned with prices of other schemes. This benchmarking highlighted that the NDIS prices for standard intensity attendant care are in fact broadly aligned with prices of the accident compensation schemes, although market prices for many aged care services are higher (see Exhibit 5). While the NDIS composite price is higher than the composite rate for other schemes, other schemes provide more generous conditions associated with the delivery of care.[19] For example, TAC and WorkSafe offer establishment fees of ~$1200, compared to $500 in the NDIS. TAC also reimburses providers for training at a rate of $43.10 per hour, compared to no specific provision for training reimbursement under the NDIS.

[19] The NDIS composite rate is a weighted average of the various NDIS standard intensity time of the day and day of the week price caps.

EXHIBIT 5

The NDIS attendant care price cap is aligned with comparable compensation schemes, although market prices for aged care appear higher



1. Benchmarking the unit price of 1:1 attendant care under the NDIS with comparable schemes is difficult for a variety of factors: each Scheme has a different funding model, serve different cohorts of clients, different business rules associated with care delivery (travel rules, cancellation policy, funding for training etc) and fee schedules with different fee structures (e.g. weekly price cap vs hourly price caps, composite vs time differentiated price caps). 2. We sampled a range of aged care home care providers in metro regions in Sydney and Melbourne for their weekday daytime attendant care prices. These rates were private rates, meaning they are not necessarily fully government subsidised. 3. NDIScomposite rate for Eastern States, based on actual distribution of service volume between time of the day and day of the week;. 4.IQRS accredited rate. 5. For these Government Schemes, we estimated the composite rate. Where the Government Scheme provided a weekly cap, we divided this cap by the recommended number of hours of care per week. Where the Government Scheme provided different rates for time of the day and day of the week, we estimated the distribution of service volume to calculate a composite rate. 6. 2015/16 Report on the Operation of the AgedCare Act 1997, p9 and 10. 7. NDIA 2017 Corporate Plan, p11. 8. TAC 2017 Annual report, p6. 9. Worksafe Victoria Annual Report 2017, p57 and 15

3.3.2 Therapy

The NDIA has a single price cap in place for all therapy supports delivered by a qualified therapist under the NDIS. The price cap allows therapists to charge participants up to $175.57/hr for the delivery of services in a participant's own environment, which for a child could be in their home or at school, or in a therapist's office.[20] When a participant requires therapy supports to be delivered in their own environment, a therapist can make a separate claim for travel against a participant's package to reimburse them for the costs they incur. The NDIA has created a separate allowance in participant packages for therapy travel, which is capped at $1000 each year per therapy support type. The current travel policy allows therapists to claim travel time at the hourly rate of the service being delivered for travel over 10km.[21]

Other comparable insurance schemes in Australia offer different therapy prices dependent on the number and complexity of the conditions experienced by the participant. Examples include the TAC, WorkSafe, Department of Veterans Affairs (DVA), and NSW State Insurance Regulatory Authority (SIRA). The categorisation of the number and complexity of conditions vary by scheme. To simplify, the IPR team has named them Level 1, Level 2, and Level 3, with the number of conditions and/or complexity of the support increasing with each level (see

[20] NDIA: *2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017)*, p. 61
[21] NDIA: *2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017)*, p. 15

TABLE 1). Price ranges to equate each level of therapy support were observed both across schemes and within schemes for common types of physical therapy including physiotherapy, speech therapy, and occupational therapy. These schemes are typically associated with physical disabilities, but each include psychological therapy as a reimbursable support. When benchmarking to comparable schemes, it is important to recognise that travel policies specifically for therapy services vary across different schemes, and the NDIS travel policy is more generous than other schemes. For example, the TAC does not pay any travel allowance above the hourly rate for out-of-room care, and the DVA pays an allowance for every kilometre travelled above 10km of $0.90/km excluding GST.[22]

For physical therapy, three discrete levels of therapy support exist, each with a different range of prices (see TABLE 1).

TABLE 1: BENCHMARK PRICES FOR PHYSICAL THERAPY SUPPORTS[23,24,25,26,27]

Level of support	Benchmark price range ($/hr)	NDIS price cap ($/hr)	Description
Level 1	$90 - $130	$175	Includes treatment on a one-on-one basis and focused on treatment of a single physical condition
Level 2	$120 - $160	$175	Includes treatment of multiple (2-3) entirely separate injuries or conditions, where treatment applied to one condition does not affect the symptoms of the other injury
Level 3	$170 - $200	$175	Includes treatment related to complex pathology and clinical presentation (including complicated injuries involving multiple joints and tissues, spinal cord injuries, head injuries, major trauma)

[22] Department of Veteran Affairs: *Occupational Therapist Schedule of Fees (Effective 1 November 2013)*, p. 5

For psychological therapy, the entry level of support is at a higher level of complexity than Level 1 physical therapy, and more equivalent to Level 2 physical therapy (see TABLE 2).

TABLE 2: BENCHMARK PRICES FOR PSYCHOLOGICAL THERAPY SUPPORTS

Level of support	Benchmark price range ($/hr)	NDIS price cap ($/hr)	Description
Level 1	$160 - $180	$175	Includes psychological therapy on a one-to-one basis focused on treatment of a psychological disability in a low risk environment
Level 2	$190 - $240	$175	Complex psychological therapy requiring a very skilled and experienced clinical professional, often necessary where a participant poses a high risk to themselves or others because of their disability

The findings outlined in this section form the basis of the suite of recommendations detailed in the following section. Recommendations are grouped by the items of the Terms of Reference. Under each item, further detail is also provided on the issues and evidence relevant to the topic.

4 Recommendations

As outlined in Section 3.1, the fundamental test of whether price caps are adequate is whether participants can access quality supports and services. There is not yet compelling evidence of supply shortages occurring, other than what was recently observed in short term accommodation and has now been addressed through price changes. However, there is still a risk of future supply shortage, particularly for participants in rural, remote and very remote areas and those with complex needs. The IPR team's analysis also identified a significant number of providers that have not yet developed a profitable operating model, particularly in the service category of attendant care.

To improve provider economics and confidence in the NDIS, minimise the risk of supply shortages in the future, and assist the NDIA to achieve its aspirations, the IPR team has made 25 recommendations, detailed in this section. These recommendations are designed to target the root cause of issues identified through consultation and further analysis.

Together, these recommendations will have a positive impact on provider economics, improving overall industry margins by 2% to 4%, with even higher margin improvements for providers serving participants with complex needs or in rural, remote and very remote areas. Examples of these recommendations that will have a direct impact on provider economics are:

- Adding a third tier to the complexity loading of 10%, to account for higher level of skills/experience of workers and additional training required.
- Allowing providers to charge up to 45 minutes of travel time in rural areas.
- Allowing providers to quote on the delivery of services in isolated regions.
- Changing the cancellation policy to allow providers to charge participants for cancellations. after 3pm on the day before the service.
- Removing the $1000 travel cap for therapy supports and align the travel policy with attendant care travel policy.
- Changing the therapy prices to better reflect different therapy types, and introduce a second tier of pricing for therapy assistants.
- Continuing to improve NDIA systems and processes (e.g. portal functionality, quoting) to enable providers to reduce administrative tasks and reduce costs.
- Introducing temporary overhead assistance equivalent to a 2% to 3% loading on the price for providers delivering attendant care for the next 12 months.

The recommendations in this section have been grouped according to items in the IPR's Terms of Reference (see Section 1.4). There were some issues raised during the consultation phase that were outside the scope of this review. These issues have been captured and will be raised separately with the NDIA.

The structure of this section is as follows:

- Section 4.1: Approach to price setting, covering Recommendations 1 to 2
- Section 4.2: National versus regional pricing, covering Recommendations 3 to 5

- Section 4.3: Pricing of services with different levels of complexity, covering Recommendations 6 to 9
- Section 4.4: Pricing of short-term accommodation (respite) services, covering Recommendation 10
- Section 4.5: Thin and undersupplied markets, covering Recommendations 11 to 12
- Section 4.6: Provider efficiencies and adequacy of provider returns, covering Recommendations 13 to 21
- Section 4.7: Price deregulation, covering Recommendations 22 to 25

4.1 APPROACH TO PRICE SETTING

The NDIA sets price caps for an hour of service for most support services supplied in the NDIS. The price caps are reviewed annually and a new price guide is published, though the NDIA has also twice amended prices outside the annual review process. In assessing the approach to price setting used by the NDIA, the IPR considered both the process for setting price caps, and the way in which price caps are applied as an hourly (or other time-based) rate.

Section 4.1 covers the following topics:

- 4.1.1 Determining appropriate price caps
- 4.1.2 Alternatives to an hourly rate

The use of price ranges and deregulated pricing are considered separately in Section 4.7.

4.1.1 Determining appropriate price caps

Issues and evidence

The NDIA has amended prices through its annual price reviews as well as interim changes where required. The current price caps are a result of the NDIA FY2017/18 Price Review concluded in June 2017 and a change to short term accommodation price caps from 30 October 2017. The NDIA FY2017/18 Price Review was based on an assessment of the underlying methodology used to estimate the hourly costs of personal care and community supports, feedback from the disability services sector including 82 provider submissions directly in response to the annual review process, new economic data such as increases in the Wage Price Index, and an assessment of the impact of proposed changes by external consultancy HoustonKemp. The annual price adjustment also accounted for changes in the national minimum wage and the operation of the Equal Remuneration Order (ERO).[28] This led to several changes. For example, base prices for the support type 'Assistance with daily living' were increased by 4.5%, loadings for remote and very remote areas were increased, and the

[28] The Equal Remuneration Order is an order made by the Fair Work Commission in 2012 which required wages in the social and community services industry to be increased regularly to 2020. The ERO increases occur each December according to a prescribed formula.

cancellation policy of therapy services was amended. The NDIA published the amended Price Guide on 12 June 2017 before it took effect on 1 July 2017. These changes were then followed by a tailored change to price caps for short term accommodation services, announced on 18 October this year, with the new prices being revealed a week later and taking effect two weeks later, on 30 October.

The NDIA does not yet have a comprehensive evidence base to inform its regular pricing decisions, but it has been increasing its scope of data collection. For example, the NDIA does not keep a collated record of supply shortfalls identified by LACs and regional offices, nor does it directly survey participants on whether they experienced shortages in supply of supports for which they had funding.[29] However, it has developed and implemented a Short-form Outcomes Framework questionnaire which measures participant outcomes and it is deploying a benchmarking survey of providers to understand evolving cost structures across the NDIS. The NDIA is also working with DSS to develop a set of metrics to monitor market development, as well as developing a market intervention strategy to identify and respond to instances in which prices have been unable to attract sufficient supply.

Recommendations

1: The NDIA should include a broader set of indicators of participant outcomes and market development in its price setting process, and clarify its methodology for implementing price setting decisions.

The NDIA's current process for setting prices and ensuring provision of services for participants can be enhanced. The IPR team recommends a four-step process (see Exhibit 6). This process should apply to the annual price reviews, as well as any interim adjustments which may be necessary in response to changing market conditions. The IPR team recommends that the NDIA considers the following four steps as it develops its market intervention strategy:

1. Continuous market monitoring
2. Focused data collection on at-risk markets
3. Data analysis and policy decision
4. Implementation of decision

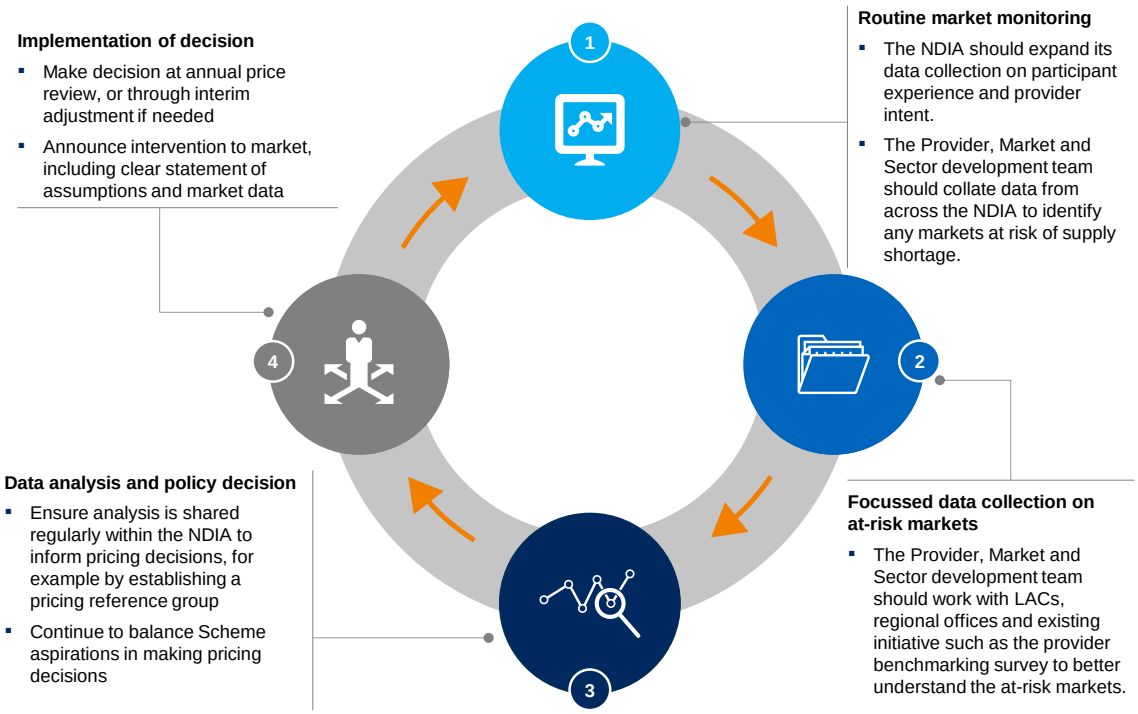
The most significant departure of this prescribed process from NDIA's current practice is to include a more thorough assessment of the risk of supply shortages, including a more comprehensive analysis of alternative supply options and the range and distribution of costs to serve of providers. The driving question should be whether participants are able to access all the services for which they have funding. In the case of an existing provider no longer being able to offer services, participants will require options to access alternative providers. Where there are signals that participants are at risk of not being able to access services, the NDIA should assess options to intervene through evaluating impact on the NDIA aspirations.

[29] The NDIA does monitor the number and broad category of complaints lodged by participants, as well as tracking the overall participant satisfaction rate, which has consistently been above 85%. However, neither of these are directly related to observations of supply gaps in the Scheme.

It is important that the price-setting process continually balances the NDIA aspirations, which can involve trade-offs. This is because in an immature and developing market, price caps not only regulate provider competition but also act as a signal of efficient prices, enable value-for-money for participants, and affect the long-term development of the NDIS.

EXHIBIT 6

The process for testing whether to amend price caps should incorporate thorough market monitoring and transparent decision making



Step 1: Routine market monitoring

The NDIA should complement its existing initiatives to advance its market monitoring capabilities through three additional initiatives: collecting data on the share of participants affected by supply gaps, extending its provider consultation and feedback processes, and collating market data and sharing internally to all relevant decision-makers.

The NDIA should collect more comprehensive data on the ability of participants to find the supports they require across each geographical region and support type. The most desirable way to collect this information is regular surveying of participants. This could be done through a new survey, or by expanding the existing participant assessment in the Short-form Outcomes Framework.

Secondly, the NDIA should establish proactive and regular consultations with providers, including surveys, to assess provider experience and intent. The NDIA should construct a representative sample of new and mature providers to gauge their financial sustainability, intent for growth, self-assessment of ability to cater to demand, and knowledge of any current or emerging supply gaps. Whilst some of this data is currently collected by other

organisations, the NDIA should have access to a more regular and reliable source of data that it can rely on for its own decision making.

The above sources of data should be part of a regular monitoring framework which also incorporates existing market data such as utilisation rates and evidence of provider entry or exit (see Exhibit 7). See Section 4.5.1 for a detailed discussion of the relevant metrics.

Finally, all relevant market information should be collated and analysed by the Provider, Market and Sector development team. Regional offices, LACs, the Scheme Actuary and other parts of the NDIS should share the relevant data with this team. The data and analysis should then be regularly reported to key stakeholders within the NDIA such as the Chief Executive Officer (CEO) and the Board. This will enable rapid identification of any markets that may be at high risk of undersupply and a consistent flow of information within the NDIA.

If this market monitoring process reveals any markets that are at risk of developing supply gaps, the NDIA should take immediate steps to collect more focussed data on those at-risk markets.

EXHIBIT 7

Supply in Scheme markets can be evaluated through considering a mix of indicators from surveys, utilisation rates and entry/ exit data

Indicator and relevant metrics		Data Source	Discussion on limitations
1 Participant experience	**1.1**: Share of participants with funding who had difficulty or were unable to find services	▪ Participant survey, e.g. "In the past year, did you have difficulty or were you unable to access supports because of a lack of suppliers in your market?" ▪ Compare across respondent region and support type	▪ Broad surveys may be too expensive or time-consuming to be sufficiently representative and timely ▪ Consider focusing on "at-risk" markets which show other indicators of supply shortages, such as low rates of market entry or poor utilisation rates
	1.2: Share of participants who are unsatisfied with quality of services accessed	▪ Participant survey, e.g. "Were you satisfied with the quality of supports you have received in the past year?" ▪ Compare across region and support-types of respondents	
2 Provider intent	**2.1**: Share of providers intending to grow/ shrink number of participants served	▪ Provider survey, e.g. "Are you intending to serve more participants in the next year than you did in the last?" ▪ Compare across respondent region and support type.	▪ Provider intent may be informed by non-Scheme features ▪ However, reason for withdrawal/ expansion is not as relevant as identifying the outcomes that are consistent with existing price settings
	2.2: Share of providers intending to expand into/ withdraw from support types/ regions.	▪ Provider survey, e.g. "Are you intending to expand the number of regions in which you operate? ▪ Compare across respondent region and support type.	
3 Utilisation rate	**3.1**: Level of utilisation by support type and geography ("utilisation rate")	▪ NDIA planning and claims data ▪ Share of funds allocated in participant plan which were disbursed in the relevant time period ▪ Compare relative averages and distribution across markets	▪ Utilisation rates are affected by many non-supply factors, e.g. plan quality ▪ However, comparing to average utilisation rates and measuring change over time can help to determine markets in which persistent low utilisation is likely to be due to insufficient supply.
	3.2: Change in utilisation rate over time by support type and geography	▪ NDIA planning and claims data ▪ Percentage point change in utilisation rate from one time period to the next	
4 Rates of market entry/ exit	**4.1**: Number and share of providers which withdrew from current markets.	▪ NDIA payment and claims data ▪ Number of providers who sought payments from fewer regions/ support types in this year than last	▪ Benchmark entry/ exit rates are difficult to establish due to volatility in transitioning markets ▪ However, the data can be used to identify outlier markets which warrant further investigation
	4.2: Number and share of providers which expanded into new markets.	▪ NDIA payment and claims data ▪ Number of providers who sought payments from more regions/ support types in this year than last	

Step 2: Focussed data collection on at-risk markets

More focussed data collection on specific markets should include investigating the causes of participants being unable to access supports, through LAC feedback and qualitative research with participants. It may also include assessing the economic performance of providers to

understand whether the supply gap is likely to worsen over time. If this data confirms that providers are struggling to provide the required supports in a financially sustainable fashion, and supply gaps are likely to continue, the NDIA should proceed to evaluate the effectiveness of different interventions to address this risk of supply shortage.

In some cases, this market monitoring process will identify instances where participants require a more immediate solution than amendments to price controls or related policies. This is discussed in further detail in Section 4.5 (*Thin and undersupplied markets*).

Step 3: Policy decision

The data collected by the NDIA should inform its annual price review, but also inform any interim price or non-price interventions that may be required. Interim interventions should be used where there is an immediate market concern, as was the case with the change of short term accommodation prices in October 2017. Once the NDIA has assessed markets that need intervention, it should identify intervention options which may involve targeted adjustments to specific policies or terms of business (e.g. travel or remoteness policies), non-price levers such as changes to the planning process or NDIA's systems and processes, or changes to prices.

The identified policy options should be assessed against each of the NDIA aspirations, to test which options will have the most favourable impact on all aspirations while ensuring that participants are able to access all the services for which they have funding. This should be done with input from all relevant parts of the NDIA, so that information on how the options will affect each of participant outcomes, market development, and Scheme sustainability can be fully considered. The assessment of policy options should be coordinated by the Provider, Market and Sector development team and made available to all relevant decision makers, including the CEO and the Board.

The NDIA should consider the addition of new organisational mechanisms to support this stronger internal collaboration and ensure proper governance of the pricing process. It may be appropriate to establish a pricing reference group with participation from all relevant parts of the NDIA, such as the Scheme Actuary, senior management, the Provider, Market and Sector development team etc. For pricing decisions which affect a smaller part of the market or Scheme spend, the NDIA may consider authorising the CEO or the Provider, Market and Sector development team to make policy decisions. Regardless of the model chosen, the NDIA should be satisfied that holistic information is available on the rationale and consequences of changes in price levels or other policies.

Step 4: Implementation of decision

The NDIA should give providers sufficient notice of price changes that result from the annual price reviews. The IPR team recommends that this notification period be one month for core and capacity building supports. A notification period of a month will allow organisations to calculate the impact of new prices and make informed business decisions. It will also allow providers to communicate and advocate for their new prices to participants. Price changes should also be scheduled to take effect at the beginning of the financial year to align with the corporate planning procedures of providers. The NDIA should also make clear the reasoning for price decisions and disclose relevant market data.

For interim price adjustments where a single support service or market is being affected, a shorter notice period of two weeks would be acceptable. This is because by their nature interim pricing decisions need to be implemented more rapidly, and are likely to affect a smaller proportion of the Scheme.

4.1.2 Alternatives to an hourly rate

Issues and evidence

It is important to differentiate between the funding model and the pricing approach of the NDIS. The NDIS funds individual supports for participants, to help them achieve their goals and desired outcomes. Under the previous block-funding model, providers were funded to deliver a range of services to a participant over a quarter or year.

The predominant mechanism for setting prices across the NDIS is a cap on the hourly (or other time-based) rate that can be charged for providing the relevant support service. Under this approach, providers are paid for their 'inputs'.

Input-based pricing, sometimes referred to as fee-for-service, rewards providers for work done, and creates a transparent price that can be used to stimulate provider efficiency. However, this form of pricing is sometimes criticised for creating incentives for providers to increase volume of services, rather than focusing on how to improve outcomes.

Outcome-based pricing is an alternative method which remunerates service providers based on an agreed improvement in the service user's outcomes resulting from the provision of services. For example, employment services could be priced based on whether users of the services are able to obtain and maintain stable employment. An example of such a payment model for providers is the Federal Government's jobactive program. Outcome-based pricing encourages innovation by prioritising the delivery of the desired outcomes at the lowest cost. It encourages providers to find more productive ways to deliver services, rather than rewarding providers who simply provide the highest volume of services. However, this method requires outcomes which are able to be clearly defined and monitored so that the improvements can be measured and an appropriate price established. The method also requires careful design choices so that providers are not encouraged to deliver short-term measurable outcomes at the expense of more sustainable, long-term improvements in a participant's welfare.

Recommendations

2: The NDIA should continue to use an hourly rate approach, but trial outcomes-based pricing

The current measures of participant outcomes are not yet sufficiently defined or tested to support an outcomes-based pricing model. Currently the NDIA is measuring progress of participants against multiple outcomes through the Short-form Outcomes Framework questionnaire, and as part of participant plan reviews. However, many of these outcomes are broadly defined such as increased choice and control or community participation. Given that many participants are receiving different supports from a range of providers, it will be difficult to attribute improvements in outcomes to a specific support. In addition, there are not yet clear

outcomes baselines for most services, or alignment on evidence-based approaches to test and monitor improvements in outcomes. As a result, outcomes-based pricing approaches will require further development and testing before becoming a viable alternative to the current hourly rate approach.

The NDIA should start to build its capability to design and manage outcome-based pricing through a trial for a support service which is amenable to outcomes measurement. Services which are most amenable to outcome measurements include employment services, learning supports, and some types of physical or behavioural therapy. For example, the NDIA could pay providers of employment supports a bonus based on their ability to find stable employment for participants. To encourage long-term improvements in outcomes, such bonuses could be paid out in part at the time of placing a participant in a job, and in part at the 12-month mark if the participant continues to be in work. For behavioural supports, the NDIA could reward providers based on their ability to reduce the incidence of certain behaviours or behavioural interventions such as restrictive practices. Before commencing any trial, the NDIA will need to be satisfied that it has a good understanding of baseline outcomes in that market, and the capability to both monitor and price outcomes going forward. A trial would develop the NDIA's capacity in designing outcomes-based pricing systems, offer useful insights on whether the NDIA is able to sufficiently monitor outcomes, test whether providers can adjust to this model of service provision, and provide evidence for whether such a system improves participant outcomes.

4.2 NATIONAL VS REGIONAL PRICING

One of the questions posed for the IPR team was whether there are significant differences in the costs of serving participants within and across states and territories.

Within states and territories, the cost of service provision varies by geography due to travel and other service delivery costs associated with remote and very remote areas. For example, in very remote areas providers often incur higher wages, higher accommodation and food costs and higher staff turnover. To compensate providers for these costs, the NDIA applies loadings to prices of 25% in very remote areas and 20% in remote areas.

Once travel and remoteness are accounted for, there is little difference in cost structures within a state. In the disability sector, approximately 80% of the cost of service provision is labour, and labour costs are typically based on the SCHADS Award.[30] Most providers pay their workers in line with these award rates or their EBAs, with no further adjustments for the location of service provision.

Across states, labour costs vary a little due to some small differences in award rates. These differences are minor (under 3%) and will converge by 2020.[31] The NDIA currently has two

[30] Estimate based on independent modelling of the IPR, consultation with providers and comparison with modelling of comparable Schemes. The NDIA's current pricing methodology makes a similar assumption as to share of labour costs.

[31] See Appendix C for further detail on SCHADS Awards by state. Convergence of national awards is a result of the Equal Remuneration Order (ERO) made by the Fair Work Commission in 2012. For full detail on the ERO and SCHADS Awards rates, see: https://www.fairwork.gov.au/pay/minimum-wages/social-and-community-services-industry-pay-rates.

price guides – one for Eastern states (NSW, VIC, QLD, TAS) and one for Western states (ACT, NT, SA, WA). The difference in prices between these guides does not correlate with differences in SCHADS Awards or other cost differences between those states. The current disparity between these price guides appears to be based on legacy arrangements among jurisdictions, rather than any direct correlation with regional costs.

Section 4.2 covers the following topics:

- 4.2.1 Service provision in remote and very remote regions
- 4.2.2 Service provision in rural areas
- 4.2.3 Single national price

4.2.1 Service provision in remote and very remote regions

Issues and Evidence

The NDIS operates in several regions which are located far from existing providers and workforces. These regions are categorised as remote or very remote, depending on classification systems that assess a combination of population size and distance factors. The NDIA is currently changing the classification system it uses from 'Remoteness Areas' (RA),[32] which ranges from category 1 to 5 by increasing remoteness, to the 'Modified Monash Model' (MM), which ranges from category 1 to 7 in the same way.[33]

'Remote' regions are those classified as 'MM 6' and are broadly comparable to RA – 4. Examples include the Central Highlands region in Queensland and Western NSW. 'Very remote' regions are those with the 'MM 7' classification and are broadly comparable to RA – 5. Examples of the most remote regions catered to by the NDIS include the unincorporated regions of far western NSW, the Central Desert region in the Northern Territory, and the Central Highlands region in Queensland.

The cost of service provision in remote and very remote areas is often higher than in other regions due to travel and other service delivery costs – for example, higher wages, higher accommodation and food costs, and higher staff turnover. To compensate providers for these costs, the NDIA applies loadings to prices of 25% in very remote areas and 20% in remote areas. These percentages are based on loadings developed by the Independent Hospital Pricing Authority (IPHA). Some providers stated that the remoteness loadings are inadequate in situations where air travel or long-distance road travel is required to serve isolated communities, or where local market infrastructure is limited.

In the absence of local supply, providers sometimes need to resort to fly-in, fly-out (FIFO) or drive-in, drive-out (DIDO) service models to reach isolated communities that may be located tens to hundreds of kilometres from the nearest town (e.g. Palm Island). Furthermore, the cost of running and maintaining off-road vehicles is very high. Providers have reported to the IPR

[32] Remoteness Area classifications are based on the Accessibility/Remoteness Index of Australia (ARIA) and the Australian Statistical Geography Standard (ASGS).

[33] See National Disability Insurance Agency: *Rural and Remote Strategy 2016 – 2019* (February 2016) for more detail on how the NDIA classifies areas according to remoteness.

team that they could spend up to $2,000 per vehicle per month for leasing (or depreciation) and operational costs. Due to the remote areas that they cater to, there are few opportunities for economies of scale and some providers maintain fleets with tens of vehicles. Many of these costs can be avoided if service delivery was instead conducted by more local workforces but this is difficult in the short term.

Many isolated communities are discrete Indigenous communities. In these communities, service provision must account for a range of cultural factors such as: gender matching for workforce and clients, family-based decision making, differences in conceptualisation of disability, and travel challenges for participants that may result in unexpected cancellations.

Providers indicated that catering to remote and very remote areas often requires an investment to build up foundational market infrastructure. For example, participants in the region might not yet have been identified by the NDIA, nor is there an understanding within the community of the value of disability support services. One provider consulted by the IPR team illustrated this issue with recent experience. The provider described a market in remote North Queensland with a population of approximately 1,000 people (60% of whom were of CALD background) where just one NDIS participant had been identified, even though a greater need for support existed. The provider worked with health care providers and the local community to identify a further dozen people in need of disability supports and facilitated their introduction to the NDIS. This provider has been able to introduce sustainable services in these regions but the market is unlikely to be large enough for two providers, and the provider is unlikely to be able to invest in developing other new markets without some support for the upfront investment that is required.

Recommendations

3: In very remote/isolated areas, the NDIA should work with other community services and providers to support local workforce development to deliver services in the most efficient way possible. In regions with limited local supply, allow providers to quote on cost of delivering NDIS services in the short term to ensure supply.

The challenges described above are not unique to the NDIS. Many other government services, such as health and education, have faced similar challenges in providing services to remote and very remote communities. While price is one lever that can help encourage supply, a more holistic approach is needed.

The NDIA should prioritise identifying areas and individuals that constitute either thin markets at risk of under-supply or underpenetrated markets with unmet demand. Analysis to identify these markets should leverage data on participant residences and support requirements, provider office locations and support offerings, and plan utilisation. Many of the isolated communities falling into this category will be discrete Indigenous communities (including ATSI participants) that will require a coordinated and culturally sensitive approach to service provision.

The NDIA should then work with other community services and providers to support local workforce development that increases the reliability and quality of care while driving down the cost of supply. This could include working with the Aboriginal Medical Services (AMS) to deliver services in predominantly Indigenous communities. Extending the reach of the AMS

may be preferable to new providers who have little experience working with Indigenous communities.

Whilst development of a local workforce is preferable, there will be some regions where this is not possible in the short term and where cost of service provision is high. In these areas, the NDIA should establish a quoting system by which providers can bid for supplying services to underserved areas. In some regions, it may be feasible to establish panels of providers to quote on service delivery, to streamline the procurement process. While the quoting method is bureaucratically more demanding, other policy options are unlikely to address the lack of supply in these areas. For example, adjustments to the price loadings for remote areas (20%) and very remote areas (25%) are unlikely to cater to the full spectrum of challenges that providers face. The variability in cost of service provision and the non-price challenges that must be overcome (e.g. engaging with local communities) require a coordinated effort from the NDIA, other mainstream services, and providers.

Implications

Participant outcomes and market development will be improved at lower cost if the NDIA successfully works with existing health service providers and communities to develop local capacity. However, this may not be able to be achieved immediately.

In the short term, establishing the operational capacity to manage a quoting process will be important. It is expected that higher prices are likely to result from this process in isolated areas, but given the small proportion of participants in these regions, Scheme expenditure will not increase significantly. This process is likely to lead to more sustainable coverage of these areas and improvement in participant outcomes, including ATSI communities.

4.2.2 Service provision in rural areas

Issues and evidence

Some of the challenges associated with service provision in remote/very remote areas are relevant to providers serving rural areas as well. While price loadings exist for MM 6 and MM 7 areas, providers serving individuals and communities in ‘outer regional’ or ‘rural’ areas, which correspond anecdotally to MM 4 and MM 5 areas, cite geographic spread and high travel costs as contributing to higher costs. As a result, it appears that some providers have terminated services to participants living more than a certain distance away from offices or have expressed plans to withdraw services from rural communities.

MM4 areas are defined as areas in Remoteness Area 2 (RA2) and Remoteness Area 3 (RA3), per the Australian Standard Geographical Classification, that are not in MM3, and are within 10 km road distance of a town with population between 5,000 and 15,000 people. MM5 areas are all other areas in RA2 and RA3. Provider travel times to and between participants in MM 4 and MM 5 areas exceed 20 minutes, the current limit on time that attendant care providers can charge for travel between participants, in a significant number of cases. Providers cite averages that are often closer to 30-45 minutes due to low participant density and geographic spread of rural farms and communities. In extreme cases, providers in rural areas take an hour to several hours to reach the site of support service provision. In practice, many providers absorb all travel costs, inclusive of the first 20 minutes of travel, due to a reluctance

to reduce service levels, as plans are often insufficient to cover travel times while still ensuring that clients receive necessary supports. Participants may also expect to be charged for and receive a full hour of service due to unclear communication and insufficient participant education.

Several providers have instituted policies that stipulate a radius outside of which they are no longer able to provide service. For example, upon transitioning to the NDIS, a provider in regional Victoria has chosen to no longer serve clients located more than 10 kilometres from its office, while a provider in regional New South Wales has chosen to only serve participants located within 30 minutes from an office. Travel costs often compound other challenges of rural service delivery including lack of appropriate facilities and extreme weather, and inefficient staff rostering. Some providers consulted by the IPR team expressed an intent to withdraw from such areas due to these location-specific costs of service. For example, a provider in Queensland identified that supports in the Charters Towers regions (MM 4) were financially unsustainable as it involved costs associated with servicing regional areas which were not adequately recognised by the current NDIS pricing arrangements. These difficulties are currently challenging to identify or diagnose, as travel expenses are not monitored as a separate line item in the NDIA payments system. It is instead included as a part of the care provided. There is therefore no ongoing record of providers' travel times.

It is important to note that as the Scheme matures, development of local workforces will help alleviate this problem. It is expected that participants in rural areas – in particular in MM4, which is defined as being within 10km of a town of 5,000-15,000 people – will be served by local providers. However, the IPR recognises that development of these local workforces takes time, and there needs to be a mechanism to ensure that participants in these areas are not disadvantaged in the short term, by compensating providers for costs incurred.

Recommendations

4: The NDIA should clearly define rural areas and lift travel allowance from 20 minutes to 45 minutes for providers serving a participant located in MM5 (or ARIA equivalent) and MM4 in the short term. Adjust participant plans to account for travel and track travel as a separate line item.

While the NDIA released a Rural and Remote Strategy in February 2016, some providers noted continued ambiguity over the official definition of 'rural'. Thus, 'rural' areas should first be formally defined with reference to a consistent geographical category. This classification could rely on either the Modified Monash Model (likely Levels 4 and 5), or on Remoteness Areas calculated with reference to the Accessibility/Remoteness Index of Australia (ARIA).

Once this definition is in place, adjustment to the provider travel policy would be the most direct and cost-effective way to support supply. To compensate providers for high travel times in rural areas, the NDIA should increase the 20-minute travel cap for providers of eligible supports, and should align this travel policy with that of therapy (see Section 4.6.4 for recommendations relating to travel for therapy supports). The IPR believes a travel cap of 45 minutes is more appropriate.

The IPR team recognises the risk that more generous compensation of travel costs may create an incentive for some providers to use travelling workforces rather than the more efficient model of building local workforces, which is a core aspiration for the NDIA. However,

workforce development in small towns of less than 15,000 people can often be challenging in the short term. Therefore, the IPR recommends that this change in policy be applied to participants in MM4 and MM5 in the near term, but changed in the medium term (3 to 4 years) to apply only to participants in MM5. A travel cap of 45 minutes is unlikely to cover all costs of travel to participants in MM5. Providers will need to look for opportunities to cluster participants and coordinate service provision to reduce travel times.

This policy does not remove the commercial incentive for participants to choose providers who are able to provide services without the additional expense of travel costs. As such, the IPR team believes this travel adjustment is an acceptable balancing of competing priorities In the medium term, the NDIA could explore mechanisms to reduce the incentive for providers to travel, such as planning processes that only allow providers to charge for travel where there are no local alternatives.

An alternative option would be to add a price loading to rural areas, as is done with remote and very remote areas. The Health system, via the General Practice Rural Incentives Program, and Aged Care system, via the viability supplement and home care subsidy rates, currently provide additional compensation for service in MM 4-5 areas. However, it is mainly travel driving the increased cost of service to participants in rural areas. More than doubling the travel time allowed to be claimed by providers would provide a more targeted and effective intervention than a broad price loading, which does not account for the specific amount of travel a provider undertakes.

Travel should be tracked as a separate line item in NDIA payment data. This will allow the NDIA to monitor travel costs and better understand how providers and participants are allocating the costs of travel. Such monitoring will also allow the NDIA to understand whether more generous travel pricing provides a perverse incentive for providers to travel long distances rather than invest in local workforce development, or to encourage participants to attend the provider premises. This monitoring and better understanding of travel behaviour might then pave the way for the deregulation of travel costs. Removing travel caps to allow complete fungibility of travel versus direct service funding would enable providers to charge for any amount of travel (subject to agreement with participants), affording participants maximum choice and control and requiring providers to reduce travel costs to remain competitive. In some areas with high participant density and sufficient supply, travel deregulation may be appropriate provided participants can make informed choices between providers located at varying distances from their residence. Participants, planners, and LACs would require education to understand the availability of supply for each participant as well as the outcome implications of trading off travel and direct service. The NDIA should maintain travel caps in the near term, including an expanded cap for travel in rural areas, with the option of exploring travel deregulation as the NDIS matures.

Service provision in rural areas can also be affected by restrictions on the ability of participants to transport themselves to and from support services. This was an issue highlighted by providers during the IPR team’s consultation process (see Section 2). However, this issue is beyond the remit of the IPR. The NDIA could work with LACs, planners as well as the states and other local authorities to understand if a participant has public transport available to them and the capability to utilise the service. The IPR team recognises that solutions to transport will have implications for the adequacy of supply and support access in remote and rural areas.

Implications

The short-term implications of this change in travel policy for Scheme expenditure is difficult to estimate with precision as the NDIA does not currently track travel as a separate item. For instance, a provider who charges for an hour of service provision may have had no travel, or have used the full travel entitlement of 20 minutes and provided 40 minutes of care.

The IPR has made a number of assumptions to estimate potential costs, based on available information. Assuming a quarter of the participants who receive supports in regional areas (MM 4 and MM 5) are now provided services which attract additional travel entitlements, and that 45 minutes of travel is charged for approximately every four hours of support provided, the additional annual cost to the NDIS would be approximately $75 million.

Increasing the amount of travel time providers can charge will require planning process adjustments. Participants living in rural areas who require providers to travel to them, and who can only be served by providers requiring more than 20 minutes travel, should be given proportionally larger plan allocations to account for the cost of travel within these areas. As with other changes to price caps which affect how plans are constructed, participant education initiatives and additional coordination of support should be offered in parallel, to ensure that participants are able to factor in provider travel times when exercising choice and control.

As the Scheme matures and local workforces develop, the NDIA should review this policy and assess whether other incentives may be more appropriate to encourage local supply and reduce the incentive for providers to travel long distances to deliver supports.

4.2.3 Single national price

Issues and evidence

The NDIA currently has two different price guides, with typically lower prices in Eastern states (NSW, VIC, QLD, TAS) and higher prices in Western states (ACT, NT, SA, WA). For example, the price for ‘assistance with self-care activities during daytime weekdays’ differs by 1.8% between the two guides. In the ACT, NT, South Australia or Western Australia, providers can charge $45.54, while in the remaining states the cap is $44.72. The differences between other prices range from 0-12%. For example, higher intensity group care on Sundays is capped at $57.18 in ACT and the western states and territories, while it is capped at $52.84 in the other states.

There is no clear rationale for maintaining separate price guides. Current disparity between the Eastern and Western price guides appears to be based largely on legacy arrangements between jurisdictions, rather than on a direct correlation with regional costs. Whilst there is currently some minor variation in labour costs between states, it is not correlated to the division of price guides. Analysis of labour costs other than award wages, such as payroll tax, leave entitlements and workers compensation requirements, does not show a consistent difference between the eastern states and western states.[34]

[34] See Appendix C for more details on differences in award rates between States and analysis of other cost differences.

Recommendations

5: The NDIA should converge the two Price Guides and move toward a single national price guide by 2021.

In the absence of stronger justification for differentiated price guides across states, the NDIA should progressively converge prices to promote pricing simplicity, ease of communication, and systems efficiency for providers operating across multiple states. This price convergence should occur by 2021.

It is the IPR team's view that the NDIA should not attempt to capture the price differences between each state through tailored state-specific price guides, as this is likely to lead to significant pricing complexity and may also fracture a national market. Cost differences within states, driven for example by remoteness of a region, are more important factors, and these are accounted for through specific policies (see Sections 4.2.1 and 4.2.2 above).

Implications

Transition to a single national price guide will need to occur over the next three years. This can be done by adjusting the relative rates of annual inflation between the eastern and western price guides such that the two price guides converge over time. Once implemented, providers operating nationally will benefit from the simplicity of one national price guide.

4.3 PRICING OF ONE-TO-ONE SERVICES WITH DIFFERENT LEVELS OF COMPLEXITY

The NDIA recognises participants entering the NDIS will have a range of disability types, levels of functional impairment, and requirements of a support worker to meet their needs. A two-tiered pricing structure is in place to allow a high intensity rate to be charged by a provider. The high intensity rate is set at 5.5% higher than the standard rate, applicable where a participant's complex needs require assistance from a support worker with a higher skill level. Support workers serving participants with complex needs are sometimes exposed to a higher level of safety risk, which can be to a participant or to themselves, and the higher skill levels and pay rates ensure the support worker is fit to provide quality services to participants in these environments. Examples of environments with greater safety risk could include a support worker serving a participant with medical needs where health-related intervention is a core component of service delivery, or serving a participant with behaviours of concern that could result in the participant attempting to self-harm or harm the support worker.

The key concerns raised by providers related to the quantum of the high intensity loading being insufficient to cover the cost of employing a higher skilled worker, and the loading not accounting for the additional time required to service participants with complex needs, including team meetings, report writing, training, and more frequent incident management. Additional concerns included the inconsistent application of high intensity loading across Core Support Items in the Price Guide. Examples include centre-based care having no high intensity rate, and not allowing for increased carer ratios, and the inconsistent allocation of the high intensity loading across participants. Currently, responsibility falls on a provider to agree with a participant that a high intensity loading is necessary for them to receive the level of care that will help them achieve their desired outcomes.

This section covers the following topics:

- 4.3.1 Definition of complexity and quantum of the high intensity rate
- 4.3.2 Participants with extreme behaviours of concern
- 4.3.3 Consistency of pricing for participants with complex needs across core supports

4.3.1 Definition of complexity and quantum of the high intensity rate

Issues and evidence

There is no simple definition communicated to the sector of what complexity means in a pricing context, and as a result, the term complexity is used inconsistently. Providers link complexity to the ratio of care a participant requires i.e. the number of carers, the number of hours of care a participant has allowance for in their plans, also referred to as 'intensity of care', and more subjectively, to how difficult a provider believes it is to serve a participant. There are cohorts of participants that require support workers with specific skillsets above the level of a typical support worker, which cost providers more to employ. Providers are not consistently receiving a high intensity loading to serve these participants due to the lack of clarity in the definition of complexity. The link between a participant's needs, the cost drivers of a provider, and price is not clear, which leads to inconsistent application of the high intensity price loading. The policy placing the responsibility on providers to determine whether a participant should be charged a high intensity rate exacerbates the issue, as providers each have their own definition of complexity.

Provider submissions to the IPR showed that many providers employ support workers serving participants without complex needs between SCHADS Level 2.2 to Level 2.4. This is consistent with NDIA expectations and the responsibilities outlined in the Award for a Social and Community Services Employee Level 2.[35] To serve participants with complex needs, providers often employ support workers at a base wage level between a SCHADS 2.4 and 3.3 to match the workers increased level of skill and experience. There is evidence of some providers employing workers up to and above SCHADS Level 4. For participants classified as having complex needs because of a medical condition, additional skills of a support worker can include the ability to recognise the need for health-related intervention, and administer medication by injection, or feeding through a nasogastric tube. For participants classified as having complex needs because of behaviours of concern, additional skills of a support worker can include the ability to recognise symptoms or presentations of mental illness and intervene to de-escalate violent behaviours. To serve participants with complex needs resulting from medical or behavioural presentations, support workers are required to exercise judgement based on prior knowledge and experience to determine the course of action necessary to

[35] The Award states the responsibilities of a Level 2 employee are: *'(k) implementing client skills and activities programmes under limited supervision either individually or as part of a team as part of the delivery of disability services'* and *'(l) supervising or providing a wide range of personal care services to residents under limited supervision either individually or as part of a team as part of the delivery of disability services'.* The Fair Work Commission: *Social, Community, Healthcare and Disability Services Industry Award 2010 (updated 29 July 2017), p. 52*

address the situation. These attributes closely align to the characteristics necessary of a Level 3 employee.[36]

The high intensity loading of 5.5% is intended to provide additional funds where a participant requires assistance from a support worker with additional skills or experience relevant to a participant's complex needs. The loading provides enough funding to allow an employer to pay a support worker between a SCHADS 2.4 and 3.1, which is at the lower end of the wage level currently being paid by providers, assuming a base level of SCHADS 2.3, which is consistent with the rate paid by many providers for participants without complex needs. This could be adequate in some situations such as feeding through a nasogastric tube in a standard environment. However, where a participant has very serious behaviours of concern, or a combination of medical needs and behaviours of concern, a worker with a higher level of skill may be required.

Many providers raised concerns about the high intensity loading not taking into consideration the incremental ongoing training and development requirements for support workers serving complex participants. Submissions to the IPR indicated providers are conducting approximately 3-4 hours of additional training for these support workers each quarter. These training sessions often bring together groups of support workers and other professionals to discuss individual client situations and techniques that have been used or developed to deliver improved outcomes. As the sessions are often internal, the costs incurred by providers are for support worker time, with no opportunity to recover the cost for the delivery of the training.

Providers serving participants with complex needs reported that they spend more time on incident management and reporting than other providers, due to the nature of the disabilities of the participants cohorts they serve. One small provider estimated spending over 200 hours per year on incident management, with an average of one incident per fortnight, and each incident requiring a review, report, care team meetings, and a response plan. This was estimated to have up to a 2-3% impact on the provider's overall margin. While not all incidents are avoidable, providers are expected to have effective internal processes to prevent and respond to incidents.

[36] The Award states the characteristics of a Level 3 employee include: *'General features of this level involve solving problems of limited difficulty using knowledge, judgment and work organisational skills acquired through qualifications and/or previous work experience. Assistance is available from senior employees. Employees may receive instruction on the broader aspects of the work. In addition, employees may provide assistance to lower classified employees.'* The Fair Work Commission: *Social, Community, Healthcare and Disability Services Industry Award 2010 (updated 29 July 2017)*, *p. 54*

Recommendations

6: The NDIA should develop a definition for complexity linked to the skills required to meet participant's needs, and use its specialised planning resources to classify what skills are required, and which participants require higher skilled support workers.

The NDIA should develop a definition for what complexity means in a pricing context and communicate it to the sector. The definition must create a clear link between a participant's needs and the cost drivers for a provider, that can be translated into price. To serve participants with complex needs, providers employ support workers with additional skills and experience, and are required to compensate them with a higher base wage level. The increased cost of employing these support workers should be translated into the price. The NDIA can leverage most of the existing definition for high intensity supports in the Price Guide, but the focus should be on skill level rather than on qualifications, as in some cases additional qualifications may not develop the specific skills necessary to serve a participant's complex needs.

This revised definition should include a clear link between a participant and their needs, and the relevant and most significant cost driver of a provider being support worker wages. Examples of participants that would be defined as complex in a pricing context include participants that exhibit rapid, severe and frequent escalation of violent or self-harm behaviour, including some participants in the psychosocial and cognitive disability participant cohorts, and participants that require health-related intervention as part of ongoing support. In both situations, participants may require a support worker with additional skills to serve them. The skill level required to service a participant increases with the severity of a participant's complex needs, and there should be different tiers of pricing to match the different levels of skills needed.

The NDIA should use the specialist team of planners it is developing as part of the Participant Pathway project to develop a set of criteria to determine whether a participant's requirements are complex for the purposes of pricing. The objective of the criteria should be to determine whether a participant requires a higher skilled or qualified support worker for their needs.

The NDIA should assign the responsibility of classifying participants with complex needs for the purposes of pricing to the specialist planning team. Planners have visibility into participant records and complexity classifications throughout the participant pathway (see Appendix D – Existing definitions of complexity that exist within the NDIA), and under the revised pathway should have face to face interactions with participants to understand their needs and goals. Each of these sources of information should allow a planner to determine if a participant requires a support worker with additional skills or experience, and hence a price loading.

As the specialist team builds capability, it should develop and refine the service models used for participants with complex needs, both health and behaviour related, to make sure participants receive plans that meet their needs and deliver the best possible outcomes. It may be difficult for the planning team to build expertise quickly, and in the short-term the NDIA should consider leveraging industry experts for support until the team is able to manage most of the cases in-house. The team could continue to reach out to outside experts for advice in very difficult cases which are outside its area of expertise.

7: The NDIA should add an additional tier to the high intensity loading to allow a provider to recover the cost of a support worker with a higher level of skill than can be procured with the current high intensity loading.

The current loading may be sufficient to employ a higher skilled support worker for some complex needs, such as health-related intervention in a standard environment. However, it may be less suitable for situations where a participant has serious behaviours of concern, or a combination of medical needs and behaviours of concern. A third tier classification of 'Very Complex', should allow a provider to employ a mix of support workers at SCHADS Level 3.1 or Level 3.2. The loading should also take into consideration the incremental ongoing training and development necessary for support workers serving very complex participants estimated at 1%. The specialist planning team should be responsible for assessing and classifying participants considered to be Very Complex. The IPR team recognises that there is a small number of participants for whom it is very difficult develop prices due to the nature of their disabilities and the environments necessary to deliver their services, and believe a quoting process is the most appropriate mechanism to ensure they receive the supports required to meet their needs (see Section 4.3.2). TABLE 3 describes the characteristics of participants that would be classified as Standard, Complex, Very Complex, and Quoted.

Incidents are more likely to occur for providers serving participants with complex needs. Providers incur costs associated with incidents such as the time spent on team briefing meetings and incident report writing. Providers are expected to have effective internal processes to prevent and respond to incidents, but it is recognised that not all incidents are avoidable.

The introduction of the NDIS Quality and Safeguarding Framework will have some implications for providers on the scope of incident reporting requirements. Given the operational implications of this are not yet known, the IPR recommends that the NDIA revisits this recommendation in the future to evaluate if providers need to be compensated for the costs of incident reporting – for example by introducing an incident reporting line item in the Price Guide to allow for providers to charge for time spent on this activity.

TABLE 3: DESCRIPTION OF PROPOSED LEVELS FOR PARTICIPANTS WITH COMPLEX NEEDS

Classification	Participant characteristics
Standard (no price loading)	■ No health-related intervention needs (e.g. feeding through a nasogastric tube, ventilation support) ■ None or mild behaviours of concern
Complex (5.5% price loading)	■ Health-related intervention needs (e.g. feeding through a nasogastric tube, ventilation support) ■ Mild-moderate behaviours of concern (e.g. infrequent rapid escalation of challenging behaviour)
Very Complex (10% price loading)	■ Combination of health-related intervention needs and mild-moderate behaviours of concern ■ Severe behaviours of concern (e.g. rapid, severe and frequent escalation of challenging behaviour)
Quoted	■ Extreme behaviours of concern – see Section 4.3.2 for further details

Implications

The NDIA has commenced work to establish specialist planning teams as they develop the new participant pathway. The specialist team will need to be trained to categorise participants with complex needs as informed by the tool/set of criteria defined by the NDIA. It is important that the team monitors the outcomes of their categorisations to help improve accuracy and consistency over time.

An improved definition of complexity and allocation process will ensure providers are able to charge a higher rate to participants that require a higher skilled support worker. This will allow providers to recover the increased cost of direct supports required to service the complex participant cohort. It will be important to engage with the relevant segments of the sector, both participant and provider representatives, when developing the final set of characteristics to be used during the complexity classification. This will limit the number of times providers request the NDIA to review participant categorisations. In a situation where a provider challenges a participant's categorisation, a process needs to be put in place to allow individual cases to quickly be reviewed by the NDIA if a provider can provide evidence to show the categorisation is not correct. It should be noted that it is possible some participants are currently being charged the high intensity rate that would not apply under a new definition. To reduce the financial impact on providers, the definition should be phased in for participants already in the NDIS as their plans come up for review.

The expected cost of the additional tier of price loading for participants with complex needs is between $100m-$140m, which represents 0.5%-0.7% of costs at Full Scheme[37]. The IPR team expects the costs to be at the lower end of the range, as the improved definition and classification process for participants with complex needs will limit the number of participants that receive the price loading to only those that require a support worker with additional skills. It is possible the price increase could be absorbed by the utilisation levels within participant budgets, meaning there could be no impact on the funding envelope. The suggested approach is to fix each of the definition and classification issues related to complexity before adjusting the price. This will ensure price loadings are only applied to participants considered to have complex needs under the improved definition of complexity.

4.3.2 Participants with extreme behaviours of concern

Issues and evidence

Participants with extreme behaviours of concern include participants that are subject to orders under the justice system, also referred to as forensic disability participants, and previous offenders no longer subject to orders. Participants with extreme behaviours of concern are not explicitly recognised in NDIS pricing. Forensic disability participants are typically individuals with cognitive impairments that have committed criminal offences in the past, but are unable to be institutionalised due to their condition. They often fall at the extreme end of the spectrum of behaviours of concern. Providers have historically served this participant cohort with a very

[37] Based on 12% of participants qualifying for the complex level (a 6% loading) and 10% of participants qualifying for the very complex level (a 10% loading), with a margin of error of +/- $20m, and assuming all participant plans are adjusted to compensate for the change in policy

skilled workforce, such as tertiary educated support workers, and it is not possible for them to recover costs at the high intensity rate set in the Price Guide.

There is legislation in place that details the responsibilities of the NDIS to participants that have been offenders under the criminal justice system. The NDIS (Supports for Participants) Rules 2013, made for the purposes of Sections 33 and 34 of the National Disability Insurance Scheme Act 2013, outline that forensic disability services are to be funded and delivered as part of the NDIS.[38] Services to be provided to this participant cohort are legislated under a number of state-based Acts related to the nature of the offence and disability of the participant.[39] A provider requires extensive knowledge of the legislative environment to deliver services to this participant cohort, who often need intensive supports and services, delivered by very skilled and experienced professionals. As the services necessary for a participant can vary significantly from one circumstance to another, it is very difficult for the NDIA to develop pricing schedules and plans that meet the needs of participants while also adhering to state-specific legislation.

Providers serving forensic disability participants, often referred to as forensic providers, are exposed to increased risk compared to providers focused on other participant cohorts. NDIA policy does not allow providers to deliver all support items from the Support Coordination support category, to mitigate the risk of a conflict of interest. There are cases of forensic service providers pulling out of Support Coordination or refusing to provide the services to participants not in their care to minimise risk, where they are not in full control of a participants care. This puts the specific sub-market at risk of supply shortages.

The NDIA has put rules in place for the Support Coordination support category to mitigate the risk of conflicts of interest, specifically for Local Area Coordinators (LACs), which are included in the NDIS Partners in the Community Program: Program Guidelines (August 2016).[40] There are three Support Items within the Support Coordination support category relevant to the discussion: Support Connection, Coordination of Supports, and Specialist Support Coordination. Participants that are classified as Supported or General during the pre-planning phase, meaning it is easier for the planning team to engage with a participant throughout the participant pathway, receive Support Connection. Support Connection is delivered by LACs, and it is not possible for LACs to deliver Support Connection and provide services to the participant. Participants classified as Intensive or Super Intensive during the pre-planning phase, meaning it is more difficult to engage with a participant throughout the participant

[38] Section 7.23 explains the meaning of a person not in custody: '*person not in custody means a person who is subject to the justice system (including relevant elements of the civil justice system), but is not in a custodial setting (for example, a person on bail, a person under a community based order that places controls on the person to manage risks to the individual or to the community, a former prisoner on parole, or a person in home detention)'*. Section 7.24 goes on to explain the NDIS responsibilities for a person not in custody *'The NDIS will be responsible for: (a) in relation to a person not in custody –reasonable and necessary supports on the same basis as all other persons'. National Disability Insurance Scheme Act 2013* (the Act): *National Disability Insurance Scheme (Supports for Participants) Rules 2013, Section 7.23 and 7.24, p. 20*

[39] In Victoria, this can include Supervision Orders under the Serious Sex Offender and Detention Supervision Act 2009 and the Crimes (Mental Impairment and Unfitness to be Tried) Act 1997, Parole Orders (and Bail Conditions) under the Crimes Act 1958 and Corrections Act 1986, and Community Treatment Orders under the Mental Health Act (2014).

[40] Section 4.1.1.3 states 'An Applicant which applies to deliver LAC Services, must not be a Registered Provider of Supports as defined under section 9 of the NDIS Act'. NDIA: NDIS Partners in the Community (Round One) – Program Guidelines, Section 4, p. 9

pathway, receive Coordination of Supports and/or Specialist Support Coordination. These Support Items are delivered by providers, not by LACs. It is possible for a provider to deliver Coordination of Supports and/or Specialist Support Coordination and be a participant's service provider, but the provider must ensure they proactively manage conflicts of interest, as per the Terms of Business for Registered Providers (July 2016).[41]

The NDIA is currently addressing cases of participants with extreme behaviours of concern out of their regional offices, and providers have communicated that in some cases they have been allowed to develop quotes to deliver services to this participant cohort. However, there are examples of providers being advised that they need to follow the Price Guide, and price according to the high intensity rate. There is not yet a consistent approach for addressing the needs of this participant cohort.

Recommendations

8: The NDIA should develop a consistent process for participants with extreme behaviours of concern that acknowledges the specialised needs of the participant cohort, and the environment providers operate in. Providers serving this cohort should quote on the delivery of services to these participants, and be allowed to deliver all services they require to be adequately supported i.e. all Support Coordination items.

The quotes, which would include a detailed support plan for a participant, would be submitted directly to the specialist planning team (see Section 4.3.1) for review and approval. A quoting mechanism will be most effective for this participant cohort given that the number of participants in this cohort is very small, the number of providers servicing the participant cohort is also very small, effectively making it a thin market, and the services necessary to support participants will vary significantly from one individual to another.

Allowing providers to deliver all Support Coordination services will ensure individuals in this participant cohort receive the services they require to be adequately supported, and help to eliminate the risk of supply shortages leading to participants not being able to procure services. Detailed reviews of the quotes submitted to the specialist planning team to ensure participants are only receiving the supports required to meet their needs can help the NDIA protect against conflicts of interest.

Implications

The NDIA will need to set up a quoting process to allow providers to submit quotes for review and approval. For the NDIA to review and approve quotes, the capability of the specialist planning team needs to be place with a clear understanding of the needs of the forensic disability participant cohort as well as of the legislative environment in which forensic service providers operate. To speed up the quoting process and ensure forensic disability participants can move into a care environment as quickly as possible, the NDIA may identify a list of preferred providers in each state that can be contacted at short notice.

[41] The Terms state *'Registered Providers must ensure that they proactively manage perceived and actual conflicts of interest, including through development and maintenance of organisational policies'* NDIA: *Terms of Business for Registered Providers (effective 18 April 2016)*, p. 3

From a participant perspective, allowing forensic service providers to deliver all supports to them could be considered as a conflict that limits choice and control. Considering the legislative environment providers operate in, it is unlikely a participant will receive a range of services from multiple providers. It is a better outcome for the participants to have the services available to them than not at all due to providers not wanting to take on additional risk.

4.3.3 Consistency of pricing for participants with complex needs across core supports

Issues and evidence

There are inconsistencies with the application of high intensity loadings and care ratios across different core supports. Support items including 'Assistance with self-care activities' and 'Assistance to access community, social/recreational activities' allow providers to charge a high intensity loading where assistance is required from a support worker with additional skills or experience relevant to the participant's complex needs. The support items also allow providers to charge different prices dependent on the care ratio necessary to support a participant. This can either be a lower care ratio, such as 1:2 or 1:3, where a single support worker can service multiple participants at the same time, or higher care ratio, such as 2:1 or 3:1, where multiple support workers are required to serve a single participant.

The support item 'Group based activities in a centre', does not allow providers to charge a high intensity loading, meaning providers cannot be compensated for the additional cost they incur for a highly skilled support worker if a participant with complex needs chooses to utilise the service. This support item is also set at a price between the 1:2 and 1:3 care ratio for Assistance with self-care activities and Assistance to access community, social/recreational activities, and does not provide the flexibility to providers to either increase or decrease the price based on the number of participants in the group.

Recommendations

9: The NDIA should update the pricing structure for the core support item 'Group based activities in a centre', to allow providers to charge a high intensity loading where a more skilled worker is required to serve a participant, and set prices consistent with the care ratio required to serve a participant.

The NDIA should ensure pricing for 'Group based activities in a centre' adopts the same approach used for other core supports, including Support Items 'Assistance with self-care activities' and 'Assistance to access community, social/recreational activities'. This recommendation is not designed to encourage a participant to lead a life with a high intensity of support. Rather, it is expected that as the Scheme matures and evidence develops, providers and the NDIA will be able to assess which interventions are most effective in supporting participants with complex behaviours and needs to achieve improved outcomes and, in some cases, no longer require high intensity support.

Implications

Participants with complex needs utilising 'Group based activities in a centre' will be required to pay a higher price for the service. They will need to choose whether they would like to

continue utilising the services at the higher price, or if their funding can be used more effectively with a different mix of services.

4.4 PRICING OF SHORT TERM ACCOMMODATION SERVICES

The NDIA recognises participants may at times have periods where their support arrangements need to be different from the regular level of support they receive. Short-term accommodation (STA), also known as Respite, is a Core Support available to participants to provide third-party care in a group based facility or in-home support. The service is often used by participants whose regular support is delivered at home by family members, allowing family members the opportunity to have some time off from being the primary care giver. It also gives participants the opportunity to socialise with peers in a safe environment.

At the time of the provider consultation phase of the IPR, a flat price of $501.71/day[42] was in place for STA, and most concerns by providers related to the lack of price differentiation. The key concern voiced by providers was that a single price for the STA support item did not reflect variations in the cost of service delivery by the day of the week, or by the care ratio necessary to serve a participant. Providers also raised the issue that there was no allowance in the price to compensate them for the capital invested in the facilities. After the completion of the consultation phase of the IPR, the NDIA announced price changes effective 30 October 2017 to address issues related to the STA price.

Issues and evidence

Under a single price point, many providers found it difficult to operate economically on weekends and public holidays, when they were required to pay penalty rates to support workers, and when participants required higher care ratios such as one-on-one support. As a result, providers began to withdraw services from the market, either by closing their facilities on specific days of the week, by no longer providing services to participants that required high care ratios, or by shutting down their short-term accommodation services completely. Recently, this issue became acute in the ACT, where providers Duo and Carers ACT closed their short-term accommodation services, and Marymead, the only other provider, signalled they were going to follow, having already restricted services to participants that required low care ratios on specific days of the week that did not involve substantially higher labour costs.

The NDIA responded to the market reaction and revised the price of STA, releasing a new price schedule, effective 30 October 2017. The NDIA adjusted the price, basing it on the price of attendant care, to better reflect the variable costs of service delivery on different days of the week and at different care ratios for participants, and capital employed in facilities. The revised pricing schedule includes differentiated prices for weekdays, weekends, and public holidays, as well as for care ratios of 1:4, 1:2, and 1:1 support needs. Each of the prices also includes a capital allowance. The NDIA has established a process for participants who are fully utilising their plans to review participant budgets and ensure participants are not disadvantaged by the price increases.

[42] NDIA: *2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017)*, p. 40

Recommendations

10: The NDIA should continue to refine the assumptions for high intensity rates, active overnight, and capital allowances used to develop the new STA price schedule, to ensure they reflect the cost of service delivery.

The IPR team agrees with the approach used by the NDIA to develop a differentiated price schedule based on the price of attendant care, that is more reflective of the cost of service delivery for providers. Assumptions around provider operating models have been used to develop the new pricing schedule, and the NDIA should continue to refine each of these to reflect an efficient provider's costs.

The NDIA has applied the high intensity loading to each care ratio to build up the new STA pricing schedule. This high intensity loading should only be used where a participant requires assistance from a support worker with additional skills or experience relevant to the participant's complex needs. Participants with complex needs are less likely to be served under low care ratios. The NDIA should consider using the standard intensity rate for lower care ratios (1:4 and 1:2), and in those special cases have two prices for a 1:1 care ratio, one price based on the standard rate (for participants with high physical disabilities) and one price based on the high intensity rate for participants with complex needs.

For each care ratio, the assumption made in the price is that the support worker will be required to work 8 hours of an active overnight shift, meaning the support worker is required to be awake and active throughout the night. Provider consultation raised the point that this should only be necessary in extreme cases, and it would be reasonable to assume that for participants without complex needs, a support worker works a night-time sleepover shift, with up to two hours of active overnight hours to allow for disruptions during the night. The NDIA should consider using an overnight shift with up to two hours of active overnight for low care ratios, and an active overnight shift only when a high care ratio is required for a participant with highly complex behavioural needs.

An accommodation allowance of $200 per night has been included to cover board and meals throughout the new pricing schedule. The $200 figure is the average cost of i) accommodation costs for a day of respite in aged care facilities ($140), based on rates set by the Australian Government for My Aged Care, and ii) accommodation costs for a day in acute care or a hospital setting ($260), as sourced from the Independent Hospital Pricing Authority (IHPA). The NDIA should continue to refine the capital allowance by reviewing the operating costs of providers. A review of the financials of providers that made submissions related to STA indicated accommodation and other overhead costs could be below $100 per day. This is from a small sample of providers, but it indicates that the operating costs are much less comparable to hospitals, and the aged care comparison of $140 per day could be a more reasonable assumption.

4.5 THIN AND UNDERSUPPLIED MARKETS

A 'thin' or 'undersupplied' market is one in which there is a persistently low level of supply relative to demand. This is often due to structural features of the market that makes it expensive or difficult for providers to compete effectively. Thin markets are a key policy concern for the NDIS as the presence of thin and undersupplied markets can compromise participant outcomes in that region.

While price caps may have an impact on thin and undersupplied markets, other policy considerations can often be more important. Once a market has been assessed as thin or undersupplied, increasing prices can be a way to attract new suppliers and investment. However, some structural features cannot be overcome by price alone. This includes when the suppliers do not have the capacity to cater to some specialised markets, or when the market has structural features such as geographical isolation which make it difficult for providers to operate in these areas.

The NDIA should bolster its market evaluation framework to identify thin markets before they develop, invest in market development infrastructure, and make pricing changes where necessary.

Section 4.5 covers the following topics:

- 4.5.1 Process to identify thin and undersupplied markets
- 4.5.2 Addressing emerging thin and undersupplied markets

4.5.1 Process to identify thin and undersupplied markets

Issues and evidence

The NDIS is too young and the available data too incomplete to make a definitive assessment of whether certain markets are at risk of being thin or undersupplied. The NDIS has only been in operation for more than 12 months in a few geographic regions. 79% of supports committed in the latest financial year were in NSW, ACT and Victoria, with the NDIS yet to be rolled out in much of Queensland, Tasmania and the western states and territories. NDIS expenditure on support services in FY 2016/17 was 15% of the projected annual expenditure by 2021. Not only is the NDIS in its early stage, there are also some limitations to the current data on market supply. For example, comprehensive surveys of participants and providers are limited to the trial sites or have only just been initiated in other parts of the Scheme. More discussion of this evidence is presented in Section 3.1 – Market Development. It is too early to form definitive assessments about which markets are likely to emerge as thin or undersupplied, as any evidence of supply gaps may be a product of temporary transitional pressures, or reflect gaps in data collection.

The NDIA is currently designing a market analysis and intervention strategy to identify thin and undersupplied markets. It is also developing a strategy to maintain critical supports which will support its efforts to identify short-term responses to supply gaps. These strategies are yet to be finalised and implemented. The NDIA does not currently have a framework with clearly identified metrics and data sources to ensure that its monitoring strategies are more comprehensive and transparent.

Recommendations

11: As part of its market intervention strategy, the NDIA should adopt a clear set of metrics to more comprehensively identify and respond to risks of thin markets emerging.

The NDIA should include a clear set of metrics and data sources within a robust evaluation framework to test markets for potential undersupply. The IPR team recommended above the

adoption of a clear and robust market evaluation and decision-making process to set appropriate price levels (see Section 4.1.1). The foundation of this process is a comprehensive understanding of market indicators to understand whether there is sufficient supply in each Scheme market. The following section identifies the key metrics that the NDIA should monitor, the data sources it can rely on, and the teams within the NDIA that should have responsibility for collection and analysis of these metrics.

The IPR team recognises that no single set of Scheme-wide indicators can offer a definitive answer on whether supply challenges are likely to occur in each rapidly changing market. Therefore, the focus of the monitoring framework should be on identifying the markets that most warrant further investigation. The NDIA should err on the side of caution when identifying thin markets. Identifying the markets 'most at risk', rather than whether they are currently undersupplied or not, will position the NDIA well to respond to emerging supply challenges.

Participant survey data

The NDIA should have a regularly updated awareness of the share of participants who are unable to access supports for which they have a budgeted plan, and the share of participants who are satisfied with the quality of supports to which they have access. This can be constructed through a participant survey, as well as by accessing informal information flows from LACs and planners. As NDIS-wide participant surveys may be more difficult to update continuously, the NDIA can target participant surveys in markets that demonstrate other indicators of supply shortages.

The NDIA currently conducts a regular participant survey through its Short-form Outcomes Framework assessment. The NDIA should include in this survey a question as to whether participants were able to access supports for which they had funding, and if not, if this was due to a lack of available providers. The NDIA currently reports on the share of participants who identified having difficulty in accessing health services, but this question is not specific to either NDIS-supported services or difficulty caused by a lack of adequate supply. The NDIA should also collate instances of participants contacting their LACs to report an inability to find providers. The results of these queries should be included by the Provider, Markets and Sector development team in its regular assessment of markets and reported to senior management.

Provider intent

Understanding whether providers intend to expand services to a new market, continue in current markets, or withdraw from the markets in which they provide support services, is a good leading indicator of the adequacy of supply in the future. The NDIA can monitor this intent through provider surveys and regular consultation with providers. Where indications exist of provider exit, more thorough consultation should be conducted to inform the NDIA's understanding of provider economics, participant demand, and Scheme performance in that area. This will inform whether the prices in that market should be changed, including through interim pricing adjustments.

The provider benchmarking initiative currently being developed by the NDIA will give some indirect indication of provider economics and intent.[43] The NDIA also manages relationships with providers through its regional offices and LAC network. However, standardised and regular reporting of provider intent should be part of its permanent market monitoring framework.

Utilisation rate

The utilisation rate is the share of a participant's budgeted plan that has been used to purchase services. It is calculated annually and, since services provided in one year may not be claimed for reimbursement until some months later, updated retrospectively. If a participant were unable to find providers of sufficient quality to meet their needs as specified in their plan, it would be reflected in the utilisation rate, and could signpost a lack of appropriate supply in that market.

Utilisation rates should be used by comparing changes in relative levels to overcome some of the metric's shortfalls. Absolute levels of utilisation rates are less informative because they may be affected by many factors other than supply. The most important of these is the content of the plans themselves; a utilisation rate might appear high simply because the plans catered for inadequate supports in the first place. Similarly, plans that provide for more services than required in a support category may appear underutilised, even though the participants are accessing all the high-quality support they require. Some plan managers who were consulted by the IPR team reported that their participants sometimes had spare allocations for capital equipment in case some of it was damaged and needed to be replaced. Such items are only intended to be used infrequently and could account for low utilisation rates in some support markets.

Despite these alternate explanations for any given level of a utilisation rate, observing the relative rates across markets, and the change in rates over time, will give some indication of which markets may be experiencing supply shortfalls.

The Scheme Actuary currently collects and shares utilisation data quarterly. The IPR team proposes the Provider, Markets and Sector development team should identify quarterly markets in the Scheme with low levels of relative utilisation using more tailored samples of participant utilisation rates, e.g. support type by geography, or a subset of participant characteristics within a geography. Markets with utilisation rates that are persistently lower than other markets can be investigated using surveys and interviews, through working with LACs, regional offices, participants and providers in that market.

Rates of market entry and exit

Rates of market entry and exit are a basic measure of the willingness of providers to supply disability support services in the NDIS at existing price levels. A combination of registration and payment data can help inform this measure. Registration data indicates instances where firms enter or exit the NDIS, but a provider can register while not actively providing supports and stop providing supports without deregistering. Analysis of payment data to identify provider activity offers the most direct observation of market supply. It is recognised that provider entry and exit rates will be affected by many commercial (and other) factors that are

[43] National Disability Insurance Agency: *Overview of benchmarking project,* available at https://www.ndis.gov.au/providers/market-information-useful-links/benchmarking-Project-Overview

not a result of just the price level. However, significant variations in provider entry or exit rates in some markets should serve as a trigger for further investigation.

The Scheme Actuary currently collects and reports payment data which shows rolling averages of provider entry and exit. This should be reviewed monthly by the Provider, Market and Sector development team, who should work with the Scheme Actuary to identify the markets by support type or geography which are experiencing the highest net declines in provider activity. This should be a trigger for further investigation in the relevant markets.

4.5.2 Addressing emerging thin and undersupplied markets

Issues and evidence

Provider submissions to the IPR during the consultation process for this review identified some markets as being at risk of undersupply due to the additional expense and difficulty in catering to them. These included markets for participants in remote regions and those with complex needs. These markets were also identified by the Productivity Commission as potential thin or undersupplied markets.[44]

Remote and very remote areas account for 3-5% of the current committed supports in the Scheme. Provider consultation and market data suggest a risk of undersupply in these markets. The non-financial obstacles to providing services in remote and very remote areas, include insufficient information about the participants in that region, limited Scheme infrastructure such as LACs, and the lack of a local workforce. Providers also revealed difficulties in travel to and from these areas which made service provision unsustainable (see Section 4.2.1).

Participants with very complex needs are defined here to include those that most require assistance from a support worker with additional skills and experience due to a medical need or challenging behaviour (see Section 4.3 for further detail). Based on the current application of ‘high intensity’ loadings, this cohort is estimated to comprise approximately 4% of participants enrolled in the Scheme but 13% of expenditure in the latest financial year.[45] Service provision to these participants is highly specialised and the participant density is low, creating a risk of undersupply that should be monitored and addressed (see Section 4.3.3).

Across all markets, as the Scheme transitions, the current assessment of market supply will change. Participants will change their demand patterns, new suppliers will come online while others leave, and Scheme infrastructure will be developed that helps participants and providers find each other – through LACs, and events at which providers can present their services, for example. These changes can continually affect the adequacy of supply in the market and must be proactively monitored by the NDIA.

[44] Productivity Commission: *National Disability Insurance Scheme (NDIS) Costs* (19 October 2017) , pp. 268 – 270.

[45] Share of participants who have been assessed as Level 13 – 15 according to the Disability Severity Indicator. It should be noted that this current definition of complexity does not adequately capture all participants with complex needs (see Section 4.3.1).

Recommendations

The supply challenges faced by the markets identified above can be addressed in part through changes to pricing and related policies. These changes are briefly outlined below, and discussed in more detail in the relevant other sections of this report:

- In very remote areas, including isolated Indigenous communities, the NDIA can work with providers to develop local workforces, and allow providers to quote on services to ensure supply in the short term (see Section 4.2.1).
- In rural areas, the NDIA can amend travel policies to enable providers to recoup costs associated with delivering services to participants in these areas (see Section 4.2.2).
- For participants with complex needs, the NDIA should more clearly define these participants, and adopt a more appropriate tiered pricing structure to reflect the costs of providing services for these participants (see Section 4.3).

In some cases, thin and undersupplied markets will require immediate intervention to ensure the provision of critical supports. For example, participants with daily care needs may require assistance in locating providers if a major provider in an already thin market were to withdraw. The NDIA is undertaking an initiative to ensure access to critical supports at any time, and facilitating a provider of last resort solution to address this scenario. In these circumstances, a price solution alone may not address the short-term requirements of participants, and LACs will likely play a significant role to help participants find suitable providers.

12: The NDIA should invest in Scheme infrastructure such as an e-market tool, which would empower participants in thin or undersupplied markets to find suitable providers.

One of the priorities for the NDIA as the NDIS has developed has been ensuring participants can connect with providers. To assist in this, the NDIA is establishing a ‘Provider Finder’, which enables a participant to search by postcode for a provider in his or her area. This is a useful tool for identifying providers, but does not yet let participants compare prices or transact directly through the platform. As the market grows, an e-market tool with this functionality will empower participants and increase price transparency and competition amongst providers. In addition to helping the NDIA address thin and undersupplied markets, easier identification of services and prices could support a faster transition towards deregulated prices (see Section 4.7).

An e-market would enable a participant to search by support type or features of the provider, such as location, price-range, or quality rating, and could also allow participants and providers to book support services on the platform. The e-market will not be a suitable solution for all providers and participants, for example where there are difficulties in accessing the internet or navigating an online portal. As such, the NDIA through its regional offices and LAC network should also continue experimenting with other forms of Scheme infrastructure, such as physical market fairs where participants can come to one place to meet providers and compare offerings.

In addition to its own activities, the NDIA can speed up the process of delivering an e-market by allowing private firms to develop and compete on online marketplace platforms. There are firms that are already providing similar products, but some are not registered in the NDIS,

meaning Agency-managed participants cannot access supports on these platforms. The NDIA should explore options to incentivise private providers to build e-market tools.

4.6 PROVIDER EFFICIENCIES AND ADEQUACY OF PROVIDER RETURNS

Section 3 of this report included analysis on provider economics and benchmarking with other schemes. The IPR team found that across all support types there were examples of providers operating profitably, as well as examples of providers struggling (see Exhibit 3). The successful models provide inspiration for how the market can innovate and drive efficiencies, while providing high quality services to participants that meet their needs. However, some providers, particularly those providing attendant care services, are struggling to make the transition to the NDIS.

The IPR team has focused on the adequacy of provider returns for attendant care and therapy. Attendant care was chosen given the large proportion of Scheme spend it represents, and given the recent scrutiny on the price cap for 1:1 attendant care. Therapy supports was chosen because the single NDIS price cap for therapy appeared to be inconsistent with the multiple price levels, and structure, of other comparable schemes.

Section 4.6 covers the following topics:

- 4.6.1 Costs of transitioning to the NDIS that impact provider returns
- 4.6.2 Administrative costs related to operating within the NDIS
- 4.6.3 Attendant care adequacy of provider returns and efficiencies
- 4.6.4 Therapy adequacy of provider returns and efficiencies

4.6.1 The cost of transitioning to the NDIS

Section 4.6.1 provides context for all of Section 4.6 by outlining the transitional costs and organisational challenges providers across all supports face as they move to a unit-funded, consumer-driven environment under the NDIS. It also provides an overview of federal and state and territory government spending to date to support NDIS transition, specifically as it relates to supporting provider readiness.

4.6.1.1 Changes providers must adapt to under the NDIS

Transitioning to the NDIS requires existing providers to develop new organisational capabilities and make significant changes and innovations to their systems and process. This requires significant investment by providers. This was recognised by DSS in a 2015 document.

'A substantial proportion of existing service providers are unlikely to operate effectively in the new environment without significant transformation…Providers long accustomed to block funding will require support to transition to business models responsive to individualised funding, and to diversify their service offerings to meet the support requirements of NDIS participants'.

Anecdotal evidence from provider consultations indicated that the cost of transition could amount to 1.5% of total annual expenditure for a provider.[46] The four biggest transitional changes to which providers must adapt are: a shift from block funding to unit funding; adapting to a consumer-driven service environment; a shift from payment in advance to payment in arrears; and compliance with a new quality and safeguards framework. Many providers have invested in IT, organisational capability, and organisational restructures.

Shift from block funding to unit funding

The shift from receiving and reporting against block funding every quarter, to claiming and reporting against individual units of service, has created challenges for providers.

First, many providers are struggling to manage the additional administrative burden of unit-funding. Anecdotal evidence from consultation suggests many providers have hired new corporate staff to manage payments and invoicing, increasing corporate overhead costs.

Second, providers have had to invest to understand whether they can deliver services under NDIS pricing. The unit costing regime requires providers to accurately measure each component of their service delivery, including on-costs and corporate overheads. Anecdotal evidence suggests many providers of disability support services did not understand their unit cost to serve prior to the NDIS. Nor did they possess data or organisational capability to measure unit costs, and therefore did not understand whether they could deliver services profitably within NDIS price caps. Not understanding whether they could deliver services within the price caps, or whether they had the short-term financial resilience to cope with transition, was a significant source of stress for many organisations. Many larger organisations hired external consultants to help them understand their unit costs to serve, while the federal government and state governments have also funded programs to help develop this capability in the sector.

Adapting to a consumer-driven service environment

In a new consumer-driven, competitive service delivery environment, providers must develop marketing capabilities to attract and retain customers. There is broad recognition amongst providers that this capability is underdeveloped in this sector, and many providers are investing significantly in their direct-to-customer marketing capabilities:

- One industry expert states: ‘There is a low level of sophistication in understanding the marketing funnel and the sequence of events through the activities of reaching, engaging, converting and servicing customers’.
- In transitioning to the NDIS, one provider invested in 10 full-time equivalent (FTE) staff to perform sales and relationship management functions at a cost of $750 000 per year, and incurred marketing and other new costs of $250 000. This represents an increase of over 1% to their total annual expenditure.

[46] Based on data from 3 large providers with revenue of over 50 million in FY16/17. Included spending on IT, new business teams and NDIS transition teams.

The empowerment of participants to choose not only their supports and providers, but also to have a greater say in when these are received, has also been challenging for providers. There is greater pressure to ensure that service times meet the needs of the participant, rather than the rostering requirements of the provider. This means providers are required to manage more peaks and troughs in demand between days of the week and hours of the day, making it more difficult to plan consecutive client bookings. Some providers have introduced a new human resources role to manage these new challenges, while others have invested in workforce rostering systems. Many providers have moved towards more casualised workforces to manage this challenge.

Shift from payment in advance to payment in arrears

Prior to the introduction of the NDIS, most disability organisations were paid by state and territory governments in advance on a quarterly basis. The switch from payments in advance to payments in arrears has represented a short-term cash flow challenge for providers, who now need to fund salaries and other expenses for a period in transition before they receive payments.

Compliance with a new quality and safeguarding framework

The NDIS Quality and Safeguarding Framework, released by the Council of Australian Governments Disability Reform Council in February 2017, introduces a nationally consistent system for regulating the safety and quality of disability services in Australia.[47]

The new framework will, among other things, introduce a new risk-based provider registration system. Registered providers whose registration group is deemed to be lower risk will only undergo a simple, periodic verification process while providers delivering higher-risk supports will be required to gain third party quality assurance certification.[48] In addition, all providers and workers will be required to comply with a new code of conduct, registered providers and their employees will be required to undertake a mandatory compulsory orientation module, and registered providers will be required to have effective internal complaints arrangements.[49]

In the short term, the new framework represents an added compliance cost for providers, who will have to adapt internal systems and processes to comply with these new standards. In the longer term, the framework may represent a cost efficiency for national providers – who will only need to comply with one set of standards, as opposed to one in each jurisdiction.

4.6.1.2 Federal and state and territory government funding for provider readiness to date

To date, federal and state and territory governments have committed significant funds to support the NDIS transition. At the federal level, the Sector Development Fund (SDF), a pool of $146 million administered by DSS from 2012/13-2017/18,[50] has funded provider readiness projects under the primary outcome area of 'building disability sector capacity and service provider readiness'.[51] At the state and territory level governments have also invested significantly in the transition, often over and above the money they have received via SDF funding. For instance, the NSW Government spent over $30 million between 2009-2016 on NDIS sector development and capacity building.[52]

Of the money dedicated to provider readiness, some has been used to fund publicly accessible education tools that give providers practical business advice to assist the transition to the NDIS world, and some has been used to provide direct individualised provider support, financial and non-financial. It is unclear how much of this funding has been provided as funding to support provider education, versus direct financial assistance to providers.

Examples of provider readiness initiatives funded by federal and state and territory governments include:

- **Education tools for all providers:** The SDF funded a 'Unit Costing Tool Project' in New South Wales, which developed a suite of resources to help providers develop the capability to operating in a unit-funded NDIS world.[53]
- **Direct individualised non-financial assistance:** The SDF funded contractors to give providers in South Australia one-on-one support in helping them transform their business models, including assistance with financial and costing analysis, bookkeeping, IT and data management integration, and marketing and communication.[54]
- **Direct individualised financial assistance:** The NSW Government's Round 1 Transition Assistance Program (TAP), launched in 2016, provided over $ 4 million in financial assistance to small and medium providers regional areas. Providers with less than $3 million in annual turnover were offered up to $35,000 to help with readiness activities like updating business plans or purchasing software.[55] In TAP Round 2,

[50] The Fund was administered by the NDIA between 2013-2014.

[51] This is one of five outcome areas funded by the SDF. It is unclear at the time of writing this report, how much of the $146 million to date has been committed to this outcome area. The SDF is now closed for new applications.

launched in 2017, the NSW Government awarded a further $600,000 in grants to providers.[56]

The effectiveness of this spending is not yet clearly established. Two audits have noted that these interventions have not been systematically evaluated. [57] Therefore, there is an opportunity for federal and state and territory governments to review the effectiveness of spending on provider readiness to date where possible, to evaluate the effectiveness of future interventions, and to assess whether any further support for provider readiness is required.

4.6.2 Costs of interacting with the NDIA

Issues and evidence

In addition to the expected costs associated with transition to the NDIS, consultation with providers revealed opportunities for the NDIA to improve its systems and processes, and reduce the administrative costs and cash flow risk of providers. Sections 2.2 and 2.4 summarised the provider feedback relating to the portal, NDIA responsiveness and planning raised in consultation, while Section 3.2 quantified the potential impact of these issues on provider financials based on a small sample of provider submissions. This sample indicated that the Agency could reduce provider costs by ~0.5% of total annual expenditure through improvements to its systems and processes.[58]

This section highlights a measures the NDIA should prioritise to address key provider feedback relating to NDIA systems and processes raised in consultation. The focus of the IPR is pricing and these recommendations are made in the context of the relative emphasis placed on these issues in consultation, and through an assessment of relative impact of these issues on provider economics.

The IPR team has been advised by the NDIA that there are multiple initiatives currently underway as part of the Participant and Provider Pathway Reviews that go to addressing the issues outlined in Sections 2.2 and 2.4, or to implementing some of the recommendations below.

[56] Consultation with the NSW Government Department of Family and Community Services.

[57] The Australian National Audit Office's audit of the Management of Transition of the Disability Services Market (November 2016) found *'limited evidence of evaluation of some higher cost projects'* funded by the SDF. Australian National Audit Office: *National Disability Insurance Scheme – Management of Transition of the Disability Services Market* (November 2016), available at https://www.anao.gov.au/work/performance-audit/national-disability-insurance-scheme-transition-disability-services. The NSW Audit Office's performance audit on *'Building the readiness of the non-government sector for the NDIS*' (February 2017) found the overall impact of the NSW Department of Family and Community Services spending on provider capability was not clear, as baseline information on provider capability was not collected and targets for improvement in provider capability were not set. Audit Office of New South Wales: *New South Wales Auditor-General's Report Performance Audit: Building the readiness of non-government sector for the NDIS* (February 2017), available at http://www.audit.nsw.gov.au/news/building-the-readiness-of-the-non-government-sector-for-the-ndis

[58] Based on 45 one-on-one interviews with providers in September 2017, in which three large providers (revenue > 50 million in FY16/17) gave detailed evidence of these costs.

Recommendations

13: The NDIA should prioritise the implementation of measures to continue to improve its portal, responsiveness and communication as part of the Participant and Provider Pathway Reviews.

Portal

- **Allow for automatic notification of plan review commencement, if participant consent is provided:** The NDIA has advised the IPR team that as of December 2017, changes to the portal will allow providers to view relevant sections of a participant's plan, including plan start and end dates, given the participant has a current service booking with the provider and the participant has provided their consent. The IPR team recommends the Agency also consider allowing providers to receive an automatic notification through the portal that a plan review has been triggered, given the participant has a current service booking with the provider and the participant has provided their consent.
- **Provide more detailed descriptions of claim rejection reasons:** The NDIA should consider providing a more detailed description of the cause of payment rejection in the portal.
- **Improve provider education tools:** The NDIA should continue simplifying and improving tools (like the provider toolkit) that educate providers how to navigate and troubleshoot portal issues. In the medium term, the NDIA should consider setting up a dummy portal that peak bodies and the NDIA can use to train providers on how to use the portal. This recommendation should be considered after changes in the provider pathway project have been implemented, and the new portal has been standardised.
- **Consult with providers when designing portal improvements:** The NDIA should consider making future improvements to the portal by consulting with a representative group of providers. The NDIA advised the IPR that this is already underway.

Agency responsiveness and communications

- **Stream call centre inquiries:** The NDIA should upskill call centre staff and stream call centre inquiries to specialist teams, to ensure that most provider inquiries are resolved by staff with the knowledge and the authority to resolve the issue. The IPR has been advised by the NDIA that there are current initiatives underway to address these issues.
- **Improve response times for SIL quote approvals:** The NDIA should aim to further reduce the average time it takes to process a SIL quote, building on its success to date in reducing the time required. The NDIA's current target is 14 days.
- **Improve communication of policy and process changes:** The NDIA should build on recent improvements such as the provider toolkit to clearly communicate all planned policy and process changes to providers, as far ahead of time as possible, and preferably through a single touchpoint. The IPR has been advised that the NDIA is aware of these issues and has recently implemented initiatives to address them e.g. the provider e-newsletter has been recently revised to include more 'need to know' information that is valued by providers.

Planning

The IPR team will not make any recommendations relating to the planning process as this is outside of the IPR's TOR. Moreover, the NDIA has advised the IPR team that most of the planning issues raised in Section 2.4 are being considered and addressed as part of the Participant and Provider Review projects.

4.6.3 Attendant care supports

Attendant care refers to 'Assistance with daily living' and 'Assistance with social and community participation'. 'Assistance with daily living' involves assisting with, and/or supervising personal tasks of daily life to develop the skills of the participant to live as independently as possible. 'Assistance with social and community participation' involves the provision of support to enable a participant to independently engage in community, social and recreational activities. Together these supports account for 45% of committed scheme spend at full Scheme. Attendant care can be provided by one carer to one participant (one to one) as well as by one carer to more than one participant in the case of 'Assistance with social and community participation' (group care).

Pricing for 'Supported Independent Living' (SIL) is derived from the price cap for attendant care. If SIL is included together with all other supports involving attendant care, together they are estimated to account for 75% of committed scheme spend at full scheme.[59]

This section covers the following topics:

- 4.6.3.1 Base price for one to one attendant care
- 4.6.3.2 Cancellation policy for attendant care
- 4.6.3.3 Group price for attendant care

4.6.3.1 Base price for one to one attendant care

Issues and evidence

Attendant care supports are currently subject to price caps. There are different price limits for the provision of these supports:

- At different times of day i.e. daytime, evening
- At different days of the week i.e. weekdays, Saturdays, Sundays and public holidays
- By the complexity of the care required i.e. standard and higher intensity
- By the location of the service i.e. metropolitan, remote or very remote.

The base price of one to one (1:1) attendant care (daytime, weekday, standard intensity, metropolitan location) is subject to a price limit set by the NDIA of $44.72 in the 2017/18 Price Guide for Victoria, New South Wales, Queensland and Tasmania, and $45.54 in the

[59] Source: NDIA Scheme Actuary.

Australian Capital Territory, Northern Territory, South Australia and Western Australia. The NDIA also sets service definitions, payment rules and terms of business that affect the cost of service delivery for this support.

The price of 1:1 attendant care has come under recent scrutiny.

- The price of 1:1 attendant care was the focus of the NDIA's FY2017/18 Price Review. The NDIA published a discussion paper '2017 Price Controls Review' in March 2017 and invited providers to give feedback on questions related to the price setting process and the adequacy of pricing for attendant care.
  - The NDIA found that 'divergent facts and views were presented' with some providers submitting that 'existing prices did not allow for recovery of costs', and some participants submitting that 'providers were overpricing supports in some categories'.[60]
  - In June 2017, the NDIA increased the base price of attendant care by 4.5% to $44.72, reflecting the increase in the national minimum wage, the Equal Remuneration Order and the impact of inflation.[61]
- More broadly, the NDIA's view on the pricing of attendant care is reflected in its March 2017 submission to the Productivity Commission Costs Paper, which states that '*Contradictory views in the provider population might be evidence that some are struggling to adjust to a funding model that is based on market principles. There is also evidence of a wide variety in operating costs under pre-NDIS approaches where efficiency was not a key consideration'*.[62]
- The Productivity Commission in its NDIS Costs Paper (October 2017) noted, based on anecdotal evidence from provider submissions, that attendant care price caps may be too low to achieve safe and quality outcomes, with estimates of the shortfall as a percentage of the current price cap varying considerably.[63]

One objective of the NDIS is to develop an efficient market of providers while providing safe and high quality supports for participants.

In assessing the price of 1:1 standard intensity attendant care, the IPR team examined evidence of supply shortages, benchmarked NDIA price caps against comparable schemes, and consulted with providers about their unit cost to serve. Detailed findings relating to these

60 National Disability Insurance Agency: *Letter from David Bowen to providers outlining the outcome of the FY17-18 Review* (12 June 2017), available at https://www.ndis.gov.au/news/letter-to-ndia-registered-providers.html

61 The 4.5% increase was based on the rise in the national minimum wage (3.3% from 1 July 2017) and the application of the Equal Remuneration Order (1.7% in some disability roles from 31 December 2016) for labour costs, and inflation (2.1% for the 12 months to 31 March 2017) for non-labour costs. Labour costs and non-labour costs were assumed to constitute 80% and 20% of the cost base for attendant care respectively. National Disability Insurance Agency: *Letter from David Bowen to providers outlining the outcome of the FY17-18 Review* (12 June 2017), available at https://www.ndis.gov.au/news/letter-to-ndia-registered-providers.html

62 National Disability Insurance Agency: *NDIA Submission to Productivity Commission Issues Paper on NDIS Costs* (March 2017), p. 101, available at https://www.pc.gov.au/__data/assets/pdf_file/0013/216031/sub0161-ndis-costs.pdf

63 Productivity Commission: *National Disability Insurance Scheme (NDIS) Costs* (October 2017), p. 300, available at https://www.pc.gov.au/inquiries/completed/ndis-costs/report/ndis-costs.pdf

are presented in Section 3. The IPR team recognises the limitations of each of these evidence sources.

The IPR team found no conclusive evidence of general supply shortages in the standard intensity attendant care market, with the NDIS price caps for attendant care being comparable to similar government funded schemes. The IPR team also found that some providers with different operating models currently deliver attendant care at a profit, but many providers in the market are struggling to make an adequate return. Based on a sample set of 22 providers who shared detailed operating cost breakdowns with the IPR team, the median cost to serve was ~$49 per hour, or ~10% higher than the current price cap (see Exhibit 4), with some providers stating they are cross-subsiding the loss on this support from other NDIS or non-NDIS funding sources, including state and territory government block funding.[64]

Many providers with profitable operating models in attendant care have recently started their business and specifically designed it to work for the NDIS, or are for-profit organisations, while many providers who are finding it difficult to deliver services under NDIS unit prices are incumbents or more traditional providers.

While there is no single model of care that will work for all providers and participants, and acknowledging the substantial investment providers have already made in transforming their organisations, the significant variation in cost to serve across the market indicates there are opportunities to innovate and lessons to be learned from operating models that are working well in standard intensity attendant care. Providers will generally need to achieve corporate overheads of 10-15% and improve workforce utilisation rates to above 90% to make a profit while complying with SCHADS award obligations. To do this, most existing providers will be required to adjust their operating models, driving efficiencies and innovation through technology and other operational improvements.

While this transformation will be challenging, examples of providers who are delivering quality supports at a profit suggest that it is achievable. Appendix E provides examples of strategies employed by some providers that have operating models that work under current prices. The NDIA's recently announced independent provider benchmarking function will also be a key reference point for providers as they make this transformation. In its first phase, this provider benchmarking project, run by an independent third-party survey manager, will survey providers for detailed information about their input costs for delivering attendant care, as well as for provider (e.g. provider scale, workforce mix, industrial agreements) and client characteristics (e.g. client complexity, location). The customised reports produced for participating providers will benchmark providers' input costs against similar providers in the sector. This will be an important piece of strategic information in helping providers understand how they are performing relative to their peers, potential drivers in variations in their input costs, and in identifying where there are specific opportunities to for improvement.

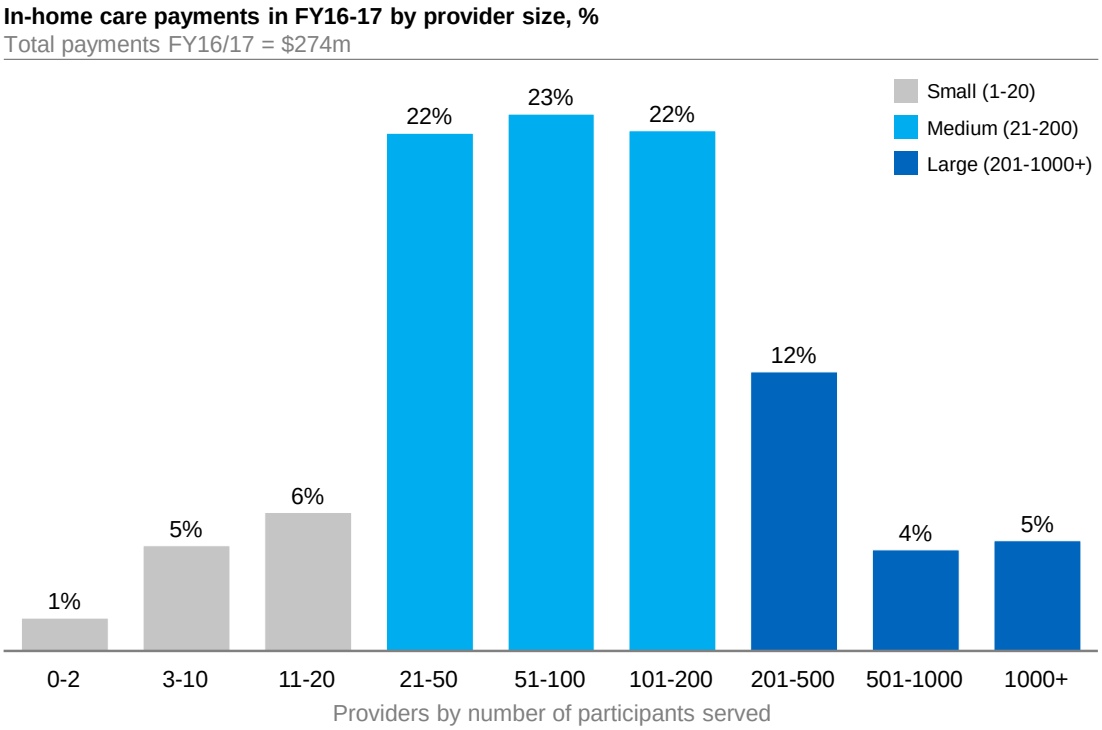
The IPR team also recognises that provider adjustment will take time: 88% of in-home care service volume under the NDIS is delivered by medium and large providers (see Exhibit 8)

[64] Data based on information from 22 providers who provided detailed financial information to the IPR. While the IPR's sample of 22 providers was not comprehensive or representative of the market, the IPR was limited by the information providers were able to provide.

who are less agile by nature of their size, while new entrants – although growing rapidly – have yet to capture a material share of the market.

EXHIBIT 8

Distribution of providers by size for in-home attendant care



SOURCE: Scheme Actuary, distribution of FY17 NDIS payments by provider size (in terms of number of participants served)

Recommendations

14: The NDIA should implement 'temporary support for overheads' (TSO) in the form of a temporary increase to the price cap for standard intensity attendant care. Government should offer business planning support for large providers that would otherwise exit and create the risk of supply shortages.

While the IPR team has not seen evidence of generalised supply shortages in attendant care to date, the IPR team's assessment is that there is a future risk of this occurring given rapidly increasing demand and supply side uncertainty. On the demand side, there will be rapid growth in demand for attendant care, as funding for disability doubles from $11 billion per annum prior to the NDIS, to more than $22 billion per annum at full Scheme. On the supply side, the market is undergoing significant adjustment. Some traditional providers, new technology-based entrants and sole traders can deliver attendant care support profitably under the price cap. However, many existing providers are not at the operating efficiency required to operate at a surplus under the price cap, and achieving the necessary efficiencies will take some more time.

The IPR team also notes the evidentiary difficulty of detecting how quickly the market is adjusting in a timely way, as articulated in Section 3.1. Critically, there is not one or a set of leading indicators that currently conclusively predict future generalised supply shortages.

In this uncertain context, and given the essential daily support that attendant care provides participants, the IPR team believes it is prudent to act cautiously and pre-emptively using a combination of price and non-price instruments to mitigate the risk of market failure.

The IPR team recommends the NDIA implement 'temporary support for overheads' (TSO) in the form of an increase of 2-3% in the price cap of 1:1 attendant care for 12 months. The TSO should apply in addition to ordinary annual indexation of the price. The presumption should be that the TSO is a one-off measure and will not be extended. The IPR believes that 12 months is a reasonable time frame for providers to implement changes to operating models to reduce overhead costs, and for the NDIA to assist and encourage the development of efficient and effective alternative supply options, such as e-marketplaces. At the end of the 12 months, the loading would be removed by reducing the annual indexation of the price by the TSO amount of 2-3%.

Before the end of this 12 months, there should be a review that examines the progress providers have made in transforming their business models and the ongoing risk of supply shortages. The expectation should be that providers have improved their performance sufficiently that they no longer require the TSO. Government should also consider using non-price instruments such as business planning support for providers to address the risk of supply shortages in attendant care, if further funding becomes available for this purpose.

In developing this recommendation, the IPR considered several alternatives including funding providers for specific activities (e.g. training, IT investments) and by-application support for providers. Given there is no legislative mechanism for NDIA to fund providers directly, and that a policy that advantaged one provider over another was unfavourable, the TSO was selected as the most appropriate option.

The specific quantum of the TSO increase should be a policy decision the NDIA makes in view of other more targeted interventions government will undertake to mitigate the risk of supply shortages. Based on current information, a 2-3% TSO adjustment reflects what the IPR team believes are reasonable assumptions for providers to achieve in the short term. While no one model of care will work for the entire market, if a 3% TSO is applied, providers will be able to achieve a ~5 % margin under the price cap if they can meet the following benchmarks:[65]

- **Labour costs (including supervisors):** SCHADs 2.3 support worker; 1:15 span of control, SCHADs 3.2 supervisor
- **Workforce mix:** 80% full-time or part-time workforce, 20% casual workforce

[65] Assumes the midpoint where an assumption range was provided. Analysis assumes labour costs in NSW as of November 2017, and the $44.72 price cap for attendant care in the Victoria, New South Wales, Queensland and Tasmania. The IPR recognises that on 1 December 2017 pay rates under the SCAHDS award were adjusted to reflect an increase from the Equal Remuneration Order (ERO). This will compress provider margins by ~2% for 6 months, until the Agency's July 2018 price increase, which should adjust the new price to reflect the 1 December 2017 ERO increase.

- **Workforce utilisation**: 90-95% utilisation of full-time and part-time workforce, 100% utilisation of casual workforce
- **Corporate overheads:** 10-15% corporate overheads as a % direct of labour costs.

These benchmarks should be achievable, as some providers are demonstrating they are able to operate more efficiently than these benchmarks, as described in Section 3.2. Some of these providers have already reduced corporate overheads to 10% and below. Improvements in utilisation above 90% should be realised as providers improve their rostering and adjust their workforce mix; and, labour costs can be reduced by creating different workforce pools for standard and high intensity participants. While achieving these efficiencies will be challenging for some providers, existing providers demonstrate they are attainable.

The IPR team recommends that the government fund business planning services for large providers who deliver high volumes of service in attendant care that are at risk of ceasing service provision, but who have the willingness to develop and implement an action plan to deliver attendant care profitably in the future. This focus on providers who deliver high volumes of service reflects the fact that the exit of these providers would increase the risk of supply shortages.

The TSO adjustment should not be made available to SIL. The high volume and certainty of demand for SIL allows providers to manage their business and workforce planning more effectively, and reduces the need for SIL providers to undergo large scale business model changes to adapt to the NDIS.

Implications

The quantum and the timing of the TSO balances the need to ensure the market has sufficient support to adjust, with the aspiration to achieve an efficient, high quality market of providers. The TSO will relieve some pressure on providers as they transform their operating models, while any targeted planning support will help protect against identified supply risks.

Implementing the TSO in conjunction with other recommendations relating to attendant care will improve the margins of providers, recognising that the TSO willonly last for 12 months. The other recommendations that will improve margins both in the short and long term, are the addition of a very high intensity rate for the most complex participants, adjustments to travel and cancellation policies, and the NDIA's ongoing work to improve the design of its systems and processes. The aggregate effect of these recommendations is that providers who were previously making a small loss on attendant care will now be able to provide the service at a profit while they adjust and improve their business models.

4.6.3.2 Cancellation policy for attendant care

Issues and evidence

Under the Price Guide, a provider can charge a maximum of 8 booking cancellations a year against a participant's plan for assistance with self-care activities and assistance to access community, social and recreational activities. A provider can only charge a booking cancellation if there are unforeseen circumstances, and the participant agrees that they (the participant), did not comply with the agreed requirements in the service agreement. The

NDIA's Price Guide does not distinguish between cancellations made far in advance and those made at short notice. The Price Guide also stipulates that providers are expected to have business arrangements in place to minimise the risk of participant cancellations, no shows or late changes.

Providers submitted that this policy does not reflect the frequency at which cancellations occur in this sector, particularly for medically or behaviourally complex participants. They submitted that where more than 8 cancellations occur per participant, this policy can be loss-incurring given providers' obligation under the SCHADS award to pay full-time and part-time employees as if they had worked a cancelled shift, if notification is not provided prior to 5pm the day before the scheduled service.

Recommendations

15: The cancellation policy for attendant care should be amended so that up to a certain threshold, providers can charge against a participant's plan for up to 90% of the entire duration of the scheduled service if the participant makes a short notice cancellation. Above this threshold, providers will need to demonstrate they are actively working with participants to minimise the risk of cancellations in order to continue charging for cancellations.

The Price Guide should distinguish between short-notice cancellations and other cancellations.

For short-notice cancellations, the cancellation policy for attendant care should be amended so that providers can charge against a participant's plan for up to 90% of the entire duration of the scheduled service.[66] A short-notice cancellation should be defined as occurring where the participant provides notice of cancellation after 3pm on the day before the scheduled service. This amended policy is designed to bring the NDIA's cancellation policy in line with providers' obligations under the SCHADS award. The 3pm cut-off time recognises that providers need time to redeploy a support worker or to give them notice of a cancelled shift before 5pm on the day before the scheduled service, as required under the SCHADS award for a full-time or part-time employee. Limiting providers to charging 90% provides an incentive to redeploy the worker if possible to recover overheads. It also provides an incentive for the provider to work with participants to reduce the volume of cancellations to the extent possible. If the worker can be redeployed by the provider, the provider should not charge the cancelling participant.

For other cancellations, where the participant has provided notice of cancellation prior to 3pm the day before the scheduled service, no cancellation fee should be able to be charged against a participant's plan. This is because providers are not obligated under the SCHADS award to pay full-time and part-time employees for a cancelled shift if notification is provided prior to 5pm the day before the scheduled service.

Additionally, the NDIA should introduce a new core support line item in the Price Guide for short-notice cancellations. This will allow the NDIA to monitor the volume of short-notice cancellations for two purposes. The first purpose is to provide better information on which participant cohorts have a defensible and higher risk of cancellations from their condition, for

[66] The terms of each provider's cancellation policy should be clearly laid out in the service agreement between the provider and the participant.

example a high risk of hospitalisation. The Scheme Actuary already factors in a level of cancellations into plan packages, but a line item would provide better information and may allow for a reduction in planned cancellations for certain cohorts of participants. The second purpose is that data on cancellations will allow the NDIA to detect anomalies in the volume of cancellations, and work with providers and participants to reduce the level of cancellations as appropriate.

The NDIA should also introduce a policy that above a specific threshold, providers will not be able to charge for short-notice cancellations unless they submit a report to the NDIA outlining the circumstances of each above-threshold cancellation, and actions taken to work with participants to minimise the risk of their short-notice cancellations. This threshold could be defined by the number of short-notice cancellations per participant per provider, or the percentage of short notice cancellations per participant per provider. The NDIA should consult with experienced practitioners in the disability sector to determine what a reasonable threshold should be.

Implications

This revised policy minimises the financial loss incurred by providers on short-notice cancellations and recognises that while providers should work with participants to minimise short notice cancellations, providers should also not bear financial risk for these incidents. It also incentivises positive behaviour by all actors in the market: participants are incentivised to give sufficient notice, while providers are incentivised to work with participants and implement processes to minimise risk of cancellations.

It is not expected that this change in policy will have an adverse impact on participant outcomes or Scheme costs. In most cases, the cost of cancellations will be absorbed by participants' budgets. If the nature of a participant's disability makes him or her more susceptible to cancellations, then the participant's budget should be increased accordingly. It is expected this will be a small proportion of participants.

4.6.3.3 Group pricing for attendant care

Issues and evidence

The NDIS has separate pricing schedules in place for the delivery of group-based community, social and recreational activities; and centre-based group care.

The current price schedule for group-based community, social and recreational activities assumes the price per participant is inversely proportionate to the number of participants in a group. The price per participant for a group of 1 support worker to 2 participants (1:2 care ratio) is half the price of a 1:1 care ratio. The price per participant for a group of 1 support worker to 3 participants (1:3 care ratio) is one third price of a 1:1 care ratio. For example, using the current price for attendant care of $44.72/hr[67], a provider will receive the same total of $44.72 whether a support worker delivers one hour of care to one participant, or a group of two or three participants.

[67] NDIA: 2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017), p. 29

Some providers believe the pricing of group care in the community does not consider the incremental fixed costs they incur when an additional participant is added to a care setting. These fixed costs include overhead costs for scheduling and invoicing, and the costs associated with completing case notes or outcome journals for a participant. Providers believe that in a 1:1 care setting it is possible to complete case notes during a consultation, however in group sessions this is difficult as there are greater demands on a support workers time due to the increased number of participants they are caring for. Some providers also believe that delivering care in a group setting requires a more highly skilled worker, because they need the skills and experience to manage multiple participants at the same time. For group-based community, social and recreational activities, it is possible to charge a high intensity rate when serving participants with complex needs. However, some providers believe that even for participants without complex needs, a higher skilled worker is required for group settings.

Providers that deliver care to large group sizes believe the Price Guide should include prices for groups larger than 3 participants to 1 support worker. The Price Guide displays prices for groups of up to 3 participants per support worker, but there are no prices indicated for groups of 4 or 5 participants per support worker. Some providers told the IPR team that because they do not believe the prices for group supports are correct, they stopped delivering care to small groups and only deliver care to groups of 4 or 5 participants, and charge them the price for a group size of 3 participants to 1 support worker. This results in their receiving more than $44.72 per hour as each of the 4 or 5 participants pays one third of the hourly rate. The NDIA is aware of this practice by providers, and is allowing it to take place because there is no policy that mandates providers need to charge a price below the 1:3 rate for groups with more than 3 participants.

The pricing schedule for centre-based group care is different to the pricing schedule for group care in the community, and some providers delivering centre-based group care believe it is difficult for them to operate with a surplus at the current price cap. The Price Guide has a flat hourly rate for centre based group care, and providers are not able to vary the price paid per participant based on the number of participants in a group, or to reflect the cost of a higher skilled support worker when they are caring for participants with complex needs (see Section 4.3.2). Some providers also believe the price does not consider the incremental fixed costs incurred when an additional participant is added to a care setting, as discussed for group based community, social and recreational activities, as well as the costs of operating a facility, and the capital providers have invested to make the facilities fit-for-purpose for participants, such as investment in modifications.

Some providers also raised the issue of cancellations impacting their ability to operate with a surplus. When a single participant in a group cancels, it is not possible for a provider to charge a higher rate to the other participants in a group to compensate for the difference in revenue. This results in the provider receiving less revenue than was expected if they delivered the support to the remaining participants in the group.

Recommendations

16: The NDIA should implement a new pricing schedule for group care (both community based and centre based) outlined in Table 4 that allows providers to recover additional costs incurred for groups, while still retaining the incentives and efficiencies of group based care. It should also assess whether a capital allowance should be provided for centre based care based on whether there is demand to increase the number of centres.

The price schedule of group based community, social and recreational activities should reflect the additional overhead costs for scheduling and invoicing, the additional administrative time required to write case notes/populate outcome journals, and consider an allowance for a higher skilled or experienced worker if it is determined to be appropriate for participants without complex needs. The price schedule should maintain high intensity loadings which can be applied above the standard rate for participants with complex needs. Section 4.3.1 includes a discussion on price loadings for participants with complex needs. This recommendation is not designed to encourage a participant to lead a life with a high intensity of support. Rather, it is expected that as the Scheme matures and evidence develops, providers and the NDIA will be able to assess which interventions are most effective in supporting participants with complex behaviours and needs to achieve improved outcomes and, in some cases, no longer require high intensity support.

TABLE 4 shows a comparison of the current price per participant without complex needs for 1:2, 1:3, and 1:4 care ratios compared to price ranges calculated using assumptions for the incremental fixed costs discussed above. Using data from a small sample of providers for the share of overheads scheduling and invoicing account for (10-20%), the amount of time spent per participant writing notes (3-5 mins/hr), and the SCHADS level of support workers for group care ratios (Level 2.3-3.1). The NDIA should conduct further work to refine the cost driver assumptions used to develop the new group prices. Once the assumptions have been refined by the NDIA, it can create a pricing schedule for group sizes larger than 1 support worker to 3 participants, up to a level deemed to be appropriate for a single support worker to be able to manage. This pricing schedule should be included in the Price Guide. TABLE 4 indicates prices for group based community, social and recreational activities for groups of up to 4 participants per support worker.

To support centre based group care, the NDIA should remove the flat pricing schedule that currently exists and adopt the same approach proposed for group based community, social and recreational activities. It should also assess whether a capital allowance is required based on whether there is demand to increase the number of centres. This should involve an assessment of the future demand for these services relative to the current supply.

TABLE 4: EXAMPLE OF PRICING SCHEDULE FOR GROUP BASED COMMUNITY, SOCIAL, AND RECREATIONAL ACTIVITIES

Care ratio	Current price per participant	Price per participant (without complex needs) including incremental fixed costs
1 staff – 1 participant	$44.72/hr	$44.72/hr
1 staff – 2 participants	$22.36/hr	$25.04/hr - $29.07/hr
1 staff – 3 participants	$14.91/hr	$16.76/hr - $19.68/hr
1 staff – 4 participants	No price - providers use $14.91/hr	$12.97/hr - $15.20/hr

Care ratio	Current price per participant	Price per participant (without complex needs) including incremental fixed costs
1 staff – 5+ participants	No price - providers use $14.91/hr	NDIA to determine the largest group size they will set prices for.

Implications

Increasing the price of group based care to reflect the incremental costs of service delivery could result in more supply of group care entering the market. This could be beneficial to participants, particularly for those with higher needs that cannot be cared for in large group sizes. By giving participants greater opportunity to access group care, they could choose to spend more of their budget on group care rather than 1:1 care, giving them more funds to utilise on other supports.

Once the NDIA has finalised a new pricing schedule for group care, they will need to ensure providers adopt the new prices and discontinue the current practice of charging the price of 1 staff to 3 participants for groups of 4 or more. The NDIA should consider including audits of group care delivery in their existing provider audit process to help enforce the use of the updated pricing schedule.

4.6.4 Therapy supports

The NDIA recognises therapeutic supports may be necessary for many participants to help build capacity to participate in the broader community. For example, for young participants (0-6 years), early intervention in the form of medical and disability therapy supports may help build their capacity to become more independent.

In therapy supports, participants, providers and other stakeholders identified an opportunity to differentiate pricing for different types of services to better match market rates for services, and enable the NDIS to provide better value for money to participants. This was supported by the IPR's benchmarking with other comparable schemes described in Section 3.3.2 above. Some providers delivering specialised therapy, for example clinical psychology, believe the price is not adequate for their participants. Other providers also raised the issue that the current description for therapy assistants does not reflect the activities undertaken, and that the price is not adequate to recover their costs, which leads them to serve participants with qualified therapists when the support could have been delivered by a therapy assistant at a lower price. Providers also raised issues relating to travel and cancellation policies, and NDIA-required report writing.

This section provides recommendations and rationale for:

- 4.6.4.1 Differentiated pricing for therapy supports delivered by a qualified therapist
- 4.6.4.2 Pricing for therapy supports delivered by therapy assistants
- 4.6.4.3 Travel policy
- 4.6.4.4 Cancellation policy
- 4.6.4.5 NDIA-required report writing

4.6.4.1 Differentiated pricing for therapy supports delivered by a qualified therapist

Issues and evidence

Providers, participant bodies, and other stakeholders raised issues associated with the single price of therapy. Some providers consider that the current price is more than adequate for many therapy supports, but where more complex therapy is required, for example complex psychological therapy delivered by a clinical psychologist, the price is not adequate. Participant bodies and other stakeholders have raised issues about the single price being too high where standard therapy is required. For example, for a typical physiotherapy consultation, participants are being charged a price higher price than the market rate for the service.

While the NDIA has a single price for therapy supports, other comparable insurance schemes in Australia have differentiated pricing. Examples include the TAC, WorkSafe, Department of Veterans Affairs (DVA), and NSW State Insurance Regulatory Authority (SIRA). Section 3.3, *Benchmarking with comparable schemes*, indicates that there is opportunity to differentiate the price of therapy supports based on the type of therapy being delivered, and level of service a participant requires to meet their needs.

Recommendation

17: The NDIA should develop differentiated price levels for physical therapy and psychological therapy based on price levels being paid in comparable schemes.

Physical therapy should be differentiated across three levels of care, and psychological therapy across two levels of care (TABLE 5 and TABLE 6).

TABLE 5: RECOMMENDED PRICES FOR PHYSICAL THERAPY SUPPORTS

Level of support	Proposed price ($/hr)	Description
Level 1	$110 - $120	The delivery of therapy for a single physical condition (which can result in multiple symptoms) in a low risk environment. An example is occupational therapy to develop the balance of a child with low level cerebral palsy that has a low level of severity on the Gross Motor Function Classification System (GMFCS).
Level 2	$140 - $150	The delivery of therapy for multiple physical conditions where treatment of one condition does not affect symptoms from another condition e.g. occupational therapy for a child with a middle level of severity on the GMFCS that results in multiple physical conditions; can also include treatment of a single physical condition if a participant also has mild-moderate behaviours of concern.
Level 3	$180 - $190	The delivery of therapy to participants with extreme presentations, e.g. occupational therapy for a child with cerebral palsy that has a high level of severity on the GMFCS, that results in physical conditions such as convulsions or spasms or swallowing difficulty such as dysphagia; can also include a combination of physical disabilities and severe behaviours of concern.

TABLE 6: RECOMMENDED PRICES FOR PSYCHOLOGICAL THERAPY SUPPORTS

Level of support	Proposed price ($/hr)	Description
Level 1	$160 - $170	The delivery of therapy focused on treatment of a psychological disability in a low risk environment. Typically administered by a registered psychologist.
Level 2	$210 - $220	The delivery of therapy focused on the treatment of a complex psychological disability where a very skilled and experienced clinical professional is necessary. Often necessary where a participant poses a high risk to themselves or others due to their disability. Typically administered by a clinical psychologist.

For each level of care in physical therapy and psychological therapy, the NDIA will need to define the characteristics of the type of therapy support a participant should expect to receive, and a provider should expect to deliver. The NDIA should work with therapy providers and the broader therapy market to develop these characteristics.

Implications

Providers of Level 1 and 2 therapy will have price caps lower than the current NDIA price cap. Providers of Level 3 therapy will be able to charge prices higher than the existing price cap for participants that require a high level of support due to their disability. When using the increased prices, providers will need to justify that the higher level of service is necessary to serve a participant. The NDIA will need to reflect the changes to therapy prices in the packages developed for participants. These changes should consider a participant's physical and psychological conditions, and reflect their likelihood to need a higher proportion of one level of therapy compared to another.

4.6.4.2 Differentiated pricing for therapy supports delivered by a therapy assistant

Issues and evidence

The current Price Guide describes therapy assistants as *'Program to empower participants & improve interactions between participants & their social networks. Assistance to engage effectively in the community through a group approach to help achieve goals, gain insight into their lives & make informed decisions*' and prices these supports at $41.71/hr[68]. Consultation with providers suggests that this description does not accurately reflect the role of therapy assistants, and that the price for a therapy assistant should be at least the same as the price of attendant care because therapy assistants, at a minimum, require the same level of skill as a standard level support worker. They believe the price of a therapy assistant should reflect the cost of a higher skilled support worker due to the increased difficulty of the support being delivered.

Providers believe they can utilise therapy assistant in two ways. The first is to have a therapy assistant to help deliver therapy supports, for example to help deliver hydrotherapy by

[68] NDIA: 2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017), p. 61

supporting a participant to stand in the water, while a physical therapist instructs a consultation. The second is in situations where a consultation could be delivered independently and in full by a therapy assistant with adequate qualifications (such as an exercise scientist). This might occur in the case of a physical therapy consultation where a treatment schedule has been developed by a physiotherapist with input from an exercise scientist, but can be delivered independently by the exercise scientist. The Price Guide does not currently allow for these two types of roles, and as a result there are examples of providers serving participants with physiotherapists at $175.57/hr[69] when an exercise scientist could be delivering the consultation at a much lower rate.

Recommendations

18: The NDIA should amend the description for therapy assistants and introduce two tiers of prices for therapy assistants – one that is comparable to the attendant care price, and a second that is for the delivery of therapy supports by a professional with a lower level of skill than a qualified therapist.

A Level 1 therapy assistant could support the delivery of therapy services and be priced in the range of $44.72-$49.20/hr. The activities performed by this type of therapy assistant is comparable to those performed by a disability support worker, but with a focus on capacity building. The relevant benchmark is therefore the attendant care price, and this is consistent with the price set by other similar schemes such as the Transport Accident Commission (TAC). The low end of the price range reflects the current price of attendant care, and the high of the range reflects the price proposed for a highly skilled support worker delivering care to a participant with very complex needs. This is the current price of attendant care plus an additional 10% price loading, and should be the absolute upper bound of the price of a Level 1 therapy assistant. This price is aligned with external benchmarks for a Level 1 therapy assistant. The TAC prices Allied Health Assistants at $37.04/hr and prices therapy supports for Independently Reviewed against Quality Standards (IRQS) Providers at $46.73/hr.

A Level 2 therapy assistant should deliver therapy supports where a qualified therapist has developed a treatment plan with input from an exercise scientist, and a consultation can be delivered by a qualified professional that is not a qualified therapist. This could be an employee with a qualification in exercise science or human movement that has the skill and knowledge to deliver a treatment plan they have helped develop at a high level of quality. The price of a Level 2 therapy assistant should be above the price of a Level 1 therapy assistant ($44.72-$49.20/hr) and below the proposed price of Level 1 physical therapy ($110-$120/hr). The market for the delivery of some therapy supports by professionals such as exercise scientists is new and growing, therefore data on pricing is limited. Discussions with some therapy providers and an observation of a small sample of private market rates suggest the price of a Level 2 therapy assistant should be between $70-90/hr, however the NDIA should conduct further analyses to refine and validate the price, and verify the relevant benchmark.

[69] NDIA: 2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017), p. 61

Implications

Increasing the price of a standard therapy assistant to be comparable to the price of attendant care will allow providers to recover the costs of employing workers with the same level of skill as a support worker. Introducing a second tier to the therapy assistant price could allow participants to receive some therapy supports at a lower price when the support is not required to be delivered by a qualified therapist, and can be delivered with a high level of quality by a professional with a lower skill level. This could represent value for money for some participants, as they could utilise Level 2 therapy assistants where they were previously seeing a qualified therapist, and redirect the funds they save to other supports.

4.6.4.3 Travel policy for therapy supports

Issues and evidence

Many providers believe the $1000 travel cap for therapy supports and the approach defined by the NDIA to calculate travel costs are appropriate for participants that are located close to a therapist or do not require frequent support. However, when a participant requires a provider to travel a reasonable distance on a frequent basis, the therapy travel policies can make it difficult for some providers to profitably serve participants, even in a metropolitan area.

For attendant care supports, there is no monetary cap on the amount a provider can charge a participant for travel. It is a different case for therapy as a $1000 per annum cap exists, and in situations where a moderate amount of travel is required, the therapy travel cap can run out quickly, as it equates to less than 6 hours of travel that a provider can charge over a year at the current therapy price cap of $175.57/hr[70].

Separating therapy support funding from therapy travel has positive and negative consequences. Placing a limit on the amount a therapist can charge for travel incentivises participants to receive supports from providers where less travel is needed to reach them. However, there are examples of providers ceasing to serve participants that have funds remaining in their plans for therapy supports, because they have exhausted the $1000 allowance that providers can charge for travel.

The policy providers are required to follow to charge for travel is also making it difficult for providers, as the calculation does not allow providers to charge for the first 10km of travel. Beyond 10km providers can charge up to the hourly rate of therapy supports based on the distance travelled, with the assumption being that the average speed of travel is always 60km/hr. For core supports such as attendant care, providers can charge the first 20 minutes of travel between participants (excluding travel to the first participant).

An effective travel policy should encourage participants to find services that require less travel where adequate supply is available, and discourage providers from serving participants where more travel is required if there are closer options available. The policy should also acknowledge that there are situations where travel is necessary, and allow providers to be

[70] NDIA: 2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017), p. 61

remunerated for a reasonable amount of travel. However, the policy should only apply where the participant cannot travel to the provider.

Recommendations

19: The NDIA should align the travel policy for therapy supports to the travel policy for attendant care by removing the $1000 travel cap, allowing providers to charge up to 20 minutes at the hourly rate when travelling between participants.

The travel policy for therapy should be consistent with the travel policy for attendant care, where there is no travel cap or separate travel allowance, and a provider can charge the first 20 minutes of travel between participants. The policy should also follow the approach suggested in Section 4.2.2, where providers serving participants located in rural areas (MM 4 and MM 5) can charge up to 45 minutes at the hourly rate when travelling between participants.

Implications

The NDIA will need to communicate with participants receiving therapy supports in-home that they will no longer have a separate budget for provider travel, and that a provider will be able to charge travel against their combined therapy budget with no maximum set by the NDIA. Participants will need to take this into consideration when they select a provider. If the preference of the participant is to receive supports from a therapist located far from their home they may receive less supports, as the provider will be able to charge up to 20 minutes in a metro area (45 minutes in rural areas) each time they travel to the participant.

The NDIA will need to communicate with providers that there are limitations on the amount of travel time they can be reimbursed for each time they visit a participant. If a provider chooses to serve a participant located outside of the area they can service based on the time caps set for metro and rural areas, they will not be reimbursed for the incremental travel time.

4.6.4.4 Cancellation policy for therapy supports

Issues and evidence

The therapy cancellation policy limits the number of hours a provider can charge to a maximum of 2 cancelled hours per year, compared to a maximum of 8 booking cancellations per year for core support items including Assistance with self-care activities and Assistance to access community, social/recreational activities. Providers believe 2 hours is insufficient as many participants cancel more than 2 hours of services per year. For example, participants with health-related needs may cancel due to hospitalisation due to their condition, and participants with behaviours of concern may cancel due to sudden escalations of behaviour. Currently providers are often required to absorb the cost of cancellations over 2 hours, even where they are short-notice, as it is typically very difficult to substitute in another patient on short notice, especially when services are delivered in-home.

Recommendations

20: The cancellation policy for therapy should be amended so that up to a certain threshold, providers can charge against a participant's plan for up to 90% of the scheduled service if the participant makes a short notice cancellation. A cancellation line item should be created as a governance mechanism for the NDIA.

The cancellation policy for therapy should follow the same approach as that suggested for attendant care (see Section 4.6.3.2). A short notice cancellation should be defined as occurring where a participant provides notice of cancellation after 3pm the day before the scheduled service. A cancellation line item should be introduced in the Price Guide to enable the NDIA to monitor the volume of cancellation by providers, which will help build an understanding of participant cohorts with higher risks of cancellations, and help detect anomalies in the volume of cancellations. Providers should not charge a cancellation where they have been able to substitute another customer.

The NDIA also should introduce a policy that above a specific threshold, providers will not be able to charge for cancellations unless they submit a report to the NDIA outlining the circumstances of each above-threshold cancellation, and actions taken to work with participants to minimise the risk of their cancellations.

Implications

As discussed in Section 4.6.3.2 the proposed policy minimises the financial loss incurred by providers on short-notice cancellations and recognises that while providers should work with participants to minimise short notice cancellations, providers should also not bear the financial risk for this occurring.

4.6.4.5 NDIA-required reports for therapy supports

Issues and evidence

Some providers indicated they were confused about whether they could be reimbursed for the time they spend developing reports for participants. The NDIA has set the expectation that providers are required to develop progress reports for participants, the Price Guide states *'Therapists will be expected to provide progress reports to the participant and NDIS at agreed times'.*[71] Currently there are some therapy providers that believe they can be reimbursed for report writing, and charge the time against a participant's package. However, there are other providers that do not believe it is possible to charge a participant for report writing, and they are absorbing the cost of the time to develop a report.

There are two types of reports therapists typically write: end-of-session notes and progress reports. Therapists write end-of-session notes to capture what has taken place during an individual consultation. This is a standard activity and should be considered as being included in the hourly rate for the support. Therapists write progress reports upon request, often by a third party, where information is sought to understand how a participant's condition is

[71] NDIA: 2017/18 NDIS Price Guide VIC-NSW-QLD-TAS (version release date July 2017), p51

improving due to their therapy. This is not considered a standard activity and therefore should be reimbursed separately.

Comparable schemes such as SIRA, TAC, and Worksafe each reimburse providers for reports, and have discrete line items in their fee schedules for reports requested by the insurers. SIRA has a single line item for report writing, and TAC and Worksafe have multiple line items for the development of the initial treatment plan, and also for treatment reviews. For each of the schemes, they will only allow a provider to charge for the reports if they have been specifically requested by an agent within insurer.

To provide therapy supports in the NDIS there are two types of reports that a provider must deliver to help the NDIA track a participant's progress: 1) at the commencement of supports, the NDIA requires a report to be submitted including the assessment of a participant, their goals, and the care plan developed to achieve those goals; and 2) as a participant progresses through their care plan, the NDIA requires a therapist to submit one or more reports per year to the NDIS to communicate the progress a participant has made against their goals, including evidence of specific areas of improvement and outcomes that have been achieved. The progress reports also include recommendations from a therapist on what they believe a participant's new or revised goals should be based on their progress at the time, and a proposal for a new or revised care plan to support a participant to achieve those goals.

Recommendations

21: The NDIA should allow providers to charge participants for the time spent writing reports that are requested by the NDIA. A new line item should be introduced for tracking purposes.

The time that a therapist can charge does not include time spent at the end of a consultation writing notes, which is factored into the rate paid for the consultation. However, for additional reports mandated by the NDIA, providers should be allowed to charge for time spent developing these reports at the same rate as a regular consultation, as they are an essential part of the service being delivered to a participant. This should be communicated to the market to ensure there is consistent application across all therapy providers.

Implications

The impact on participants of allowing therapists to be reimbursed for the development of NDIA-required progress reports is expected to be small, as it should occur no more than once or twice a year. Adding a separate line item in the Price Guide for NDIA-required reports will allow the NDIA to track therapists that are charging participants for report writing, to make sure it is only occurring when they have requested a report to be written by a therapist.

4.7 PRICE DEREGULATION

The deregulation of NDIS prices offers some compelling advantages for providers and participants operating in a mature market. The effect of current NDIS price controls is that nearly all transactions take place at the specified price cap. Forcing the market to a single regulated price introduces the risk that the market will be undersupplied (if the price is too low), or that participants will not be able to achieve value for money (if the price is too high). In

a market like disability services, regulated prices also restrict the ability of providers to offer a range of different service types and thereby limit participants' ability to choose the best mix of quality and price that suits their needs for any service. Deregulation also has the benefit of reducing bureaucracy, making it easier for participants and providers to interact with the NDIS. However, price deregulation comes with risks if implemented in an underdeveloped market. In particular, it may result in providers charging higher prices and participants receiving less value for money.

To navigate this choice, the NDIA should collect more information to understand the likely impact of deregulation of prices, prepare participants and providers for deregulation, and undertake trial(s) before deregulating prices across large portions of the market.

This section covers the following topics:

- 4.7.1 Developing more information and insights on self-managed participants
- 4.7.2 Assessing and advancing participant and provider readiness for de-regulation
- 4.7.3 Conducting a deregulation trial

4.7.1 Developing more information and insights on self-managed participants

Issues and evidence

There is currently limited information to understand how the NDIS would operate if prices were deregulated. One source of possible insight is the experience of self-managed participants, who operate in a commercial environment that is broadly comparable to a deregulated market. These participants are allocated a budgeted plan through the same process as all other participants. However, the providers they choose and manage are not bound by the NDIA's price caps in providing support services to them[72]. This is therefore somewhat comparable to the experience of participants in a deregulated market.

According to the latest NDIA data, 18% of Scheme participants have at least partially self-managed plans[73]. Anecdotal evidence from participants who self-manage their supports suggests there are many benefits of self-managing, including much greater flexibility in how funds are used across support categories. However, further analysis is required to understand whether this experience is likely to be replicated across the Scheme as a result of broader price deregulation.

There is currently only partial data available on the experience of self-managed participants. Through auditing processes, the NDIA has the potential to gather data on how self-managed participants allocate funds within their budgeted plans. The NDIA also collects participant outcomes data which can be used to track the performance of self-managed participants against those of Agency-managed or plan-managed participants.

[72] Note: providers serving both self-managed and NDIA-managed participants typically charge both groups of participants at the price cap. Therefore, only a small part of the self-managed market is effectively operating as per a deregulated market.

[73] Source: Scheme Actuary

Recommendations

22: The NDIA should collect and analyse information on the experience of self-managed participants to help inform its assessment of price deregulation.

A better understanding of the outcomes of self-managed participants can help the NDIA understand the opportunities and challenges of potential price deregulation.

The NDIA should collect information on:

- The pricing of support services provided to self-managed participants, including prices relative to the rest of the Scheme, the distribution of prices within the market for self-managed participants, and the responsiveness of prices to competitive pressure.
- Outcomes for self-managed participants.
- The supply response to price changes for supports catering to self-managed participants.

This information can be gathered through existing sources, as well as through new initiatives. Data on outcomes of self-managed participants can be gathered by categorising responses to the Short-form Outcomes Framework survey. Comparing self-managed participants with Agency-managed participants may be affected by some sampling bias, as self-managed participants are likely to have better support structures around them, which could lead to better outcomes. Therefore, it will be more useful for the NDIA to compare changes within cohorts over time, rather than across cohorts.

Some general scheme data, such as utilisation rates, are also already being collected by the NDIA and could be monitored by the participant's type of support management. The NDIA is planning to collect more thorough data on which supports are being accessed by self-managed participants, and for what prices, as part of its assurance process for self-managed participants.

Implications

The NDIA will need to collate the information it has on self-managed participants from the Scheme Actuary, the Provider, Market and Sector Development team, and its quality and safeguards assurance processes.

The NDIA will also need to expand its data collection and analysis efforts in some instances, including amending the Short-form Outcomes Framework survey or other participant consultation as necessary. The NDIA should also include queries specific to self-managed participants in its regular consultation with providers, including through LACs, its annual request for submissions into the pricing process, and ad hoc consultations throughout each year.

4.7.2 Assessing and advancing participant and provider readiness

Issues and evidence

Deregulated markets will allow providers and participants to transact freely without being bound by price caps. The NDIS marketplace is yet to be guided by a clear set of pre-conditions which would need to be satisfied for such transactions to function effectively. Price

controls cannot be relinquished until the NDIA is satisfied that such pre-conditions have been articulated and satisfied.

A broad review of provider and participant capacity makes clear that it remains too early for the Scheme to pursue price deregulation across markets at this point in time. Most providers and participants have spent under a year in the Scheme, and the Scheme continues to grow rapidly from quarter to quarter. As such, there is little stable evidence to evaluate the performance and capabilities of participants and providers in the Scheme. Even in existing competitive and well-supplied markets like those for some forms of therapy, it is important to observe participant and provider behaviour over a longer timeframe.

The NDIA supports the capability development of participants and providers through various initiatives. This ranges from core elements of the NDIS such as LACs, through to the release of market information such as the Market Position Statements. Others, such as support coordinators or online marketplaces, also work to expand the capacity of participants and providers to locate and compare with each other.

Recommendations

23: The NDIA should collect information on and assess the readiness of participants and providers for price deregulation.

The NDIA can test the readiness of the market for price deregulation by considering the commercial and other characteristics required to operate in a deregulated market. Before deregulating a market, the following conditions should be met:

- Participants must first have a thorough awareness of their supports and prices in their market.
- Participants must have the ability to exercise choice and control by switching between providers as required. The development of the e-market would support this by giving participants greater information about alternative providers and greater transparency on the range of prices charged in the market.
- Providers must have the commercial capacity to make efficient pricing decisions.
- Providers must have the ability to provide sufficient supply to drive competition and moderate price fluctuations.

The required information can be collected through participant and provider consultation, analysis of existing market and NDIA data, and by collating NDIA experience from its network of LACs and regional offices. This assessment of the readiness of markets for deregulation should consider specific markets and not just the Scheme in aggregate. Different markets within the Scheme – be they geographic regions or various support types – will be ready for deregulation at different times. Deregulation should, therefore, not be considered as a single event to be rolled out across the Scheme, but rather as a process to be introduced to markets as they become sufficiently mature.

24: The NDIA should provide more comprehensive market data to support the development of provider and participant capacity.

The NDIA should make available more detailed market information on participants' demand for services, and the available supply of support services. In addition to market overviews

presented in its Market Position Statements, the NDIA can provide further evidence of what support services participants are demanding and accessing in each market – defined by support type and geographic region – and the state of supply in those markets. This could take the form of more detailed Market Position Statements, the Provider Finder, or e-markets (see Section 4.5). Market information can also be disseminated through the NDIA's existing LACs and regional office network, as well as through support coordinators. Information on where participants are located, their patterns of demand, and the current state of service provision in a given market are very relevant to providers making pricing or supply decisions. Ensuring that such market data is available will likely lead to increased competition in the market, and improve the readiness for price deregulation.

Implications

Ensuring timely access to detailed market data will promote participant outcomes in the short term. It will also support market development in the medium to long term, with the potential to accelerate readiness for price deregulation across markets.

4.7.3 Conducting a deregulation trial

Issues and evidence

It is essential that price deregulation begins with a trial, given the limited information currently available on how the disability support services market in Australia would operate in a deregulated pricing environment, as well as the lack of directly comparable markets elsewhere.

A trial will allow the NDIA to collect more detailed information on the impact of deregulation. This information can help the NDIA confirm its assessment of the readiness of markets for deregulation, and help refine the design choices to be made in implementing deregulation. A deregulation trial would involve the removal of price caps in a specified market, defined by support type or region.

Recommendations

25: The NDIA should pursue a trial of price deregulation in one market, once the preconditions for deregulation have been satisfied.

The market chosen for deregulation should have well-equipped participants and providers as identified in Section 4.7.2, as well as meet three additional criteria:

- The chosen market should have been active in the Scheme for at least 2 years. This will allow the NDIA to assess whether the information collected about that market reflects a stable state.
- The chosen market should be clearly defined and demarcated from the remainder of the Scheme. For geographies, this would mean that the defined area is aligned to other boundary definitions affecting how businesses operate (e.g. state borders, remoteness thresholds).
- The market should be one in which the NDIA is satisfied that it has monitoring capacity and a good understanding of Scheme and market performance to date.

Some therapy supports and well-defined geographical areas such as the ACT have been identified to the IPR team by providers and other Scheme stakeholders as potential candidates for deregulation. These do not yet appear to be ready for deregulation as the Scheme is still in its early stages and there is insufficient evidence that providers and participants have the capacity to navigate a deregulated market. The NDIA should monitor the progress of these and other markets against the above criteria to identify a suitable market for a deregulation trial.

The NDIA could consider transitioning toward the trial by replacing prescriptive price caps with suggested price ranges as a way of testing market capacity for price competition. To do this, a price guide for that market would identify two prices for a given support item, a lower price which is nominated as the suggested efficient price, and a higher price which acts as the price cap. Even though the current price is only a price cap for most support services, the great majority of providers charge at this price point, and there is no way to indicate an efficient price using a single price cap.

The introduction of deregulated pricing in a chosen trial market should be accompanied by enhanced safeguards and monitoring in that area. The NDIA should be able to identify risks of supply shortages or where providers are charging well above their cost to serve to the detriment of participants' ability to secure plan outcomes.

Implications

Designing and delivering a deregulation trial will require an investment of resources from the NDIA in the medium term. However, a well delivered deregulation trial will provide a lower risk way to test the proposed preconditions for deregulation of prices and ultimately, promote a more innovative and sustainable Scheme.

Appendix A: Differences in cost drivers between attendant care providers

Summary of key differences in cost drivers between attendant care providers

The following table summarises some differences in cost drivers between providers, and explains the significant variation in cost to serve between different attendant care providers.

TABLE 7:

Issue	Provider feedback
Labour costs	■ Some providers found it difficult to manage labour costs under the current price. This was particularly true for providers who had a mix of complex and standard intensity clients, and therefore had more qualified or mature workforces. For instance, for some providers, the average worker had a Cert IV qualification and was paid at SCHADS 2.3. By contrast providers who focus on participants at the lowest end of the complexity spectrum submitted it was neither necessary nor proportionate to pay a highly qualified worker to deliver attendant care; rather it was the support worker's mindset that was important. ■ Under the SCHADS Award, employers pay casual workers a 25% loading on the base salary of an FTE. The more expensive base wage of and fixed cost of onboarding and training a casual worker is offset by a various factors: first, casual workers have lower on-costs as they are not entitled to annual or sick leave; second, it is easier to manage the utilisation rates of casual workers; finally, anecdotal evidence suggests employers with heavily casualised workforces tend to pay lower base salaries. Depending on the difference in utilisation and base salary paid to casual workers vis a vis FTEs, casual workers can be either more or less expensive to hire.
Workforce utilisation	■ Factors that make workforce utilisation difficult to manage include: unchargeable time spent travelling to clients, particularly in regional and remote areas; the frequency of cancellations in the sector; and, the time required for care co-ordination (e.g. team meetings, debriefing) and reporting, particularly for behaviourally and medically complex participants. Utilisation is particularly challenging to manage in areas of lower population density and for providers with less casualised workforces. ■ Utilisation was significantly easier to manage for providers with highly casualised workforces, as staff are only rostered when there is known demand. However, because casual workers are paid a 25% loading under the SCHADs award (which is only partially offset by the lower on-costs associated with casual workers), whether a casual worker is more expensive to employ than a permanent employee depends on how well an employer can utilise its casual workers relative to its permanent workforce.
Supervision structures	■ Some providers had heavy supervision structures, reflecting the complex participants in their client mix. For instance, some providers have 2 layers of supervision consisting of a supervisor and a team leader. Providers who only serviced lower complexity participants with strong informal supports had minimal supervision in their operating models, rather relying on instant customer feedback to detect potential risks to service quality.
Corporate overheads	■ This was a key differentiating cost driver between providers. Traditional providers that had achieved relatively efficient overheads had typically invested in IT and had achieved a degree of scale. Online platform providers also leveraged

Issue	Provider feedback
	technology to minimise overhead costs, while sole traders incurred very low overhead costs.
Other issues	■ *Training:* While there are currently no legislative requirements for disability support workers to undergo specific trainings, some providers, particularly those with complex participants in their client mix, require their staff to complete a mandatory training as a matter of internal policy.[74]

74 Some of these trainings include: First Aid, Manual Handling, Corporate Induction, Medication and infection control; CPR; Epilepsy; Diabetes; Bowel care; Oxygen Training; Management of PEG feeding.

Appendix B: Summary of IPR recommendations

Below is a summary of the IPR team's recommendations, as well as an assessment of the potential impact of these recommendations on the NDIA's three aspirations. Cost estimates have been made on the best information available. Where information is incomplete due to immaturity of the Scheme, the IPR has made a number of assumptions, which has led to wide ranges in estimates. In the aggregate, the IPR team estimates that the recommendations made in this report will have a potential financial impact of ~$250-420m per annum over the next 12 to 24 months, but will alleviate some of the financial pressure currently placed on some providers, and will improve participant outcomes by addressing challenges that are impacting some providers' abilities to deliver quality services.

Beyond the next 24 months, the IPR team believe it is possible to implement the IPR recommendations and manage the Scheme so that it is financially sustainable and within the current budget estimates. Approximately 50% of the total cost implication of the IPR recommendations is temporary and will therefore not have an adverse impact on the Scheme's longer-term financial sustainability. Also, as the Scheme matures, the NDIA should be able to offset any financial impact of these recommendations by appropriately assessing their effectiveness and efficiency. For example, as evidence develops as to which interventions are most effective in reducing costs associated with complexity, it should be possible to reduce the number of complex participants and provider costs and prices. It should also be possible to encourage more local providers in rural and remote areas that will assist in reducing travel costs. There should also be some savings from introducing tiered therapy pricing.

EXHIBIT 9

Summary of recommendations (1/3)

Positive impact | Neutral/No impact
Potential minor negative impact | Potential significant negative impact
E.g. <$50m for Scheme sustainability | E.g. >$50m for Scheme sustainability
Short term = < 1 year | Medium term = 1-2 years | Long term = 3+ years
($Xm) = Value used by IPR team to calculate the total financial impact of recommendations if different from range provided by the Scheme Actuary

	Recommendation	Direct impact on NDIA aspirations: Participant outcomes	Direct impact on NDIA aspirations: Market development	Direct impact on NDIA aspirations: Scheme sustainability	Implications: Implementation timeframe
Price-setting process	1 Include a broader set of indicators of participant outcomes and market development in its price setting process, and clarify the methodology for making price setting decisions.				Short-term
	2 Continue to use an hourly rate approach, but trial outcomes-based pricing.				Medium-term
National vs regional pricing	3 In very remote/isolated areas, work with other community services and providers to support local workforce development to deliver services in the most efficient way possible. In regions with limited local supply, allow providers to quote on cost of delivering NDIS services in the short term to ensure supply.				Medium-term
	4 Clearly define rural areas and lift the travel allowance from 20 mins to 45 mins for providers serving a participant located in MM5 (or ARIA equivalent) and MM4 in the short term. Adjust plans to account for travel and track as a separate line item.			$26-75m[1]	Short-term
	5 Converge the two Price Guides and move toward a single national price guide by 2021.				Long-term
Comp-lexity	6 Develop a definition for complexity linked to the skills required to meet participant's needs, and use specialised planning resources to classify what skills are required, and which participants require higher skilled support workers.				Medium-term
	7 Add an additional tier to the high intensity loading to allow a provider to recover the cost of a support worker with a higher level of skill than can be procured with the current high intensity loading.			$100m – $140m[2]	Medium-term (require definition first)
	8 Develop a consistent process for participants with extreme behaviours of concern that acknowledges the specialised needs of the participant cohort, and the environment providers operate in. Providers serving this cohort should quote on the delivery of services to these participants, and also be allowed to deliver them all of the services they require to be adequately supported (i.e. all Support Coordination items).				Short-term
	9 Update the pricing structure for the core support item 'Group based activities in a centre' to allow providers to charge a high intensity loading where a more skilled worker is required to serve a participant, and set prices consistent with the care ratio required to serve a participant.				Short-term

1 $26m assumes 25% of participants in ARIA-outer regional get the additional loading and the impact of the loading is only 10% (i.e. 45 mins hr travel for every 6.75 hrs of care). $75m assumes 25% of participants in MM4 and MM5 receive a loading and the impact of the loading is 20%. If all participants in MM4 and MM5 received the additional loading (and impact was 20%), this would equate to a cost of $296m. The IPR does not believe this to be a likely scenario.
2 Based on 12% of participants qualifying for the complex level (a 6% loading) and 10% of participants qualifying for the very complex level (a 10% loading), with a margin of error of +/- $20m to account for uncertainty in data, and assuming all participant plans are adjusted to compensate for the change in policy

EXHIBIT 10

Summary of recommendations (2/3)

Positive impact | Neutral/No impact
Potential minor negative impact | Potential significant negative impact
E.g. <$50m for Scheme sustainability | E.g. >$50m for Scheme sustainability
Short term = < 1 year | Medium term = 1-2 years | Long term = 3+ years
($Xm) = Value used by IPR team to calculate the total financial impact of recommendations if different from range provided by the Scheme Actuary

	Recommendation	Direct impact on NDIA aspirations: Participant outcomes	Direct impact on NDIA aspirations: Market development	Direct impact on NDIA aspirations: Scheme sustainability	Implications: Implementation timeframe
STA	10 Continue to refine the assumptions for high intensity rates, active overnight, and capital allowances used to develop the new STA price schedule, to ensure they reflect the cost of service delivery				Short-term
Thin markets	11 Adopt a clear set of metrics to more comprehensively identify and respond to risks of thin markets emerging.				Short-term
	12 Invest in Scheme infrastructure such as an e-market tool, which would empower participants in thin or undersupplied markets to find suitable providers.				Medium-term
Relative provider efficiencies and ade-quacy of provider returns	13 Prioritise the implementation of measures to continue to improve the NDIA's portal, responsiveness and communication as part of the Participant and Provider Pathway Reviews.				Long-term
	14 Implement 'temporary support for overheads' (TSO) in the form of a temporary increase to the price cap for standard intensity attendant care. Government should offer business planning support for large providers that would otherwise exit and create the risk of supply shortages.			$130-190m[1]	Short-term
	15 Amend the cancellation policy so that up to a certain threshold, providers can charge against a participant's plan for up to 90% of the entire duration of the scheduled service if the participant makes a short notice cancellation. Above this threshold, providers will need to demonstrate they are actively working with participants to minimise the risk of cancellations in order to continue charging for cancellations.				Short-term
	16 Implement a new pricing schedule for group care (both community based and centre based) that allows providers to recover additional costs incurred for groups, while still retaining the incentives and efficiencies of group based care. Also assess whether a capital allowance should be provided for centre based care based on whether there is demand to increase the number of centres.				Short-term
	17 Develop differentiated price levels for physical therapy and psychological therapy based on price levels being paid in comparable schemes.				Short-term
	18 Amend the description for therapy assistants and introduce two tiers of prices for therapy assistants – one that is comparable to the attendant care price, and a second that is for the delivery of therapy supports by a professional with a lower level of skill than a qualified therapist.				Short-term

1 $130m assumes 2% TSO for the 12 months in FY18/19, $190m assumes 3% TSO for the 12 months in FY18/19. Assumes TSO is applied to attendant care supports only (excludes SIL).

EXHIBIT 11

Summary of recommendations (3/3)

Positive impact
Neutral/No impact
Potential minor negative impact
Potential significant negative impact
E.g. <$50m for Scheme sustainability
E.g. >$50m for Scheme sustainability
Short term = < 1 year
Medium term = 1-2 years
Long term = 3+ years
($Xm) = Value used by IPR team to calculate the total financial impact of recommendations if different from range provided by the Scheme Actuary

	Recommendation	Direct impact on NDIA aspirations			Implications
		Participant outcomes	Market development	Scheme sustainability	Implementation timeframe
Relative provider efficien-cies and ade-quacy of provider returns	19 Align the travel policy for therapy supports to the travel policy for attendant care by removing the $1000 travel cap, and allowing providers to charge up to 20 minutes at the hourly rate when travelling between participants.				Short-term
	20 Amend the cancellation policy for therapy so that up to a certain threshold, providers can charge against a participant's plan for up to 90% of the scheduled service if the participant makes a short notice cancellation. Create a cancellation line item as a governance mechanism for the NDIA				Short-term
	21 Allow providers to charge participants for the time spent writing reports that are requested by the NDIA. Introduce a new line item for tracking purposes.				Short-term
Price deregula-tion	22 Collect and analyse information on the experience of self-managed participants to help inform NDIA's assessment of deregulation.				Medium-term
	23 Collect information on and assess the readiness of all participants and providers for deregulation.				Medium-term
	24 Provide more comprehensive market data to support the development of provider and participant capacity				Medium-term
	25 Pursue a trial of price deregulation in one market, once the preconditions for deregulation have been satisfied				Medium-term

Appendix C: Variation in attendant care cost drivers across jurisdictions

EXHIBIT 12

SCHADS awards are broadly comparable across states and territories

STATE	Relevant Award (adjusted to 2016/17 per Equal Remuneration Order)	Hourly pay rate of full or part time worker at Level 2.3	Hourly pay rate of full or part time worker at Level 3.2
NSW	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Community Services Employee (State) Award [AN120505] (NSW)	$25.52 (Grade 1) $25.97 (Grade 2)	$28.21
ACT	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Social and Community Services (ACT) Award 2001 [AP808334]	$25.52	$27.68
Victoria	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Community Services – Victoria – Award 2000 [AP796561]	$25.52 (Youth or welfare worker) – $26.11 (Community development worker)	$27.35 (Youth or welfare worker) $27.59 (Social worker)
South Australia	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Community Services Award [AN150140] (SA)	$25.71	$27.68
Western Australia	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Community Services – Western Australia Award 2002 [AP815319]	$25.52	$27.35 – $27.68 (Depending on experience)
NT	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Community Services Industry – Community Services Workers – Northern Territory Award 2002 [AP817216]	$25.75	$27.76
Queensland	Social, Community, Home Care and Disability Services Industry Award 2010 [MA000100] and Social and Community Services (Queensland) Award 2001 [AP808848]	$25.52	$27.35

Source: Social, Community, Home Care and Disability Services Industry Award 2010, accessed in November 2017.

Labour costs make up 80% of the costs of attendant care services (which account for approximately 75% of NDIS expenditure)[75]. There is currently some variation in labour costs between states, but they are not correlated to the differences in prices between the Eastern Price Guide and Western Price Guide. For example, New South Wales and Victoria are covered by the same Price Guide but include Award provisions for Level 2.3 workers with slightly different pay rates. Similarly, the ACT and Western Australia have the same Award rate for Level 2.3 workers despite being covered by different Price Guides.

Analysis of other labour costs such as payroll tax, leave entitlements and workers compensation requirements does not show a consistent difference between the eastern states versus the western states. For example, the payroll tax rate in South Australia and Victoria (which are administered by different price guides) is similar at just under 5% annual rate and annual threshold of approximately $600,000. Meanwhile, the ACT and Western Australia are

administered by the same guide but the former has a payroll tax rate 1.35 percentage points higher and an annual threshold $1.15 million higher. Similarly, the qualifying period for long service leave is 15 years in Victoria and WA (again, there are different price guides), while it is 10 years in NSW which is regulated by the same price guide as Victoria. Finally, workers compensation premiums are higher in the ACT and Tasmania, while Western Australia has much lower premiums than South Australia. Non-labour components of cost such as utilities, rent, and cost of goods vary within states as much as they do vary between states.

Appendix D: Existing definitions of participant complexity within the NDIA

The NDIA currently uses three discrete approaches to categorise participants with complex needs through the pre-planning, planning, and plan implementation phases of the participant pathway. There is no relationship between any of the three approaches, and they are used in isolation. This means specific characteristics relating to a participant's level of need that surface during pre-planning or planning phases are not always used to inform whether they receive a high intensity loading during plan implementation.

During the pre-planning phase participants are segmented based on 'streaming factors' that are designed around workflow, to help the NDIA understand the amount of time required to keep a participant engaged in the participant pathway. These factors include behaviours of concern, involvement in multiple service systems (e.g. the justice system or Child Protection), and the level of informal supports. Participants are streamed into four categories – General, Supported, Intensive, and Super Intensive, with the greater the intensity the more time/effort required to be spent on participant.

As participants progress to the planning phase, they are assessed using a Disability Severity Indicator, which measures of the impact of the disability on the participant's day-to-day life, to determine their level of functional impairment. The level of functional impairment, together with to the participant's age and location, are used to determine the level of funding a participant receives. Participants are allocated a rating between 1-15 describing their level of functional impairment, as follows: 1-5 Low level of disability-high functional capacity; 6-10 Medium functional capacity; (11-15) High level of disability-low functional capacity.

Once a participant receives a plan and selects the providers to deliver their services, providers assess the participant based on a range of additional factors, such as disability type, budget, personal/family situation, to determine if they should be charged at a standard intensity rate or a high intensity rate. The Price Guide notes that a provider can charge a high intensity rate where a participant requires assistance from a support worker with additional qualifications or experience relevant to the participant's complex needs. High intensity rates can be considered when assistance is required to manage challenging behaviours, or when active support is required due to high medical support needs, such as unstable seizure activity or respiratory support.

Appendix E: Opportunities for attendant care providers to innovate

The IPR team has identified three broad areas where traditional providers of attendant care can innovate and drive efficiency, based on the information it received in provider consultation.

Going forward, the new benchmarking project should provide tailored and strategic information to providers to help them understand how their input costs benchmark against their peers, and where there are specific opportunities to drive efficiency. In the longer term, the aspiration of this benchmarking project is to link data collected on provider input costs, to information about service quality and participant outcomes. This will build a more wholistic picture of how the sector can drive better participant outcomes with greater efficiency.

A. Achieve efficiencies in corporate overheads

The significant variation in provider cost to serve from the sample of cost inputs submitted to the IPR team indicates that, there is significant opportunity for some providers to improve their corporate overhead efficiencies.

Medium to large providers should be investing in technology (for attendance, online booking, automation, rostering) to achieve efficiencies in indirect overheads, while smaller providers should consider using shared services.

B. Optimise staff mix and staff rostering

Workforce planning and support worker utilisation is critical under the NDIS now that providers are only for funded for units of direct client service. Providers are facing a heightened need to maximise the time staff spend performing-chargeable activities. In response, providers should improve their ability to predict demand for services, and use this information to optimise their workforce mix (e.g. full-time, part-time and casual workers) and workforce rostering.

The IPR team notes that predicting and optimising staff mix and staff rostering may be particularly difficult in the current NDIS context for a number of reasons: first, providers may not have the data and capability to analyse historical demand for services; second, even if providers had this data, the transition to full Scheme will means historical demand may not be the best predictor of future demand; finally, in rostering staff, providers of disability staff need to optimise for many variables (including participant needs, participant preferences, staff skill, staff available, staff preference, and staff geography) to ensure it can supply adequate and high quality services.

While these workforce utilisation challenges exist in many other industries, the relatively fragmented nature of disability care means many traditional providers do not have the financial capacity or the scale to justify investing in digital solutions that could assist providers improve workforce.

C. Segment service lines based on participant needs

Many providers currently maintain the same staff pool and supervision structures across all their participants. This is often driven by rostering, which is easier to do if all staff are

capable of serving the most complex participants the provider serves, that is they are trained to the highest common denominator.

Providers should identify participant segments and design customer-centric operating models to ensure staffing and supervision structures are commensurate with the participant segment's needs.

The level of staff qualification, training, experience, and supervision, and therefore the labour costs involved in delivering safe and high quality care varies significantly between participants at different points on the complexity spectrum: At the lowest end of the spectrum, soft skills rather than formal certifications are more important to delivering a high quality service; At the highest end of the spectrum, formal qualifications and experience are needed to deliver supports safely to medically and behaviourally complex participants. This was recognised by the Quality and Safeguarding Framework.

These changes will be easier to implement for smaller providers with defined customer segments and new entrants into the market who focus on specific customer segments. Large providers should also have sufficient scale in a geography to better design service models around different participant segments, although the challenge and time taken for transformation is not underestimated.

Glossary and Abbreviations

TABLE 8:

Abbreviation	Meaning
AMS	Aboriginal Medical Services
ARIA	Accessibility/Remoteness Index of Australia
Assistive Technology	Any device or system using a device that allows individuals to perform tasks that would otherwise be more difficult, unsafe or not possible. It does not include items for treatment, mainstream technology without modifications.
ATSI	Aboriginal and/or Torres Strait Islander
Attendant Care	Refers to all supports which are either assistance with daily living or assistance with social and community participation.
Award	Regulatory instrument which outlines the minimum pay rates and conditions of employment for a particular industry and/or occupation.
Board	The corporate governing board of the National Disability Insurance Agency
CALD	Culturally and linguistically diverse
CEO	Chief Executive Officer of the National Disability Insurance Agency
COAG	Council of Australian Governments
DIDO	Drive-in, drive-out; refers to services provided by non-local workforces who are required to drive to/from a separate town or region.
DVA	Department of Veterans Affairs
DSS, or 'the Department'	The Commonwealth Department of Social Services
Eastern Price Guide	*NDIS Price Guide Victoria, New South Wales, Queensland Tasmania* released by the NDIA, the latest of which is valid from 1 July 2017
EBA	Enterprise Bargaining Agreement
ECEI	Early Childhood Early Intervention [x]
NDIA Aspirations	The three external aspirations of the NDIA as identified in its *Corporate Plan 2016 – 2021*: better participant outcomes, a growing market with innovative supports ('market development'), and a financially sustainable scheme ('Scheme sustainability').
FIFO	Fly-in, fly-out; refers to services provided by non-local workforces who are required to fly to/from a separate town or region.
FTE	Full-time equivalent
Full Scheme	Refers to the fully implemented state of the NDIS, estimated to operate from 2020.
FY	Financial Year
IAC	Independent Advisory Council
ICT	Information and communication technology
IHPA	Independent Hospital Pricing Authority
IPR	Independent Pricing Review
IT	Information Technology

Abbreviation	Meaning
LAC	Local Area Coordinator
Modified Monash Model, including 'MM 4', 'MM 5' etc.	A geographical classification system predominantly used to estimate health workforce needs, based on the population size and proximity of each geographical region.
NDIA	National Disability Insurance Agency
NDIS	National Disability Insurance Scheme
NILS	National Institute of Labour Studies
Participant and Pathway Review	A review of the process by which participants are enrolled into and managed within the NDIS, finalised in late 2017.
Price cap or price level	The applicable maximum price that can be charged by a provider registered under the NDIS for a particular support service, as identified in the relevant Price guide.
Price guide	One or all of the Eastern price guide, Western price guide, *NDIS Price Guide Very Remote* or *NDIS Price Guide Remote*
Portal	A secure website that enables registered providers to transact online with the NDIA.
QSC	Quality and Safeguards Commission

Acknowledgements

NDS gratefully acknowledges the expert advice and guidance of Dr Ian Watson in the development of Workforce Wizard, and the innovative work of software company Mozzler.

This data for this report was collected in part through the NDS Disability Workforce Innovation Network project 2014-16 which took place with the assistance of funding provided by the Australian Government. NDS also recognises the significant contribution of the industry in embracing Workforce Wizard, helping shape it and making it the successful tool it is today.

About this report

This is the second edition of a twice yearly publication. It was prepared by Dr Ian Watson, Freelance Researcher and Caroline Alcorso, NDS. The next edition will be published in July 2018.

About National Disability Services

National Disability Services ('NDS') is the peak body for non-government disability services. Its purpose is to promote quality service provision and life opportunities for people with disability. NDS's Australia-wide membership includes more than 1000 non-government organisations, which support people with all forms of disability. NDS provides information and networking opportunities to its members and policy advice to state, territory and federal governments.

National Disability Services

Contents

Executive summary

The second edition of **Australian Disability Workforce Report** revisits the issues first identified in our mid-2017 edition. The richness of nine quarters of Workforce Wizard data covering between 35,000 and 38,000 people each quarter significantly deepens our understanding of front-line disability and allied health professional work.

The analysis presented confirms the distinctive character of the of the disability workforce: a majority female, mainly part-time group of workers, over two-fifths of whom are casually employed.

Trends and features that appear to be associated with the way the sector is responding and adapting to the National Disability Insurance Scheme are also becoming clearer as the rollout gathers pace.

Changes in support worker employment as the NDIS rolls out

Since 2015, casual work has been increasing slightly, and now accounts for 42 per cent of all workers. Most employment gains appear to be coming from casual employment growth. This trend is mainly driven by small and medium organisations, where casual employment at the end of 2017 formed close to half of their workforce.

Two potential downsides to this high casual employment, however, are revealed elsewhere in the data analysis. First is the very high turnover rate of casual workers – a two-year average of nearly 9% per quarter (equal to 35% per annum). This is a significant cost and administrative burden for providers. Second, detailed investigation of NDS carecareers job board data shows job applicants have a clear preference for permanent over casual roles. In the competition for talented people, offering casual jobs only or mainly is likely to be a liability.

Part-time work has also been growing; but unlike casual employment large organisations are also contributing to this tendency. It appears that both large and small/medium organisations are seeking to achieve flexibility in their staffing, but have chosen different strategies. Again, the NDS carecareers job board data offers useful insights. Most job applicants want part-time rather than full-time work, so this growth in the sector is partly driven by worker preferences.

Allied health professionals facing an uncertain environment

Allied health professional employment offers a stark contrast to that of disability support workers. Instead of being majority part-time, the allied health workforce is split almost evenly between people who work full and part time. Three-quarters are permanent workers. But around 16% of applied health professionals were employed as fixed term (on short term contracts) over the last two years and this rose to above 20% during some quarters.

Again, different strategies to minimise risk in an uncertain environment are being used with this young, mainly female professional workforce.

Spotlight topics of interest suggested by Workforce Wizard users

The two spotlight topics featured in this edition of **Australian Disability Workforce Report** are staff absences and industrial instrument coverage.

This is the first time we have reliable data on the use of personal and carers' leave in disability: well over ten days per year. The data is important to achieving fair prices since these figures run counter to the figures assumed by the NDIA.

The disability sector also has an above-average proportion of workers on enterprise agreements than the labour market average, although we know that many of these are due to be renegotiated.

Workforce Wizard and carecareers data continue to fill a major gap

Despite government's legitimate concern about the sector's capacity to scale up as quickly as NDIS participants need, no publicly funded workforce data collection process exists. ABS classifications continue to merge disability workers with other groups, making it impossible to obtain regular labour force analysis.

NDS thanks the many regular Workforce Wizard users whose quarterly data entries allow us to fill this pressing information gap.

1 Introduction

This is the second edition of the **Australian Disability Workforce Report**, an NDS publication that documents current trends in the disability workforce. The features of this workforce is a key question for the sustainability of the National Disability Insurance Scheme (NDIS), and the disability sector as a whole.

Disability's key workforce metrics are reported and discussed in this and every edition. A primary focus is how the workforce is changing (or not) with the introduction of the NDIS.

Australia's capacity to provide a workforce that is of sufficient quantity and quality to meet the increasing workload that the NDIS demands will be crucial to the success of the scheme.

Where does the data come from?

Since ABS labour force data is not classified in a way that allows us to pinpoint the disability workforce, the **Australian Disability Workforce Report** relies on data from NDS's purpose-built two-way workforce metrics application, Workforce Wizard.

Workforce Wizard (www.workforcewizard.com.au) is a free online tool into which disability service providers enter data quarterly. An important design element of Workforce Wizard is that it is short and simple, making it convenient for users. Once the data period closes, benchmark reports are quickly generated showing the organisation's workforce characteristics benchmarked against the sector.

Organisations enter data based on workforces of their own defining. For the purposes of this report, if an organisation entered data for more than one workforce, those workforces were consolidated into one organisational result. This is to avoid multiple counts of a single organisation with more than one (and sometimes duplicate) workforces. When the unit 'organisation' is used in this report, it needs to be understood that the real life organisation may have other streams of activity, such as aged care, plus other staff (eg back office staff) who are not included in our analysis.

The data sample used in this report is nine quarters of data entered up to the end of the September quarter in 2017. Roughly 35,000 to 38,000 disability support workers and allied health professionals data were entered each quarter, from across Australia. Considering the significant coverage of the sector that Workforce Wizard provides, aggregate results have been mainly used.

A longitudinal 'balanced panel' has also been created of organisations that have entered data across the seven consecutive quarters between March 2016 and September 2017. The longitudinal nature of this panel means the disability support worker results from each quarter are more truly comparable to each other, and can confirm trends.

There is no separate longitudinal analysis for the allied health workforce, as most participants of this sample are consistently engaged with Workforce Wizard and therefore constitute a longitudinal panel.

Data on jobseekers

The second major source of data used in this report comes from carecareers (www.carecareers.com.au). This is NDS's job board where employers advertise for disability sector and aged care staff. The data from this job board spans about five years, from the end of 2012 to the beginning of 2018, and is a rich source of information on what is happening in the disability job market. Around one million people use this site every year to find disability and aged care jobs.

A more detailed discussion of Workforce Wizard and carecareers data and our methodology can be found in the first edition of the **Australian Disability Workforce Report**, which can be found at www.nds.org.au/workforce-hub.

What's in this report

In the next three chapters, the Report presents data on the key metrics Workforce Wizard collects about disability support workers:

- types of employment
- organisation growth
- turnover rates
- working hours; and
- age and gender distribution.

Chapter Six analyses these same workforce trends among allied health workers.

Chapter Four reports on our newly introduced special topics, so-called Spotlight Topics, which shed light on important policy issues in the sector. These issues are generated by users and reflect their concerns and interests. One or two additional questions are asked each quarter about these subjects, on a one-off basis.

In this edition, the topics covered are:

- Number of staff absences
- Industrial instrument use in the organisation.

carecareers data analysed in Chapter Five concerns the number of views and applications made by jobseekers for each advertisement.

Throughout the report there are hyperlinks (in blue) to various other parts of the text, to all the figures, and to the tables in the appendix. These tables provide the data which sit behind all the figures. Clicking on these links will take you directly there, and clicking on the Back Button in your PDF Reader will take you back to where you were reading.

2 How are workers employed?

The disability workforce is quite distinctive. About 70% of disability support workers are women, compared to a figure of 46% in the wider Australian workforce.[1] Disability support workers are also slightly older than the Australian workforce: some 44% are aged 45 years or more. In the workforce more generally, the figure is 39%.

Over time, as the disability sector grows strongly, these features may change. More men and more younger workers may enter the sector. At present these features pose challenges that many services are overcoming as they broaden their recruitment targets. On the other hand, there are two areas where the characteristics of the sector pose considerable ongoing challenges. These arise around the forms of employment—whether workers are permanents or casuals—and the hours of work.[2] The disability sector is quite unique in both these areas and the steady growth of casual employment and the increased use of part-time hours raises important issues about the viability of the sector's workforce. Will the disability workforce of the future be a stable, highly-skilled and well-motivated workforce? Or will we see the emergence of pockets of heavily casualised and part-time work, where high turnover, low morale and inconsistent standards prevail?

It is still early days in the rollout of the NDIS, but the sector needs to be alert to developments in the disability workforce which may undermine the positive outcomes promised by the scheme. By focusing on changes in forms of employment and hours of work, NDS is drawing attention to issues that industry, government and service users need to solve collaboratively.

1. It is important to stress that this gender characteristic is shared by other community sector workers, such as carers and aides (the group which includes child-care aged-care workers) where the proportion is 85%.
2. See the discussion of these concepts in the Appendix, on page A1.

Overview

Most disability support workers are employed as permanent or casual workers. Very few are fixed-term workers.[3] In September 2017 the proportion of permanent workers in the disability workforce was 55%; the proportion of fixed-term workers was 3%; and the proportion of casual workers was 42%. Figure 1 shows these proportions in each of the quarters over last two years.

The largest group in the disability workforce are permanent workers ...

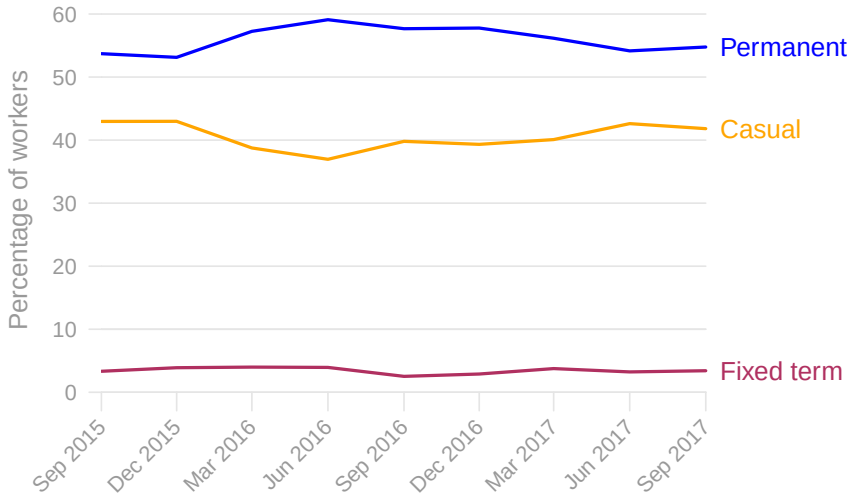

Figure 1: Forms of employment

Notes: Details in Table A10

The figures for September 2017 are close to the overall averages for this two-year period, though the permanent proportion is somewhat lower and the casual proportion somewhat higher, suggesting that the share of casual employment may be slowly increasing. The analysis of workforce growth (page 14 onward) does indeed suggest that casual employment is increasing in the sector.

... but casual workers make up two-fifths of the workforce, a share which has been increasing over the last 18 months

3. Permanents are employed with an expectation of on-going employment; fixed-term workers have a termination date in their contracts; and casuals have no expectation of any ongoing employment and can, in theory, be terminated at short notice.

Does organisational size make a difference?

While the overall trend towards increased casualisation is only slight, when we look more closely at the different organisational sizes in the disability sector, it becomes apparent that small and medium organisations are definitely engaging more casuals. This is shown in Figure 2. In both cases, the proportion of casuals among their disability support workers is now greater—or about to become greater—than the share of permanents. Only for large organisations is the gap between the share of casuals and permanents not closing.[4]

Permanent employment is increasingly the preserve of large organisations ...

In the September 2017 quarter the proportion of permanent disability support workers in large organisations was 57%, while the proportion of casuals was 40%. By contrast, in small organisations permanents made up just 44% and casuals had reached 47%, while in medium organisations the figures were 49% permanents to 48% casuals.

... and casual employment is becoming dominant in small and medium size organisations

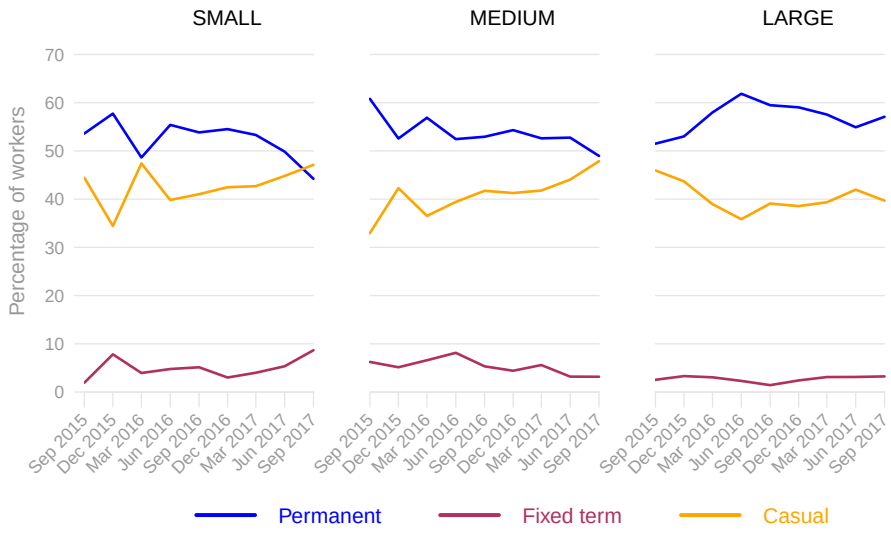

Figure 2: Forms of employment by size of organisations

Notes: Details in Table A11

4. We categorise organisational size on the basis of the number of disability support workers in the organisation: Small: less than 50 workers; Medium: 50 to 199 workers; and Large: 200 or more workers.

Is there a gender story?

There is also a striking pattern according to the gender of the workforce. We saw in the last chapter that women make up the majority of the workforce—averaging around 70 percent—so this makes it difficult to define organisations by their gender proportion. Nevertheless, by pooling the data from all quarters, we have a sufficient number of observations to define four categories based on the ratio of female to male staff, that is, the percentage of women within each organisation's workforce.[5]

By comparing the forms of employment across these four categories we find a distinctive result: organisations with higher female-to-male ratios have higher levels of casual employment and lower levels of permanent employment. Indeed, there is an almost linear relationship: as the proportion of women increase in organisations, so too does the proportion of casuals (see the red line in Figure 3.)

> As the proportion of women increase in organisations, so too does the proportion of casuals

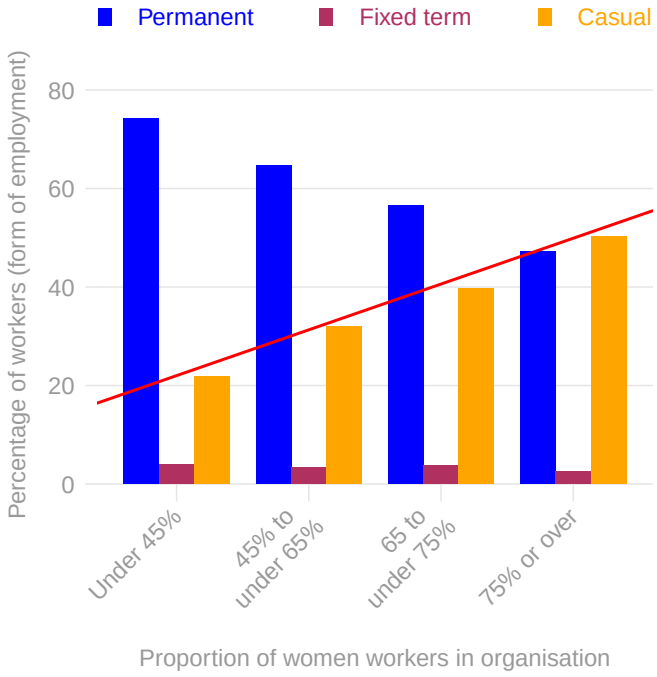

Figure 3: Forms of employment by the proportion of women employed

Notes: Note that data is pooled over all quarters. Details in Table A12.

In organisations which are clearly majority male—that is, where

> Permanent employment is dominant in organisations where there are a large majority of male workers

5. These categories are: Under 45% women; 45% to under 65% women; 65% to under 75% women; 75% or over women.

male workers make up 55% or more of the staff—the proportion of permanents in those organisations is 74% and the proportion of casuals is just 22%. By way of contrast, in organisations where women make up three quarters of the staff—only slightly above the overall average—we find almost equal proportions of permanents (47%) and casuals (50%).

The growth in the workforce

One of the most striking aspects of the disability workforce is the strong growth taking place. As the NDIS rollout proceeds, new organisations have arisen and existing organisations have expanded their staff to cope with the increased demand for services. During 2016 the Australian workforce as a whole increased by about 1.6% per year, but the workforce in the broader social assistance / personal assistance / residential care sectors grew much more strongly, by 9.5% per year.[6] In the case of the disability sector the growth, as measured by Workforce Wizard, has been even stronger: 11.1% per year (averaged over the two year period).

It is possible to examine workforce growth in the disability sector by analysing the numbers of workers who leave an organisation and the numbers who are recruited in each quarter. The difference between these is a measure of 'net change' in the workforce. These figures are collected by Workforce Wizard for permanent and casual staff, and an overview of these data are shown in Figure 4.

Employment losses come from permanent workers leaving ... and the gains come from increased recruitment of casuals

It appears that employment losses in the sector tend to come from permanent workers departing and that most of the employment gains are, in absolute terms, from increased employment of casuals. Given that casuals make up just under half of the disability support workforce one might expect that the net change would also reflect a similar ratio. Clearly, this is not the case, and the increased propensity for organisations to recruit more casuals is evident in Figure 4.

If we want to look at this in percentage terms, the permanent growth rate was 1.3% per year. The casual growth rate, on the other hand, was 26% per year.[7]

6. Figures from Australian Bureau of Statistics, *Characteristics of Employment*, 2016, Cat. No. 6333.0.
7. There is considerable quarterly variability in these percentages, so the figures given here are averaged over the two year period. A different approach to calculating growth rates, based on a balanced panel, is discussed below on page 18.

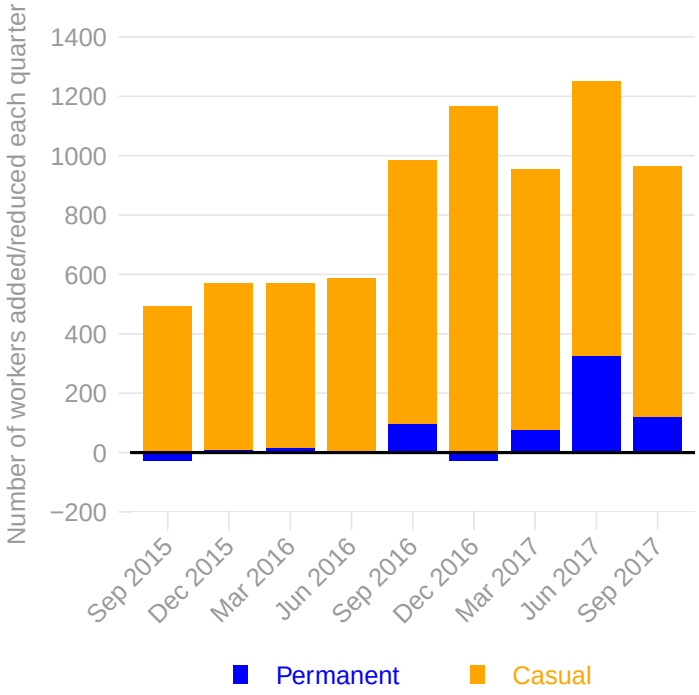

Figure 4:
Net change in permanent and casual staff

Notes: Details in Table A13

In large organisations permanent and casual employment are growing at the same rate ...

We saw earlier (page 12) that in both small and medium size organisations the proportion of casual staff was growing strongly, and becoming the dominant form of employment. For medium size organisations, this picture is confirmed in Figure 5, which shows the net change in permanent and casual staff across medium and large organisations (with trend lines shown in black). In large organisations the **ratio** between permanent and casual net changes in staff appears reasonably stable over time—both are growing together at the same rate.

... but in medium organisations casual employment is growing strongly while permanent employment is declining

By contrast, in medium size organisations, the net change in casual staff is growing rapidly, while the net change in permanent staff shows a downward trend.

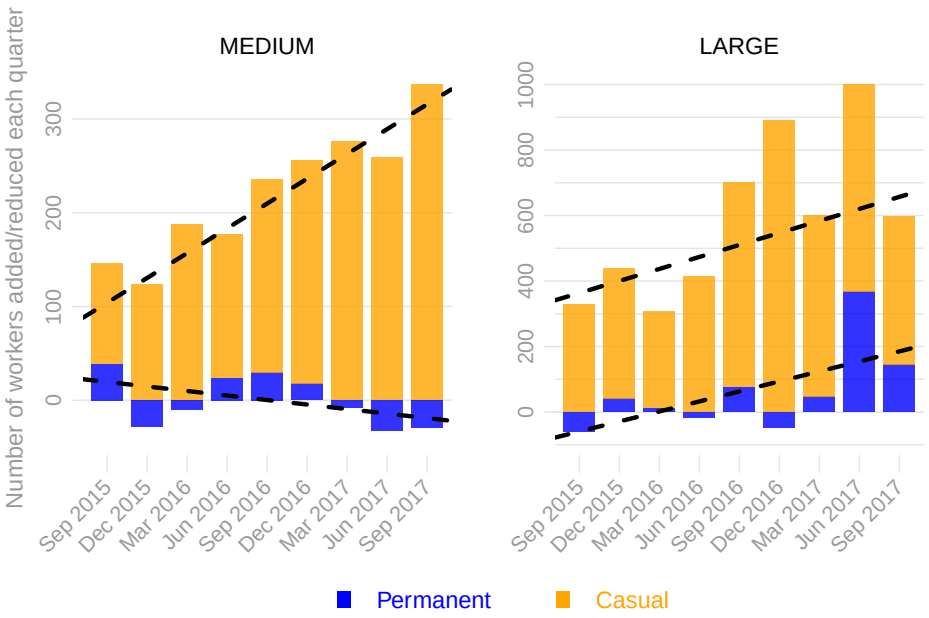

Figure 5:
Net change in permanent and casual staff, by organisational size

Notes: Details in Table A14

What do these changes mean? Essentially, over time a downward trend in the net change of permanent staff means that the sector is diluting its permanent workforce, and that in the long term the share of jobs in the sector held by casual workers will steadily increase. While large organisations are 'holding the line' and not contributing to this potential problem, the drivers of this transition lie in the medium size organisations.

Another perspective on these changes in employment entails categorising organisations by how their permanent and casual staffing profile changed during the quarter. We can define three categories: where a particular type of workforce is declining, where it is stable, and where it is increasing. (The definitions of these categories, and the detailed data for them, are shown in the appendix, see Table A17).

Looking first at the casual staffing profile, about 71% of organisations have had a stable casual workforce in each quarter. Only a small proportion of organisations—an average of 3%—had seen their casual workforce decline during the quarter. By contrast, 25% of all organisations experienced an increase in their casual workforce.

25% of all organisations experienced an increase in their casual workforce ...

... but the majority of organisations maintained a stable permanent workforce

In the case of permanent workers, about 85% of organisations had a largely stable workforce during the quarter. Another 7% of organisations had seen their permanent workforce decline. The remaining 8% of organisations had seen their permanent workforce increase. This organisational approach to the issue of forms of employments is important because it emphasises the **stability**, as well as the changes, in the sector.

As the sector grows rapidly, more of the increased recruitment of workers takes place through the creation of casual jobs

While the losses in employment which do take place are largely in permanent jobs—as we saw earlier—the magnitude of this is relatively small. The strong growth in casual employment may not represent a 'conversion' of permanent work into casual work. Rather, it suggests that as the sector grows rapidly, more of the increased recruitment of workers takes place through the creation of casual jobs.

Workforce turnover

Workforce turnover is an important measure of the amount of 'churn' in an organisation. High levels of labour turnover lead to instability, as experienced workers with good organisational knowledge depart and are replaced with less experienced workers. High labour turnover can signal problems with the organisation, such as low worker morale, or uncompetitive wages or working conditions. On the hand, turnover rates which are too low may leave an organisation without fresh ideas, and the organisations may suffer from routines which reflect old habits no longer suited to the organisation. For the clients, turnover which is too high disrupts continuity in their access to supports; turnover which is too low may leave them deprived of the new ideas which new recruits might bring.

About one quarter of the disability workforce changed jobs every year

The turnover rate is measured as the number of workers who leave an organisation during a quarter, expressed as a percentage of the average total number of workers for that quarter and the previous quarter. Thus the all-worker turnover rate, shown in Figure 6, was 6.5% in the September 2017 quarter; the permanent turnover rate was 4.9% and the casual turnover rate

was 8.6%. In annual terms, about one quarter of the disability workforce changed jobs every year.

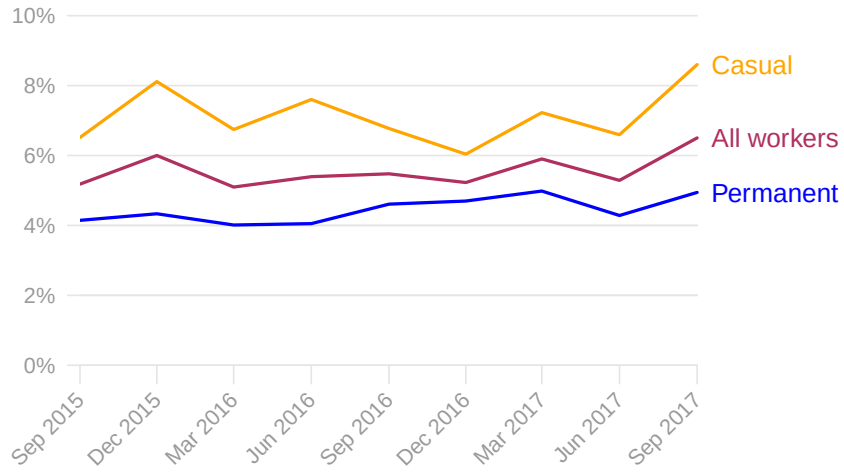

Figure 6: Quarterly turnover rates by forms of employment

Notes: Details in Table A18

The turnover rate for all workers averaged 5.6% per quarter over the last two years, so the 6.5% figure for September 2017 represents a small rise. The turnover rate for permanent workers has fluctuated between 4.1% per quarter and 5% per quarter over the last two years, and has averaged 4.4% per quarter for the period. In the case of casuals, the turnover rate has been even more erratic, ranging from a low of 6% per quarter through to a high of 8.6% per quarter, with the average for the last two years being 7.1% per quarter. The rate for the last quarter—at 8.6%—is above this longer-term average.

Casual workers have 1.6 times the turnover rate of permanent workers

In summary, the turnover rate for casuals has averaged about 1.6 times as high as the permanent rate over the last two years and appears to be increasing. This reinforces the observation made at the start of the chapter: organisations gain apparent flexibility by employing more casual staff but the cost is a greater increase in labour turnover in their workforce, and a consequent drop in the quality of the service provision for their clients.

Another look at growth in the workforce

The information provided by Workforce Wizard on departures and recruitment is valuable in looking at growth and turnover rates. There is, however, an issue around compositional change in the Workforce Wizard sample. As new organisations join the Workforce Wizard, and others drop out, the composition of the workforce

represented by all these organisations may change. To capture a more enduring picture of the workforce we can create what is called a 'balanced panel', a longitudinal sample made up of the same organisations.[8]

Using this balanced panel, we look at where the growth in the workforce came from with respect to forms of employment (see Table A15 for details). In overall terms, most quarters saw growth in numbers (with the exception of the March 2017 quarter) with the strongest growth taking place in the June and December quarters of 2016 (Figure 7).

We can also look at these data in terms of growth rates, that is, the percentage change in numbers in each quarter. Figure 8 shows that the quarterly growth rate for the permanent workforce is consistently lower than the growth rates for casuals (except for the last quarter). In annual terms, and averaging across all quarters, the growth rate for permanents was about 4% percent and for casuals it was 15.2%. The growth in the workforce overall was 8.4%.[9]

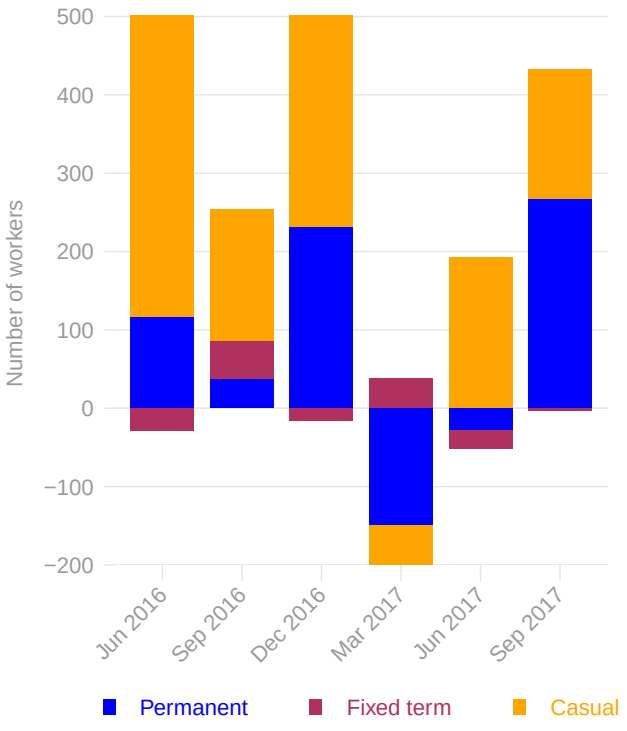

Figure 7: Growth in disability support workforce by forms of employment (counts)

Notes: Details in Table A15

8. In this case, we have selected only those organisations with complete data in Workforce Wizard for all of the seven previous quarters. While this reduces the size of the sample considerably, the numbers are still adequate for our analysis.
9. Growth rates for fixed-term workers are not shown because they are so erratic, based as they are on very small counts. The average growth rate across all quarters for fixed-term workers is 1.1%.

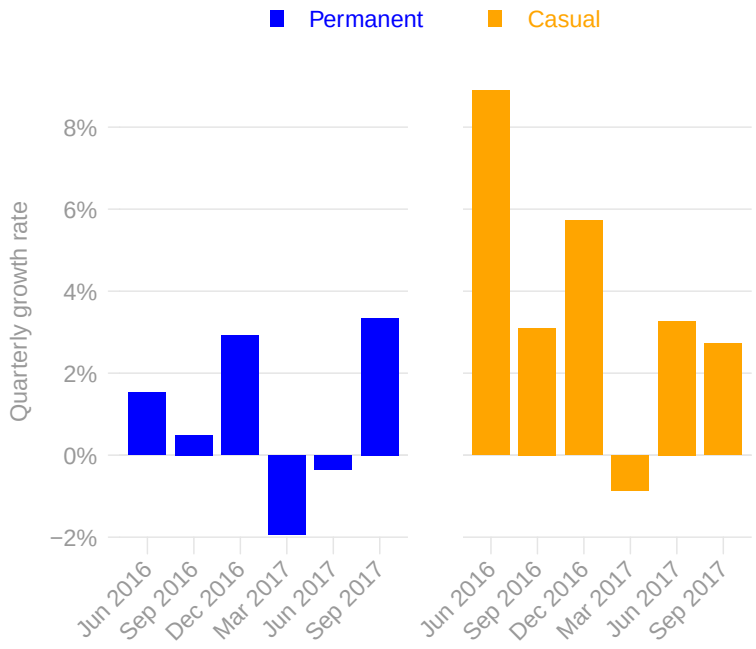

Figure 8: Growth in disability support workforce by forms of employment (quarterly growth rates)

Notes: Details in Table A16

Both these figures show that the majority of the growth in the sector's workforce was through the increased employment of casuals, with only the most recent quarter breaking from this pattern. This analysis confirms the overall picture shown earlier: that casual employment is overwhelmingly driving employment growth in the sector but that in the last quarter (September 2017) permanent employment fared much better. Additional quarters of Workforce Wizard will indicate if this is the beginning of a new trend.

Casual employment has driven employment growth ... but permanent employment has begun to fare better

How does the sector compare?

In 2016 the proportions of casuals, permanents and fixed-term workers in disability, compared with the labour market more generally were as follows:

Permanent: 58% (disability) to 67% (in general);
Casual: 40% (disability) to 23% (in general);
Fixed term: 3% (disability) to 10% (in general).

This comparison shows that casual employment in the disability sector is considerably higher than in the labour market more generally. At the same time, fixed-term employment is much lower.

Casual employment in disability is much higher than in the labour market more generally

If we look at the ABS category of ‘carers and aides’—which includes child care, aged care and disability—this difference in casualisation rates shrinks considerably: some 33% of carers are casuals. The full details of these comparisons can be found in the appendix (Table A6).

In summary, casual employment is much higher in the disability sector than in the Australian workforce more generally. But if we compare the sector to other similar sectors, then the comparison is less stark, though these higher casualisation rates are still exceptional.

3 What hours are worked by disability workers?

Overview

Flexibility in the hours of employment is important for both employers and workers. The former often need to manage varying demand for staff, while workers often need flexibility to juggle their work and non-work lives. In this chapter we look at the hours patterns in the permanent workforce: mainly the split between part-time (under 38 hours per week) and full-time (38 hours or more). We also look at the average hours worked each week.

The disability sector shares in what has been a national trend towards increased part-time work. Within the disability sector, part-time work is dominant and also increasing (see Figure 9). In the September 2017 quarter, the proportion of the permanent workforce who worked part-time was 81%. Full-time workers made up the remaining 19%.

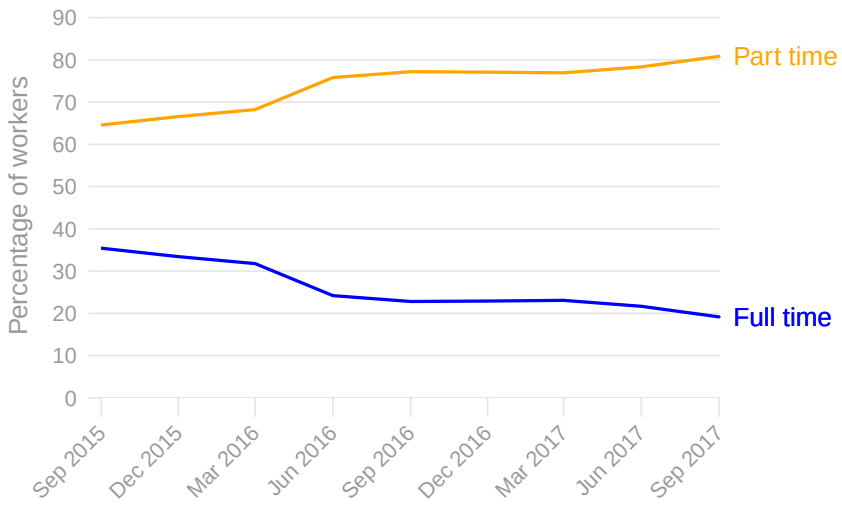

Figure 9: Full-time and part-time workers: overview (%)

Notes: Details in Table A19

Over the last two years part-time work has grown strongly among permanent disability support workers. In September 2015 part-time workers made up 65% of this workforce (with full-timers making up the remaining 35%). The part-time workforce (among permanent workers) has thus grown by 16 percentage points in just two years.

The permanent workforce is dominated by part-time work, and this is growing strongly

Does organisational size make a difference?

Over the last two years large organisations have been steadily increasing their part-time workforce. As Figure 10 on page 24 shows, at the start of the period part-timers made up 62% of their workers. By the end of the period the figure was 83%, an increase of 21 percentage points. From being behind small and medium organisations in their employment of part-timers back in 2015, by late 2017 large organisations now have the highest proportion of part-timers.

Large organisations have increased their part-time workforce ... and now have the highest proportion of part-time workers

In both small and medium organisations the proportion of part-timers has remained reasonably stable over the period (with more volatility in small organisations). By the end of the period medium organisations had slightly higher proportions of part-timers than did small organisations (74% to 68%).

Because the analysis discussed here applies to the **permanent** workforce, a number of inferences can be drawn. First, this high proportion of part-timers in large organisations is predominantly **permanent part-time**. Secondly, the slightly lower proportion of part-timers in small and medium organisations needs to be seen in the context of higher levels of casual workers in those organisations. In other words, both large and small/medium organisations have sought to achieve flexibility in their staffing, but have chosen different strategies.

Both large and small/medium organisations aim for workforce flexibility ... but have chosen different strategies

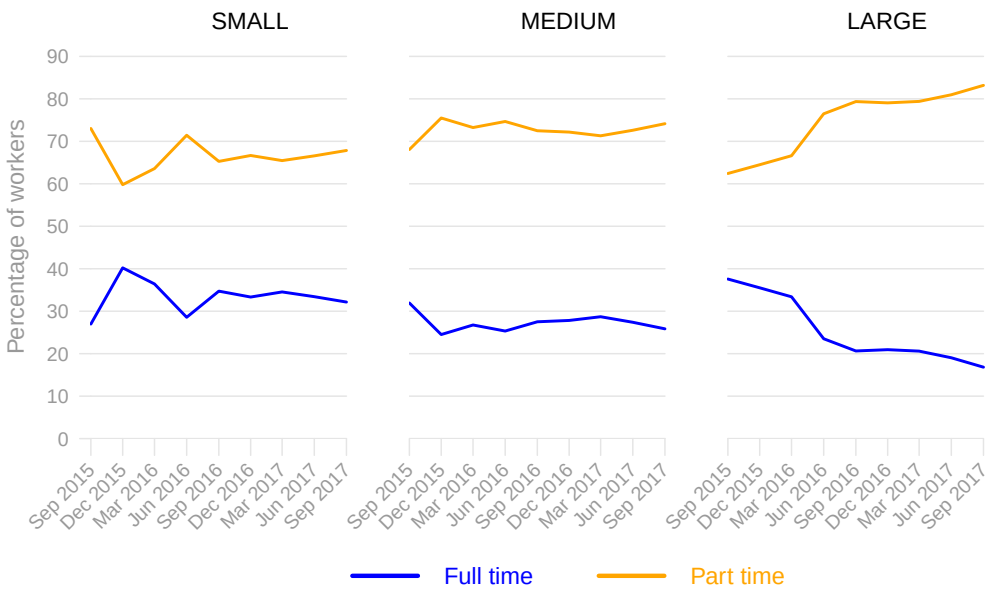

Figure 10:
Full-time and part-time workers by size of organisation

Notes: Details in Table A20

Average hours worked by each worker

Does the increased use of part-time workers also mean a reduction in the average hours worked by each worker within the disability sector? In general, the answer appears to be yes. There is a downward trend over the last two years in overall average hours of work, as shown by the red line in Figure 11.

There is a long-term downward trend in average hours of work ...

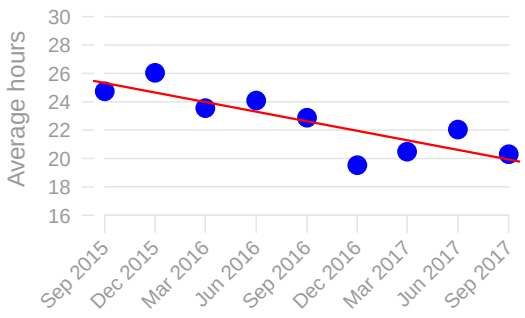

Figure 11:
Average hours of work per week per worker

Notes: Details in Table A21

If we look at the size of the organisations we can see that this is driven by the medium and large organisations (see Figure 12). In small organisations, average hours of work are stable whereas in both medium and large organisations they are declining steadily. This last result is not surprising: given

... and this is most pronounced in medium and large organisations

the increased use of part-time workers by large organisations, it follows that their average hours per worker will be declining.

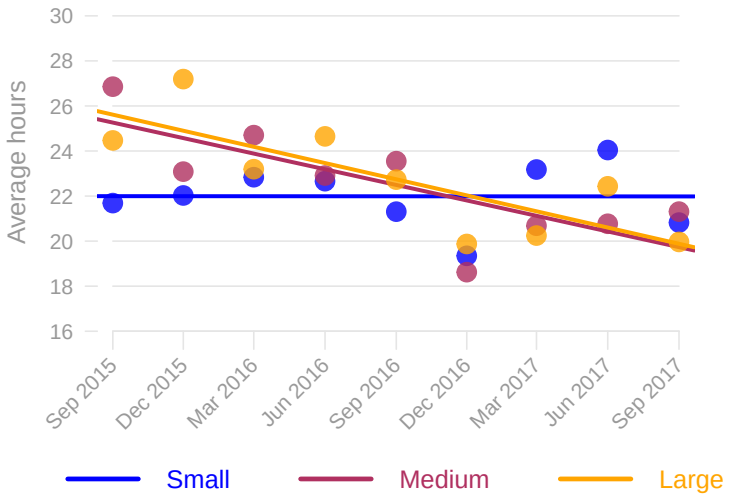

Figure 12:
Average hours of work per week per worker by organisational size

Notes: Details in Table A22

Both the level and the decline in average hours worked are a cause for concern. The decline appears unusual, and departs from the general pattern in the labour market. The level—averaging 22.6 hours per week over the last two years—is considerably lower than elsewhere in the labour market. For example, in workforces with similarly large proportions of part-time workers the figure is closer to 26 hours per week.[10] In the last quarter, the average hours worked by disability support workers had actually fallen to just 20 hours per week. Such low average hours raise important questions about sustainable growth for the sector's workforce: how does one earn a living wage without taking on a second job, or leaving the sector for a better paid position elsewhere?

Gender and hours of work

Is there a gender effect with full-time and part-time work, as there is with forms of employment? Using the same definitions as before, we look at whether organisations with higher concentrations of female disability support workers are also more likely to have higher proportions of part-time workers.

10. This is a ten year average for the general category of 'carers and aides', which includes aged-care workers as well as disability workers. Based on HILDA data.

There is no clear linear relationship between gender and hours of work

Figure 13 suggests that unlike forms of employment, there is no clear linear relationship. Until one looks at those workplaces with the highest concentrations (three quarters or more women) the proportion of part-time workers shows no distinct pattern. However, in those organisations with these large concentrations of women, there is a distinctly higher proportion of part-time workers: some 84% working part-time compared with an average of about 75% across the other categories.

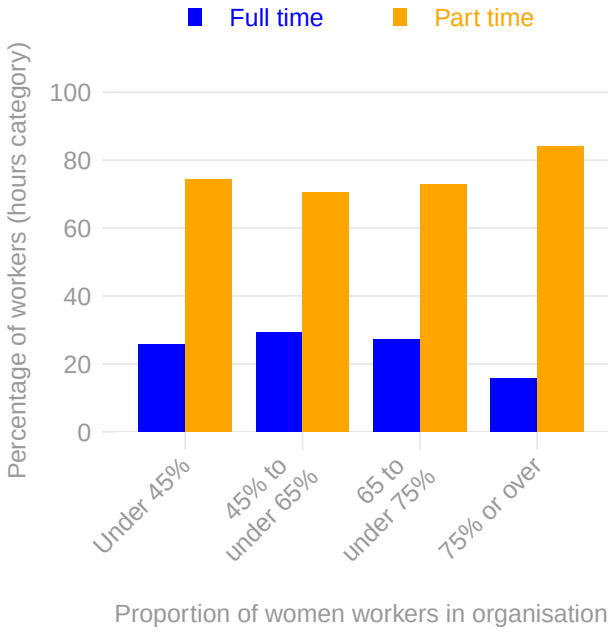

Figure 13: Full-time and part-time workers by the gender composition of the organisation

Notes: Note that data is pooled over all quarters. Details in Table A23.

Hours of work and workforce growth

Employment gains come from increases in part-time workers ... job losses are from declines in full-time workers

We saw earlier that workforce growth was strongly driven by an increased employment of casual workers. Using the same approach, with a balanced panel (see page 14), we analyse the composition of workforce growth according to the full-time and part-time status of the workers entering and leaving organisations. While the totals are smaller—because this full-time / part-time analysis is restricted to the permanent workforce—it seems clear that the growth in employment is largely driven by the increased employment of part-time workers. At the same time most of the job losses have been for full-time workers. Only in the September 2016 quarter did growth in full-time workers exceed growth in part-time workers. Figure 14 illustrates these findings.

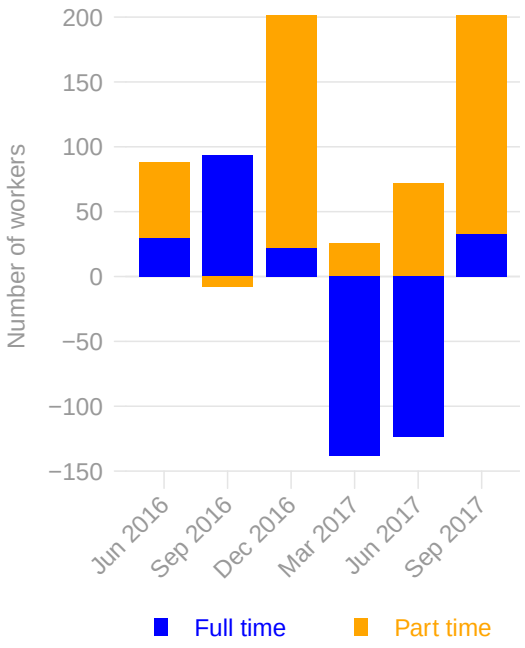

Figure 14: Growth in disability support workforce by full-time and part-time work (counts)

Notes: Details in Table A24

How does the sector compare?

We conclude this chapter by looking at how disability support workers compare with other workers. A more detailed comparison is in the appendix (see Table A7). It needs to be kept in mind that the population here is the permanent workforce and the comparisons are for September 2016.

The high levels of part-time employment in disability appear exceptional

In the September quarter of 2016 about 23% of disability workers within the permanent workforce were full-time; the remaining 77% were part-time. By comparison, the figures for the labour market as a whole are vastly different: 69% full-time and 31% part-time. In other words, in its use of part-time employees, the disability sector appears quite exceptional. However, this seems to be a feature of this type of sector, since the occupational category of 'carers and aides'—which includes the aged-care sector—has similar proportions: here some 30% are full-time and 70% part-time.

The strong growth of part-time work in disability over the last two years is a departure from the general trend

Is the growth in part-time employment which this chapter has illuminated part of a wider development in the labour market, or is it

somewhat unique to the disability sector? Over the last 15 years, part-time employment has grown steadily among permanent employees, rising from 26% of the workforce in 2001 to 30% in 2016. However, this growth has been uneven: and the figure of 30% has been largely stable since 2011 suggesting that the strong growth of part-time work in disability over the last two years is a departure from the general trend, and is likely to be NDIS-related.

If we again look at the broad category of 'carers and aides'—keeping in mind that it includes aged-care workers as well as disability support workers—the 15 year-trend is largely static: 72% were part-time in both 2001 and 2016. However, in the period since 2011, the proportion has been dropping, from a high of 75% down to 72%. While these figures need to be treated with caution (given the small sample size on which they are based), they confirm the earlier impression: the increasing use of part-time work in the disability sector is not shared more widely in the labour market.

4 Spotlight topic: absences

Introduction

Each quarter the Workforce Wizard contains an additional 'spotlight topic', a topic which throws light on important policy issues within the sector. It is not essential that these topics be collected every quarter. They will be repeated every two years and thereby provide the sector with a long-term perspective on these crucial issues.

In the March 2017 quarter the topic was recruitment trends and difficulties, and the results for this topic were discussed in the previous **Australian Disability Workforce Report**. In June 2017 the topic was workforce absences, specifically personal and carers' leave and leave without pay. Since these conditions were only available to the permanent workforce, they were only collected by Workforce Wizard for workers engaged as permanent or fixed term.

Personal and carers' leave and leave without pay

The Workforce Wizard collected the actual **number** of days workers were absent, but to take account of the fact that large organisations have a larger numbers of workers, we need to analyse leave as a **ratio**: the number of days taken per worker per quarter. Using this figure we compare averages across the states (with some of the smaller areas grouped with their neighbour to make the numbers adequate for analysis).

Workers took an average of about 6 days of personal and carers' leave per person per year

During the June quarter of 2017 disability support workers took an average of 1.8 days of personal and carers' leave per person during the quarter (see Table 1). Using the median, which removes more extreme values, the average was 1.2 days. Based on these figures, an annual estimate is that workers took about 6 days of personal and carers' leave per person per year.[11]

11. This is based on multiplying by 4 the mid-point figure of 1.5 days.

Personal and carers' leave was highest in Queensland (2.9 days per quarter) and New South Wales / ACT (2.5 days per quarter), and lowest in Victoria / Tasmania (1 day per quarter) and in organisations that were spread across states (0.8 day per quarter).

Leave without pay was much less common. The national average was 0.5 day, which in annual terms equated to 2 days of leave without pay. The highest figures were just 0.7 day per quarter in Queensland and South Australia / Northern Territory. The lowest figures (0.3 day per quarter) were again in the multi-State organisations.

> Workers took an average of 2 days of leave without pay per person per year

While there is no discernible pattern in the leave without pay figures according to the size of the organisation, there is when it comes to personal and carers' leave. Those disability support workers employed by large organisations accessed about half of the amount of leave compared to those employed by small and medium organisations. Those in large organisations took 1.1 days per quarter, while those in small organisations took 2 days and those in medium organisations took 2.1 days.

Table 1: Average number of days per worker per quarter, personal and carers' leave and leave without pay, by State

	Personal and carers' leave		Leave without pay		
State	**Mean**	**Median**	**Mean**	**Median**	**n**
Queensland	2.5	1.3	0.4	0.0	33
Multi-state	1.0	1.1	0.5	0.2	47
Victoria / Tasmania	2.9	1.8	0.7	0.0	31
Western Australia	1.3	1.2	0.7	0.0	30
New South Wales / ACT	1.6	1.2	0.4	0.0	34
South Australia / NT	0.8	0.4	0.3	0.0	18
National average	1.8	1.2	0.5	0.0	193

Notes: Population is permanent and fixed term workers only. n is number of organisations in the sample. *Source*: Workforce Wizard

The National Employment Standards for a full-time employee provide for 10 days per year for personal and carers' leave. This minimum figure feeds into the pricing assumptions of the NDIS. Yet the disability sector figure of 6 days for each worker, in a workforce where over 80% of workers are **part time**, equates to a much higher number, well over 10 days. While it is well-known that workers in stressful and emotionally demanding jobs have higher sickness rates, this is the first time we have data on the actual use of personal and carers' leave entitlements in disability.

Industrial instruments covering the workforce

In the September quarter of 2017 the spotlight topic was the type of industrial instrument which covered the workforce for which that organisation was entering data. The industrial instrument provided the basis for wages and conditions for a defined group of employees. There were two main instruments:

1. Awards: which are negotiated by trade unions and often operate at an industry level. They usually provide a 'floor' to both wages and conditions in that industry, though individual organisation may sometimes provide 'over-award' pay or conditions.
2. Enterprise agreements: these are based on bargaining outcomes within the organisations between the union or workers and the management. They usually provide better pay and conditions than the award, but may also involve 'trade-offs' on the part of the workers in return for these advantages.

Traditionally, many disability organisations have undertaken enterprise bargaining, but this may be changing in the new market environment and this spotlight topic will assist in monitoring such changes.

Nearly 60% of organisations were covered by awards, about 40% by enterprise agreements

Overall about 59% of organisations were covered by awards and the remaining 41% were covered by agreements. However, the variation across states was considerable. As Table 2 shows, the coverage of awards was much higher in New South Wales / ACT and Queensland: 87% and 73% respectively. It was lowest in South Australia / NT (just 25%) and somewhat lower in Victoria / Tasmania (49%).

Table 2: Industrial instruments operating in organisations, by state (%)

State	Award	Agreement	Total	n
New South Wales / ACT	87	13	100	30
Victoria / Tasmania	49	51	100	37
Queensland	73	27	100	22
South Australia / NT	25	75	100	16
Western Australia	54	46	100	26
Multi-state	56	44	100	16
Total	59	41	100	147

Notes: Population is organisations and coverage refers to disability support workers. n is number of organisations in the sample. *Source*: Workforce Wizard

These figures for industrial coverage are for **organisations** in the disability sector, but it is also possible to calculate coverage for the **workforce** by taking account of the number of workers in each organisation. Table 3 shows the patterns in industrial coverage for some 31,000 disability support workers in Australia.

Overall, workers are split almost evenly between award coverage (51%) and enterprise agreements (49%). The state patterns, however, are quite diverse. New South Wales / ACT and Queensland are again the States with the highest proportion of workers under the award (82% and 63%), and South Australia / NT is again much lower. An interesting difference is evident in the figures for Victoria / Tasmania. Award coverage for organisations is 49%, but for the workforce the figure is half this at 25%.

Workers are split evenly between award coverage and enterprise agreements

Table 3: Industrial instruments for the workforce, by state (%)

State	Award	Agreement	Total	n
New South Wales / ACT	82	18	100	6,658
Victoria / Tasmania	25	75	100	5,008
Queensland	63	37	100	2,911
South Australia / NT	17	83	100	3,429
Western Australia	44	56	100	5,999
Multi-state	58	42	100	6,819
Total	51	49	100	30,824

Notes: Population is the disability support workforce. n is number of workers covered by the organisations in the sample. *Source*: Workforce Wizard

Historically, enterprise bargaining has been more common in large organisations, while smaller organisations have often stayed on the award. To some extent, this pattern is confirmed in the Workforce Wizard data, particularly for the workforce figures. In the case of organisational coverage, some 46 percent of large organisations have enterprise agreements, slightly higher than the average (41%) but considerably higher than small organisations (35%). Turning to workforce coverage, some 53% of workers in large organisations are covered by enterprise agreements compared with just 35% of the workforce found in small organisations.

Table 4: Industrial instruments for organisations and for the workforce, by organisational size (%)

	Organisations				Workers			
Org size	Award	Agree-ment	Total	n	Award	Agree-ment	Total	n
Small	65	35	100	40	65	35	100	1,083
Medium	59	41	100	66	61	39	100	6,757
Large	54	46	100	41	47	53	100	22,984
Total	59	41	100	147	51	49	100	30,824

Notes: Population in first panel is organisations; in second panel the workforce. n in first panel is number of organisations; in second panel, number of workers covered. *Source*: Workforce Wizard

The disability sector has a higher proportion of workers on enterprise agreements than the labour market average

How do these figures compare with the industrial relations situation more generally? The Australian Bureau of Statistics collects workplace information on methods of setting pay and it's data for May 2016 provides an overall estimate of 37% of employees[12] on enterprise agreements, with the balance split between award coverage and individual arrangements.[13] This suggests that the disability sector has a higher proportion of workers (49%) on enterprise agreements than in the labour market more generally.

However, if we look at the broad industry category of 'health care and social assistance', the figures are much closer to the disability sector figures in Workforce Wizard. These ABS estimates show that 53% of employees were employed on enterprise agreements. This industry finding mirrors the findings in other chapters, where if we focus more closely on occupational groups such as carers and aides, the disability sector appears much less exceptional.

12. The data come from ABS, *Employee Earnings and Hours*, Australia, May 2016, Cat.No. 6306.0 (Spreadsheet: 63060DO007_201605). Note that the population for these estimates is full-time non-managerial employees. The all-employee data combines awards and collective agreements and is therefore of no use in this particular comparison.
13. The ABS has always distinguished between award coverage and individual arrangements but this overlooks two issues. First, individual arrangements are 'underpinned' by the award, so the low figures given for award coverage are mislead-ing. Secondly, the number is further reduced because 'over-award' payments are also classified as individual arrangements. For these reasons, it is best to just focus on the figures for enterprise agreements, which the ABS terms collective agreements.

5 What are workers looking for?

The job market is where employers in the disability sector look for workers and where people interested in working in the sector seek out jobs. The **carecareers** website which is run by NDS accepts advertisements for jobs ('job ads') from employers where they currently have vacancies. People who land on the website scan this 'job board' looking for suitable employment, and when they find a position which interests them, they may click on the 'view details' button and continue by clicking on an 'apply' button.

The data from this job board spans about 5 years, from the end of 2012 to the beginning of 2018, and is a rich source of information on what is happening in the disability jobs market. In this chapter we look at the job applications posted by individuals who transact with the carecareers job board. These people—termed 'job seekers'—may be already working, and looking around for a different job; they may be unemployed; or they may be outside the labour force and contemplating entering or returning to the workforce. We don't have information on their situation, but we can look in some detail at the kinds of jobs for which they are looking.

We use the data from 2013 to 2017 because it is complete for each year. Through to end of June 2016 NSW employers (accounting for over 50% of the total advertiser base) were able to list ads for free, so there is a steady growth in jobs over the period. However, during 2017—once employers were required to pay a (modest) amount for listing ads—the number of job ads declined. It is important to keep this decline in mind. It does not imply a decline in the availability of work in the sector and the decline in ads does not weaken the useful of the various comparative measures used here.

All the jobs examined here are only those applying to the disability sector (carecareers posts a much larger range of jobs in other areas of the community sector) and we also analyse the occupational groupings which apply to these jobs.[14]

14. The definitions of the occupational groupings used here are to be found in the appendix. See Table A26. The combined disability sector jobs include some health professional, and allied health professional jobs, but for sampling reasons the occupational groupings omit all of the health jobs.

What interests job seekers?

One measure of what people look for when they transact on the jobs board of carercareers is whether they click to find out more details about the job. We calculate **the ratio of views to each listing** to gauge the 'popularity' of listings over the period from 2013 to 2017. These data are shown in Figure 15 and suggest that in the first full year of operation, each listing on the jobs board for direct support workers was 'viewed' on average by more than 450 potential workers.[15]

These popularity ratios fell in 2014, but then grew steadily from then on, and the pattern was generally repeated across most occupational groups. One interpretation of these data is that the initial year represented heightened interest in a new job-seeking platform available on the internet, and that subsequent years reflected the underlying growth of interest in these jobs. What seems particularly notable about the listings for direct support workers is the reduction in listings during 2017 did not lead to a diminishing level of interest by job seekers. The ratio (of over 400) held up during 2017, despite fewer jobs on offer on the platform.

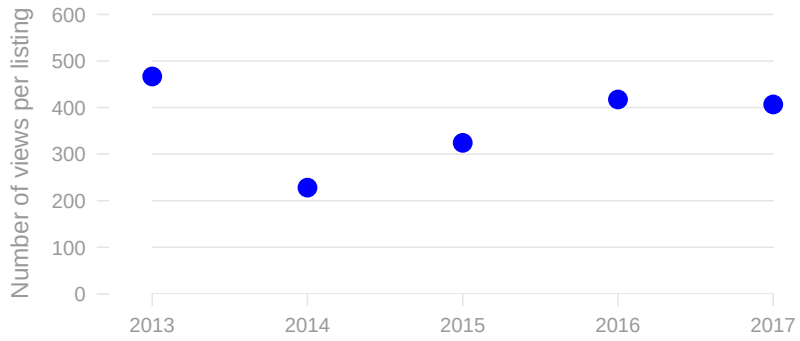

Figure 15:
Views of job listings for direct support workers

Source: carecareers job board

15. We need to keep in mind that actual job listings were only shown for a month, so this figure is an average based on dividing the total number of views in a year by the total number of listings, broken down by the occupational grouping.

Job applications

A much stronger measure than viewing the details for job ads is making an application. While there are some difficulties in knowing whether job seekers follow through completely with their online applications, there is no reason to assume that systematic patterns will influence this outcome. With this in mind, we examine information on forms of employment and hours of work to see what kinds of jobs disability workers are looking for. We plot the data as monthly counts and then fit trend lines to illuminate the overall pattern. As we did in earlier chapters, we focus on both forms of employment (permanent and casual jobs) as well as hours of work (full time and part time jobs). The latter distinction is only applicable to job ads for permanent positions.

As Figure 16 shows, most job seekers preferred permanent jobs over casual jobs. The growth in the latter category remained almost flat from 2016 onward, whereas growth in applications for permanent jobs grew strongly until early 2017, when applications began to fall.

Most job seekers preferred permanent over casual jobs ...

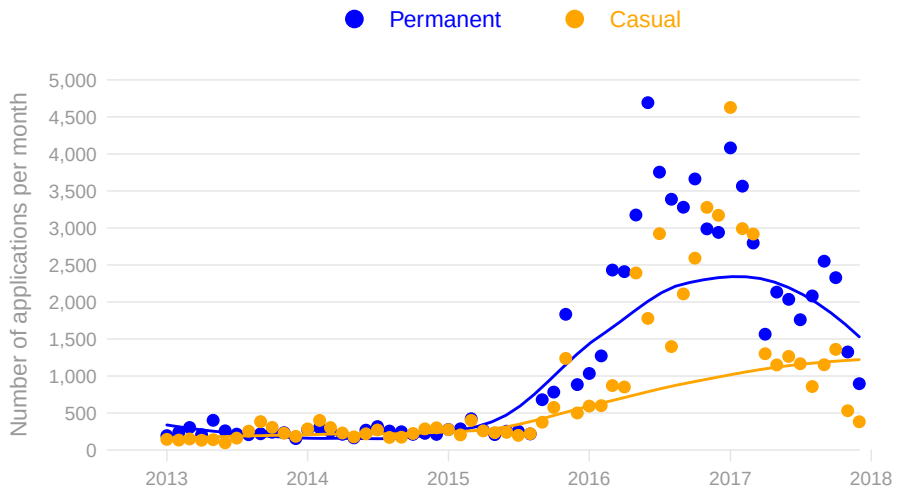

Figure 16: Monthly applications for disability jobs, by forms of employment

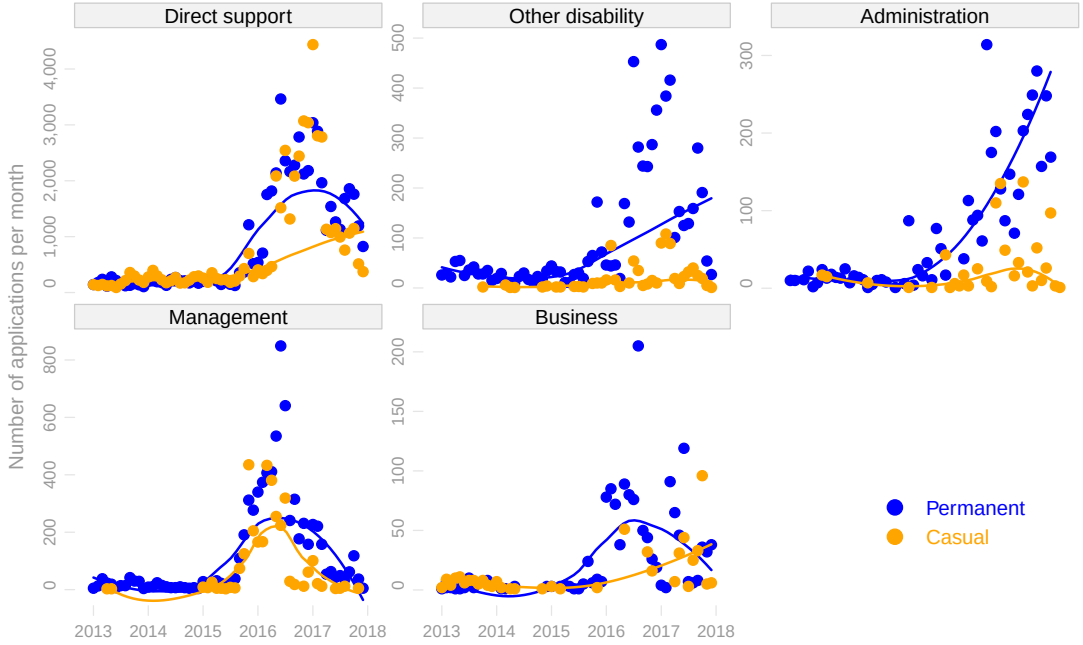
Source: carecareers job board

Because 80% of the applications were for direct support workers, the occupational breakdown for this group closely matched the overall patterns. That is, direct support workers had a much stronger preference for permanent jobs over casual jobs (see Figure 17). This carried through to the other occupational groups with some minor variations. For example, while casual jobs barely

featured in administration, they were more common in the management occupations, with applications split evenly between permanent and casual jobs during the middle of 2016.

Figure 17: Number of job applications per month, by forms of employment and by occupational grouping (*Source:* carecareers job board)



When we turn to hours of work, a very different picture emerges. Not only did part-time applications outnumber full-time applications across the period, but they continued to grow strongly during 2017 when full-time applications were falling away (Figure 18). This is quite a striking difference to the picture which emerges with forms of employment. Again, because of the dominance of direct support workers in this population, the breakdown by occupational groups reinforces this general pattern of a strong preference for part-time work. There is, however, is one interesting variation. While full-time applications were more common than part-time ones in administrative occupations, the numbers were very close and there was strong growth in both during 2017 (Figure 19).

... but workers preferred part-time jobs over full-time jobs

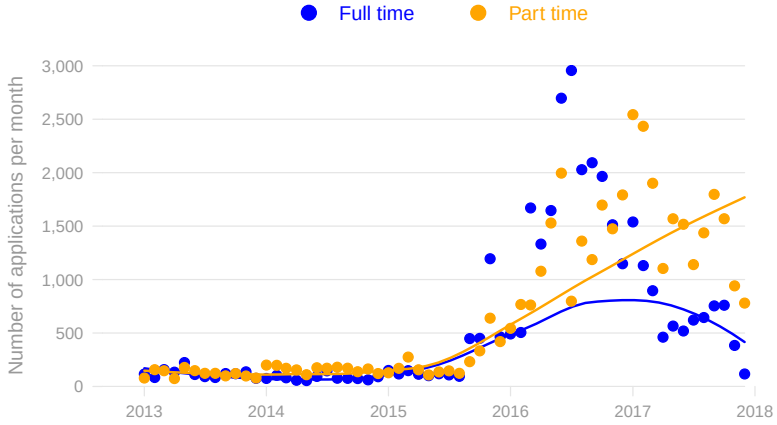


Figure 18: Monthly applications for disability jobs, by hours of work

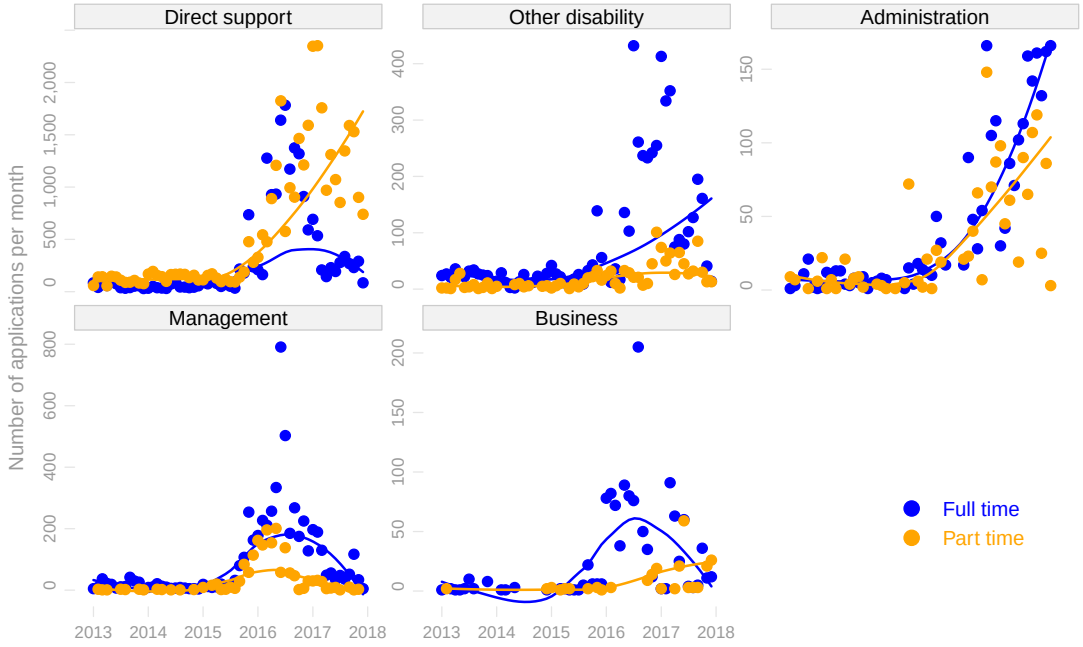
Source: carecareers job board

Figure 19: Number of job applications per month, by hours of work and by occupational grouping (*Source:* carecareers job board)



One of the enduring questions posed by the growth of part-time employment in the Australian labour market is whether this growth is mainly driven by what employers offer, or by what workers are looking for. The high levels of **underemployment**[16] in some sectors of the labour market suggests that many of the part-time jobs are all that is on offer. Nevertheless, some sectors have large numbers of female workers and students who seek out part-time work because of its suitability for work-life balance.

16. This is where part-timers wish to work more hours than are provided by their employers.

The job applications data for the disability sector provides some insights into this enduring question. When it comes to offering jobs for direct support workers, carecareers employers appear to be offering both permanent and casual jobs in roughly comparable numbers. Similarly, when it comes to whether the permanent jobs on offer are full-time or part-time jobs there is some variability over the period, but the overall pattern in the proportions are also close to even.

Most job seekers want permanent jobs in preference to casual jobs, and part-time jobs in preference to full-time jobs

However, when we turn to look at the data on what interests job seekers, we find that workers are more interested in applying for the permanent jobs. And within those permanent jobs, they are more interested in the part-time positions. This is particularly so among workers looking for direct support jobs and for jobs in administration.

6 What does the allied health workforce look like?

Demographic aspects

The allied health workforce in the disability sector is much smaller than the disability support workforce, but is quite a distinctive group of workers. It is made up of allied health professionals such as occupational therapists, physiotherapists and speech pathologists, as well as nurses.

The workforce is overwhelmingly made up of women. In the September quarter of 2017, 92% of allied health professionals were women. In very few organisations (about 12%) is the female-to-male ratio of the allied health workforce less than 80%. Indeed, in more than one fifth of disability organisations, the whole of their allied health workforce is female. These figures compare starkly with the disability support workforce, where the female proportion in the September quarter of 2017 was 70%.

Similarly, the age profile of allied health workers stands out: they are a much younger workforce. Some 65% were in the middle years of 25 to 44, compared with a figure of 44% among disability support workers. As we saw earlier, the latter group had more older workers—about 21% were older than 55 years—whereas in the allied health workforce only 11% were in this age group.

Forms of employment

Three quarters of the allied health workforce were permanent workers

Unlike disability support workers, an important aspect of employment among allied health workers is the dominance of permanent employment and the relatively larger role played by fixed-term appointments. Whereas casual employment is a striking feature of the disability support workforce, among allied health workers it is

insignificant: only about 7% of workers were employed in this way over the period.[17] By contrast, some 16% were employed as fixed-term and this figure had moved above 20% during some quarters. Most importantly, an average of three quarters of the allied health workforce were employed as permanent employees.

If we look at this in terms of workforce density within organisations, we see that both casual and fixed-term employment is not prominent. As Table 5 shows, 47% of organisations with allied health workers employ none of these worker as casuals, and 44% employ none as fixed-term workers. Only about 10% of organisations had densities of more than 30% for these forms of employment, and these were overwhelmingly the smaller organisations.

Table 5: Organisations by casual and fixed-term density: allied health workers

	Casual employment		Fixed-term employment	
Density	**No.**	**%**	**No.**	**%**
None	91	47	85	44
10% or less	46	24	31	16
Between 10% and 30%	35	18	58	30
More than 30%	23	12	21	11
Total	195	100	195	100

Notes: Data has been pooled over all quarters. *Source*: Workforce Wizard

Hours of work

The allied health workforce is split almost evenly between full-time and part-time workers.[18] In the September quarter of 2017 49% were employed full-time and 51% were employed part-time. This situation is, however, the culmination of a steady increase in part-time workers over the two year period. At the start of the period part-time workers made up 45% of the workforce.

Consistent with this development, the average hours of work seem to have been declining over the period. As Figure 20 shows, despite the fluctuations, the longer-term trend appears to be downward.[19]

17. The data for the last quarter shows a threefold increase in the proportion of casuals (from 6.6% to 18.7%), but because of the small number of organisations in the Workforce Wizard sample, one needs to treat this figure with considerable caution. The average of 7% for the period excludes this outlier. Including it only moves the average higher by one percentage point.
18. The population for this is both permanent and fixed-term workers. Unlike the situation with disability support workers, fixed-term employment is significant in allied health, and is thus included in the analysis.
19. One needs to be cautious with these quarterly figures for the allied health work-

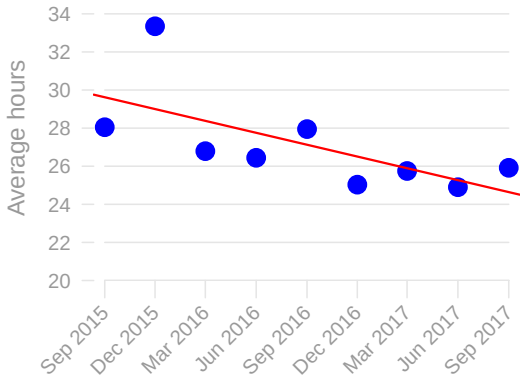


Figure 20: Average hours per week: allied health professionals

Notes: Details in Table A25

Spotlight topics

Like the disability support workers, the allied health professionals also answered question about absences and industrial relations. In the case of personal and carers leave, allied health professional took an average of 2 days leave per person during the quarter. This was a slightly higher figure than that taken by disability support workers (1.8 days).

Allied health workers use of leave without pay was low: 0.7 days per quarter. Again, this figure was slightly higher than the comparable figure for disability support workers (0.5 days).

In nearly two-thirds of organisations the industrial coverage for allied health professionals was an industrial award, with the remainder of organisations using enterprise agreements (63% to 37%). This figure for award coverage was slightly higher than for organisations with disability support workers (59%).

force because the number of observations are quite small. See Table A25 for these counts.

Appendix

Important concepts

Workers may be engaged by employers as permanent, fixed term, or casual, a mode of engagement referred to as the **form of employment**. The first two categories are characterised by the workers having access to holiday and sick leave, while those in the third category have neither of these. Permanents are also employed with an expectation of on-going employment; fixed-term workers have a termination date in their contracts; and casuals have no expectation of any ongoing employment and can, in theory, be terminated at short notice.[20]

Fixed term workers are often used to fill a gap, such as when staff are on parental leave or long service leave. Because the number of fixed-term disability support workers is very small, we mostly combine permanent and fixed-term workers and refer to them as the permanent workforce. Only in Chapter 2, the chapter which deals with forms of employment, do we report on all three categories.

One of the key issues for workforce planning in the disability sector is the extent of casualisation. As we will see, the sector has a higher proportion of casual workers than most other sectors in the workforce and it is growing over time. There are a number of important policy issues raised by this development. While casuals offer apparent flexibility to employers in meeting their staffing needs, the downside is the higher staff turnover which results, and a more uneven mix in their workforce when it comes to quality (such as skills, experience and qualifications). For workers, these jobs offer a 'casual loading' in their wages, which they may be reluctant to forgo in favour of the increased security which permanent jobs might bring. The main downside for workers is that casual employment is insecure: there is no guarantee of the job continuing, nor how much income they may earn and institutions such as banks will often not make large loans to those in casual employment.

20. The casual category is a complicated one, since industrial tribunals have modified the rights of employers to terminate casuals at short notice. The labour market is also characterised by large numbers of 'permanent casuals' who have worked in that form of employment with the same employer over many years.

The **hours** an employee works, whether full-time or part-time, is a different matter to the **form of employment**, but in popular usage the term 'casual' is often taken to mean part-time. In the case of the disability workforce, we distinguish full-time and part-time only for the combined permanents category (that is, permanents and fixed term workers). In the case of casuals, disability services do not systematically record data on their hours of work, so we are not in a position to discuss levels of part-time work among the casual workforce.

Comparisons

In this section of the appendix we look in more detail at how disability support workers compare with other workers, and how the Workforce Wizard data compare with other data sources (in this case the HILDA data).[21] The comparison for forms of employment is summarised in Table A6. We need to keep in mind the difficulties of lining up disability support workers with occupational and industry categories available in other data sources.[22] There is no clear one-to-one correspondence. The occupational category which is the closest analogy for these workers is **carers**, so this comparison is the best one for comparing the data as such.[23] The other comparisons in this table illuminate how the workforce in this sector differs from other workforces.

Table A6: Comparisons for forms of employment (%)

Category	Casual	Fixed term	Permanent
Disability service workers (Workforce Wizard)	40	3	58
Carers (HILDA)	33	9	58
Community Sector (HILDA)	19	11	70
All males (HILDA)	20	9	70
All females (HILDA)	25	11	64
All persons (HILDA)	23	10	67

Notes: The data for Workforce Wizard come from the September quarter of 2016, the closest period in time to when the HILDA data was collected. *Source*: Workforce Wizard and unpublished data from HILDA, Release 16

21. The Household, Income and Labour Dynamics in Australia (HILDA) Survey is a longitudinal survey of Australian households which has been conducted annually since 2001. It is carefully sampled to be representative of the Australian population and collects information on households, and on individuals living in those households. It is managed by the Melbourne Institute of Applied Economic and Social Research.
22. For more details see NDS and Windsor and Associates 2014, *Roadmap to a Sustainable Workforce: Improving the quality of disability workforce data*, Report for DSS Project Report 1, Sydney: National Disability Services.
23. Carers are defined as ANZSCO [42] Carers and Aides. This category also includes childcare workers, education aides and aged care workers.

The most notable difference shown here is the remarkably high incidence of casual employment among organisations in the Workforce Wizard. The comparison with carers has the smallest gap: 40% compared to 33%. Compared to the community sector as an industry category,[24] the difference is stark: 40% compared to 19%. A similar gap is evident for the workforce more generally: 40% to 23%.

However, part of the explanation for these differences lies with the category of fixed-term employment. What is notable about the occupational comparison is that the incidence of permanent employment is identical between Workforce Wizard and carers, at 58%. The difference in casualisation is solely due to the differences in fixed-term employment: Workforce Wizard organisations have a far smaller proportion of fixed-term workers than is the case for carers. A similar difference is evident with the community sector. Here the gap in permanent employment between that sector (70%) and the disability sector (58%) is narrower than is the gap in casual employment between that sector (19%) and the disability sector (40%).

Turning now to a comparison with hours, Table A7 summarises the results. It needs to be kept in mind that the population here is the permanent workforce, and this applies to the HILDA data as well as to the Workforce Wizard figures.

Table A7: Comparative split between part-time and full-time permanent workers (%)

Category	Part time	Full time
Disability service workers (Workforce Wizard)	77	23
Carers (HILDA)	70	30
Community Sector (HILDA)	56	44
All males (HILDA)	16	84
All females (HILDA)	47	53
All persons (HILDA)	31	69

Notes: Population is non-casual workforce for both Workforce Wizard and HILDA data. The data for Workforce Wizard come from the September quarter of 2016, the closest period in time to when the HILDA data was collected. *Source*: Workforce Wizard and unpublished data from HILDA, Release 16

As with forms of employment, Workforce Wizard organisations are closer to the category of carers: about 7 percentage points difference in the incidence of part-time workers: 77% to 70%. As noted earlier this occupational category is probably the closest match for disability support workers so these similar figures suggest

24. The community sector is defined as ANZSIC [86] Residential Care Services and [87] Social Assistance Services.

the Workforce Wizard data is reasonably representative of the sector.

The broader comparison is quite stark. For all the other comparisons in this table the gap is particularly large. There is a 21 percentage point gap with the community sector more broadly, and a 46 percentage point gap with the general workforce. Given the high incidence of female employment in the sector, a fairer comparison for the latter would be with the female workforce more generally and the gap here is 30 percentage points: 77% to 47%. Clearly, the incidence of part-time employment within the permanent workforce in the disability sector is remarkable.

Acknowledgements

This report uses unit record data from the Household, Income and Labour Dynamics in Australia (HILDA) Survey. The HILDA Project was initiated and is funded by the Australian Government Department of Families, Housing, Community Services and Indigenous Affairs (FaHCSIA) and is managed by the Melbourne Institute of Applied Economic and Social Research (MIAESR). The findings and views reported in this report, however, are those of the author and should not be attributed to either FaHCSIA or the MIAESR.

Table A17: Categorisation of organisations according to workforce changes, by forms of employment

		Percentages in each category			
Quarter	**Forms emp**	**Decline**	**Stable**	**Increase**	**n**
Sep 2015	Permanent	7	89	4	123
Dec 2015	Permanent	8	83	8	132
Mar 2016	Permanent	7	85	8	157
Jun 2016	Permanent	7	86	7	167
Sep 2016	Permanent	8	81	11	182
Dec 2016	Permanent	9	83	8	183
Mar 2017	Permanent	8	85	7	189
Jun 2017	Permanent	4	89	8	193
Sep 2017	Permanent	7	83	10	165
Sep 2015	Casual	2	72	25	123
Dec 2015	Casual	3	76	21	131
Mar 2016	Casual	6	73	21	157
Jun 2016	Casual	5	76	19	167
Sep 2016	Casual	3	71	26	182
Dec 2016	Casual	1	70	29	183
Mar 2017	Casual	3	67	30	189
Jun 2017	Casual	3	70	26	193
Sep 2017	Casual	4	67	29	165

Notes: These definitions are based on: **decline**: where the net change in staff (in each form of employment) in that organisation has fallen by more than 5 workers during the quarter; **stable**: where the net changes lie between a fall in 5 workers and a rise in 5 workers; and **increase**: where the net changes are greater than 5 workers increasing.
n is number of organisations in the sample. *Source*: Workforce Wizard

Table A18: Turnover rates: all workers, permanents and casuals

Quarter	**Permanent**	**Casual**	**All workers**	**n**
Sep 2015	4.1	6.5	5.2	123
Dec 2015	4.3	8.1	6.0	132
Mar 2016	4.0	6.7	5.1	157
Jun 2016	4.1	7.6	5.4	167
Sep 2016	4.6	6.8	5.5	182
Dec 2016	4.7	6.0	5.2	183
Mar 2017	5.0	7.2	5.9	189
Jun 2017	4.3	6.6	5.3	193
Sep 2017	4.9	8.6	6.5	165

Notes: Turnover rate is the number of workers in organisations who leave during the quarter, expressed as a percentage of the average total number of workers for that quarter and the previous quarter. All workers refers to the sum of permanents and casuals (ie. excludes fixed-term workers). n is number of organisations in the sample. *Source*: Workforce Wizard.

Table A19: Full-time and part-time workers: overview (%)

Quarter	Full time	Part time	n

A FREE WORKFORCE BENCHMARKING TOOL FROM NDS

Can you afford NOT to use it?

More than 200 organisations use Workforce Wizard every quarter to understand where their workforce is heading and how it compares to the sector.

Without Workforce Wizard you wouldn't know:

- Is your turnover higher than everyone else's?
- Do your workers have above-average absences?
- What is the common rate of unfilled vacancies?

Disability providers use Workforce Wizard to:

- Benchmark staff retention
- Compare client and workforce profiles
- Meet clients' expectations with sufficient capacity
- Produce informative reports for their Boards

The Productivity Commission

The Productivity Commission is the Australian Government's independent research and advisory body on a range of economic, social and environmental issues affecting the welfare of Australians. Its role, expressed most simply, is to help governments make better policies, in the long term interest of the Australian community.

The Commission's independence is underpinned by an Act of Parliament. Its processes and outputs are open to public scrutiny and are driven by concern for the wellbeing of the community as a whole.

Further information on the Productivity Commission can be obtained from the Commission's website (www.pc.gov.au).

Opportunity for further comment

You are invited to comment on this position paper by written submission to the Productivity Commission by Wednesday 12 July 2017. Further information on how to provide a submission is included on the study website: http://www.pc.gov.au/inquiries/current/ndis-costs/make-submission.

The final report will be prepared after further submissions have been received.

Commissioners

For the purposes of this study the Commissioners are:

Angela MacRae	Commissioner
Richard Spencer	Commissioner

Terms of reference

REVIEW OF NATIONAL DISABILITY INSURANCE SCHEME COSTS

I, Scott Morrison, Treasurer, pursuant to Parts 2 and 4 of the Productivity Commission Act 1998, hereby request that the Productivity Commission (the Commission) undertake a study into the National Disability Insurance Scheme (NDIS) costs.

Background

The Heads of Agreement between the Commonwealth and the States and Territories (States) on the NDIS stated that the Commission would undertake a review of scheme costs in 2017. This review is intended to inform the final design of the full scheme, prior to its commencement.

Scope of the study

The Commission should address the following issues identified in the Heads of Agreement for the review of scheme costs:

- the sustainability of scheme costs;
- jurisdictional capacity;
- cost pressures (including wages pressures);
- changes in the agreed escalation parameters;
- if efficiencies have been achieved within the scheme;
- whether there has been any impact on mainstream services; and
- examine the most appropriate levers to manage any potential cost overruns.

In addressing these issues, the Commission should consider:

1. Commonwealth and State funding and governance arrangements for the NDIS, including financial contributions and risk-sharing;
2. the interaction with, and role of, other services in meeting reasonable and necessary support for people with severe and profound disability; and

3. whether there are any issues with the scheme's design, including the application of market and insurance principles, in ensuring the best possible outcomes for people with severe and profound disability.

In conducting the analysis, the Commission should take into account its 2011 report into disability care and support and subsequent agreements between governments for the implementation of the NDIS. The Commission will be provided with all the data on scheme rollout it considers necessary for the analysis.

Process

The Commission is to consult broadly, including with the Australian, State and Territory Governments.

The Commission will report within eight months of receipt of the terms of reference, or by 15 September 2017, whichever is later.

Scott Morrison
Treasurer

OVERVIEW

Key points

- The National Disability Insurance Scheme (NDIS) is a complex and highly valued national reform. The scale, pace and nature of the changes it is driving are unprecedented in Australia. If implemented well, it will substantially improve the wellbeing of people with disability and Australians more generally.
- The level of commitment to the success and sustainability of the NDIS is extraordinary. This is important because 'making it work' is not only the responsibility of the National Disability Insurance Agency (NDIA), but also that of governments, participants, families and carers, providers, and the community.
- Based on trial and transition data, NDIS costs are broadly on track with the NDIA's long-term modelling. While there are some emerging cost pressures (such as higher numbers of children entering the scheme), the NDIA has put in place initiatives to address them. The benefits of the NDIS are also becoming apparent. Early evidence suggests that many (but not all) NDIS participants are receiving more disability supports than previously, and they have more choice and control.
- Nevertheless, the speed of the NDIS rollout, as specified in Bilateral Agreements between governments, has put the scheme's success and financial sustainability at risk. It has resulted in the NDIA focusing too much on meeting participant intake estimates and not enough on planning processes, supporting infrastructure and market development.
  - This focus is manifest in poor outcomes such as confusion for many participants about planning processes; rushed phone planning conversations; inadequate pre-planning support for participants; problems for providers with registering, pricing and receiving payment; and a lack of effective communication with both participants and providers.
- For the scheme to achieve its objectives, the NDIA must find a better balance between participant intake, the quality of plans, participant outcomes, and financial sustainability. Steps are now being taken by the NDIA to better balance these aspects. Greater emphasis is needed on pre-planning, in-depth planning conversations, plan quality reporting, and more specialised training for planners. The Commission is unable to form a judgment on whether such a refocus can be achieved while also meeting the rollout timetable.
- The interface between the NDIS and other disability and mainstream services is also critical for participant outcomes and the financial sustainability of the scheme. Some disability supports are not being provided because of unclear boundaries about the responsibilities of the different levels of government. Governments must set clearer boundaries at the operational level around 'who supplies what' to people with disability, and only withdraw when continuity of service is assured.
- A significant challenge is growing the disability care workforce required to deliver the scheme — it is estimated that 1 in 5 new jobs created in Australia over the next few years will need to be in the disability care sector. Present policy settings are unlikely to see enough providers and workers as the scheme rolls out. Some emerging shortages need to be mitigated by better price monitoring and regulation; better tailored responses to thin markets; formal and informal carers allowed to provide more paid care; and a targeted approach to skilled migration.
- NDIS funding arrangements could better reflect the insurance principles of the scheme, including by allowing more flexibility around the NDIA's operational budget and providing a pool of reserves. Funding contributions made 'in-kind' must be phased out.

Overview

This position paper outlines the Commission's early thinking on the National Disability Insurance Scheme (NDIS) Costs study. The purpose of this position paper is to seek feedback on the Commission's preliminary conclusions and draft recommendations, and on any additional issues that should be considered before the public release of the completed study in September 2017. The Commission welcomes further written comment on this paper, and will undertake consultations to facilitate feedback from participants to inform the preparation of the study report.

More data and information, while still only reflecting the transition stage of the NDIS, will be available before the study's final report is released. As such, the recommendations made in this paper should be viewed as indicative.

1 About the National Disability Insurance Scheme

The NDIS is a new scheme designed to change the way that support and care are provided to people with permanent and significant disability (a disability that substantially reduces their functional capacity or psychosocial functioning). The scheme seeks to create opportunities for people with disability to live 'an ordinary life'. The NDIS is currently being rolled out across Australia. At full scheme, about 475 000 people (460 000 participants under the age of 65 years, and 15 000 aged 65 years and over) with disability will receive individualised supports, at an estimated cost of $22 billion in the first year of full operation.

The NDIS is based on the premise that individuals' support needs are different, and that scheme participants should be able to exercise choice and control over the services and support they receive. The scheme differs from previous approaches in a number of ways:

- it adopts a person-centred model of care and support
- it is an insurance-based scheme — it takes a long-term view of the total cost of disability to improve participant outcomes and to meet the future costs of the scheme (box 1)
- funding is determined by an assessment of individual needs (rather than a fixed budget)
- it is a national scheme.

The NDIS funds reasonable and necessary supports for Australians with permanent and significant disability. Reasonable and necessary supports are those that help participants live as ordinary a life as possible, including care and support to build their skills and capabilities, so that they can engage in education, employment and community activities.

Box 1 **The NDIS is based on insurance principles**

The National Disability Insurance Scheme provides universal coverage by pooling risk across all Australians and taking the risk of disability support costs away from individuals. It is based on four insurance principles.

1. Actuarial estimate of long-term costs — updated to reflect the experience of the scheme, and used to help ensure the scheme is financially sustainable and continuously improved.
2. A long-term view of funding requirements — takes a lifetime view of participant needs and seeks early investment and intervention for people in order to maximise their independence, and social and economic participation, and reduce their long-term support requirements.
3. Investment in research and innovation — to encourage and build the capacity and capability for innovation, outcome analysis and evidence-based decisions on early interventions.
4. Investment in community participation and building social capital — to make the community accessible and inclusive for people with disability, and provide participants and non-participants with necessary supports outside of the scheme, through: mainstream services; Information, Linkages and Capacity Building initiatives; and education programs.

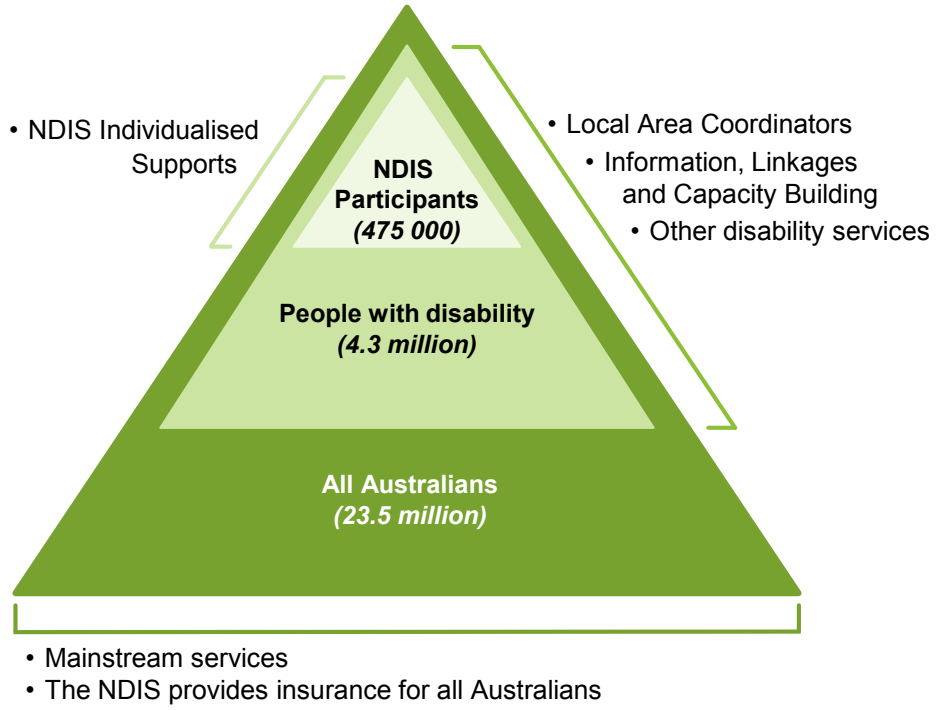
The NDIS also funds supports for people who meet early intervention criteria. This covers cases where early intervention can significantly improve an individual's outcomes and is cost-effective. The focus on early intervention reflects the lifetime approach of the scheme (which is consistent with insurance principles, box 1).

Individuals eligible for the scheme are assessed, and individualised support packages are developed and funded for them. Individualised supports will be available for about half a million people at full scheme (figure 1). NDIS access, planning and payments are managed by the National Disability Insurance Agency (NDIA). (In Western Australia, arrangements are different to reflect a recently announced Bilateral Agreement with the Commonwealth, but the scheme in Western Australia is intended to be consistent with the NDIS.)

Information, Linkages and Capacity Building (ILC) services will also be provided under the NDIS from July 2017. ILC services will provide information about, and referrals to, community and mainstream services (including health, education, employment, transport, justice and housing). These services will be available to the 4.3 million people with disability in Australia (figure 1).

The governing legislation for the NDIS is the *National Disability Insurance Scheme Act 2013* (Cwlth) (NDIS Act). The Act also establishes the NDIA, the independent statutory agency responsible for administering the NDIS. The NDIS Rules and Operational Guidelines set out the operational details of the NDIS. Funding for the NDIS is shared by the Australian, and State and Territory Governments.

Figure 1 **The NDIS is part of a broader system of supports**[a]



[a] Number of Australians and those with disability are based on 2015 data. NDIS participants are the projected number of people eligible in 2020.

Some background to the scheme

The Commission's inquiry in 2011 on *Disability Care and Support* found that Australia's system of disability support was inequitable, underfunded, fragmented, inefficient, and gave people with disability little choice and no certainty of access to appropriate supports. The Commission recommended a new national scheme to provide insurance cover to all Australians in the event of significant disability. This recommendation was based on the finding that such a scheme would generate substantial benefits, including:

- improved wellbeing of people with disability (and their families and carers)
- better options for people with disability for education, employment, independent living and community participation
- efficiency gains and cost savings in the disability support system and savings to other government services.

The Commission's recommendations on the national scheme were largely accepted by Australian governments. The *Intergovernmental Agreement for the NDIS Launch* was signed by the Commonwealth and all States and Territories in December 2012.

2 What we have been asked to do and our approach

In the Heads of Agreement on the NDIS signed by the Commonwealth and the States and Territories in 2012 and 2013, it was agreed that the Productivity Commission would review NDIS costs in 2017 to inform the final design of the full scheme prior to its commencement. The Commission has been asked to look at:

- the sustainability of scheme costs, including current and future cost pressures, and how to manage any potential cost overruns
- whether jurisdictions have the capacity to deliver disability care and support services as the scheme expands
- how the NDIS impacts on, and interacts with, mainstream services
- whether efficiencies have been achieved within the scheme
- whether there are any issues with scheme design, including the application of market and insurance principles, in ensuring the best possible outcomes for people with profound or severe permanent disability
- funding and governance arrangements.

What factors drive scheme costs?

Assessing the sustainability of the scheme involves examining the factors that drive costs. The majority of NDIS costs are for individualised supports, but there are also the costs of operating the scheme and funding ILC activities.

Key factors driving scheme costs include the:

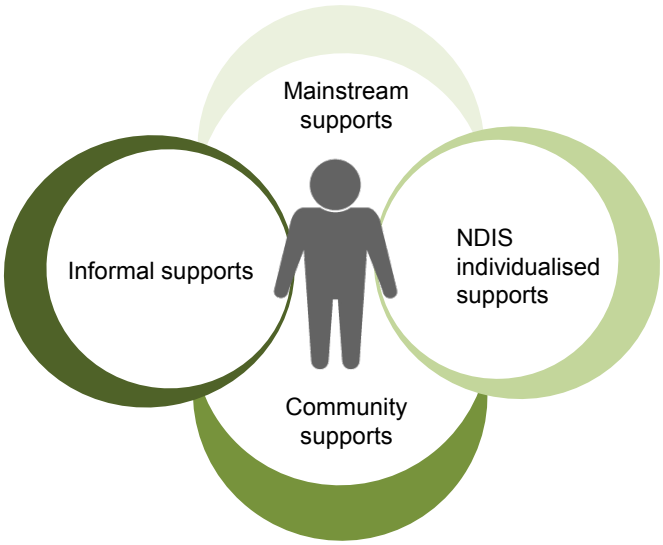
- number and characteristics of scheme participants
- scope of supports provided to scheme participants
- quantity of supports received by scheme participants
- proportion of supports in a plan that is utilised by a participant
- price paid for supports under the scheme
- costs associated with operating the scheme.

Scheme culture will also be an important driver of costs. Moving away from the welfare culture of current disability systems to one of providing reasonable and necessary supports, and managing down the total cost of disability over a participant's lifetime, will be critical for the financial sustainability of the scheme.

Other support systems can also affect scheme costs. The NDIS, as a person-centred approach to providing disability supports, relies on supports and services outside the scheme, including informal supports (family, friends and neighbours), community supports

(local sporting teams, social and interest groups), and mainstream supports (public transport, health and education), to help people with disability to live ordinary lives (figure 2). If these supports are not available, people with disability could seek NDIS funding to fill the gap, and this could pose a risk to scheme costs.

Figure 2 **A person-centred approach relies on supports beyond the NDIS**



Costs are just one side of the equation

While the focus of this study is on scheme costs and the financial sustainability of the scheme, the Commission examined costs in light of the benefits and impacts of the scheme on the lives of people with disability, and Australians more generally, using a wellbeing framework (figure 3).

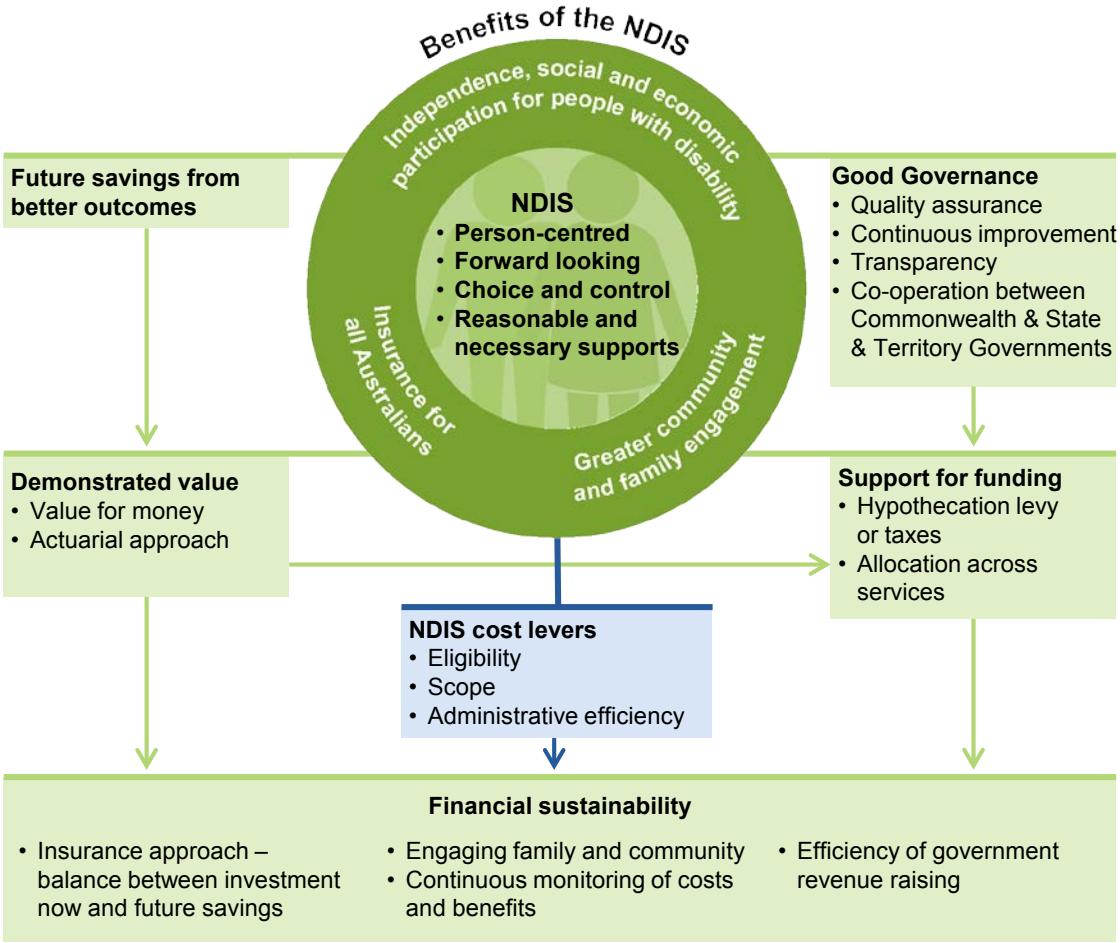
The NDIS was introduced because it has potential to improve the lives of people with disability and the community more generally (by providing insurance for all Australians and lowering future costs of providing disability support). It is therefore essential that the costs to the community are considered in the context of scheme outcomes.

Taxpayers' willingness to fund the NDIS will depend on their perception of value for money, in terms of:

- people with disability experiencing better lives as a result of the scheme
- the scheme making it easier for families and carers to play a supporting role
- the way the scheme invests in people with disability
- the supports that are funded (and the evidence base to support what is funded)

- efficiency gains and cost savings in the disability support system and other government services.

Figure 3 **A wellbeing framework for considering costs and benefits**



While the NDIS is sometimes described as an 'uncapped scheme', the ultimate cap — and test of financial sustainability — is taxpayers' continuing willingness to pay for it. In line with this, the NDIA defines financial sustainability for the NDIS as:

- the scheme is successful on the balance of objective measures and projections of economic [and] social participation and independence, and on participants' views that they are getting enough money to buy enough high-quality goods and services to allow them reasonable access to life opportunities — that is, reasonable and necessary support; and
- contributors think that the cost is and will continue to be affordable, under control, represents value for money and, therefore, remain willing to contribute.

The NDIA's actuarial estimates of long-term costs (which reflect the experience of the scheme and management responses to cost pressures) play an important role in demonstrating to the Australian community that the scheme is sustainable.

Perceptions about the governance arrangements for the NDIS are also important. For example, the community expects planning processes to be in line with the objectives of the scheme and that services meet quality standards. Governments also need to demonstrate that the NDIS funds are dollars well spent, and that funding the scheme is not to the detriment of other important social expenditure (such as health and education).

Financial sustainability of the NDIS also needs to be considered in the context of the efficiency and effectiveness of the NDIA, the readiness of participants and providers, and the integration of the scheme with mainstream and other disability services. Only a system that is integrated and holistic in its focus will bring the benefits that the scheme is expected to deliver.

Modelling costs

In 2011, the Commission estimated that a national disability insurance scheme would cover 411 000 participants and cost $13.6 billion (gross) at maturity. The NDIA's current projections are that the NDIS will cover 475 000 participants and cost $22 billion at full scheme commencement.[1] The NDIA's estimates are broadly consistent with the Commission's 2011 modelling (table 1).

There is an $8.9 billion difference between the Commission's original estimates and the NDIA's current estimates. This is largely the effect of pay rises awarded to social and community services employees by the Fair Work Commission in 2012, accounting for over $6 billion or 71 per cent of the difference. Combined with population changes and the cost of participants aged over 65 years (who entered the scheme when they were under 65 years of age), this brings the estimates to within one per cent of each other (table 1).

Table 1 **Comparing the Commission's and the NDIA's costings**

	Participant numbers	*Scheme costs ($ billions)*
Productivity Commission estimates 2011[a]	**411 250**	**12.82**
Population projections to 2019-20	49 544	1.54
Inflation in disability sector (wages)	..	6.38
Participants aged 65 years and older	15 285	1.09
Updated Productivity Commission estimates 2017	**476 079**	**21.84**
The NDIA's projections for participants 2017[b]	**473 653**	**21.76**
Difference (%)	2 426 (0.5%)	0.08 (0.4%)

[a] Excluding operating costs and offsets associated with the National Injury Insurance Scheme and assumed efficiency dividends. [b] Excluding operating costs ($1.5 billion), offsets associated with the National Injury Insurance Scheme (-$0.7 billion) and assumed efficiency dividends (-$0.3 billion).

[1] While the gross cost of the NDIS is estimated to be $22 billion in 2019-20, the scheme is expected to reduce the funding required for a range of government programs. A review by the Australian Government Actuary in 2011 estimated that these offsets were around $11 billion.

It is too early and the data are too limited for new cost projections

It is still very early days in the NDIS's transition to full scheme. And while the transition experience should inform estimates of full scheme costs, the data have too many limitations to update the prevalence and package cost assumptions. An important limitation is small and unrepresentative trial populations, but approaches to planning and assessments have also changed.

The Commission has not developed new projections of scheme costs for the position paper and will not, given the data limitations, be in a position to do so for the final report. Rather, we have assessed the risks to the financial sustainability of the scheme, including both those within and outside the control of the NDIA. Many of these risks cannot be modelled.

3 An enormous challenge

The NDIS is a major, complex national reform, the largest social reform since the introduction of Medicare. It will:

- involve a shift away from a block-funded welfare model of support, to a fee-for-service market-based approach
- increase funding in the sector from around $8 billion per year to $22 billion in 2019-20
- involve assessing the 'reasonable and necessary' needs of around 475 000 people
- require around 70 000 additional disability support care workers (or around 1 in 5 of all new jobs created in Australia over the transition period)
- substantially improve the wellbeing of people with disability and Australians more generally (if implemented well).

It is therefore no surprise that the NDIS has been described as a 'ground-breaking reform' and a 'once-in-many-generation reform'.

The level of commitment to the NDIS is extraordinary

There is an extraordinary level of commitment to the success and sustainability of the NDIS (and to preserving the core principles of the scheme) shared by governments, people with disability and their families and carers, providers of disability services and disability advocates (box 2). As the Australian Disability Discrimination Commissioner said:

> Yes — the NDIS is big, it is complex, and it changes everything, but it is the change that we need. And when we think about what life might be like for people with disability without the NDIS, I think it becomes clear that it is the change we cannot afford to prevent. … If we want real and lasting change for people with disability, we cannot absolve ourselves of our responsibility to make the NDIS work.

Box 2 **There is overwhelming support for the NDIS**

NSW Council for Intellectual Disability:

> … we have been strong supporters of the development of the NDIS and we continue to see [the] scheme as having a fundamental capacity to improve the lives of people with disability around Australia.

Flourish Australia:

> …. strongly supports the NDIS and the opportunity it provides for greater certainty, choice and control, and economic and social participation for people with disability who require life-long support.

JFA Purple Orange:

> … the NDIS is a major, once-in-many-generations opportunity to invest in the life chances of people living with disability, to achieve a fair go, so that people living with disability take their rightful place as … valued active members of Australian community life and the economy.

National Disability Services:

> The principles on which the NDIS is founded remain compelling and inspiring.

Australian Federation of Disability Organisations:

> We want to begin … by emphasising our unwavering support for the NDIS. AFDO and its members regularly hear from people with disability and their families about the difference the NDIS is making to their lives. People who now have the dignity of appropriate and timely support, the opportunity to be more involved in their communities, the chance to move out of home, the economic freedom of a new job. These are the kinds of differences the NDIS is making.

Anglicare Australia:

> Anglicare Australia strongly believes that the establishment of the NDIS is a major achievement. Our member agencies are already witnessing the transformative power of the scheme for participants, and finding that reconfiguring services to reflect their needs and aspirations is creating opportunities to reimagine and create better outcomes in people's lives.

Health Services Union:

> The HSU has always been a strong supporter of the NDIS and our longstanding position has been that quality disability services depend on a quality workforce.

New South Wales Government:

> The NSW Government is a strong advocate of the National Disability Insurance Scheme (NDIS). The improvement in the lives of people with disability, as outlined by the Productivity Commission (PC) in its 2011 inquiry report into Disability Care and Support, is a goal embraced by NSW.

A highly ambitious rollout schedule

The NDIS was trialled from 2013 in different jurisdictions across Australia in four trial sites (including two whole-of-state age cohort trial sites). Trials commenced in July 2013 in New South Wales, Victoria, South Australia and Tasmania (table 2).

Table 2 **NDIS transition arrangements by jurisdiction**

	Trial period			Transition to full scheme			Full scheme
	2013-14	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20
NSW	Hunter area trial		Early Transition in Nepean Blue Mountains area (children aged 0-17 years)	Transition to full scheme (by region)		Full scheme	
Vic	Barwon area trial			Transition to full scheme (by region)			Full scheme
Qld			Transition to full scheme from July 2016 (by region). Early Transition from January 2016 in Townsville, Charters Towers and Palm Island				Full scheme
SA	Statewide trial (children aged 0-14 years)			Transition to full scheme (by age and region)		Full scheme	
Tas	Statewide trial (people aged 15-24 years)			Transition to full scheme (by age)			Full scheme
NT		Barkly region trial		Transition to full scheme (by region)			Full scheme
ACT[a]		Territorywide trial		Full scheme			
WA[b]		Perth Hills area trial MyWay trial			Transition to locally-administered NDIS		Full scheme

[a] The Bilateral Agreement for the NDIS launch between the Australian Government and the ACT Government notes that from 2016-17 the ACT will be in 'transition to full scheme'. This transition has been categorised as 'full scheme' because all residents who meet the eligibility criteria will have access to the scheme. [b] In February 2017, the Australian Government and Western Australian Government signed a Bilateral Agreement for a nationally consistent, but locally administered, NDIS.

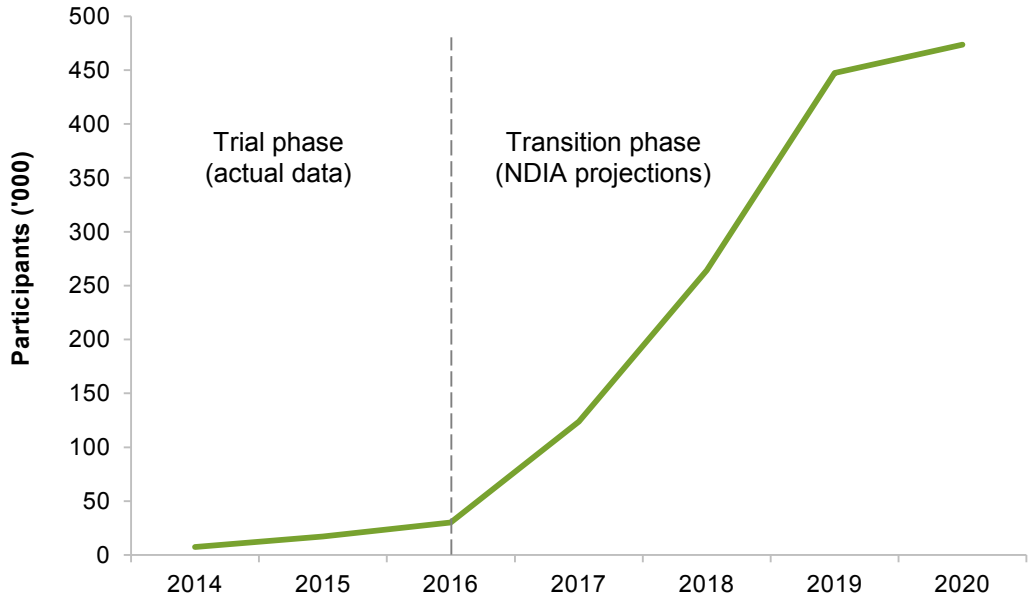
The Bilateral Agreements between the Commonwealth and the States and Territories set out the timeframes, and the estimated number of people who will become participants in the scheme, for the transition to full scheme in each jurisdiction. The transition to the full scheme began in all states and territories in July 2016, with the exception of Western Australia (which will transition from July 2017). The full scheme is scheduled to be rolled out by 2019-20, but some jurisdictions will move to full scheme earlier.

The Commission's 2011 report recommended that the trials start a year later than they did and also that they operate in only two geographic locations. According to the NDIA, the changed timing and breadth of the trial compromised what the NDIA could achieve in the short term and as a consequence, some aspects of the scheme were being built and tested over the trial period. For example, the NDIA started the trial without an assessment tool to determine reasonable and necessary supports, and had to build one over the first three months of operation. And the ICT system used during trial was an interim system which would not scale up to full scheme.

An independent review of the capabilities of the NDIA described the Agency as 'a plane that took off before it had been fully built and is being completed while it is in the air'.

The NDIA has been given an extremely difficult task — the rollout schedule is highly ambitious given the magnitude of the reform. To reach the estimated 475 000 participants at full scheme by 2019-20 (figure 4), the NDIA will need to approve hundreds of plans a day. In the March 2017 quarter, the NDIA approved about 14 000 plans, or roughly 160 plans a day. In 2018-19 (the final year of transition), the NDIA's modelling indicates that about 500 plans a day will need to be approved, while reviewing hundreds more.

Figure 4 **Participant numbers will increase substantially over the next three years[a]**



[a] The projections of scheme participants were prepared by the Scheme Actuary for the NDIA's 2015-16 Annual Financial Sustainability Report using data at 30 June 2016. They do not incorporate actual participant numbers beyond June 2016.

Given the size, speed and complexity of the reform, it is inevitable that there will be transitional issues with the rollout of the NDIS that require careful risk management. It needs to be recognised that the scheme is still in its infancy and it will take time to get things right.

But already there are signs that the rollout schedule is compromising the NDIA's ability to implement the NDIS as intended and putting the financial sustainability of the scheme at risk — and the number of participants entering the scheme is only now just starting to ramp up. At the end of March 2017, around 78 000 participants had approved plans. This is just 82 per cent of the bilateral estimate.

Many of the concerns raised in this study were about the rollout schedule, including concerns around market and provider readiness, the capacity of the NDIA systems to function at full scheme, and the quality of plans (box 3).

The NDIA is aware of the risks of focusing on participant numbers, noting that:

> … bilateral estimates can and do impact upon the way in which the Scheme is delivered. This can put sustainability at risk and impact on the way in which early intervention and investment initiatives are implemented in the short term. It may also have adversely impacted the quality of plans.

The rollout schedule is compromising the integrity of the planning process, and the quality of participant plans. While the NDIA has been set a challenging task of completing high numbers of plans in a short period of time, it is important that it also undertakes the planning process in a way that achieves the objectives of the scheme and financial sustainability. A focus on participant numbers can compromise the depth and quality of the planning process, with the result that some participants are allocated resources without meaningful consultation and are sometimes unable to manage their plans. Quality plans are critical not only for participant outcomes but for containing long-term costs of the scheme (section 6).

The rollout schedule has also meant that parts of the supporting infrastructure that are essential to the objectives of the scheme are not operating as intended. For example, Local Area Coordinators (LACs), who play a key role in delivering information and linking participants to disability services, were supposed to be ‘on the ground’ in rollout areas six months before participants joined the scheme. Some areas were without LACs after they had joined the scheme.

One option to address these concerns is to slow down the timetable for the rollout. Further discussion of this option is in section 11.

Box 3 Risks from the rollout schedule are highlighted

Community Mental Health Australia:

> If the focus purely becomes about signing as many people up as quickly as possible and preventing cost-overruns, then the intent of what the NDIS was actually meant to deliver starts to become lost.

JFA Purple Orange said:

> The NDIS transition arrangements, as set out in the bilateral agreements, mean a tsunami of new participants will be processed into the scheme over the next two years. During this time, any fledgling design features intended to advance what we understand to be the NDIS's underlying values — choice and control, and participation in community life and economy — are at risk, due to the provisions in the various bilateral agreements where a specific volume of people are to enter the NDIS in a specific timeframe and with an associated transfer of specific costs.

Maurice Blackburn Lawyers said:

> We believe the roll-out timeline of the NDIS is highly ambitious and increases the serious risk of inadequate delivery of services to participants. It also poses significant financial risks to the scheme as a whole.

Blind Citizens Australia:

> While we understand that the agency is under intense pressure to meet the targets that have been agreed upon under the bilateral agreements between state and territory governments, meeting these targets should not come at the expense of the basic rights and freedoms of people with disability.

Australian Federation of Disability Organisations:

> The need to bring in a large number of participants into the scheme to meet bilateral targets has during transition led to practices which have not always been consistent the original vision of the scheme.

House with No Steps:

> … the Scheme has aggressive ramp-up targets. These are putting pressure on the NDIA's capacity to develop quality plans for participants. Unfortunately, the need to achieve high growth in participant numbers appears to be outweighing considerations of plan quality and consistency.

Department of Social Services:

> … there are risks arising from the scale and pace of roll-out that has potential to place strain on the NDIA, and on agreed transition timeframes.

Victorian Government:

> Victoria recognises the NDIA has been set the task of completing a very large number of plans in a relatively short period of time and it is important the NDIA perform its planning function adequately. Too great an emphasis on cost containment at this early stage of the NDIS rollout risks undermining the effectiveness of the scheme in meeting the reasonable support needs of participants with adverse implications for longer term costs both to the NDIS and to mainstream services.

4 Key insights from trial and transition data

Costs in the trial phase aligned with expectations

Given the uncertainties around the costings of the scheme before it commenced, an important rationale for trial sites was to inform more reliable estimates of full scheme costs (and for testing and refining the scheme). At the end of the trial phase:

- the number of participants with an approved plan (30 821) was 83 per cent of bilateral estimates (36 307) (there were 35 695 people who had been determined eligible but who did not yet have an approved plan)
- the average annualised package cost was $36 049.

The scheme, at the end of the trial, also came in under budget — there was a surplus of around 1.5 per cent of the funding envelope over the three years. However, this was in large part because not all committed supports were used — in 2015-16, 74 per cent of committed supports were used.

Transition — the latest data

The Commission have data for the first three quarters of transition (July 2016 to March 2017). More data are expected after the release of the position paper.

At the end of March 2017, an additional 63 000 people were eligible for the scheme, taking the total number of participants to 99 092. Around 75 000 participants are currently active (they have not exited the scheme) and have an approved plan. Some insights from the transition data are that:

- autism and intellectual disability are the largest primary disability groups (accounting for almost two-thirds of scheme participants). Psychosocial disability is the next most common disability, accounting for about 6 per cent of scheme participants
- most scheme participants at the end of 2016 were children aged 14 years and under (around 43 000 or 44 per cent of participants). Around 45 per cent of the children in the scheme have autism, while 34 per cent have an intellectual disability (including developmental delay)
- while only 18 per cent of packages approved from 1 July 2016 are more than $100 000, they account for 56 per cent of scheme costs.

Emerging cost pressures

The Commission compared trial and transition data on participant numbers and package costs with the assumptions in the NDIA's modelling to better understand how the scheme

is tracking in terms of costs. Noting the limitations of the data, scheme costs are broadly in line with expectations.

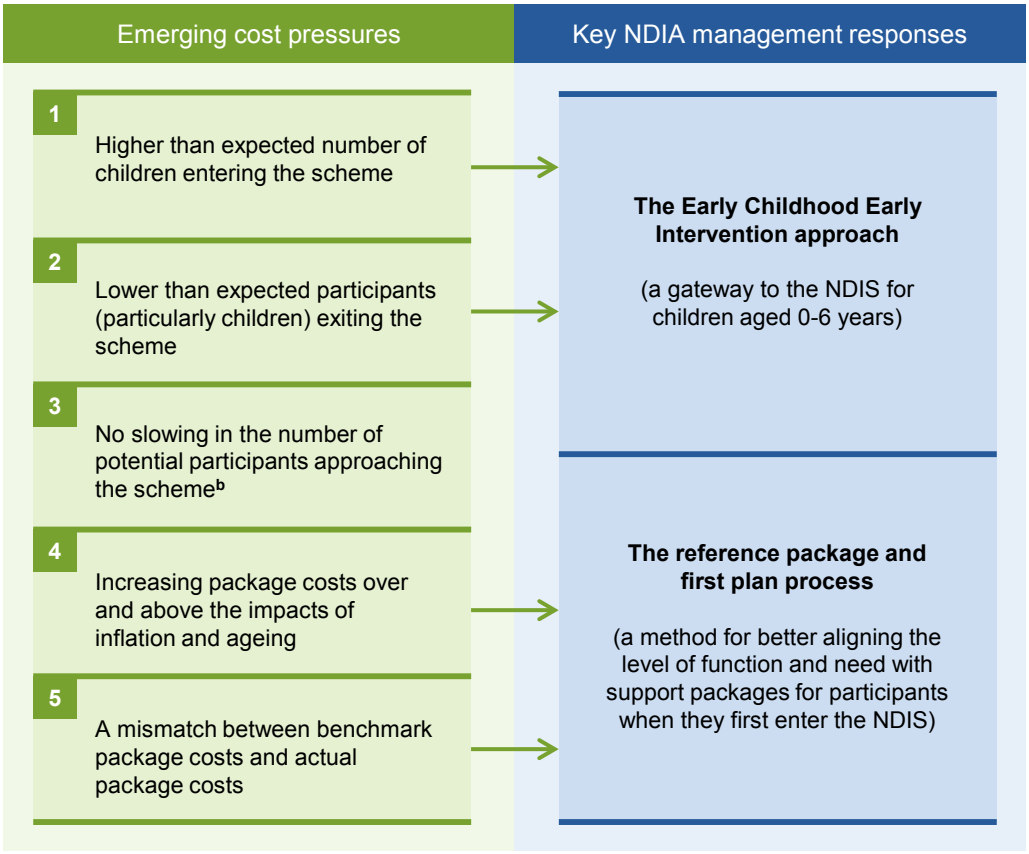
- For most disabilities, participant numbers broadly match the modelling assumptions for all but the largest disability groups — there are more children with autism and intellectual disability than expected.
- Average package costs (for plans effective from 1 July 2016) are higher than the modelling assumptions (after accounting for disability, age and level of function). Breaking this down further:
  - the average package provided to participants with low levels of function is less than expected ($120 000 compared to $150 000)
  - the average package for participants with medium levels of function is higher than the modelling assumptions ($56 000 compared to $41 000)
  - participants with high levels of function are receiving higher packages on average than the modelling assumes ($29 000 compared to $11 000).
- Utilisation rates are lower than expected. Underutilisation is currently offsetting the increase in scheme costs attributable to higher prevalence rates for children and higher than expected package costs.

The NDIA is tasked with ensuring the NDIS is financially sustainable. This involves identifying and managing emerging cost pressures. The NDIA has identified five early cost pressures that need to be managed for the full scheme going forward (figure 5).

- The number of children entering the scheme is higher than expected.
- The number of people approaching the scheme in trial sites that have been operating the longest (since 2013) is higher than would be expected if only people with newly acquired conditions were approaching the scheme.
- The number of participants exiting the scheme has been lower than expected (particularly for children entering under the early intervention requirements).
- Levels of committed support tend to increase as participants move to their second and third plans (over and above the impacts of inflation and ageing).
- There is greater than expected variability in package costs for participants with similar conditions and levels of function (suggesting inconsistencies in planners' decisions).

The NDIA has not updated its baseline cost projections to reflect these cost pressures. But it has put in place initiatives to address these cost pressures, including the Early Childhood Early Intervention (ECEI) approach for children aged 0-6 years (section 5, box 4), and the first plan process to reduce variability in the level of support provided to participants (section 6, box 5). As discussed below, while these initiatives appear appropriate, it is too early to tell whether they will be effective at containing costs.

Figure 5 **The NDIA's responses to emerging cost pressures**[a]



[a] The NDIA's two main responses to emerging cost pressures. The NDIA has also initiated several smaller projects to address emerging cost pressures, such as an analysis of reasonable and necessary costs across the lifespan of participants. Box 4 provides details on the Early Childhood Early Intervention approach and box 5 outlines the first plan process. [b] Potential participants continuing to approach the scheme is not a cost pressure that can easily be addressed by the NDIA.

Benefits are already being realised

Realising the benefits of the scheme is critical for the wellbeing of people with disability and for ensuring that the community continues to be willing to pay for the scheme. However, at this early stage, only some of the benefits are being realised.

The NDIS Outcomes Framework and a National Institute of Labour Studies evaluation of the NDIS provide some insights into the scheme's benefits. Both find that the NDIS has:

- increased supports — more hours of support, a wider range of supports and greater access to equipment — than under the previous system
- on average, improved wellbeing of NDIS participants and their families and carers
- given people more choice and control over their supports
- increased social participation for some scheme participants and their carers.

The Commission also received numerous submissions supporting these findings. As one disability advocate said:

> … I have seen the life changes in people with disability who now have the NDIS funding. They are now accessing community, have a good life and have hope for their futures. The burdens are off the family, some aged carers, and there is job creation. Broken wheelchairs are now being replaced and people who never had wheelchairs, now have and can access the community. I now see happy people.

However, not all people with disability report improved outcomes under the NDIS. The National Institute of Labour Studies evaluation found that:

- some people with disability are experiencing poorer outcomes under the NDIS and receiving fewer services than previously. Often these are people who cannot effectively advocate for themselves, particularly people with psychosocial disability, and those who find it difficult to navigate NDIS processes
- many NDIS participants are experiencing difficulties accessing supports (due to lengthy waiting lists for some providers and types of supports, the absence of local providers and concerns about quality). Also, unmet demand is more common for participants living in rural and remote areas and for older participants
- about 15 per cent of participants feel they have less choice and control, while about one quarter of participants are accessing fewer distinct supports. Qualitative data suggests that those who are unable to navigate the NDIA website to find service providers, and those less able to articulate support needs, are less likely to feel that they have more choice and control.

There has also been a significant fall in participant satisfaction with the scheme since the scheme entered the transition phase — participants reporting that they were satisfied or very satisfied fell from an average of 95 per cent to 85 per cent between 2015-16 and 2016-17 (the first three quarters). This could be linked to the speed of the rollout, and changes to the planning process (discussed below).

The remainder of this overview discusses the longer-term issues that affect financial sustainability and highlights where the major risks lie.

5 Scheme eligibility

The eligibility criteria are the main instrument available to influence how many people will be eligible for individualised support through the NDIS. It is important that these criteria are clear, aligned with the objectives of the scheme, and rigorously upheld.

When the Commission designed the national disability insurance scheme, it recommended that the eligibility for the scheme for individualised supports uphold the following principles:

- individuals should have a disability that is or is likely to be permanent, reflecting the irreversible nature of disabilities

- individuals would meet one of the following conditions:
  - have significantly reduced functioning in self-care, communication, mobility or self-management and require significant ongoing support
  - be in an early intervention group, comprising of individuals for whom there is good evidence that the intervention is safe, significantly improves outcomes and is cost effective
- individuals would meet residence and age requirements.

The eligibility criteria for the NDIS are broadly in line with what the Commission recommended in 2011, with two exceptions:

- the inclusion of supports to undertake activities of *learning or social interaction*
- the inclusion of developmental delay in the early intervention criteria (table 3).

Both these criteria allow more people to qualify for individualised supports under the NDIS than the Commission included when costing the scheme.

Adding learning or social interaction — what effect?

The Commission was unable to assess the effect of adding learning or social interaction to the eligibility criteria, because the NDIA does not collect data on which (or how many) of the six activity domains are relevant to each participant when they enter the NDIS (table 3). Speech Pathology Australia, however, said that their members who are NDIS providers are not providing services to children whose *only* disability relates to learning and literacy.

Collecting data at entry on the domains would provide information on the impact of each part of the eligibility criteria on participant numbers (and therefore scheme costs). Such information would also allow for more granular analysis of who is in the scheme and what their needs are likely to be (which could also be useful to the NDIA in its monitoring and forecasting roles). The NDIA should collect this information.

Adding developmental delay — what effect?

The evidence suggests that providing individualised supports for children with developmental delay can improve outcomes for individuals and reduce costs. It is therefore consistent with the early intervention principles of the scheme.

A review undertaken for the Department of Social Services (DSS) estimated that around 11 600 children with developmental delay or global developmental delay would be eligible for support under the scheme at a cost of $155 million each year. While no definitive data are available to test this estimate, trial site data (which may not be reflective of full scheme prevalence rates) suggest higher prevalence rates than the estimate provided to the DSS.

Table 3 **A summary of the NDIS eligibility requirements**

Age requirements	Residence requirements
Aged under 65	• Australian citizen • Permanent resident • Hold a protected special category visa
And meet either:	
Disability requirements	**Early intervention requirements**
Disability attributable to one or more: • intellectual • cognitive • neurological • sensory • physical impairments; or • an impairment attributable to a psychiatric condition; and	• Has one or more identified intellectual, cognitive, neurological, sensory or physical impairments, and likely to be **permanent**; or • Has one or more identified psychiatric conditions, and likely to be **permanent**; or • Is a child who has developmental delay; and
The impairments are, or are likely to be, **permanent**; and	The early intervention support is likely to benefit the person by **reducing the person's future needs** for supports in relation to disability; and
Impairments substantially reduce **functional capacity** or **psychosocial functioning** to undertake one or more of the following activities: • communication • social interaction • learning • mobility • self-care • self-management.	The early intervention support is likely to benefit the person by: • **mitigating or alleviating** the impact of the person's impairment on their functional capacity • **preventing the deterioration** of such functional capacity • **improving** functional capacity • strengthening the **sustainability of informal supports** available to the person, including through building the capacity of the person's carer.

For children to be eligible for individualised supports, they need to have a delay across multiple domains. This suggests that the eligibility criteria set an appropriately high hurdle. However, assessment of the functional capacity of children in the scheme suggests that the entry pathway may not be sufficiently robust, as 40 per cent of children in the scheme do not have any identified deficits compared to the normal range for their age. This points to a problem with eligibility screening, and underscores the importance of rigorous entry and exit pathways in moderating scheme costs. The development of the ECEI pathway for children to enter the scheme seeks to tighten the entry pathway for children aged 0-6 years (box 4).

Box 4 **Early Childhood Early Intervention (ECEI)**

The ECEI approach is designed to be a 'gateway' to the NDIS for children aged 0 to 6 years. It aims to ensure that only those children who meet the eligibility criteria of the NDIS become participants of the scheme. Under the ECEI approach, families meet with an early childhood intervention service provider to discuss the needs of their child. The provider then identifies appropriate supports for the child and family, and whether the supports should be provided through the NDIS or through mainstream services. As the NDIA put it, 'the ECEI approach aims to ensure children are provided with the right level of support at the right time for the right length of time'.

The ECEI approach is also aimed at ensuring early intervention supports are effective and result in the exits expected in the 0-6 years cohort. The NDIA plots a child's progress against development milestones and supports the child to access mainstream supports when NDIS supports are no longer required.

Effective entry and exit pathways?

Effective entry pathways uphold the eligibility criteria of the NDIS and allow only individuals who meet the criteria to qualify for supports. The two entry pathways for people to receive individualised supports under the NDIS are the ECEI pathway for children aged 0-6 years (box 4), and a more general pathway for people aged 7-65 years.

The ECEI approach was put in place in response to the higher than expected number of children entering the scheme in the trials.[2] The approach is designed so that children in the 0-6 years cohort requiring early intervention supports will have their needs met either through the NDIS or by other support systems.

It is too early to gauge the success of the ECEI in upholding the eligibility criteria of the NDIS and to assess its effectiveness in supporting children who are not eligible for individualised supports. However, given that children receiving early intervention supports are one of the largest participant groups in the scheme, it is critical that the NDIA builds an evidence base on early intervention to inform the types of intervention that are most beneficial and should be funded. The NDIA has developed an evaluation and monitoring framework for the ECEI approach.

Streamlined entry for early intervention

The NDIA maintains a list (List D in the latest NDIA operational guidelines) that allows for streamlined entry into early intervention supports for children who have a condition on this list. List D contains about 130 conditions, including Global Developmental Delay.

2 The NDIA is also developing an early intervention approach for the 7-14 years cohort.

Maintaining such a list represents a trade-off. The appeal of such a list is that it places less onus on families to demonstrate eligibility, reduces the administrative burden on the NDIA and provides a degree of certainty for the families of children with these conditions. However, the list can also affect incentives, and can represent an overly-generous entry gateway if set too expansively. A list can also stifle exits from the scheme. If diagnosis forms the basis of early intervention, a child would remain eligible for early intervention supports so long as their condition is present, even if the expected benefits from early intervention have been realised (or are unlikely to be realised).

The Commission is seeking feedback on the advantages and disadvantages of List D, with a view to determining whether it should continue to be a pathway for children to enter the scheme under the early intervention requirements.

Scheme exits

The NDIA has identified lower than expected exit rates as an early cost pressure. At the end of March 2017, while just under 700 participants had exited the scheme, only 10 per cent were people with early intervention plans. The NDIA should address trends in exit rates that appear inconsistent with scheme objectives.

Psychosocial disability and the NDIS

In 2011, the Commission recommended that people with psychosocial disability be supported through the NDIS. This was on the basis that:

- the day-to-day support needs for people with significant and enduring psychiatric disability are often the same as people who have an intellectual disability or an acquired brain injury
- some important parts of the care requirements of people with psychosocial disability — namely community supports — are best met through the NDIS
- providing supports to people with psychosocial disability through the NDIS provides them with the wider benefits of the scheme, including personalisation of supports to meet the needs of the individual, more choice in what supports are provided, when and by who, and greater access to early intervention supports.

These points remain salient, and lend support to people with psychosocial disability being supported through the NDIS. And, while the Commission heard a range of views about whether the NDIS is the 'right' vehicle to provide support to people with psychosocial disability, the majority of submissions to this study were supportive of its inclusion.

Concerns were also raised about the need for permanency under the NDIS Act being incompatible with the recovery models used in supporting people with psychosocial disability. However, the investment approach to the NDIS and the recovery model of mental health are both about building capacity, and appear to be well aligned.

Scheme participant numbers suggest that people with psychosocial disability are able to demonstrate that their condition is, or is likely to be, permanent. At the end of March 2017, about 5000 people with psychosocial disability received individualised supports through the NDIS. Data also indicated that 81 per cent of people with psychosocial disability who lodged an access request to the NDIS were eligible for the scheme.

The Commission does not support changing the eligibility criteria to relax the definition of permanency and how it relates to psychosocial disability.

Estimating the number of participants with psychosocial disability is difficult because a robust and comprehensive database from which to draw is lacking. However, given that a range of estimates have been prepared by a number of stakeholders and agencies, it would be beneficial for the methodology used to be made fully transparent, so that each could be assessed and considered in relation to projections of numbers of participants with psychosocial disability at full scheme.

Concerns about gaps in support for people with psychosocial disability not eligible for the NDIS are discussed in section 7.

6 Supports and plans

Scope of supports

The NDIS is designed to cover specialist disability supports that are 'reasonable and necessary'. This includes supports that help people with disability to:

- pursue their goals and maximise their independence
- live independently and be included in the community as fully participating citizens
- participate in the community and in employment.

The concept of 'reasonable and necessary supports' is not specifically defined in the NDIS Act, nor does it provide direct guidance on how to determine whether a support is a reasonable and necessary support. There is good reason for this — flexibility around what is reasonable and necessary allows participants to exercise choice and control, and to be innovative about supports.

However, what is 'reasonable and necessary' will ultimately be shaped by court and tribunal decisions over time, having regard to the legislation, rules and operational guidelines. Such decisions will affect what supports are funded and scheme costs. This is one policy lever that is outside the control of the NDIA. The Commission is seeking feedback on whether greater legislative clarity is required around whether and how the test of 'reasonable and necessary' should be applied.

About plans and the planning process

The planning process is about matching scheme participants with support packages. It involves conversations between the participant and the NDIA to ascertain, for each participant: their goals and aspirations, their level of function and an appropriate support package. The NDIS Act requires the development of a plan to, where possible, be individualised, directed by the participant, and maximise participant choice and control.

Good planning processes are essential for the long-term sustainability of the NDIS. Poor planning processes can:

- be unreliable and contribute to underutilisation of supports, undermining the predictability of scheme costs and the ability of governments to plan for the future of the scheme
- mean that participants are allocated supports that are not right for them, with the result that the benefits of the NDIS (such as increased quality of life, greater social and economic participation, and reduced need for other or future supports) are not realised
- result in greater variability in plans and outcomes for participants with similar needs, compromising equity within the scheme
- place greater stress on review processes, adding to the workload of planners and the NDIA.

Planning processes were changed in response to trial experience

In July 2016, the NDIA introduced a 'first plan process' for determining participants' support packages (box 5). The first plan process has resulted in more plans being in line with benchmark costs (compared to the trial period).

The move to transition also saw a shift from face to face to phone planning conversations (although face to face meetings can be requested). This was a decision by the NDIA to allow people to enter the scheme as quickly as possible. The decision was based on trial experience which suggested that people want to join the scheme as soon as they can, and want time to think about their goals, supports and how to use them. The NDIA's approach is that the first planning conversation is the start of a lifetime journey and plans can be adjusted and improved over time.

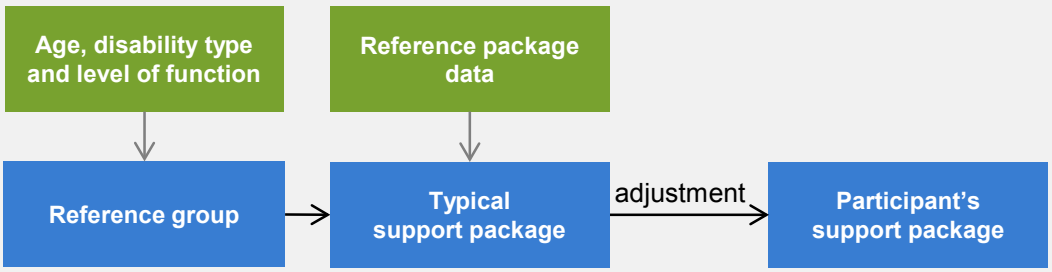
There is a lot of dissatisfaction with phone planning (box 6). The Commission heard (on numerous occasions) that participants had been called with no forewarning of the planning conversation, so the person was not prepared and could not have an advocate present. Others said that they had not known that the conversation they were having with the Agency was a planning conversation until they had received their plan.

A number of participants also said they felt rushed during their planning meetings. As one study participant put it:

> … the transition time pressures appear to have resulted in a reduction in the time available to assist people to resolve their plan; in some cases this is reported to have reduced to a 30 minute phone call. This could not be further removed from the feature of a 'person centred model of care and support' that is meant to distinguish the NDIS from previous approaches.

Box 5 How does the first plan process work in practice?

Participants are first allocated a 'typical support package', based on their reference group (which is determined by their age, disability type and level of function). The typical support package may include funding across the following eight core domains: daily activities; social participation; consumables; transport; home modifications; assistive technology; capacity building; and support coordination.



For each participant, the level of funding is adjusted according to the participant's circumstances. This is done using a questionnaire, which asks the participant about each of the domains, including what supports they already have in place, and whether these are sufficient and sustainable. For example, where it is reasonable that sustainable informal, community or mainstream supports continue to assist the participant, or where the participant believes that other informal, community or mainstream supports may provide a better outcome, funding is adjusted in the participant's support package.

The speed of transition has placed a lot of pressure on the NDIA to finalise plans quickly and phone planning conversations are seen as part of the solution. The NDIA said:

> The current process is designed to balance the need to gather sufficient information for a decision-maker to make a valid decision under the NDIS legislation, with making the process non-intrusive and convenient for the participant.

An individualised approach to planning is a key feature of the NDIS and sufficient time is required to match participants with the supports that are right for them. Phone planning conversations can mean that planners do not 'get the full picture'. For example, the living environment of participants may not be adequately reviewed (which means issues such as accessibility, safety and appropriate assistive technology can be difficult to identify).

Phone planning conversations are not appropriate for some participants, including some participants with particular accessibility requirements, mental illness, cognitive impairment and neurodegenerative diseases or people of culturally and linguistically diverse backgrounds. However, they may be adequate for others, particularly if there has been adequate pre-planning.

Box 6 Dissatisfaction with phone planning

Social Support & Precarious Workforce Research Discussion Group:

> … some participants are not fully aware that the phone conversation occurring with the NDIS staff member is actually their planning process occurring. This confusion is also evident in the NDIS marketing of phone-planning as a 'planning conversation', where the suggestion is you will 'talk-about' the plan whereas the reality is that it is a full and structured assessment and plan procedure.

The Disability Services Commissioner:

> Planners are not providing clear and accessible information about the planning process including when and how planning will take place. A sister of a participant said that someone from NDIA had rang her while she was in the car. They advised that they were 'only collecting answers' and it would 'only take a minute'. Following that conversation, her sister received a plan for approval from the NDIA, with less funds than she had previously received.

Alzheimer's Australia:

> Annie called the Parkinson's 1800 support line as she worried about an over the phone NDIS planning session that had taken place earlier that day. Annie's volume and quality of speech has been impaired due to Parkinson's and she also requires longer to respond to questions. She felt rushed and because her response is delayed she felt that the assessor didn't get a clear indication of her needs. Annie and a Parkinson's Nurse Specialist were able to take the time [to] put information together in order to apply for a review for Annie's plan.

Ethnic Communities' Council of Victoria:

> … anecdotal evidence from advocates and providers in the North Eastern Melbourne Region indicates that some participants are not being adequately informed about the purpose of phone contact by the NDIA or their LAC. These participants are having plans being completed without realising that they are engaging in the process or providing informed consent.

Blind Citizens Australia:

> [Phone planning] severely compromises the ability of people who are blind or vision impaired to demonstrate the difficulties they may face with completing tasks like reading, navigating the environment or household chores.

But the Commission considers that the pre-planning phase of the planning process has not received the attention that it requires and many participants are ill-prepared for planning conversations (which is affecting the quality of plans). The NDIA acknowledges that there has been some dissatisfaction with the way the planning process has been operating and because of the speed of the transition, it was not able to engage LAC partners in time to provide participant and community development during the pre-planning stages (and this has made the first plan process more difficult to implement).

A greater focus on pre-planning should mean that phone planning conversations will be suitable for a larger pool of participants. LACs need to be in place six months in advance in the areas in transition to assist participants with pre-planning. The Commission considers this to be a better (and likely less costly) option than trying to 'fix' plans twelve months after they are first put in place. It will also mean that participants are not only in the scheme, but are also more likely to be exercising choice and control (and this is more likely to induce a provider response).

Participants need to understand the planning process

The planning process has changed a lot since the NDIS commenced in 2013. As with all insurance-based schemes, the tools and processes for handling claims and assessing entitlements are a matter of ongoing refinement. This is necessary to ensure that the insurance scheme remains 'on track' and is viable in the long term. Dynamic processes are also important to allow the scheme to adapt to changing circumstances or incorporate information that becomes available over time.

In light of this, it is important that stakeholders can access accurate and up-to-date information about planning processes. Clear messaging about how and why things are changing is also important to maintain the credibility of evolving planning practices.

At present, the planning process is complex and confusing, and often lacks clarity and transparency. Study participants found it difficult to access information about what assessment tools the NDIA uses (including tools used for measuring level of function), and many were unsure or unaware of how the first plan process operated. In addition, limited information is publicly available to help scheme participants and their families, carers and advocates to navigate the planning system. Scheme participants are often not aware of their rights and options, such as their entitlement to request a face-to-face meeting, or have an advocate present during the planning meeting.

For many scheme participants, pre-planning support can assist them in navigating a confusing and complex system. But demand for pre-planning support services is partly driven by how accessible and complex planning processes are. There is considerable scope for the NDIA to improve transparency and clarity around planning processes. This includes providing clear and up-to-date information about what to expect during the planning conversation, when it will occur, and how the information gathered during that conversation will be used.

Planners need more disability knowledge

Planners' limited disability knowledge is an issue of real concern (box 7). Many advocacy groups said that planners do not have sufficient knowledge of particular disabilities or the impact that particular conditions have on people's lives, and they often did not know what supports would be most effective for the participant's disability. Alzheimer's Australia, for example, reported that a person with Multiple Sclerosis (MS) was asked by the LAC at a planning meeting 'How long will MS last?'

Box 7 Concerns about planners' and LACs' lack of knowledge about disabilities

MND Australia:

> LAC's do not have the expertise to support people with [motor neurone disease]. … They have no understanding of MND and the disability it creates. They attempt to plan via a telephone conversation, when speech and communication can be one of the early losses created by MND.

Alzheimer's Australia:

> Peter, the carer of a woman with younger onset dementia, felt unprepared when he and his wife attended their first NDIS planning session. … The NDIS planner had no understanding of dementia and the needs of people living with dementia and as a result the planning session focused on physical needs and solutions. As a result their first NDIS plan provided funded supports totalling $600 … Feedback from people with progressive neurodegenerative diseases has revealed that Local Area Coordinators (LACs) have also shown insufficient knowledge of their disease, the impact of that condition on their lives, the most effective service interventions and the degenerative and fatal nature of their disease.

Amaze:

> We are also concerned that participants appear to be receiving very inconsistent and at times, misleading advice, from planners and NDIA staff. The NDIA must support planners with clear policy and guidelines to provide consistent advice to participants about the planning process, criteria for supports and how plans may be implemented … Amaze's 2017 survey found: 65% of respondents rated their planner's knowledge and understanding of autism as none to moderate a level (with the remainder rating the planner's knowledge as high). … given 30% of participants identify autism as their primary diagnosis, a high level of ongoing training in autism will be a necessity to developing and maintaining their capacity to reliably develop plans.

New South Wales Government:

> … planner knowledge and capability is highly varied, as is their interpretation of reasonable and necessary supports and understanding of interim working arrangement with mainstream services. Approved supports are less likely to be based on a participant's needs and more on a planner's knowledge of the disability and / or how effectively the participant or their carer advocate for certain supports.

Planners should, at a minimum, have a general understanding about different types of disability. The Commission recommends specialised planning teams for some types of disability, such as psychosocial disability.

An alternative (or complementary) approach would involve leveraging expertise from within the industry, and getting specialist disability organisations or service providers more involved in the planning process. While this could give rise to potential conflicts of interest, these can be managed or mitigated by ensuring that such organisations have an advisory role, with final decision-making powers being exercised by an impartial planner. This approach would also mean that the NDIA would not need to compete with others in an already thin market to recruit planners with specialist qualifications or experience.

7 Boundaries and interfaces — the NDIS and services outside the scheme

People with disability, their families and carers rely on a wide range of services — including mainstream services, specialist disability services and community supports. For the NDIS to work efficiently and effectively, the interface of the scheme with these other services on which people rely must be as seamless as possible.

While the level of funding provided to the NDIS recognised that the aggregate level of funding available to people with disability was inadequate, it is also the case that the NDIS was not expected to fill *all* the service gaps that predated the scheme. The responsibility to provide services to people with disability remains a shared responsibility between all levels of government.

The interface between supports for people with disability will take time to determine at the coalface, but until those interfaces and the associated boundaries are settled it is important that governments do not withdraw from services too quickly, as any gaps that emerge will place added burdens on people with disability and their families. As the interface issues become more defined, it is essential to understand and manage the incentives that are set up where boundaries exist. Most critically, it is important that people with disability do not see the NDIS as an oasis of support, surrounded by a desert, where little or nothing is available. Should such a dynamic develop, the financial pressures on the NDIS could be unsustainable, particularly if people feel the need to test their ability to qualify for the scheme, or remain in the scheme for as long as possible, for fear of not gaining access again should the need arise.

This contrasts to the more sustainable situation where supports within the NDIS are well tailored, so that those with high needs will receive substantially more than those with low needs. The gap between participants with the lowest needs, and hence with the lowest level of supports, and those outside the scheme, should be such that there is not a large difference between the two. In such a system, people will not have an incentive to enter the scheme as their needs will be adequately met outside it, and those inside the scheme who are assisted sufficiently to no longer need individualised supports will have little incentive to stay in the scheme longer than necessary.

Clearly there is much detail yet to be worked through. Nevertheless, establishing clear and robust boundaries (and appropriately tailored supports) is an essential element to the fiscal sustainability of the NDIS, and for the surrounding network of supports. When people are accessing the services they need, the system as a whole should be providing supports at the most efficient and cost effective level.

Linking people to the right services

The Commission's 2011 report recommended a bridging and capacity building service for any person with, or affected by, a disability. The ILC program is a key component of the NDIS and has been set up to provide information, linkages and referrals to people with disability, their families and carers, with the appropriate community and mainstream supports (box 8). The focus of ILC is on community inclusion.

ILC will be important for scheme sustainability because it is expected to reduce reliance on NDIS funded support and costs over time, by reducing the demand for individualised packages and the need for supports within funded packages, as well as making supports more effective at helping people achieve their goals. Therefore, it is important that ILC is adequately funded.

ILC is still to be implemented and the funding for ILC will gradually increase over transition (from $33 million in 2016-17 to $131 million in 2019-20). The timing of ILC funding (starting with a small budget that increases over time) has prevented the NDIA investing in ILC activities and the rollout of initiatives that would allow the infrastructure of a national ILC framework. Withdrawal of existing ILC-type activities by State and Territory Governments may also have affected the supports available.

Box 8 **What role for ILC?**

In July 2015, COAG members endorsed the ILC Policy Framework. The framework describes five streams to achieve the objectives of ILC.

- Information, Linkages and Referrals — connect people with disability, their families and carers with appropriate disability, community and mainstream supports.
- Capacity building for mainstream services — ensure people with disability connect with and access mainstream supports.
- Community awareness and capacity building — support organisations (such as not-for-profit organisations, local councils, businesses) and communities to be inclusive of people with disability, and understand the needs of families and carers.
- Individual capacity building — foster the principle of choice and control, improving outcomes for people with disability, their families and carers.
- Local Area Coordination (LAC) — the development of relationships between the NDIS; people with disability; their families and carers; and the local community. The LAC's role connects across each of the streams of ILC, which include information and linkages and individual capacity building, as well as working with mainstream services and communities to better enable access and participation. Twenty per cent of LACs annual funding is for ILC activities.

It is a false economy to have too few resources for ILC activities in the transition period when it is critical to have structures in place to ensure that people eligible for the NDIS can access the scheme, and that those who are not eligible can access supports and services outside the NDIS.

Although directing additional funds to ILC in transition could crowd out state and territory 'ILC-like' activities, the grants process by which organisations receive ILC funding means that these activities can be targeted to where they are most needed. There may also be a risk of duplicating services, but the risk of service gaps appears much more likely under current arrangements, particularly as determining precisely what ILC should cover is unclear at the operational level.

It is the Commission's view that ILC funding should be increased to the full scheme amount for each year during the transition to allow for an accelerated national rollout of ILC activities. The additional funding should come from the NDIA's program delivery budget.

The effectiveness of the ILC program in improving the outcomes for people with disability and its impact on the sustainability of the NDIS should be reviewed as part of the 2023 review of NDIS costs when data on ILC activities is available. In the interim, there should be much greater transparency about the specific programs that are being funded as ILC activities by each jurisdiction over the transition and at full scheme. The ILC budget should be maintained at a minimum of the full scheme amount each year until results from this review are available.

Interface with mainstream services is not clear at an operational level

The Australian Government has entered into Bilateral Agreements with State and Territory Governments to delineate the types of services to be provided and funded by the NDIS and mainstream services. Schedule 1 of the *National Disability Insurance Scheme Rules (Supports for Participants) 2013* (Cwlth) sets out the rules to determine whether the scheme or another system is more appropriate to fund the specific supports for individuals.

COAG has accountability for the NDIS and the *National Disability Strategy,* and through its Disability Reform Council (DRC), receives reports and advice on progress and risks. While the principles agreed to by COAG on the boundaries between the NDIS and mainstream services are relatively clear, greater clarity is required at the operational level.

The boundary issues are yet to be tested. However, the NDIA reports some instances of possible cost-shifting, scope creep and service gaps, including:

- providers trying to extend the amount of therapeutic (health) interventions through use of NDIS funding
- reports that mainstream services are refusing entry to people who are likely to be eligible for the NDIS
- issues around a lack of accessible public transport options, particularly in regional, rural and remote areas, which means NDIS participants seek transport funding through the NDIS despite having the capacity to travel independently.

The current arrangements under the *National Disability Strategy* should be strengthened to include more detail around boundaries (based on challenges faced when seeking to operationalise boundaries), and greater accountability. This could be achieved through review points of National Agreements and National Partnership Agreements under the Federal Financial Relations Intergovernmental Agreements by setting out specific commitments, key performance targets and outcomes. As the DSS said:

> Translating the National Disability Strategy into tangible results for people with disability, their families and carers is a major factor in successful implementation of the NDIS.

Adding a standing item to the agenda of each COAG council that is responsible for any services which interface with the NDIS to discuss any gaps in service provision would also help build clarity around what services governments will provide and ensure ongoing monitoring and solutions for potential future gaps.

Concerns that some people with disability may be left without services

Many are concerned that, as disability support programs are rolled into the NDIS, people using these services (including those not eligible for the NDIS) may no longer receive continuity in support. This is a key risk to the financial sustainability of the NDIS — and one that the NDIA has little control over.

Mental health services are an area of particular concern. The National Mental Health Commission's report on Mental Health Programs and Services estimated that about 700 000 Australians experience a severe mental illness in any one year. However, according to the NDIA, only around 64 000 people with psychosocial disability are expected to be eligible for individual packages in the NDIS.

Clearly, there needs to be support for people with mental health illnesses outside of the scheme — a responsibility that remains (largely) with State and Territory Governments. However, governments have been withdrawing their funding for a number of mental health support programs in their jurisdictions and using this funding to offset part of their contribution to the NDIS. At this stage, it is unclear what supports will be available for people with a mental illness who do not meet the NDIS eligibility criteria and this should be clarified as a matter of urgency.

The implications of this are significant. Not only is this uncertainty distressing for those with mental illness, any gap in support would place an additional call on the generosity of informal support. Gaps could place another pressure on the financial sustainability of the NDIS should it encourage scope creep, or force those who are unlikely to meet the eligibility criteria to test their access for fear of having few supports should they not qualify for the scheme. Mental health and psychosocial disability have been made a key priority of the DRC, but more clarity is required.

While the Australian and State and Territory Governments have agreed to provide continuity of support for disability services outside the NDIS, in practice there is confusion

and uncertainty about what services will continue to be provided and/or funded. Governments need to be clearer about how they will approach continuity of care, and in particular about what disability services they will continue to provide for people who are not eligible for the NDIS.

Gaps in disability services need to be quickly identified (possibly with the assistance of ILC and LACs) and managed, to ensure the sustainability of the overall scheme. The NDIA should report, as part of the quarterly COAG DRC report, on boundary issues. There should also be mandatory public reporting by all governments on the number of people covered by disability programs pre- and post-NDIS, and it should cover all disability services — that is, those within and outside the responsibility of the NDIS.

The National Injury Insurance Scheme

In 2011, the Commission recommended a National Injury Insurance Scheme (NIIS) that would operate in parallel to the NDIS. The scheme was to cover the care costs of people who acquired severe disabilities through catastrophic accidents. The Commission also recommended that the NIIS be in full operation before the full rollout of the NDIS.

The NIIS is only partially implemented, with the motor vehicle and workplace accident streams effectively operating, but the medical and general accident streams still to be implemented. This means that some people who would be expected to have their needs met through NIIS will instead need to have them met by the NDIS.

In principle, states and territories should bear the consequential NDIS costs if the NIIS remains only partially implemented for an extended period. The Commission is seeking feedback on a mechanism to ensure that the States and Territories bear the cost of NDIS participants who were intended to be covered by the NIIS.

8 Market readiness

The market-based approach of the NDIS means that there will be significant changes in the way that supports are demanded by and provided to, participants. This disruption of the disability services market is designed to maximise the choice and control of participants, while also providing incentives to providers to efficiently and effectively deliver the supports that participants want and need (table 4).

While efficiencies are likely to be driven by the scheme, the increase in funding and considerable unmet need in the disability support sector means that the number of workers and providers will need to grow quickly over the transition period. For example, the NDIS workforce will need to more than double from 2014-15 to 2019-20, and the number of NDIS providers will need to increase by between four- and ten-fold.

Table 4 **Intended effects of the NDIS in the disability services market**

Features of Disability Services Market pre-NDIS	*Features of a Mature Disability Services Market*
• Largely 'block funded', with funding provided in advance of service delivery and little freedom to innovate.[a]	• Predominantly fee-for-service paid on invoice. In principle, prices for services are set by the competitive market, and there is innovation by service providers seeking to attract and retain consumers.
• Services often limited and priorities for families in immediate crisis, rather than for early intervention. Consumers have little control over the services they receive and limited choice of provider.	• Funding to meet the reasonable and necessary support needs of each NDIS participant. Consumers have choice and control regarding the services received and providers used.
• The primary relationship is between the service provider and the funder, with consumers often described as 'passive' recipients of services.	• The primary relationship is between the consumer and service provider. Intermediaries and access to information about provider quality, performance and pricing help consumers exercise choice.
• Providers are subject to various statutory provisions (at all levels of government) regarding quality. The system is complex, difficult to navigate and not well integrated nationally.	• Compliance with a national quality framework. A nationally consistent and navigable system.
• High transaction costs for both consumers and service providers.	• Lower transaction costs for consumers and service providers. There is adequate depth and resilience in the market to underpin financial sustainability.

[a] Block funding refers to the process where governments purchase a 'block' of services from a provider, which is to be delivered to clients who meet certain criteria, or are referred to those providers as part of an individualised plan.

As the success of the NDIS relies on the timely provision of the right supports to participants, the readiness of the market will affect the trend in costs during transition and beyond. The following sections look at the readiness of disability support providers, the workforce, and participants.

Providers face challenges to be ready for the NDIS

To meet the needs of NDIS participants, there needs to be an increase in the quantity, quality, range and responsiveness of disability supports supplied. But as noted by House With No Steps, the disability support market is not a typical market.

> The disability support 'market' is not a normal or 'perfect' market in classical economic terms. It is about providing a range of customised supports, human and technological, paid and unpaid, to meet complex and often poorly-defined human needs and wants. Outcomes are often hard to measure and report. Information is unbalanced. Regional, rural and remote markets are 'thin'. The 'buyers' of services and their local situations are diverse and heterogeneous, not homogeneous. Many are vulnerable.

In making the transition to a market-based system for disability support services, providers are facing the prospect of workforce shortages and coming to grips with operating in a

market that will, for some time, be characterised by price caps. The best ways to service thin markets will also need to be considered in the new environment.

Prices are important for market development and participant outcomes

In a mature market, the choice and control that participants exercise will increasingly drive the price of disability supports. In turn, these prices will drive providers to supply the supports that participants most value, and encourage competition and innovation among providers to efficiently deliver those supports. Allowing the market to determine the price of supports is an important tenet of the NDIS, as it will contribute to both participant outcomes and the financial sustainability of the scheme.

However, prices are currently regulated (box 9). The NDIA currently sets maximum prices ('price caps') for many of the supports provided by NDIA-registered providers to:

- ensure value for money for participants — as the price of supports may be bid up too quickly before the sector grows sufficiently to meet the increased demand
- encourage the market supply of disability supports.

Box 9 Why regulate the price of disability supports?

Governments have historically regulated the price of human services, including disability care and support services, on the grounds of equity and efficiency. Without appropriate price regulation, the provision and use of disability services may be below socially optimal levels for a number of reasons, including abuse of market power arising from a lack of competition.

The simplest example is that there may be too few providers in a market for there to be competition. This is a real risk in the market for disability supports. For example, early data indicate a market concentration of more than 80 per cent in some disability service sub-markets. If prices are not regulated, this may result in limited access to services for some disadvantaged groups over the transition period.

This was recognised by the Commission in 2011, who recommended that an early — but temporary — task for the NDIA was to set efficient prices to allow providers to recover the costs of service provision (including adequate returns for capital investment), and in turn, ensure the supply of disability supports. But price regulation should not persist unnecessarily, have excessive scope, nor shape the market — such as by benefiting some providers or participants over others.

In practice, the NDIA must balance these two objectives. Setting prices too high may induce greater supply in the market, but reduce the purchasing power of participants. Setting prices too low may ensure lower costs, but may lead to shortages of particular supports. Striking the right balance is difficult.

Some existing providers — who would benefit from an increase in price caps — argued that some price caps are too low to provide quality supports. In turn, the NDIA stated that existing providers — many of whom relied on block funding previously — may be finding

it difficult to adjust to the fee-for-service model. Given that the NDIA's most recent price review has only just concluded (with new prices to take effect on 1 July 2017), the Commission has made no findings or recommendations about the adequacy of those prices.

However, there is a potential conflict of interest with the NDIA setting prices and also being responsible for the financial sustainability of the scheme. This is a structural issue in the design of the scheme that needs to be addressed, as the mere perception of a conflict is sufficient to disrupt the transition to price deregulation.

Mindful of the immediate and significant challenges being managed by the NDIA, the Commission proposes moving towards the deregulation of prices in three stages. The first stage is to immediately introduce an independent price monitor with responsibilities including to:

- examine how the market is responding to prices set by the NDIA
- review the NDIA's price caps based on the available evidence, including comparing NDIA's price caps to other care sectors (such as aged care)
- report publicly on its assessment of the NDIA's price controls with regard to market development and participant outcomes.

The independent price monitor would improve transparency around how price caps are set, and in turn, lead to greater accountability and thereby confidence to participants, providers and the wider community. It should be put in place immediately to serve as a 'check and balance' on the NDIA's pricing over the crucial transition period.

The second stage is to shift the NDIA's price-setting powers to a regulator that is an independent statutory authority — an approach consistent with the evolution of other markets for consumer-directed care, such as the aged care sector. Such a move would allow the NDIA to focus on its core responsibilities of delivering and administering the NDIS, remove the potential conflict of interest, and provide ongoing independence and transparency of price regulation.

The body tasked with price regulation (including the NDIA while it remains the price regulator) should, among other things:

- collect data and publicly report on providers' characteristics and costs
- communicate with disability support providers, participants and the NDIA to transparently set prices at regular intervals, with sufficient time for providers to phase in price changes
- periodically review its price model for transitional and efficient prices in a transparent and comprehensive manner
- send more granular and targeted price signals — that is, provide prices by supports at the state and territory level, with an expectation that price signals could be set at a more disaggregated regional level where possible

- assess and recommend — on the basis of transparent consultation and evidence — when prices for particular NDIS supports in each region should be deregulated, and evaluate whether there remains a need for price controls. To enable efficiencies to be driven by the market wherever possible, the price regulator should presume that it is appropriate for prices to be deregulated — that is, to only have price controls when there is clear evidence that unregulated prices are likely to lead to inflation that would harm participants.

At this time, the Commission envisions that the independent price monitor would be best placed to take over these pricing powers, as it would have developed the knowledge and expertise necessary to understand the disability support market.

The third and final stage of deregulation occurs when the price of a given disability support has been deregulated, but is still subject to subsequent monitoring. The independent price monitor would maintain an ongoing watch on pricing, collect data, and publicly report on emerging market issues that affect the purchasing power of scheme participants.

A key question is when the NDIA's pricing powers should be transferred to an independent price regulator. There appears to be broad consensus among many (including the NDIA, the DSS and the Australian National Audit Office) that price controls are likely to be needed for the foreseeable future. Given the potential conflict of interest that the NDIA faces in setting prices, the need for price regulation to persist over coming years, and the imminent significant increase in participants, the Commission's view is that the price regulation powers should be transferred to the independent body by 1 July 2019.

Thin markets need more attention

When creating a new market for disability supports, there is a risk that, in some areas, or for some types of supports, the market (the number of providers or participants) will be too small to support the competitive provision of services ('thin market'). Thin markets are not new — they have been, and will continue to be, a persistent feature of the disability sector, even under the NDIS.

In the absence of government intervention, there may be greater shortages, less competition, and poorer outcomes for participants in thin markets. Participants at most risk are those who:

- live in outer regional, remote or very remote areas
- have complex, specialised or high intensity needs, or very challenging behaviours
- are from culturally and linguistically diverse backgrounds
- are Aboriginal and Torres Strait Islander Australians
- have an acute and immediate need (crisis care and accommodation).

A more considered and timely approach is needed to address access issues in thin markets. More flexible funding, service delivery and other measures tailored to the specific circumstances are needed. Block-funding may continue to play a role, as well as provider of last resort arrangements. Regardless of the approach chosen, there is a need for: transparent reporting and evaluation of thin market arrangements; strong market stewardship; and collaboration between the Commonwealth and the State and Territory Governments.

The Commission is seeking feedback on when particular measures should be used to provide services in thin markets, when provider of last resort arrangements should be used, and any other information on ways to address thin markets.

The workforce is not growing fast enough

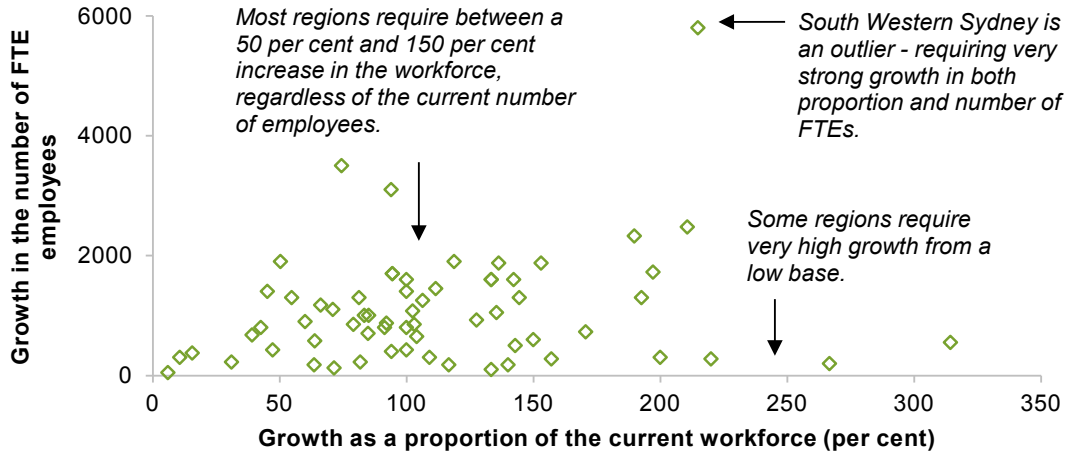
As the NDIS provides more individualised supports for people with disability, the workforce needed to provide those supports will not only need to increase, but also become more diverse. While precise estimates of the size of the necessary workforce differ, there is broad consensus that the number of full-time equivalent positions will need to roughly double over the three year transition period. At a more local level, some regions will need to expand their workforce only marginally, while others will need to more than double (figure 6).

Three policy changes are recommended to mitigate the potential workforce shortage over the short term:

- Meeting the desires of many existing workers — who are more qualified and experienced, and usually work part-time — to work additional hours. While in some cases this may not expand the *effective* workforce (especially given that many participants need care at particular hours of the day), this approach will provide more scope for 'on-the-job' training and mentoring of new staff to expand the overall workforce more quickly.
- Temporarily relaxing the restrictions on NDIA payments to informal carers to encourage them to provide more care over the transition period. This involves removing the restriction that paid informal carers must not live at the same residence as the participant, which is an obstacle to providing care for those in rural and remote areas. Such payments will need to be monitored closely, and their scope reduced as the workforce develops.
- Allowing for skilled migration where residual shortages remain persistent — especially in the case where allied health professionals may be lacking in particular regions. It remains to be seen how recently announced changes to skilled migration visas will affect labour supply for the NDIS.

Figure 6 **Variation in growth required in different regions[a]**

Each dot represents the growth in the amount of full-time equivalent (FTE) employees needed relative to the current situation, both in terms of the number and proportion, between 2015-16 and 2019-20.



[a] The NDIA's market position statements provide 'low and high' estimates for the number of FTE disability workers at present and what will be needed in the future. To derive these estimates for growth, the midpoints of each range are used. No data available for Western Australia. Regions are areas consisting of several local government areas.

Building the workforce is a long-term exercise

While these measures will help to address workforce shortages in the transition period, more attention also needs to be paid to the longer-term development of the workforce.

The responsibility for workforce development is currently shared jointly between the DSS and the NDIA — with the former having 'oversight' of workforce development and the NDIA allocated the task of 'market steward'. The COAG DRC also plays a role in workforce development issues, along with the relevant State and Territory Government departments.

The fragmented landscape of roles and responsibilities is understandable given the breadth and reach of the scheme, and the speed of implementation. The risk is that a fragmented workforce policy may lead to duplication or unnecessary programs at a time when the scheme can least afford it.

The Commission considers that a 'big tent' approach to workforce development remains appropriate, but that the roles and responsibilities of different parties should be clarified further and made public.

- State and Territory governments should have more responsibility for workforce development issues over the transition period, as they have the best experience of

where there has been historically unmet need and which approaches may be best suited to solve such issues in particular jurisdictions.

- The Australian Government should retain oversight of the scheme and focus on areas such as tertiary education and immigration, and how increased demand affects and interacts with other caring sectors, in particular aged care.
- The NDIA is best placed to provide more information to Australian Governments in the form of actuarial and scheme data collected to provide more granular detail on where supply gaps are emerging, or likely to emerge.
- Providers should also have a means to have a greater say in emerging workforce policy issues, such as where the incentives of the scheme may interact with other laws and regulations, like minimum standards, conditions of State and Commonwealth awards, and training and development.

Over the long term, the workforce development responsibilities of State and Territory Governments will diminish as the NDIS fully rolls out and supplants their existing disability support programs. However, State and Territory Governments should remain 'in the tent' when it comes to workforce policymaking given the interaction between the NDIS and other mainstream services.

Building the evidence base is also important

Existing data on the size and scope of disability care workers and the organisations they are employed by are poor, and not commensurate with the importance of the NDIS. This was acknowledged by many study participants, including the DSS (the agency currently tasked with market development oversight), who said that 'a significant limitation to assessing the NDIS market readiness is the availability of market and workforce data'.

Given the size of the scheme, and its importance to participants, the NDIS needs an evidence base about the providers and workforce who deliver supports. To remedy this deficiency, the Australian Government should fund the collection of more fit-for-purpose data by the Australian Bureau of Statistics and the university sector.

Participants need help to make the most of the NDIS

The NDIS is about giving participants more choice and control over their supports. While some participants will be ready to manage and work with the NDIS to implement their plans, others will be less so, and may find it difficult to get the most out of the scheme. This in turn will reduce the overall benefits and financial sustainability of the scheme.

How ready participants are to make the most of their plan will depend on a number of factors, including: an individual's capacity; their network of informal carers and peers; the assistance provided under the NDIS; how ready the market is to provide supports; and the

complexity of the scheme. As participants spend more time in the NDIS, there will also be some degree of 'learning by doing'.

However, some scheme participants are finding the NDIS hard to understand and interact with, particularly because the scheme is a new way of allocating and supplying disability supports. Some transitional issues are also making it harder for participants.

The NDIS provides some assistance to participants to implement their plans, including through support coordination (the key means to bolster the readiness of participants with complex needs). The Commission is seeking feedback on possible improvements to support coordination and complementary actions that may make support coordination more efficient.

Other groups can also help participants navigate the NDIS and access the supports that they need, such as:

- peer support groups and disability support organisations, who can provide participants and their families with information on how best to find and secure disability supports
- advocacy groups, who may be able to help participants find supports. They can also provide systemic feedback to the NDIA and Governments about the difficulties that participants may face in accessing supports within their plans.
- intermediaries, who can provide tailored supports to participants, including helping to pay providers and hiring workers.

Each of these groups play an important role in helping participants and their families to be ready for the NDIS. Intermediaries, in particular, can assist those who may struggle to deal with the administrative burden of managing their own affairs (while allowing participants to retain choice and control), and reduce scheme costs by aggregating participants' purchases of common supports. The Commission is seeking feedback on the role of intermediaries and disability support organisations within the NDIS.

While finding ways to bolster readiness is important, a complementary approach is to reduce the complexity of the scheme. One way is for the NDIA to implement its proposed eMarketPlace — an online platform that, among other things, is designed to provide participants with timely information on the number, quality and past performance of providers. This would make it easier for participants to find the supports that they need at a time when many are finding it difficult to identify and engage with providers.

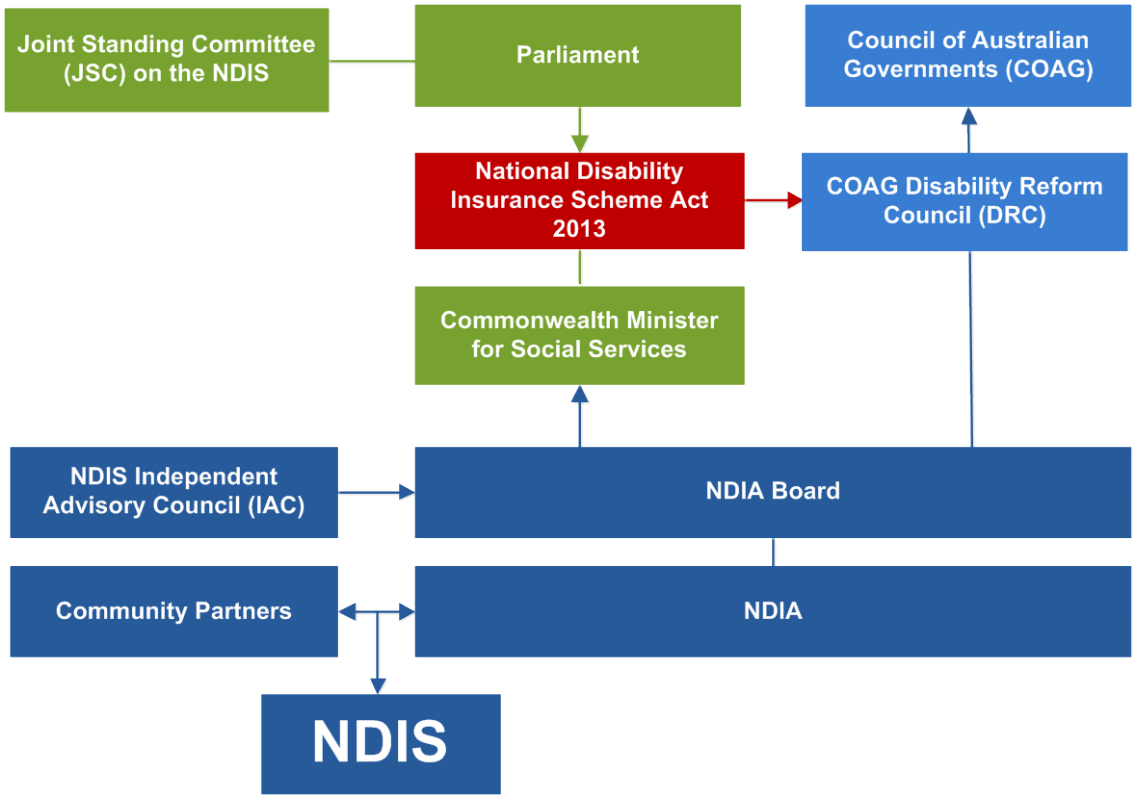
9 Governance

The governance arrangements for the NDIS are complex and reflect the shared responsibility of the scheme between the Australian and State and Territory Governments (figure 7). While the NDIS is administered by an Australian Government Authority (the NDIA) under Commonwealth legislation and under the direction of an Australian

Government Minister, it is designed and funded by the Australian, State and Territory Governments.

The NDIA is governed by a Board, which is appointed by the Minister for Social Services in consultation with State and Territory Governments. The Board is responsible for managing risk and setting the strategic direction of the NDIA. It is also responsible for monitoring and reporting on the performance of the Agency. The NDIA Board was expanded from 1 January 2017 by the Australian Government with the aim to ensure it has the disability service, financial management, corporate governance and insurance-based expertise needed to guide it through its critical three year expansion to 2019-20.

Figure 7 **Summary of NDIS governance arrangements**



In 2011, the Commission recommended a single national scheme, and a single national agency, to provide disability care and support. All states and territories, except Western Australia, joined the national scheme. In 2017, the Australian Government and Western Australian Government signed a bilateral agreement for the implementation of the WA NDIS. Under the agreement, the WA NDIS (intended to be consistent with the NDIS) will be administered by the Western Australian Government, not the NDIA. The Commission considers Western Australia should be in the national NDIS. That said, given the concerns about the transition timetable, Western Australia could delay joining the national scheme until after 2019-20.

Lack of transparency and clarity

Clear and transparent governance arrangements for the NDIS are crucial, especially given the scale and complexity of this reform. Effective governance is also essential for ensuring accountability and trust in the scheme.

The high-level governance arrangements generally provide a strong foundation for the development of the NDIS, including in relation to managing scheme costs and sustainability, but they lack clarity and transparency in some key areas. This includes, for example, confusion over the role of LACs, how the NDIS interfaces with mainstream services, the continuity of care arrangements of State and Territory Governments, and the planning process.

It is important that governments and the NDIA work to strengthen the clarity and transparency of governance arrangements and processes. The Commission has made recommendations with this aim.

Australian Government responsibility for NDIS

In 2011, the Commission recommended that the Australian Government Treasurer should be responsible for the NDIS because of the proposed commercial focus of the NDIA, and the need to ensure strong cost controls, insurance characteristics, long-run sustainability and appropriate management of funds. The Commission also envisaged other ministers, such as the Minister for Social Services, playing a prominent role in disability policy.

However, primary responsibility for the NDIS was given to the Minister for Social Services. While the Commission does not recommend a change to the current arrangements (given that stability is important amidst the pace and extent of reform), it is important that the governance supporting the NDIS is akin to that of an insurance scheme and it is not managed as a welfare program.

NDIS rules

Under the current governance arrangements, the states and territories play a significant role in setting NDIS policy. For example, while the Minister for Social Services is responsible for creating NDIS Rules, in many cases these rules require unanimous agreement from the Australian Government and each host jurisdiction.

There have been cases where NDIS rules have taken considerable time to implement, including the *National Disability Insurance Scheme (Specialist Disability Accommodation) Rules 2016* (Cwlth), which is reported to have taken at least eight months. This is a significant period of time in a transition period of three years.

The benefits of requiring agreement from all jurisdictions to implement many NDIS rules needs to be balanced against the need for the NDIS to be agile and able to adapt to emerging risks, especially during the transition, to ensure the financial sustainability of the scheme. The requirement for unanimous agreement from the Australian Government and all host jurisdictions for changes to some rules should be relaxed. There is also a need to align the governance and risk-sharing arrangements (discussed below).

Review processes

There are review processes both internal and external to the NDIA. Concerns were raised about the review processes, including that: there is confusion about the distinction between a plan review and a review of a decision; the information provided about the review processes is inadequate and the review processes are not accessible; and the time taken for reviews can vary drastically and can be significant.

The NDIA and governments are taking steps to improve review processes. However, publicly reporting on reviews, including on the numbers of reviews, review timeframes, outcomes of reviews, and participant satisfaction with the review process, would improve clarity, transparency and accountability around the effectiveness of the review process.

Review processes can also influence costs, both by the number of internal reviews undertaken and external reviews resulting in changes to eligibility or supports provided. For internal reviews, it is important that issues with the planning process that are resulting in increased numbers of plan reviews are addressed. The NDIA should adopt a process for amending or adjusting plans without triggering a full plan review to reduce costs and time delays associated with plan reviews.

For external reviews, it is essential that where such reviews lead to significant impacts on scheme sustainability that mechanisms are available to swiftly respond. The Commission is seeking more information on what is required in this regard.

Monitoring the performance of the NDIS

Performance reporting is important for ensuring outcomes are realised and that there is accountability when they are not. It is also an important component of the insurance approach. Effective performance reporting involves timely and transparent reporting of output and outcome indicators that measure performance against the objectives of the scheme.

The performance of the NDIS is currently monitored and reported through a number of mechanisms and reports, the main one being the *Integrated National Disability Insurance Scheme Performance Reporting Framework*. This framework includes the measures and indicators of scheme performance that the NDIA is required to report against to the COAG DRC and information the NDIA is required to provide to jurisdictions.

While the NDIA is still developing its performance reporting (which makes it too early to determine whether the performance reporting is sufficient to shed light on scheme objectives), the Commission has identified some gaps in the framework and the performance reporting against this framework. There is limited reporting against the outcomes indicators. And, there are few indicators for mainstream services, ILC and LACs. Given the importance of understanding the interaction between the NDIS and mainstream services, and the critical role that ILC and LACs play in the scheme, data on these activities should be an important component of reporting on the NDIS performance.

The performance reporting framework also does not have a strong enough focus on reporting on quality, including the quality of participants' plans. Over time, as reporting on outcomes under the reporting framework develops, evidence of good outcomes will be evidence of good quality plans, processes and experiences. However, it could be many years until this outcomes reporting is of a sufficient standard. Until then, reporting on quality is needed.

10 Funding

To ensure that the integrity of the NDIS' objectives are maintained, the scheme needs to be funded so that it operates in a way that is consistent with an insurance scheme, rather than a welfare program. It is also important that the way the funding mechanisms are designed create good incentives for appropriate allocation of responsibility between the Australian and State and Territory Governments to act in the long-term best interests of Australians with disability requiring services provided by the NDIS, and by mainstream and other disability services.

In 2011, the Commission recommended that the Australian Government fully fund the NDIS from general revenue (because of an absence of reliable growth in taxes at the State and Territory level). However, the scheme has been implemented with funding from Australian, State and Territory Governments governed by a range of Bilateral Agreements that are to be revisited every five years.

Escalation parameters

People covered by insurance schemes are generally required to contribute premiums in exchange for having their risk covered. For the NDIS, the Australian and State and Territory Governments make these contributions using taxation revenue.

At full scheme, the State and Territory Governments will contribute a combined $10.3 billion each year to the NDIS (the transition period has separate funding arrangements). The current Bilateral Agreements between the Australian Government and the States and Territory Governments require that these contributions increase by

3.5 per cent each year (the 'escalation parameters') until 2023, subject to the outcomes from this study.

The current escalation parameters are based on the long-term annual projections of the consumer price index of 2.5 per cent and a net population growth rate of 1 per cent. If the objective of the escalation parameters is to maintain the real per capita contributions to the NDIS from the States and Territories, they should be based on the best available estimates of inflation and population growth for the period of the agreement, at the time of making the agreement. The 3.5 per cent currently specified in Bilateral Agreements is at the lower bound of a range that would be expected to keep real per capita contributions from the states and territories constant over time.

However, if scheme costs were to rise faster than the current escalation parameters (for example, because of greater than expected increases in wages or prevalence rates of disability), the proportion of funding by the Australian Government would increase relative to that of the states and territories over time (in the absence of any other mechanisms being applied).

An alternative way to set escalation parameters would be to explicitly link them to scheme costs so that the proportion of funding allocated to the Australian Government and the State and Territory Governments is maintained over time. The Commission seeks further views on the appropriate role of escalation parameters.

Flexibility of funding

For the NDIS to operate as an insurance scheme, the NDIA needs to have the capacity to manage the lifetime risk of participant costs — for example, by making large upfront investments to yield future cost savings. This requires more funding flexibility than is allowed under the existing 'pay as you go' approach (which effectively operates on a cash reimbursement basis, much like a welfare program).

The NDIA will have a capped operational budget of 7 per cent of total package costs each year at full scheme. While acknowledging the need to constrain administrative expenditure, the Commission considers that a target range of 7 to 10 per cent of package costs would be more appropriate given the insurance approach, as constraining the operating budget within a particular year could undermine the objectives of the scheme.

The NDIA called for increased flexibility around the use of funding currently exclusively allocated to program delivery to better manage risks in accordance with insurance principles. However, the Commission's preferred option, in the longer-term, is to provide the NDIA with a pool of reserves (as recommended by the Commission in 2011). A pool of reserves would enable the NDIA to operate the scheme more like an insurance scheme, which could facilitate a cultural and operational shift within the Agency. It could also result in improved lifetime outcomes for participants and provide assurance to the community that the scheme is insulated (to some extent) from the vagaries of the budget

cycle. The Commission is seeking feedback on how this could be achieved, and what level of reserves would be required.

Creating the right incentives

The allocation of funding responsibility between the Australian and State and Territory Governments needs to be designed to create the right incentives. Importantly, funding cost overruns should be based on good risk management principles — that is, risks should be allocated based on who is best able to manage them. Under the funding arrangements during the transition, the Australian Government is responsible for all cost overruns of the NDIS, but there are a number of potential cost drivers that are in the control of the State and Territory Governments. For example:

- State and Territory Governments' funding and management of mainstream services can impact on scheme costs
- State and Territory Governments provide the majority of 'in-kind' contributions, which can drive up scheme costs and limit participant choice
- State and Territory Governments have a key governance role in the scheme — unanimous support is needed to change the NDIA Board or many of the NDIS Rules, or to direct the NDIA to take specific action, which gives them leverage over cost mitigation tools.

This creates a disconnect between the Australian Government's ability to control costs and the liability for cost overruns. There are two options available to address this at full scheme.

- The responsibility for funding cost overruns could be reallocated between the Australian and State and Territory Governments based on their ability to manage cost overruns. Determining what these should be is not straightforward (allocations of between 25 and 50 per cent of the cost overruns to the State and Territory Governments were suggested to the Commission by some stakeholders. The Bilateral Agreements currently state that the Commonwealth will accept at least 75 per cent of the cost overruns at full scheme.)
- Adjust the governance arrangements to allow the Australian Government to manage a greater proportion of the risk of the cost overruns in line with their greater responsibility for funding these overruns.

More information is requested given that these options are not necessarily mutually exclusive.

In-kind services

The Australian, State and Territory Governments are also able to provide in-kind services (that is, they can transfer already funded disability services to be used by NDIS participants) to the NDIA in lieu of cash contributions towards their NDIS funding commitments. In practice, what this means is that supports in individual participant's plans are described specifically as having to be provided by a particular provider (that is, the provider engaged through the in-kind arrangement).

In-kind contributions are estimated to account for about 19 per cent of total NDIS package costs during transition, and are expected to fall to about 10 per cent in 2020-21. While all governments are reviewing their in-kind contributions on an ongoing basis (with the intention of minimising in-kind contributions in full scheme), there is still some uncertainty around the quantum and scope of in-kind contributions at full scheme. The Commission recommends that all in-kind funding of supports be phased out by the end of the transition. Governments should not continue to make such costly contributions without any requirement to provide additional resources to balance the adverse impacts that such contributions have on financial sustainability, and participant choice and control.

11 Summing it all up

While the issues described above may seem considerable, it is important to consider them in the context of the scale, pace and complexity of the NDIS reform. It will take time to get things right. It is this need for more time that makes the roll out timetable such a key focus for addressing the many and considerable risks identified in this report.

The rollout timetable

As highlighted throughout this position paper, the ambitious timetable for the rollout presents an immediate risk to the success and financial sustainability of the scheme. The speed of the rollout has:

- compromised the quality of plans
- implications for the development of other parts of the scheme, especially the disability care workforce, which is unlikely to be sufficiently developed by 2020 to deliver the supports the NDIA is expected to allocate
- imposed challenging timeframes on the development of important structural elements of the scheme — including details around responsibilities at the coalface in services like health and transport, and instituting the new Quality and Safeguarding Framework.

Some study participants argued that the scheme rollout should be slowed down (box 10). For example, the Mental Health Community Coalition of the ACT argued that slowing

down the implementation of the NDIS would mean that you could 'replace costly mistakes with getting it right in the first place'.

Box 10 **Some argued for a slowdown of the transition timetable**

Cerebral Palsy Alliance:

> We would strongly recommend that the Commonwealth and States revise the transition timetable to support a realistic and manageable change management process for all stakeholders — as per NSW Bilateral Agreement Management of Risk Clauses 48-51 — if the risk of market, sector and system readiness to transition emerges — changes to the participant phasing schedule may be considered by both parties.

David Parkin:

> The rollout to new areas needs to be slowed. Get the current system as right as it can be. There are enough participants now … who are actually using the system to understand where the effort needs to be applied. The NDIS has to listen to people and Providers.

Australian Lawyers Alliance:

> One important response to the challenges ought in our view to be a reconsideration of the rollout schedule. As at the date of this submission, the rollout is less than nine months old, yet the level of dissatisfaction with the scheme, and the clarity with which problems are being identified, are both rapidly escalating.

Australian Physiotherapy Association:

> Our members are concerned that the balance between the speed of the roll-out and its effectiveness needs to be changed, and the roll-out slowed so that the NDIS can properly train its team, manage its workload and provide consistent support to the regions in which the roll-out is occurring.
>
> Alternatively, the financing of the Scheme needs to be adjusted to address the substantial implementation costs.

Maurice Blackburn Lawyers:

> A prudent approach would be to consider a slower roll-out schedule to help minimise the risks associated with the introduction of the scheme. … A revised rollout schedule could involve a complete cessation of the rollout on a regional basis for a specified period, to enable the remedial work to be undertaken, and a fresh analysis of readiness after that period.
>
> Aside from managing financial risks, a roll-out over an extended period would avoid significant frustration and distress for those living with disabilities and their families, and allow lessons learned from the early results to be incorporated into the scheme's final design.

However, others argued that the rollout schedule should not be changed. For example, the Australian Federation of Disability Organisations said:

> Some in the sector have responded by arguing for a slow down [to] the roll out and to lengthen the transition period. To AFDO and its members, this would be completely unacceptable. For many people with disability, the wait has already been too long. For people who have had little or no support for many years, the NDIS cannot come quickly enough. Slowing down the roll out is therefore not an option.

The Commission acknowledges the hardship that has been imposed on some people with disability under the pre-NDIS arrangements. Given the problems under the current rollout schedule, however, it may be in the interests of people with disability to slow down the

rollout timetable with the objective of securing for them the NDIS's ultimate success and sustainability.

The rollout timetable is tied to the schedules set out in the Bilateral Agreements. Given that the numbers of scheme participants in the Bilateral Agreements are estimates and not hard targets, there may already exist some flexibility for the NDIA to slow down the pace of the rollout should that be required. However, any slowdown would have implications for scheme funding arrangements and the disability services provided by the states and territories. These matters would need to be careful addressed should a slowdown be implemented.

The NDIA is aware of the current problems …

The NDIA acknowledges that the scale of the participant intake has affected the quality of participants' and providers' experiences. The NDIA has been working with participants, providers, peak disability bodies and other stakeholders to identify changes or improvements required to achieve:

- the intake of participants at the rate required by the Bilateral Agreements
- plans that maximise choice and control for participants, and contribute to improved participant outcomes
- plans that are of a high quality
- plans that are financially sustainable so that the aggregate value of all plans remains within the funding envelope.

While the NDIA's proposed new approach is yet to be tested with participants and providers, at this stage the Agency plans to have a greater focus on outcomes, more active involvement with communities, more face-to-face communications, and improved interaction with providers and disability organisations. The NDIA also plans to make improvements to its call centre and portal to make it easier to navigate.

The Commission appreciates that it will take time to implement the changes and for the changes to be reflected in the performance reporting data. On the information received to date about the changes proposed by the Agency, the Commission is unable to form a judgment about whether the much needed focus on participant and provider experiences (and ultimately participant outcomes) can be achieved while also meeting the rollout timetable. A slowdown in the rollout of the scheme may be required. The Commission is seeking feedback on how a slowdown, if required, could be operationalised, and what the implications of a slowdown would be.

… but scheme success and financial sustainability are about more than the rollout

The Commission has identified several other key risks to the success and sustainability of the scheme beyond the rollout, including decisions by the Administrative Appeals Tribunal or courts about what are 'reasonable and necessary' supports, changes to NDIS rules, market readiness, and State and Territory Government responsibility for disability care and mainstream services.

A significant challenge is the need to develop the disability supports market, so that there are enough providers and workers to meet the increased demand for services from scheme participants. Without a sufficient supply of disability supports, the NDIS cannot function as intended.

And all governments need to work together to better manage the integration of the NDIS and other services. As noted earlier, there is evidence of service gaps opening up and an apparent reluctance in some instances to find ready solutions. In these circumstances, it is critical that all governments take greater care when withdrawing from services to ensure that there is genuine continuity of supports for people with disability. Without such care, families and informal carers can be left bearing the burden of unintended gaps, which would be contrary to the objectives of the scheme.

Only an integrated and holistic system, supported by the ongoing and shared commitment and goodwill of people with disability and their families and carers, providers of disability services, governments and the community more broadly, will bring about the expected benefits from the seismic shift in the delivery of supports to those that need them the most. There is enormous goodwill behind the NDIS — and it is needed now more than ever.

Draft recommendations, findings and information requests

How is the scheme tracking?

DRAFT FINDING 2.1

The scale and pace of the National Disability Insurance Scheme (NDIS) rollout to full scheme is highly ambitious. It risks the National Disability Insurance Agency (NDIA) not being able to implement the NDIS as intended and it poses risks to the financial sustainability of the scheme. The NDIA is cognisant of these risks.

DRAFT FINDING 2.2

While a different methodology is used, the National Disability Insurance Agency projections of scheme costs are broadly consistent with the Productivity Commission's modelling of the scheme in 2011, after accounting for sector-specific wage increases, population changes, and costs associated with participants aged over 65 years (who were not included in the Commission's estimates).

DRAFT FINDING 2.3

The National Disability Insurance Scheme, at the end of trial, came in under budget. This was in large part because not all committed supports were used (in 2015-16 the utilisation rate was 74 per cent).

Based on trial and transition data, scheme costs are broadly on track compared to the National Disability Insurance Agency's (NDIA) long-term modelling. At this stage, early cost pressures (such as greater than expected numbers of children and higher than expected package costs) have been offset by lower than expected levels of utilisation.

The NDIA has put in place initiatives to address emerging cost pressures. It is too early to assess the effectiveness of these initiatives.

DRAFT FINDING 2.4

Early evidence suggests that the National Disability Insurance Scheme is improving the lives of many participants and their families and carers. Many participants report more choice and control over the supports they receive and an increase in the amount of support provided.

However, not all participants are benefiting from the scheme. Participants with psychosocial disability, and those who struggle to navigate the scheme, are most at risk of experiencing poor outcomes.

Scheme eligibility

DRAFT RECOMMENDATION 3.1

When determining that an individual is eligible for individualised support through the National Disability Insurance Scheme under the disability requirements, the National Disability Insurance Agency should collect data on which of the activity domains outlined in section 24 of the *National Disability Insurance Scheme Act 2013* (Cwlth) are relevant for each individual when they enter the scheme.

INFORMATION REQUEST 3.1

The Commission is seeking feedback on the advantages and disadvantages of maintaining 'List D — Permanent Impairment/Early Intervention, Under 7 years — No Further Assessment Required' *in the National Disability Insurance Agency's operational guidelines on access. Feedback is sought on the extent to which the list:*

- *reduces the burden on families to demonstrate that their child will benefit from early intervention and/or provides certainty that support will be provided*
- *reduces the burden on the National Disability Insurance Agency of assessing whether children are eligible for early intervention support under the* National Disability Insurance Scheme Act 2013 *(Cwlth)*
- *may be contributing to supports being provided to children who are unlikely to benefit from such supports*
- *may be discouraging or inhibiting exit from the scheme.*

INFORMATION REQUEST 3.2

The Commission is seeking feedback on the benefits and risks of maintaining 'List A — Conditions which are Likely to Meet the Disability Requirements in section 24 of the NDIS Act'. *In particular:*

- *to what extent does List A reduce the burden for people with permanent and significant disability of entering the National Disability Insurance Scheme under the disability requirements?*
- *is there any evidence that people who do not meet the disability requirements are entering the scheme under List A?*

Scheme supports

INFORMATION REQUEST 4.1

Is the National Disability Insurance Scheme Act 2013 *(Cwlth) sufficiently clear about how or whether the 'reasonable and necessary' criterion should be applied? Is there sufficient clarity around how the section 34(1) criteria relate to the consideration of what is reasonable and necessary?*

Is better legislative direction about what is reasonable and necessary required? If so, what improvements should be made? What would be the implications of these changes for the financial sustainability of the scheme?

INFORMATION REQUEST 4.2

Should the National Disability Insurance Agency have the ability to delegate plan approval functions to Local Area Coordinators? What are the costs, benefits and risks of doing so? How can these be managed?

DRAFT RECOMMENDATION 4.1

The National Disability Insurance Agency should:

- implement a process for allowing minor amendments or adjustments to plans without triggering a full plan review
- review its protocols relating to how phone planning is used
- provide clear, comprehensive and up-to-date information about how the planning process operates, what to expect during the planning process, and participants' rights and options
- ensure that Local Area Coordinators are on the ground six months before the scheme is rolled out in an area and are engaging in pre-planning with participants.

DRAFT RECOMMENDATION 4.2

The National Disability Insurance Agency should ensure that planners have a general understanding about different types of disability. For types of disability that require specialist knowledge (such as psychosocial disability), there should be specialised planning teams and/or more use of industry knowledge and expertise.

Boundaries and interfaces with the NDIS

DRAFT FINDING 5.1

It is a false economy to have too few resources for Information Linkages and Capacity Building, particularly during the transition period when it is critical to have structures in place to ensure people with disability (both inside and outside the National Disability Insurance Scheme) are adequately connected with appropriate services.

DRAFT RECOMMENDATION 5.1

Funding for Information, Linkages and Capacity Building (ILC) should be increased to the full scheme amount (of $131 million) for each year during the transition. The funds that are required beyond the amounts already allocated to ILC to reach $131 million should be made available from the National Disability Insurance Agency's program delivery budget.

The effectiveness of the ILC program in improving outcomes for people with disability and its impact on the sustainability of the National Disability Insurance Scheme should be reviewed as part of the next COAG agreed five-yearly review of scheme costs. The ILC budget should be maintained at a minimum of $131 million per annum until results from this review are available.

DRAFT RECOMMENDATION 5.2

The Australian, State and Territory Governments should make public their approach to providing continuity of support and the services they intend to provide to people (including the value of supports and number of people covered), beyond supports provided through the National Disability Insurance Scheme. These arrangements for services should be reflected in the upcoming bilateral agreements for the full scheme.

The National Disability Insurance Agency should report, in its quarterly COAG Disability Reform Council report, on boundary issues as they are playing out on the ground, including identifying service gaps and actions to address barriers to accessing disability and mainstream services for people with disability.

DRAFT RECOMMENDATION 5.3

Each COAG Council that has responsibility for a service area that interfaces with the National Disability Insurance Scheme (NDIS) should have a standing item on its agenda to address the provision of those services and how they interface with NDIS services. This item should cover service gaps, duplications and other boundary issues.

Through the review points of National Agreements and National Partnership Agreements under the Federal Financial Relations Intergovernmental Agreement, parties should include specific commitments and reporting obligations consistent with the National Disability Strategy. The Agreements should be strengthened to include more details around how boundary issues are being dealt with, including practical examples.

INFORMATION REQUEST 5.1

The Commission is seeking feedback on a mechanism to ensure that the States and Territories bear the cost of participants who were intended to be covered by the National Injury Insurance Scheme.

Provider readiness

DRAFT RECOMMENDATION 6.1

The Australian Government should:

- immediately introduce an independent price monitor to review the transitional and efficient maximum prices for scheme supports set by the National Disability Insurance Agency (NDIA)
- transfer the NDIA's power to set price caps for scheme supports to an independent price regulator by no later than 1 July 2019.

The body tasked with price regulation for scheme supports should:

- collect data on providers' characteristics and costs. This should include appropriate funding to continue the business characteristics and benchmarking study currently undertaken by National Disability Services and Curtin University
- determine transitional and efficient prices for supports at a state and territory level
- comprehensively review and publish its price model on an annual basis. This review should be transparent, have public consultation, be evidence-based and evaluate the effectiveness of prices in meeting clearly-defined objectives
- assess and recommend when to deregulate prices for supports, with particular regard to the type of support and region, on the basis that prices should only be regulated as narrowly, and for as short a time, as possible.

DRAFT FINDING 6.1

In a market-based model for disability supports, thin markets will persist for some groups, including some participants:

- living in outer regional, remote and very remote areas
- with complex, specialised or high intensity needs, or very challenging behaviours
- from culturally and linguistically diverse backgrounds
- who are Aboriginal and Torres Strait Islander Australians
- who have an acute and immediate need (crisis care and accommodation).

In the absence of effective government intervention, such market failure is likely to result in greater shortages, less competition and poorer participant outcomes.

INFORMATION REQUEST 6.1

In what circumstances are measures such as:

- *cross-government collaboration*
- *leveraging established community organisations*
- *using hub and spoke (scaffolding) models*
- *relying on other mainstream providers*

appropriate to meet the needs of participants in thin markets? What effects do each have on scheme costs and participant outcomes? Are there barriers to adopting these approaches?

Under what conditions should block-funding or direct commissioning of disability supports (including under 'provider of last resort' arrangements) occur in thin markets, and how should these conditions be measured?

Are there any other measures to address thin markets?

INFORMATION REQUEST 6.2

What changes would be necessary to encourage a greater supply of disability supports over the transition period? Are there any approaches from other consumer-directed care sectors — such as aged care — that could be adopted to make supplying services more attractive?

Workforce readiness

DRAFT FINDING 7.1

It is unlikely that the disability care workforce will be sufficient to deliver the supports expected to be allocated by the National Disability Insurance Agency by 2020.

DRAFT RECOMMENDATION 7.1

The roles and responsibilities of different parties to develop the National Disability Insurance Scheme workforce should be clarified and made public.

- State and Territory Governments should make use of their previous experience in administering disability care and support services to play a greater role in identifying workforce gaps and remedies tailored to their jurisdiction.
- The Australian Government should retain oversight of workforce development, including how tertiary education, immigration and aged care policy interact and affect the development of the workforce. In doing so, the Australian Government should pay particular attention to immigration policy to mitigate workforce shortages over the transition period.
- The National Disability Insurance Agency should provide State and Territory Governments with data held by the Agency to enable those jurisdictions to make effective workforce development policy.
- Providers of disability supports should have access to a clear and consistent mechanism to alert those tasked with market development about emerging and persistent workforce gaps.

INFORMATION REQUEST 7.1

What is the best way for governments and the National Disability Insurance Agency to work together to develop a holistic workforce strategy to meet the workforce needs of the National Disability Insurance Scheme?

DRAFT RECOMMENDATION 7.2

The National Disability Insurance Agency should publish more detailed market position statements on an annual basis. These should include information on the number of participants, committed supports, existing providers and previous actual expenditure by local government area.

The Australian Government should provide funding to the Australian Bureau of Statistics to regularly collect and publish information on the qualifications, age, hours of work and incomes of those working in disability care roles, including allied health professionals.

DRAFT RECOMMENDATION 7.3

The National Disability Insurance Agency's (NDIA) guidelines on paying informal carers who live at the same residence as a participant should be relaxed for core supports for the period of the National Disability Insurance Scheme (NDIS) transition. Such payments should be:

- accessible under clearly defined and public guidelines, which make reference to worker shortages in the relevant market using the NDIA's information about providers and supports in the participant's region
- set at a single rate determined by the NDIS price regulator in a transparent manner
- reviewed by the NDIA as part of plan reviews.

INFORMATION REQUEST 7.2

How has the introduction of the National Disability Insurance Scheme affected the supply and demand for respite services? Are there policy changes that should be made to allow for more effective provision of respite services, and how would these affect the net costs of the scheme and net costs to the community?

Participant readiness

INFORMATION REQUEST 8.1

Is support coordination being appropriately targeted to meet the aims for which it was designed?

DRAFT RECOMMENDATION 8.1

The National Disability Insurance Agency should implement the eMarketPlace discussed in the *Integrated Market Sector and Workforce Strategy* as a matter of priority.

INFORMATION REQUEST 8.2

Is there scope for Disability Support Organisations and private intermediaries to play a greater role in supporting participants? If so, how? How would their role compare to Local Area Coordinators and other support coordinators?

Are there any barriers to entry for intermediaries? Should intermediaries be able to provide supports when they also manage a participant's plan? Are there sufficient safeguards for the operation of intermediaries to protect participants?

Governance

DRAFT RECOMMENDATION 9.1

The requirement that changes to National Disability Insurance Scheme Category A Rules have unanimous agreement from the Australian Government and all host jurisdictions should be relaxed.

DRAFT RECOMMENDATION 9.2

The Western Australian Government and Australian Government should put in place arrangements for Western Australia to transition to the National Disability Insurance Scheme. Any decision to join the national scheme should be made public as soon as possible.

DRAFT RECOMMENDATION 9.3

The National Disability Insurance Agency should publicly report on the number of unexpected plan reviews and reviews of decisions, review timeframes and the outcomes of reviews.

DRAFT RECOMMENDATION 9.4

The performance of the National Disability Insurance Scheme (NDIS) should be monitored and reported on by the National Disability Insurance Agency (NDIA) with improved and comprehensive output and outcome performance indicators that directly measure performance against the scheme's objectives.

The NDIA should continue to develop and expand its performance reporting, particularly on outcomes, and Local Area Coordination and Information, Linkages and Capacity Building activities. The NDIA should also fill gaps in its performance reporting, including reporting on plan quality (such as participant satisfaction with their plans and their planning experience, plans completed by phone versus face-to-face, and plan reviews).

The *Integrated NDIS Performance Reporting Framework* should be regularly reviewed by the NDIA and the COAG Disability Reform Council and refined as needed.

DRAFT RECOMMENDATION 9.5

In undertaking its role in delivering the National Disability Insurance Scheme, the National Disability Insurance Agency needs to find a better balance between participant intake, the quality of plans, participant outcomes and financial sustainability.

INFORMATION REQUEST 9.1

The Commission is seeking feedback on the most effective way to operationalise slowing down the rollout of the National Disability Insurance Scheme in the event it is required. Possible options include:

- *prioritising potential participants with more urgent and complex needs*
- *delaying the transition in some areas*
- *an across-the-board slowdown in the rate that participants are added to the scheme.*

The Commission is also seeking feedback on the implications of slowing down the rollout.

Funding arrangements

DRAFT FINDING 10.1

The objective of the escalation parameters is not specified in the Bilateral Agreements between the Australian Government and the State and Territory Governments at full scheme.

The existing escalation parameters are unlikely to reflect the full increase in National Disability Insurance Scheme (NDIS) costs over time, which would result in the Australian Government bearing a higher share of NDIS costs over time.

INFORMATION REQUEST 10.1

The Commission is seeking views on the role of the escalation parameters in the Bilateral Agreements between the Australian Government and the State and Territory Governments.

Should escalation parameters be set on the basis of maintaining a constant real per capita contribution to the National Disability Insurance Scheme by State and Territory Governments; or should they be more explicitly tied to scheme costs so that the proportion of funding allocated to the Australian Government and the State and Territory Governments is maintained over time?

DRAFT FINDING 10.2

Responsibility for funding National Disability Insurance Scheme (NDIS) cost overruns should be apportioned according to the parties best able to manage the risk. This is not the case in the transition period, as the Australian Government bears all the risk of any cost overruns, but not all the control.

The governance arrangements for the NDIS do not allow the National Disability Insurance Agency to respond swiftly when factors outside its control threaten to impose cost overruns.

INFORMATION REQUEST 10.2

The Commission is seeking information on the best way to align the ability to control cost overruns with the liability to fund cost overruns. Possible options include:

- *estimating the proportion of cost overruns that the Australian and State and Territory Governments are responsible for and allocating funding responsibility accordingly*
- *altering the governance arrangements of the National Disability Insurance Scheme to give the Australian Government greater authority to manage the risk of cost overruns, to better reflect their funding liability.*

DRAFT RECOMMENDATION 10.1

At full scheme, the annual operating budget for the National Disability Insurance Agency should be set within a funding target of 7-10 per cent of package costs with the expectation that, on average, it would sit at the lower end of the band.

The National Disability Insurance Agency should be required, in its annual report, to state reasons why it has not met this target in any given year.

DRAFT RECOMMENDATION 10.2

The Australian Government should reconsider the staffing cap on the National Disability Insurance Agency, given the importance of developing internal capability and expertise.

INFORMATION REQUEST 10.3

The Commission seeks feedback on the level of a future contingency reserve that would enable the National Disability Insurance Agency to operate like an insurance scheme, and how this would best be implemented, including any transitional arrangements.

DRAFT RECOMMENDATION 10.3

In-kind funding arrangements should be phased out by the end of transition and should not form part of the intergovernmental agreements for full scheme funding. Should in-kind funding persist beyond transition, jurisdictions should face a financial penalty for doing so.

1 About this study

The National Disability Insurance Scheme (NDIS) is a new scheme designed to change the way that support and care are provided to people with permanent and significant disability. It is currently being rolled out across Australia and is expected to be fully implemented in all states and territories by mid-2019.

This study is a review of NDIS costs. It looks at the sustainability of scheme costs in light of the benefits and impacts of the scheme on the lives of people with disability, and Australians more generally. The study will help inform the final design of the full scheme.

Some background to the study

In 2011, a Productivity Commission inquiry into *Disability Care and Support* found that Australia's system of disability supports was inequitable, underfunded, fragmented, inefficient and gave people with disability little choice and no certainty of access to appropriate supports (PC 2011). The Commission recommended that a national disability insurance scheme be established to change the way that support and care are provided to people with significant disability, and to provide insurance cover to all Australians in the event of such a disability. The recommendation was based on the finding that such a scheme would generate substantial community-wide benefits, including improving the lives of people with disability and their families and carers.

The Commission's recommendation was accepted by Australian Governments and on 7 December 2012, COAG signed an Intergovernmental Agreement for the launch of the NDIS (COAG 2012b). In the Heads of Agreement between the Commonwealth and the States and Territories, it was established that the Productivity Commission would review NDIS costs in 2017, to inform the final design of the scheme ahead of its full rollout. The terms of reference for this study were received on 20 January 2017.

1.1 About the NDIS

The NDIS is based on the premise that individuals' support needs are different, and those participating in the scheme should be able to exercise choice and control over the services and support they receive. The objectives of the NDIS (as outlined in the *National Disability Insurance Scheme Act 2013* (Cwlth) (NDIS Act)) are to:

- support the independence and social and economic participation of people with disability

- provide reasonable and necessary supports, including intervention supports
- enable people with disability to exercise choice and control in the pursuit of their goals and the planning and delivery of their supports
- facilitate the development of a nationally consistent approach to the access to, and the planning and funding of, supports for people with disability
- promote the provision of high quality and innovative supports that enable people with disability to maximise independent lifestyles and full inclusion in the community
- raise community awareness of issues that affect people with disability.

The NDIS operates under the NDIS Act, and is administered by the National Disability Insurance Agency (NDIA). Funding for the NDIS is shared by the Australian and State and Territory Governments.

The NDIS provides individualised supports to assist people with permanent and significant disability to participate in economic and social life.[3] This paper refers to people who are eligible for individualised supports as 'participants' of the scheme.

For each participant, the NDIS funds 'reasonable and necessary' supports related to their disability. Reasonable and necessary supports are those that help participants live as ordinary a life as possible, including care and support to build skills and capabilities, so that they can engage in education, employment and community activities.

Supports are also available to those who meet early intervention criteria. This covers cases where early intervention can significantly improve outcomes and is cost effective. The focus on early intervention reflects the lifetime, insurance-based approach of the scheme.

Individuals eligible for the scheme are assessed, and individual support packages are developed and funded. Access, planning and payments are managed by the NDIA. (In Western Australia, arrangements will be different to reflect a recently announced bilateral agreement with the Commonwealth, but are intended to be consistent with the NDIS (Porter, Barnett and Faragher 2017)).

The individualised supports provided to participants account for the vast majority of scheme costs and therefore references to 'the scheme' (including in this paper) often refer to these supports.

However, the NDIS is broader than just supports for eligible participants. Information, linkages and capacity building (ILC) services will also be provided under the NDIS from July 2017 to help all people with disability (not just scheme participants), and their families and carers, with information and referrals to community and mainstream services (including health, education, employment, justice, transport and housing) (NDIA 2016g).

3 Permanent and significant disability is defined in this paper as a disability that substantially reduces a person's functional capacity or psychosocial functioning. This is in line with the eligibility criteria contained in the Act.

ILC will also facilitate greater social cohesion by promoting awareness and acceptance of disability in the wider community.

More detail on the scheme, including eligibility criteria, planning processes and governance arrangements, is provided throughout this paper.

The NDIS is part of a broader system of support

The NDIS is part of a wider disability system. It is one component of the broader *National Disability Strategy 2010–2020*, which was endorsed by the Council of Australian Governments in February 2011 and provides a ten-year national policy framework for improving life for Australians with disability, their families and carers (COAG 2011b).

Only a proportion of people with disability will become participants and receive individualised supports. There are approximately 4.3 million people with disability in Australia (figure 1.1). Once fully implemented, the NDIS will provide individual packages to about 475 000[4] people — those people with a 'permanent and significant' disability.

Supports for people with disability (both NDIS participants and non-NDIS participants) are also provided through other Australian and State and Territory Government funded disability services, and mainstream services, such as health and education.

1.2 The benefits of the NDIS

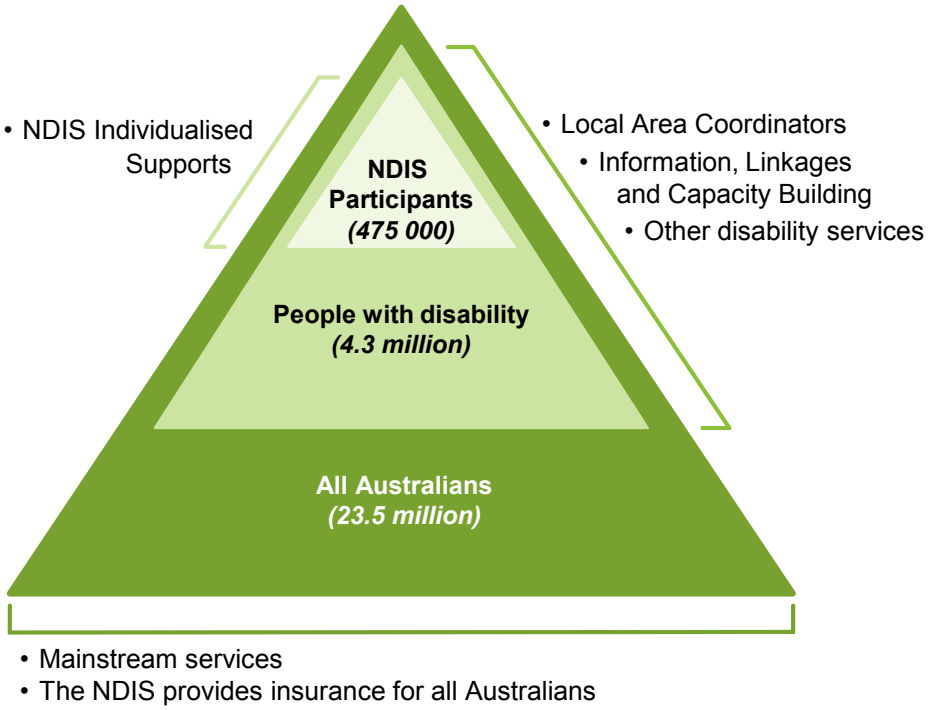
The Commission recommended a national disability insurance scheme in 2011 on the basis of the substantial net benefits it would generate in the long term from:

- improved lives for people with disability and their families and carers through increased care and support and more choice and control over the supports they receive. This was identified as the area of largest benefit with more, and better targeted, support for participants leading to greater social participation and independence
- efficiency gains in the disability sector — through increased competition and innovation, and better value for money
- savings to other government services — by better supporting people with disability and reducing their reliance on mainstream services
- increased economic participation for people with disability — by overcoming obstacles to employment for those with disability through direct interventions, like school to work transition programs, and through changes to community attitudes. The Commission estimated that employment of people with mild to profound disabilities could increase by 100 000 by 2050 (catching up to OECD levels) resulting in $8 billion in additional gross domestic product in that year alone

4 460 000 participants under the age of 65 and 15 000 aged 65 years and over (chapter 2).

- increased economic participation for informal carers — the Commission estimated that an additional 7500 carers could re-enter the workforce (PC 2011).

Figure 1.1 **The NDIS is part of a broader system of supports**[a]



[a] Number of Australians and those with a disability are based on 2015 data. NDIS participants are the projected number of people eligible in 2020.

Sources: Commission estimates based on unpublished NDIA data and ABS *(Disability, Ageing and Carers, Australia: Summary Findings, 2015, Cat. no. 4430.0)*.

A new approach to disability care and support

The scheme is designed to change the way that participants and disability support providers interact, and the way that supports are funded. Two of the key changes from previous approaches include a more market-based, person-centred approach to care and support, and a scheme based on insurance principles.

A market-based approach aims to create incentives that better provide participants with the quantity, quality and variety of services they desire in an efficient way. It is expected to overcome many of the previous system's shortcomings (table 1.1), including by providing participants more choice and control over their supports and services, and encouraging innovation by service providers through increased competition.

Table 1.1 **Intended effects of the NDIS in the disability services market**

Features of Disability Service Markets pre-NDIS	*Features of Mature Disability Service Markets*
• Largely 'block funded', with funding provided in advance of service delivery and little freedom to innovate.[a]	• Predominantly fee-for-service paid on invoice. In principle, prices for services are set by the competitive market, and there is innovation by service providers attracting and retaining consumers.
• Services often limited and priorities for families in immediate crisis, rather than for early intervention. Consumers have little control over the services they receive and limited choice of provider.	• Funding to meet the reasonable and necessary support needs for each NDIS participant. Consumers have choice and control regarding the services received and providers used.
• The primary relationship is between the service provider and the funder, with consumers often described as 'passive' recipients of services.	• The primary relationship is between the consumer and service provider. Intermediaries and access to information about provider quality, performance and pricing help consumers exercise choice.
• Providers are subject to various statutory provisions (at all levels of government) regarding quality. The system is complex, difficult to navigate and not well integrated nationally.	• Compliance with a national quality framework. A nationally consistent and navigable system.
• High transaction costs for both consumers and providers.	• Lower transaction costs for consumers and service providers. There is adequate depth and resilience in the market to underpin financial sustainability.

[a] Block funding refers to the process where governments purchase a 'block' of services from a provider, which is to be delivered to clients who meet certain criteria, or are referred to those providers as part of an individualised plan.

Sources: Adapted from ANAO (2016, p. 20), which is based on analysis of PC (2011); DRC (2015a) and NDIA presentations on the market transition.

As an insurance-based scheme, the NDIS takes a lifetime approach to a participant's support needs and life goals (box 1.1). It is intended to provide assurance to both those with a permanent and significant disability, and those who may acquire such a disability in the future, that they will receive the support they require. In other words, there is essentially no cap on funding — anyone who meets the eligibility criteria is guaranteed to get funding for supports and services. It also focuses on early intervention investment in people with disability so that their outcomes can be improved later in life, and so that costs can be minimised over the long term, even if that involves more spending upfront.

This contrasts with the previous system which operated on an annual capped amount and did not tailor supports to individuals, leading to short-term planning, limited choice, higher long-term support needs, unmet demand and adverse outcomes for some (PC 2011).

Box 1.1 **The NDIS is an insurance-based scheme**

The insurance approach of the NDIS takes a long-term view of the total cost of disability in order to improve participant outcomes and meet the future costs of the scheme. Key elements of the approach include:

- universal coverage by pooling risk across all Australians and taking the risk of disability support costs away from individuals
- creating an innovative and competitive market for disability support, through which participants can exercise choice and control over the planning and delivery of their supports
- a long-term view of the total future social cost of disability for all people who are insured and yet to be insured
- the NDIA — in its role as the social insurance manager — managing the total cost of disability over a participant's lifetime and incentivising short-term investment in participants to reduce long-term costs.

The NDIA identifies four principles for the way that the insurance approach is operationalised:

1. Actuarial estimate of long-term costs — updated to reflect the experience of the scheme, and used to help ensure the scheme is financially sustainable and that the scheme is continuously improved.
2. A long-term view of funding requirements — takes a lifetime view of participant needs and seeks early investment and intervention for people in order to maximise their independence, and social and economic participation, and reduce their support requirements in the long term.
3. Investment in research and innovation — to encourage and build the capacity and capability for innovation, outcome analysis and evidence-based decisions on early interventions.
4. Investment in community participation and building social capital — to make the community accessible and inclusive for people with disability, and provide participants and non-participants with necessary supports outside of the NDIS, through mainstream services, ILC initiatives and education programs.

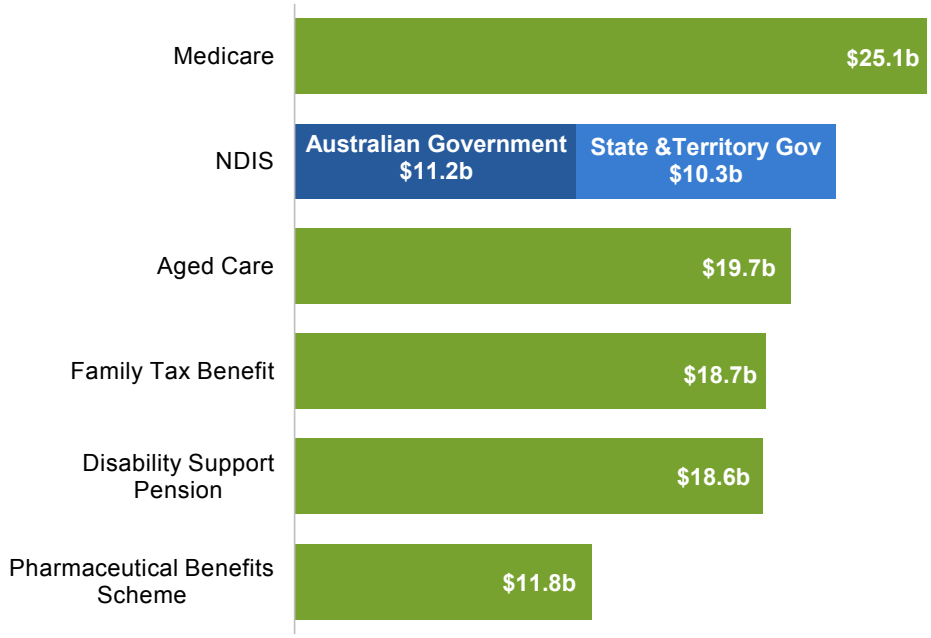
1.3 The NDIS is a major reform

The NDIS is a major reform. As the NDIA said, the scheme is 'on a scale not previously contemplated in Australia and is designed to address un-met need' (NDIA 2016k, p. 7). The NDIS will be the largest social reform since the introduction of Medicare. At a currently estimated annual cost of about $22 billion when fully implemented, government expenditure on the NDIS will exceed that on Aged Care and will be almost double that spent on the Pharmaceutical Benefits Scheme (figure 1.2).

Figure 1.2 **Projected NDIS expenditure compared with other Australian Government programs, 2019–20**



Source: Adapted from Department of Parliamentary Services (2017), which is based on Australian Treasury (2016a, 2016b).

At full rollout, the NDIS is expected to cover 475 000 people with disability. This is almost 200 000 more people than were covered under the previous system (NDIA 2016k, p. 8). To meet this increased demand, the disability workforce will need to more than double.

Introducing a scheme of this scale and nature is a challenging task and it is inevitable that it will take many years before the scheme is fully established and operating smoothly. The enormity and significance of the task was acknowledged by many participants to the study. For example, the ACT Disability Aged Carer and Advocacy Service said:

> The NDIS is monumental reform for Australia: a grand scheme (akin to the introduction of Medicare) that has the potential to make vast differences in the life experiences of an array of people with disability, their families and carers both now and in decades to come. (sub. 87, p. 1)

Richard Madden, from the Centre for Disability Research and Policy at University of Sydney, said:

> The NDIS has been introduced quickly, and involves a large increase in public expenditure, and inevitably some uncertainty as long standing support arrangements change. The change effort has been huge for all involved. Inevitably, there have been issues to be addressed, and some delay in ambitious timetables. These issues, while important, must not detract from the achievements made and the opportunities that exist. (sub. 101, p. 3)

There is overwhelming support for the scheme

While many submissions to this study commented on the scale and complexity of the reform, there is an extraordinary level of commitment to the success and sustainability of the NDIS (and to preserving the core principles of the scheme as set out by the Commission). This commitment is shared by governments, people with disability and their families and carers, providers of disability services and disability advocates (box 1.2). For example, Every Australian Counts said:

> The Scheme is a once-in-a-lifetime change to the way disability support is delivered in Australia. It is going to affect millions of Australians. Because of the relative unfamiliarity of this model, there are issues that need ironing out. A reform of this size will take time to get right. Long-term, the NDIS will give back to the economy. Indeed, it would cost far more not to implement it. (sub 92, p. 2)

It is also acknowledged that 'making the scheme work' is not just the responsibility of the NDIA, but also of governments, providers, participants (and their families and carers). As the Australian Disability Discrimination Commissioner said:

> Yes — the NDIS is big, it is complex, and it changes everything, but it is the change that we need. And when we think about what life might be like for people with disability without the NDIS, I think it becomes clear that it is the change we cannot afford to prevent. … ensuring the sustainability and success of the NDIS is not only the responsibility of the NDIA or its board — it is the responsibility of all governments, service providers, participants, their families and carers. If we want real and lasting change for people with disability, we cannot absolve ourselves of our responsibility to make the NDIS work. (McEwin 2017)

Box 1.2 There is overwhelming support for the NDIS

Australian Federation of Disability Organisations:

> We want to begin … by emphasising our unwavering support for the NDIS. AFDO and its members regularly hear from people with disability and their families about the difference the NDIS is making to their lives. People who now have the dignity of appropriate and timely support, the opportunity to be more involved in their communities, the chance to move out of home, the economic freedom of a new job. These are the kinds of differences the NDIS is making. (sub. 180, p. 6)

Anglicare Australia:

> Anglicare Australia strongly believes that the establishment of the NDIS is a major achievement. Our member agencies are already witnessing the transformative power of the scheme for participants, and finding that reconfiguring services to reflect their needs and aspirations is creating opportunities to reimagine and create better outcomes in people's lives. (sub. 157, p. 4)

NSW Council for Intellectual Disability:

> … we have been strong supporters of the development of the NDIS and we continue to see the scheme as having a fundamental capacity to improve the lives of people with disability around Australia. (sub. 193, p. 2)

Flourish Australia:

> Flourish Australia strongly supports the NDIS and the opportunity it provides for greater certainty, choice and control, and economic and social participation for people with disability who require life-long support. … However, we are also mindful that, as with any reform of such a substantial scale, there can be unintended consequences, implementation issues and uncertainty, especially during the transition phase. We are particularly mindful of the impact of this on the people we support. (sub. 74, p. 1)

JFA Purple Orange:

> … the NDIS is a major, once-in-many-generations opportunity to invest in the life chances of people living with disability, to achieve a fair go, so that people living with disability take their rightful place as valued active members of Australian community life and the economy. (sub. 186, p. 4)

National Disability Services:

> The principles on which the NDIS is founded remain compelling and inspiring. Doubling the funding for disability support to rectify the chronic under-supply of services, choice and control for people with disability and their families, an insurance approach that focuses on early intervention and building the capacity of individuals and families and increased equity across Australia. (NDS 2016, p. 3)

Scope Australia:

> Scope is fully committed to the implementation of the National Disability Insurance Scheme. The Scheme creates a paradigm shift in social policy and recognises the rights of all Australians to live an ordinary life. It has enhanced the lives of more than 60,000 participants and their families and for the first time fully recognises the rights of people with a disability to live their lives as empowered and equal citizens. (sub. 72, p. 29)

Health Services Union:

> The HSU has always been a strong supporter of the NDIS and our longstanding position has been that quality disability services depend on a quality workforce. (sub. 132, p. 5)

New South Wales Government:

> The NSW Government is a strong advocate of the National Disability Insurance Scheme (NDIS). The improvement in the lives of people with disability, as outlined by the Productivity Commission (PC) in its 2011 inquiry report into Disability Care and Support, is a goal embraced by NSW. (sub. 60, p. 2)

1.4 The Commission's approach to the study

This study is a review of NDIS costs. The Commission has been asked to look at:

- the sustainability of scheme costs, including current and future cost pressures, and how to manage any potential cost overruns
- whether jurisdictions have the capacity to deliver disability care and support services as the scheme expands
- how the NDIS impacts on, and interacts with, mainstream services
- whether efficiencies have been achieved within the scheme
- whether there are any issues with scheme design, including the application of market and insurance principles, in ensuring the best possible outcomes for people with permanent and significant disability
- funding and governance arrangements, including financial contributions, risk-sharing, and the 'escalation parameters', which define the annual increase in funding required by different jurisdictions.

A number of stakeholders expressed concern that the Commission would focus on costs and not take into account the intent of the scheme and the potential impact that it could have on the lives of people with disability (box 1.3). As the Australian Federation of Disability Organisations said:

> A focus on costs should not be at the expense of a focus on outcomes for the very people the scheme is intended to support. Any decisions made in the interests of ensuring sustainability should also be consistent with improving outcomes for people with disability. (sub. 180, p. 6)

And while the focus of this study is on scheme costs, the Commission's approach (consistent with the *Productivity Commission Act 1998* (Cwlth)), is to examine costs in light of the benefits and impacts of the scheme on the lives of people with disability, and Australians more generally, using a wellbeing framework (see figure 1.5 below). This is also consistent with the insurance approach of the NDIS, which is about 'maximising outcomes for participants and their families/carers at the lowest possible sustainable cost' (NDIA, sub. 161, p. 26).

The objectives of the NDIS (choice and control, independence, social and economic participation, reasonable and necessary support) are seen by the Commission as an integral part of the analysis of the scheme costs. Costs cannot be considered in isolation of the benefits they provide.

Box 1.3 **Stakeholders said the focus should not be solely on costs**

Anglicare Australia:

> … measures of the financial sustainability of the NDIS should not be narrowly held and applied solely within the scheme itself. Although such measures are of course essential, questions regarding the overall worth of the scheme that capture the cost and benefit to Australian society should be included … (sub. 157, p. 21)

Community Mental Health Australia:

> … CMHA … believes that the Commission in assessing whether or not the NDIS is financially sustainable must investigate how the scheme is being implemented and how this is being managed. (sub. 11, p. 2)

Australian Blindness Forum:

> The financial sustainability of the NDIS should be defined and measured by the standard that all people with disability can access and participate in the community. (sub. 48, p. 17)

NSW Government:

> Any review of costs and sustainability isn't necessarily about minimising short term costs. Costs must be considered in relation to the objectives of the NDIS (reasonable and necessary support; choice and control; increased social and economic participation). (sub. 60, p. 9)

SDN Children's Services:

> SDN believes that a drive for financial sustainability must not be disconnected from a drive for quality, effective practices. (sub. 73, p. 2)

Autism Aspergers Advocacy Australia:

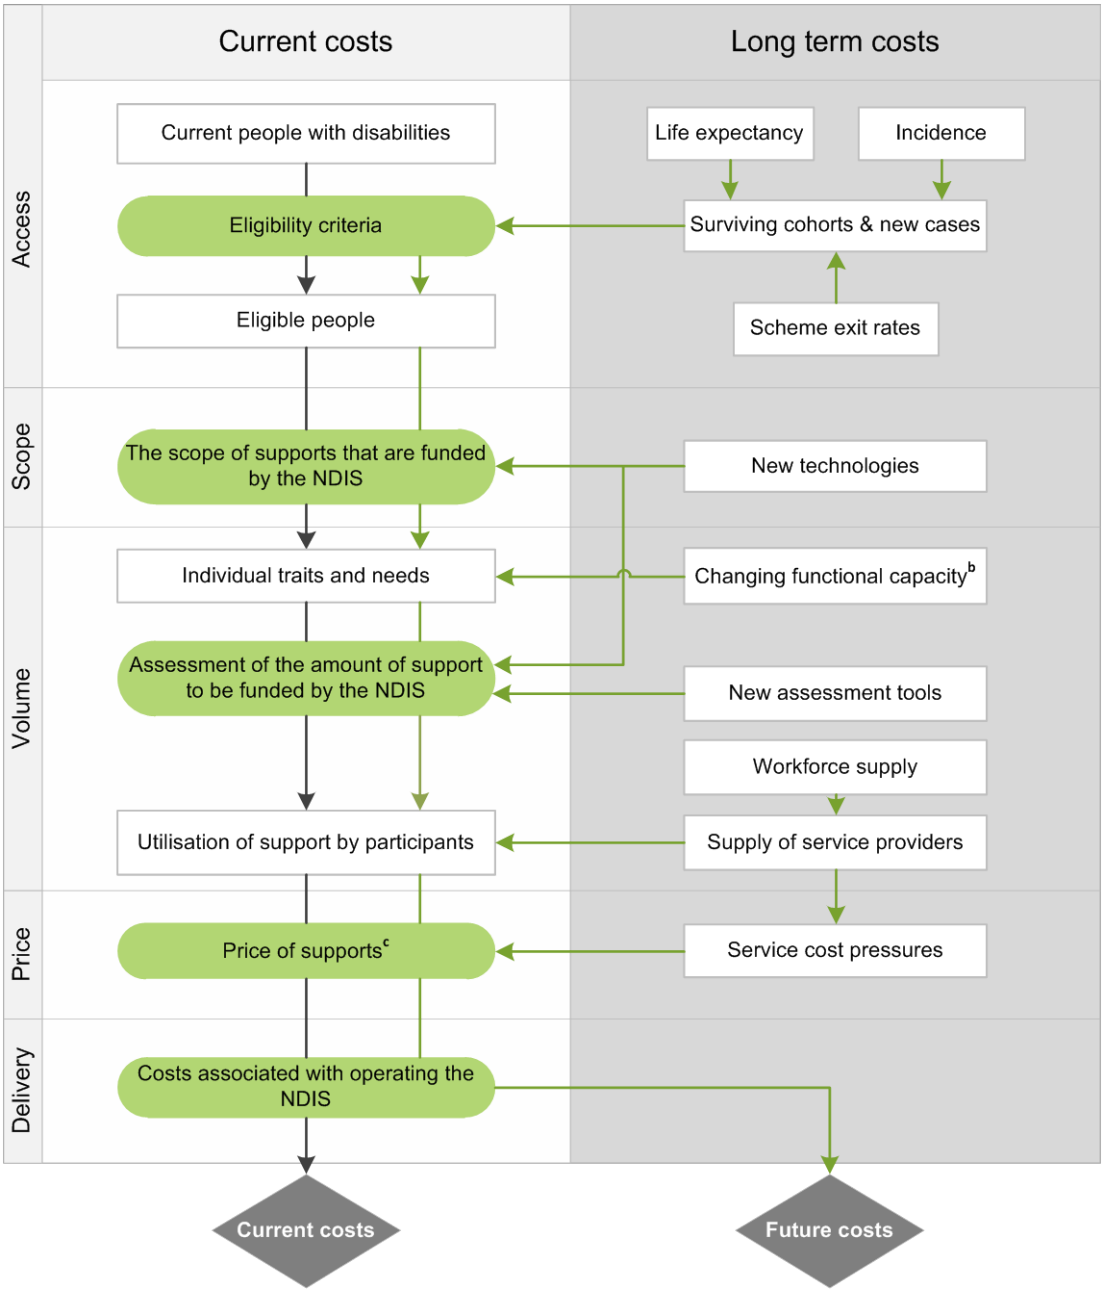
> Maybe 'sustainability' is the wrong notion. It is more about benefit versus cost, and people having a reasonable standard of living in our community. (sub. 178, p. 36)

What are the factors driving scheme costs?

Assessing the sustainability of scheme costs, including current and future cost pressures, involves examining the factors that drive scheme costs. Key factors driving scheme costs include:

- access — the number and profile (age, sex, disability type, disability severity) of participants in the scheme
- scope — the scope of supports provided to participants in the scheme
- volume — the quantity of supports in a participant's plan and the proportion of supports in a plan that are utilised by a participant
- price — the price paid for supports under the scheme
- delivery — the costs associated with operating the scheme (figure 1.3).

Figure 1.3 **What drives scheme costs?**[a]



[a] Green cells denote cost drivers that the NDIA and/or governments have direct control over. Grey cells are cost drivers that can only be *indirectly* influenced by governments. [b] This includes changes in participants' functional capacity attributable to early intervention. [c] Prices of disability supports are currently set by the NDIA. The NDIA intends to deregulate prices as the market matures (NDIA 2016h, p. 11).

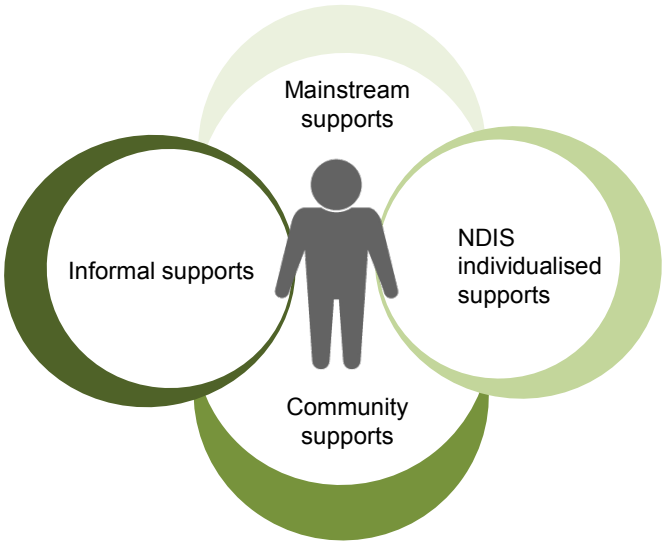
Scheme culture will also be an important driver of costs. Moving away from the welfare culture of current disability systems to one of seeking reasonable and necessary supports and managing down the total cost of disability over a participant's lifetime (in line with an

insurance approach) will be critical for the financial sustainability of the scheme. As noted by Bruce Bonyhady, the former Chair of the NDIA Board:

> Importantly, the NDIS cannot be allowed to be turned into a Centrelink-type entitlement model, because under this approach costs would continually escalate. (sub. 100, p. 2)

Other support systems can also affect scheme costs. The NDIS, as a person-centred approach to providing disability supports, relies on supports and services outside of the NDIS (including informal, community and mainstream supports) to be in place to help people with disability to live ordinary lives (figure 1.4). If these supports are not available, people with disability could seek NDIS funding to fill the gap, and this could pose risks to scheme costs.

Figure 1.4 **A person-centred approach relies on supports outside the NDIS**



Source: Adapted from NDIA (sub. 161, p. 22).

Sustainability — interpreted as financial sustainability

The Commission has interpreted scheme sustainability to mean 'financial sustainability'. This is in line with the NDIS Act. Under the Act, the NDIA manages, advises and reports on the financial sustainability of the NDIS. While financial sustainability is not defined or listed as one of the explicit objectives of the Act, the Act (s. 3) does state that 'regard is to be had to … the need to ensure the financial sustainability of the National Disability Insurance Scheme'.

The insurance approach to the scheme and financial sustainability are inextricably linked. For a commercial insurer, financial sustainability is about balance sheet adequacy — there needs to be enough capital to meet some proportion of future expected liabilities by way of

cash claims (as set out in prudential standards set by the Australian Prudential Regulation Authority) (NDIA 2016j).

However, the financial risks inherent in the NDIS are unique. The NDIS is funded on a cash-flow basis — annual contributions meet the cash claims expense — so a balance sheet approach to financial sustainability is not appropriate. And because there is no annual capped amount (as there was in previous disability support systems), the financial risk associated with satisfying all valid claims for reasonable and necessary support needs to be managed. As the NDIA explained:

> … unlike traditional disability systems, it is not open to the NDIA to refuse to fund reasonable and necessary supports for a participant who has been found to be eligible on the basis that the 'budget has been exhausted'. The NDIS, therefore, faces significant financial risks in the same way that an insurer does and these risks must be managed. Indeed, the NDIS Act explicitly requires the Agency to manage the financial risk that goes with a regime under which any valid claim has to be satisfied. However, the NDIS is still concerned with people rather than claims, and outcomes as well as financial result. (2016j, p. 6)

In light of this, the NDIA defines financial sustainability for the NDIS as:

- the scheme is successful on the balance of objective measures and projections of economic [and] social participation and independence, and on participants' views that they are getting enough money to buy enough goods and services to allow them reasonable access to life opportunities — that is, reasonable and necessary support; and
- contributors think that the cost is and will continue to be affordable, under control, represents value for money and, therefore, remain willing to contribute. (2016j, p. 18)

Based on the NDIA's definition, achieving financial sustainability requires continuous monitoring of both participants' outcomes and costs. It is not about minimising costs or maximising benefits, but rather balancing the two in a way that ensures there is a net benefit over time. As the NDIA put it:

> … while cost efficiency will be of prime importance to an insurer it will not be the sole focus of the NDIS. Rather, good participant outcomes will be an ongoing objective and, so, finding the right balance between participant outcomes and cost will be critical. (2016j, p. 12)

And as pointed out by the New South Wales Government, financial sustainability must be considered against a long term (not a short term) view of costs:

> The lifetime costs for supporting participants must be considered and an investment approach taken. Early intervention principles are appropriate (including beyond just early childhood), and may increase costs in the short term before delivering lower lifetime costs. The alternative is immediate cost reductions that deliver worse social or economic outcomes for participants or the need for acute responses later in life: this is not an improvement to financial sustainability.
>
> … Financial sustainability must be considered with reference to a suite of indicators, with a long-term view, and with consideration of broader impacts elsewhere. (sub. 60, pp. 9–10)

The Department of Social Services (sub. 146, p. 17) said it supported the NDIA's definition of financial sustainability, and noted that 'considerations of NDIS sustainability

need to weigh the success of the Scheme in improving economic and social outcomes and the value-for-money proposition for contributors'.

As outlined above, financial sustainability is a difficult concept to define in a unique scheme like the NDIS, but the Commission supports the definition used by the NDIA. The definition provides a clear link between scheme costs and benefits and support from taxpayers.

A wellbeing framework for considering costs and benefits

The Commission has examined scheme costs and the financial sustainability of the scheme in light of the benefits to people with disability and Australians more generally using a wellbeing framework (figure 1.5).

The NDIS aims to improve the lives not only of current scheme participants, but also future participants. This will only be the case if the scheme is financially sustainable. Financial sustainability is also essential if scheme participants are to consistently receive reasonable and necessary care while they remain in the scheme. Cost overruns could jeopardise the level of care and support participants receive, or result in a return to some of the less desirable features of the previous system (including, for example, an inequitable rationing of support services).

And, unlike other insurance schemes that rely on premiums to fund costs, the NDIS will only be funded as long as taxpayers consider it is a good use of taxes.

Taxpayers' willingness to fund the NDIS will depend on their perception of value for money in terms of:

- people with disability experiencing better lives as a result of the scheme
- the scheme making it easier for families and carers to play a supporting role
- the way the scheme invests in people with disability
- the supports that are funded (and the evidence base to support what is funded)
- efficiency gains and cost savings in the disability support system and other government services.
