Funding for volunteer organisations needs to strike a balance between several objectives. For volunteering to provide the greatest benefit, government funding of volunteer organisations should not crowd out the fundraising or support that people would provide anyway. Nor should funding be structured in a way that means volunteers are, or are perceived to be, 'paid supports' rather than people who want to offer their time to make a genuine connection and difference to people with disability. At the same time, funding and support to volunteer groups should reflect the broader social benefits they enable, and the cost and labour savings that they may allow.

The Commission's 2011 *Disability Care and Support* inquiry suggested that as formal supports were rolled out to participants in the NDIS, volunteers would focus on providing supports outside the scheme, and to all people with disability — largely funded through ILC (PC 2011, pp. 218–224). However, as the ILC program becomes more clearly defined, it

does not seem to be a good fit for all volunteer activity. As a result, the Commission considers it may be worth the NDIA trialling some new funding arrangements for volunteer organisations, particularly in this period where the workforce is not developing quickly enough.

RECOMMENDATION 9.4

Some volunteer organisations are finding it difficult to provide supports to eligible scheme participants. There is merit in the National Disability Insurance Agency:

- considering whether volunteer organisations should be funded to cover both the initial costs of connecting participants with volunteers and ongoing costs of volunteer management. The Agency should consider whether this is best done through line items for scheme participants or through a more direct funding arrangement with volunteer organisations
- trialling different funding arrangements to cover ongoing costs of volunteer management and collecting data on the outcomes of participants that use such services to better evaluate the costs and benefits of volunteer organisations providing scheme supports over the longer term.

9.4 How does informal care affect the workforce?

Unpaid informal care by family members, friends and community groups remains a critical part of the NDIS. Under the current payment system, the funding a participant receives takes into account the level of reasonable and sustainable informal support received, but as noted by the NDIA, 'the maintenance of ordinary family relationships, and the increased independence this entails for the participant, is central to the purpose of the Scheme' (NDIA, sub. PP327, p. 49).

To the extent that participants have natural and informal supports in their lives, this reduces the amount of formal care considered necessary. However, a lack of informal care could increase the need for formal carers, and require an even faster build-up of the disability care workforce.

Workforce shortages will mean that some people with disability will have to continue for some time yet to rely on their informal carers. But there are two constraints on informal carers providing additional hours of care. One is the declining ability to care (especially in the case of ageing informal carers) and other commitments (such as paid employment, or the need to engage in paid work). The other is a lack of respite services.

The ageing of informal carers means that many carers will be unable to provide additional care in the future. The most striking example are ageing parents of adult children with disabilities. Many ageing parents contributed to this study (box 9.5) and it is clear that their capacity to offer additional care is extremely limited, and should not be relied upon.

Box 9.5 **Many parents are currently the 'provider of last resort'**

Rosa Miot:

> The NDIS is crucial to my future. I have a 40 year old daughter with an intellectual disability. I have been her full time carer all of her life. … However, I am now 70 years old and I will need the NDIS to provide her with the ongoing supports she will need to be able to remain living in the community as she has done all her life. I would like to be able to concentrate on my own life and health needs and not be overburdened with the caring role. (brief sub. 134)

Evelyn Ware:

> My husband and I are 89 and 82 years old respectively and have a daughter aged 55 with autism and intellectual disability. Although living in the community she requires a considerable amount of support with budgeting, health matters, cooking and general management of her life. … once we are unable to provide the assistance we are now providing she will need to have more support from NDIS, or go into supported accommodation as her disability prevents her from living independently in the community. (brief sub. 137)

Pat van der Beek:

> Our intellectually disabled son is 41 years old this year and my husband and I are 73 and 72 respectively. When the NDIS rolls out in our area in July, we are hopeful that we will have additional resources to enhance his life. His siblings are busy with their own families, careers and lives in general and there is no certainty that they will be able (or willing) to provide the necessary support for their brother when we no longer can. … While we are currently both in reasonable health, there is obviously no guarantee this will continue; inevitably, our son will be without our support in the later years of his life. … We have genuinely done our utmost to give him the best possible life to this point and welcome the introduction of the NDIS which we hope will enhance his future while also lifting some of the responsibility from our shoulders. (brief sub. 70)

However, for others, the constraint is less to do with ability and more to do with the forgone wages that caring entails. Alleviating these constraints may allow informal carers to support family members with disability for longer and more intensively. One way to do this is to pay informal carers.

Is paying informal carers appropriate to reduce calls on the workforce?

Paying informal carers to provide attendant care judged to be reasonable and necessary under the NDIS has potential benefits, definite costs, and considerable risks. In the position paper, the Commission included a draft recommendation suggesting that the guidelines on paying informal carers should be relaxed for the period of transition, as a way to reduce workforce shortages.

The benefits of paying informal carers are that such payments can enable informal carers to provide a greater quantum of care, which reduces the calls on the formal carer workforce. Depending on a participant's circumstances — such as those in thin markets — payments to informal carers may be the only way that some will receive funded attendant care under the NDIS. If this care is not judged as reasonable and necessary, there could be greater calls on

other mainstream services, or on the scheme itself, over the longer term.[82] But while this could be beneficial to participants and reduce long-term costs, it is difficult to know what the scale or scope of these benefits might be.

Much clearer are the additional costs to the NDIS of paying informal carers, which would depend on the eligibility for such payments and the rate of payment. Currently, the NDIA's (ndd) operational guidelines 'will not fund a family member to provide personal care or community access supports unless all other options to identify a suitable provider of supports have been exhausted'. (In practice, this has sometimes been interpreted to mean that family members who are paid to provide supports do not reside at the same location as the participant (NDIA 2014b, p. 5), or that this is a rule disallowing the employment of a participant's relative to provide supports (QAI, sub. 115, p. 15)). While the NDIA does not currently collect data on how often these exceptional circumstances occur, the Commission understands that NDIS payments to family carers are very rare. Accordingly, increasing the scope of paying informal carers means that there will be greater costs to the scheme.

There are also risks to paying informal carers, which have their own potential costs and benefits that need to be considered. Participants in this study highlighted several of these risks, which fall into three broad groups: the risks to participants, risks to informal carers, and risks to the sustainability of the scheme (table 9.4).

It is difficult to quantify the likelihood and costs associated with these risks, but each points to higher potential costs or poorer potential outcomes for scheme participants. Participants have experienced safer outcomes, less unmet need and greater satisfaction under some schemes that provide paid family care (PC 2011, appendix G). But in other schemes, experience suggests that the risks and costs of paying family carers can be substantial.

One example is the experience of the NSW Lifetime Care and Support scheme (now part of icare) in paying family carers. The scheme only allows payment to family members in exceptional circumstances, including instances of geographical isolation and culturally-sensitive situations. Where such payments have been made, the dependence on the income has sometimes disrupted family relationships, including the payments for care becoming a key source of income for the extended family. It has also led to some difficulties where the needs and aspirations of the participant and their family carers change, such as when family carers become too old and frail to provide the proper attendant care they are paid to supply (icare, pers. comm., 19 September 2017).

[82] The benefits from paying informal carers are reflected in the policy decisions of many OECD countries Most OECD countries have some paid benefits program designed to support the providers of informal care. Typically, these fall into two sorts of programs: a paid allowance to the informal care giver and a payment to a person with disability that can be used to pay family carers. Austria, Belgium, the Czech Republic, France, Italy, Luxembourg, the Netherlands, New Zealand, Norway, Poland, the Slovak Republic, Spain, Sweden, the United Kingdom, and the United States all have some variant of the latter that allows for payments to pay for family members to provide disability care, though the rate and eligibility criteria vary considerably (OECD 2011, p. 139). However international comparisons are difficult to make, especially as different jurisdictions often use a range of eligibility and means test criteria in relation to such payments.

Table 9.4 **The risks from paying informal carers could be considerable**

Risk faced by	*Potential outcome*
Scheme participants	• Informal carers may provide a lower quality of care than professional carers. This could undermine participant wellbeing, and in some cases, recovery. • Participants may suffer harm or exploitation without appropriate institutional safeguards. • Payments can undermine family relationships by introducing a payment for care that was previously being provided out of love. When such payment arrangements are put in place, they can be very difficult to unwind, especially where a degree of dependence on the funding occurs.
Paid family carers	• Payments to family carers would not be costless to the economy more broadly, as they may reduce the incentives of carers to find other paid employment. • While payments may be provided to carers, these could be offset by an increased administrative burden and other costs. For example, paid family carers may need to register as a provider. • The value of the payments may be offset through the withdrawal of other (means-tested) government programs.
The scheme overall	• Additional administrative costs to the scheme. This includes the difficulty of determining that paid time to informal carers is used for the reasonable and necessary supports provided under the scheme, rather than for hours of informal care that were expected to be provided anyway. • Payments to family members to provide care may inhibit a market-driven solution that would otherwise respond to the shortfall. • Such payments could affect the interpretation of what amount of informal care may be expected of participants without payment. If payments to family members were to become the norm, then this could affect the amount of paid supports expected as part of reasonable and necessary criteria of the NDIS. This could substantially increase scheme costs.

Sources: Based on Carers Australia (sub. PP224, pp. 11–13); icare (pers. comm., 19 September 2017); NDIA (sub. PP327, pp. 49–50); Prader-Willi Syndrome Association of Australia (sub. PP228, p. 6).

Another example is the difficulties faced by the New Zealand Ministry of Health in keeping payments to family members financially sustainable. Legal challenges that broadened the extent of family carer payments increased their cost substantially in 2012, requiring a legislative change to constrain the cost (NZ HRC nd). These experiences show that paying informal carers can, in some cases, lead to undesirable outcomes from a financial, legal and scheme sustainability perspective.

The key policy question is whether taking such risks by paying informal carers is worthwhile to address the potential shortage of formal carers being faced by the NDIS. For such an approach to be effective, participants would have to *want* to use paid informal care, and informal carers would have to be prepared to supply paid care.

Study participants' views were mixed on the effectiveness and desirability of paying family members to provide care (box 9.6), with the strongest support coming from participants who see thin markets as presenting the greatest risk of a lack of supply of paid, formal carers.

Box 9.6 Some of the views on paying family members to provide care

National Disability Insurance Agency:

> The NDIA considers that the unintended side effects of such a change will cause social and financial problems that outweigh the workforce supply benefits. … Paid informal care by family members has the potential to negatively affect the social bonds between participants and families … Paid Informal care is likely to compromise the sustainability of the NDIS. (sub. PP327, pp. 49–50)

Physical Disability Australia:

> If participants are able to utilise some of their support packages to supplement the income of parents, partners, siblings and other extended family members then they will be less of a burden to them, they will be actively contributing to the economic well-being of the family and they will have the benefit of privacy at those times when they don't want workers in their homes but still need support with particular tasks. (sub. PP306, p. 4)

Australian Federation of Disability Organisations:

> Half the membership supported the relaxation of the operational guidelines to allow for the payment of informal carers citing it as an expression of the principle of choice and control. Member organisations from this group stated that in rural and regional areas informal carers may already be providing disability support in the absence of available disability support providers. This option would acknowledge that relationship, resource it and may allow for the person with a disability to continue to live at home with family rather than having to move away from all that they know and trust in order to receive disability support. (sub. PP325, p. 19)

Carers Australia:

> Many family and friend carers would regard being paid to care for a loved one as anathema and possibly an extra source of relationship strain within the family. Among those who are anxious about the consequences of family carer employment, the possibility that carers will become even more entrenched in their caring role is often raised. Further, paying informal carers can create extra burdens, particularly if it assumes that it will be in addition to the care already provided, or carers feel that receiving payment means they should be doing more than they are already.
>
> However, we know from consultations around the NDIS, that other carers and those they care for regard the option to choose to pay family or friend carers, in preference to a worker who they believe would not provide the same standard and quality of highly personal holistic care, is a key element of choice and control. Having noted the lack of consensus around the merits of paying family and friend carers, we are of the view that [payments to informal carers] bear consideration, especially in cases where replacement care is not readily available and where, as a consequence, carers are not benefiting from NDIS supports in the way intended. (sub. PP224, p. 10)

Northern Territory Government:

> The Position Paper's Draft recommendation … suggesting the relaxation of paying informal carers living in the same residence as the participant is supported, particularly for Aboriginal and remote communities. However, the NDIA will need to ensure access to such payments is simple and clearly understood by Aboriginal Australians, and that appropriate protections are in place for participants. (sub. PP359, p. 5)

The lack of data collected on where participants have been allowed to use paid family carers under the scheme, and the lack of clarity on when such circumstances occur, means that it is difficult to assess the level of workforce savings they could enable from past practice. Nor is it clear how such arrangements would interact with other NDIA policies, such as the Market Intervention Framework and Provider of Last Resort Policy (chapter 7).

Given the uncertainties about costs and risks, it would be premature to recommend any changes to paying family carers before a better evidence base is collected. At any rate, given the risks highlighted by the NDIA on payments to informal carers, it seems necessary for the good governance of the scheme that the Agency collect better data on its current arrangements in this area.

RECOMMENDATION 9.5

The National Disability Insurance Agency should collect data on the number of participants who make use of paid informal carers to deliver scheme supports, including the costs associated with such payments and their length of use.

Respite

Respite[83] services can help informal carers care for longer. A lack of respite may mean that informal carers are unable to support family members and friends who are NDIS participants. This will require more formal and costly supports in their place. It was for this reason that the Commission in its 2011 *Disability Care and Support* inquiry recommended that the needs of carers be considered as part of a participant's individualised supports (PC 2011, p. 340).

A number of respite options (such as the *Mental Health Respite Carer Support Program*) have been wound up, with the funding provided to the NDIS (Mental Health Australia, sub. PP321, p. 13). Replacement support for carers outside the scheme, including information and linkage about respite, is to be provided under the DSS' *Integrated Plan for Carer Support Services*, but this service is still to be fully implemented. A gap is emerging for respite services both within and outside the NDIS as the scheme transition occurs.

In this context, a number of study participants argued that respite services are not well catered for under the NDIS. Concerns raised included that there is a lack of respite supports in plans, or insufficient quantities of respite options for family members (Carers Australia Victoria, sub. 131, pp. 37–38; Carers ACT 2015, pp. 1–3).

It can also be difficult for some participants and their families to identify available respite options under the NDIS support list, as it is not clearly labelled as 'respite' (Anglicare Australia, sub. PP339, p. 11).

[83] Some participants in this study said the term 'respite' is pejorative and prefer the term 'family care'. The Commission is sensitive to this issue, but has used the term 'respite' for clarity — both because it is included in the NDIA's Price Guide (NDIA 2017q, p. 28) and most study participants, including people with disability, used the term in their submissions.

As the Intermediate Review into the NDIS said:

> … both the quantitative and qualitative data indicate that many family members and/or carers of NDIS participants are unable to take adequate breaks from providing support and they cannot access carer support in a consistent manner. (Mavromaras, Moskos and Mahuteau 2016, p. xiv)

Respite can be accessed under the NDIS in two ways:

- A line item in participants' plans that provides for short-term accommodation (often there is a cap on the number of days provided each year).
- A core support can be used to fund additional in-home care or support in shared facilities (NDIA, sub. PP327, p. 51).

While placing the options for respite in plans maximises choice and control for the participant, it can lead to inappropriate levels of support for informal carers (Inclusion Australia, sub. PP357, p. 23; National Mental Health Commission, sub. 153, p. 4) — especially as some block-funded supports for carers are withdrawn. As Anglicare Sydney said:

> … carer needs and supports are not formally recognised as part of NDIS packages. There is no formal assessment of the needs of the carer, no funding package for the carer and no guarantee of involvement in the assessment of the care recipient's needs. … With the closure of carer-specific support services, Anglicare is concerned that carers will no longer receive the same amount of support, let alone improved levels of support, under the new system. (Kemp et al. 2016, p. 10)

Such an approach is at odds with practices in other jurisdictions.

> Although carers' goals and aspirations are recognised in the guidelines for carer support under the NDIS, there is no formal assessment process for their needs. In the UK, carers' needs are assessed independently of the needs of service users. In the US, needs of all members of the family are assessed at once. (Hamilton et al. 2016, p. 1)

The NDIA noted that alternatives to respite, including 'community-based activities such as camps and innovative daytime opportunities that connect a person to their community' were becoming apparent under the scheme. Also, the choice not to call respite 'respite' was a deliberate choice made by the Agency in the interests of participants and families.

> On the advice of the NDIS Independent Advisory Council (IAC), 'respite' is not a distinct service listed on participant plans. The IAC notes that the 'respite' paradigm sets up an unhelpful dynamic portraying people with disability as 'burdens of care'. Parents and other carers do not need 'respite', but may need 'rest, recovery, re-energising and inspiration'. The IAC favours reframing the question to 'What would it take to enable the family and the person with disability to get a life?' Participant plans under the NDIS list specific services instead (such as short-stay supported accommodation). (sub. PP327, p. 51)

The Commission considers that the use of alternative arrangements that better connect people with disability to the community and provide respite to informal carers is an excellent example of the benefits of the scheme. However, it should also be noted that day programs

and occasional camps may not be sufficient respite in some circumstances, especially where the supply of such alternatives does not keep pace with demand. Also, not labelling short-term accommodation as respite is inadvertently causing confusion and leading to poorer outcomes for some informal carers.

This is concerning from both a wellbeing and a financial sustainability point of view, as the benefits of respite usually exceed the cost of providing them. For example, research and analysis conducted by the Victorian Ombudsman and Victorian Equal Opportunity and Human Rights Commission found that it costs far less to provide 'intensive' respite for children with disability compared with placement in out of home residential care (VEOHRC 2012, p. 54). Respite services provided to young carers have contributed to improved emotional and physical wellbeing, as well as better opportunities to complete schooling (ARTD Consultants 2008, p. vi). Internationally, respite services are recognised as both improving the wellbeing of carers, improving the quality of care to people with disability, and reducing costs to governments (OECD 2011, pp. 127–129).

Informal care, and the ability to call upon informal carers, is a vital part of the supports provided by the NDIS. Without respite services, the sustainability and success of the scheme are imperilled. It is the Commission's view that it is appropriate for respite supports to be allocated to participants on the basis of the amount of informal supports expected of informal carers, that respite should be more clearly labelled, and that the options available to participants to use their core supports for respite are clearly set out.

RECOMMENDATION 9.6

The National Disability Insurance Agency should:

- ensure planners take into account the amount of respite care that is reasonable and necessary under an individualised support package, based on the amount of informal care that is expected to be provided by informal carers
- label short-term accommodation supports provided in participants' plans in a way that makes it clear that these supports can be used for respite
- better inform participants and their informal carers that core supports provided in individualised support packages can be used to fund additional in-home care or support in shared facilities to provide respite
- include specific measures to ensure a supply of respite services in its provider of last resort policies.

Another issue raised repeatedly to this study was that price caps offered for short-term accommodation under the NDIS (which is used for respite), are too low to be sustainable, especially for participants with complex needs or challenging behaviours (Cerebral Palsy Alliance, sub. 163, att. 1, p. 4; HSU, sub. PP316, p. 8; Nardy House, sub. PP216).

In turn, the NDIA (sub. PP327, p. 50) noted that '[i]t is too early in the Transition to provide a view on whether the NDIS has affected supply and demand for respite services', and that:

> … as part of the independent pricing review, the NDIA has asked for advice on improving pricing effectiveness for the pricing of short-stay support, and for emergency and crisis supports. This will inform the NDIA's position on whether respite services can be more effectively provided. (sub. PP327, p. 51)

The Commission's recommendations on price monitoring and regulation are aimed at addressing concerns about the adequacy of pricing (chapter 8). Concerns that existing providers may be struggling to transition across to the NDIS, and that a lack of respite services may result, mean it is prudent for the NDIA to explicitly consider respite supports in its provider of last resort policies (chapter 7).

10 Participant readiness and market stewardship

Key points

- The National Disability Insurance Scheme (NDIS) relies heavily on well-informed participants making decisions in their best interests. Participant readiness depends on a number of factors, including: an individual's capacity; their network, carers and peers; assistance provided by the NDIS; assistance available in the community; how ready the market is to provide supports; and the complexity of the scheme.
- Some participants (and their families) are finding it difficult to understand and interact with the NDIS. This is in part because the scheme is a new way to allocate and supply disability supports. Some transitional issues are also contributing to these difficulties.
  - If participants are unable to interact well with the NDIS, the benefits of the scheme will not be fully realised. This has consequences for participants and their families, the financial sustainability of the scheme, and the broader community.
- Some participants receive NDIS supports to help them implement their plans, including support coordination, which makes up about 4 per cent of committed supports. The National Disability Insurance Agency (NDIA) needs to clarify the role of support coordination and allocate it based on need (rather than for a fixed time period).
- The NDIA is currently responding to participants' concerns about the online portal (which is used to manage plans) and developing the eMarketPlace. Providing timely and useful information to help participants find providers should be a matter of priority.
- Intermediary services, which can help participants manage their plans, can also reduce transaction costs and the complexity of the scheme for participants. More should be done to encourage the use of intermediaries, particularly to unlock the benefits of self-management. In a mature scheme, intermediaries could also help streamline administration and compliance costs, as well as protect participants by helping them to understand their consumer rights and protections under the scheme. However, the safeguards that apply to intermediaries to protect providers and participants need to be monitored closely so they can be adjusted to changing need as the scheme evolves.
- Disability advocacy is critical to helping participants engage with the NDIS, and for all people with disability. These services need to be appropriately funded by governments, with data collected to evaluate future funding arrangements at full scheme.
- Market stewardship would be improved by increased clarity of roles and responsibilities, data collection and greater collaboration between governments.

The new model of disability support envisioned by the National Disability Insurance Scheme (NDIS) relies heavily on well-informed participants making decisions in their own best interests. As a result, participant readiness is central to the success of the scheme. The

outcomes of the scheme are directly linked to how ready participants are to enter the NDIS; to get the plans that they need; to find their supports; and to self-manage their own affairs (if they want to).

Participant readiness also affects scheme costs. If people with disability are unable to navigate the scheme, this will lead to lower participation in the scheme, underutilisation of supports, and mean that the intended benefits of the scheme are not fully realised. While this will reduce scheme costs in the short term, it may lead to higher costs (both inside and outside of the NDIS) in the long term.

This chapter looks at participant readiness and the supports available to assist participants use the scheme (section 10.1). It then discusses options for improving participant readiness (section 10.2). (Participant engagement in the planning process is discussed in chapter 5.) The chapter concludes (section 10.3) with a wider perspective on market readiness issues, focussing on what governments need to consider to help participants, providers and workers deliver NDIS supports efficiently and effectively.

10.1 What is participant readiness?

Participant readiness should be considered in the context of the changes that the NDIS is driving for people with disability. Participants are moving from a scheme where they had little choice and control over their supports to a new system, where they have more opportunities to exercise choice and control. This change brings with it new challenges, including:

- thinking about the best way to achieve their goals
- shopping around for providers
- managing administrative and financial tasks.

And participants are tackling these new challenges while the scheme is still rolling out and as the disability support market is changing. As one study participant said:

> Telling people they have choice and control, does not give them the skills to find appropriate service providers, which are much harder to find when they are full and simply tell people to go somewhere else if they are not happy with something. There is no information anywhere on how people can choose providers, what to look for in them, the sorts of questions to ask and what sorts of things you might want to consider. Equally when providers are all full, then what options are there. (Belinda Jane, sub. 80, p. 10)

There will be some degree of 'learning-by-doing' as participants spend more time in the NDIS and become more familiar with the scheme. But the experience to date is that participants need help to become well-informed consumers who are able to make decisions that result in cost-effective outcomes.

This was recognised by the COAG Disability Reform Council.

> … many people with disability will not have had the opportunity to exercise choice. Some people with disability may require additional support to effectively exercise informed choice, especially those with high and complex needs. (2015a, pp. 14–15)

Similarly, the Victorian Ombudsman noted that:

> The NDIS is a market driven model, rooted in the belief that people with disability are best placed to decide how their money should be spent on services to support them. For many people with disability, this is a long awaited improvement, however for people with severe cognitive impairment and/or limited communication, it can present new barriers. For the most vulnerable, capacity will never improve; it is not a developmental challenge that will be rectified as people 'become more confident and skilled consumers in the market'. This fact must be acknowledged and provided for within the NDIS. (2015, p. 90)

There are two main aspects to participant readiness to exercise choice and control:

- the capacity of participants (and their families) to navigate the NDIS — including their ability, willingness, disability type, experience, skills and resources
- the complexity of the NDIS — including interactions with the National Disability Insurance Agency (NDIA), Local Area Coordinators (LACs) and providers to access and purchase supports. Participants also need to navigate the interfaces with mainstream services like health, education and transport (chapter 6). The more complex the scheme, the more skills participants will need to engage with it.

The two levers available to improve participant readiness are therefore: developing the skills (and capacity) of participants, and reducing the complexity of the scheme. While both levers have costs and benefits, they are not mutually exclusive, but interdependent and complementary.

What help is there for participants?

Scheme participants have access to resources to help them navigate the scheme, and to exercise choice and control over their supports. They range from general assistance available to all participants to more specialised services to address particular needs.

Participants also have options around how they manage their plans (box 10.1).

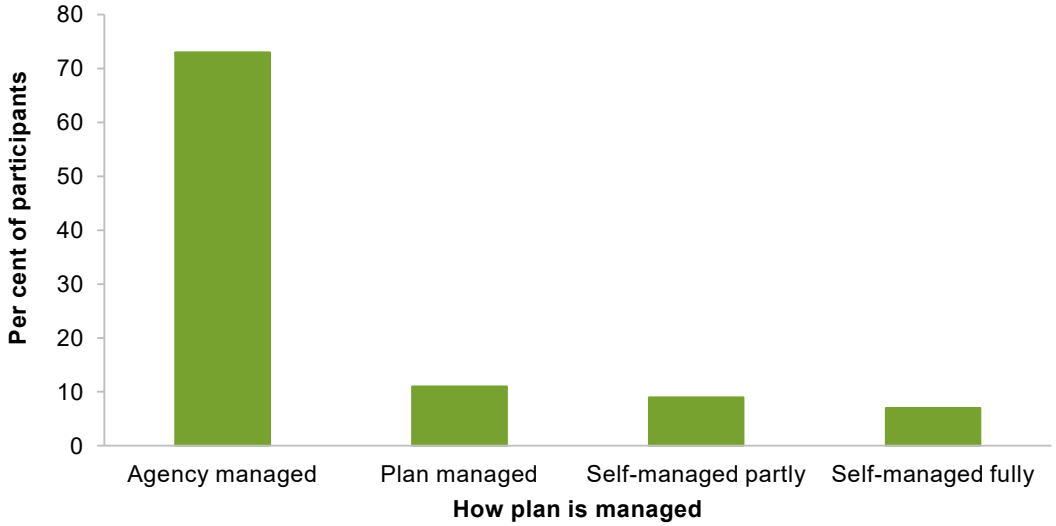
- Participants can use a NDIA-managed ('Agency-managed') plan. Under this option, participants are required to find supports from providers that are registered with the Agency. The NDIA then directly reimburses providers after they deliver supports to the participant.
- Participants can self-manage part or all of their supports. Under this option, the participant finds supports from, and manages payment to, providers. Participants can pay providers and then seek reimbursement from the NDIA, or pay providers once the participant receives funds from the NDIA (NDIA 2017x).

- Participants can use a 'plan manager'. The plan manager can either manage the payments, or provide assistance in terms of finding, hiring and firing providers on behalf of the participant. Plan managers are often referred to as financial and service intermediaries (these are the line items in approved NDIS plans to fund such supports) (NDIA 2016j, p. 48, 2016k, p. 48).
  - Financial intermediaries hold funds and manage risk on behalf of participants.
  - Service intermediaries provide broader technical assistance, including: assisting participants develop skills with plan management; negotiating and coordinating supports; sourcing providers; negotiating the method and timing of the delivery of supports; negotiating individual requirements as part of support management; recruitment, training, support and employment of staff (NDIS IAC nd). (However, the distinction between financial and service intermediaries is somewhat blurred in practice, as the service intermediary role can only be undertaken in conjunction with the financial intermediary role (NDIS IAC nd).)
- Participants can also use a combination of the above three options to meet their needs (NDIA 2017x).

Most participants to date have chosen an Agency-managed plan, rather than using a plan manager or managing their plans themselves (figure 10.1).

Figure 10.1 **How NDIS participants are managing their plans**

For participants who entered the scheme between 1 July 2016 and 30 June 2017



Source: NDIA (2017y, p. 21).

Box 10.1 Managing the funding for supports under a participant's plan

The *National Disability Insurance Scheme Act 2013* (Cwlth) (NDIS Act) allows a participant to choose how to manage their funding for supports. Management of funds is defined as:

- purchasing the supports identified in the plan (including paying any applicable indirect costs, such as taxes, associated with the supports)
- receiving and managing any funding provided by the National Disability Insurance Agency (NDIA)
- acquitting any funding provided by the NDIA (s. 42(1)).

A participant with an approved plan (or one that is being prepared) may make a request that funding be managed wholly, or to a specific extent, by one of the following:

- the participant — this is known as 'self-management'
- a registered plan management provider nominated by the participant
- the NDIA
- the plan nominee nominated by the participant or the CEO of the NDIA (ss. 42(2), 43).

The NDIS Act does not permit self-management of funds in some circumstances, including when:

- the participant or the plan nominee is an insolvent under administration (ss. 44(1), 44(1A))
- self-management would present an 'unreasonable risk to the participant' (s. 44(2)(a)). This is prescribed by the *National Disability Insurance Scheme (Plan Management) Rules 2013* (Cwlth), which includes a range of factors relating to the participant's legal capacity and decision-making ability that the CEO of the NDIA must consider in making this determination (NDIS Act s. 44(3)(a), *National Disability Insurance Scheme (Plan Management) Rules 2013* (Cwlth) rr. 3.7 and 3.8)
- the NDIS Rules have prescribed matters that must not be managed by a participant (s. 44(2)(b)).

If a participant does not make a plan management request, the plan is to be managed by the registered plan management provider specified by the NDIA, or by the NDIA itself (s. 43(4)). If this occurs, the CEO of the NDIA 'must, so far as reasonably practicable, have regard to the wishes of the participant in specifying who is to manage the funding for supports under the plan' (s. 43(5)).

General assistance is available for all participants

Assistance to implement and manage a plan is available for all scheme participants, including via LACs, Early Childhood Partners, Information, Linkages and Capacity Building (ILC), and plan managers (sometimes referred to as intermediaries).

LACs link participants to the NDIS, and to information and support in the community. They work with the local community to make it more inclusive for people with disability. LACs can also help participants understand the NDIS and implement their plan. Participants can receive help to:

- find and start receiving the supports that they need

- self-direct or self-manage their plan
- find mainstream and community services (NDIA 2017n).

However, LACs are still being rolled out. The nature of their services also means that they assist participants with less complex needs (NDIA, sub. 161, p. 107).

ILC-funded projects focus on community inclusion, and making sure that the community becomes more accessible and inclusive for people with disability. This includes:

- personal capacity building — making sure that people with disability and their families have the skills, resources and confidence that they need to participate in the community, or access the same kind of opportunities or services as others
- community capacity building — making sure that mainstream services or community organisations become more inclusive of people with disability (NDIA 2017k).

ILC was not part of the NDIS trial period, but is being progressively rolled out during transition (chapter 6). The NDIA has provided grants to organisations to carry out activities in the community, with further funding rounds open in the second half of 2017 (NDIA 2017k; Prentice 2017).

Participants can also use a plan manager (registered with the Agency) for some or all of their supports. A plan manager can take on a range of different tasks for the participant, allowing the participant to effectively 'outsource' the tasks that they feel least comfortable with managing, and in turn, reduce their administrative burden. For example, plan managers can coordinate payments between the participant, provider and the NDIA, but participants retain choice and control over their supports. Plan managers can also take a larger role, such as searching and securing providers to meet a participant's needs — effectively acting as an agent for the participant.

Support coordination is available for some participants

Some participants who may have less capacity to actively manage their affairs, including those with complex or high support needs, can have 'support coordination' items as part of their plan. These items include: support connection; coordination of supports; participant training in planning and plan management; and specialist support coordination (NDIA 2017q, p. 55, 2017r, p. 56, 2017s, p. 56, 2017t, p. 56).

Whether support coordination is allocated to a participant is determined in the same way as other supports — based on what is reasonable and necessary for the NDIS to provide in meeting a participant's needs or goals. About 54 per cent of scheme participants had funding for support coordination included in their plans between July 2016 and March 2017, although only 37 per cent of participants had support coordination allocated in the June 2017 quarter (NDIA 2017y, p. 21). About 4 per cent of committed supports in participant plans after 30 June 2016 were allocated to support coordination (figure 2.9).

The NDIA said the participants most likely to benefit from support coordination include people:

- with severe and multifaceted disability requiring multiple supports
- who are young and in nursing care
- with conditions of a degenerative nature, and supports requiring regular active management and ongoing adjustment due to the participant's changing needs
- with episodic mental or ill health support needs
- requiring regular crisis management
- with poorly resourced families or limited or no informal support networks
- requiring child protection or criminal justice involvement
- with a history of changing and challenging support provision (sub. PP327, pp. 53–54).

The NSW Government also nominated other groups.

> There is likely benefit in specialist support co-ordinators identified for particular groups of participants, such as children and young people, people with psychosocial disability, and Aboriginal participants. (sub. PP230, p. 9)

Support coordinators provide more intensive assistance to help a participant understand their plan, and to choose and connect with providers — effectively a more personalised and in-depth service than what LACs would provide (NDIA ndc, nde). Support coordination also aims to build and strengthen the participant's capacity to connect to and coordinate informal, mainstream and funded supports to reduce the reliance on support coordinators and others in the future. This includes resolving points of crisis, developing capacity and resilience in a participant's network, and coordinating supports from a range of sources (NDIA, sub. PP327, p. 53).

Other groups can also provide assistance to participants

While LACs, ILC, plan management and support coordination are all provided under the NDIS, there are other groups and representatives — including Disability Support Organisations (DSOs), peer support groups, advocacy organisations and trustees — who also play an important role assisting participants and their families to engage with the NDIS.

Peer support groups allow scheme participants and their families to share their experience, information and knowledge with others about issues associated with disability and the scheme (including helping people think about their goals, supports they might need and support options). Peer support groups can also provide information on how best to find and arrange supports, and connect with community activities. Some peer support groups are forming as the NDIS rolls out (for example, the Mental Health and NDIS Facebook Support Group (sub. 8), and the NDIS Grassroots Discussion Facebook Group).

Trustees can also help participants manage their affairs. For example, public trustees, established by State and Territory Governments, aim to ensure that all members of the community (including people with disability) have access to financial management services in the event that their capacity to make decisions is affected. Public trustees can make decisions on behalf of a person with disability in the best interests of that person (known as 'substitute decision making'), taking into account their needs and views. The *National Disability Insurance Scheme Act 2013* (Cwlth) (NDIS Act) also allows the CEO of the NDIA to appoint a public trustee as a participant's nominee in order to make decisions on planning and actioning supports.[84] These arrangements are still to be tested, and need to be carefully monitored to ensure that they are fit-for-purpose.

Navigating the NDIS is proving difficult for some participants

While there is assistance to navigate the scheme, some scheme participants are finding it difficult to understand and interact with the scheme, and to exercise choice and control over their supports. Some participants said they are finding it difficult to understand their plans (chapter 5); to find, negotiate, purchase and coordinate supports with providers in a timely manner (for example, ADACAS, sub. PP260, p. 6); and to seek assistance from the NDIA when problems occur (JSCNDIS 2017a, pp. 62–63).

A number of study participants mentioned problems with clear communication of the participant pathway. This partly reflects the changing nature of the disability support landscape. Under the previous system, scheme participants who had access to support programs (typically block-funded) often relied on advocates and providers to be the 'first port of call' to seek remedies, information or changes to services. Under the NDIS, participants now have a range of options when seeking information or clarity — including approaching a LAC or the NDIA itself. A lack of fit-for-purpose information means participants can be confused, and providers are continuing to help them navigate the system. As one study participant said:

> There needs to be much more focus on communicating clearly and simply with clients. For instance, at the moment, plans are vague and written in 'government speak'. If the government is concerned about clients overspending, the NDIS needs to give clients clear information on what their funding is for and clear conditions under which it can be spent. (Angela Blakston, brief sub. 168)

[84] To the best of the NDIA's knowledge, there have been no instances of the CEO (or their delegate) appointing a nominee for a participant under Chapter 4, Part 5, Division 2 of the NDIS Act (NDIA, pers. comm., 7 September 2017). However, there are some concerns that nominees may have a narrower ability and responsibility compared with what a public trustee would ordinarily be able to do in the interests of the beneficiary. The Australian Law Reform Commission and participants in this study also noted that there may be a conflict in the duties required of a nominee as defined in the NDIS Act, and relevant State and Territory legislation (ALRC 2014, pp. 151–152; Financial Services Council, sub. 98, pp. 4–5), but this is yet to be tested in court.

Carers Australia also said that:

> If anything has characterised the NDIS to date it is poor communications performance. It has failed to communicate changes in the Scheme as it has been rolled out to potential participants. Its communications have frequently been heavily jargonised and pitched at a very high level. Even people whose job it is to understand NDIS developments and operations often struggle with exactly what is being communicated. In some cases the NDIA has been successful in making elements of the Scheme intelligible to consumers; for example, in a number of their plain English guidelines to supports available under the NDIS. This approach needs to be incorporated into all communications with participants, their carers and providers. (sub. 195, p. 22)

Providing information about the scheme in plain English is one relatively low cost way the NDIA can make the scheme less complicated for participants and their families.

The time spent by providers assisting participants and their carers to navigate the complex system can be significant, and often are 'unbillable hours' of support (JSCNDIS 2017a, p. 64). Participants and their carers said that often they are unable to obtain helpful advice from the Agency or LACs (JSCNDIS 2017a, pp. 61–63; Macarthur Disability Services, sub. 57, p. 9). The NDIA acknowledged that:

> People with disability and their families and carers have reported that there is continued difficulty in understanding the NDIS and the process of moving through the [participant] pathway. (sub. 161, p. 107)

Vision Australia said that some information provided by the NDIA (particularly for the purpose of pre-planning) was not in a format that was accessible by participants, especially for those who are blind or have low vision.

> … much information produced by the NDIA is inaccessible — either not electronically accessible, or the print versions are not produced in either braille or large print, or information is provided in image or tables that cannot be read by text to speech software or is difficult to navigate with magnification. Informed choice and decision making requires information: the current situation forces many people who are blind or have low vision to rely on supports of others, despite preferences for independence. (sub. PP252, p. 2)

Reflecting the complexity and variation of needs and circumstances among participants, some participants will be more ready than others. This, in turn, partly reflects the extent of help that they received under previous disability support arrangements. For example, one study participant said that:

> I don't think I will have trouble utilising my plan, because I am overdue some support and will fully appreciate the value of NDIS funding. I've done my research and I know what's available in my area; however, I appreciate that I live in a city area where there is choice of providers and my needs will not be difficult for me to articulate and negotiate around. (Name Withheld, sub. 5, p. 1)

However, another study participant commented that:

> As a now plan-managed NDIS participant I find it even harder, if anything, to manage that additional layer of administrative burden and all I really want to do is to go back to the good old

> days when the MS [Multiple Sclerosis] Society told me what I want and needed and provided it at a reasonable cost. … there are many benefits to it, including being able to shrug off the burden of managing your costs and choices with a reasonably low level of bureaucratic rigidity. In the meantime … I am an 'under-utilisation' risk to the NDIS, with the immediate threat of having my unused funding cut back — not because I don't want and need the features these choices provide, but because I can't get organised to utilise the promised benefits and it's easier to blow my budget RIGHT OUT than navigate the NDIS' portal … (Kirsty Magarey, sub. 150, p. 4)

Others are also unclear about who is ultimately responsible for helping participants navigate the system, including when supports are being replaced by the NDIS.

As one study participant said:

> In a recent conversation with my mother where we discussed the upcoming pre-planning meeting, my mother was under the impression that Minda Inc. would be acting as an agent for N in the actual planning meeting with the NDIA. From her perspective, she had assumed that as Minda Inc. would be acting as an agent that that would mean that neither she nor N would not need to have to go through meeting. But I'm not sure that's the correct assumption. Nonetheless, the pre-planning meeting with Minda Inc. still requires my mother to complete some paper work on behalf of my brother and to spend time continuing to cajole N to attend that meeting. (Name Withheld, sub. PP365, pp. 1–2)

10.2 How can participant readiness be improved?

Making clearer the role of support coordination and other assistance

It was recognised before the NDIS was implemented that it would be necessary to build the capacity of participants to interact with the scheme. The NDIA's 'participant pathway' reflects this, and includes funding for participants with limited capacity to navigate the scheme.

> The NDIA has designed the participant pathway to include support for participants during the planning and implementation phases … In the implementation phase, the NDIA provides LACs for those with less complex needs and funding for support coordination for the intensive participant groups. … The NDIA has also identified that there is a need for work in the support coordination sector, particularly in some cohorts such as where participants have challenging behaviours, rural and remote areas and where there are gaps in mainstream services that the NDIS cannot fill. Work continues to educate support coordinators on the capacity building role expected of their function which is designed to build the skills of individuals over time to make support decisions themselves. (NDIA, sub. 161, p. 107)

Support coordination is the key means to bolster the readiness of participants with complex needs. For example, Mental Illness Fellowship of WA said that support coordination is particularly important for participants with multiple levels of disadvantage and/or psychosocial disability.

> Where people live in quite complex situations, are impacted by poor physical health, poverty and social isolation support coordination is a critical component keeping people well and managing

> their day to day living. At times support coordination is also a critical link between people's physical and mental health providers. (sub. PP221, p. 4)

However, there is some confusion about the role of support coordinators. It is also not clear whether support coordinators are effective in helping scheme participants find providers, or whether participants who most need these supports have access to them (box 10.2).

Box 10.2 Confusion about the role of support coordinators

Cheryl McDonnell:

> We need a step by step guide. A clear list of who is who and who does what. What the heck is a support coordinator and what exactly can they achieve in an hour a week? … Especially at the start of a plan, [a] support coordinator needs to be much more active. (sub. 79, p. 3)

Early Childhood Intervention Australia Victoria/Tasmania:

> There has been a lack of clarity and guidance around the function, allocation and use of support coordination funding … Providers also report a wide variation in the quality of the support provided. (sub. 129, p. 11)

Summer Foundation:

> In addition to the set up administration, many Support Coordinators are reporting significant time being spent in rectifying poor plans that do not represent the Participants' requirements. The NDIA states that Support Coordinators 'do not make a judgment about the adequacy of the plan and do not make requests for an unscheduled plan review on behalf of Participants'. Nevertheless Support Co-ordinators report on the amount of time overall that is being spent on rectifying inadequate planning at the Agency level, and this impacts on their work in reaching Participant outcomes. (sub. PP293, p. 4)

National Disability Insurance Agency:

> The NDIA agrees … that more clarity is needed around the role of support coordination, the effectiveness of support coordination, and the allocation of support coordination to the participants who most need it. (sub. PP327, p. 52)

The limited availability of quality and skilled support coordinators in some areas was noted by study participants, as well as delays in participants receiving support, and waiting lists for support coordination (NSWCID, sub. PP234, p. 6; Victorian OPA, sub. PP241, p. 3; Royal Institute for Deaf and Blind Children, sub. PP259, p. 7; Summer Foundation, sub. 113, p. 13).

The Victorian Government (sub. PP298, pp. 28–29) observed that some support coordinators were not equipped to assist participants with complex needs, particularly in crisis management and care coordination — resulting in State (and Territory) Government departments being re-engaged to cover the capability gap, potentially poorer participant outcomes and higher costs for governments.

These concerns reflect, in part, the current problems around developing the supply of supports and the workforce to meet the needs of participants (discussed in chapters 7 and 9 respectively). The MJD Foundation (sub. PP233, pp. 8–9) said that the NDIA did not have a clear picture about the actual support coordination options available in communities, and that support coordinators who wished to make service bookings were hampered by their

inability to view participant plans in the portal. The New South Wales Government argued that:

> … better targeting and development of the support co-ordination market is required prior to the conclusion of transition. The NDIA should implement mechanisms to communicate the purpose of the function. It should engage with the sector to co-design and commission a sustainable and well-networked support co-ordination market. (sub. PP230, p. 9)

Study participants (including the MJD Foundation, sub. PP233, p. 8; MHCSA, sub. 308, p. 6) also said that support coordination that is time-limited and focused on capacity-building is not always appropriate for people with permanent and significant disability. In the ACT — the jurisdiction that is already at full scheme — there is some suggestion that the NDIA intends to withdraw support coordination altogether and that LACs will take over this role.

> Support coordination in the ACT has been through various stages. Initial plans did not include it and many plans were not implemented as a result. Now that the LACs have commenced in the ACT the NDIA has made it clear that support coordination will be withdrawn for the majority of participants as the LACs should be doing this role in addition to their many other functions. The NDIA's understanding of support coordination is that over time all participants will develop skills so that it is no longer required. This is a simplistic understanding that does not take into account that many people will want and need support coordination on an ongoing basis … The NDIA needs to take a more realistic approach to support coordination recognising that it can play a role in ensuring sustainability of supports and outcomes for the person with disabilities. (ADACAS, sub. PP260, p. 6)

However, it is not clear whether the shift from support coordination to LAC services is because initially LAC services were not in some regions, and support coordination was funded until LAC services were in place (NDIA 2017x).

Support coordination may be required on an ongoing basis in some cases, including in cases where a participant has elderly informal carers with declining capacity to undertake support coordination (ADACAS, sub. PP260, p. 6; David Parkin, sub. PP362, p. 19).

Summer Foundation, a major provider of support coordination, echoed concerns about the subsequent withdrawal of support coordination based on time rather than participant outcomes, as well as the inconsistent allocation of support coordination in the first place.

> The allocation of Support Coordination in a participant's plan is reported as both incredibly varied with a lack of transparency about how allocation principles are applied. This generates a feeling that there is inequity. Some report also seeing huge reductions in allocation in subsequent plans despite a continuing and genuine need for support. (sub. PP293, pp. 3–4)

Although it is too early to properly evaluate the efficacy and efficiency of support coordination, it is clear that participants, their families and carers, and governments value support coordination, and that it helps many people who receive and use it. Participants who are allocated and use support coordination have higher rates of utilisation (the ratio of used to committed supports in a plan) on average than those who are allocated, but do not use, support coordination. At face value, this suggests that support coordination can help build a participant's capacity.

Because effective support coordination is important for both participant outcomes and containing scheme costs, the NDIA should clarify the roles and responsibilities of support coordinators, and how they interact with the other groups who assist participants and their families navigate the NDIS (including LACs). The NDIA (sub. PP327, p. 55) said that it is seeking to make clearer the roles of intermediaries, but whether this includes support coordinators is unclear.

The allocation of support coordination in plans should also be made transparent, and be more explicitly linked to participants' needs, circumstances and outcomes (informed by supporting data where possible), rather than be time-limited. This approach is consistent with the legislative requirement that NDIS fund reasonable and necessary supports (NDIS Act, s. 34).

RECOMMENDATION 10.1

The National Disability Insurance Agency should:

- clarify to scheme participants and the community the role of support coordinators in relation to Local Area Coordinators, plan managers, mainstream services and advocates
- allocate support coordination to participants in their plans on the basis of need (and not for a fixed time period) in determining whether it is a reasonable and necessary support, pursuant to section 34 of the *National Disability Insurance Scheme Act 2013* (Cwlth).

How can scheme complexity be reduced?

The objectives of the NDIS mean that some parts of the scheme will be complex by design. Putting in place a framework to identify, assess, plan and provide supports for people with disability is no simple task. Guidelines and processes can introduce complexity in the pathway that participants need to navigate to meet their goals. However, unnecessary complexity can lead to miscommunication or a breakdown in continuity of care (Warr et al. 2017, p. 33), and ultimately reduced participant wellbeing. Complexity can also add to scheme costs and reduce efficiency. The challenge is to simplify the scheme as much as possible, while maintaining the integrity of the scheme.

The Commission heard that the NDIS is complex. The two main areas of concern were:

- participants finding providers
- participants (and providers) understanding and using the online portal where plans and payments are managed (box 10.3).

The rapid rollout of the NDIS has led to a number of transitional issues, including with the online portal. A review of the portal found many shortcomings in its implementation, mainly

stemming from the speed of the rollout (PwC 2016). The NDIA said it accepted the recommendations of the review and is addressing the portal issues.

> Significant difficulties with the implementation of the new ICT system in July 2016 adversely impacted on both participants and providers and caused a loss of community confidence in the NDIA's administration. An assessment of the failures from July 2016 have been documented in the PricewaterhouseCoopers *NDIS MyPlace Portal Implementation Review*. The NDIA accepts the broad thrust of those findings and has now implemented, or is the process of implementing, all of the recommendations from that report. (sub. 161, p. 15)

Box 10.3 The NDIS online portal is not easy to use

Syndromes Without A Name Australia:

> The portal has a number of plans on it if the plan has been reviewed, causing confusions for clients. The headings are not the same as what is written in the plan, leading to interpretation errors. The portal crashes a number of times and the dates need to be entered a certain way. Some days the portal works better than others. There is no form on the MyGov tab or NDIS website to ask for a correction if you accidently upload a payment request to the wrong category. One family is still waiting 6 weeks later to hear from NDIS re: this issue, after submitting an enquiry regarding this. As there is no way to upload receipts, the portal uploads are open to exploitation. (sub. 86, p. 2)

Mental Health Community Coalition of the ACT:

> Service Providers are often placed in the unenviable position of having to help participants use the My Gov website in order to use their NDIS plans, including by entering passwords – technically this is breaking the guidelines of use, possibly the law. (sub. 135, p. 28)

Summer Foundation:

> The current administration of the NDIS creates a high barrier for participation by individuals with complex needs. Young people in RAC [residential aged care] typically have few informal supports and many have cognitive impairment. Most don't have ready access to a computer and/or are not able to navigate the Internet, both of which are required to activate plans and to find and negotiate supports with providers … More accessible and flexible approaches to delivering information and building the capacity of people with disabilities and their families are desperately needed. (sub. 113, p. 25)

Vision Australia:

> … the Participant Portal is completely inaccessible for a participant who is blind or has low vision and relies on JAWS [Job Access With Speech, the screen reading software]. (sub. PP252, p. 12)

More recently, the NDIA (sub. PP327, pp. 26, 52) said that, as part of its current participant and provider pathway reviews, it is committed to providing an improved online portal.

On the basis of the NDIA's commitment to address portal issues, the Commission has not made any finding or recommendation on the online portal. However, as participants (and providers) rely heavily on the portal to manage supports and payments, any issues with the portal should be closely monitored to improve accessibility for scheme participants. The online portal should also be revisited in future reviews of the NDIS.

Timely and useful information can minimise transaction costs for participants

Participants need information about providers. As the Prader-Willi Syndrome Association of Australia said:

> NDIS participants must have access to information about the performance of providers (e.g. number of complaints against them, participant's budgets running out too early, etc.). (sub. 112, p. 6)

The Minister for Social Services said that information for participants (and providers) is critical to support an effective NDIS market.

> The NDIS market is the arrangements through which participants use NDIS funding to obtain goods and services from providers. Mechanisms to provide information to people with disability about providers and to develop participants' skills as consumers are part of the NDIS market. NDIS market risks include anything that might reduce choice and control by people with disability to access goods or services that support them to live an ordinary life. An effective NDIS market is dependent upon people with disability being empowered to make informed decisions about high quality and safe supports and providers being informed about and able to meet the needs of people with disability. (Commonwealth of Australia 2017, p. 53, [310])

Information can emerge naturally from private sources, such as peer-to-peer online comparison sites (Better Caring, sub. PP296), connecting services (Ubercare, sub. PP227) and peer support groups for disability supports (Mental Health and NDIS Facebook Support Group, sub. 8). And while this is already occurring, the extent of it is unclear. The NDIA said that it:

> … is already aware of a range of small e-markets emerging around the country. For example, app-based plan management and financial management platforms are emerging to enable payments to be made to providers from participant plans, alleviating the burden on participants and providers. Another emerging e-market provides the ability to match available housing with people who are looking for specialist disability housing. (sub. PP327, p. 55)

Some providers said they are providing information to participants to help them make choices (AOPA, sub. 123, p. 8). However, as the Tasmanian Government (sub. PP247, pp. 9–10) pointed out, private sources of consumer information can lack transparency, increase the fragmentation of information, and be driven by service providers rather than consumers. And information provided by peers may not necessarily be accurate either. The effectiveness of private platforms will be limited if the NDIA holds all the relevant information necessary for participants to make decisions (such as the availability of registered providers in a particular area) and if they cannot be easily integrated with the Agency's payment system. And private payment platforms, while increasing the ease of making payments and facilitating transactions, do not by themselves help participants find providers.

The NDIA, as a market steward (section 10.3), is responsible for providing information about providers to reduce participant search costs, to increase competition, to monitor the market, and to reduce information asymmetry (NDIA 2016i, pp. 24–25). This role will

become increasingly important as the number of participants and the disability support market expands during transition. This role also reflects a key area for action under the Integrated Market Sector and Workforce Strategy (DRC 2015a, p. 15) to enhance the amount of information available to consumers. It also embodies the NDIA's (2016i, p. 24) desire for participants to have easy access to information 'about all possible service providers from which they can choose'.

According to the NDIA (sub. 161, p. 65), the NDIS 'eMarketPlace' will support information discovery, encourage industry innovation, build local community capacity, and provide timely data and analytics to assist with the scheme's sustainability (box 10.4). The eMarketPlace is broadly consistent with the Commission's 2011 recommendation that the NDIA should provide a centralised internet database of service providers with information on the range of products and services, price, availability and links to measures of performance and quality (PC 2011, pp. 486–7).

Box 10.4 The eMarketPlace aims to help participants and providers

The eMarketPlace is a project of the National Disability Insurance Agency (NDIA) to 'support information discovery, encourage industry innovation, and build local community capacity' and to 'provide timely data and analytics to assist with Scheme sustainability' (NDIA, sub. 161, p. 65). This includes the introduction of 'cognitive intelligence capabilities' — a form of artificial intelligence that will allow for easier interaction between participants, providers and the NDIA. For example, participants will be able to ask general and personalised questions about the eMarketPlace and the National Disability Insurance Scheme, rather than contacting the scheme's call centre or shopfronts. The eMarketPlace is to be co-designed by the NDIA and people with disability.

The aim of the eMarketPlace is to maximise the benefits of the scheme by making it easier and more efficient for participants to find and access the supports that they need. It will also allow providers, businesses and community organisations to market their products and services. In turn, it should improve the responsiveness of providers to participant demand, encourage the supply of supports and innovation.

The eMarketPlace is expected to reduce transaction costs for participants, providers and the NDIA. According to the NDIA:

> By introducing an eMarketPlace and eventually automating much of the payments and processing function, the NDIA will reduce the time spent on these activities and consequently the potential costs.
>
> In general contexts, eMarket platforms may be able to reduce unit costs by between 15-30%. In the NDIA context, these cost savings may flow through to participants in some scenarios. Where the NDIS is incentivising participants to shop around, the eMarketPlace will likely result in the best price for support services, in particular homogenous supports, being achieved more often. As well as open price comparison and price competition, the eMarketPlace also adds an additional commissioning channel for the participant. Cost savings realised from eMarketPlace price competition will serve to promote the effectiveness of the eMarketPlace, incentivising eMarketPlace participation, improving the scale of use and the sustainability of the NDIS. (sub. 161, p. 66)

Sources: Adapted from NDIA (sub. 161, pp. 65–66, sub. PP327, pp. 54–55).

The NDIA (2016i, pp. 29–31) initially planned to introduce the eMarketPlace by the end of June 2018, but it is unclear how long this will take in practice (there are a number of market stewardship activities and projects that are to take place during this period, including end-to-end improvements from the participant and provider pathway reviews (NDIA, sub. PP327, p. 54)). The Agency recently indicated that the eMarketPlace will not be delivered by June 2018, but rather it will be launched 'at the appropriate time once developed', while also stating that there were 'no known blockages or barriers' (apart from technological requirements) (NDIA 2017c, 2017d).

Some progress has been made on the eMarketPlace. In 2016-17, the NDIA spent about $640 000 on the eMarketPlace, and has undertaken work, in collaboration with the Department of Human Services, on the architectural models and high level requirements of the capabilities that are needed for the eMarketPlace (NDIA 2017d). The NDIA (sub. PP327, p. 54) is in the process of confirming the requirements of an effective eMarketPlace with the DSS, with functional requirements likely to include the ability to find providers and connect them to participants, trade, make payments, rate services and collect data.

The next stage of development is to determine what infrastructure changes may be required (NDIA, sub. PP327, pp. 54–5). The NDIA (sub. PP327, pp. 54–5) intends to conduct a Request for Information to gather advice from industry stakeholders about innovative solutions and commercial models that could deliver the eMarketPlace. The Agency is working with the Department of Human Services (the NDIA's shared services partner) to confirm the utility and timing of a Request for Information.

The eMarketPlace, if implemented as described, will go a long way to ensure that participants have the information they need about providers. The NDIA (whether through the eMarketPlace or directly providing information) must address existing information gaps — such as the slow updates to existing provider lists (every three months), inaccessible provider lists, and lack of consumer satisfaction indicators about providers (particularly on service quality and performance) — and make the information publicly available as soon as possible.

The eMarketPlace will supplement other work by the NDIA to develop consumer guides on best practice in areas such as therapeutic supports and equipment (DRC 2015a, p. 15), which are currently being refined. Metrics are being developed to better understand purchasing patterns and timing of participants' decision-making (NDIA, sub. 161, p. 107).

Participants must have access to information about options for supports and providers that is timely, accurate, relevant, clear and accessible, if they are to exercise choice and control. For example, ADACAS said that:

> An e-market place, appropriately set up and run would be welcome however as it is very difficult currently for people to find supports and to make informed choices about service providers. (sub. PP260, p. 6)

The New South Wales Government (sub. 60, p. 4) pointed out that 'participants are particularly vulnerable to information asymmetries and/or a differential in bargaining power

between themselves and providers'. This is particularly the case for people with disability where quality of service is highly valued (as poor service can have significant negative consequences for participants' lives) and switching costs can be high.

Accessible information to participants about providers must be made available as soon as possible. The Agency should consider outsourcing delivery of the eMarketPlace to private providers if necessary.

RECOMMENDATION 10.2

The National Disability Insurance Agency should provide accessible information to participants and the public about the providers available in the market and indicators of participant satisfaction with those providers. This information should be updated in as close to real-time as possible, and be consistent with the stated objectives of the eMarketPlace discussed in the *Integrated Market, Sector and Workforce Strategy*. It should be provided no later than 1 July 2018.

Intermediaries could play a bigger role

For some participants, the most cost-effective (and preferable) option will be to delegate some or all of the administration of their plans to an intermediary.

Intermediaries can assist participants who struggle to self-manage their affairs. They can also reduce scheme costs by aggregating participants' purchasing power for common supports. But there is some evidence that the administrative burden of self-managing a plan is a disincentive for some participants to take full control of their supports. The Intermediate Evaluation of the NDIS observed that:

> At wave 1 the option of self-managed funding was not always fully understood by NDIS participants; nor was it always discussed in the planning meetings. By wave 2 it was evident that while NDIS participants had a greater understanding of what self-management was there remained very few self-managers. The main reason for this appeared to be a reluctance to take on additional administrative activities. (Mavromaras, Moskos and Mahuteau 2016, p. 72)

Similarly, a report by the Melbourne Social Equity Institute noted that some participants are deterred by self-management because it is perceived to be too complicated and burdensome.

> … some participants had not developed an integrated package of services to meet their individual objectives and needs. Rather, they had opted for a care package which served to reduce the burdens of self-management. … One participant, caring for two children with disabilities, brought two large folders of letters, forms, reports and notes to the interview to show us the enormous amount of paperwork involved in self-managing her children's plans. (Warr et al. 2017, pp. 32–34)

Because participants who want to and can self-manage their NDIS funds are more likely to have positive outcomes (box 10.5) it is important that there are incentives to self-manage. As the NDIS Independent Advisory Council said:

> … the IAC [Independent Advisory Council] has drawn on the many evaluations of approaches to service provision to argue that when participants self-direct their support and self-manage their funds they are more likely to be able to achieve positive outcomes because they have control over the 'what, when, where and by whom' of support, making it more likely that the paid support facilitates the desired lifestyle and compliments rather than drive out freely given support by family and friends (informal support). (sub. 149, p. 6)

Increased use of self-management (where appropriate and over the long term), could benefit participants and carers. If intermediaries can build the capacity of participants to self-manage, then they should be encouraged. Intermediaries can undertake a range of tasks that participants may need for them to better self-manage. For example, intermediaries can:

- develop a participant's capacity in understanding their plan, budget and the choices available to them (increase capacity / reduce complexity)
- collaboratively develop a plan for initial plan activation / implementation
- collaborate and coordinate with the NDIA, support coordinators and LACs
- [support] the participant in sourcing services and items (as needed)
- work with the participant and providers on establishing service agreements and supporting a participant in negotiating rates and schedules as needed
- work with providers on service bookings / agreements / invoicing / payment processes
- [provide] the participant tools and personal support to effectively manage their NDIS budget
- conduct invoice processing (participant approvals required), NDIS billing and provider payment processes
- [continue] plan and budget monitoring and capacity building and planning. (Integra, sub. PP268, p. 2)

By coordinating these activities, intermediaries can act as a 'one-stop shop' for scheme participants, reducing the complexity faced by participants. In short, they mitigate the complexity of the NDIS that may be unavoidable, and which can have real costs for participants. Mind Australia said that:

> … when processes are overwhelming or negotiations are difficult, the impact on an individual's mental health can be devastating. One participant in the choice project said that when she was accepted into the NDIS, she thought that getting good support would mean fewer stays in hospital. In fact, she was admitted to hospital eight times in her first year in the scheme, which she put down [to] the stress of dealing with the NDIS and NDIS processes. Ongoing navigational support is one means to address this situation. (sub. 144, pp. 11–12)

Box 10.5 The benefits of self-directed funding

Self-management is a means through which participants can exercise self-direction over their supports and their lives. As the NDIS Independent Advisory Council explained:

> The term 'self-direction' is a generic term for an approach that gives people with disability greater control over their support and their lives. The concept is often broken into component parts of self-directed planning, self-directed funding and self-directed support. Self-directed support can be managed through a service provider, a financial intermediary or via a direct payment (self-management). (sub. 149, p. 7)

There is a strong body of evidence to suggest that self-management — including the self-direction of funding and disability supports — results in better outcomes for people with disability and their families. For example:

- The UK Individual Budget pilot found that participants who were given the opportunity to self-direct their funding were more satisfied with the scheme, had greater aspirations, and more likely to report that they felt in control of their daily lives for a given level of expenditure (Glendinning et al. 2008).
- An assessment of the US Cash and Counselling program found that those who self-managed their funds were more likely to have their needs met and be more satisfied with their care. Further, there was no evidence that self-management led to greater care-related health problems, and a significant proportion of those who self-managed had a lower incidence rate of adverse events (Carlson et al. 2007).
- A study of the Victorian scheme that examined the use of individual support packages found that those who used them reported improved choice, control, independence and self-determination in their lives — positive outcomes that they attributed to the better control they had over the way they could organise their disability supports (Fisher et al. 2010, p. viii).
- Where self-management has been used in Australia and overseas, the risks of improper use of funds (such as fraud) appear to be limited. Auditing and close observation of payments have been found to effectively mitigate the risks of abuse of self-managed funding (Fisher et al. 2010, p. 47). The incentives faced by those who self-direct also play a role in reducing fraud: to misuse support funds does not result in a net gain to participants as it is their own budget as part of an individualised support package.

Ultimately, the broader benefits of self-management are reflected in the goal of better participant outcomes and more efficient use of disability supports.

> They move from dependent clients toward active citizens who have increased independence, self-management and inclusion and as a result require less support over their lifetime. (NDIS Independent Advisory Council, sub. 149, p. 9)

Intermediaries can also have broader, scheme-wide benefits. For example, intermediaries can:

- provide systemic feedback to the NDIA on any common and recurring issues, which in turn can reinforce the scheme's insurance approach
- enable participants to exercise choice and control by providing a wider selection of providers to choose from, and empowering them to make decisions
- help enforce quality and safeguards regulations, as they may have greater visibility and knowledge of the provider landscape that allows them to detect, monitor and screen poor quality or unsafe providers, and warn against 'sharp practices'

- reduce costs to participants and to the scheme, by purchasing services on behalf of participants in bulk that can reduce unit costs ('economies of scale'). This may also provide greater certainty to providers about longer-term demand and better spread the risk of providing disability supports
- minimise the burden on the NDIA and LACs — especially given the heavy workloads to bring people with disability into the scheme — by providing an alternative avenue for troubleshooting (Integra, sub. PP268; Plan Management Partners, sub. PP324).

Reducing barriers to participants using intermediaries

Many scheme participants are unaware that intermediaries are an option to help manage their plans. The Commission heard that LACs and the NDIA provide little information about intermediaries and the option of using them (Integra, sub. PP268, pp. 3–4; Plan Management Partners, sub. PP324, pp. 3, 6). For example, Family Advocacy said that:

> LACs do not seem to fully understand what self-management means. There appears to be superficial knowledge of what options are available to the participant. One family member reported that in their 'first plan' meeting, the LAC simply said they could agency plan or self manage but did not explain what this really means or provide any options of how that could work. Another LAC told a family that she could either have support coordination or plan management but not both. This is completely incorrect and makes no sense. The first refers to support in coordinating the Plan and the second relates to how the Plan will be managed by the participant. One does not depend on the other. (sub. PP346, p. 22)

The NDIA (sub. PP327, pp. 55–6) recognised that there are barriers to participants using intermediaries that are not in the interests of the participants and the scheme, and is currently addressing these issues as part of its participant and provider pathway reviews.

The Agency also proposed that the use of intermediaries could be encouraged by:

- providing greater clarity on the roles of intermediaries — to improve consistency in planning decisions (in providing funding to intermediaries), and reduce confusion in the sector and the NDIA
- reducing barriers to entry — including administrative barriers (for example, tight definitions of intermediary supports, fungibility in rules and price controls); improvements to the NDIA's processes and policies as part of the provider pathway; and harmonisation of processes across jurisdictions (for example, regulatory, registration and compliance requirements that are proportionate and risk-based) (NDIA, sub, PP327, pp. 55–6; Neville 2017, p. 10).

The administrative rules and prices that apply to intermediaries are best left to the NDIA and the body responsible for NDIS pricing, respectively. The NDIA's pathway reviews are intended to lead to better engagement and encouragement of intermediaries. For example, the NDIA said that it wants to improve data sharing with intermediaries to enable scalability and better participant supports (Neville 2017, p. 10). However, the first step is for the Agency to provide more information to participants and planners about the roles and use of

intermediary services as an option, particularly when participants are considering self-management.

Some safeguarding issues still need addressing

While intermediaries can unlock the broader benefits of self-management to scheme participants, there are some outstanding safeguarding and consumer protection issues.

Participants should not be 'hurried' or unduly pressured into self-management. Some participants will need to build capacity first in a number of areas before being ready to self-manage (even with the assistance of intermediaries, support coordinators and other capacity-building supports). This will take time. Self-management should therefore be considered a long-term goal for many participants, and should be assessed on a case-by-case basis.

It is not clear whether the NDIS Quality and Safeguarding Framework is appropriate for intermediaries. While the Framework and proposed Code of Conduct for workers and providers (which also applies to intermediaries) give participants protections (chapter 11), the role that intermediaries play is different to direct support providers. There is a risk that participants may come to depend on intermediaries to an extent where they may find themselves unable to switch between them, to determine if they are getting a good deal (such as whether participants are given sufficient choice over their provider), or whether intermediaries are acting in their best interests more generally.

Intermediaries (like any other registered provider) will need to be closely monitored over transition, particularly in the first few years of scheme rollout, in order to implement and adjust any specific safeguarding measures as necessary. General consumer protections and guarantees under the Australian Consumer Law, or other regulations (such as Australian Securities and Investments Commission licensing and professional requirements for financial service businesses) are not necessarily fit-for-purpose for NDIS participants (who may be less likely than other consumers to complain).

While there are protections for participants, there is relatively little in the way of protections for providers who must deal with intermediaries when problems arise. For example, beyond costly litigation pursuant to service agreements, there appears to be little recourse for providers who are paid late, in part or not at all, by intermediaries. This needs to be remedied immediately by adjusting the conditions of registration for intermediaries with the NDIA (and subsequently with the NDIS Quality and Safeguards Commission) to require the timely payment to providers. Intermediaries should be held to the same account as the NDIA when they manage a participant's plan.

There is also a question about whether intermediaries should also be allowed to be service providers. The Commission's view is that plan management services should be separate from service provision. This was noted as a positive way to avoid conflict of interest by some intermediary providers and to ensure that participants' needs are met (Integra, sub. PP268,

p. 4; Plan Management Partners, sub. PP324, p. 7). The NDIA has also proposed an ongoing review of independence and conflict of interest requirements, and how best to manage this for intermediary functions (Neville 2017, p. 10).

That said, it is important to note that the intermediary market remains underdeveloped, underused and uncertain. This makes it difficult to put in place safeguards at present, except to ensure that any regulations are risk-based. The Victorian Government said that:

> It is too early to say how well equipped and how well supported NDIS participants will be to exercise informed choice in this new marketplace. As the disability service market matures, it can be anticipated that intermediaries will emerge to facilitate mutually satisfactory transactions between providers and consumers, often aided by new information and communication technologies and tools.
>
> Appropriate regulatory responses for intermediaries will also need to be determined. In the interim, the readiness of participants to exercise choice is likely to rely heavily on NDIA funded initiatives and programs designed to assist participants navigate the disability support sector. Much of this support infrastructure is yet to be fully rolled out. (sub. 174, p. 19)

Intermediaries should be closely monitored over the next few years to ensure that there are no unnecessary barriers to their operation, but also as a means to better identify areas of complexity that participants are seeking paid assistance to overcome, which may be useful for ongoing scheme reform. The activities of intermediaries should also be monitored with an eye to developing any necessary safeguards that may be needed beyond the NDIS Quality and Safeguarding Framework (which will come into effect as each state and territory reaches full scheme (DSS 2017f)).

RECOMMENDATION 10.3

The National Disability Insurance Scheme Quality and Safeguards Commission, upon commencement, should closely monitor the operation of intermediary services under the National Disability Insurance Scheme, and make changes to safeguarding rules and codes of conduct as necessary to ensure that intermediaries act in the best interests of participants.

The National Disability Insurance Agency should provide clear and timely information about the option for participants to self-manage their plans, and the role that intermediaries can play to assist them to undertake different tasks on their behalf. The Agency should continue to assess the capacity of participants to self-manage on a case-by-case basis, consistent with the provisions of the *National Disability Insurance Scheme Act 2013* (Cwlth).

Advocates provide vital assistance to people with disability

Advocates for people with disability (including scheme participants) are independent people or organisations (without a conflict of interest) who directly speak, act or write on behalf of

the interests of an individual or group. This may extend to helping people with disability find and secure supports.

There are a number of different models of disability advocacy, including:

- systemic advocacy — aimed at bringing about systematic improvement in policy and practice, and removing discriminatory barriers for people with disability
- individual advocacy (also known as 'independent advocacy') — upholding the rights of individuals with disability by working on discrimination, abuse and neglect
- self-advocacy — supporting people with disability to advocate for themselves, or as a group (DSS 2017c, p. 2).

Advocacy has always been, and continues to be, important to people with disability, and particularly so for some groups.[85] COAG's (2011, pp. 17, 41) *National Disability Strategy* noted the role of advocacy in protecting and advancing the human rights of people with disability, their wellbeing and interests, as it enables them to participate in making decisions that affect their lives. As the Victorian Government said:

> The role of advocacy and self-advocacy will continue to be important in building participants' capacity to meaningfully exercise choice. Particularly during transition, some participants may need additional assistance to navigate the planning and plan implementation processes. (sub. 174, p. 19)

While many of the arguments for intermediaries are also applicable to advocates, advocates have a broader role supporting people with disability. Indeed, this is expressly reflected in the general principles of the NDIS Act in section 4(13).

> The role of advocacy in representing the interests of people with disability is to be acknowledged and respected, recognising that advocacy supports people with disability by:
>
> (a) promoting their independence and social and economic participation; and
>
> (b) promoting choice and control in the pursuit of their goals and the planning and delivery of their supports; and
>
> (c) maximising independent lifestyles of people with disability and their full inclusion in the community.

Advocates help participants in a way that NDIS supports cannot

The NDIS affects the need for advocacy services by participants and their families. The need for advocacy may diminish as the support and assistance provided by the NDIS increases — for example, ILC, LACs, the NDIS Quality and Safeguarding Framework, intermediary and support coordination services may fulfil some of the roles previously undertaken by

85 For example, the DSS identified that people who are Aboriginal and Torres Strait Islander Australians; who are from culturally and linguistically diverse backgrounds; who live in rural, regional and remote locations; and who are very socially isolated (including those with communication difficulties and those in institutional care) are most likely to benefit from advocacy (DSS 2017g, p. 18).

advocates. That said, many of these supports are in transition, and still to be fully clarified or established. These NDIS supports reflect the DRC's agreement that the NDIS would fund decision supports, safeguard supports and capacity-building for participants, including support to approach and interact with disability supports and access mainstream services (DSS 2015b, p. 3). The DRC also agreed that systemic advocacy, legal review and representation would be funded outside the NDIS — in line with the Commission's 2011 recommendations (DSS 2015b, p. 3).

However, some study participants argued that there is an ongoing need for advocacy *because* of the NDIS, and that the need for advocacy by participants cannot — and in many cases, should not — be met by NDIS supports.

- There are limits to what information and peer support organisations can do for participants via ILC, particularly those with high support or complex needs, or who are unable to navigate the NDIS more generally.
- LACs, to date, have focused more on developing participant plans and less on linking participants to services and building participant capacity (as part of their ILC functions, chapter 6).
  - Advocates can help fill the gap *before* a plan is made and provide valuable pre-planning assistance — this is important because participants may not have access to support coordination, plan managers, intermediaries or other assistance.
  - Advocates can help ensure better quality plans for participants *during* the planning process (chapter 5) and in any *subsequent* plan reviews (including NDIS appeals).
- Despite the introduction of the NDIS Quality and Safeguarding Framework, some participants may have a lower propensity or ability to make complaints, and to seek redress on quality and safeguarding issues (ADACAS, sub. 87, pp. 22–23). Advocates can help participants prevent, identify, raise and resolve such issues — they are an important safeguard for participants. For example, Children and Young People with Disability Australia (sub. 188, p. 25) said that people are often unaware of the rights of children and young people with disability, the relevant legislation and protections, and require support to resolve specific issues. Survey data also indicate that people with disability are more likely than the population on average to experience multiple legal problems and unmet legal need (Coumarelos et al. 2012; PC 2014, p. 95).
- How effective support coordination and intermediary services are at helping participants and building their capacity is still unclear. This is partly due to a lack of clarity on their allocation to participant plans, expected roles and safeguarding issues. Even if these issues are resolved, advocates may continue to have an ongoing role in monitoring the *quality* of these services, and intervening in any safeguarding issues, particularly with respect to identifying and reporting violence, abuse and neglect against people with disability in institutional and residential settings (SCARC 2015, p. 213).

In its review of the National Disability Advocacy Program (NDAP), the DSS acknowledged the role of advocates compared with other supports (including the Commonwealth

Ombudsman for Disability), particularly their independence and the broad scope of matters within their purview.

> It is important to recognise the unique role of advocacy and understand the limitations and restrictions of other roles. For example, NDAP advocates are independent and can act solely on the side of the person with disability. This differs from NDIS LACs (who have conflicts of interest due to their direct or indirect employment by the NDIA) and NDIS Support Coordinators (who have an interest in maintaining the funding relationship). (2017g, p. 12)

Advocates assist with broader issues and access to mainstream services or the community more broadly (which NDIS supports are not designed for), particularly when there are failures and gaps in mainstream service systems (DPOA, sub. 165, pp. 12-13), and when people with disability have complex needs and multiple levels of disadvantage (Australians for Disability Justice, sub. PP342). For example, Leadership Plus, a Victorian advocacy organisation, reported that the top three issues in recent years related to:

- Services — service delivery and quality including disability specific agencies and others,
- Finances — including financial management issues with appointed Administrators, capacity to manage personal income, loss (or risk of loss) of funds due to theft or mismanagement by friends or family, and
- Accommodation — for example, having appropriate housing, maintaining tenancy in public and community housing, risk of homelessness, addressing safety concerns. (sub. 128, p. 1)

In short, advocates help participants navigate NDIS processes, manage interactions with other disability services, and ultimately exercise choice and control over their supports and lives.

> The role of independent advocacy should not be underestimated in assisting people through the pre-planning process, understanding what supports and service options that are available to them, what supports are considered reasonable and necessary, feeling confident to ask for a review of their plan if they are not happy and ensuring their plans do not simply replicate their current inadequate supports. Rather than reducing the need for independent advocacy, the processes used in delivering the NDIS have highlighted the need for strong independent relationships and support through advocacy that will ensure that people with disability do exercise choice and control and have their needs met. (SUFU, sub. PP242, p. 5)

> The evidence of this investigation [of the effectiveness of statutory oversight mechanisms in the reporting and investigating of allegations of abuse in the disability sector in Victoria] strongly suggests that the role of advocacy will need to be strengthened further with the introduction of the NDIS … Without a strategy to embed the role of advocacy, a market-based model appears inaccessible for a large sector of people with diminished capacity to make informed decisions. It is not viable for advocacy to take a secondary position in the safeguards framework. I consider advocacy to be key in a framework for Victorian people with disability who have no prospect of becoming empowered consumers and have no family or friends to voice their best interests. (Victorian Ombudsman 2015, pp. 89–90)

> Advocacy is one of the most important safeguards in protecting and upholding the rights of people with a disability … For the NDIS to deliver on the promise we made to people with a

> disability — greater choice and control, we need to make sure they have the tools to enforce their rights. (Foley 2017)

All governments should continue funding disability advocacy …

Funding for most advocacy activities is shared between the Australian[86] and State and Territory Governments (except for South Australia) (DSS 2016e, p. 2). While the Commission recommended that State and Territory Governments should continue funding disability advocacy groups (PC 2011, pp. 523–5), most State and Territory Governments will reduce or cease funding advocacy services in accordance with Bilateral Agreements on the transition of the scheme (as it is considered to be a State specialist disability service (NSWFACS 2016)). The exception is the Victorian Government (2017a, pp. 263–4), which has committed funding for disability advocacy for 2017-18, and stated that it is 'committed to strengthening the disability advocacy sector' (Foley 2016, p. 2).

Although some jurisdictions intend to withdraw funding, there is still some uncertainty about what advocacy funding should be, and who should pay for it. This is reflected in recent amendments to the DRC's terms of reference to include a review of advocacy arrangements, including roles and responsibilities, by 31 October 2017 (DRC 2017c, p. 3).

In August 2017, the DSS completed its review of the NDAP (DSS 2017g), which considered what an updated NDAP should look like, and how it should work (including funding) in a NDIS environment (DSS 2016e, p. 2). The Australian Government announced that it will provide disability advocacy funding of $60 million over the three years to 30 June 2020 for:

- disability advocacy services under the NDAP
- NDIS Appeals providers
- disability representative organisations (disability peak bodies) (Porter and Prentice 2017).

As disability advocacy funding will be reduced by most States and Territories, disability advocacy organisations will need to rely more heavily on other sources of funding to continue their operations. These include public contributions (such as volunteering and donations), Australian Government funding, ILC funding or a combination of these sources.

For people with disability inside the NDIS, this outcome is at odds with the DRC's agreement and the Commission's 2011 recommendation. For people with disability outside the scheme — including those seeking to enter the NDIS as new participants — an unintended consequence will be service gaps and potentially poorer user outcomes. While there are intangible benefits from disability advocacy, the reduction or absence of advocacy

[86] NDAP agencies based in the NDIS sites may have additional roles, such as assisting people through the planning and internal review processes with the NDIA. Australian Government funding has been provided via the NDIS Appeals program to support people with disability who seek an external review of the NDIA's decisions through the Administrative Appeals Tribunal (DSS 2017c).

can impose real costs on the wellbeing of people with disability, their families and the broader community.

Although it is appropriate for disability advocacy funding to be withdrawn for *some* participants (to avoid overlap with NDIS supports), it remains the case that many participants and people with disability who are ineligible for the scheme need and would benefit from advocacy services (Daly, Barrett and Williams 2017, pp. 11–2; DARU 2017b, pp. 14–5; Porter and Prentice 2017). Funding for advocacy services for people with disability should continue both during and after the transition to the NDIS, just like funding for most other mainstream services (chapter 6). As noted by the Disability Advocacy Resource Unit (2017b, p. 7), while there is likely to be an increase in demand for advocacy in the short term, there will be continued demand for advocacy in the long term.

… but disability advocacy should still be funded outside of the NDIS

Just as NDIS funding arrangements reflect the different incentives faced by the Australian, State and Territory Governments (chapter 12), care must also be exercised in deciding how disability advocacy should be funded to avoid cost-shifting. If advocacy is funded solely by the Australian Government, then there may be pressure to help participants access services that are funded by the States and Territories. But if advocacy is funded solely by the States and Territories, there may be pressure to help participants to enter the NDIS and use services funded by the Australian Government.

The previous practice — where the Australian, State and Territory Governments all contributed to disability advocacy funding — is appropriate to address this concern. It also reflects the fact that advocates help people with disability to prevent and resolve issues in all government services, and the interface between these services. This approach is also consistent with the joint commitment made by all governments to the National Disability Strategy, and by extension, to all people with disability.

It is appropriate that disability advocacy funding remains separate from the NDIS for a number of reasons.

- All scheme participants initially come from outside of the scheme, and some participants will need advocates after they enter or exit the scheme.
- People with disability outside the scheme need and are major users of advocacy services.
- All people with disability benefit from advocates who advance systematic issues on their behalf and seek to improve the system.
- There is a conflict of interest if the NDIS funds the same organisations whose role it is to challenge the system. Separating funding from the NDIS would ensure the independence of advocates, which is central to their effectiveness in helping people with disability.

What should funding for disability advocacy be?

Limited evidence on the benefits and costs of disability advocacy makes it difficult to determine the appropriate level of funding for advocacy (box 10.6). The benefits of disability advocacy are difficult to quantify — although there are many examples and anecdotes that it leads to better outcomes for people with disability. The costs of disability advocacy funding by governments are also often reported in an aggregated manner that makes it difficult to separate specific funding from other services.

Without good cost-benefit analysis, but recognising that disability advocacy funding needs to continue in the short term, the Commission examined the advocacy funding arrangements in two different jurisdictions, and applied them nationally on a per capita basis (table 10.1). The approaches considered were:

- the Victorian Government's funding of disability advocacy under the Victorian Disability Advocacy Program. This program receives about $3 million each year for 24 disability advocacy organisations and has an annual target of 1700 users (Victorian Government 2017a, pp. 263–264; sub. PP298, p. 7). In 2016-17, the program was supplemented with the $1.5 million Victorian Disability Advocacy Innovation Fund, which was allocated to 15 disability advocacy organisations and designed to help people with disability access an advocate when they need it (Foley 2017; VDHS 2017)
- the Australian Government's commitment to fund disability advocacy by about $20 million per year on average until 2020. In 2016-17, about $17.7 million was provided under the NDAP to 58 advocacy agencies across Australia, with about 12 000 people with disability receiving individual support (DSS 2017g, p. 3).

Based on funding in these jurisdictions, total disability advocacy funding would be between $31.7 million and $40.0 million per year between 2017-18 to 2019-20.

The Commission considers that, at this stage, State and Territory Government funding should at least match the per capita contribution of the Australian Government. This would mean total funding of about $40 million each year between 2017-18 and 2019-20, and ensure continuity of advocacy services for people with disability, including scheme participants.

Over the next few years, policy-relevant data on disability advocacy will need to be collected to inform how future funding arrangements should be determined. The Commission recommends that in particular, services provided by advocates funded under the NDAP or by State and Territory Governments to people with disability should be recorded, and where possible, linked with other NDIA data to build an appropriate evidence base. The DSS should then use this evidence for future reviews of disability advocacy funding to ensure that funding levels reflect the costs and benefits of such services. Governments also need to clarify future funding arrangements in a timely manner to reduce uncertainty for both users and advocacy organisations.

Box 10.6 Quantifying the costs and benefits of disability advocacy

While many study participants provided useful anecdotes about the benefits of disability advocacy, more rigorous and systematic analysis of the costs *and* benefits of disability advocacy is needed to better determine the appropriate amount of advocacy funding by governments, and how funding should be used to maximise its efficiency and effectiveness. Cost-benefit analysis may also help to identify potential areas for improvement and reform in the disability system.

However, there is a lack of cost-benefit analysis on disability advocacy. A 2009 report prepared for the Department of Families, Housing, Community Services and Indigenous Affairs on the models of advocacy funded under the NDAP lamented about the lack of accurate and comparable cost and outcome data (particularly for individual advocacy), and in turn, the lack of evaluation of advocacy programs (Jenny Pearson and Associates 2009, p. vii). This is still true today.

- The DSS, in their review of the NDAP, noted that systemic advocacy is funded inconsistently across jurisdictions by NDAP because of a lack of data and reporting. Many stakeholders to that review recommended greater data collection and reporting to improve the advocacy evidence base and coordination on systemic issues (DSS 2017g, p. 22).
- The Victorian Government Office for Disability Advocacy Program also collects quarterly data on disability advocacy (DARU 2017a, 2017b, p. 4). However, the Disability Advocacy Resource Unit (2017a) noted that this data may have some measurement issues (including under-reporting, misreporting, data gaps and difficulties in interpretation), and made a number of recommendations to improve the integrity of the data.
- There are a lack of publicly available, disaggregated data on expenditure on disability advocacy. For example, expenditure data on advocacy is in the same category as information and print disability services, even though they are different to advocacy services (SCRGSP 2016b, tables 15A.7 and 15A.8)).

A recent cost-benefit analysis on advocacy has helped to shed some light on its value to the community. In a study commissioned by the Disability Advocacy Network of Australia, Daly, Barrett and Williams (2017) estimated that disability advocacy funding of $232 million would provide net benefits of about $600 million to Australia (in net present value) for the ten years from 2017 to 2026 (or about $60 million per year). (While the analysis made some generous assumptions, including large cost reductions in the justice system and creation of employment due to advocacy, the overall conclusion that disability advocacy provides a net benefit to the community is still valid.)

Table 10.1 **Benchmark estimates of proposed disability advocacy funding ($ million)[a]**

Annual funding for the period 2017-18 to 2019-20

	NSW	*Vic*	*Qld*	*SA*	*WA*	*Tas*	*NT*	*ACT*	*Aus Gov*[b]	***Total***
Benchmarked to the Victorian Government's funding of $3m per year	3.7	3.0	2.4	0.8	1.3	0.2	0.1	0.2	20.0	**31.7**
Benchmarked to the Australian Government's funding of $20m per year	6.4	5.1	4.0	1.4	2.2	0.4	0.2	0.3	20.0	**40.0**

[a] These estimates are based on taking the contribution made by a particular jurisdiction to disability advocacy funding and applying it on a per capita basis to all other jurisdictions. It assumes an equal split of disability advocacy funding between the Australian and State and Territory Governments — a proportion that is consistent with the split of historical advocacy, information and print disability funding under the National Disability Agreement (SCRGSP 2016b, table 15A.8). [b] This assumes that the Australian Government's contribution is fixed at $20m per year, reflecting the recent funding announcement.

Sources: Commission estimates based on ABS (*Demographic Statistics*, Australia, December 2016, Cat. No. 3101; *Population Projections*, Australia, November 2013, Cat. No. 3222); DSS (2017g, p. 3); Victorian Government (sub. PP298, p. 7); and Porter and Prentice (2017).

RECOMMENDATION 10.4

The Australian, State and Territory Governments should continue to fund disability advocacy organisations. State and Territory Governments should fund disability advocacy to 2019-20 by an amount that at least matches the per capita contribution of disability advocacy funding announced by the Australian Government.

The Australian, State and Territory Governments should also collect data from funded disability advocacy organisations about people with disability who use their services, and their outcomes. This data should be in a format that can be linked with data held by the National Disability Insurance Agency, and be made publicly available. The Department of Social Services should undertake an independent evaluation of advocacy funding at the beginning of 2020 to inform future funding arrangements, and thereafter periodically evaluate disability advocacy. These reports should be made public.

Supporting the outcomes from disability support organisations

Other organisations, which identify themselves as disability support organisations (DSOs), assist scheme participants to engage with the scheme and the community. In 2011, the Commission used the term to describe the support that these organisations provided to people using NDIS services — including brokering, managing administration, mentoring and planning — and to distinguish their role from that of traditional specialist service providers (PC 2011, pp. 101, 414–22).

As the scheme has evolved, so too has the definition of DSOs. It is now used in a range of different contexts, including:

- peer connection — in 2014, the Australian Government's Sector Development Fund funded 18 DSOs to facilitate up to 20 peer support groups over the life of the project (NDIA 2015b, p. 80)
- advocacy and helping prospective participants
- information sharing and community connection
- intermediary roles (for example, Plan Management Partners, sub. PP324)
- participant capacity building roles.

The term DSO is less relevant than the *supports* they provide to people with disability and the outcomes they achieve. The Commission's recommendations in this report — if implemented — should provide adequate resources for the roles of DSOs and reduce the burden on them.

- Improvements to the planning process (including LACs engaging in pre-planning) (recommendations 5.2 and 5.3) will enable participants to receive their reasonable and necessary supports.
- Properly resourced ILC is an avenue for DSOs to connect people with disability to the community (recommendation 6.1).
- Properly funded disability advocacy will provide additional support for participants to navigate the NDIS (recommendation 10.4).
- Allocating support coordination in plans based on need will help participants to build the skills they need to exercise choice and control, and ensure that they get the NDIS-funded supports they are entitled to (recommendation 10.1).
- Making available accessible information to participants about providers, reflecting the objectives of the eMarketPlace, will help participants access the supports that they need (recommendation 10.2).
- Trialling volunteer organisations to provide supports creates a means to preserve social capital and allow greater choice for participants (recommendation 9.4).
- Clarifying the role of intermediaries (and therefore making them easier to access) will help reduce the administrative and search costs faced by participants (recommendation 10.3).

These recommendations are, in the Commission's view, sufficient to enable DSOs to do their important work supporting people with disability, including scheme participants. Should the Commission's recommendations not be implemented, then Governments and the NDIA will need to consider increasing funding via other channels to ensure that participants — both actual and potential — are appropriately supported.

10.3 Market stewardship

Market readiness issues reflect poor market stewardship

As discussed in chapters 7–9, and in this chapter, there are substantial challenges developing the market supply of disability supports. While some progress is being made, there are still difficulties growing the significant number of providers and the disability care workforce required, as well as helping participants to become informed and effective consumers (figure 10.2). This is occurring at a time when the rapid pace of the rollout — and growth in demand for supports — is at its greatest. Based on experience to date, there will be a shortage of disability supports under the scheme in the short to medium term.

Many of these challenges could have been — and should have been — anticipated and acted upon earlier. This highlights the need for more effective market stewardship by governments (including the NDIA). As the Agency said:

> Market stewardship recognises that when governments implement policies to increase consumer choice and adopt market-based delivery, they must also oversee how the marketplace develops. (2017e, p. 8)

And just as providers, workers and participants need to change their approach to disability supports, so too must governments.

FINDING 10.1

The supply of disability supports in the short to medium term will not be able to meet participant demand resulting from the National Disability Insurance Scheme. This is due to a combination of factors, including rapid intake of the scheme, difficulties faced by participants to navigate the new markets for disability supports, difficulties by providers to adjust quickly to a new market-based model of service delivery, and underdeveloped market stewardship.

Figure 10.2 **The challenges confronting NDIS markets are symptoms of a greater need for better market stewardship**

Key issue	Provider readiness: Price Signals	Provider readiness: Non-Price Signals	Workforce readiness	Participant readiness
Responsible stakeholders	Price regulator (currently NDIA)	Provision of market information (NDIA)	Coordination of workforce development activities by Governments, DSS and NDIA	Assistance in plans (NDIA)
Main current actions	McKinsey & Company price review initiated by the NDIA	Changes arising from the NDIA provider pathway review	Sector Development Fund Workforce action plan developed by DSS	Changes arising from the NDIA participant pathway review
Commission recommends	Principles-based pricing Independent price monitor and regulator (NDIS Quality and Safeguards Commission)	NDIA to release more frequent and granular data on participant demand NDIA to make public its Provider of Last Resort policy and Market Intervention Framework	Better coordination between governments, providers and the NDIA to develop the workforce Appropriate data collection Trialling use of volunteers	Implement objectives of the eMarketPlace Clarifying the supports that help participants Encouraging use of intermediaries Continue funding disability advocacy

All of the market readiness issues suggest that market stewardship needs improvement

Clarify and make public the roles and responsibilities for each party
Require transparent and regular reporting against outcomes
Collect and make public disaggregated, tailored and forward-looking market data
Coordinate market stewardship actions across all sectors

What is market stewardship and the role of governments?

To facilitate the significant market growth required, governments need to change their approach to the design, oversight, management and regulation of the market for disability supports. More effective government stewardship of the market is required than previously to create and manage the NDIS market.

Government stewardship involves governments taking steps in the design, delivery and improvement of services to ensure that services meet objectives (PC 2017b). The aim of stewardship is usually to protect equity — to ensure the individual wellbeing of users and to maximise community welfare. In the NDIS, the objective of government stewardship is to ensure that participants can access reasonable and necessary supports from the market, and ultimately have greater choice and control over their lives.

To date, many of the challenges of government stewardship are in the design of the scheme — such as planning (chapter 5), funding arrangements (chapter 12), and the interface between the NDIS and mainstream services (chapter 6) — which often need coordination and cooperation by multiple governments. As a result, the Australian, State and Territory Governments are NDIS government stewards.

An additional and unique challenge for the NDIS is the need for market stewardship — a specific form of government stewardship. Aimed at facilitating the creation and development of a market, it is often required as part of structural reforms, particularly when governments have previously been large service providers (such as in the disability support sector). Market stewardship can require active intervention to not only protect participants, but also to support the functioning and sustainability of markets so that it benefits all participants (Carey et al. 2017, p. 3). This includes promoting innovation, the diffusion of best practice and higher standards of services to people with disability.

In the NDIS, market stewardship means facilitating the timely creation and development of the disability support market, and ensuring that it develops in a way that meets the objectives of the scheme. As discussed in chapters 7–10, the challenge is to facilitate a substantial increase in the number of disability support providers and workers to meet participant demand, and to ensure that participants have the skills and supports they need to navigate the market. The NDIA has the designated role of market steward. The Agency described its goals as being:

> … to create an efficient and sustainable marketplace through a diverse and competitive range of suppliers who are able to meet the structural changes created by a consumer driven market. More specifically this involves:
>
> - enabling existing and emerging suppliers to mature at an appropriate and sustainable rate;
> - providing an environment for innovation in planning and delivery of supports; and,
> - building strong business integrity systems and processes and capability. (2016i, p. 4)

To achieve these goals over the transition period, the NDIA's market stewardship activities have focused on the delivery of disability services, which include:

- regulation — such as price setting and provider registration (chapter 8)
- models of service provision — including government commissioning or provision of services in thin markets, and under provider of last resort arrangements (chapter 7)
- information provision to the market — particularly to participants and providers
- managing transitions and implementation — including the withdrawal of government service provision (chapter 7).

This reflects the continuum of NDIS market intervention options available to the NDIA to develop and correct the NDIS marketplace, which range from 'light touch' to highly interventionist actions (NDIA 2016i, p. 23).

Market oversight is also needed to protect participants

Market stewardship also requires complementary market oversight. Market oversight is a forward-looking task which involves prudential supervision of the system (including the practices and financial performance of providers), identifying systemic risks and, where possible, taking mitigating action. This may require mandatory performance reporting from providers, the acceptance of complaints, and investigation powers. Doing so would enable monitoring and evaluation of any trends in the quality or cost of services, although this may be difficult given the decentralisation of services in the NDIS. It would also ensure that market stewardship responses are proportionate to the risks.

In the NDIS, market oversight is particularly important to regulate the quality of services and to safeguard the rights of people with disability. The Senate Community Affairs References Committee (2015) found that violence, abuse and neglect of people with disability is widespread, and recommended stronger independent oversight mechanisms. Currently, the DSS (sub. 146, p. 34) is responsible for market oversight, and reports on the effectiveness of the NDIS market, including market trends and outcome quality. Under proposed legislation, the core functions of the NDIS Quality and Safeguards Commissioner will include NDIS market oversight and consumer protection. This will include monitoring changes in the NDIS market which may indicate emerging risk, as well as monitoring and mitigating the risks of provider failure and unplanned service withdrawal (s. 181E(i), National Disability Insurance Scheme Amendment (Quality and Safeguards Commission and Other Measures) Bill 2017 (Cwlth)).

Under the NDIS, particularly during the transition phase, governments need to help participants exercise choice and control over their supports and lives, and to improve their wellbeing. This is an ongoing responsibility. They can do this by not only directly helping participants navigate the NDIS and the market, but also by actively facilitating the market supply of disability supports — to ensure that there are diverse and competitive markets for participants. Regardless of the approach taken, the ultimate focus of market stewardship

should be consistent with the person-centred approach of the scheme — to enable people with disability to achieve their goals and live better lives.

How can market stewardship be improved?

The market readiness issues to date highlight the need for more effective and holistic market stewardship than at present. As noted by the UK Institute for Government, effective market stewardship requires governments to:

- clarify roles, responsibilities and accountability arrangements
- be more considered, open and flexible in design
- focus on competition, market structure and market dynamics
- increase transparency (Gash et al. 2013, p. 6).

Clarify responsibilities and coordinate responses

Clearly defined market stewardship roles and responsibilities promote transparency and accountability of market development responsibilities.

Although the NDIA is designated as the market steward, *all* governments take actions that affect market outcomes, and so have some responsibility for market stewardship. All governments have a duty to participants to actively facilitate the supply of disability supports, particularly as there are multiple and diverse local markets that differ by jurisdiction. Without the cooperation of other market stewards, the NDIA's efforts to develop the market are unlikely to be effective or efficient.

To date, responses from jurisdictions have varied and their effectiveness is unclear. Some are spending additional money to support participants (and providers), while others are relying more heavily on the market to provide services. While some of the variation in responses reflect specific jurisdictional differences (including the rollout timetable), some of this variation also highlights the uncertainties around the roles and responsibilities of governments under the NDIS. In practice, this has led to gaps, duplication and shifting of responsibilities, and lack of accountability. This poses a risk to the scheme and to the wellbeing of participants and their families.

It is possible for governments to work together in the interests of participants. Host jurisdictions are likely to provide services in monitoring the overall integrity and effectiveness of the national NDIS Quality and Safeguarding Framework. For example, worker screening and approval of restrictive practices[87] by providers will continue to be managed through current State and Territory government processes (DSS 2016d, p. 17).

87 Restrictive practices are any intervention that has the effect of restricting the rights or freedom of movement of a person with disability, with the primary purpose of protecting the person or others from harm. They include the use of seclusion and consequence driven practices, as well as chemical, mechanical, physical, psycho-social and environmental restraints (DSS 2016d, pp. 66–67).

The DRC should set a clearer, more specific and practical delineation of market stewardship roles, individual and joint responsibilities, as well as accountability arrangements of the Australian, State and Territory Governments ('accountability maps'). Where Governments, their agencies and/or the NDIA are responsible for a market stewardship task, there should be clear and transparent reporting about specific actions and outcomes (including the costs, benefits and risks of any actions), timeframes and progress towards goals.

While clarifying responsibilities is important, there should also be more effective cooperation and coordination between the Australian and State and Territory Governments, particularly with other care sectors (such as aged care and health) and mainstream services (such as employment, education and transport). This is important as participants need to access both NDIS and mainstream services. Collaboration may also allow NDIS market stewards to draw on the lessons from other sectors with similar market development issues and/or consumer-directed reforms (such as aged care).

Evidence and risk-based market intervention

A strong risk-based focus on the market supply of disability supports is essential (balanced against the costs and benefits of any proposed market intervention). Under the previous arrangements, governments that provided or commissioned services faced the risk of non-delivery of services by providers — with little or no risks borne by providers and people with disability. The NDIS market-based approach to services means that there are now new and emerging risks to participants and providers, not just governments. Risk-based market stewardship is needed to maximise the net benefits of the NDIS market-based approach, while minimising the associated risks to participants, providers and the broader community. For example, risk-based regulation requires the identification, analysis and treatment of risks; development of contingency plans; and monitoring and evaluation of outcomes (VCEC 2015).

However, to date, market stewards have not given market supply issues sufficient and timely attention. This may be partly due to ambiguity about who is responsible for market development, what market stewardship entails, why it is needed, and lack of capacity or impartiality of governments to undertake market stewardship functions. As such, 'the system for identifying and addressing emerging issues is currently informal and unfixed in the NDIS implementation' (Carey et al. 2017, p. 14).

Effective market stewardship needs to be forward-looking, transparent and evidence-based. In practice, market stewardship efforts in the NDIS are hampered by limited and fragmented information and data on the disability support market. Interventions should be subject to rigorous evaluation and be sufficiently flexible to help stewards to adapt to unpredictable market developments. The Tasmanian Government remarked that:

> … better NDIA market data would assist providers to respond on likely participant demand. The Tasmanian Government has been calling for greater market analysis for some time …

> Performance indicators for the NDIS market will be critical tools for monitoring readiness and anticipating supply shortages and provider failure. (sub. PP247, p. 8)

At the same time, market stewards need to engage in open and iterative engagement with providers, workers, participants and the broader community. For example, provider engagement could inform:

- system, program and service design (effectiveness and efficiency)
- market intelligence (current and emerging activity, trends, forecasts etc)
- market sustainability (organisational trends etc)
- participant needs (assessment and planning, person centred practices)
- innovation (new ideas, new ways of doing things) (Community Services Industry Alliance, sub. PP251, p. 4).

This information would also inform research, benchmarking, monitoring, evaluation and quality assurance. A more bottom-up approach (as opposed to the current top-down approach) would facilitate local responsiveness and flexibility.

The Commission recommends the collection and publication of more timely, disaggregated, tailored and forward-looking market data by the Australian, State and Territory Governments, in conjunction with the NDIA and the NDIS Quality and Safeguards Commission, to support market oversight and stewardship. This includes qualitative information and feedback from liaison with market participants. Better information would enable greater flexibility, evaluation and refinement of risk-based market stewardship responses.

The way forward

In the transition period, market stewardship is critical to the wellbeing of participants and their families. Now, more than ever, there must be more investment in market stewardship. The Commission has made a range of recommendations (relating to pricing, providers, workers and participants) in this regard. However, these specific recommendations are a symptom of, and do not exhaustively define, the structural problems in current market stewardship arrangements. Market stewardship more generally could be improved by clarifying responsibilities for market stewardship, collection of more specific market data, and more effective government collaboration.

Market stewardship is a dynamic role that will evolve over time as the scheme is rolled out. While it is difficult to be certain about the future pathway of market stewardship, what *is* certain is that *ongoing* market stewardship will be needed. Market stewardship must receive ongoing and consistent priority by governments and their agencies, be forward-looking, flexible and adaptive to changing circumstances. This is essential to support an effective NDIS market, the scheme's sustainability, and the lives of participants and their families.

RECOMMENDATION 10.5

The COAG Disability Reform Council should immediately clarify and make public the roles and responsibilities of the Australian, State and Territory Governments with respect to market stewardship (those actions required to define and support the effective functioning of sustainable and enduring markets for participants and providers). This should include clear and transparent reporting of the specific actions and outcomes they are to achieve (including costs, benefits and risks), timeframes and progress towards goals.

The Australian, State and Territory Governments should:

- with the National Disability Insurance Agency and the National Disability Insurance Scheme Quality and Safeguards Commission, collect and make publicly available disaggregated, tailored and forward-looking market data, including provider and workforce data on supply gaps
- coordinate their market stewardship actions across all sectors, particularly with other care sectors and mainstream services.

11 Governance

Key points

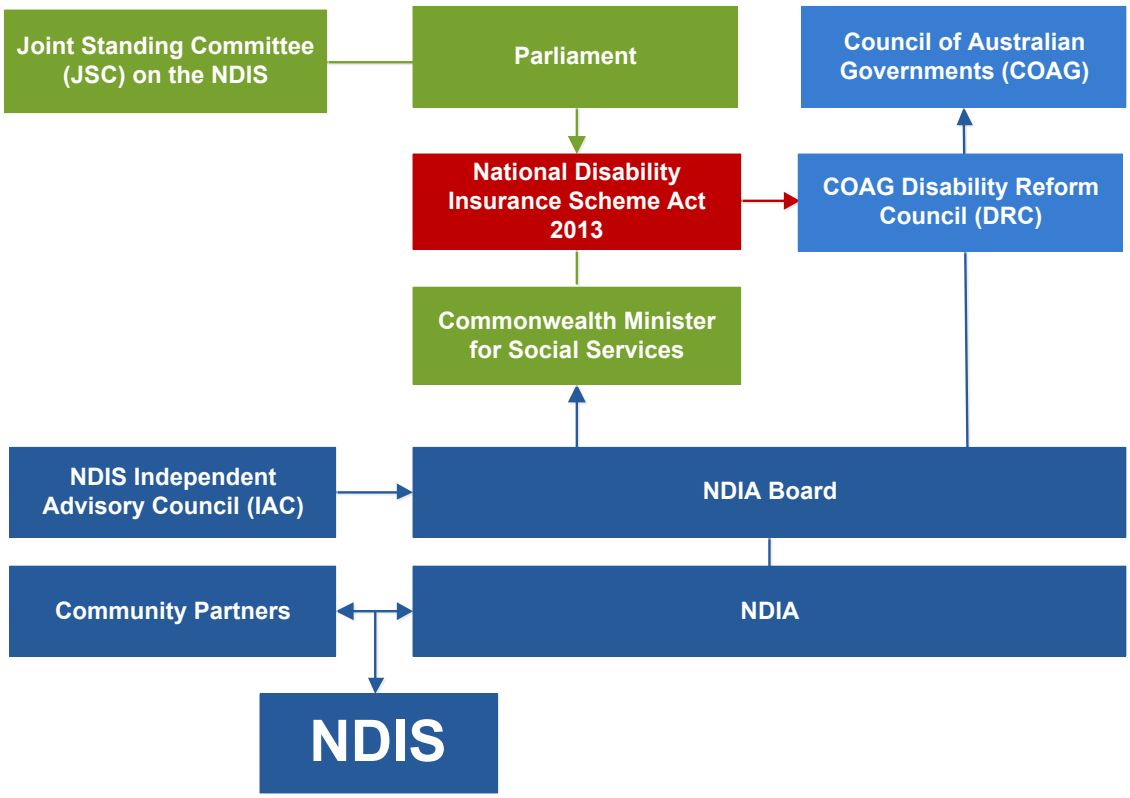
- The governance arrangements for the National Disability Insurance Scheme (NDIS) provide a good foundation for delivering the scheme. However, improvements can be made.
- More clarity should be provided around some roles and responsibilities, including Local Area Coordinators, mainstream services and market stewardship.
- The process for agreeing to Category A NDIS Rules should continue to require unanimous agreement from all jurisdictions, but changes are needed to allow for faster response times where emerging issues threaten the scheme's financial sustainability.
- The National Disability Insurance Agency (NDIA) should be given autonomy to independently manage the NDIS as an insurance scheme. The NDIA's operating cost target should be changed and the Australian Government should remove the cap on staff directly employed by the NDIA.
- Internal review processes have the potential to increase scheme costs and poor planning processes can increase the number of reviews. External review outcomes could also significantly affect scheme costs. The NDIA should publicly report on internal and external review processes.
- The timeframe to implement the NDIS Quality and Safeguarding Framework is ambitious. However, it needs to be met to ensure quality and safety for scheme participants, and to provide clarity and reduce the regulatory burden on providers. Regulation and quality assurance arrangements should be continually monitored and refined as needed.
- While the Western Australian NDIS is meant to mirror the national scheme in many respects, there is a risk that the governance arrangements could lead to a divergence in participant outcomes. There are also costs associated with setting up parallel schemes. Western Australia should be part of the national scheme.
- Current NDIS performance reporting does not have a sufficient focus on plan quality. Reporting on quality needs to be developed as a priority. Reporting on scheme participants' outcomes and attainment of participants' goals also requires further development.
- The focus of governments and the NDIA on participant intake, at the expense of quality and participant outcomes, has compromised the success of the scheme. The NDIA should better balance participant intake, the quality of plans and participant outcomes.
- The Australian, State and Territory Governments should immediately start planning for a changed participant intake timetable for the rollout of the NDIS. In doing so, they need to ensure that continuity of support arrangements are in place and assess whether additional resources are required for the scheme to meet its objectives.

This chapter examines the National Disability Insurance Scheme (NDIS) governance arrangements in the context of scheme costs and financial sustainability. Section 11.1 provides an overview of the governance arrangements. Sections 11.2 to 11.8 discuss issues with the current governance arrangements including: clarity and transparency around roles, responsibilities and processes; the NDIS Rules; the National Disability Insurance Agency's (NDIA's) structure and governance; the Western Australian NDIS; review processes; regulation; and performance reporting arrangements. Section 11.9 discusses the timetable for the scheme rollout.

11.1 Overview of governance arrangements

The NDIS is established under the *National Disability Insurance Scheme Act 2013* (Cwlth) (NDIS Act) (figure 11.1). The NDIS Act sets out (among other things) the objectives of the NDIS, eligibility, how plans are prepared and reviewed, the governance arrangements for the NDIA, and internal and external review processes. The Act is supported by the NDIS Rules, which are legislative instruments that provide more detail on the operation of the NDIS.

Figure 11.1 **Summary of the NDIS governance arrangements**



Source: Adapted from NDIA (2016b, p. 127).

The Australian, State and Territory Governments share governance responsibility for the NDIS. The COAG Disability Reform Council (DRC) is responsible for NDIS policy and broader disability policy. Its members include the Ministers responsible for disability policy, the Treasury portfolio from each Australian, State and Territory Government, and a representative from the Australian Local Government Association (DSS 2017a).

The Australian Government Minister for Social Services is responsible for administering the NDIS Act. However, many of the Minister's responsibilities require agreement from, or consultation with, State and Territory Governments prior to being undertaken. The Minister's functions include making NDIS Rules and appointing Board and Independent Advisory Council members. The Minister can also issue directions to the NDIA about the performance of its functions (NDIA 2016b, 2017i; NDIS Act).

In addition to their governance role through the DRC, State and Territory Governments are responsible for regulating providers until the *NDIS Quality and Safeguarding Framework* is implemented (DSS 2016d, p. 17).

The NDIA is responsible for managing and delivering the NDIS. It is an Australian Government agency established under the NDIS Act and the *Public Governance, Performance and Accountability Act 2013* (Cwlth) (PGPA Act) (NDIA 2017i; NDIS Act, s. 117). Its main functions include:

- delivering the NDIS to support the independence and social and economic participation of people with disability, and enabling them to exercise choice and control in the pursuit of their goals
- managing, advising and reporting on the financial sustainability of the NDIS
- facilitating innovation, research and best practice in the disability sector
- building community awareness of disabilities
- collecting, analysing and exchanging data on people with disability, and the supports provided to them
- undertaking research relating to disabilities (NDIA 2017ab; NDIS Act, s. 118).

The NDIA is governed by a Board, which is responsible for setting the strategic direction of the NDIA, managing risks and monitoring and reporting on the Agency's performance (NDIA 2017w). The Board is advised by the Independent Advisory Council (IAC). The IAC is a panel of experts including people with disability, carers of people with disability, at least one person with expertise on disability in rural or remote areas, and at least one person with expertise in the supply of equipment or provision of disability services. The IAC can provide advice to the Board about the way in which the Agency administers the NDIS and helps to meet the objectives of the NDIS Act. The IAC can provide advice either on its own initiative or at the written request of the Board (NDIA 2017j).

A Parliamentary Joint Standing Committee on the National Disability Insurance Scheme was established in 2013 to review the implementation, administration, performance, governance

and expenditure of the NDIS, and other NDIS-related matters referred to it by parliament (JSCNDIS 2017b; NDIA 2016b, p. 131). To date, the Committee has provided two progress reports on the implementation and administration of the NDIS, a progress report on general issues around implementation and performance, an interim report on the provision of hearing services under the NDIS and completed an inquiry into services for people with psychosocial disabilities related to a mental health condition.

Different arrangements for Western Australia

Western Australia has different governance arrangements for the NDIS to the rest of Australia. While it is intended to provide similar supports to the national scheme, the Western Australian NDIS (WA NDIS) is:

- administered by the Western Australian Government, not the NDIA
- funded differently (chapter 12)
- being rolled out one year later than the national scheme (2017-18) (box 11.1).

Box 11.1 The NDIS in Western Australia

In January 2017, the Western Australian and Australian Governments signed a Bilateral Agreement for the implementation of the WA NDIS. Under this agreement, Western Australia will have a locally administered scheme, but the scheme is to be consistent with the national NDIS. The WA NDIS began rollout on 1 July 2017 (one year later than the national scheme).

Unlike the national scheme, the WA NDIS will be managed by the State Government under State legislation. A WA NDIS authority will be established to manage the scheme which, similar to the NDIA, will have a Board and Independent Advisory Committee.

The intention is that the WA NDIS will be consistent with the national scheme in a number of areas, including:

- eligibility requirements
- the core principles, including access to reasonable and necessary supports, choice and control and guaranteed portability
- the application of the National Quality and Safeguarding Framework
- the complaints and appeals process, which will mirror the national process including access to the Administrative Appeals Tribunal
- reporting requirements, including the requirement to report quarterly to the DRC
- other governance arrangements, including relevant Rules under the NDIS Act
- contributions to policy at the national level by the Western Australian Government.

Sources: Australian Government and Western Australian Government (2017); WADSC (2017).

Are the current governance arrangements effective?

The high-level governance arrangements for the NDIS mostly reflect those recommended by the Commission in its 2011 inquiry on *Disability Care and Support*, and provide a solid foundation for delivering the scheme and managing financial sustainability.

One difference is the Australian Government minister responsible for the NDIS. In 2011, the Commission recommended that the Australian Government Treasurer be the responsible Minister for the NDIS because of the proposed commercial focus of the NDIA, and the need to ensure strong cost controls, insurance characteristics, long-run sustainability and appropriate management of funds (PC 2011, p. 432). The Commission envisaged other ministers, such as the Minister for Social Services, playing a prominent role in disability policy.

However, instead, the Australian Government Minister for Social Services has primary responsibility for the NDIS. There is a risk that the intention that the scheme be firmly based on insurance principles will be less evident by placing it in a department that deals with welfare programs.

The following sections discuss areas of concern about the governance arrangements.

11.2 Lack of clarity around roles and responsibilities

While the high-level governance arrangements for the scheme are clearly set out in the NDIS Act, the Heads of Agreements, the Bilateral Agreements and other policy documents, there is a lack of clarity in practice around roles and responsibilities. For example, there is a lot of confusion about the role of Local Area Coordinators (LACs). DARE Disability Support said:

> DARE's understanding of the role initially envisaged for the LACs, namely frontline problem solving and assistance with plan implementation, appeared to change shortly before transition to planning and the Coordination of Supports for non-complex participants, surely a foreseeable gap in NDIS planning resources. (sub. 182, p. 7)

The confusion is probably, in part, because the NDIA experimented with different delivery models for LACs before settling on the current outsourced model (NDIA, sub. 161, p. 4), and because LACs were diverted away from their intended activities towards planning-related tasks. As the NDIA said:

> The need to meet bilateral estimates has also meant that for the first period of transition the NDIA has asked LAC partners to divert their resources into information gathering to facilitate the approval of plans and implementation of plans. (sub. 161, p. 56)

There is also a lack of clarity around the responsibilities of the NDIS and mainstream services, and how governments are approaching continuity of support (chapter 6). As noted by the Department of Social Services (DSS):

> The Council of Australian Governments (COAG) agreed principles to determine the responsibilities of the NDIS and mainstream service systems, which are generally sound, but need clarifying at an operational level. (sub. 146, p. 4)

The Commission is recommending that the Australian, State and Territory Governments make their approach to continuity of care, and the services they intend to provide, public and that a standing agenda item be added to the agenda of the relevant COAG Councils to address how mainstream services interface with the NDIS (chapter 6).

Other areas in need of greater clarity include supply side arrangements, including the roles and responsibilities of Australian, State and Territory Governments around market stewardship (recommendation 10.5).

Given the scale and complexity of the scheme, and the focus on insurance principles — which involves ongoing monitoring and refining of the scheme — some uncertainty and changes to roles, responsibilities and processes is inevitable, especially while the scheme is in transition. However, it is crucial that governments and the NDIA continue to work to ensure clarity and transparency in the governance arrangements so they do not undermine accountability and put the success of the scheme at risk.

11.3 NDIS Rules

The NDIS Rules are legislative instruments that provide more detail than the NDIS Act on the operation of the NDIS (NDIA 2017m). The Australian, State and Territory Governments are jointly responsible for the NDIS Rules. There are four categories of NDIS Rules (box 11.2). The Minister for Social Services has overarching responsibility for making Rules, and each Category requires a different level of involvement or agreement from State and Territory Governments. The Minister can also delegate the power to make Rules to the CEO of the NDIA, with the agreement of State and Territory Governments (NDIS Act, s. 201). NDIS Rules are disallowable instruments which means they are tabled in Parliament and open to Parliamentary veto or disallowance for fifteen sitting days. If a motion is brought to disallow an instrument, Parliament has an additional fifteen sitting days to vote on or withdraw the motion (Parliament of Australia 2017).

Most of the Rules currently in force are either Category A or Category B Rules. Category A Rules cover most of the sections of the NDIS Act, including (but not limited to) extra guidelines and information on disability and early intervention requirements, what must be included in plans, and the statement of participants' supports. Category A Rules require unanimous agreement from the Australian Government and each State and Territory Government (NDIS Act, s. 209).

Box 11.2 Categories of NDIS Rules

There are four main categories of NDIS Rules.

- Category A — The Australian Government and each host jurisdiction must agree to the Rule.
- Category B — The Australian Government and the specific host jurisdiction that the Rule relates to must agree to the Rule.
- Category C — The Australian Government and a majority of host jurisdictions must agree to the Rule.
- Category D — Each host jurisdiction must be consulted on the Rule (NDIS Act, s. 209).

In addition, under sections 125B and 180C of the NDIS Act, the Minister responsible for the *Insurance Act 1973* (Cwlth) can make Rules related to the management of risk and the Scheme Actuary's duties.

Most of the current NDIS Rules are either Category A Rules (requiring unanimous agreement) or Category B Rules (requiring agreement between the Australian Government and the relevant host jurisdiction).

Category A Rules

The current Category A Rules cover areas such as:

- rules to assist in determining who can become a participant, including extra details about age, residence and early intervention requirements (*National Disability Insurance Scheme (Becoming a Participant) Rules 2016* (Cwlth))
- requirements in determining representatives for children, and what that child's representative must comply with (*National Disability Insurance Scheme (Children) Rules 2013* (Cwlth))
- nominees, including their appointment, duties and cancellation and suspension (*National Disability Insurance Scheme (Nominees) Rules 2013* (Cwlth))
- how supports in a participant's plan should be specified and how to assess whether it would pose an unreasonable risk for a participant to manage their own plan (*National Disability Insurance Scheme (Plan Management) Rules 2013* (Cwlth))
- criteria for approving registered providers of supports and requirements registered providers of supports must comply with (*National Disability Insurance Scheme (Registered Providers of Supports) Rules 2013* (Cwlth))
- funding of Specialist Disability Accommodation (*National Disability Insurance Scheme (Specialist Disability Accommodation) Rules 2016* (Cwlth)).

Category B Rules

Category B Rules are jurisdiction-specific Rules. They generally relate to the schedules for phasing participants into the scheme (such as the Rules regarding the preparation of participant plans), or the specific State and Territory laws that prevent a person providing certain information to the NDIA (*National Disability Insurance Scheme (Protection and Disclosure of Information) Rules 2013* (Cwlth)).

Are the arrangements for NDIS Rules affecting scheme costs?

Some concerns were raised by study participants about the governance arrangements for Rule changes. Both the NDIA and the DSS pointed to the length of time it can take to introduce or amend NDIS Rules.

> The process for amendment of the NDIS Rules requires agreement from a majority or all (depending on the rules) of the States and Territories. Recent experience of seeking amendments to rules is that the process takes considerable time. (NDIA, sub. 161, pp. 48–49)

> This has proved cumbersome and complicated for most rules and other actions, such as making appointments and issuing directions, requiring unanimous agreement by the Commonwealth and the States. This can delay the timely sign-off of amendments, and can potentially impact timely direction being provided to the NDIA. (DSS, sub. 146, p. 32)

The NDIA and the DSS both raised the example of the *National Disability Insurance Scheme (Specialist Disability Accommodation) Rules 2016* (Cwlth) (Category A Rules), which required unanimous agreement from the Australian, State and Territory Governments. According to the DSS (sub. 146, p. 32), it took about 10 months to implement these Rules. The NDIA (sub. PP327, p. 58) also argued it 'experienced similar implementation times with the Registered Providers of Support Amendment Rules and the NSW Prescribed Program Rules'. In a transition period of three years, such timeframes could pose significant operational difficulties for the NDIA.

That said, the South Australian Government (sub. PP354, p. 12) argued that 'while agreement of the [Specialist Disability Accommodation] Rules took time, the final product much better addresses critical issues for states and territories'. The Tasmanian Government also said that, to date, the majority of Category A Rules have been agreed to in a timely manner.

> Despite the one example cited in the PC's position paper, the majority of Category A Rules, covering complex, detailed and technical matters, including how the scheme interacts with state and territory systems, have been developed and agreed by jurisdictions in a highly collaborative and timely manner. (sub. PP247, p. 10)

Can the arrangements be improved?

Some study participants called for changes to the way Rules are made, to make implementation and amendments more responsive and timely. One option supported by some study participants was to relax the requirement that Category A Rules have unanimous agreement from the Australian, State and Territory Governments (for example, AFDO, sub. PP325, p. 10; New South Wales Government, sub. PP230, p. 9). The Victorian Government noted:

> Victoria supports governance arrangements that are as responsive and streamlined as possible. Victoria supports relaxing the requirement of unanimous agreement of all jurisdictions to change some Category A NDIS Rules … to either require majority agreement or, in some cases, consultation. (sub. PP298, p. 21)

However, not all study participants were supportive of this approach. For example, the Tasmanian Government argued that the requirement for unanimous agreement reflects the fact that Category A Rules influence the boundaries of the scheme and, therefore, state and territories' non-NDIS disability and mainstream service provision.

> … NDIS design features such as eligibility and scope of supports have direct and indirect consequences for, and costs to, state systems. It is therefore appropriate that these features, established through the NDIS Category A Rules under the NDIS Act, remain subject to the agreement of all host jurisdictions. The Tasmanian Government does not support any changes to the current Rule-making arrangements with respect to Category A Rules concerning access and reasonable and necessary supports. (sub. PP247, p. 10)

Similarly, the Northern Territory Government said:

> The NT Government recognises the Commonwealth and NDIA's frustration regarding the delay in gaining authorisation from all jurisdictions to make amendments or introduce rule changes to the NDIS. However there is an inherent risk to states and territories relaxing unanimous agreement around rule changes. (sub. PP359, p. 6)

Some non-government study participants also argued against change. For example, Legal Aid NSW said it:

> … acknowledges concerns around delay in changes to the NDIS Rules, but is not supportive of relaxing the requirement for unanimous agreement from the Australian Government and all host jurisdictions. We see this requirement as an important safeguard. If all host jurisdictions were not required to agree to changes, we see a risk that the Commonwealth would make changes to the Rules to contain costs. (sub. PP245, p. 14)

Victoria Legal Aid also cautioned against providing any person (including the NDIA CEO) the power to bypass the usual process for implementing or amending Rules.

> We urge caution in giving the NDIA CEO, or any other person, the power to alter or bypass the process for amending Rules made under section 209 of the NDIS Act. The Rules are the key tool for decision making under the scheme and the process for their amendments reflect the significant impact any changes will have for participants, State Governments and service providers. … In our view it is a key priority to ensure consultation and proper consideration of the impact of changes with potentially wide ramifications for participants of the scheme before they are implemented. (sub. PP367, pp. 3–4)

Another option is to change the process for agreeing to NDIS Rules without relaxing the requirement for unanimous agreement. Some States and Territories were supportive of changing the process to improve its speed. The South Australian Government (sub. PP354, p. 12) stated it is 'open to considering changes that enhance the agility of Scheme governance'. The Northern Territory Government also said:

> … an alternative may be to develop nationally agreed key principles to provide overarching guidance to the consideration of rule changes when they occur. For example, one of the principles could include minimum timeframes for jurisdictions to respond to proposed new rules or changes. (sub. PP359, p. 6)

Risks could be reduced by more timely agreement on Rules

Governance arrangements need to be sufficiently flexible so that the NDIA and governments can respond quickly when circumstances arise that could threaten the financial sustainability of the scheme. Implementing or changing Rules can be a lengthy process, especially as they are subject to the disallowance process. However, changes to the process for agreeing to Category A Rules can be made to help ensure they are implemented in a timely manner.

While relaxing the requirement for unanimous agreement, such as to majority agreement, could decrease the time it takes to implement Rules, there are problems with this approach. Category A Rules cover much of the Act, and the current Category A Rules influence the boundaries of the scheme. For example, the National Disability Insurance Scheme (Becoming a Participant) Rules 2016 (Cwlth) include detail on the processes used to determine eligibility. As the NDIS Rules can influence who becomes a scheme participant, they can also influence who does not become a participant and therefore may need to rely on mainstream or specialist disability support services provided by State and Territory Governments. Many scheme participants will also need to access mainstream and disability service support provided by State and Territory Governments.

The involvement of State and Territory Governments in disability and mainstream service support exposes them to considerable risk and they should therefore continue to have a say over the design and boundaries of the NDIS. Given the State and Territory Governments' considerable experience in disability service provision, they are also likely to have valuable knowledge and expertise for designing and refining the scheme.

The Commission does not recommend that the requirement for agreeing to Category A NDIS Rules be changed from unanimous agreement. Instead, the process should be changed to encourage timely agreement to Rules without diluting the control of States and Territories. This could be done, for example, by requiring governments to state whether they agree or disagree to a proposed rule introduction or change within a certain amount of time. No response could be taken as agreement to the proposal.

RECOMMENDATION 11.1

The *National Disability Insurance Scheme Act 2013* (Cwlth) should be amended to change the process for agreeing to Category A Rules to reduce the time it takes to implement or amend those rules.

The amendment should not change the requirement that there be unanimous agreement among the Australian Government and the host jurisdictions for implementing or amending Category A Rules.

11.4 Structure and governance of the NDIA

It is essential that the NDIA has the correct governance model and appropriate level of independence so that is can effectively manage the NDIS in line with insurance principles.

In 2011, the Commission assessed different options for the NDIA's governance model (PC 2011) and found that the most appropriate model was a corporate governance model, independent from day-to-day government operations with clear accountability and reporting requirements. To achieve this model, the Commission recommended that:

- the NDIA be established as an independent Commonwealth statutory agency (now called a corporate Commonwealth entity) under the *Commonwealth Authorities and Companies Act 1997* (Cwlth) (no longer in force but now covered by the PGPA Act)
- the NDIA be overseen by a skills-based board, chosen by an appointment panel established jointly by the Australian, State and Territory Governments. The Board would have the sole power to appoint and dismiss the CEO
- the Australian, State and Territory Governments establish an advisory council to advise the Board
- the NDIA be provided with its own legislation that specifies its objectives, functions and governance arrangements, and future changes to key features of the scheme should be undertaken only by explicit changes to the Act, in consultation with all State and Territory Governments
- the arrangements between the NDIA and governments be at arm's length, and subject to strict transparency requirements (PC 2011).

The current governance arrangements of the NDIA (as outlined in section 11.1) largely reflect what was recommended in 2011. The NDIA is a corporate Commonwealth entity (box 11.3) under the PGPA Act. And while, under the NDIS Act, the Minister was responsible for appointing the first CEO (in consultation with State and Territory Governments), the NDIA Board is responsible for appointing or dismissing all subsequent CEOs (NDIS Act, s. 160).

The NDIA's high-level structure and level of independence is similar to the corporate structures of the Transport Accident Commission in Victoria and Insurance and Care New South Wales (*State Insurance and Care Governance Act 2015* (NSW); *Transport Accident Act 1986* (Vic)).[88]

There is, however, one key difference in the structure of the NDIA compared with what was envisioned by the Commission in 2011. When discussing the need for the NDIA to be a Commonwealth statutory authority (corporate Commonwealth entity), in 2011, the Commission noted that this type of agency 'would generally not engage staff under the

[88] Insurance and Care New South Wales was established in 2015 to administer the New South Wales Government compensation, insurance and care schemes. It includes the Lifetime Care and Support Scheme (icare 2017).

Public Service Act unless there were good reasons to do so' (PC 2011, p. 423). The NDIA engages its staff under the *Public Service Act 1999* (Cwlth) (NDIS Act, s. 169).

Box 11.3 Governance structures for Commonwealth bodies

The three main types of Commonwealth bodies are non-corporate Commonwealth entities, Corporate Commonwealth entities and Commonwealth companies. The financial and governance arrangements of these different bodies are set out in the PGPA Act and PGPA Rules, the *Corporations Act 2001* (Cwlth), entity-specific legislation or administrative arrangements.

Non-corporate Commonwealth entities

Non-corporate Commonwealth entities are legally and financially part of the Commonwealth. Entities are usually established as a non-corporate Commonwealth entity if they need direct accountability to the Parliament, will be primarily budget funded, need to be subject to Australian Government policies, will raise money or perform regulatory activities under Commonwealth law, or if they need to be classified as part of the general government sector. Government departments are an example of non-corporate Commonwealth entities.

Corporate Commonwealth entities

Corporate Commonwealth entities are separate legal entities from the Commonwealth. They can exercise certain legal rights such as entering into contracts and owning property. Entities might be established as corporate Commonwealth entities if:

- they will operate commercially or entrepreneurially;
- a multi-member accountable authority (such as a board of directors) is needed;
- it would be best that its assets are not owned or controlled by the Commonwealth directly;
- it requires a degree of independence from general Australian Government policies and executive government direction.

Corporate and non-corporate Commonwealth entities are generally subject to the same planning, performance and accountability requirements under the PGPA Act. However, corporate Commonwealth entities may have different provisions, such as those relating to banking, borrowing, and investments. Corporate Commonwealth entities also often have their own legislation that sets out its powers and can impose additional governance, reporting and accountability requirements. Examples of corporate Commonwealth entities include the Reserve Bank of Australia and the CSIRO.

Commonwealth companies

Commonwealth companies are bodies established under the Corporations Act that are controlled by the Commonwealth. An entity will generally be established as a Commonwealth company if two or more of the following apply: it will primarily conduct commercial or entrepreneurial activities and will generate profits for distribution to its members; it will operate in a commercial or competitive environment; or it is likely to be sold off by the Commonwealth in the short to medium term. Examples of Commonwealth companies include the NBN Co and the Australian Rail Track Corporation.

Retention of the NDIA's independence is critical

While governments are responsible for determining the scope of the NDIS and its high-level funding, the NDIA should be given the independence to operate the scheme on a day-to-day basis. Some study participants highlighted the importance of, and raised some concerns about, the NDIA's level of independence (CYDA, sub. 188; National Disability and Carer Alliance, sub. PP344). For example:

> Victoria supports clarifying governance and accountability arrangements so as to provide the NDIA with the operational autonomy that was originally envisaged … The NDIA needs to be properly resourced and operate with sufficient authority so that it can implement the NDIS on the basis of robust insurance principles. (Victorian Government, sub. PP298, p. 21)

> It is also important that NDIA retain its status as an independent statutory authority. The independence of the agency responsible for administering the scheme was one of the key issues during the campaign for the introduction of the NDIS. An independent agency with its own board (including board members with disability) helps to ensure the vision of the scheme is realised and it is not subject to the changing priorities of successive governments. It is also important that the independence of the agency's decision making is not compromised or undermined by interference in day to day operational issues. Structural and systemic issues lie with the governments who work in partnership to deliver the scheme — day to day operational issues should lie with the NDIA. And the NDIA should be held to account by its own board and COAG should they fail to administer the scheme efficiently and effectively. (AFDO, sub. PP325, p. 24)

In addition, Bruce Bonyhady (sub. PP333, p. 20) raised concerns about the Australian Government's control over the NDIA, and the NDIA (sub. 161, p. 108) argued for some changes to the administrative and governance arrangements including greater flexibility to use funding allocated to package costs and greater protection for the role of the NDIA's Operational Guidelines in managing scheme costs.

The Commission identified two aspects of the governance arrangements that could hinder the NDIA's ability to effectively and independently operate the scheme — the cap on its operating costs and staffing-related concerns. (The level of independence regarding funding arrangements is discussed in chapter 12.)

Beyond these, the Commission received insufficient evidence to conclude that any significant changes to governance arrangements are required to ensure the NDIA has enough independence to undertake its functions. The high-level governance structure appears to provide the NDIA with sufficient independence from day-to-day government control. It is nevertheless important that, as the scheme develops, there are no structural barriers to the NDIA exerting an appropriate level of independence and developing a culture conducive to running the scheme in line with insurance principles. The governance of the NDIA and NDIS should be considered as part of the five-yearly reviews into NDIS costs.

The NDIA's capped operating costs

At full scheme, the NDIA's operating costs will be capped at 7 per cent of package costs each year (NDIA, sub. 161, p. 110). The 7 per cent operating cost target is similar to that estimated by the Commission in 2011 (PC 2011, pp. 776–7).

The rationale for capping the operating expenses of the NDIA appears to be to encourage administrative efficiencies. The DSS (sub. 146, p. 24) commented that the 7 per cent cap was 'an aspirational approach designed to encourage best practice and efficient operations'.

However, capping operating expenses could have perverse outcomes in practice. As noted in the NDIA's Annual Financial Sustainability Report, the risks to the scheme's financial sustainability from the setting of operating expense budgets are asymmetric:

> It is worth noting that a 10% increase in the operating budget may result in additional expenditure of approximately $150 million at full scheme, however an increase in package costs of 10% could result in an additional $2 billion at full scheme. (NDIA 2016a, p. 56)

In addition, if the NDIA's operating budget is set too tightly, this could hinder its ability to implement upfront investments, such as in LACs, assessors and planners, which could in turn have a significant effect on package costs and scheme sustainability.

Operating costs made up about 33 per cent of scheme costs in June 2016 (NDIA 2016b, p. 109). To achieve a 7 per cent target by full scheme, the NDIA will need to cut operating expenditure by about 18 per cent ($250 million) between 2018-19 and 2019-20 (box 11.4).

While similar types of schemes operate close to a 7 per cent average when they are close to maturity, they still have significant fluctuations in their annual operating expenses as a proportion of their overall expenses (box 11.4).

A number of study participants argued that the 7 per cent cap at full scheme is too low (for example, AFDO, sub. PP325, p. 24; ABF, sub. 48, p. 15; PDCN, sub. 29, p. 4; Sotica, sub. 67, p. 9). The Victorian Government also said that there are risks to holding the NDIA to a specific operating cost target:

> The NDIA has been set an operating cost target of 7 per cent of total scheme costs at full scheme. Given that the major risk to total scheme costs is package costs, which comprise around 90 per cent of total costs, it would be a mistake to hold the NDIA to an operating cost target if capping administrative costs threatened increases in package costs due to inadequate quality control or oversight. (sub. PP298, p. 10)

While the Commission understands the need to create incentives for administrative efficiencies, a hard cap for operating expenses enforced year in, year out does not align with the way an insurance scheme operates. Greater flexibility (including setting an operating budget that sits within a funding range) would allow investments in administrative functions to be made that reduce lifetime costs (for instance, investing in LACs early to increase participant capacity and readiness which could lower costs in the long term).

Box 11.4 Operating expenses of the NDIA and comparable schemes

The NDIA's operating expense ratio is projected to decrease to less than 7 per cent at full scheme.

NDIS expenses by category ($ millions)[a]

	2015-16 (actual)	*2016-17 (actual)*	*2017-18 (projections)*	*2018-19 (projections)*	*2019-20 (projections)*	*2020-21 (projections)*
Package costs	859.9	2 973.0	8 045.1	14 267.1	17 855.8	19 165.5
Information, Linkages and Capacity Building program	10.7	33.3	68.9	105.3	119.3	118.6
Operating expenses	301.2	704.9	1 033.0	1 393.9	1 143.9	1 096.2
Total scheme costs	1 171.7	3 711.2	9 147.0	15 766.2	19 119.1	20 380.3
Operating expense ratio (%)[b]	35.0	23.7	12.8	9.8	6.4	5.7

[a] Excludes Western Australia. [b] The expense ratios differ from NDIA targets and estimates because the NDIA and the DSS use different projections of scheme costs.

Comparable schemes, such as the New Zealand Accident Compensation Commission and the Victorian Transport Accident Commission have operating expense ratios close to a 7 per cent average, but they have significant fluctuations in their annual operating expense ratios.

Operating expense ratios of comparable schemes (per cent)[a]

	2010-11	*2011-12*	*2012-13*	*2013-14*	*2014-15*	*2015-16*	*Average*[b]
NZ Accident Compensation Corporation	14.34	6.0	22.9	11.2	7.4	4.9	8.3
NSW Lifetime Care and Support[c]	2.7	3.6	3.6	3.7	4.0	8.4	3.3
VIC Transport Accident Commission	8.5	4.6	11.7	7.4	6.0	4.8	6.4
Disability services nationwide[d]	7.6	7.4	6.6	6.5	6.2	6.4	6.8

[a] The ratio of average operating expenses between 2010-11 to 2015-16 to the average total expenses over the same period. [b] The average is calculated as the ratio of the average of operating and total expenses over time. [c] New South Wales Lifetime Care and Support changed its reporting methodology in 2015-16, and therefore, this number may not be comparable with previous years and has been excluded from the calculation of the average operating expense ratio. [d] Data for 2013-14 to 2015-16 are affected by the introduction of the NDIS.

Sources: ACC (2012, 2013, 2014, 2015, 2016); Australian Treasury (2016, 2017d); icare (2016a); LCAS (2012, 2013, 2014, 2015); SCRGSP (2017); TAC (2012, 2013, 2014, 2015, 2016).

One way to balance flexibility with accountability would be to allow a target range for operating expenses, with the expectation that the NDIA would sit at the bottom of this target on average. This would allow the NDIA some flexibility to smooth out year-to-year fluctuations in spending while also placing some limits on administrative spending. A number of study participants were supportive of this approach (for example, AFDO, sub. PP325, p. 11; PDA, sub. PP306, p. 5; Tasmanian Government, sub. PP247, p. 11; VALID, sub. PP332, p. 11; Victorian Government, sub. PP298, p. 10).

Based on similar types of schemes, a target of 7 to 10 per cent appears to be reasonable. The NDIA agreed:

> Providing expenditure flexibility at Full Scheme, within a range of 7 percent to 10 percent of package costs would allow the NDIA to make appropriate upfront investments, consistent with insurance principles. The investments would seek to optimise overall Scheme experience and participant outcomes, while reducing future Scheme outlays. (sub. PP327, p. 65)

Should the NDIA exceed the funding target in a particular year, it should be required to publicly report the reasons why. The NDIA (sub. PP327, p. 65) regarded a requirement to report on why the target had not been met as appropriate.

RECOMMENDATION 11.2

At full scheme, the annual operating budget for the National Disability Insurance Agency should be set within a funding target of 7–10 per cent of package costs with the expectation that, on average, it would sit at the lower end of the band.

The National Disability Insurance Agency should be required, in its annual report, to state the reasons why it has not met this target in any given year.

NDIA staff cap

The NDIA, like most Australian Government agencies, is currently subject to a staff cap, which sat at 1749 in 2016-17 (NDIA, sub. PP327, p. 65). At full scheme it will have a cap of 3000 directly employed staff (DSS, sub. 146, p. 24). It is expected that the NDIA will require a workforce of about 10 000 people to deliver the NDIS at full scheme, which means that about 7000 people will be outsourced to partner organisations (DSS, sub. 146, p. 24; NDIA, sub. 161, p. 63).

The rationale for the cap on directly employed staff appears to be to encourage the NDIA to enter into community partnerships. While it is important that the NDIA works collaboratively with the community to deliver the scheme, it could also lead to poorer outcomes. For example, the NDIA outsourcing a lot of its work can present a particular risk when the agency is so new and needs to build institutional expertise and capability (NDIA, sub. PP327, p. 66). This is especially the case in light of the problems with the planning process (chapter 5).

Independent agencies, such as corporate Commonwealth entities (and state-based equivalents), are usually given the autonomy to independently run their organisations. Similar non-Commonwealth organisations, such as the Transport Accident Commission, also generally do not have staff caps.

The Commission recommends that the Australian Government remove the cap on directly employed staff. This is on the basis that the NDIA is best placed to determine the most

effective and efficient staff mix to deliver the scheme, within the constraints of its capped operating budget.

Reconsidering the staff cap on directly employed staff was supported by some study participants (for example, ABF, sub. PP263; CPSU, sub. PP310, p. 5; PWSAA, sub. PP228, p. 9; Queensland Government, sub. PP345, p. 26; South Australian Government, sub. PP354, p. 13; Tasmanian Government, sub. PP247, p. 11; Victorian Healthcare Association, sub. PP337, p. 4). The Victorian Government said:

> The NDIA should also have more flexibility over its staffing arrangements … This would enable it to rely less on secondments from the Commonwealth Department of Social Services, which risk compromising the NDIA's operational autonomy and may lead it to take an overly welfare-based approach. (sub. PP298, p. 2)

The NDIA (sub. PP327, pp. 65–66) also said that the staff cap might constrain its ability to adopt new service delivery models that could arise from the participant and provider pathway reviews.

In contrast, JFA Purple Orange (sub. PP350, p. 27) did not support reconsidering the staff cap, arguing instead that the NDIA should make greater use of the community sector. The Commission considers there is scope for the NDIA to make greater use of the community sector's expertise, but this can be achieved through other means.

RECOMMENDATION 11.3

The Australian Government should remove the cap on staff employed directly by the National Disability Insurance Agency.

Employment of NDIA staff

As discussed above, the NDIA employs staff under the Public Service Act. This reduces the NDIA's independence in making staffing decisions, particularly around salary and conditions. It could also affect the 'cultural independence' of the Agency and contribute to a perception that it is more of a government agency rather than an independent insurance scheme. As of 1 July 2017, about 65 per cent of corporate Commonwealth entities did not employ staff under the Public Service Act (Department of Finance 2017b).

However, the Commission did not receive any evidence that this staffing arrangement has affected, or is affecting, the NDIA's independence or culture (or scheme costs or participant outcomes). But, as the scheme and the NDIA develop over time, the appropriateness of employing NDIA staff under the Public Service Act should be reassessed.

11.5 Western Australian NDIS

As noted above, Western Australia has not signed up to the national scheme. This section looks at whether the governance arrangements for the WA NDIS will affect financial sustainability. The funding arrangements are discussed in more detail in chapter 12.

Will two schemes affect financial sustainability?

In 2011, the Commission recommended a single national scheme, and a single national agency, to provide disability care and support across the country (PC 2011, pp. 424, 448). There are costs involved in implementing two systems. There is the cost of two sets of legislation — the NDIS Act and the proposed Western Australian legislation. There are also additional costs associated with setting up a separate agency in Western Australia to administer the WA NDIS (in addition to setting up the NDIA), and any associated loss of economies of scale that could ensue from having a single agency. Having two agencies could also mean that it takes longer for lessons learned from the national scheme to be adopted in Western Australia and vice versa.

There could, however, be benefits to Western Australia having its own scheme. For example, a WA NDIS could allow increased flexibility and an ability to quickly adapt to changing Western Australian conditions. While the scheme is intended to mirror the national scheme in many aspects, including most parts of the NDIS Act and the NDIS Rules, the fact that the NDIA has its own detailed operational guidelines for its functions suggests that mirroring the legislation allows for significant flexibility. This flexibility could lead to a divergence in the supports provided to scheme participants and participant outcomes between Western Australia and the rest of Australia.

There were two trials of the NDIS in Western Australia — one managed by the NDIA and the other by the Western Australian Government. There are two reviews that compared the trials in Western Australia.

- One review identified key features for an effective disability support model for Western Australia, and made a number of recommendations to address gaps in processes. It found that the Western Australian-managed trial required fewer changes in policy and processes to achieve an effective model than the NDIA-managed trial (Stantons International 2016).[89]
- The WA NDIS and the NDIS Actuaries also undertook an assessment of the two Western Australian trials. The results of the evaluation are not public.

[89] The limitations of this review should be noted. It compared and contrasted the processes related to plan preparation, activation, operation and review. It did not compare actual outcomes of participants in the two trials — this was not feasible due to the timing of the review — nor did it compare the costs of the different approaches (Stantons International 2016).

Many study participants supported Western Australia joining the national scheme, with their key concern being that inequities in disability support across jurisdictions could emerge if they remain outside the scheme (box 11.5).

Box 11.5 Many study participants supported WA joining the national scheme

Down Syndrome Australia:

> Down Syndrome Australia, as a federation of state and territory Down syndrome organisations, has advocated strongly for WA to be part of the national scheme. DSA is very concerned that people with Down syndrome in WA will not get an equitable level of support, nor the choice and control nor long-term certainty of the national scheme. (sub. 121, p. 20)

Disabled People's Organisations Australia:

> DPO Australia is very concerned about the decision by the previous Western Australian Government to establish its own NDIS. Despite a number of nationally consistent provisions in the bilateral agreement, it is concerning that the WA NDIS will have different funding arrangements and accountabilities and a greater focus on service provider control. This is highly likely to prevent market growth and innovation for people with disability in WA and create inequities in the provision of specialist disability support in WA. (sub. 165, p. 10)

Matt Burrows:

> Without WA signed up to a national Scheme, the entire Scheme is at risk. The entire Scheme is not sustainable as a *national* reform unless all States and Territories are signed up to it. (sub. 7, p. 4)

Community Mental Health Australia:

> The announcement that Western Australia (WA) would be implementing its own state-based system has immediately created a situation where there will not be a nationally consistent scheme … (sub. 11, pp. 1–2)

Queensland Advocacy Incorporated:

> [Western Australia's agreement with the Australian Government] undermines that nationally consistent approach and increases state and territory variation. (sub. 115, p. 18)

Department of Social Services:

> DSS agrees with the Commission's recommendation that WA should join the NDIA-delivered NDIS to ensure national consistency and sustainability … DSS is providing all information requested to support the WA government to make a decision about the NDIS, and is committed to working with WA to ensure that Western Australians have influence over how the NDIS is delivered in their State. (sub. PP318, p. 20)

However, some study participants said there would be benefits in Western Australia having its own scheme. For example, National Disability Services said:

> NDS supports disability service providers in WA who want a nationally consistent NDIS that provides local accountability and that recognises and respects local needs and conditions and the complexities of delivering services in regional, rural and remote areas. WA providers have little confidence that an Agency based in Geelong will be sufficiently responsive to local issues in WA. They would prefer a well-resourced and skilled agency based in WA believing that it would be best-placed to deliver and oversee the transition to the NDIS in that State. (sub. PP295, p. 10)

In April 2017, it was reported that the Western Australian Government was undertaking a review of the decision to implement the WA NDIS and that joining the national scheme was still an option (Emerson, Wearne and Carporn 2017). The outcome of this review had not been reported publicly at the time this report was finalised. Study participants were concerned about the uncertainty this situation created, and highlighted the importance of this decision being publicly communicated as soon as possible.

> WALGA supports that a decision should be made soon as this additional layer of uncertainty further complicates Local Government's current position and stalls any decision making process. Without a decision, clarity around government's roles and responsibilities makes planning difficult and moving forward to serve communities and individuals very limited. (WALGA, sub. PP320, p. 8)

> We agree that any decision on the future scheme to be embedded in Western Australia should be made public as soon as possible. (Activ, sub. PP302, p. 12)

> The ongoing arrangements for the NDIS in Western Australian should be finalised as soon as possible to remove uncertainty for people with disability, their families and carers and providers. (NDS, sub. PP295, p. 10)

Under the Bilateral Agreement between the Western Australian and Australian Governments, there are to be regular reviews of the state legislation, the first occurring two years after the commencement of the WA NDIS (Australian Government and Western Australian Government 2017). While the terms of reference for these reviews are yet to be agreed, they will include the extent to which the WA NDIS is achieving consistency with the agreed provisions in the NDIS Act. If the WA NDIS is to proceed as agreed under the Bilateral Agreement, these reviews will be important for ensuring consistency between the two schemes, and that people with disability in Western Australia are not disadvantaged by not being part of the national scheme.

It is still the Commission's view that there should be a national scheme and Western Australia should be in the NDIS. There are benefits of having a national scheme (as identified in the Commission's 2011 inquiry) and there are additional costs with two schemes. Where there is evidence that different processes in the Western Australian-managed trial have resulted in better outcomes for participants than under the national scheme, these processes should be considered for the national scheme. Regardless of whether Western Australia joins the national scheme or not, it is essential that the outcome of the review and any decisions be made public as soon as possible, to minimise uncertainty for scheme participants, providers and other governments.

RECOMMENDATION 11.4

The Western Australian Government and Australian Government should put in place arrangements for Western Australia to transition to the National Disability Insurance Scheme. Any decision to join the national scheme should be made public as soon as possible.

11.6 Review processes

Processes for resolving disputes are essential to achieving good outcomes and promoting confidence in the scheme. There are two types of *internal review* processes that can be accessed by those dissatisfied with an NDIA decision.

- *An unscheduled plan review* — a scheme participant can request that the NDIA conduct a review of their plan. The NDIA must decide within 14 days whether or not to conduct the review, begin the review within 14 days of that decision, and complete the review as soon as reasonably practicable (NDIS Act, s. 48). (This process is distinct from the periodic plan review discussed in chapter 5.)
- *A review of a decision* — a number of reviewable decisions relating to the NDIA are set out under s. 99 of the NDIS Act, including decisions regarding eligibility, supports provided and registration of providers. When the NDIA makes a reviewable decision, it must give written notice to each person directly affected informing them of the option for review. The person then has three months to request a review and the review must be completed as soon as reasonably practicable (NDIS Act, s. 100).

There are also *external review* processes for resolving disputes. If a person is dissatisfied with the outcome from a review of a decision (not an unscheduled plan review), they can apply to the Administrative Appeals Tribunal (AAT) to undertake a merit review within 28 days of the review decision (or apply for an extension of time). If the entity is dissatisfied with the outcome of the AAT review, they can appeal the decision in the Federal Court, but only if it is a question of law (NDIA 2017aa).[90]

Are the review processes appropriate and effective?

Some study participants argued the review processes are not as appropriate and effective as they could be. First, there is confusion about the two types of internal NDIA reviews. The NDIA said it:

> … is aware that there has been confusion around avenues for reviews of decision[s] (especially given the word 'review' is used in the legislation to refer to two different [processes] in relation to planning). (sub. 161, p. 94)

The Commonwealth Ombudsman also commented:

> … the distinction between an 'internal review' [a review of a decision by the NDIA] and a 'plan review' often seems to be lost on participants and their representatives. This situation was demonstrated in a recent AAT decision, *Bridgland and National Disability Insurance Agency*, where the applicant had sought an internal review and then, remaining dissatisfied, lodged an appeal with the AAT. The Tribunal found that it did not have jurisdiction to review the matter

[90] A question of law can include, for example, whether the AAT denied a person procedural fairness, correctly interpreted or applied the NDIS Act, or applied or identified the correct test. This is also known as a judicial review.

> because the NDIA reviewer had initiated a plan review, resulting in a new plan which attracted internal review rights the applicant had not yet exercised. (sub. 137, p. 12)

This confusion was also noted by EY (2015, p. 70) in its review of the NDIS Act, which recommended that the terminology in the Act be amended to make the distinction between the two types of reviews clearer. The *National Disability Insurance Scheme Amendment (Quality and Safeguards Commission and Other Measures) Bill 2017* (Cwlth), which is currently being considered by the Senate Community Affairs Legislation Committee, if passed, would rename plan reviews 'plan reassessments'.

Second, there are concerns about the adequacy of information provided about review options. Down Syndrome Australia (sub. 121, p. 15) said 'it appears that people are not well enough informed about their rights to ask for an internal review within the timeframe'. Scope Australia argued the process is not clear and that the amount of information provided is insufficient:

> … the process for resolving disputes or disagreements is not clear. The Agency rarely provides a contact name for appeals or provides a process by which participants can escalate their concerns. There is only one email address where the information and requests for review can be lodged. This is not customer friendly nor does it encourage participants to best advocate for their rights. (sub. 72, p. 19)

Similarly, Brain Injury SA commented:

> … the information provided to participants about review is unclear and inadequate. There is minimal information about the process and no information about how or where participants can get help with a review. Brain Injury SA delivers presentations to client communities about the support it can provide to participants wanting a review of an NDIA decision and further appeal rights and support. However, NDIA should provide this sort of information to all participants and be consistent about this approach.
>
> Further, Brain Injury SA has received anecdotal evidence from parents and guardians that NDIA has not been informing participants of their right to an internal review or external merits review through the AAT. (sub. 116, p. 10)

Legal Aid NSW also said:

> We have also observed that the right of participants to internal review is not adequately publicised. For instance, in our experience it can be difficult to find information about internal reviews and appeals to the AAT on the NDIA website. It is important that participants are aware of these review and appeal rights so that they can exercise them when necessary. (sub. PP245, p. 9)

Third, study participants expressed frustration about both the overall length and variability of time that reviews take. For example, Brain Injury SA (sub. 116, p. 6) said 'reviews can take between 1 and 8 months'. Others also commented on the delays.

> If people are not satisfied with their plan, they can apply for an internal review of a decision, and if necessary escalate this to the Administrative Appeals Tribunal. However, VCOSS members

> report this process can be confusing and time-consuming, taking months to resolve. (VCOSS, sub. 176, p. 12)
>
> The review process itself is complex and bureaucratic and we have heard of cases where it can take up to 18 months to be completed. Participants who are implementing their second plan are sometimes still waiting for the review of their first plan to be finalized. (Leadership Plus, sub. 128, p. 2)
>
> Although operational guidelines suggest NDIA has 14 days to decide to review a plan, Anglicare Tasmania have examples of cases where reviews have not been resolved for up to seven months. In all cases we have been involved with, timeframes have been very lengthy and involved a huge amount of follow up from families or workers. (Anglicare Tasmania, sub. 145, p. 33)
>
> We are concerned in particular about the length of time that it takes for the NDIA to conduct an internal review. We have clients who have waited five months for an internal review of a 12 month plan. (Legal Aid NSW, sub. PP245, p. 14)

Governments and the NDIA are working to address concerns about review processes. COAG has agreed to implement the recommendation from EY's review of the NDIS Act to review the terminology in the Act to make the distinction between the types of reviews clearer, and to amend the legislation to provide more guidance on the rights of scheme participants to request a review of their plan (COAG 2016, pp. 4–5). The NDIA (sub. 161, p. 94) also said it is working to improve its review processes, including working with the Commonwealth Ombudsman to develop service and process improvements.

It is important that the NDIA continues to improve the transparency, clarity and adequacy of the information it provides about reviews and on the timeliness of its reviews.

Are review processes affecting scheme costs?

Review processes can affect scheme costs in two ways.

- Internal reviews can affect the amount of supports provided or the number of people eligible for the scheme, and thereby affect scheme costs.
- Decisions resulting from external review processes will clarify the eligibility requirements and reasonable and necessary supports, which can impact scheme costs.

In addition, poor planning processes can lead to an increase in the number of reviews being requested (chapter 5). This can be costly for the NDIA and scheme participants, and can divert resources away from other, more valuable activities.

However, while review processes can increase scheme costs, they can also provide benefits when they lead to the reversal of an incorrect decision. Therefore, it does not necessarily follow that reviews that increase scheme costs will also negatively impact financial sustainability and scheme outcomes — they could result in a net benefit.

Some study participants said that a high number of unscheduled plan reviews are being undertaken for certain types of disability. For example, MND Australia stated:

> From June 2016 until January 2017 100% of all Plans for people with MND in NSW and the ACT required review. (sub. 45, p. 7)

The NDIA (2017y, p. 29) reported that, in 2016-17, it conducted 37 020 plan reviews that lasted for 30 days or more. Of these, about 15 per cent were unscheduled. The outcomes of these reviews were not reported, making it difficult to determine whether reviews are increasing costs through changes to plans. That said, the large number of unscheduled plan reviews in a year is a large direct cost itself, and suggests significant scope to improve processes and, therefore, reduce the resources the NDIA dedicates to unscheduled plan reviews.

For internal reviews of decisions, the most recent publicly available data are included in the NDIA's June 2016 quarterly report to the DRC (NDIA 2016p, p. 46). At the end of June 2016, the NDIA had conducted 772 reviews of decisions. Of these:

- 262 related to access decisions and 510 to plan decisions
- about 66 per cent of completed reviews where an outcome was recorded (384 reviews) resulted in the original decision being overturned.

While there is data on the number of internal reviews of decisions and their type, there is no publicly available data on the impact that internal reviews of decisions have had on scheme costs, such as whether they have led to more participants entering the scheme or additional supports included in plans.

There is some publicly available data on external reviews. As at 30 June 2017, there had been 268 external appeals to the AAT, up from 161 as at 31 March 2017 (NDIA 2017y, p. 29). Of the 130 appeals that were resolved by 30 June 2017, 58 per cent confirmed the NDIA's decision, 41 per cent did not confirm the NDIA's decision and 1 per cent were pending. As with the internal reviews of decisions, while participants have successfully appealed many external reviews, it is not clear whether this has led to increased scheme costs.

Two decisions by the AAT were appealed to the Federal Court. The first case, *Mulligan v National Disability Insurance Agency* [2015] FCA 544, was an appeal of an AAT ruling to affirm the NDIA's decision to decline access to the scheme. The Federal Court set aside the AAT's decision and remitted it for another decision by the AAT (NDIA 2017g).

The second case, *McGarrigle v National Disability Insurance Agency* [2017] FCA 308, was an appeal of an AAT decision to affirm the NDIA's decision to partially fund transport to access daily activities (chapter 5). The Federal Court set aside the AAT decision and remitted it for another decision by the AAT. The NDIA appealed this decision (*National Disability Insurance Agency v McGarrigle* [2017] FCAFC 132), but this appeal was dismissed on 21 August 2017.

There is the potential for external review processes to significantly increase costs in the future by expanding eligibility requirements and the scope of supports provided. As the NDIA said:

> Decisions by the AAT (and/or an appeal to the Federal Court) have the potential to vastly increase the scope of both access and reasonable and necessary supports and must be adhered to while in effect, even if the NDIA challenges the decision. (sub. 161, p. 49)

That said, scheme participants need to have access to effective external review processes to ensure that participants have access to the scheme where appropriate and are receiving the right level of support, participant outcomes are being fully realised, and there is trust in the scheme. As noted by Carers Australia Victoria:

> Internal and external reviews are a vital quality safeguard for participants and carers, enabling them to test the lawfulness and merits of NDIA decisions affecting them. Importantly, they also promote transparency in NDIA decision-making. (sub. 131, p. 14)

The NDIA has committed to improving review processes. In addition, the Commission has recommended that a process be implemented for allowing minor amendments or adjustments to plans without triggering a full plan review (recommendation 5.1).

More clarity and transparency around the effectiveness of the review processes and their effect on financial sustainability and outcomes is also required. The NDIA should undertake more detailed public performance reporting on review processes (including on the number of reviews, review timeframes, outcomes of reviews, and participant satisfaction with the review process). This will improve:

- clarity and transparency
- the NDIA's incentive to improve processes
- accountability, making it easier for governments, scheme participants and the community to assess the NDIA's performance in this area.

As argued by Legal Aid NSW:

> Reporting requirements in this area may highlight performance … increase accountability, and prompt system and process improvements at the NDIA. (sub. PP245, p. 14)

Study participants strongly supported the NDIA publicly reporting on review processes.[91] For example, Community Mental Health Australia said:

> CMHA also supports the recommendation that the NDIA publicly report on reviews, including the number of reviews, review timeframes, outcomes of reviews and participant satisfaction with

[91] Study participants who supported the NDIA publicly reporting on review processes included: the ABF (sub. PP263); AEIOU Foundation (sub. PP277); AFDO (sub. PP325); Amaze (sub. PP281); Bruce Bonyhady (sub. PP333); CSSA (sub. PP278); CYDA (sub. PP358); Legal Aid NSW (sub. PP245); Macular Disease Foundation Australia (sub. PP243); Mental Health Australia (sub. PP321); MIFA (sub. PP338); Name withheld (sub. PP237); NDS (sub. PP295); PWSAA (sub. PP228); Queensland Government (sub. PP345); Summer Foundation (sub. PP293); Tasmanian Government (sub. PP247); The Benevolent

> reviews. This has been an issue CMHA has raised significant concerns with … the number of full reviews being triggered and the time being taken for these reviews. CMHA has also raised the need for … indicators other than the number of people receiving plans, including those noted as being suggested by the Commission. (sub. PP270, p. 14)

The NDIA, in its submission to the position paper, said it is working to improve its reporting on reviews:

> The NDIA agrees that it can improve its reporting in this area and has already made progress towards better availability and reporting of the number of unexpected plan reviews. This is being further addressed through the work that is currently underway on improving participant and provider pathways … (sub. PP327, pp. 58–9).

RECOMMENDATION 11.5

The National Disability Insurance Agency should publicly report on the number of unscheduled plan reviews and reviews of decisions, review timeframes, outcomes of reviews and stakeholder satisfaction with the review process.

11.7 Regulation and quality assurance

Regulation and quality assurance arrangements are important for ensuring the quality of the scheme and good outcomes for scheme participants. Currently, the Australian, State and Territory Governments are responsible for regulation and quality assurance in their jurisdictions, and for the programs they fund (Bilateral agreements for the Transition to a National Disability Insurance Scheme, sch. F; DSS 2016d, p. 17). The NDIA also undertakes some regulatory-related responsibilities such as setting NDIS prices and detecting fraud (DSS 2016d; chapter 8).

In December 2016, the DRC endorsed the NDIS Quality and Safeguarding Framework (PMC 2017). Under this framework, nationally consistent regulation and quality assurance processes will be implemented from 1 January 2018 (Australian Treasury 2017b, p. 154). The focus of the framework is on helping scheme participants to exercise choice and control, while ensuring appropriate safeguards are in place.

The Australian Government will be responsible for most of the regulatory functions under the framework, including provider registration, the complaints handling system, serious incident notification, restrictive practice oversight,[92] and investigation and enforcement

Society (sub. PP334); VCOSS (sub. PP264); Victorian Government (sub. PP298); and Women with Disabilities Victoria (sub. PP282).

92 Restrictive practices are 'any intervention that has the effect of restricting the rights or freedom of movement of a person with disability, with the primary purpose of protecting the person or others from harm. They include the use of seclusion, as well as chemical, mechanical and physical restraint' (DSS 2016d, p. 66).

(box 11.6). A number of entities will be established to oversee the Australian Government's regulatory functions including the:

- NDIS Complaints Commissioner, who will be responsible for handling complaints, investigating serious incident notifications and investigating potential breaches of the NDIS code of conduct. The Commissioner will refer complaints to the relevant entity where appropriate, including those about provider standards to the NDIS Registrar
- NDIS Registrar, which will be responsible for registering providers, managing the NDIS practice standards and certification scheme, leading the design and broad policy settings for worker screening, monitoring provider compliance, and monitoring, reviewing and reporting on the effectiveness of the market for supports
- Senior Practitioner, who will be responsible for overseeing approved behaviour support practitioners and providers, providing best practice advice, receiving, reviewing and reporting on providers using restrictive practices, and following up on serious incidents that suggest unmet support needs (DSS 2016d, pp. 16–17).

The State and Territory Governments will be responsible for worker screening and for the authorisation of restrictive practices in their jurisdiction (box 11.6).

The Australian Government also announced that it will establish an NDIS Quality and Safeguards Commission to implement the framework and to undertake some of the Australian Government's regulatory functions listed above, including provider registration and regulation, complaints, reportable incidents, and behaviour support practices (Australian Treasury 2017b, p. 154; DSS, sub. 146, pp. 6–7). The *National Disability Insurance Scheme Amendment (Quality and Safeguards Commission and Other Measures) Bill 2017* (Cwlth), which is currently being considered by the Senate Community Affairs Legislation Committee, if passed, will establish the Commission. However, there is still a lot of work to be done in terms of implementation design and roll out of the arrangements (DSS 2016d).

Do current arrangements pose a risk to the scheme?

Developing an NDIS Quality and Safeguarding Framework is an acknowledgment that the current arrangements will not be satisfactory for full scheme. Study participants raised a number of concerns with the current arrangements, including the:

- requirement for providers to register in each jurisdiction in which it will provide services and the different registration requirements across jurisdictions (ARPA, sub. 28, p. 1; Plan Management Partners, sub. 126, p. 13)
- burden of the registration process on providers (AHPA, sub. 37, p. 5; OTA, sub. 15, p. 6; QAI, sub. 115, p. 16)
- third party verification requirements (APS, sub. 19, p. 2; ARPA, sub. 28, p. 1).

Box 11.6 NDIS Quality and Safeguarding Framework

The NDIS Quality and Safeguarding Framework outlines the national approach to regulation and quality assurance for the NDIS. The DRC endorsed the framework in December 2016. The aim of the framework is to 'help empower and support NDIS participants to exercise choice and control, while ensuring appropriate safeguards are in place, and establishes expectations for providers and their staff to deliver high quality supports' (DSS 2017e, p. 1).

The framework embodies a number of principles.

- Measures within the framework are designed to uphold and respect the human rights of people with disability.
- Developmental measures (measures intended to build capacity) are designed to empower and support people with disability to make informed decisions about providers and supports.
- The framework is designed to ensure that people with disability have the same protection, regardless of where they live in Australia.
- The regulatory requirements for workers and providers are tiered to ensure regulation is proportionate to the level of risk associated with the type of support offered and the needs of the participants supported.
- The framework starts from the presumption that all people with disability have the capacity to make decisions and exercise choice and control.
- The framework streamlines requirements so the system is easier for people with disability to navigate, and red tape is reduced for providers.
- The framework is designed to support the development of an efficient and effective market.

The framework includes a range of measures targeted at individuals, the workforce and providers in three domains — developmental, preventative and corrective.

The Australian, State and Territory Governments will share responsibilities under the framework. The Australian Government will be responsible for provider registration, the complaints handling system, serious incident notification, restrictive practice oversight, and investigation and enforcement. State and Territory Governments will be responsible for worker screening and for the authorisation of restrictive practices in their jurisdiction.

The framework also encompasses a range of other functions including:

- advocacy services, which are funded outside of the NDIS
- systems for detecting fraud and related issues associated with the responsibility for paying providers and verifying that supports have been delivered. These will remain the responsibility of the NDIA
- complaints about the NDIA and Local Area Coordinators, which will be addressed through existing measures
- universal complaints and redress mechanisms, including Fair Trading and professional and industry bodies, which will continue to be available to participants
- anti-discrimination and human rights legislation overseen by the Disability Discrimination and Human Rights Commissioners, which will provide additional avenues for raising a complaint.

The Australian Government has committed $209 million to establish the NDIS Quality and Safeguards Commission to implement the framework.

Sources: Australian Treasury (2017b, p. 154); DSS (2016d, 2017e).

The concerns with the current arrangements highlight the need to implement the new arrangements as soon as possible. It is also important that governments working on the new arrangements take into account current arrangements that could be imposing unnecessary regulatory burdens on providers.

The new framework

There is still a lot of work to be done on the implementation and rollout of the new framework. As a result, the Commission is not in a position to provide detailed commentary on the arrangements. It is also difficult to predict in advance what negative outcomes will arise if the arrangements are not sufficiently robust. That said, the underlying principles used to guide the design of the framework, including the focus on proportionality and the level of risk, are appropriate. Consultation on the framework has also been extensive (DSS 2016d).

But even if the high-level framework and the detailed processes are well-designed, it may not be enough to ensure it is effective. The regulator needs to be sufficiently resourced to undertake its functions. In the 2017-18 Australian Government Budget, $209 million over four years was allocated to establish the NDIS Quality and Safeguards Commission (Australian Treasury 2017b, p. 154).

The NDIS Quality and Safeguarding Framework was only endorsed by the DRC at the end of 2016 which means that the timeframe (like other NDIS timeframes) is ambitious. However, it is imperative that this timeframe be met to ensure quality and safety for scheme participants, and to provide clarity and reduce the regulatory burden for providers. Physical Disability Australia (sub. 38, p. 14) said it is important 'the NDIA develops and implements its national quality framework as a matter of some urgency'.

A timely and robust NDIS Quality and Safeguarding Framework is particularly important given the relative vulnerability of people with disability. As noted in the Framework document (DSS 2016d, p. 7), recent inquiries into abuse of people with disability in institutional settings have found that particular people with disability are at increased risk of violence, abuse and neglect. They include women, people with intellectual or cognitive disability, Aboriginal or Torres Strait Islanders and people from culturally and linguistically diverse backgrounds.

It is also important for safeguarding against less reputable providers entering the new market. In this respect, there may be lessons to be learnt from other reforms that have had significant issues, such as the Vocational Education and Training (VET) reforms (HSU, sub. PP316, p. 4) (box 11.7).

It is also essential that there are safeguards in place to ensure that scheme participants do not engage in fraudulent activity. While the incidence of fraud related to self-managed payments in the United Kingdom and some States and Territories is low, prevention, early detection and control strategies are still critical to maintaining the integrity of self-managed payments (NDIS IAC, sub. 149).

Box 11.7 Vocational Education and Training reforms

In 2009, the Australian Government introduced the VET FEE-HELP scheme. The scheme initially provided income-contingent loans to students undertaking VET courses at institutions that had a credit transfer arrangement with a higher education institution. In 2012, the scheme was expanded and became available to students undertaking courses at other VET providers.

The number of approved providers doubled between 2012 and 2014 and the number of students accessing VET FEE-HELP increased almost fivefold between 2012 and 2015. The increase in the number of students was mainly made up of full-fee paying students enrolled in private training providers and accessing the loans.

While there was more choice for students and more people enrolled in VET, the regulations and safeguards put in place were insufficient and significant quality problems arose. For example, there was no requirement on providers to demonstrate that they were delivering high-quality education. There was also a lack of information on the quality of providers available to students, and some private providers engaged in high-pressure marketing tactics.

Many students signed up for courses that they had little prospect of completing, and if they did, were unlikely to improve their employment outcomes due to their poor quality. Students were also left with large loan debts, and the Australian Government incurred a large fiscal liability.

The criteria for education providers are now tighter and in January 2017, the VET FEE-HELP scheme was replaced with the VET Student Loans scheme. This scheme introduced more stringent access requirements on providers, courses and students, increased monitoring of providers and strengthened compliance and payment conditions.

Sources: Birmingham (2016); Department of Education and Training (2017b); PC (2016).

The Australian National Audit Office and NDIA staff expressed concerns that the scheme lacks sufficient safeguards in the area of self-managed participants (ANAO 2017; Mavromaras, Moskos and Mahuteau 2016, p. 59). There are also questions about whether the NDIS Quality and Safeguarding Framework is appropriate for intermediaries (chapter 10).

Given the significant potential for adverse outcomes for participants, regular monitoring and review of regulation and quality assurance arrangements will be essential to ensure that problems are identified and addressed early. The arrangements should also be independently reviewed periodically once the framework is in place and operating long enough for issues to be identified. There will need to be sufficient systemic data collection so that problems can be identified.

RECOMMENDATION 11.6

The *NDIS Quality and Safeguarding Framework* and associated regulatory arrangements should be examined as part of the first five-yearly review into National Disability Insurance Scheme costs in 2023.

11.8 Performance reporting and monitoring

Performance reporting requirements can influence scheme costs by improving transparency and accountability, and providing the NDIA and governments with additional incentive to effectively manage the scheme. It is especially important that governments and the community have sufficient oversight through an effective performance monitoring mechanism given that the NDIS is projected to cost $22 billion at full scheme (chapter 12), and the NDIA's level of independence from day-to-day government control.

What are the performance reporting requirements?

The NDIA is subject to a number of performance reporting and monitoring mechanisms under both the PGPA Act and the NDIS Act, including the:

- Quarterly Report to the DRC
- Scheme Actuary's monitoring and reporting on the financial sustainability of the scheme, mainly through the Annual Financial Sustainability Report
- Annual Report and Corporate Plan.

The Annual Report and Corporate Plan are standard reporting practices for Commonwealth entities. The Quarterly Report and the Annual Financial Sustainability Report are requirements under the NDIS Act. The scope and effectiveness of the Quarterly Report, and the financial sustainability monitoring and reporting are discussed in more detail below.

Quarterly report

The Bilateral Agreements for the transition, agreed to by the Australian, State and Territory Governments, set out the framework for the NDIA's quarterly report (table 11.1).

The NDIA is not yet reporting against all of the performance measures or indicators in the reporting framework, as it has not yet built into its systems the capability to measure some of the indicators. For example, the NDIA is not reporting detailed data on the proportion of participants who attain the goals outlined in their plans, the time between requesting access and receiving support, and the number of participants and other people with disability supported by LACs (NDIA 2016r, 2017y).

Also, only limited baseline (not longitudinal) data are presented for some indicators, such as the proportion of participants, and their families and carers, who report improved economic and social outcomes (NDIA 2016r, 2017y).

As the NDIA is still developing its performance reporting against the integrated framework, it is too early to judge whether the performance reporting will be sufficient to shed light on whether the scheme is meeting its objectives. That said, the Commission has identified some gaps in the framework and the current performance reporting against that framework.

Table 11.1 **NDIA operational performance outcomes, measures and indicators**

Outcome	*Measures*	*Indicators*
1. People with disability lead lives of their choice	1.1. Outcomes for participants and their families	1.1.1. Proportion of participants, and their families and carers who report improved economic and social outcomes (as measured by the NDIS Outcomes Framework)
		1.1.2. Proportion of participants who attain the goals outlined in their plans (as measured by the NDIA's Goal Attainment Scale)
		1.1.3. Participant satisfaction
	1.2. Provision of support in response to assessed need	1.2.1. Number of registered service providers by characteristics and market profile
		1.2.2. Access request to receiving support within different timeframes
2. NDIS is a financially sustainable and insurance-based	2.1. Participant characteristics and their families	2.1.1. Access requests made by outcome
		2.1.2. Eligible participants against bilateral targets, including key characteristics
		2.1.3. Participants with approved plans against bilateral targets
		2.1.4. Trends in plan approvals
		2.1.5. Access request to plan approval within different timeframes
		2.1.6. Ineligible participant numbers and key characteristics
	2.2. Support packages	2.2.1. Committed support
		2.2.2. Actual payments
		2.2.3. Average and median package costs by sub-groups of the population and for all participants compared with the expected averages and medians, including trends
		2.2.4. Details of participants with second plans, including length and value of supports
		2.2.5. Distribution of package costs
	2.3. Projections	2.3.1. Cost of the NDIS in dollar terms and as a percentage of GDP (split by participants aged under 65 years and over 65 years). This measure will include NDIS operating costs
3. Greater community inclusion of people with disability	3.1. Mainstream services	3.1.1. Number of participants accessing mainstream services by service type
	3.2. Local Area Coordination	3.2.1. Number of participants and other people with disability supported by LACs by participant characteristics
		3.2.2. Description of activities undertaken on ILC including dollars spent by regions and activities
	3.3. Information, Linkages and Capacity Building (ILC)	3.3.1. Number of participants and other people with disability supported by ILC activities by participant characteristics
		3.3.2. Description of activities undertaken on ILC including dollars spent by regions and activities.

Sources: Bilateral Agreements for the Transition to a National Disability Insurance Scheme, sch. G.; NDIA (2016r).

There are also limited indicators on mainstream services, Information, Linkages and Capacity Building (ILC) and LACs, and for the indicators that do exist, the NDIA is not yet reporting against some of them (NDIA 2016r, 2017z). Given the importance of understanding the interaction between the NDIS and mainstream services, and the critical role that ILC and LACs play in the scheme (chapters 6 and 10), data on these activities should be an important component of reporting on scheme performance.

There is also not a strong enough focus on quality in the framework, including the quality of plans and review processes (recommendation 11.5). Over time, the NDIA intends to develop its monitoring of, and reporting on, outcomes. Evidence of good outcomes will be evidence of good performance and good plans. However, it could be some time until this reporting is of a sufficient standard. Until then, reporting on quality is needed. Given the problems with the planning process (chapter 5), and the fact that many are exacerbated by the rollout schedule (chapter 2 and section 11.9), the NDIA should begin reporting indicators and measures of quality by June 2018. This could include indicators such as participant satisfaction with their plans and their planning experience, the number of plans completed by phone and face-to-face, and the number and nature of plan reviews.

Many study participants supported the NDIA continuing to develop and expand its performance reporting.[93] For example, the South Australian Government said:

> SA supports the NDIA strengthening its reporting on Scheme outcomes, in particular in relation to plan quality, the timeliness of plan development and review, and LAC and ILC activities. (sub. PP354, p. 12)

The NDIA (sub. PP327, p. 60) said it is already taking steps to develop its reporting in these areas.

The performance reporting framework should be regularly reviewed and refined over time. The current Bilateral Agreements state that the framework is to be reviewed annually (Australian Government and Queensland Government 2015, sch. G, p. 2). Improvements could also be introduced under the next performance reporting framework to be detailed in the Bilateral Agreements for full scheme. The framework should be assessed in terms of both whether additional indicators and data are required, and whether the data collected passes a cost-benefit test.

[93] Study participants who supported the NDIA continuing to develop and expand its performance reporting included: ADACAS (sub. PP260); ABF (sub. PP263); AFDO (sub. PP325); Amaze (sub. PP281); CMHA (sub. PP270); Macular Disease Foundation Australia (sub. PP243); Mental Health Australia (sub. PP321); MIFA (sub. PP338); Name Withheld (sub. PP237); NDS (sub. PP295); NMHC (sub. PP319); OTA (sub. PP285); PWSAA (sub. PP228); Queensland Government (sub. PP345); Richard Madden (sub. PP307); Summer Foundation (sub. PP293); Tandem (sub. PP212); Tasmanian Government (sub. PP247); VCOSS (sub. PP264); and Women with Disabilities Victoria (sub. PP282).

RECOMMENDATION 11.7

The National Disability Insurance Agency (NDIA) should continue to develop and expand the performance reporting against the *Integrated NDIS Performance Reporting Framework*, including on outcomes, and Local Area Coordination and Information, Linkages and Capacity Building activities.

The NDIA should also fill gaps in its performance reporting, including reporting on plan quality (such as participant satisfaction with their plans and their planning experience, plans completed by phone versus face-to-face, and plan reviews). This work should be made a priority. The NDIA should begin reporting on measures and indicators of quality by June 2018.

The *Integrated NDIS Performance Reporting Framework*, and any additional reporting outside this framework included in the Quarterly report to the COAG Disability Reform Council (DRC), should be regularly reviewed by the DRC and refined as needed.

Monitoring and reporting on financial sustainability

Under the NDIS Act, each time an annual report is prepared, the Scheme Actuary is to:

- assess financial sustainability and identify risks to financial sustainability, and any trends in the provision of supports to people with disability
- consider the causes of those risks and trends
- estimate the future expenditure of the NDIS
- prepare a report of that assessment, consideration and estimation
- prepare a summary of that report that includes the estimates of future expenditure (NDIS, sub. 161, p. 115).

The Scheme Actuary prepares an annual financial sustainability report, which includes detailed data and information on the financial sustainability of the scheme. This report is not released publicly, although a summary is included in the NDIA's annual report (NDIS Act, s. 172). The Annual Financial Sustainability Report is also reviewed annually by an actuary independent of the NDIA and the scheme actuary (NDIS Act, s. 180E). As discussed above, performance reporting, and independent and robust review of performance reporting, is important for transparency and accountability and providing incentives to improve performance. As much data and analysis on financial sustainability as possible should be made public.

11.9 The rollout

As discussed in chapter 2, the rollout schedule for bringing participants into the scheme is already falling behind the expected pace, and if the current trend continues, the timetable will not be met. This means that 'full scheme' (the time when everyone eligible to enter the NDIS will be able to do so and have an approved plan) will be delayed beyond 2019-20 — that is, beyond the date anticipated in the Bilateral Agreements.

A refocus is needed, making the timetable even more unrealistic

This report highlights many areas where the participant intake schedule is compromising the NDIA's ability to implement the NDIS as intended. Governments need to move the focus of the rollout away from participant intake towards the quality of plans and participant outcomes. A change in focus was supported by many study participants (for example, Amaze, sub. PP281, p. 5; CSSA, sub. PP278, p. 7; NDS, sub. PP295, p. 10; NDIA, sub. PP327, p. 60; OTA, sub. PP285, p. 9).

There is some evidence that the NDIA is already shifting focus. The NDIA recently reviewed its participant and provider pathways and is currently testing 'options for improved service delivery' (sub. PP327, p. 2). The NDIA's new approach is expected to have a greater focus on outcomes, more active involvement with communities, more face-to-face communications, and improved interaction with providers and disability organisations. The NDIA also plans to make improvements to its call centre, and portal to make the portal easier to navigate (NDIA, pers. comm., 22 May 2017).

The NDIA said it is 'working actively to deliver on the bilateral estimates, while providing participants with a quality experience' (sub. PP327, p. 2) and is:

> … unequivocally committed to delivering a quality experience for participants and providers centred on an outcomes-focused approach. This is the overarching objective of the NDIS, which must guide the NDIA's decision-making and the speed of roll-out, while recognising the undoubted benefits that participants gain from entering the Scheme. (sub. PP327, p. 6)

The latest Statement of Strategic Guidance,[94] issued in March 2017, includes participant and community outcomes as one of the six areas the DRC expects the NDIA Board to focus on.[95] The DRC also notes that it has requested 'additional work on indicators to understand and monitor the experience of participants and providers that include measures of participant satisfaction and the quality of planning' (DRC 2017b, p. 2).

[94] Under section 125 of the NDIS Act, the Minister for Social Services, with agreement from the Australian, State and Territory Governments, may give the NDIA Board a statement setting out strategic guidance for the agency. The Board must have regard to this statement when performing its functions.

[95] The other areas include: building and maintaining stakeholder confidence; identifying strategic risks early and managing risks well; supporting market development; safeguarding the sustainability of the NDIS; and developing a high performing NDIA (DRC 2017b).

Without a refocus away from participant intake, the objectives of the scheme will not be achieved. The rebalancing should be explicitly tied to quality indicators that are publicly reported on (recommendation 11.7), so that the expectations set for the NDIA are clear, and the NDIA is held accountable.

RECOMMENDATION 11.8

The National Disability Insurance Agency should better balance participant intake, the quality of plans and participant outcomes. This rebalancing should be explicitly tied to quality indicators that are publicly reported on (as per recommendation 11.7).

The required rebalancing will make it more difficult to meet the bilateral estimates for the transition. In addition, the Commission has made a number of recommendations in this report aimed at improving the quality of planning and participant outcomes. Implementing the Commission's recommendations and the NDIA's new approach will increase the NDIA's workload over and above the 'businesses as usual' case of bringing new participants into the scheme and reviewing existing plans.

All of the above factors make the existing timetable for participant intake unrealistic, and full scheme will be delayed. The changed timetable must be planned for now.

Study participants' views on the implications of a slowdown

While it is now apparent that a slowdown in the participant intake is inevitable, in the position paper, the Commission sought feedback on the most effective way to operationalise a slowdown and the implications of slowing the timetable. The Commission received strong, but mixed, feedback from study participants on whether a formal slowdown was needed.

Many study participants argued a slowdown was necessary (box 11.8). For example, One Door Mental Health pointed to the extra time it would give the NDIA to implement positive changes and potential participants to apply:

> The implications of [a slowdown] are positive. From a planning perspective, NDIA planners and LACs struggling with capacity … have time to catch up, the NDIA has time to implement positive changes to emerging issues, governments have the opportunity to ensure that alternative supports are in place for those who do not qualify and service providers are given extra time to implement changes and encourage clients to apply. From a participant point of view, a slow-down will result in better quality plans and services. For those who do not qualify for a plan, there will be an extension of time in which they can access alternative supports to replace those that will no longer exist following transition. (sub. PP266, p. 16)

However, many other study participants were opposed to formally slowing down the rollout (box 11.9). For example, the Australian Federation of Disability Organisations said:

> Some in the sector have responded by arguing for a slow down of the roll out and to lengthen the transition period. To AFDO and its members, this would be completely unacceptable. For many

people with disability, the wait has already been too long. For people who have had little or no support for many years, the NDIS cannot come quickly enough. Slowing down the roll out is therefore not an option. (sub. PP325, p. 7)

Box 11.8 Some study participants highlighted the benefits of slowing the rollout …

Australian Psychological Society:

> Given the current issues with the NDIS, the APS is of the view that the ambitious timetable for the rollout presents a risk to consumers, and ultimately to the success and financial sustainability of the scheme. Slowdown would also allow more time for cross-sectorial planning and systems review in relation to the transfer of psychosocial supports for people with mental illness to the NDIS. … the APS has serious concerns about the capacity of the NDIS to provide sufficient, appropriate and effective services for people with a psychosocial disability. A slowdown would enable the necessary planning to take place to ensure consumer needs are appropriately met. (sub. PP229, p. 3)

David Parkin:

> The rollout to new areas needs to be slowed. Get the current system as right as it can be. There are enough participants now … who are actually using the system to understand where the effort needs to be applied. The NDIS has to listen to people and Providers. (sub. 177, p. 10)

Macular Disease Foundation Australia:

> The Foundation supports a slow-down in the NDIS rollout in order to assist the National Disability Insurance Agency in finding a better balance between participant intake, the quality of plans, participant outcomes and financial sustainability. … there are currently issues with the NDIS that have resulted in poor participant outcomes. Priority should be placed on addressing and resolving these issues to improve participant outcomes. Delaying the rollout may be the best option to prevent further uptake of sub-optimal plans, which not only negatively impact participants' lives, but also waste taxpayers' money and erode public trust in the NDIS. (sub. PP243, p. 5)

Royal Australasian College of Physicians:

> The rollout should be slowed as necessary to ensure that each new and existing participant can undergo effective and comprehensive planning, and receive necessary interventions throughout this process. (sub. PP299, p. 2)

JFA Purple Orange:

> Given the current difficulties in scheme design and implementation, especially those brought about by the contents of the bilateral agreements, we think there is merit in NDIS implementation slowing down. This is because we are concerned that the Scheme may develop less helpful features that are out of step with the Scheme's values and which, once 460,000 participants are enrolled will be very hard to change. This crystallisation will profoundly compromise the hoped-for benefits of the NDIS. (sub. PP350, p. 25)

There was also very little appetite from governments to delay the rollout — of the governments that provided submissions in response to the position paper, the only one to support it was the Northern Territory Government (sub. PP359, pp. 6–7). The Victorian Government (sub. PP298, p. 1) said 'there are challenges with the transition that can and should be addressed without the need to delay scheme rollout'. And the Queensland Government said:

> The Queensland Government's bilateral agreement with the Commonwealth provides for Queensland to transition in three years. Queensland does not resile from its commitment,

particularly to transition all its existing clients within the three year timeframe. Queensland would consider any extension to its transition timeframe to be a dis-benefit to Queenslanders given Queensland's transition phasing, funding decisions, contractual arrangements with funded providers and its workforce arrangements. Queensland would also prefer to avoid undue anxiety for existing service users and potential providers, and to avoid continuing to operate duplicate systems past June 2019. (sub. PP345, p. 23)

Box 11.9 … while others highlighted the costs

Name Withheld:

> … I request you recommend limiting as much as possible any slowdown in the rollout of NDIS. Many families have suffered severe hardship under inadequate state disability services and have been waiting patiently for the NDIS over the seven years since your inquiry began the NDIS process. (Name Withheld, sub. PP237, p. 5)

Victorian Advocacy League for Individuals with Disability:

> VALID does not agree that slowing down the roll out is the only response to the current implementation issues. VALID's preferred response would be to identify the issues that require resolution, prioritise their resolution, look at proposed solutions and then decide if [a] slow down is the only way to [an] appropriate resolution and the only way to achieve agreed goals. (sub. PP332, p. 10)

Queenslanders with Disability Network:

> QDN also firmly believes that the full implementation of the scheme needs to be consistent with the original principles and intent of the NDIS and supports actions that deliver on this, however QDN does not support actions to slow down the roll out of the NDIS. QDN does not support actions that compromise the long awaited access to supports that many people with disability have been waiting decades for, particularly in Queensland. (sub. PP335, p. 3)

EACH:

> The consideration of slowing the rollout of the NDIS due to both government and non-government conformance or adaptability to the Scheme should not be seen as a viable option to address these areas of concern. The rollout is based on a progressive schedule across the country, which was informed by evaluation of need and the individual requirements of potential participants. It would be unreasonable to expect potential participants to continue to wait for services purely because 'scheme design' and 'scheme roll out' has not been effectively managed or achieved. (sub. PP276, p. 16)

Richard Madden:

> The vital issue is that all Australians who are eligible have the right to enter the NDIS in accordance with the current rollout schedule. Any delay in the rollout removes entitlement from some who will be forced to wait with no supports or inadequate supports. This is wrong as a matter of social justice. (sub. PP307, p. 5)

The Department of Social Services (sub. PP318, pp. 5–6) argued that a slowdown is not required, but rather, existing flexibility within the current arrangements could ease implementation pressures while preserving the rollout schedules. It raised the examples of:

- South Australia — where the Bilateral Agreement estimates were adjusted to allow more new participants to enter the scheme
- Queensland — where it was agreed that three regions could commence transition earlier than originally planned.

There were a number of concerns raised about a slowdown, by both those who did and did not see the need for a slowdown. The main concern was potential participants waiting longer for NDIS support (Parkinson's Australia, sub. PP232, p. 6; YDAS, sub. PP262, p. 2), which would affect some people with disability more than others, including:

- those with urgent and complex needs (NDS, sub. PP295, p. 10; PWSAA, sub. PP228, p. 8)
- those not currently receiving support, or receiving inadequate support, outside the NDIS (JFA Purple Orange, sub. PP350, p. 25; PWSAA, sub. PP228, p. 8; Richard Madden, sub. PP307, p. 5)
- children (ECIA Victoria/Tasmania, sub. PP301, p. 7; NDS, sub. PP295, p. 10)
- those who turn 65 years while waiting and, unless eligibility criteria change, will not be eligible for the scheme when they otherwise would have been (ABF, sub. PP263, p. 14; BCA, sub. PP351, p. 5; Macular Disease Foundation Australia, sub. PP243, p. 5).

Another concern was that some Australian, State and Territory Government programs are already being withdrawn and a slowdown could leave some potential scheme participants without support at all (Anglicare Australia, sub. PP339, p. 11). The Australian Psychological Society said:

> A slowdown would need to be managed carefully as consumers in several jurisdictions are already experiencing a close down/transfer of all state-funded disability services. This is particularly the case in NSW, but also in Victoria with regard to the closure of mental health community-based services. A slowdown must not leave consumers without access to services. (sub. PP229, pp. 3–4)

To address these issues, study participants emphasised the importance of continuity of support arrangements (chapter 6) (The Benevolent Society, sub. PP334, p. 3; MIFWA, sub. PP221, p. 5; One Door Mental Health, sub. PP266, p. 16; Legal Aid NSW, sub. PP245, p. 15). For example, Occupational Therapy Australia said:

> … if a decision is made to delay the transition to the NDIS in some areas, slow down the scheme's rollout across the board, or prioritise some participants over others, any such decision must not adversely impact would-be participants. Once again, it falls to state and territory governments — who would presumably be party to any such decision — to ensure they have the necessary supports and services in place for those people put at risk by any changes to the scheduled rollout of the NDIS. (sub. PP285, p. 9)

Others argued that a slowdown could hinder market development (Victorian Government, sub. PP298, p. 1) due to a slowdown in the rate at which suppliers respond and enter the market. The ACT Government, for example, said:

> Proposals to slow the pace of the NDIS rollout to full scheme could further inhibit provider sustainability, and consequently market supply, where access to a regional or national market may enable providers to develop stronger ongoing business models. (sub. PP312, p. 8)

Study participants also discussed the potential impacts on public support for the scheme. On the one hand, Legal Aid NSW (sub. PP245, p. 15) and the Health Services Union (sub. PP316, p. 4) argued that public support could decline if the rollout is *not* slowed. However, the Victorian Government (sub. PP298, p. 8) said 'delaying scheme roll out could also reduce public confidence in the NDIS'.

Study participants agreed that there should not be an across the board slowdown, and instead certain groups should be prioritised, such as those with urgent and complex needs (Activ, sub. PP302, p. 12; Bruce Bonyhady, sub. PP333, p. 5; Inclusion Australia. sub. PP357, p. 26; Quality Living Options Bendigo, sub. PP220, p. 2; Speech Pathology Australia, sub. PP303, p. 10). For example, one study participant said:

> If slowdown must occur it should only be targeted to apply to people with low support needs. People with complex or higher support needs, or needing early intervention, would be at greatest risk from slowdown. I know from experience how desperate some families can feel under inadequate state disability services. Even a delay of one year could precipitate a significant tipping point for some people. A delay in transition to the NDIS may cause a spike in families relinquishing the care of people with high support needs.
>
> Slowdown should not be applied across the board nor to particular geographical areas. (Name Withheld, sub. PP237, pp. 5–6)

It is time to start planning now for a changed timetable

As noted above, a slowdown to the participant intake timetable is inevitable — the reality is that a slowdown is already taking place, and the work needed to better balance participant intake, the quality of plans and participant outcomes will only slow this down further.

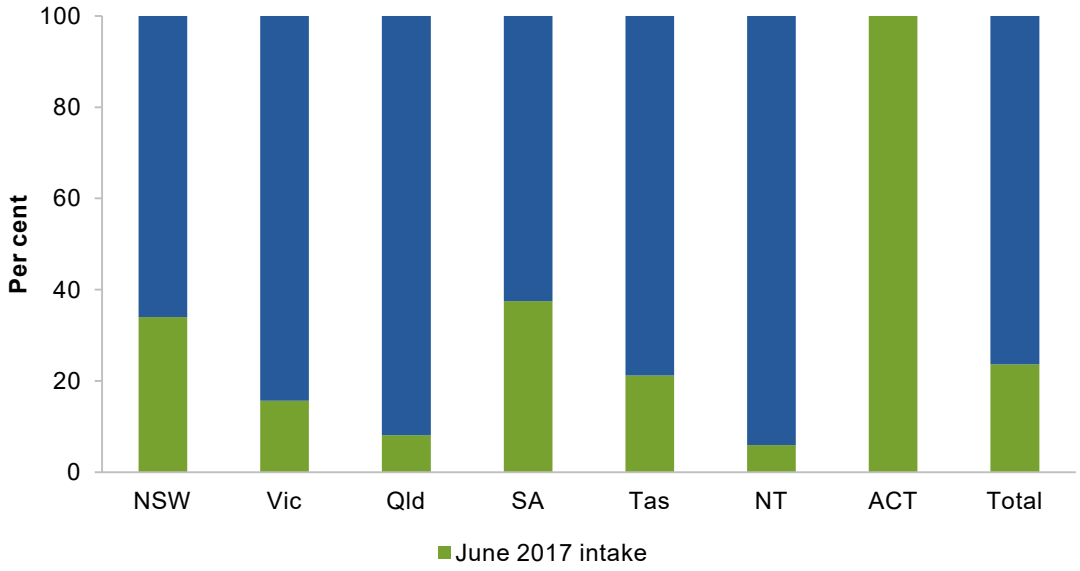
The NDIA and the Australian, State and Territory Governments need to recognise that the current timetable for participant intake will not be met. Action needs to be taken now to implement what is required to ensure the scheme meets its objectives, especially in light of the ramp up in participant numbers expected over the next two years in a number of jurisdictions. Any adjustments to the intake schedules will need to be made on a state-by-state basis, as jurisdictions are at different stages of the rollout (figure 11.2).

Any change in the timetable will have implications for scheme participants, providers, governments and the NDIA, as well as other parts of the scheme, including the impacts on market stewardship, non-NDIS service provision (mainstream services and disability services) and funding arrangements. For example, if the slowdown is not managed well, it could leave some potential scheme participants without adequate support. Governments are currently winding back some services as people with disability transition to the NDIS. Governments will need to alter their withdrawal plans and ensure that adequate continuity of support arrangements are in place.

A slowdown could also have implications for the development of the market and the supply of disability supports. The Commission has made a number of recommendations on market

development and participant readiness (chapters 7–10). But a slowdown could have additional effects on market, provider and participant readiness that will need to be managed.

Figure 11.2 **Scheme intake as a proportion of the total bilateral estimate by state, as at June 2017[a,b]**



[a] Excludes Western Australia. [b] ACT is at full scheme. Its current intake of 6047 participants has exceeded the bilateral estimate of 5075 participants.

Sources: Bilateral Agreements for the Transition to a National Disability Insurance Scheme; NDIA (2017y).

The way that funding arrangements are tied to participant phasing schedules, and whether changes to the full scheme funding arrangements are required given the slowdown, will also need to be considered.

The NDIA and governments also need to assess whether additional resources are required to implement the scheme successfully. Some study participants raised providing additional resources as another option to help deal with the current problems, and in some cases an alternative to slowing down the rollout.[96] But simply providing more money will not solve many of the immediate problems, as any additional staff will need training and experience, making this untenable as a quick fix.

[96] Study participants who raised the option of providing additional resources included: MIFA (sub. PP338); National Disability and Carers Alliance (sub. PP344); Parkinson's Australia (sub. PP232); Richard Madden (sub. PP307); Summer Foundation (sub. PP293); Victorian Government (sub. PP298); and YPINH (sub. PP326).

Decisions need to be communicated

It is critical that any decision made to change the participant intake schedule, together with any changes made to the scheme in response to this report's recommendations, are clearly and publicly communicated (Mental Health Coalition of South Australia, sub. PP308, p. 6; Vision Australia, sub. PP252, p. 13).

RECOMMENDATION 11.9

The Australian, State and Territory Governments should immediately start planning for a changed timetable for participant intake for the National Disability Insurance Scheme.

In doing so, the Australian, State and Territory Governments should ensure that adequate continuity of support arrangements are in place and assess whether additional resources are required to ensure the scheme meets its objectives. The issue of resourcing disability services under the changed timetable should be dealt with by the Treasurers and Ministers responsible for the disability portfolio in each jurisdiction, at the next COAG Disability Reform Council meeting.

12 NDIS funding arrangements

Key points

- Responsibility for funding the National Disability Insurance Scheme (NDIS) is shared between the Australian, State and Territory Governments. There are different funding arrangements for transition and full scheme.
  - During transition, the Australian, State and Territory Governments each contribute an agreed amount per participant based on the intake of participants in each state and territory. The package cost contributions equate to about a 40-60 split respectively. All cost overruns are to be funded by the Australian Government.
  - In the first year of full scheme, State and Territory Governments will contribute $10.3 billion to the NDIS. This amount will be escalated at 3.5 per cent each year. The Australian Government will fund the remainder (estimated to be $11.1 billion in 2019-20) and will have primary responsibility for cost overruns (covering at least 75 per cent).
- The funding arrangements for the NDIS need to provide funding certainty and allow the scheme to operate in line with insurance principles. This requires: sufficient funding for the National Disability Insurance Agency (NDIA) to take a lifetime approach to participant needs and support requirements; predictable funding that gives people with disability (and their families), and those who may acquire disability, certainty that they will receive reasonable and necessary supports over their lifetime; incentives for the NDIA to efficiently and effectively operate the scheme; and incentives for governments to take a collaborative approach to mainstream interfaces.
- Funds from the first 0.5 percentage point Medicare levy increase for the NDIS are credited to the DisabilityCare Australia Fund (DCAF). The DCAF is an investment account managed by the Future Fund and subject to management fees. State and Territory Governments can receive some funds from this account to put towards their NDIS contributions.
  - The DCAF should not be continued past 2023-24, as it is unlikely to be efficient to hold these funds in an account subject to management fees when 'churn' (from State and Territory Governments withdrawing a substantial proportion of the funds) is high.
  - Money from this Fund should instead be paid into the NDIS Savings Fund when it is established (along with funds from the proposed second 0.5 percentage point Medicare levy increase for the NDIS). The NDIS Savings Fund is ring-fenced within consolidated revenue and not subject to management fees (making it more suitable when churn is high).
- Given the limited and less efficient taxes available to State and Territory Governments (compared to the Australian Government), escalation parameters should be set on the basis of population growth and inflation. This will maintain constant real per capita contributions from State and Territory Governments over time. This means the Australian Government will bear a greater proportion of the total scheme costs over time.
- To give the NDIA greater capacity to operate the NDIS more in line with insurance principles, a commitment should be made now to build a pool of reserves over the medium to long term.

The National Disability Insurance Scheme (NDIS) involves a significant increase in funding provided to people with disability. When the NDIS is fully rolled out in 2019-20, it is expected to cost about $22 billion per year. This is an increase in total government spending on disability supports from $8.4 billion in 2015-16 (or just over 150 per cent) (SCRGSP 2017, p. 15.4).

This chapter examines the NDIS funding arrangements with a focus on reforming full scheme funding arrangements. Section 12.1 looks at how the NDIS is currently funded. Section 12.2 sets out a framework for evaluating funding arrangements. This framework is used to assess the way that funds are currently raised to pay for the NDIS (section 12.3), the setting of escalation parameters (section 12.4), and cost overrun and reserve arrangements (section 12.5).

12.1 How is the NDIS funded?

The complex funding arrangements for the NDIS are set out in a range of intergovernmental agreements between the Australian and State and Territory Governments. These agreements outline, among other things:

- the funding responsibilities of the Australian and State and Territory Governments in transition
- how these arrangements will change at full scheme — although full scheme arrangements are yet to be finalised and are subject to negotiation between the Australian and State and Territory Governments
- the arrangements for ongoing review of the funding agreements.

Transition funding arrangements (2016-17 to 2018-19)

During transition, package costs are shared between the Australian and State and Territory Governments. The Australian Government covers about 40.6 per cent of the 'agreed package costs'[97] for participants under 65 years, and the State and Territory Governments fund the remainder (about 59.4 per cent of the agreed cost) (table 12.1).

The Australian Government pays 100 per cent for non-Indigenous participants aged 65 years and over, and Indigenous participants aged over 50 years, in the scheme. It also funds the Information, Linkages and Capacity Building (ILC) activities and the National Disability Insurance Agency's (NDIA) operating expenses.

All cost overruns in the transition period — including those from average package costs consistently exceeding agreed amounts, or consistently higher than expected numbers of

[97] These agreed package amounts are the midpoint of Commission estimates from 2011. The Australian Government contribution is paid upfront monthly, while State and Territory Government contributions are paid monthly in arrears.

participants — are to be funded by the Australian Government (as per the Heads of Agreement).

Table 12.1 **Agreed average package costs and intake during transition**

	2016-17	*2017-18*	*2018-19*
Agreed average cost per participant ($)	39 667	41 383	43 163
Agreed (capped) participant intake[a]	78 642	123 681	153 443

[a] Excluding Western Australia and those aged over 65 years.

Sources: The Bilateral Agreements between the Australian, State and Territory Governments on the transition to the National Disability Insurance Scheme.

During transition, the NDIA is subject to a jurisdiction-by-jurisdiction cash ceiling equal to three months of agreed annual funding contributions for scheme participants in each state and territory. When the NDIA reaches this ceiling, contributions from the relevant jurisdiction and the Australian Government are reduced to ensure that the ceiling is not exceeded.

The NDIA is also subject to a jurisdiction-by-jurisdiction cash floor equal to the previous month's agreed contribution for that jurisdiction. Once this floor is breached, the Australian Government is expected to make a cash contribution to the Agency to ensure the cash holdings do not go below the nominated floor.

Funding arrangements at full scheme

At full scheme, State and Territory Government contributions to the NDIS are calculated as predetermined fixed dollar amounts, rather than shares of agreed costs for each participant. In 2019-20, State and Territory Governments, excluding Western Australia, will contribute about $9 billion (table 12.2).[98] The Australian Government will contribute the remainder of the budgeted amount. The Australian and New South Wales Governments have agreed to a fixed contribution from New South Wales of $3133 million in 2018-19. The fixed funding contributions of the other states and territories were calculated to equal the per capita contribution of New South Wales (table 12.2) (Australian Government and New South Wales Government 2012, p. 3).

[98] Estimated to be $10.3 billion should agreement with Western Australia be reached (DSS, sub. 146, p. 17).

Table 12.2 **State and Territory Government funding commitments in 2019-20**

State or Territory	*Contribution ($ million)*
NSW[a]	3 243
Vic	2 510
Qld	2 030
SA[a]	748
Tas	232
NT	99
ACT	167
Total[b]	9 029

[a] Not stated directly in the Heads of Agreement. Instead a figure of $3133 million is given for 2018-19, which was escalated at 3.5 per cent for the 2019-20 figure. The same calculation was performed for South Australia based on $723 million for their contribution in 2018-19. [b] The total excludes what Western Australia's contribution would be if it joined the national scheme.

Sources: Heads of Agreement with each State and Territory Government (except Western Australia).

State and Territory Government contributions can include in-kind services. These sometimes take the form of large capital investments made (like large residential centres or group homes) or contracts entered into prior to the NDIS. State and Territory Governments usually retain policy and administrative control over these in-kind services, including any decision to replace them with a financial contribution. Over time, and as these assets age, it is expected that they will be phased out. In-kind services are discussed in more detail in chapter 7.

The Heads of Agreement state that, at full scheme, State and Territory Government contributions will increase by 3.5 per cent per year (subject to the response to the recommendations of this study). These escalation parameters are calculated based on assumed net population growth of 1 per cent per year and the midpoint of the Reserve Bank of Australia's consumer price index medium-term inflation target of 2–3 per cent (Australian Government and New South Wales Government 2012, pp. 2–3).

Over the medium term, scheme costs are expected to increase above long-term inflation and population growth trends due to the impact of people aged over 65 years in the scheme (DSS, sub. 146, p. 17). The cost of the NDIS is expected to increase to just over $32 billion by 2029, with the Australian Government share of funding increasing from 52 per cent in 2019-20 to 56 per cent in 2028-29 (table 12.3).

Table 12.3 **Projections of the funding split over time**

While arrangements for cost overruns at full scheme are still to be finalised, the Heads of Agreement for each State and Territory (excluding Western Australia), note that the Australian Government will:

> … assume 100 per cent of the risk for full scheme … subject to the review [of scheme costs by the Productivity Commission] noting the Commonwealth is committed to always assuming a minimum of 75 per cent of risk … for client support costs … (Australian Government and New South Wales Government 2012, p. 4)

As discussed in chapter 11, Western Australia has opted for a locally administered scheme and has different funding arrangements to the other states and territories (box 12.1).

Sources of NDIS funding

Australian Government funding for the NDIS comes from a number of sources (figure 12.1).

- Funds redirected from previous Australian Government disability service programs to the NDIS (DSS 2016f, p. 2).
- Funds previously provided to State and Territory Governments under the National Disability Agreement and the 2011 National Health Reform Agreement (DSS 2016f, p. 2).
- A 0.5 percentage point increase in the Medicare levy on personal taxable income (estimated to raise about $4 billion per year in 2018-19) which provides funding via the DisabilityCare Australia Fund (DCAF) (box 12.2) (Australian Treasury 2017a, p. 130).
  - A maximum of $9.7 billion over 10 years will be allocated to the States and Territories, with the remainder available to the Australian Government (*DisabilityCare Australia Fund Act 2013* (Cwlth), s. 13).

- Debits from the yet-to-be-established NDIS Savings Fund (box 12.2), which will source funding from:
  - an additional 0.5 percentage point increase in the Medicare levy on taxable income (subject to legislative passage) (estimated to raise about $4 billion per year in 2019-20) (Australian Treasury 2017a, p. 130)
  - underspends and realised savings from the NDIS (through, for example, changes to budget forecasts reflecting cost saving measures by the NDIA)
  - uncommitted funds from the Building Australia Fund and Education Investment Fund (to be legislated)
  - other redirected savings at the discretion of the Australian Government
- consolidated general government revenue.

Box 12.1 Funding arrangements in Western Australia are different

Western Australia has so far opted not to join the national scheme, but rather to have a separate Western Australian National Disability Insurance Scheme (WA NDIS) (chapter 11).

WA NDIS during transition

During the transition period, as in other jurisdictions, the WA Government will contribute about 59.4 per cent of care and support package costs for an agreed number of eligible participants each year.

The Western Australian Government will cover a larger proportion of cost overruns than other State and Territory Governments.

- The Australian Government will bear a maximum of 25 per cent of any cost overruns for the WA NDIS when those overruns are due to a higher than expected number of participants or higher package costs.
- Cost overruns due to any other reasons will be funded by the WA Government.
- If there are lower than expected package costs or participant numbers, the remaining funds will be split according to the contributions of each government.

The WA Government and Australian Government will share equally in the cost of Information, Linkages and Capacity Building grants and Local Area Coordinators in that state. The WA Government will fund the administrative costs of the WA NDIS. And, as in the other states and territories, the Australian Government will fund supports for participants aged over 65 years who choose to remain in the scheme, and Indigenous participants aged over 50 years old.

WA NDIS at full scheme

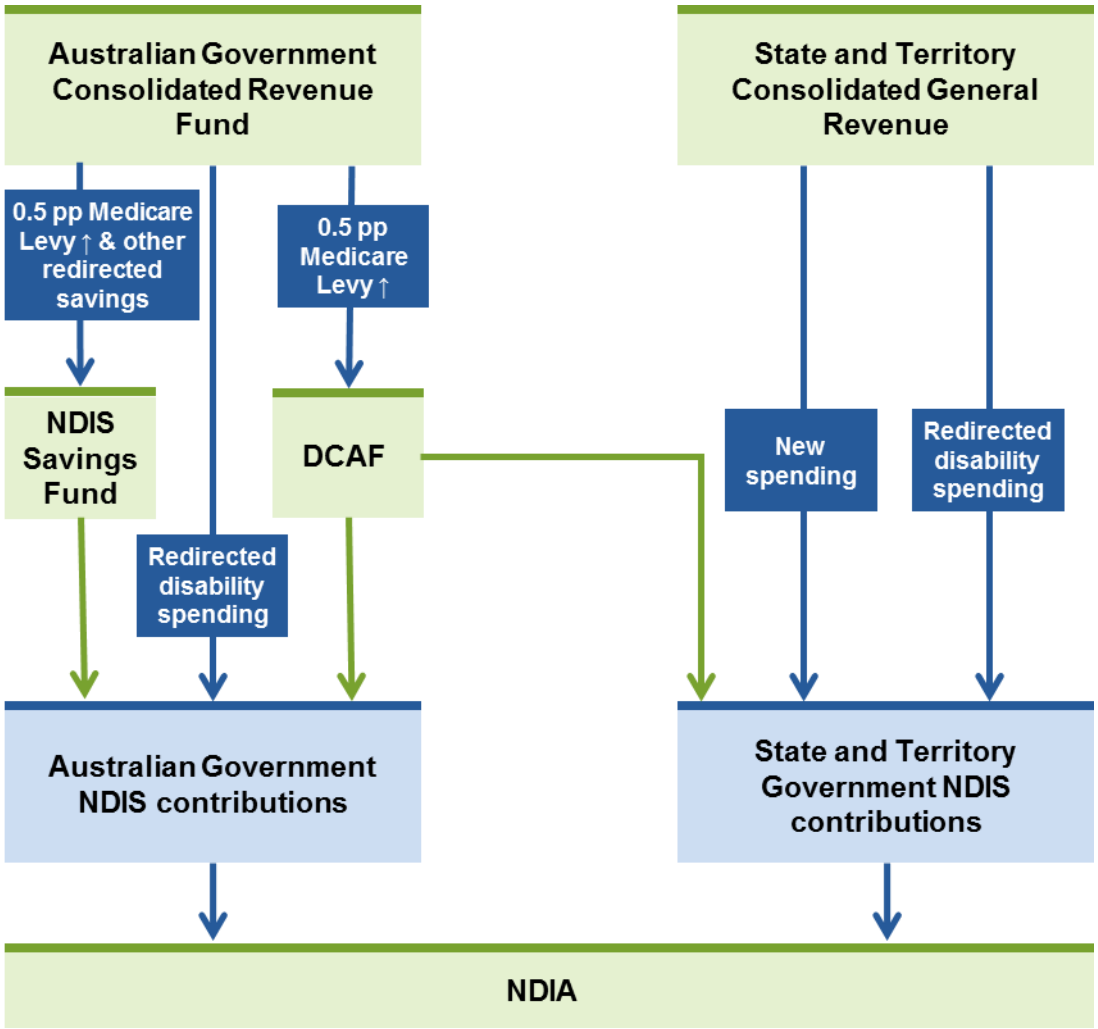
Limited details about the WA NDIS at full scheme are available, but the Bilateral Agreement does state that if the WA Government maintains a separate scheme after transition, the Australian Government will make a fixed per person contribution towards the cost of the scheme in Western Australia and this amount will escalate at 3.5 per cent per year.

Source: Australian and Western Australian Governments (2017, p. 14).

State and Territory Government contributions are funded through (figure 12.1):

- redirected funding previously used for legacy specialist disability services
- funds allocated to the States and Territories from the DCAF — the maximum amount of credits for the States and Territories is $9.7 billion over 10 years (*DisabilityCare Australia Fund Act 2013* (Cwlth), s. 13)
- consolidated State and Territory Government general government revenue.

Figure 12.1 **Proposed NDIS funding model in 2019-20[a,b]**



[a] The NDIS Savings Fund and the increase in the Medicare Levy to be put into the NDIS Savings Fund are subject to legislative passage. The abbreviation 'pp' stands for percentage point. [b] State and Territory Government consolidated general revenue is referred to by different names in different jurisdictions' constitutions.

Sources: Australian Treasury (2017b), Heads of Agreement with each State and Territory Government (except Western Australia).

Box 12.2 The DisabilityCare Australia Fund and the NDIS Savings Fund

The Australian Government increased the Medicare levy by 0.5 percentage points from July 2014-15 to provide funding for the NDIS. The funds from this increase to the Medicare levy are credited to the DisabilityCare Australia Fund (DCAF) to partially reimburse the Australian and State and Territory Governments for their contributions to the NDIS.

As set out in the *DisabilityCare Australia Fund Act 2013* (Cwlth) (DCAF Act), from 2014-15, the maximum amount of credits available for State and Territory Governments from the DCAF is $825 million per year in 2014-15. This amount will increase at 3.5 per cent each year until 2023-24. Over 10 years (ending 2023-24), the maximum amount of credits available for the State and Territory Governments is a total of $9.7 billion between them, to partially reimburse their NDIS contributions.

Governments have not yet negotiated whether the States and Territories will continue to receive these payments after 2023-24, but the operation of the DCAF Act is due to be reviewed before June 2024 (DCAF Act, s. 55).

State and Territory Governments can be paid an amount from DCAF in order to reimburse them for expenditure incurred in relation to the *National Disability Insurance Scheme Act 2013* (Cwlth). Funds not allocated to State and Territory Governments can be used by the Australian Government to reimburse it for expenditure incurred in relation to the National Disability Insurance Scheme Act.

As at 31 March 2017, the DCAF had $6.2 billion in assets.

The Australian Government's 2017-18 Budget includes plans to increase the Medicare levy by (a further) 0.5 percentage points. Revenue generated from this increase will be credited to the yet to be established NDIS Savings Fund, alongside other redirected savings, contributions from NDIS underspends, and recommitting funds from the Building Australia Fund and Education Investment Fund (subject to legislation). The NDIS Savings Fund and the increased Medicare levy are also subject to legislation passing through Parliament. The NDIS Savings Fund will ring-fence — or hypothecate — funding specifically for the NDIS.

Sources: Australian Treasury (2017b, 2017e), Australian Government (2013a), Australian Government and New South Wales Government (2012), the *National Disability Insurance Scheme Act 2013* (Cwlth), the *DisabilityCare Australia Fund Act 2013* (Cwth), and Porter and Cormann (2016)

Most funds are for individualised supports

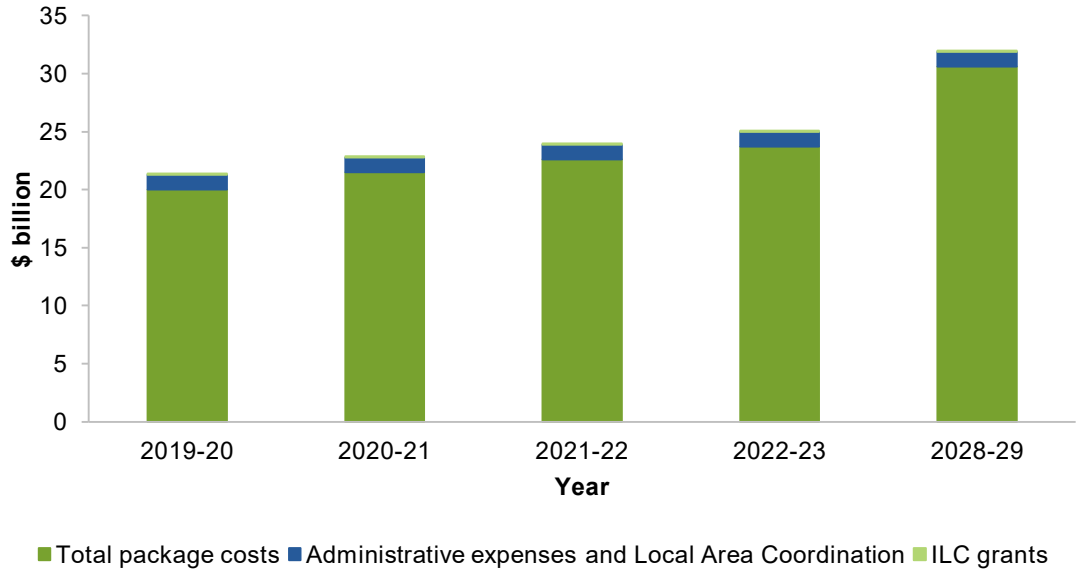
The Australian and State and Territory Governments' funding contributions to the NDIS are used for three categories of expenditure:

- individualised support costs (participant packages) — these are expected to be more than 93 per cent of the NDIS expenditure at full scheme
- operational expenses of the NDIA, including funding for assessment, planning and Local Area Coordination (LAC) — these are expected to account for less than 7 per cent of the budget at full scheme

- the Information, Linkages and Capacity Building (ILC) grants (chapter 6) — these make up the remainder of the budget, at less than 1 per cent at full scheme (table 12.3, figure 12.2).

During transition, the NDIA's operating expenses and ILC are funded by the Australian Government (Australian Treasury 2017d, p. 140). However, at full scheme, the Heads of Agreement indicate that State and Territory Governments may contribute towards ILC and LAC funding.

Figure 12.2 **The allocation of full scheme funding over time**[a]



[a] While most chapters in this report use modelling based on the NDIA's models and data, this chapter uses a funding and costs model provided by the Department of Social Services.

Source: Estimates provided by the DSS (sub. 146, p. 17) based on MYEFO 2016-17 data.

12.2 A framework for evaluating funding arrangements

As an insurance-based scheme, the NDIS should be designed to take a lifetime approach to disability care and support. As discussed in chapter 1, the NDIS is intended to provide assurance to both those with permanent and significant disability, and those who may acquire such disability in the future, that they will receive the support they require for as long as they need it. This is only possible if the funding source is both sufficient and predictable. It should also take a lifetime view of participants' needs by, for instance, seeking early investment and intervention for people in order to maximise their independence and social and economic

participation, and reduce their support requirements in the future. As the Commission's 2011 *Disability Care and Support* report said:

> Whatever its exact form, the financing mechanism must give people with a disability certainty about getting reasonable supports over their lifetime. Moreover, a stable revenue stream is needed to underpin a proper governance arrangement for the NDIS … Accordingly, funding for disability must move away from the uncertainty underlying the annual determination of government budgets for disability support. (PC 2011, p. 33)

The funding arrangements for the NDIS also need to be efficient, transparent and create the right incentives for effective management of the scheme over time.

Funding needs to be sufficient

The consequences of an insufficient source of future funding for the NDIS are considerable. As the Commission said in 2011:

> … the consequences of insufficient future benefits are worse than in many other cases where people seek assurance — uncertainty about the timely replacement of an ageing and increasingly worn-out wheelchair; unmanageable carer pressures; and the fear of inadequate or low quality care without respect or dignity for a partner or a child. Accordingly, while people value the supports they might get today, they value highly the guarantee that they will get adequate supports tomorrow too. This implies that a properly designed NDIS must reflect those preferences. (PC 2011, p. 647)

The objective of the NDIS is to fund the reasonable and necessary supports for people with disability. The scheme was designed to be uncapped in order to achieve this (noting, as discussed in chapter 1, that the ultimate cap is taxpayers' willingness to continue to pay for the scheme). This means that allocated funding needs to be sufficient to meet the cost of reasonable and necessary supports for all scheme participants. Sufficient funding is essential if the chronic underfunding and unmet demand of the previous disability support system is to be avoided.

Sufficient funding also suggests the need for access to extra funds for investments that will reduce the long-term costs of the scheme, and for managing risk in times of volatility and uncertainty.

Funding needs to be predictable

Funding predictability relates to certainty about the ongoing availability of funds. Under the previous disability support system, people with disability were typically uncertain about whether they would get the support they needed over their lifetime:

> People with disabilities and their carers do not get the certainty of lifelong support needed for proper life planning and cannot avoid the extreme anxiety about the adequacy of future funded support when informal care is no longer reasonable or feasible. Current funding for disability comes from two levels of government, which are subject to annual budget cycles — making it

> hard to give people with disabilities any certainty that they will get reasonable care and support over the long run. (PC 2011, p. 6)

A lack of funding certainty imposes costs on people with disability and their carers and families — not just the costs of inadequate care, but also the psychological costs of uncertainty (such as fear of inadequate or low quality care for a partner or child, which can create incentives for exaggerating problems when funds are severely rationed and allocated mainly to crisis support).

A predictable revenue stream is also essential if the NDIA is to take a forward-looking approach to systematically manage demand and price pressures to minimise the long-term costs of the scheme. Making long-term decisions is not feasible when future revenue sources are subject to the unpredictable processes of annual budgets (PC 2011, pp. 647–648). As the Governments of Victoria, Queensland, South Australia and the ACT said:

> To deliver on its objectives of improved social and economic participation, and to ensure equity in application and integrity of the Scheme, the NDIS must be free from the influences of evolving budget pressures. The Scheme is an insurance-based model and participants require confidence that their supports will be provided for as long as required. Decisions about eligibility and reasonable and necessary supports should not be subject to ongoing revisions to align costs with a targeted funding level. (sub. 201, p. 3)

'Predictability' requires binding commitments from governments for funds allocated to the NDIS. This suggests either an agreed amount of revenue or a specific tax dedicated to the NDIS (hypothecation is discussed further below).

Funding arrangements need to create the right incentives

Incentives to effectively and efficiently operate the scheme

Funding arrangements should allow the NDIA to operate the NDIS as an insurance-based scheme (chapter 1). For example, they should provide incentives to make investments that reduce future claims on the scheme, and be able to meet unexpected cost fluctuations.

The arrangements also need to provide incentives for the Agency to operate the scheme efficiently. For example, allowing the NDIA some flexibility to make decisions about the efficient operation of the NDIS may help to minimise costs.

And while the NDIS is funded by an annual appropriation, governments (and taxpayers) will not commit to just any level of funding. As the Commission said in 2011:

> That would provide an excuse for lax cost control and permissive benefit levels by the scheme. Any scheme that did not control premium [funding] pressures would not be sustainable or acceptable to governments and taxpayers. (PC 2011, p. 573)

Incentives for federal-state collaboration

The NDIS is funded in part by redirecting existing disability funding. However, the NDIS is not designed to cover all Australians with disability (chapter 1). The scheme is also designed to operate in conjunction with, not replace, mainstream services.

Ideally, the NDIS would operate as part of a seamless system of mainstream and disability services that takes a lifetime, insurance-based approach. That is, early interventions and well-targeted preventative care would occur in a coordinated way to minimise the overall costs of mainstream and disability services, and maximise the wellbeing of participants in those systems. However, as discussed in chapter 6, these interactions are not always seamless. Gaps in the NDIS can impose costs on mainstream services, and vice versa.

The design of funding arrangements for the NDIS can affect how these interactions play out. Arrangements need to ensure that the amount of funds available for mainstream services and continuity of support obligations is adequate.

Revenue raising needs to be efficient

Government funds for the NDIS can be sourced either from reducing expenditure on other programs, or from an increase in tax revenue (borrowing is not considered a feasible long-term option). Reducing government spending on other programs has its attractions, and it is likely that spending on disability services will have a high net benefit compared to some other government expenditure (PC 2011, p. 643).

Where tax increases are required, tax revenue should be raised in the most efficient way possible.

Transparency is important

Transparent funding arrangements are also important, particularly in the context of holding the NDIA and the Australian, State and Territory Governments accountable for decisions they make. Transparency provides the NDIA and the community with certainty that the NDIS will have access to sufficient revenue in the future by making it more difficult for governments to renege on their funding commitments.

12.3 Raising funds to pay for the NDIS

A shared funding arrangement was agreed

In 2011, the Commission's preferred funding option was for the Australian Government to be the single funder of the NDIS. This option was preferred because it would:

- provide certainty and clear lines of funding responsibility
- avoid the inefficiencies of the Commonwealth-State 'blame game' that afflicts some other shared funding arrangements
- reflect the Australian Government's capacity to raise efficient and sustainable taxes of the magnitude required (PC 2011, pp. 673–8).

This option was subject to State and Territory Governments reducing their taxes to avoid increasing the tax burden on Australians beyond what is necessary to provide additional funding to the NDIS.

The Commission also recommended that the Australian Government direct payments from consolidated revenue into a National Disability Insurance Premium Fund, using a legislated formula that provided stable revenue to meet the actuarially assessed reasonable needs of the NDIS and included funding for adequate reserves (PC 2011, p. 659).

However, the Australian, State and Territory Governments agreed on a pooled funding approach for the NDIS, with contributions from State and Territory Governments agreed in bilateral agreements (chapter 1). And there is no pool of reserves.

Concerns raised about the shared funding arrangements

The shared funding arrangements for the NDIS were raised as a concern in the context of ensuring secure funding for the NDIS. For example, Physical Disabilities Australia, said:

> PDA does not believe the current funding arrangements between the Commonwealth and the States and Territories secure the NDIS' future. Instead, we believe they will threaten the Scheme's viability. Whilst the funding commitments are shared in this way, politicians at all levels will continue to threaten the Scheme's future by claiming the other entities 'aren't paying their fair share' or are 'exploiting [their jurisdiction's] better run economy'. (sub. 38, p. 17)

However, any potential instability from shared federal-state funding is expected to be counteracted by the extraordinary commitment to the success of the NDIS by the State and Territory Governments and the support for a shared funding approach. The Victorian Government, for example, said:

> Victoria supports the continuation of a joint approach to funding the NDIS that involves Commonwealth funding of the scheme, supported by contributions from the states and territories agreed bilaterally. This approach is most likely to ensure a sustainable source of funds and offers the best prospect of delivering NDIS objectives effectively and equitably. (sub. 174, p. 23)

The South Australian Government also said:

> SA remains strongly committed to the NDIS. The issues that SA has raised in response to the Commission's Position Paper are to ensure that the Scheme is successfully implemented and sustainable in the long term for both Commonwealth and state and territory governments. This will provide people with disability the confidence that the NDIS will deliver the benefits for which it was designed. (sub. PP354, p. 15)

Others pointed to the benefits of having State and Territory Governments involved in the scheme. Bruce Bonyhady, for example, said:

> The preferred method of funding in the Productivity Commission Report in 2011 was for the Commonwealth and States to engage in a tax-swap and for the Commonwealth to fully fund the NDIS from general revenues. … However, acceptance of this recommendation would have meant that once the NDIS was fully implemented, the States and territories would not have had any 'skin in the game' and so risked the States not having an interest in the NDIS or engagement with people with disability. This would have been a mistake. … It is clear from the implementation of the NDIS to date that the shared funding model has contributed very positively and significantly to the national governance arrangements and ensured that all governments have maintained their strong commitments to the NDIS. (sub. 100, pp. 11–12)

Hypothecation

Highly volatile and inadequate disability spending was a feature of the previous disability system. In light of this, the Commission in 2011 argued that such a tax could provide greater certainty for funding the NDIS (while noting that economists and Treasury departments, often question the appropriateness of hypothecated taxes):

> A genuinely hypothecated tax can be a way of increasing certainty that government would provide adequate funding in the future … Just identifying the tax as something like a 'National Disability Insurance Premium' would make it hard to eliminate the tax or to divert it to other purposes, since most would accept the legitimacy of dedicated public funding in this area. (PC 2011, p. 659)

The Commission also noted that an alternative to a hypothecated *tax* is hypothecated or 'earmarked' *funding* — rather than specifying the tax base to be hypothecated, the Australian Government diverts a specific funding amount from consolidated revenue into a hypothecated, or earmarked, fund for the NDIS specified in legislation.

Having hypothecated funding, rather than a hypothecated tax, has two main benefits. It:

- does not lock in a particular tax base as the source of revenue for the NDIS
- minimises the need for tax increases by leaving open the option of reducing wasteful or unnecessary expenditure.

But the amount earmarked for the fund would need to include an escalation factor to reflect the anticipated growth in scheme costs over time, rather than an absolute dollar amount which falls relative to NDIS costs over time.

Hypothecation of funds — whether through a hypothecated tax or earmarked fund — can make it more difficult for governments to renege on their commitments by providing an upfront transparent commitment to the way that a pool of money will be used.

Earmarked Medicare levy increases will be used to partially fund the NDIS. There are a number of benefits from hypothecating funds from the Medicare levy for the NDIS, including:

- increasing certainty that funds are available for the NDIS by providing a transparent allocation of funds to be used for a particular purpose
- reducing reliance on State and Territory Governments to raise their own funds (displacing inefficient State and Territory Government taxes with more efficient Australian Government taxes).

As discussed above, the money raised for the NDIS from the first Medicare levy increase is currently credited to the DCAF and the proposed (second) Medicare levy increase will be credited to the proposed NDIS Savings Fund. The DCAF is an investment account managed by the Future Fund and subject to management fees. The NDIS Savings Fund is ring-fenced within consolidated revenue.

While the DCAF is an earmarked fund with transparency around what goes into the fund, it is not without its problems.

- It is subject to management fees (Future Fund Board of Guardians 2016, p. 66). At full scheme, when there is expected to be a lot of 'churn' in the funds under management from the Australian, State and Territory Government withdrawals. These management fees may erode the returns on the fund because being able to make funds readily available for withdrawals means they have to be invested in liquid assets.
- There is little transparency around how the funds are used, and how they are allocated to State and Territory Governments — the DCAF Act does not provide any certainty around when State and Territory Governments can access funds.
- It is a complex arrangement — the Medicare levy increases are to be put into two separate hypothecated funds and other Australian Government contributions come directly from consolidated revenue (not hypothecated).

These features may not be an issue in transition where the funding requirements of the NDIS are lower, and funds are building in the DCAF (reducing the impact of management fees). However, it will be difficult to justify renewing the DCAF arrangements after State and Territory Governments have made withdrawals from the DCAF, because of the increased 'churn' in funds and erosion on the fund returns. For this reason, the Commission is of the view that in 2023-24, when the DCAF arrangements are reviewed, the money raised by the Medicare levy increases intended for the NDIS should instead be put into the NDIS Savings Fund until the Australian Government needs to contribute it to the NDIS.

The benefit of the NDIS Savings Fund is that it is not subject to management fees (unlike the DCAF). And while it is not truly hypothecated (in that it remains part of consolidated

revenue), the transparency of the NDIS Savings Fund makes it a commitment that is difficult for governments to renege on. Other Australian Government contributions could also be put into the NDIS Savings Fund before they are provided to the NDIA to ensure transparency and certainty over funds committed to the NDIS.

If the Australian Government wishes to partially pay for the contributions of the State and Territory Governments — and it might be efficient to do so if it avoids some State and Territory Governments raising additional funds through inefficient state and territory taxes — it should do so by reducing the State and Territory contributions directly. This would be simpler than the DCAF, improve transparency and predictability of the funding arrangements, while also realising the benefits of hypothecation.

State and Territory Governments are likely to continue to provide funds to the NDIA directly, rather than putting them in a pool with Australian Government funds.

RECOMMENDATION 12.1

The DisabilityCare Australia Fund (DCAF) should be discontinued after 2023-24. All the Medicare levy funds hypothecated for the National Disability Insurance Scheme (NDIS) should be put in the proposed NDIS Savings Fund.

The reimbursement arrangements that currently apply under the DCAF should not be continued after 2023-24. If necessary, the impact of such reimbursements should be reflected directly in reduced contributions from the State and Territory Governments.

12.4 Escalation parameters

The NDIS is designed to be a no-fault scheme that covers the entire population, and the funding contributions of governments to the NDIS can be thought of as 'insurance premiums' paid by individuals through their taxes (PC 2011, p. 976). At full scheme, these insurance premiums will be made up of contributions from the Australian Government, and the agreed fixed funding contributions of State and Territory Governments which are escalated at 3.5 per cent per year.

The Heads of Agreement state that the DRC may agree to revise the escalation parameters based on the advice of this study. The Agreements also state that the calculations of per capita funding will be updated every five years to take into account each new Census. The first re-basing is expected to occur from 2023, based on 2021 Census figures.

The terms of reference for this study ask the Commission to look at changes in the agreed escalation parameters.

What are the objectives of the escalation parameters?

There were different views put to the Commission about what the escalation parameters are designed to achieve.

The New South Wales Government, for example, argued that the parameters should remain unchanged:

> … escalation was intended to represent a fair and fixed rate of growth to NSW's contribution. Again, it was not intended to maintain a specified cost share basis, nor meet actual cost or activity growth, nor necessarily maintain a real per capita contribution. Rather it was an agreed growth rate based on a fixed population growth factor (1.0%) and a fixed cost escalation factor (2.5% - equal to the RBA long term inflation target). (sub. PP230, p. 11)

The Tasmanian Government (sub. 247, p. 11) and South Australian Government (sub. PP354, p. 14) were also opposed to any changes to the escalation parameters.

The Victorian Government argued that escalation parameters should be used to maintain their current per capita contributions to the NDIS in real terms:

> Victoria considers it is clear from the wording of the bilateral agreements that the objective of the escalation factor to be applied to state contributions to NDIS costs was to maintain the real value of those contributions over time against growth in population and economy-wide movements in prices and wages.
>
> The states clearly did not agree to meet increased costs arising from a higher than expected participant numbers and/or higher average per person care and support costs. Under the bilateral agreements, 100 per cent of the risk of scheme cost overruns due to such factors was clearly apportioned to the Commonwealth. (sub. PP298, p. 33)

The ACT Government was also open to the parameters being explicitly defined to maintain constant real per capita contributions:

> If there is a departure from the current indexation rate of 3.5 per cent, the ACT suggests that [the] most appropriate alternative would be to set rates on the basis of maintaining a real per capita contribution to the NDIS as this is in line with the design of the scheme and the original agreement. (sub. PP312, p. 13)

Both the Queensland Government and the Victorian Government highlighted the importance of escalation parameters being certain once agreed on:

> The agreed fixed rate provides certainty for states and territories which is important in the context of smaller state budgets. Introduction of variable escalation rates may require states to set aside funds in contingencies in case of higher than expected cost pressures. Such funds could be better utilised for mainstream services or elsewhere in the economy. (Queensland Government, sub. PP345, p. 24)
>
> States' NDIS contributions have been carefully formulated and agreed. The Commonwealth cannot keep shifting the goalposts. (Victorian Government, sub. PP298, p. 33)

Others, such as the DSS, argued that the parameters should be used to increase State and Territory contributions in line with changes in scheme costs:

> … contribution levels should be linked to underlying growth in NDIS costs, including short to medium term financial implications such as expanding market and wage increases for the Social and Community Services sector. In addition, should there be an adverse impact on the pricing of supports, escalation rates should be adjusted to reflect those changes. Escalation rates should therefore be based on an economic projection of cost escalation, with any costs incurred outside of these settings considered in the context of risk sharing arrangements. (sub. PP318, p. 21)

This would require the escalation parameters to reflect the increase in NDIS costs over time. However, existing escalation parameters are unlikely to do this, as NDIS costs are expected to grow at a faster rate than inflation and population (DSS, sub. 146, p. 17). As the NDIA said, it:

> … can observe that wage inflation and the Equal Remuneration Order (ERO) are likely to result in an increase above 3.5 per cent in the short-term, which will result in a skewing of the contributions. Longer-term assumptions should be set considering wage inflation levels, population growth rates, and efficient prices. (sub. 161, p. 114)

If escalation parameters do not reflect cost increases over time, the Australian Government will, over time, bear a higher share of NDIS costs for participants aged under 65 years. The Queensland Government (sub. PP345, p. 24) argued that it was 'reasonable for the Australian Government to gradually assume a greater share of scheme costs over time, considering its greater revenue base', noting that 'this would be a move closer to the funding arrangements originally proposed by the PC in 2011'.

The DSS also suggested that the escalation parameters should be adjusted to take account of the State and Territory Governments' roles and responsibilities, including the extent to which these governments support and fund mainstream services:

> Under first principles, financial contributions from all parties should reflect, where possible, the roles and responsibilities of those parties. The architecture of the NDIS is a unique arrangement in the relationship between the Commonwealth and State governments, with current governance arrangements providing States with a significant and ongoing funding and stewardship role in the NDIS, the effective implementation of the interface of the NDIS with mainstream service systems and stimulating the appropriate workforce to deliver disability services. (sub. PP318, p. 21)

The threshold issue for determining the objective of escalation parameters is whether or not State and Territory Government contributions at full scheme and beyond should keep pace with scheme costs, or maintain existing real per capita contributions.

The argued benefit for State and Territory Government contributions to track scheme costs is to give them some 'skin in the game' to control costs, for example, by giving them additional incentives to agree to cost-saving changes in the rules. However, there are a number of factors that contribute to increasing scheme costs, and most of these are not within the control of State and Territory Governments. It is also unclear how State and Territory

Government decisions could impact many of the cost drivers that would be used to set escalation parameters, including equipment costs and social and community workers' award wages.

But, as noted by some State and Territory Governments, higher escalation parameters could impose a greater cost on taxpayers if State and Territory Governments are required to raise additional funds (because they have access to narrower and less efficient tax bases than the Australian Government) and/or affect the delivery and quality of mainstream services which are necessary for the sustainability of the NDIS (box 12.3). And limited State and Territory Government tax bases mean that guaranteeing the sufficiency of funds may be difficult when State and Territory Governments have to raise significant amounts of additional revenue.

Box 12.3 State and Territory Governments point to their access to less efficient taxes and more limited revenue bases

Victorian Government:

> … increasing the proportion of state funding or the indexation of the state contribution would increase budgetary pressures on states and may affect the delivery, quality and access to mainstream services, which are also necessary for the sustainability of the NDIS.
>
> … Increasing the NDIS' dependence on smaller state budgets that rely on Commonwealth grants and less efficient taxes may result in a backwards step — towards an NDIS that is not fully funded. (sub. PP298, p. 34)

Tasmanian Government:

> State funding contributions to the NDIS during transition and at full scheme are fixed and capped, in recognition of states' need for budget certainty and their limited capacity to raise additional funds. As pointed out in the New South Wales submission to the PC's earlier Issues Paper, state contributions were never intended to cover the costs of the scheme. (sub. PP247, p. 10)

Governments of Victoria, Queensland, South Australia and the ACT:

> Increasing the proportion of state funding or the indexation of the state contribution would add to the revenue burden on states, and may result in a reversion to the previous rationed and waitlisted disability system that was 'underfunded and inefficient', with disability funding once again competing with other state service delivery obligations. It is worth remembering that, in part, it is this concerted attempt to move away from uncertainty of supports that has driven the design of the NDIS to be one that provides participants with confidence about the services that will be available in the future. (sub. 201. p. 3)

Governments have agreed to fixed funding contributions from States and Territories at full scheme, and the Commission recommends keeping those agreed contributions constant on a real per capita basis over time. This requires calculating escalation parameters with reference to inflation and population growth.[99] In broad terms, this should mean that State and Territory Governments are unlikely to need to increase tax rates as inflation and population growth are expected to increase State and Territory Governments' nominal tax revenues.

[99] A broad measure of inflation is more appropriate than services sector inflation, or other measures of cost growth in the disability services sector, given that the objective of escalation parameters is not related to tracking scheme costs.

That said, funding splits are ultimately a reflection of what governments can afford and are prepared to contribute to the NDIS at a given time. Securing agreement is an important part of ensuring that funding is predictable. And making these agreements transparent also helps to prevent governments from reneging on their commitments.

How should the escalation parameters be set?

On the basis that escalation parameters should be set using inflation and population growth, the agreed 3.5 per cent per year would seem to be at the lower end of the likely range for these combined factors using reasonable assumptions. Using the last few years of low inflation as a short-term estimate, the agreed escalation parameters seem a little high, but it is questionable whether this low inflation will continue post 2019-20 (table 12.4). The assumed population growth of 1 per cent per year is significantly below projected and historical rates.

If population growth falls within the bounds of projections from the Australian Bureau of Statistics, and inflation falls within the Reserve Bank of Australia's medium-term target, then an escalation parameter of about 4 per cent per year (approximate midpoint of the 3.3-4.8 per cent range) would seem more appropriate for the period to 2023. This is the period over which the escalation parameters are to be set in the forthcoming bilateral agreements, with a review to be undertaken to reassess the parameters post 2023. This review should revise estimates of population and inflation for the next five-year period.

Table 12.4 **Possible population growth and inflation assumptions**
Different assumptions produce very different parameters (per cent)

	Population growth	*Inflation*	*Implied escalation parameter*[a]
Historical 3 year average annual growth (2014–2016)	1.5	1.6	3.1
Medium-term projections (2020–2023)	1.3–1.8[b]	2–3	3.3–4.8 (midpoint of 4.05)
Long-term projections (post-2050)	0.2–1.3	2–3	2.2–4.3

[a] Sum of population growth and inflation. [b] The Australian Bureau of Statistics projections have three different scenarios to project population growth. The numbers presented here are the range implied by their estimates.

Sources: ABS (*Australian Demographic Statistics, Dec 2016*, Cat. no. 3101.0; *Consumer price index Australia, June 2017*, Cat. no. 6401.0; *Population projections, Australia, 2012 (base) to 2101*, Cat. no. 3222.0).

Should escalation parameters vary by jurisdiction?

A potential issue with setting the escalation parameters on a national basis is that some states and territories can be expected to have faster population growth rates than others or differing

levels of economic growth. This could lead to different effective burdens upon some State and Territory Governments in funding their NDIS contributions. As the Northern Territory Government said:

> … for the NT the equivalent long term annual population growth is estimated at 1.5% and the average forecast CPI over the next five years is estimated at 1.2% per cent. Therefore, the 3.5% that the Territory has agreed to is higher than the growth expected in the NT. (sub. PP358, p. 7)

However, as mentioned above, the base funding allocation between State and Territory Governments will be adjusted to reflect Census population data in 2023.

RECOMMENDATION 12.2

From full scheme, the escalation parameters that determine the growth of State and Territory Government financial contributions to the costs of the National Disability Insurance Scheme should be set on the basis of population growth and inflation. This will maintain constant real per person contributions from the State and Territory Governments.

The Commission's assessment of projections of population and inflation over the period 2019-20 to 2023-24 suggests the escalation parameters should be set at 4 per cent, rather than the currently agreed 3.5 per cent.

The escalation parameters should be reassessed for the period beyond 2023-24, at 5 yearly intervals, based on the most contemporary projections of population and inflation at that time. The funding shares among the States and Territories should also be rebased according to the most contemporary census population data available at that time.

12.5 Funding an insurance-based scheme

When someone enters into an insurance contract, there is generally a guarantee that any valid claim will be honoured by the insurance company. Insurers therefore face significant risks that need to be managed — they need to satisfy all valid claims, but they do not know the actual costs of the claims that they will have to pay in any given year. They can also face very long-term liabilities when claims are granted.

Insurance schemes typically prepare actuarial forward estimates of costs over a period of time and adjust their insurance premiums in line with these estimates.

Insurers carry reserves to set aside money for future claims (box 12.4). These reserves can be used to respond to cost fluctuations, including in instances where those fluctuations may be temporary due to one-off events, or where actions need to be taken to ameliorate emerging cost pressures. This means that insurance premiums only need to be adjusted when it is clear that the cost fluctuations are sustained over the long term.

For public insurance schemes, having a funding buffer gives flexibility to respond to the inevitable annual fluctuations of costs, and so avoid governments needing to inject funds from general revenue or ration supports. A reserve also allows insurers to make upfront investments to reduce scheme costs over the longer term. However, it is important that any funds allocated to a reserve are raised efficiently, and there is transparency around access to and use of the funds.

Box 12.4 Reserves are built up through adjusting premiums

A key principle of insurance is that the liabilities created by claims should be backed by sufficient financial assets. Holding a pool of reserves is the typical way to achieve this.

In private insurance schemes, premiums are set to cover the expected cost of claims (often with a buffer to limit potential losses), administrative costs and a profit margin. For insurance where a claim has a life longer than a year, premium revenue is typically designed to exceed the annual cost of claims so that the insurance company can build up reserves. Provided the reserve assets are as large as the liabilities from outstanding claims, the insurance firm will remain solvent.

This principle is also applied in public insurance schemes, such as Victoria's Transport Accident Commission (TAC), New South Wales' Lifetime Care and Support (LCAS) (now part of icare), the Australian Government's ComCare, and New Zealand's Accident Compensation Corporation (ACC). In these schemes, levies or charges are used to collect enough revenue to cover a proportion of the full (lifetime) cost of current and expected new claims in the following year. The reserves are usually invested in financial markets by professional managers outside of the scheme.

The level of reserves held varies among schemes. For example, LCAS has financial assets approximately one and half times as large as their lifetime claim liabilities, while ComCare's financial assets are only about 80 per cent of its lifetime claim liabilities. These differences reflect a range of factors including differing: policies regarding the size of the asset base, assumptions regarding the size of liabilities and returns on investment, and performance of invested funds.

Reserve ratios of other public insurers in 2016

	Total financial assets	*Participant lifetime cost*	*Ratio*
	$ m	$ m	%
LCAS	4 371	2 939	149
TAC	11 973	13 901	86
ComCare	2 307	2 757	84
ACC[a]	37 859	36 663	103

[a] In New Zealand Dollars.

But unlike other insurance schemes, the NDIA does not set its own premiums. As discussed earlier, it relies on funding contributions by the Australian and State and Territory Governments. And the financial risk associated with satisfying all valid claims for

reasonable and necessary support needs to be managed (without knowing exactly how much that will be in any given year, chapter 1).

Allowing the NDIA to manage discrepancies between actual and estimated costs in any given year is necessary to ensure that the NDIA and the public have confidence in the sufficiency and predictability of funding.

Current NDIS funding arrangements have two in-built mechanisms for managing fluctuations in expenses — cost overrun and cash ceiling arrangements.

Cost overrun arrangements

Under the current funding arrangements, any 'cost overruns' are to be funded by the Australian Government. However, what defines a cost overrun (or the circumstances when it occurs) is not clear. The Heads of Agreement state that:

> The Commonwealth will fund 100 per cent of the risk of any increase in costs associated with higher participant numbers and/or higher average per person care and support costs, and 100 per cent of DisabilityCare Australia's cash flow risk, during the launch and transition period.

Full scheme arrangements for cost overruns are not yet finalised.

Are the current arrangements appropriate?

Good risk management requires that those who are best placed to manage the risk of fluctuations in expenses should have responsibility for doing so.

Under current funding arrangements, the Australian Government has responsibility for the risk of fluctuations — State and Territory Government contributions to the NDIS are fixed contributions (effectively capped), and the Australian Government has committed to contributing the 'remainder'. However, the Bilateral Agreements do not spell out how the remainder is calculated, nor is it publicly stated whether the calculation of 'the remainder' is based on the NDIA's projections of lifetime scheme costs, or adjusted as actual scheme costs evolve.

There are a number of factors that can contribute to cost overruns, including:

- changes to the boundaries of the NDIS (defined in the NDIS Rules and interpreted by the Federal Court)
- inaccurate or outdated actuarial estimates of total scheme costs
- underestimates of the number of participants in bilateral agreements
- higher average package costs than estimated
- how efficiently the NDIA administers the scheme

- cost shifting from State and Territory Governments to the NDIS that increases scheme costs.

Many of these factors are not in the control of the Australian Government.

While no single entity has control over all of these factors, the NDIA has access to the best information about the factors driving fluctuations in expenses, not the Australian Government. If this information was used to calculate increases to funding contributions to the NDIS, and there was a buffer to account for the risk that actual costs might deviate from expected costs, then cost overruns should not occur, or only when cost increases are sudden and difficult to predict.

FINDING 12.1

If funding contributions to the National Disability Insurance Scheme increase in line with projected scheme costs and there is an actuarially-assessed buffer for risk, then cost overruns in a mature scheme will only occur where cost increases are sudden and difficult to predict.

The contributions of the Australian Government should be explicitly tied to the long-term projections of scheme costs based on the provision of reasonable and necessary supports, rather than committing to 'the remainder'. Calculating funding contributions in this way will provide the NDIA with sufficient certainty and flexibility to efficiently manage the costs of the scheme over the long term, rather than relying on injections of cash from the Australian Government under the current cost overrun arrangements. Such arrangements would put it on a much firmer insurance-based footing, and clearly differentiate it from a welfare program.

That is not to say that any government should commit to unconditionally increasing funding for the scheme — as noted in chapter 1, the scheme is only uncapped to the extent that taxpayers are willing to pay for it. Transparency and independent oversight are necessary to provide a check and balance on required scheme funding. Performance reporting is further discussed in chapter 11.

Projections of long-term costs should be generated by the NDIA. This information, along with details of the underlying assumptions, should be shared with the DSS, who would continue to generate the information provided to the Department of Finance in preparing the budget forward estimates. The independent review of the Annual Financial Sustainability Report (which includes the NDIA's projections) required under the NDIS Act should continue (chapter 11).

In the case of a sudden, unforeseeable increase in scheme costs that was not factored into government funding contributions, the Australian Government is the appropriate government to make any required cash injection given its access to a more efficient tax base than State and Territory Governments. As such, the current transition arrangements where

the Australian Government funds 100 per cent of cost overruns should continue for the full scheme.

RECOMMENDATION 12.3

From full scheme, the Australian Government should explicitly factor projected increases in scheme costs, based on the provision of reasonable and necessary supports, into the calculation of its contributions to the National Disability Insurance Scheme.

If cost overruns occur from full scheme, they should be funded by the Australian Government.

Reserve arrangements

Reserves act as a way of increasing funding certainty and providing a buffer for the risk that costs exceed available funds in a given year. As the Commission said in 2011, there should be a long-term link between costs and available funds, with a sufficient buffer provided for risk:

> In effect, the process of managing costs and revenues is like a dance of a pair of ballroom dancers — they are not always in the same position, but the pattern of their movements are orderly and they always remain linked. (PC 2011, p. 647)

In 2011, the Commission recommended the NDIS be structured as a 'pay-as-you-go' scheme and be established with a large enough reserve fund to smooth out fluctuations and reduce uncertainty. The Commission noted that a reserve would act as a buffer against unpredictability, and avoid the Australian Government needing to inject additional funds from general revenue when claim costs were higher than expected in a given year (PC 2011, p. 449).

The Tasmanian Government pointed out that the transition funding arrangements provide the NDIA with a buffer:

> The ability for the NDIA to retain up to three months of reserves was agreed by governments as part of the funding mechanism for transition in recognition of the NDIA's need to have access to a buffer to fund a surge in claims during the rollout. (sub. PP247, p. 11)

As outlined above, during transition, the NDIA can access between one and three months' worth of contributions from package cost underspends. However, any cash reserves above this need to be returned to contributing governments in proportion to their contribution.

Participants generally supported giving the NDIA a pool of reserves

The NDIA supported establishing a reserve, but was cautious about losing access to its current cash buffer:

> Insurance companies and most other existing injury support schemes typically hold significant reserves on their balance sheet. The NDIA notes that any future contingency reserve could only be built from Full Scheme. This is in comparison to the Transition, where States and Territories pay the NDIA in arrears. The appropriate level of any future contingency reserve depends on the specific purposes identified for the reserve (related to operating 'like an insurance scheme').
>
> At the same time, the NDIA notes that it would be undesirable during the Transition to fund the creation of a contingency reserve through removal of the NDIA's current cash buffer because this would reduce operating flexibility, particularly as the NDIA strives to review the appropriateness of the NDIA participant and provider pathways. (sub. PP327, p. 66)

Bruce Bonyhady said:

> Currently, the NDIA has no capacity to deal with unexpected contingencies, other than seek government top-ups, and this is a weakness in the current governance and funding arrangements. (sub. 100, p. 10)

Other participants pointed to the potential benefits from the use of reserves:

> Victoria supports establishing a future contingency reserve to allow the NDIA to manage fluctuations in expenditure and access a level of reserves that better reflect the level of risk it needs to manage. (Victorian Government, sub. PP298, p. 10)
>
> It would seem appropriate that a reserve fund should be established as any enterprise seeks to do where future demands are uncertain. (Quality Living Options Bendigo Inc, sub. PP220, p. 3)

However, others were sceptical of the need for a reserve:

> Such a scheme should be funded like any other government program, through the budget process. Government budget processes are well developed to deal with unexpected expenditure demands, including any necessary decisions to limit future expenditures. (Richard Madden, sub. PP307, p. 8)
>
> Government funding is fungible, and given the NDIA has the financial backing of the Australian, State and Territory Governments, an alternative arrangement should be considered to make funding available for use in a manner consistent with the use of a contingency reserve, but without the need for a large pool of cash to be quarantined for that purpose. (ACT, sub. PP312, p. 14)

There are benefits from establishing a pool of reserves

Providing the NDIA with a pool of reserves has the advantage of providing certainty to participants and providers that the scheme will be enduring. This is an important departure from previous highly uncertain and heavily rationed disability arrangements:

> The need for a stable revenue source also suggests that a funding buffer is required, since there will be annual fluctuations on the cost side. In those periods, the NDIS would need to run down a funding 'buffer' to meet those needs, while it would need to build up the reserve level at other times. (PC 2011, p. 650)

A pool of reserves will also allow the NDIA the funding flexibility to take a long-term approach to participants needs to reduce their support requirements in the long term (including upfront investments to reduce future outlays and ultimately reduce scheme costs). While the NDIA could bring forward its existing allocation of funding to make these investments or manage fluctuations in expenses (either as part of the cost overrun arrangements or seeking additional money from the Australian Government) like any other government expenditure program, these arrangements do not provide the NDIA with certainty over access to those funds, even though this is critical to the application of insurance principles.

The need for a pool of reserves is not negated by the Australian Government being the 'funder of last resort'. Having reserves available provides transparent and tangible evidence of the commitment to fund disability services, now and into the future. It is a bulwark against the vagaries of annual budget cycles, and avoids potential shortfalls and rationing.

It is worth noting that providing the NDIA with a pool of reserves does not mean that the NDIA should be responsible for the day-to-day management and investment of those funds (PC 2011, p. 35). Other public insurance schemes, such as the Transport Accident Commission and NSW Lifetime Care and Support, outsource this function.

Reserves should be gradually built up over time

The NDIA's current cash ceiling arrangements, with access to three months of underspends, does not give the NDIA a means for building up a reserve fund, as there is a cap on accumulations. Other public insurance schemes, such as the TAC and NSW Lifetime Care and Support (now part of icare), gradually built up reserves over time (box 12.5).

The Commission considers contributions to the NDIS should similarly provide enough leeway for the NDIA to manage long-term costs (including making early investments). Insurance schemes typically adjust the premiums that they charge to reflect changes in cost forecasts over a set period of time, and the Commission recommended earlier that the calculation of Australian Government contributions should take into account changes in costs over the long term. Allowing some future funding to be brought forward into current years with reference to these projected long-term costs to create a buffer for risk is consistent with this recommendation, and consistent with the approach of other comparable insurance schemes.

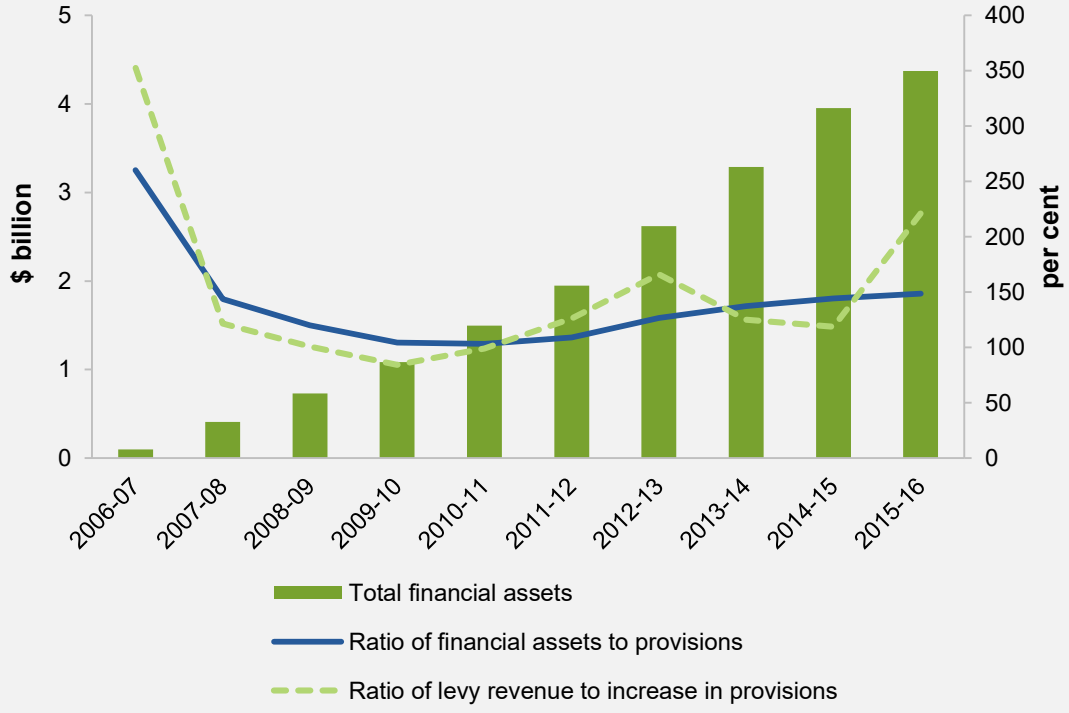
One way this could be achieved would be to create a buffer for risk by including a small margin in the contributions of the Australian Government that allows some future contributions to be brought forward to the current year. In 2011, the Commission recommended that the NDIS be funded by a formula that had a margin over and above yearly expenses to buffer against fluctuations in expenses to create a partial reserve fund (PC 2011, p. 35).

Box 12.5 **NSW Lifetime Care and Support built reserves up gradually**

The NSW Lifetime Care and Support Scheme (now part of icare) was established in 2006 by the NSW Government to provide individuals with no-fault insurance for catastrophic motor vehicle accidents in New South Wales.

NSW Lifetime Care and Support is funded through the Medical Care and Services Levy on Compulsory Third Party insurance which has funded annual claims and also built up a pool of reserves. The reserves held by NSW Lifetime Care and Support were not established by an initial capital injection, but have built up gradually over time through this levy. Reserves (after returns on investment) are now more than sufficient to cover the lifetime cost of all existing and new participants and the scheme's operating expenses in that year, plus a profit and risk margin.

Build-up of Lifetime Care and Support Reserves



Source: icare (2016) and LCAS (2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015).

A gradual accumulation of funds is a more fiscally sustainable way of building up reserves than a large initial capital injection, and this is consistent with the approach used by the TAC and NSW Lifetime Care and Support. Further, when the NDIS is in a steady state, it is likely that entry of participants into the Scheme will be fairly constant. Hence a fairly constant trickle of reserve funds to meet participants' early investment needs is likely to be appropriate for a mature scheme.

While the Commission does not consider that there should be a hard cap on the level of reserves held by the NDIA, a target amount is appropriate. As the Commission recommended in 2011, the level of reserves should be determined by an actuarial and economic determination of optimal reserves (PC 2011, pp. 671–672). There is no urgency

to build substantial reserves now. But there is an imperative for governments to make an immediate commitment to establishing a pool of reserves. It is an essential feature of an insurance-based scheme.

RECOMMENDATION 12.4

Governments should commit now to providing a pool of reserves for the National Disability Insurance Agency. The pool should build up gradually over time, with the target amount based on an actuarial and economic analysis of the optimal level of reserves.

13 Data and evidence

Key points

- The National Disability Insurance Scheme (NDIS) requires good quality data and evidence to inform an insurance based approach to disability support, and to understand any emerging risks to the financial sustainability of the scheme. Providing funding for comprehensive, accessible data is a sound investment when considered in the light of its importance in informing policy for the $22 billion scheme.
- A process of continuous improvement is embedded into the National Disability Insurance Agency's (NDIA) data collection approach — the NDIA's framework for monitoring financial sustainability involves continuous monitoring and evaluation of participant outcomes and costs.
- The NDIA collects data on participants when they access the scheme, when plans are developed, at plan implementation and plan review. At full scheme, there will be data on about 475 000 scheme participants (and progressively data will be collected for many participants over their lifetime).
- A comprehensive data warehouse and reporting capability (including for tracking longitudinal outcomes) are required to support the actuarial and research functions of the NDIA. Currently, the NDIA do not have the required capability to collect all the necessary data for the scheme. It is important that capability constraints are effectively addressed and the data warehouse capability developed.
- Ideally the NDIS will fit seamlessly within the landscape of services delivered to all people with disability. Data on services provided to people with disability outside the NDIS will be critical for assessing the performance of the scheme, and for identifying potential service gaps.
- Data collected on services provided outside the NDIS are being scaled back at a time when it is most needed. Governments should commit to the ongoing funding of the Survey of Disability, Ageing and Carers, and an expanded Disability Services National Minimum Data Set to include supports to people with disability not in the NDIS.
- Linking NDIS data with other datasets has the potential to provide a more complete picture on people with disability. The use of 'flags' in data collections for NDIS participants and people with disability can help shed light on differences in how people with disability interact with mainstream services and on outcomes. Better linking of datasets can also improve data collection efficiency.
- It is imperative that wider access to the NDIA's longitudinal database is permitted to allow research to be undertaken (with appropriate safeguards and policies to protect privacy).
- The NDIA should make public the details of the data it holds, and consult with stakeholders on how best to provide access to this data.

The National Disability Insurance Scheme (NDIS) requires good quality data and evidence to inform an insurance based approach to disability support, and to understand emerging risks to the financial sustainability of the scheme. Providing funding for comprehensive, accessible data is a sound investment when considered in the light of its importance in informing policy for the $22 billion NDIS.

This chapter examines the role of data for the NDIS (section 13.1), and the importance of data collection in relation to disability services provided outside the NDIS (section 13.2). Sections 13.3 and 13.4 look at linking and sharing data and section 13.5 discusses best practice principles for handling data and proposes a way forward.

13.1 The pivotal role of data for the NDIS

Data and evidence are pivotal to any insurance scheme. The financial performance of insurers depends on the quality of their data and how well the data are integrated into day-to-day decision making.

Like other insurance schemes, the NDIS relies on data and analysis systems to monitor (in real time) cost pressures and identify and manage emerging risks to the financial sustainability of the scheme.

Practices of continuous improvement are integrated into the NDIS (figure 13.1). As the NDIA said:

> The first insurance principle is about embedding practices of continuous improvement into the NDIS. It involves comparing actuarial forecasts of cost and participant outcomes with the actual experience of individuals, in order to maximise lifetime opportunities and minimise the lifetime costs of those who are insured. (sub. 161, p. 24)

The NDIS Prudential governance framework also states that:

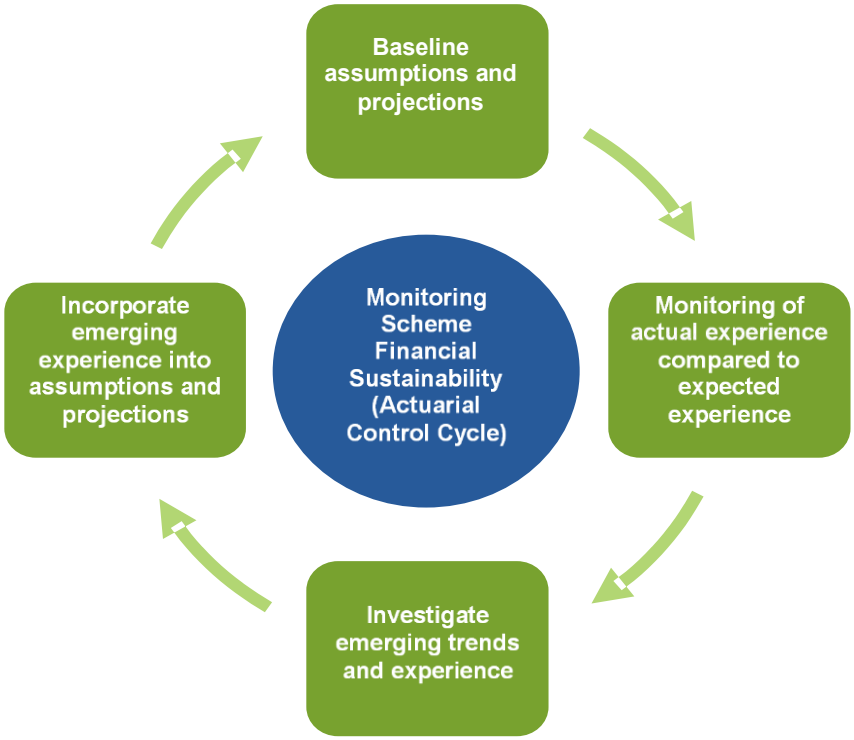
> The NDIA will have access to a person centred longitudinal database of all NDIS participants, and where necessary supplementary linked data sources, containing sufficient information to:
>
> - provide the NDIA operational staff with real-time comprehensive data and information on participant utilisation, cost of supports and participants outcomes; and
> - provide the necessary information for the Scheme Actuary to develop reports on quarterly experience, future expenditure and financial sustainability (NDIA 2016h, p. 23).

The NDIA's framework for monitoring financial sustainability (used by the Scheme Actuaries) includes an evaluation of participant outcomes and costs and involves collecting data on:

- the number of participants
- the characteristics of participants (to allow analysis of reference groups)
- the outcomes of participants

- the cost of supports of participants (sub. 161, p. 115).

Figure 13.1 **Financial sustainability monitoring framework**
Continuous monitoring and evaluation of outcomes and costs



Source: NDIA (sub. 161, p. 115).

This information is used by the NDIA to implement any changes that might be required to ensure that the scheme remains financially sustainable (figure 13.1). And, as discussed in chapter 11, it is also used for the NDIA performance reporting requirements, including the quarterly monitoring report and the Annual Financial Sustainability Report.

The NDIA collects data on participants when they access the scheme, when plans are developed, at plan implementation and plan review (figure 13.2). At full scheme, there will be data on about 475 000 scheme participants, including data on outcomes across eight key domains:

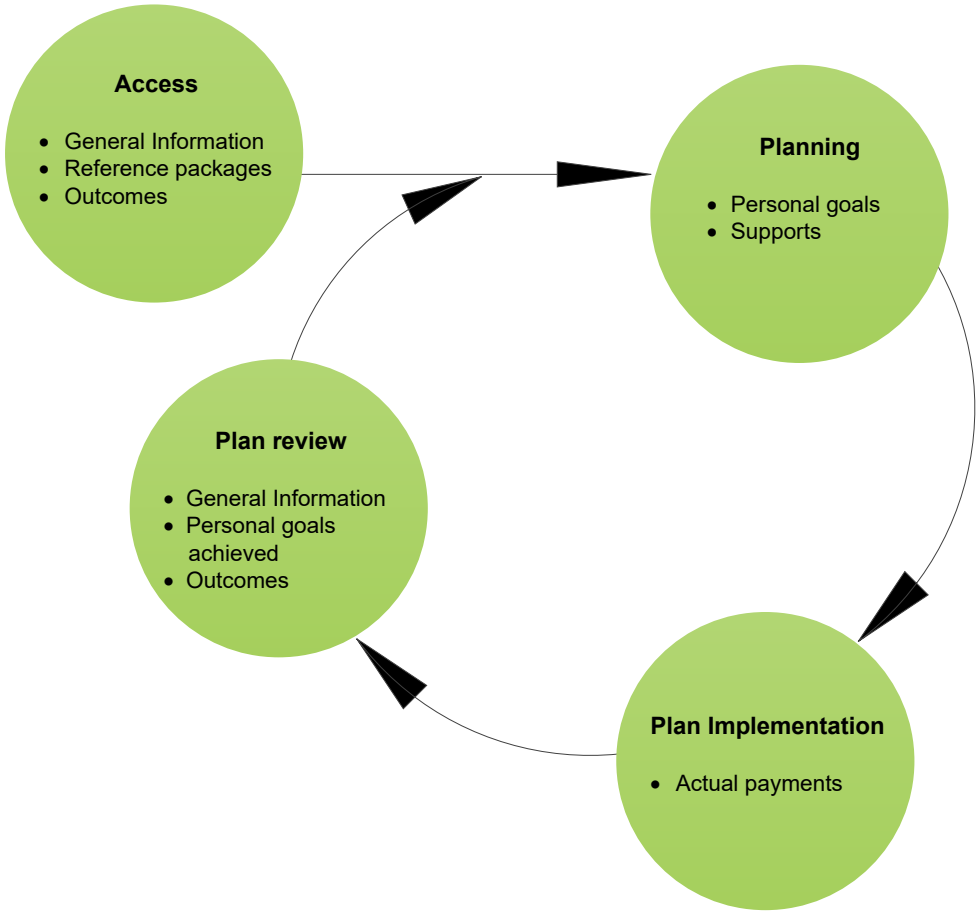
- choice and control
- daily activities
- relationships
- home
- health and wellbeing

- lifelong learning
- work
- social, community and civic participation (chapter 3, box 3.1).

A key advantage of a longitudinal database is that it can measure change over time. As most participants will receive individualised packages under the scheme over their lifetime, with time, NDIS data will be available for participants over their lifetime. Commenting on the NDIA's longitudinal dataset to support actuarial analysis of the scheme, Bruce Bonyhady said 'the NDIA is building the most comprehensive population-based longitudinal database on disability in the world' (sub. 100, p. 15).

The NDIS longitudinal dataset will take some time to build, but the NDIA are already using data from the trials and transition to track scheme performance (including participant outcomes) and identify emerging cost pressures to the scheme (chapter 2).

Figure 13.2 **Collecting data on participants**



Source: Based on NDIA (2016b, p. 10).

The critical role of data for the NDIS and the actuarial approach for measuring performance was commented on by a number of study participants. The Northern Territory Government, for example, said:

> Performance monitoring and reporting arrangements have the potential to affect the delivery and financial sustainability of the NDIS. Without robust and timely data (both qualitative and quantitative) the transition and outcomes of the Scheme are at risk. (sub. 205, p. 3)

The New South Wales Government said:

> A robust actuarial approach is required to measure scheme performance, including against agreed indicators and broader factors impacting on scheme outcomes. This will provide longitudinal data to refine reference packages as the scheme matures, and support market facilitation in areas where the supply of supports is limited. (sub. 60, p. 10)

And the Australian Institute of Health and Welfare commented on the potential benefits of the NDIS dataset:

> The establishment of the NDIS brings with it the opportunity to capture more comprehensive data, as well as opportunities to enhance data access in line with the Australian Government's public data agenda. Indeed, for the first time in Australia, data on scheme participants will enable a joined-up view of their disability support needs, the services provided in response to those needs, and the social and economic outcomes of those services. (sub. PP349, p. 5)

Building the evidence about what works and why

Building the evidence base about what works and does not work for different groups (or what yields the best outcomes at the lowest cost) is also critical. This information is important not only for the NDIA (to maximise the benefits and minimise the costs of the scheme), but also for people with disability and their carers and providers of disability services. Mind Australia, for example, said:

> At present, a lack of evidence on what works for whom and in what circumstances is lacking and needs to be developed as part of ensuring that planners can assist people to make purchasing decisions that are in their best interests, and which deliver sustainable outcomes desired by the scheme. (sub. 144, p. 8)

The Centre of Research Excellence in Disability Health also said:

> As the National Disability Insurance Scheme moves to full rollout there will be a comprehensive data base on all components of the scheme and user experiences such as service provision, service use, costs, and social, economic and health outcomes of the people with disabilities. It is critical to use this data to evaluate the outcomes of the Scheme and to identify how it can be improved.
>
> Importantly the NDIA data will be longitudinal and will enable the tracking of outcomes within and between individuals over time. (sub. 69, p. 2)

And the Victorian Government pointed to the importance of linking support plans with outcomes:

> Ensuring the sustainability of scheme costs will not only require careful management of access and scheme boundaries, consistent with the core NDIS objectives, but will also depend critically on the effectiveness of NDIA planning and assessment processes in delivering an insurance-based approach to investment to support people with disabilities.
>
> This requires an evidence base derived from longitudinal data that links individual support plans with client outcomes, and this will take time. (sub. 174, p. 4)

Facilitating innovation and undertaking research (such as controlled experiments) can help identify low cost choices among effective disability supports and interventions and shed light on what processes used by the NDIS are most effective (for example, planning approaches). One of the NDIA's insurance principles is investment in research and innovation — that is, to encourage and build the capacity and capability for innovation, outcomes analysis and evidence-based decisions on early interventions (chapter 1, box 1.1). The NDIA said it:

> … invests in research and innovation to support the long-term approach of the insurance approach. Investment in research is focused on supporting the NDIS make evidence-based decisions on early interventions to maximise lifetime value for participants. (sub. 161, p. 25)

The NDIA is currently focusing on identifying key transition points for specific cohorts and designing early interventions. The areas of focus include:

- the Early Childhood Early Intervention
- School Leaver Employment Supports
- an intervention initiative for the 7–14 years cohort (sub. 161, pp. 25–6).

The NDIA has also commissioned research on hearing, Autism Spectrum Disorder interventions, Foetal Alcohol Spectrum Disorder interventions and Assistance Animals as supports for people with disability (sub. 161, p. 26).

But it is still very early days in terms of building the evidence base. As the Department of Social Services (DSS) said:

> The insurance-basis of the NDIS is still maturing and it is too early to assess its long-term effectiveness in improving wellbeing for people with disabilities and managing costs in the Scheme. The evidence-base for lifetime cost estimation is increasing, and will need investment to be sufficiently robust and broad-based to inform individualised supports. The impact and use of technology by participants is also important to consider and incorporate into the evidence-base. While this will take time, the early and effective implementation of insurance-based principles is necessary to avoid unsustainable cost escalation. (sub. 146, p. 25)

Data gaps within the NDIS data collection

In this report, the Commission has identified a number of data gaps within the NDIS collection and made recommendations accordingly. For example, the NDIA does not collect

information on which participants have employment restrictions (chapter 3) or on which activity domains are relevant for individuals when they enter the scheme (chapter 4). The evidence base on the effectiveness of Information, Linkages and Capacity Building activities is also very thin (chapter 6), and there are gaps in the NDIA's performance reporting (chapter 11).

While more data would provide the benefit of a stronger evidence base, the benefit must be weighed against the costs of gathering the extra data.

- The collection of data imposes a burden on participants, providers and NDIA staff. A balance needs to be struck between the impost on people (and the possibility of a decline in data quality if too much is asked) and the potential benefit from the additional data.
- There are costs associated with establishing and supporting adequate information, communication and technology (ICT) and administrative systems.
- While the cost of storing data has fallen substantially in recent years, there is a cost to modifying programs to enable information to be recorded.

When deciding what data to collect, the scope to leverage off other data collections to lower the impost on participants, providers and NDIA staff must also be taken into account.

Does the NDIA have the capability to collect the required data?

The NDIS is a new scheme, and the capability to collect data is evolving. The NDIA identified the collection of data on participants as a 'major challenge'.

> Another major challenge is ensuring appropriate collection and access to quality data on participant needs, supports and outcomes. A comprehensive data warehouse and reporting capability, including for tracking longitudinal outcomes is required. Currently, the NDIA does not have the required capability and continued development in this area is critical. (sub. 161, p. 118)

Some examples of problems with the ICT system for the NDIS include that it:

- cannot transfer free text to the data warehouse, so details on individual circumstances that could impact on reasonable and necessary supports are not readily available
- does not transfer all required information on participant assessments to the data warehouse
  - for example, when assessing participants' level of function, the data warehouse is provided a standardised functionality score, but information on the screening tool used for the assessment is not transferred to the data warehouse. This compromises the ability of the NDIA to assess the appropriateness of screening tools being used or to assess how consistently a screening tool is operating in practice.

The plan was always for a staged development of ICT capacity for the NDIS. The Australian Government allocated $143 million over four years for the implementation of the system

(with the appropriation split between the NDIA, the DSS and the Department of Human Services) (DSS 2015a, p. 1 NDIA, sub 161, p. 14), with capacity building to focus on the following.

- In the first year: the ability to accept participants into the scheme, register providers and enable participants and providers to make claims.
- In the second year: improving participant and provider functionality, workflow management, business assurance and fraud prevention.
- In the third and fourth years: the e-MarketPlace and broadening communication options.
- The need for work supporting longitudinal data analysis, monitoring and facilitating an insurance approach was noted, but no time frame was specified (NDIA, sub. 161, pp. 14–15).

The NDIA has recognised that the remedial actions to address ICT failures 'have also put the development of other ICT initiatives under pressure' (sub. 161, p. 15). For example, the development of the e-MarketPlace was scheduled for 2017-18 (NDIA 2016i, pp. 31–32), but the NDIA recently indicated that the e-market program is in the design phase and that there is now no fixed time period for the launch (NDIA 2017d).

The Commission is concerned that, without ongoing improvements in this area, there is a risk that the necessary changes to the ICT system (to have a fully operational data warehouse that can support the actuarial and research functions of the Agency) will not be implemented fast enough.

While the scheme is still in the early stages of operation, it is important that the NDIA closely monitor the progress of resolving the system interface issues and the development of the data warehouse capability. In particular, ensuring that the actions are sufficiently resourced and prioritised, and where necessary, that remedial action is taken. The NDIA's annual report should include an item on the progress of the ICT system and if there are any problems that could disrupt the operation of the scheme or affect the assessment of scheme progress or financial sustainability.

Constraints on data collection

Because the NDIA needs to draw on evidence from outside the scheme, it faces the potential risk that external data collections may change. The NDIA will need to monitor the data being collected outside the scheme. Over time, it may be appropriate to revise the collection of data within the scheme if key external comparators cannot be identified.

13.2 Data on disability services outside the NDIS

Disability data collected outside the scheme should continue

Not all data relevant for assessing the effectiveness of the NDIS can, or should be, collected within the scheme. And, as a number of study participants noted, it is important to understand the wider environment in which the NDIS operates. The Australian Institute of Health and Welfare (AIHW), for example, said:

> … about 89% of all people with disability in Australia, and 36% of people with severe or profound disability aged under 65, won't be supported by the NDIS … As such, truly understanding the costs of, and pressures on, the NDIS, as well as the experiences of people with disability more broadly, will require understanding the wider environment in which the NDIS operates. (sub. PP349, p. 1)

Also:

> The ability to articulate a broader story — with the NDIS included in the context of the wider suite of supports and payments for people with disability — will be critical to governments' understanding, not only of the costs of, and pressure on, the NDIS, but also of the broader experiences of, and outcomes for, people with disability. (sub. PP349, p. i)

The two main existing datasets that collect information on supports for people with disability are:

- the Australian Bureau of Statistics Survey of Disability, Ageing and Carers (SDAC)
- the Disability Service National Minimum Data Set (NMDS) — the main source of information on government provided or funded services for people with disability outside the NDIS (box 13.1).

The SDAC collects information on the level of support needs of people with disability and the level of natural supports available to them. Because the SDAC covers both NDIS and non-NDIS participants, it will continue to be a valuable data source post-NDIS rollout — it can also provide valuable information on the needs and level of ability of future NDIS participants.

Some of the benefits of the NDIS are expected to result from reduced demands on other government supports (chapter 3). As Anglicare Australia said, the impacts of the scheme will include the cost implications on other government programs.

> … it is incumbent on the Commission to recommend evaluation measures regarding the scheme's financial sustainability that take into account the costs avoided or passed on to other areas of government if the NDIS is not properly supported. (sub. 157, p. 21)

And the DSS said:

> Better cross-system reporting on disability could make system boundaries and responsibilities more transparent, as well as give a more coherent picture of improvements in services to people with disability. (sub. 146, p. 5)

Box 13.1 Two important data collections outside the NDIS

Survey of Disability, Ageing and Carers

The Australian Bureau of Statistics (ABS) Survey of Disability, Ageing and Carers (SDAC) provides a comprehensive snapshot of the social and economic participation, circumstances and limitations of people with disability and people over 65 years, and (informal) carers of these two groups.

The latest (2015) SDAC surveyed about 25 750 households (private dwellings and self-care retirement villages) and 1000 cared-accommodation establishments. The survey was the eighth iteration of a series of similar surveys that began in 1981.

Groups covered

The three groups of interest in SDAC are:

- people with disability: disability is defined as any limitation, restriction or impairment that restricts everyday activity and has lasted (or is likely to last) at least 6 months. Both NDIS and non-NDIS participants are included
- people over 65 years old: also recorded whether they have a disease or disorder likely to last longer than six months
- carers: classified as primary carer (those over 15 years old that provide the most support) or other carers (those that provide care, but not the most care, or are under 15 years old).

Goals

SDAC's main objectives are to:

- measure the prevalence of disability in Australia
- measure the need for support of older people and those with disability
- provide a demographic and socio-economic profile of people with disability, older people and carers compared with the general population
- information on carers and those cared for.

NDIS relevant information

SDAC allows valuable insights on the NDIS market by indicating the:

- level of unmet demand for disability services
- level and sustainability of informal caring arrangements
- social and economic circumstances and participation of people with disabilities and their carers.

(continued next page)

Box 13.1 (continued)

Disability Services National Minimum Data Set

The Disability Services National Minimum Data Set (NMDS) is an annual collection and collation of a standard set of data items on disability support services provided under the National Disability Agreement. The data are collected from service users by funded agencies, and is provided to jurisdictions, which in turn provide the data to the Australian Institute of Health and Welfare (AIHW) for national collation and reporting.

The services currently covered by the NMDS include:

- *accommodation support*: services that provide accommodation to people with disability, and services that provide support to enable a person with disability to remain in their existing accommodation or to move to more suitable or appropriate accommodation
- *community support*: services that provide the support needed for a person with disability to live in a non-institutional setting
- *community access*: services designed to provide opportunities for people with disability to gain and use their abilities to enjoy their full potential for social independence
- *respite*: services that provide a short-term and time-limited break for families and other voluntary caregivers of people with disability to help support and maintain the primary caregiving relationship, while providing a positive experience for the person with disability
- *open employment*: services that provide employment assistance to people with disability in obtaining and/or retaining paid employment in the open labour market
- *supported employment*: services that provide employment opportunities and assistance to people with disability to work in specialised and supported work environments
- *advocacy, information, alternative forms of communication*: advocacy; information/referral; combined information/advocacy; mutual support/self-help groups; and alternative formats of communication
- *other support*: research and evaluation; training and development; peak bodies; and 'other support services'.

Sources: ABS (2016a), AIHW (2017a, 2017b).

The AIHW identified a number of data gaps.

> While there is some information about the use of specialist services by people with disability (for example, those provided under the National Disability Agreement, now in transition to the NDIS), we know little about their access to, and use of, mainstream and other services. We also lack a strong evidence base supporting our understanding of the interactions between sectors. (sub. PP349, p. 2)

The AIHW also highlighted the importance of understanding the interaction with, and role of, other services in meeting the needs of people with disability, including:

- mainstream services, such as health, aged care and housing
- specialist supports provided outside the NDIS, such as mental health services

- other supports, such as those provided by informal carers and the community more generally (sub. PP349, p. 2).

Concerns raised about current disability data collections

A number of stakeholders raised concerns about the ongoing funding arrangements for SDAC. Richard Madden said:

> SDAC funding is not secure. The ABS conducts the survey each three years, but must rely on funding from stakeholders (Commonwealth Departments of Social Services and Health, and States and Territories). Funding also determines the sample size. (sub. 101, pp. 11)

The DSS also said that it:

> … notes that not all jurisdictions are contributing funding towards the 2018 Survey of Disability, Ageing and Carers (SDAC). (sub. PP318, p. 11)

Currently, the ABS conducts the SDAC every six years, with an additional survey every three years if funding is provided. In recent years, the survey has been conducted every three years, with half the cost of this second survey funded by the Australian Government Departments of Social Services and Health and the remaining funds provided by the States and Territories (with contributions based on population levels).

The Commission understands that the cost of the 2018 survey is about $19 million. While most jurisdictions have agreed to contribute funding, some are yet to commit. Without ongoing commitment of funds, there is uncertainty about the frequency of the survey and/or how representative the survey will be (as the sample size may be reduced).

The SDAC is important because it provides outcomes data on people with disability both inside and outside the NDIS (as well as for carers) and the extent of unmet need. The AIHW noted that 'the planned 2018 iteration will be well timed to capture relevant information towards the end of the NDIS roll-out period' (sub. PP349, p. 5).

Less frequent (every six years instead of every three) and/or less reliable data will mean less up-to-date data to inform the outcomes during the critical early years of the NDIS. As the AIHW put it:

> … there is a risk that the vital SDAC information may only be available each 6 years, which is too infrequent to inform the experiences and outcomes associated with such a major policy reform as the NDIS. (sub. PP349, p. 5)

RECOMMENDATION 13.1

Australian, State and Territory Governments should commit, by June 2018, to fund (on an ongoing basis) the Australian Bureau of Statistics Survey of Disability, Ageing and Carers, so it can be conducted every three years.

Concerns were also raised about other datasets being discontinued as supports are transitioned to the NDIS. The DSS, for example, said:

> One way to better understand how mainstream services and the NDIS are supporting people with disability is to ensure adequate data collection and reporting. As States wind down the provision of specialist disability services, there is a risk State provided data may decrease. The NDIS will provide a rich source of new data, but only for around one tenth of the total population of people with a disability. DSS considers that all governments need to commit to sustaining and enhancing data collection and reporting on people with disability access to services in cost effective ways. (sub. PP318, p. 11)

Addressing interface issues and data gaps

With the transition to the NDIS, many programs that provide support to people with disability are being changed or discontinued (chapter 6). In addition, some supports previously provided through specialist disability programs will be provided by other systems (for example, some supports for people with psychosocial conditions may be provided through health systems).

While there may be reporting on services provided for each of these programs, it is unlikely that a comprehensive picture of supports provided to people with disability will be available unless a unified reporting system is agreed to. To date, reporting on specialist disability programs has occurred under the National Disability Strategy and data collected through the NMDS.

Where governments provide or fund supports to people with disability, they are likely to collect information on the programs and the characteristics of clients. There would be a small additional cost for governments to collect information on disability and NDIS participation status as part of these data collections — and in many cases, disability status is already collected.

One of the main impediments to expanding the NMDS to collect information on a wider set of services provided to people with disability will be identifying the additional information to collect. This will take time, but should begin as soon as possible.

There are relevant working groups operating under the National Disability Agreement with the expertise to identify the range of services provided to people with disability (the Senior Officers Working Group) and the technical knowledge of the data (the Research and Data Working Group). Each working group comprises of subject matter experts from State, Territory and the Australian Governments. These groups should be authorised to begin planning changes to the NMDS.

Broadening the data collection under the NMDS will not only provide the NDIA with better information to manage scheme costs and outcomes, but also an evidence base for monitoring services provided to people with disability who are not eligible for the NDIS. This

information could also provide insights on any cost shifting from the NDIS onto State and Territory provided services.

RECOMMENDATION 13.2

The Australian, State and Territory Governments should agree to expand the data collection for the Disability Services National Minimum Data Set to include supports to people with disability that are provided or funded by governments outside the National Disability Insurance Scheme (NDIS).

The data collected should include services provided to NDIS participants, but not provided by the NDIS.

A decision on the data to be collected should be made by June 2018, with the broader data to be included in the 2018-19 Disability Services National Minimum Data Set.

13.3 Linking data

Linking datasets for improved collection efficiency and more insights

Data linkage is a process that allows information from datasets to be combined (while also allowing privacy to be preserved). Data linkage has the potential to fill current gaps in what we know about people with disability. As the AIHW said:

> … integrating data in this way can tell a much more powerful, person-centred story than is possible from individual datasets in isolation, and can help policy makers to improve their understanding of a range of issues. … Linkage can also be used to assess outcomes at different 'levels' or for different cohorts (for example, for Indigenous Australians). (sub. PP349, p. 2)

Examples include linking specialist disability services or payments data to national hospital, Medicare Benefits Schedule or Pharmaceutical Benefits Scheme and aged care data to shed light on how people with disability interact with health services.

Linked data will also be important for tracking outcomes for people who leave the scheme in the future. This would be most relevant for people who join the scheme through early intervention pathways and people who will exit to use the aged care system.

But there are also practical challenges with linking datasets, including gaining approval to link data so that researchers can analyse data and release results in a timely way (AIHW, sub. PP349, p. 3).

Current Australian Government policy is to optimise the social value from administrative data collections.

> The data held by the Australian Government is a strategic national resource that holds considerable value for growing the economy, improving service delivery and transforming policy outcomes for the Nation. … The Australian Government commits to optimise the use and reuse

> of public data; to release non sensitive data as open by default; and to collaborate with the private and research sectors to extend the value of public data for the benefit of the Australian public. (Turnbull 2015, p. 1)

But as the Commission's recent *Data Availability and Use* inquiry (PC 2017a, pp. 114–116) highlighted, there is considerable scope to use linked datasets better and more often in policy design and analysis. If the recommendations of that inquiry are adopted (the Australian Government is currently considering a response), the scope for linking administrative datasets will be enhanced.

Data linkage keys

A data linkage key is a way of identifying records from multiple datasets that relate to the same person or organisation. If a common unique identifier is used (such as a Medicare number or Australian Business Number), datasets can be linked using the identifier. In the absence of a common identifier, it will be necessary to create a linkage key from a range of identifying information (such as name, date of birth and address).

While the initial linkage will require access to identifying information, once the match is made, a key can be developed that matches the unique identifiers for the same individual across the datasets. That data linkage key can then be used to link datasets that do not contain identifying information (thus assisting in protecting privacy).

The Commission's *Data Availability and Use* inquiry recommended the retention of linkage keys (PC 2017a, p. 44). The retention of linkage keys will be critical for the NDIA obtaining information in a timely and cost effective manner.

The NDIA will need to regularly update information to assess the lifelong impacts of the scheme. Retaining data linkage keys will reduce the cost and effort that is required to link administrative datasets. It should also reduce the rate of failed matches between the datasets.

Retention of data linkage keys should also reduce the need to duplicate efforts to 'clean' datasets. Administrative datasets often have issues with data quality (such as misspelt entries, inconsistent dates or data recorded in the wrong units of measurement) and retaining data linkage keys can overcome the need to replicate data cleaning.

Linking to surveys

There are some recent examples of survey information being linked with administrative datasets (ABS 2011a, 2011b, 2017b) that could provide a template for linking NDIS data with relevant surveys (such as the SDAC and the General Social Survey).

The ability to link NDIS data with these surveys would be enhanced if the surveys included a 'flag' indicating if the respondent was a NDIS participant. The SDAC included a flag for NDIS participants in the 2015 version of the survey.

The AIHW is also working on including a NDIS participant flag in some of the Institute's surveys, including by States and Territories, for future implementation in the AIHW's Specialist Homelessness Services Collection (sub. PP349, p. 4). Commenting on a NDIS flag, the AIHW said:

> The AIHW is developing a flag for use in data collections to indicate whether a person is receiving support through the NDIS. This flag could be used to look at the use of mainstream and other services by NDIS participants. If used together with the standardised disability flag, it could potentially also be used to examine participation in the NDIS as well as to look at if there are differences in the use of mainstream services between NDIS participants and other people with disability. (sub. PP349, p. 4)

13.4 Sharing data

Access to the longitudinal dataset

A number of stakeholders argued that it is critical that researchers are able to access the NDIA's longitudinal dataset (box 13.2). As the Centre of Research Excellence in Disability and Health noted, the NDIA has limited capacity to conduct research, and:

> … it is important that this rich data is made available to external researchers from a broad range of disciplines (e.g. business and economics, epidemiology, statistics, social sciences, public policy) who can provide independent evaluation of outcomes. … The Agency has relatively limited internal capacity to conduct the broad range of research questions that need to be answered. This recommendation is in line with the Productivity Commission's recent Inquiry into Data Availability and Use. (sub. 69, p. 3)

The longitudinal dataset should allow researchers to assess the effectiveness of particular supports by linking information about supports with participant characteristics and outcomes.

Box 13.2 Participants support researchers having access to NDIA's data

Richard Madden:

> The NDIA currently receives information on each service for which it is billed by service providers, and has full information on the NDIS participant who has received the service. NDIA should work with stakeholders and the AIHW and ABS to design an appropriate minimum data set for participants and supports received, which can be extracted from its data holdings. … A de-identified data set on participants and supports received should be provided without charge to the AIHW in a timely fashion for statistical reporting. (sub. 101, pp. 12–13)

Bruce Bonyhady:

> The disability data that is being collected … should be made available for research, as a matter of high priority, subject to appropriate safeguards. As the Productivity Commission is currently conducting an Inquiry into Data Availability and Use which will report shortly, this Review should include recommendations on how best to ensure that the NDIA data will be made available for research to improve the lives of people with disability, their families and carers. (sub. 100, p. 15)

Australian Institute of Health and Welfare:

> … while it is entirely appropriate for the NDIA to monitor the progress and sustainability of the scheme, an independent agency (such as the AIHW) should be engaged to undertake reporting more broadly, perhaps against a disability reporting framework similar to that used in the health sector.
>
> … There is great potential benefit in making non-sensitive data 'open by default' by not restricting its use or redistribution; but how to make optimal use of this huge and increasingly unstructured source of information is a major challenge. While the need to manage 'big data' is clearly evident, the key issue for all data users is to ensure these data are used in the most effective manner; that is, 'smart data'. It also presents an opportunity to develop better ways to analyse and present data, and to partner with a wider range of collaborators. (sub. PP349, p. 6)

Benefits from data sharing

A key reason for allowing approved external researchers access to the longitudinal data is that it increases the opportunities for identifying best practice models and ways to improve the scheme. Such solutions are more likely to evolve if a community of researchers develops who are actively engaged in discussions about the merits and potential unintended impacts of alternative approaches. The size and capability of the research community interested in examining NDIS related issues is likely to be substantially larger if researchers have timely access to quality data.

The gold standard for evidence based policy are systematic reviews with decisions based on a literature that has built up on an issue, particularly with academic researchers reviewing their peer's research, and re-evaluating the issue from a slightly different perspective.

This dialectic approach has the scope to develop robust findings on an issue. Such an approach is common in medical research (and especially epidemiology). The NDIA does not have the resources to replicate such a process in house.

Existing legal and policy basis for the NDIA to share data

The NDIA is sharing data with other organisations. The NDIA provided the Commission with a set of de-identified unit record data to assist with this review. The State and Territory Governments are routinely given access to similar data (NDIS Act, s. 174). The Australian Government Actuary has also had access to the NDIA's data to undertake the role of reviewing actuary (as set out in the *National Disability Insurance Scheme Act 2013* (Cwlth) (NDIS Act)).

However, the NDIA does not currently have a public policy outlining when and how data can be shared. For the NDIA to share data, it needs:

- no legislative barrier to sharing data
  - there is no need for legislation to permit data sharing but where legislation does prescribe data protections (as is the case of the NDIS Act), there needs to be a clear legislative basis for doing so (box 13.3)
- established rules on data sharing
- the technical capacity to share data.

The Commission's recent *Data Availability and Use* (2017a) inquiry identified two other critical factors that can hamper the level of data sharing — organisation culture and agency practice.

FINDING 13.1

There are benefits from allowing researchers to have access to National Disability Insurance Scheme unit record data. Access could be provided by creating a de-identified longitudinal dataset and by allowing approved researchers access to bespoke and more detailed data sets on a case-by-case basis.

Box 13.3 The NDIA has legal permission to share data

The NDIS Act provides scope for unit record data to be shared with Australian, State and Territory government agencies, academic researchers, peak bodies and disability service providers.

Disclosure of protected information for research, actuarial analysis or policy development is permitted if the CEO of the Agency believes the information is reasonably necessary (s. 60).

The CEO can certify that information be disclosed for public interest reasons (s. 66).

The CEO may disclose information to the heads of a range of Australian, State and Territory government agencies for the purposes of the department or agency (s. 66).

Such disclosure of information needs to be consistent with rules established for the running of the Agency.

The Act also specifies that the NDIA should 'develop and enhance the disability sector, including by facilitating innovation, research and contemporary best practice in the sector' (s. 118).

Does the NDIA have rules and policies that permit data sharing?

Scheme Rules do not limit the ability to share data with other government agencies, peak bodies, providers or researchers who are interested in using the information to improve the scheme.

The *National Disability Insurance Scheme (Protection and Disclosure of Information) Rules 2013* (Cwlth) provide guidance to the CEO when considering disclosure of information for public interest purposes (Part 4) and sets out matters relating to the CEO's power to disclose information to Secretaries, chief executives and heads of Australian, State and Territory Government agencies (Part 5).

The two main areas of guidance for the CEO in considering public interest access is that those seeking access to the data have 'sufficient interest in the information' and that 'the information cannot reasonably be obtained from a source other than the agency' (*National Disability Insurance Scheme (Protection and Disclosure of Information) Rules 2013* (Cwlth), r. 4.3).

When releasing information to the heads of government agencies, the main guidance the Rules provide for the CEO is that a record should be kept of what data was supplied, who the data was supplied to and the requested purpose of the data (*National Disability Insurance Scheme (Protection and Disclosure of Information) Rules 2013* (Cwlth), r. 5.5).

The Commission understands that the NDIA does not have a policy on the release of public information, although progress on preparing such a policy is well advanced.

Does the NDIA have the technical capacity to share data?

There are two elements to the technical capacity of the NDIA to share data — the technical ability of the Agency staff and the technical capacity of the Agency's information and communication technology.

The NDIA has staff that are qualified and capable of warehousing, curating and transforming data. However, there are currently deficiencies in the NDIA's technical capacity to collect data.

13.5 A way forward

The Commission's recent inquiry on *Data Availability and Use* found that comprehensive reform of Australia's data infrastructure is needed to signal that permission is granted for active data sharing and release, and that data infrastructure and assets are a priority. To be effective, these reforms should be underpinned by:

- clear and consistent leadership to effect cultural change
- transparency and accountability for release and risk management
- reformed policies and legislation
- institutional change (PC 2017a, p. 35).

A culture of data availability and use

Leadership is important for establishing a data sharing culture. As the Commission's *Data Availability and Use* inquiry put it:

> New arrangements for data access will require, within Governments, strong and consistent leadership, from the Ministerial level as well as the upper echelons of the bureaucracy. (PC 2017a, p. 28)

The Tasmanian Government also noted:

> It takes clear, high-level direction and authorisation in order to get data-sharing initiatives up and running. (2016, p. 14)

Without a culture that grants active permission for the sharing and release of data, the benefits of data sharing and use will not be realised (and as noted above, the benefits of greater sharing and use of data about people with disability are likely to be significant). It is therefore critical that the NDIA has a data sharing culture if the benefits of the data held by the NDIA are to be realised.

The NDIA should actively promote data sharing within the Agency and with external bodies and researchers. Publishing data holdings, policies and processes (discussed later) can help signal that the NDIA is 'open for business' when it comes to data sharing and release. There are also a range of data communities of practice that the NDIA could participate in to develop expertise in data availability and use, including, for example, the Australian Government's Data Champions Network.

Data about people with disability can be highly sensitive, and there is likely to be community concern about how this data is used. Policies, processes and systems implemented to enable data sharing and release need to be designed to maintain trust, including via developing robust risk-management procedures.

One means of engendering trust is to have an independent process to review how data will be used. A standard means of reviewing the appropriateness of research on or about people

are ethics committees. Ethics committees are intended to ensure respect and protection of participants of the study, and to encourage ethical practices amongst researchers (NHMRC 2015, p. 6). Depending on the nature of the intended research using NDIS data, it may be appropriate for ethics committee approval to be obtained before data is accessed.

A comprehensive, longitudinal dataset

Data that is fit for purpose

As outlined above, the NDIA collects data for two purposes — to monitor and evaluate performance of the scheme and to inform policy.

Timely, standardised data collected at a sufficient level of disaggregation is also critical to enable broader use. The Commission's *Data Availability and Use* inquiry (PC 2017a, p. 345), set out four preconditions for releasing unit record level data. The data should be:

- machine readable
- readily linkable to other datasets
- understandable
- de-identified (unless the data is already publicly available).

One study participant, Richard Madden, suggested that the NDIA should provide the AIHW with data on participants:

> A de-identified data set on participants and supports received should be provided without charge to the AIHW in a timely fashion for statistical reporting (sub. 101, p. 13).

One benefit of providing the AIHW with data on disability is that it could be linked with other related data collections that the AIHW holds, particularly health data.

While linking disability and health data would not remove the need for the NDIA to collect outcomes information, it could significantly reduce the amount of information that it needs to collect, thus promoting cost savings to the NDIA and efficiencies across the health and disability systems.

Given that the AIHW already has expertise collecting, linking and reporting on health and disability data, and it has established and effective ICT systems, there are likely to be cost savings and efficiency benefits from the NDIA regularly providing such unit record data to the AIHW.

Managing the risk of sharing and releasing data

The Commission's *Data Availability and Use* inquiry found significant deficiencies in the way the public sector manages the risk of sharing and releasing data — including that data

is locked up and unable to be used due to concerns about the risk and sensitivity of that data, or it is shared (for genuine public interest purposes) but with poor controls on its use (PC 2017a, pp. 94–95).

The Commission proposed that data use should require rigorous assessment of *genuine* risk to inform the development of effective risk management strategies and controls by institutions that have the capability and resourcing to carry out this role effectively (PC 2017a, p. 181). A risk-based approach to data sharing and release allows the benefits of data use to be maximised, while the harms are minimised.

The five safes model is a best-practice framework for managing the risk of sharing and releasing data (box 13.4).

For the NDIA, a risk-based approach to sharing and releasing data means scaling releases of data depending on the risk of the release:

- public, or open data, should be sufficiently aggregated and confidentialised such that the data released is non-sensitive (that is, non-identifiable)
- a synthetic dataset is one way of making more disaggregated but non-sensitive data readily available to researchers
- data provided to trusted researchers in a secure environment can be more lightly de-identified
- data shared within the NDIA or with other government departments (chapter 11) may include identifiable details (if the purpose of use requires it — for instance, service delivery purposes) but secure access and storage procedures should be in place.

These initiatives require a certain amount of capability to be effectively undertaken. And the NDIA is a relatively new agency whose capability is still developing. While there will be benefits from the NDIA developing some in-house capability, there is also likely to be scope for the NDIA, particularly in the early years of its operation, to draw heavily on outside expertise from more mature organisations such as the AIHW and Data61.

Box 13.4 Five safes model

The traditional approach for managing risk of data sharing was to only release data that could not be used to identify people. This approach limits the type of analysis that can be undertaken (such as excluding analysis of disabilities where there are few sufferers, or not permitting analysis of exits from the NDIS). However, more recent approaches have been developed to allow researchers access to more identifying information, but which maintain the same level of privacy and data security, by using other levers. For example, in the NDIS context, virtual data laboratories could be used to ensure researchers can only extract results of their analysis when the data custodian considers that the results will not identify individual NDIS participants.

The five safes model focuses on five risk axes:

- *Safe people*: Can the researchers be trusted?
- *Safe projects*: Is the use of data appropriate? Does the researcher have ethics committee approval (where appropriate)?
- *Safe settings*: Does the access environment prevent unauthorised use?
- *Safe data*: Can the data disclose identity?
- *Safe outputs*: Are the statistical results non-disclosive?

In practice, the five safes model has been implemented using virtual laboratories or trusted access models which provide more risky data in a safer environment. Such facilities can be expensive to develop and require technical expertise and specialised information, communication and technology systems. While the NDIS may choose to develop its own capability, there is already an example that has been extensively used for health research in Australia — the Secure Unified Research Environment, provided through the Sax Institute (PC 2017a, p. 419). It provides a high security environment that facilitates the use of data from different custodians and also allows the collaboration of researchers working across multiple institutions, including overseas-based researchers.

Source: Adapted from Desai et al. (2016, pp. 3–5).

FINDING 13.2

The National Disability Insurance Agency should adopt a risk-based approach to sharing and release of data. A risk-based approach could include:

- open data that are able to be publicly released because they are non-sensitive
- a synthetic dataset that is more disaggregated but also non-sensitive, that is readily provided to researchers
- secure sharing of more sensitive data to researchers in an environment such as SURE
- better sharing of data with other relevant agencies such as the Australian, State and Territory Governments, with secure access and storage procedures put in place.

There are likely to be benefits, particularly in the early years of its operation, from drawing on the capability and expertise of more mature organisations such as the Australian Institute of Health and Welfare and Data61.

Best-practice policies, processes and systems

There is value in the NDIA making public details of the data it holds and how to access it. When developing policies and processes for seeking access to such data, the NDIA should consult with researchers, other data users, and relevant organisations that have expertise in data sharing (such as the DSS and the AIHW) and cover issues such as:

- what data will be of most value to researchers, including how to design a generic unit record file to reduce the cost to the NDIA of addressing bespoke data requests
- impediments researchers experience when trying to access administrative data, and practical ways to avoid them
- processes for seeking access to the data.

RECOMMENDATION 13.3

The National Disability Insurance Agency (NDIA) should engage with stakeholders on how data access will be operationalised. By July 2018, the NDIA should issue a statement outlining the organisation's goals for data sharing and an intended timeline for operationalising data sharing by the NDIA.

A Conduct of the study

The Commission received the terms of reference for this study on 20 January 2017. It subsequently released an issues paper on 22 February 2017 that invited public submissions and highlighted particular matters on which it sought information. A position paper was released on 14 June 2017, which sought further information and feedback.

An extension to the date for the final report from 20 September 2017 to 11 October 2017 was granted by the Treasurer. A copy of the extension letter is included with the terms of reference at the front of this report.

In total, the study received 372 submissions (table A.1). The study also received 185 brief submissions online, including those collected by the organisation Every Australian Counts. All public submissions are available on the study's website.

During the study, the Commission held consultations with people with disability, advocacy groups, peak bodies, service providers, disability care and support workers, and government departments and agencies (table A.2).

The Commission would like to thank all those who contributed to this study.

Data and information

The Commission would like to thank the National Disability Insurance Agency (NDIA) for providing unpublished data and information to the study, and for allocating a staff member to spend several days in the Commission's Canberra office to provide feedback on analysis conducted by the Commission. Any errors in the analysis of these data and information in this paper are attributable to the Commission.

There are two areas the Commission did not examine.

1. The construction of the NDIA's reference packages and how they are used to derive typical support packages. The Commission requested data on the nature of reference packages, which the Agency declined to provide on the grounds of the sensitive nature of the material. The NDIA instead provided a member of the actuarial team to discuss the mechanics of the reference packages with Commission staff.
2. The updates to the NDIA's Hourly Rate Model (formerly known as the 'Reasonable Cost Model' and 'Hourly Cost Model'). The model was requested by the Commission in August 2017, but was not provided the model until 11 September 2017. This was too late for the Commission to study the model and its assumptions in detail.

The Commission would also like to thank the Department of Social Services for providing unpublished data and information to the study.

This paper uses the National Centre for Vocational Education Research's data on vocational education outcomes (VOCSTATS). These data are collected by registered training organisations and state training authorities around Australia. The National Centre for Vocational Education Research is not responsible for errors in the extraction, analysis or interpretation of the data presented in this study.

Title: 2016 National Aged Care Workforce Census and Survey – The Aged Care Workforce, 2016
Word ISBN: 978-1-76007-315-2
PDF ISBN: 978-1-76007-314-5
Publications Number: 11848

Acknowledgements

This research was commissioned by the Australian Government Department of Health and undertaken by the National Institute of Labour Studies (NILS) research team at Flinders University.

The NILS research team would like to thank the aged care sector's managers and workers giving their time generously to complete the surveys and interviews. We are deeply grateful for the valuable input and insights they provided for this research and we hope the research outcome will support the healthy development of the sector in the years to come. We would like to recognise the contribution of I-view to the fieldwork and data collection. Last, but not least, our deep thanks go to the Aged Care data project team at the Department of Health for their continuous support.

Every major research project is the product of extensive team work where individual contributions merge into the final reporting material, in a way that often makes it difficult to thank each researcher for their precise individual contributions. Kostas Mavromaras was the Chief Investigator and Genevieve Knight was the Manager of the project. The quantitative team included, in alphabetical order, Joanne Flavel, Genevieve Knight, Tom Karmel and Zhang Wei. The qualitative team was led by Linda Isherwood and included, in alphabetical order, Angela Crettenden, Megan Moskos, Llainey Smith and Helen Walton. We thank all NILS staff, especially Tracey Sharples and Deb Payne for their expert secretarial and administrative support, and Alison Goode, Stephane Mahuteau and Sue Richardson for their background advice and support in technical and policy matters.

NDIS	National Disability Insurance Scheme
NP	Nurse Practitioner
PAYG	Employees for whom Pay As You Go (PAYG) tax is deducted by the organisation including for those on paid leave.
RN	Registered Nurse
TCP	Transition Care Program

Executive Summary

Background

This is a report on the findings of the 2016 National Aged Care Workforce Census and Survey (NACWCS) conducted by the National Institute of Labour Studies, on behalf of the Australian Department of Health. It is the fourth report in the series (previous reports were in 2003, 2007, and 2012).

Methodology

All provider organisations with aged care funding for residential facilities and home care/home support outlets, were invited to participate in the 2016 NACWCS. Over 4,500 facilities and outlets and more than 15,000 aged care workers responded.

Additional qualitative data focusing on newly-hired and mature-aged workers was obtained through in-depth interviews with a sample of 100 direct care workers.

Introduction

The aged care workforce can be viewed in a number of ways:

- PAYG/non-PAYG
- Direct care/non-direct care
- Employed/volunteer
- Residential/Home care and home support

This report focuses primarily on direct care[1], PAYG employees in both residential facilities and home care and home support outlets, although there is also limited information on PAYG non-direct care workers, and non-PAYG workers.

It also provides information on the residential facilities and home care and home support outlets as employers and businesses. Detailed information was collected on the presence, causes and consequences of skill shortages, job vacancies, the composition of the workforce including the use of agency workers and volunteers, the types of employment contracts used, prevailing industrial relations and other matters.

Where relevant, comparisons are made with the 2012 results. However, a caveat is that this report should be read in the context that since then, there have been significant changes in the aged care landscape and some reforms are continuing, with the full impact on workforce issues not yet clear.

Key quantitative findings of the 2016 NACWCS

Estimated number of PAYG aged care workers

- **366,027** (4 per cent increase since 2012)
  - 235,764 in residential facilities
  - 130,263 in home care and home support outlets

[1] Workers who provide care services to older Australians as a key part of their work.

Estimated number of PAYG aged care workers in direct care roles

- **240,317**
  - 153,854 in residential facilities (**5 per cent increase** since 2012 – converts to 3 per cent on a FTE basis)
  - 86,463 in home care and home support outlets (**7 per cent decrease** since 2012 – converts to 19 per cent on a FTE basis)

Characteristics of PAYG residential direct care workforce

- 87 per cent female
- Median age 46 years
- 70 per cent are Personal Care Attendants (PCA)
- 32 per cent born overseas
- 78 per cent employed on a permanent and part time basis
- 10 per cent of the workforce are casual or contract employees (down from 19 per cent in 2012)
- 80 per cent of workers engaged in work-related training (mostly mandatory) in the previous 12 months
- 58 per cent of workers undertook Continuing and Professional Development (CPD)

Characteristics of PAYG home care and home support direct care workforce

- 89 per cent female
- Median age 52 years
- 84 per cent are Community Care Workers (CCW)
- 23 per cent born overseas
- 75 per cent employed on a permanent and part time basis
- 14 per cent are casual or contract employees (down from 27 per cent in 2012)
- 75 per cent of workers engaged in work-related training (mostly mandatory) in the previous 12 months
- 48 per cent of workers undertook continuing and professional development (CPD)

Residential aged care facilities

- The average size of facilities has remained constant since 2012
- 52 per cent have more than 60 places
- 80 per cent belong to a larger provider group
- 53 per cent report skill shortages, most commonly for Registered Nurses (RN) (down from 76 per cent in 2012)
- An estimated 23,537 volunteers worked in residential aged care in the designated fortnight

Home Care and Home Support outlets

- Increase in size of outlets since 2012
- 28 per cent employ more than 40 PAYG workers
- 61 per cent belong to a larger provider group

- 42 per cent report skill shortages, most commonly for CCWs (down from 49 per cent in 2012)
- An estimated 44,879 volunteers worked in home care and home support in the designated fortnight

Profile of the 2016 Aged Care Workforce

General

- The aged care workforce is older than the national average, generally in good health and has high levels of post-school education and training
- Overall the direct care workforce is relatively stable, with only a small minority indicating an intention to leave the sector within 12 months
- The residential workforce is getting younger and the home care and home support workforce is getting older
- There are indications of modest under-utilisation of the workforce as a whole

Training

- A much smaller proportion of CCWs than other occupations in home care and home support undertook training or CPD, suggesting a training gap
- There is a lower level of work related training than in 2012
- Priority areas identified for future training included dementia, palliative care and (in home care and home support) mental health
- A lack of access to training for workers in regional and rural areas is evident

Skill shortages

- The incidence of skill shortages has declined considerably since 2012, particularly in residential facilities
- Shortages are more prevalent outside major cities, and vacancies are harder to fill in remote and very remote areas, especially for RNs in residential facilities

Job satisfaction

- Job satisfaction is high across all work aspects except for pay
- Home care and home support workers reported greater job satisfaction for time available to care for clients and having freedom in their work and less stress and pressure than their residential care counterparts
- In both sectors, workers reported that the most stressful aspect of their jobs was the unanticipated changes in work patterns including working longer than scheduled and variations being made to hours or location of work at short notice

Facilities and outlets

- The share of facilities and outlets offering both residential and home care and home support care has fallen since 2012 indicating that facilities/outlets are becoming increasingly specialised within their respective sectors
- The majority of residential aged care facilities are large, and outlets within the home care and home support sector appear to be getting larger

- Service provision which accounts for the diverse needs of older Australians from different ethnic and cultural groups is becoming more mainstream

Conclusion

The aged care workforce remains predominantly female, older, and in good health. It is a well-qualified and trained workforce, with good access to further work-related training. However access to this training was lower than in 2012. The direct care residential workforce is getting younger and the home care and home support one is getting older.

A considerable shift away from casual or contract employment arrangements has been seen since 2012, particularly within the home care and home support sector.

The general picture that emerges regarding working arrangements and conditions is one of improving working conditions without any major imbalances. Although there are indications of continuing modest under-utilisation of the workforce as a whole, this is not to the point of being a driving force for the deterioration of working conditions in the sector.

Negative perceptions of aged care work as an occupation of low pay and status remain. Given the need for the expansion of the aged care workforce, this issue must be addressed.

In summary, the 2016 NACWCS showed that the aged care workforce is both stable and committed. Its workers report relatively high levels of job satisfaction and a large majority wish to stay working in the sector. The overall picture that emerges is that both the retention of current workers and the attraction of new workers to the sector seem to be working well with no major bottlenecks or hurdles that the labour market could not sort out by itself and without intervention.

Emerging issues

The Productivity Commission has estimated that by 2050 the aged care workforce will need to have grown to around 980,000 workers. It is vital that the sector and its workforces are monitored in order to keep all stakeholders informed and help the design and implementation of new policies to meet this growth.

The reduction in the estimated size of the direct care workforce in the home care and home support sector, combined with the likely increase in future demand for care provided in this setting may cause concern.

The 2016 NACWCS sought to identify potential workforce competition with the disability sector. At present there appears to be very little interaction at the workforce level between the aged care and disability care sectors. However, given the full National Disability Insurance Scheme (NDIS) roll out over the next two to three years, this could have substantial impacts on the aged care workforce.

There is some concern in the home care and home support sector about the impacts of aged care reforms (particularly Consumer Directed Care) on working conditions and employment. The impact of these reforms should be closely monitored particularly in light of the unexpected decline in the estimated size of this workforce.

Responding to change, a majority of residential facilities continue to be large in scale but utilising a smaller proportion of direct care workers, while home care and home support outlets are growing in size, with the larger ones expanding their workforces at a faster rate than the smaller ones.

1. Introduction

Since the last report on the Australian aged care workforce in 2012 (King et al, 2012) and through the implementation of new government policies (Department of Health, 2017), the aged care sector has experienced considerable changes in both the demand for and the supply of its services. These changes are set to continue apace over the coming decades.

The Australian population as a whole has been getting older. About a quarter of all Australians are expected to be 65 years and older by the middle of the 21st Century (Productivity Commission 2013). The ageing of the population will be fuelled in part by a rapid expansion of the oldest-old (those aged 85 years and older and who typically have higher care needs) from less than two per cent today to between five and seven per cent. The number of people who will be requiring aged care services is therefore set to increase substantially in the decades to come. Through significant general advances in medicine and health care we are managing to keep the younger part of the retired population both healthier and more active than their parents' generation was at the same age. However, through improved longevity we are also seeing an increased incidence of age-related conditions such as dementia and Alzheimer's disease. Thus, not only is the overall number of elderly people set to rise, but the composition of the demand for aged care services, and its methods of delivery are all set to change further.

Over and above these unprecedented changes in the demography and the health of the nation, in the last decades Australians on the whole have been getting substantially richer. According to figures from the Organisation of Economic Cooperation and Development (OECD) which have been adjusted to constant 2010 prices, Australian Gross Domestic Product (GDP) per capita has risen from US$26,433 in 1985 to US$44,774 in 2015 (OECD 2017). Thus, we should not only be expecting to see a higher proportion of life spent in retirement, but also, for many Australians, a larger proportion of their lifetime income and wealth accumulated for and spent during retirement. Along with this financial empowerment, many older Australians are becoming clearer and better articulated about their future care needs and requirements. This includes expressing a stronger desire and ability to remain living in their own home and pursue an active lifestyle. Our expectation is that over time the demand for quality care services that are tailored and timed to suit these individual and family needs is set to increase to levels never exercised by past cohorts.

A new national picture of demand for aged care services is therefore emerging. This changing demand is being driven by greater absolute numbers of older people within the population, and also an increased preference to continue to live and receive supports within the home. Critically for the aged care sector, an increasing proportion of older Australians strongly feel willing, able, and empowered to make effective demands for a better and broader range of high quality care services and a fundamentally different consumer-driven method of provision.

The aged care sector has been listening, anticipating and responding to these changes in the types of services that are demanded and how they should be best be provided. Moreover, the sector is currently undergoing intense transformation as a consequence of the structural changes brought about by the recent aged care reforms. Since 2012, these reforms have reshaped the way aged care services are provided in Australia across both residential and community settings with further changes set to occur. By 2050, more than 3.5 million Australians are expected be using aged care services each year (Productivity Commission, 2011). In order to adequately provide services for these individuals, the Productivity Commission (2011) has estimated that the aged care workforce will need to quadruple in size over this time and employ around 980,000 workers. In this period of change it is of key importance that the sector and its workforces are monitored in order to keep all stakeholders informed and help the design and implementation of new policies to manage change.

The National Aged Care Workforce Census and Survey (NACWCS) is designed to provide continual and consistent information to monitor the sector and its workforces. The information in the NACWCS has been used by government and by providers of aged care services alike, the former in its efforts to design and provide a coordinated strategic approach to the sector and the latter in assisting to manage both present and future aged care workforce requirements.

The 2016 NACWCS is the fourth data collection and report commissioned by the Department of Health (DoH) and conducted by the National Institute of Labour Studies (NILS). The previous NACWCS reports were delivered in 2003, 2007 and 2012. Across this time the aged care sector has grown in size and changed in nature rapidly. The capacity of the sector and relevant stakeholders to respond appropriately to these developments, has been facilitated and enhanced through the independently generated statistical evidence about the sector itself and its workforces in the NACWCS. It is critical that both employers and employees can juxtapose evidence reflecting their own and one another's responses to change that affects both, in the knowledge that this evidence has been generated consistently over time within a broader nationally representative context. It is also critical for government to be able to rely on evidence that is manifestly both well-informed and independently produced.

This report describes the NACWCS 2016 data collection and findings in the following chapters. Chapter 2 sets the scene and offers an overview of the workings of the data collection and the reporting. It also outlines the research content and its design and implementation. The chapter firstly describes the sources of information used within the report, including the instruments and processes used to collect this data within residential facilities and home care and home support outlets - namely the *census* of employers/business units and the *survey* of a sample of their workforces. It then goes on to describe the response rates and the population weights of the data, the latter being explained in further detail in Appendix 1. Chapter 2 concludes with an outline of the qualitative module of NACWCS 2016 which focuses on recently hired and mature-aged workers in the direct care workforce.

Chapters 3 to 7 describe the data in detail and each section is preceded by a condensed list of its key findings for ease of future reference. Throughout the text we make comparisons between residential facilities and home care and home support outlets and their workforces. Where appropriate and feasible we also make comparisons across time, contrasting the new evidence found in the 2016 NACWCS with the findings previously outlined in the 2012, 2007 and 2003 reports.

Chapter 3 provides detailed information on the residential aged care workforce using responses primarily from the residential workforce survey and on occasion from the residential facilities census as well. It presents and discusses total employment within the sector and the key characteristics of the workforce. The main characteristics of aged care work itself are also discussed, including employment arrangements and wages, education and training, and the pathways that lead into and out of aged care. Chapter 3 continues by examining experiences of working in the sector (including satisfaction with the various aspects of the work) and the extent of work-related injury and illness. The chapter concludes with findings on cultural and linguistic diversity in the residential aged care sector.

Chapter 4 predominantly uses evidence from the residential aged care census to provide an overview of the key characteristics of the residential facilities themselves. It begins with a profile of facilities and examines their relationship with broader aged care services and the extent of ethnic specialisation. The chapter continues with evidence on skill shortages and vacancies, in the context of the sector's capacity to attract and retain staff in a competitive labour market. The employment arrangements of PAYG workers and the use of non-PAYG employees and volunteers are then explored. Chapter 4 concludes with a discussion of how quality is measured by employers in the residential aged care sector.

Chapters 5 and 6 essentially repeat the structure of Chapters 3 and 4, only now the information relates to the home care and home support workforces (Chapter 5) and outlets (Chapter 6).

These chapters take the opportunity to compare their findings with the corresponding results for the residential workforce and facilities.

Chapter 7 presents the findings of the in-depth interviews conducted with 100 newly hired, mature-aged and general direct care workers. A key question addressed by Chapter 7 relates to the capacity of the sector to attract and retain its workforce in the context of rapid change in the sector. This chapter offers a deeper and complementary understanding of the factors that matter for these specific sub-groups of aged care workers, including their working environment, wages, education and training, skills development and career paths. It offers invaluable deep insights of their experiences of working in aged care and on those factors that may ultimately influence their recruitment and retention outcomes.

Chapter 8 summarises and discusses the findings of the report and also identifies several emerging issues that warrant further investigation. The main text of this research is supported by a technical Appendix on the population weights that have been constructed and used in order to estimate the broader population numbers presented in the report.

2. Finding out About the Aged Care Workforce

In this chapter we describe the types of information used for this 2016 report on the aged care sector and its workforce. The information contained in this report comes from three sources.

The first and main source is the 2016 National Aged Care Workforce Census and Survey (NACWCS). The 2016 NACWCS packages of forms were sent to all provider organisations with aged care funding for residential facilities and home care/home support outlets providing specific aged care services as defined by the Australian Government Department of Health. Each package contained a census form, to be completed by the manager at the facility/outlet level, and several worker survey questionnaires, to be completed by a sample of direct care workers employed at that facility/outlet.

The second source of information comes from aged care administrative data supplied by the Department of Health with the lists of provider organisations and services which formed the basis for the census and survey sampling.

The third source of information comes from interviews with a small sample of direct care workers who in their worker survey had offered to be further contacted about their work. The overall design of the project, including census and survey design and research were conducted by the National Institute of Labour Studies (NILS) research team.

2.1 Overview of the 2016 National Aged Care Workforce Census and Survey

The census and survey packages were mailed out on 17 June 2016 with respondent completions accepted until 11 October for online completions and 27 October for hardcopy completions. Participants were asked to complete a questionnaire which was available in hard copy and online versions. I-view conducted the fieldwork and administered the process for disseminating the survey packages, collected and collated the data, and delivered the raw data files to NILS. Support to respondents for completing the questionnaires was provided by I-view via a free 1800 number. Additional support was provided by NILS and the Department where necessary and appropriate. Detailed information and guidance were also available online. NILS carried out the work necessary to prepare the data for statistical analysis and conducted that analysis. Where this was required, the surveys and the research process received approval from the ABS Statistical Clearing House and the Flinders University Ethics Committee in full compliance with the National Privacy Guidelines for survey research.

2.1.1 The Aged Care Workforce Research

The census of facilities/outlets and survey of a sample of their workforce sought information that is in its majority directly comparable with the information collected through the research conducted in 2012 and earlier in 2007 and 2003. The primary aim was to create a comprehensive profile of the direct aged care workforce in residential and community aged care settings. A further aim was to cover a broad range of sociodemographic and economic factors such as age, gender, qualification, and employment status, in a way that is directly comparable with the previous data collections. The information needed to be sufficiently detailed in order to inform strategies to further develop and build a skilled and flexible workforce. It also needed to include information about the skills and qualifications of aged care staff to reflect their readiness to meet the care needs of the rapidly growing number of consumers of the Australian aged care system.

The report therefore discusses how aspects of the workforce in residential facilities and home care and home support outlets have changed over time; how the direct care workforces in the two sectors compare with one another; and how new knowledge about the workforce might inform the direction and types of changes needed to recruit and retain direct care workers into

the future. To this purpose the NILS team strived to generate data that is comparable over time, as much as the various program changes that have been taking place will allow.

Four discrete questionnaire forms were produced to collect the data:

- Residential Census
- Home Care and Home Support Census
- Residential Worker Survey
- Home Care and Home Support Worker Survey

In line with the 2012 census of facilities/outlets, the 2016 data collection sought information about the characteristics of their PAYG direct care workforces[2], the conditions under which they are employed, their vacancy rates, and other characteristics of the organisation; management, administration and ancillary staff; their use of agency, brokered and self-employed (non-PAYG) staff; volunteers and volunteer hours; nurse practitioners; allied health assistants; the Aboriginal and Torres Strait Islander workforce; the culturally and linguistically diverse workforce; skill shortages; training; and work-related injuries and illnesses.

Information from the census was supplemented with administrative data provided by the Department of Health records, and primarily used to identify and contact the relevant organisations and their workers. For residential facilities, this administrative data included postcode, remoteness of geographical location, ownership type and the number of operational places (residential). To avoid duplication, these questions were not asked of the facilities. For the Home Care and Home Support census, only some of this information on outlets was available, so that postcode and remoteness of geographical location were additionally collected.

As in 2012, the survey of employees sought information about the characteristics of people who work in direct care roles, their career paths, their experiences of working in aged care and their intentions to stay in the sector. Specifically the worker surveys collected data on the role of the worker, working conditions (hours, form of employment, pay), career path (prior work, recruitment, intention to stay/leave), job satisfaction, demographic characteristics, training and qualifications, what workers like/dislike about their job; the balance between work and non-work responsibilities; migrant status; and proficiency in English. In 2016, as in 2012, Nurse Practitioners and Allied Health Assistants were included in the direct care workforce.

An important aspect of the NACWCS data collections is their linked employer-employee nature. The appeal of such data is that it links employer characteristics directly with employee characteristics at the micro (individual) level. Taking the potential problem of skill shortages as an example, by linking the data, we are able to know who the employers that may report skill shortages may be (that is, how they compare with other employers), and also who their employees are (that is how their employees compare with the employees of other employers). This attribute adds considerable granularity to the dataset and can be very useful for the microeconomic analysis of the labour market of the aged care sector.

In 2016, a small number of additional questions were asked of both employers and employees to capture information about new topics relevant to aged care workforce planning and development. Furthermore, in some existing questions, additional categories were added for similar reasons. The changes also reflected some updating needed for accommodating the new aged care funding packages and other changes to the aged care system within the questionnaires, and these new topic areas. Since the 2012 report, there has been significant reform to the way aged care is delivered to consumers, such as the migration to the Consumer Directed Care (CDC) model, the removal of the distinction between high-level and low-level residential care, and the introduction of the new Home Care Packages Program and the

[2] A key period for this information collected in the census is the last pay period (fortnight) in November 2015.

Commonwealth Home Support Program (CHSP). Additionally, these changes are taking place against a backdrop of an ageing population, changing client preferences including an increasing demand for formal aged care services delivered in a community setting, demand from competing sectors for the skills required in the aged care workforce, and a forecast reduction in the availability of informal (i.e. family) care. To the aged care workforce these factors and others represent significant pressures for change in the coming decades and imply the need to either expand the size of the workforce or improve its productivity, or both, whilst maintaining appropriate standards of quality. The additional questions asked reflect these factors and explored:

1. Potential competition with the disability sector: The workers surveys aimed to elicit the extent to which aged care skills are interchangeable with those used in disability support. The worker surveys asked whether aged care workers have worked in the past, are currently working alongside their aged care job, or expect to work in disability care in the future. The surveys also asked workers whether they have had any training in the area of disability support with new response categories added relating to disability skills and qualifications. These disability workforce questions were motivated by the impending expansion of the disability sector through the National Disability Insurance Scheme (NDIS), which may use people with similar qualifications and demographics as the aged care sector and result in skill shortages shared by the two sectors. In this context of judging the incidence of skill shortages, both the 2012 and 2016 NACWCS data included a suite of questions on skill shortages (their incidence, causes and responses to) similar to the ABS Business Longitudinal Database suite of questions developed by the ABS. This combination allows linking between the aged care and disability support sectors while also enabling national benchmarking through the ABS national data collections.
2. The role of non-PAYG workers: In addition to existing questions, the 2016 census also asked facilities and outlets to state their reasons for employing non-PAYG workers. Moreover, the 2016 census elicited additional information regarding volunteers about the roles they perform.
3. Quality of services: New questions were added about the quality monitoring undertaken by employers to give a measure of how the quality of the aged care provision is checked by management.
4. Paid travel time: A new question was added on the availability of paid travel time for the home care/home support workforces in order to obtain an overview of this practice.

In some cases of policy interest, the same or similar questions were asked of both employees and employers, on the expectation that they will be answered through a different lens. In several instances the report compares and discusses both perspectives.

2.1.2 Research Design and Implementation

Research design

The initial potential respondent lists were constructed from a set of Australian Government Department of Health lists of residential and home care and home support service providers within Australia. The lists comprised 2,952 residential services (Residential services, National Aboriginal and Torres Strait Islander Flexible Aged Care and Transition Care Program with residential places) and 5,442 home care/home support services (Home Care Packages program, the new Commonwealth Home Support Program (CHSP), HACC in Victoria and Western Australia, Multi-Purpose Services (MPS), National Aboriginal and Torres Strait Islander Flexible Aged care and Transition Care Program with home care/home support places)[3].

[3]Outlets providing DVA Community Nursing, Veteran's Home Care or other DVA administered programs were not part of the original service lists but it was recognised that some 'in-scope' outlets

NILS conducted analysis to determine the number of workforce surveys that were to accompany each census form. This was determined by the size of the service facility/outlet. Each dispatched residential census form was accompanied by either 4, 6 or 8 workforce surveys. For each Home Care and Home Support census form, the number of workforce surveys was 3, 5 or 7. Stratifying the sample of workers improved the likelihood of employees being given an equal chance to participate in the survey. The stratification was implemented so that the number of surveys sent to each organisation differed according to the size of the service as per operational places/funding/services provided in the administrative list. Small residential outlets were sent 4 worker surveys, medium sized were sent 6 and large were sent 8. Overall, an average of 6 surveys was sent to each residential facility. Small home care/ home support outlets were sent 3 worker surveys, medium sized were sent 5 and large were sent 7. Overall, an average of 5 surveys was sent to each home care/home support outlet. Where insufficient service information was available in the administrative data, the average number of surveys was sent (extra population cases that arose during fieldwork were also supplied the average number of worker surveys). The resulting total number of workers selected to receive a survey was 17,717 for the Residential Worker Survey and 27,206 for the Home Care and Home Support Worker Survey.

Fieldwork

The census and survey mail out commenced distribution on 17 June 2016. The original date for survey closure was 23 September. However, the response was slower than anticipated, but steady. In order to ensure an optimal response rate, fieldwork was extended until 11 October for online survey responses and 27 October for hardcopy completions.

At the outset of the census and survey, an interactive webcast presentation (webinar) was hosted by the Department with invitations sent to all organisations on the lists. The webinar was designed and delivered by NILS researchers, and included a set of frequently asked questions. To further support the provider organisations, their facilities and outlet managers and workers to complete the forms, I-view hosted a free 1800 Helpline from 20 June through to 28 September. In all, 2,247 inbound calls were made to the 1800 Helpline. The most common known reason for calling was to confirm distribution requirements from the provider organisation postal address to their facility/outlet service address, often associated with co-location issues where there were multiple services at the same physical facility/outlet address with a combined workforce. Further information and answers to ‘frequently asked questions’ were also made available on a dedicated website. In addition, emails were sent to residential facilities and home care and home support outlets to stimulate participation: an introductory email, two reminder emails and a final thank you/last chance email were sent to facilities/outlets. The Department supplemented these reminders with communications sent to all providers of aged care services and by directly approaching providers who had not completed their forms close to the end of the fieldwork period. The census and surveys were also advertised through professional and peak body organisations and aged care publications.

Further adjustments were required to the original contact lists to accommodate facilities that had opened or closed during the defined period, or which were discovered to be co-located after the packages were sent out. Extra cases arose that were not in the original contact lists, and they were provided with online forms when requested via the 1800 helpline (684 cases, made up of 9 Residential census with 72 related residential worker forms, 67 Home care/home support census with 536 related worker forms).

The census and survey packages, distribution of forms and completion instructions

It was established by the Department of Health that providers would be identified for the dispatch of the mailed forms by the provider organisation administrative postal address. This

also provided services under these programs and so they were included in the home care and home support lists.

was critical where a service outlet provided more than one type of aged care service with the same provider organisation administrative postal address. Of all services in the sample (8,394), 1,030 were identified as providers with more than one service at the provider administrative postal address. This corresponded to 6,426 Census and survey packages which were sent to these (administrative postal) addresses, with their associated worker surveys numbering 34,862. To these providers, bundles of the relevant number of census and survey packages corresponding to their services were sent together in satchel/s to the provider organisation administrative postal address. Each provider received a cover letter with their relevant number of census and survey packages. The cover letter asked providers to distribute the contents of their survey package to their service facility/outlets for completion of the census by the manager and distribution of the surveys to their workers. The letter introduced the project, explained the contents of the census packages, how many questionnaires they should be expecting to receive overall, the benefits of completion, how to participate in the census and how to distribute the census and survey packages out to the service levels.

Following this distribution, each facility/outlet then received a survey package which contained the census and relevant number of worker surveys. A letter inviting the outlet manager recipients to participate in the census and instructions to workers for completing the surveys was incorporated into each questionnaire. Each census and survey package also contained a separate cover letter addressed to the manager with information about how to distribute the surveys and how to complete the census. The covering letter also nominated the 1800 Helpline that the recipient could call if they had any queries regarding the study. The cover letter requested that facility/outlet managers distribute the surveys by selecting staff who were (a) on the payroll as PAYG employees; (b) providing direct care to older Australians (i.e. to those 65 years and older, or 50 years and older if Indigenous); and (c) who had their birthday nearest to the day the package was received. The latter criterion was added to provide a random element to the selection of workers by their management.

For each census and survey, instructions were also provided for participating online, including unique usernames and passwords. Overall, 53 per cent of responses were received online from residential facilities, 52 per cent of home care and home support outlets, 17 per cent of workers in residential facilities and 20 per cent of workers in home care and home support outlets.

2.2 Responses and Weighting used in this Report

2.2.1 Residential Census and Residential Worker Survey Response Rates

Out of the final population of 2,952 residential facilities, 2,240 provided valid responses. This is a 76 per cent response rate for the residential census. Of the 17,717 surveys circulated to workers in residential aged care who were invited to participate, 8,885 provided valid responses. This represents a response rate of 50 per cent for the residential worker survey. Extra cases arose during fieldwork that were not in the original contact lists, made up of 9 residential census with 72 related residential worker forms with their respective response rates at 90 per cent and 22 per cent. The analysis and discussion of the residential aged care workforce and facilities can be found in Chapters 3 and 4.

2.2.2 Home Care and Home Support Census and Home Care and Home Support Worker Survey Response Rates

As with the 2012 community census and survey, for the 2016 census and survey of home care and home support outlets, it was evident from calls to the 1800 helpline and feedback from motivational calls that a number of home care and home support services on the list were out of scope for a variety of reasons. Using a similar process to calculate the responses to that used for residential aged care, then out of the final population of 5,442 home care and home support outlets a total of 2,307 valid responses were received. This is a 42 per cent response rate for the Home Care and Home Support outlet census. Of the 27,206 surveys circulated to

workers in home care and home support aged care who were invited to participate, 7,024 provided valid responses. This is a 26 per cent response rate for the home care and home support worker survey. Extra cases arose during fieldwork that were not in the original contact lists, made up of 67 home care/home support census with 536 related worker forms. Their respective response rates were 67 per cent and 10 per cent. The analysis and discussion of the home care and home support aged care workforce and outlets can be found in Chapters 5 and 6.

2.2.3 Weighting for Response used in the Report

In order to extrapolate the responses received and make them relevant to the entire workforce that provides direct care services for older Australians, response information from both residential facilities and home care and home support outlets and their worker surveys were weighted to reflect the lists. Appendix 1 contains an explanation of how these weights were formed. Weighted results from the census and surveys are used throughout the report.

2.3 Interviews with Direct Care Workers

Interviews with direct care workers were undertaken to provide a qualitative account of working in aged care and enable better understanding of some of the information obtained from the census and surveys. Upon completion of the workforce survey, direct care workers were given an opportunity to nominate themselves to take part in a qualitative interview about their experiences of working in the aged care sector. Following the 2016 research design, a sample of 100 direct care employees were interviewed, 48 from home care and home support outlets and 52 from residential facilities. The interviews were conducted from August to October 2016 and lasted for approximately 30 minutes each. A copy of the interview schedule is provided in Appendix 2. The focus of the 2016 qualitative research was on newly hired and mature-aged workers in order to understand more about their specific experiences of working within aged care (the 2012 qualitative focus was on the migrant and male workforces). Investigation was undertaken of issues relating to recruitment and retention for these workers; this is of particular importance if the sector is to attract new workers as well as retain its existing ones. The interviews also aimed to identify and explore broader emerging issues for the aged care workforce. The results of the qualitative research are presented in Chapter 7.

3. The Residential Aged Care Workforce

Key Findings

- The total residential PAYG aged care workforce has grown by 17 per cent since 2012 to an estimated 235,764. During the same time period the residential direct care workforce increased by 5 per cent and the FTE workforce by 3 per cent.

- PCAs were the largest occupational group (70 per cent), followed by RNs (15 per cent) and ENs (10 per cent).

- The median age of the residential direct care workforce was 46 years.

- While 32 per cent of the total residential care workforce was born overseas, 40 per cent of recent hires were migrant workers.

- Aboriginal and Torres Strait Islander people accounted for 1 per cent of the residential direct care workforce.

- Over 60 per cent of workers reported being in either very good or excellent health.

- Ninety per cent of workers held post-secondary qualifications. Two-thirds (66 per cent) of facilities reported that more than 75 per cent of their PCAs hold a Certificate III in Aged Care.

- There is a drop in casual employment. Over three-quarters of all residential direct care workers were employed in 2016 on permanent part-time contracts (78 per cent), with approximately 12 per cent on full time permanent and 10 per cent on a casual/contract arrangement. The corresponding percentages for 2012 were 72, 10 and 19, suggesting a considerable shift away from casual/contract arrangement in favour of permanent employment.

- A regular daytime shift was the most common work schedule for all direct care occupations. Rotating shift patterns were the norm for a fifth of nurses and PCAs.

- There are indications of potentially underutilised labour supply as there are more workers who want to work more hours than workers who want to work fewer hours. Although 56 per cent of the residential workforce are happy with their current hours of work, 14 per cent want to reduce their hours, and 30 per cent want to increase them.

- Around a tenth of the residential workforce reported more than one current job.

- Eighty per cent of workers had undertaken training over the previous 12 months, with mandatory training the most common form of training. Dementia and palliative care were seen as priority areas for future training.

- Aged care work was a first occupation for only a small minority of workers. Apart from nursing, there were no clear pathways into aged care for other occupational groups. The aged care sector draws its workers from the broader labour market.

- Attachment to the sector measured by previous paid work in aged care was at its highest for RNs (70 per cent) above half for ENs and AHs (both at 55 per cent) and at its lowest for PCAs (35 per cent). The primary reasons provided for changing aged care employer included personal circumstances and working conditions.

- A tenth of the residential workforce was currently seeking alternative work. Most residential workers (82 per cent) expected to still be with their current employer after 12 months. Only 4 per cent of employees reported intentions to leave the aged care sector altogether.

- Relatively high levels of overall job satisfaction were reported by workers. However, when looking at satisfaction with specific aspects of their job, aged care workers were least satisfied with their total pay and with the time available to them to care for residents.

- The most prevalent unusual job demands made of workers were related to changes in work patterns (due to unanticipated needs of residents, or variations on hours, or location).

- Fourteen per cent of workers reported sustaining a work-related injury or illness over the previous 12 months, most commonly sprains/strains and chronic joint/muscle conditions.

- Most residential facilities (91 per cent) employed at least one PCA from a CALD background, most commonly from India and the Philippines.

- The employment of CALD PCAs was widely seen as offering benefits to a facility – these benefits included enhanced cross-cultural understandings and activities. About a third of facilities reported difficulties in employing CALD PCAs, with communication issues the most commonly stated difficulty.

3.1 Introduction

This chapter provides detailed information about the residential aged care workforce using responses from both workers (N=8,885) and facilities (N=2,240). The census and survey captured information on the main occupational groups within aged care. In selected tables we provide details on each of these occupations (including, as in 2012, Nurse Practitioners and Allied Health Assistants). However, given the relatively low proportion of these latter occupations, most tables in the report combine Nurse Practitioners with Registered Nurses, and Allied Health Assistants with Allied Health Professionals.

We begin the chapter by providing an overview of the residential workforce and the socio-demographic characteristics of the workers themselves. The main characteristics of aged care work are then discussed including employment arrangements, wages, multiple job holding and training. The next sections of the chapter explore career pathways into and out of aged care, the experiences of residential aged care work (job satisfaction and job demands), and the extent of work-related injuries and illness in the sector. The chapter finishes with a focus on workers from culturally and linguistically diverse backgrounds.

3.2 Total Employment and Main Workforce Characteristics

In this section we provide an overview of the residential aged care workforce including the overall size of the PAYG workforce and the different occupational groupings. We then examine the main socio-demographic characteristics of the residential workers themselves – their age, gender, ethnicity, cultural background, health and education.

3.2.1 Total Employment

In order to undertake workforce planning and development effectively it is important to understand the size and composition of the existing workforce. Our estimates of the residential aged care workforce are based on information obtained from the census of residential facilities.

Total PAYG employment in residential aged care in 2016 is estimated to be 235,764 workers, of which 153,854 are in direct care roles. Table 3.1 indicates that the whole residential aged care PAYG workforce is estimated to have grown by 17 per cent since 2012 (from 202,344 to

235,764), and by about 50 per cent since 2003. The growth in residential direct care employment is estimated to have been lower, at 5 per cent between 2012 and 2016, falling from 10 per cent between 2007 and 2012, and 15 per cent between 2003 and 2007. In total, residential direct care employment grew 33 per cent from 2003 to 2016.

The estimated proportion of the residential aged care workforce working in direct care roles continues to fall. In 2016, 65 per cent of residential aged care employees work in direct care roles, compared with 73 per cent in 2012, 76 per cent in 2007 and 74 per cent in 2003.

Table 3.1: Size of the residential aged care workforce, all PAYG employees and direct care workers: 2003, 2007, 2012 and 2016 (estimated headcount)

Occupation	2003	2007	2012	2016
All PAYG employees	156,823	174,866	202,344	235,764
Direct care employees	115,660	133,314	147,086	153,854

Source: Census of residential aged care facilities (weighted estimates).

3.2.2 Occupation

The occupational composition of the headcount of residential direct care employees is presented in Table 3.2. Personal Care Attendants (PCAs) are the largest occupational group in residential aged care (70 per cent) and they continue to grow both numerically and as a proportion of the residential aged care workforce. The number of residential aged care PCAs has grown by 7,814 since 2012.

The number of Registered Nurses (RNs) also rose by 539 between 2012 and 2016, reversing some of the decline in numbers observed between 2003 and 2012. Their share of direct care employment was 15 per cent (unchanged from 15 per cent in 2012). The number of Nurse Practitioners rose since 2012, from 294 to 386, however they still only make up a very small proportion of the workforce (0.3 per cent). The estimated number of Nurse Practitioners (NPs) will be imprecise as it is based on a very small number of observations, so strong conclusions about growth in this occupation cannot be drawn.

The number of Enrolled Nurses (ENs) has fallen by 1,218; as a proportion of the workforce, they have decreased from 12 per cent to 10 per cent. The Allied Health (AH) employment categories also experienced a decline, but most of this was for Allied Health Professionals which fell by 438 workers (falling from 2 per cent to 1 per cent share of the direct care workforce).

The overall picture in Table 3.2 suggests that residential facilities continue to rely increasingly on PCAs to provide direct care to residents. There has been some increase in the number of RNs, but there has been a corresponding and larger fall in the number of EN. PCAs are the only residential direct care occupational category to substantively raise its share of employment since 2012, with the PCA share rising by 2 per cent.

Table 3.2: Direct care employees in the residential aged care workforce, by occupation: 2003, 2007, 2012 and 2016 (estimated headcount and per cent)

Occupation	2003	2007	2012	2016

**In 2003 and 2007 both of these categories were combined under 'Allied Health'.*

Table 3.3 shows the estimated full-time-equivalent (FTE) direct care workforce. There has been a modest increase in the estimated number of FTE employees in direct care roles since 2012. The increase in direct care employment of 3,097 between 2012 and 2016 is comparable to the increase between 2003 and 2007 of 2,843.

Comparing the percentages in Tables 3.2 and 3.3 suggests that the distribution of residential FTE direct care workforce (presented in Table 3.3) is very similar to that of the headcount of the direct care workforce (Table 3.2). The rate of increase in the residential FTE direct care employees was 3.3 per cent, smaller than the corresponding 4.6 per cent headcount increase. This suggests that there has been growth in part-time employment during this period, or more conservatively, an increase in the proportion of workers employed for fewer hours.

Table 3.3: Full-time equivalent direct care employees in the residential aged care workforce, by occupation: 2003, 2007, 2012 and 2016 (estimated FTE and per cent)

Occupation	2003	2007	2012	2016

Figure 3.1: Share of the occupations for the residential direct care employees (headcount and FTE, per cent)

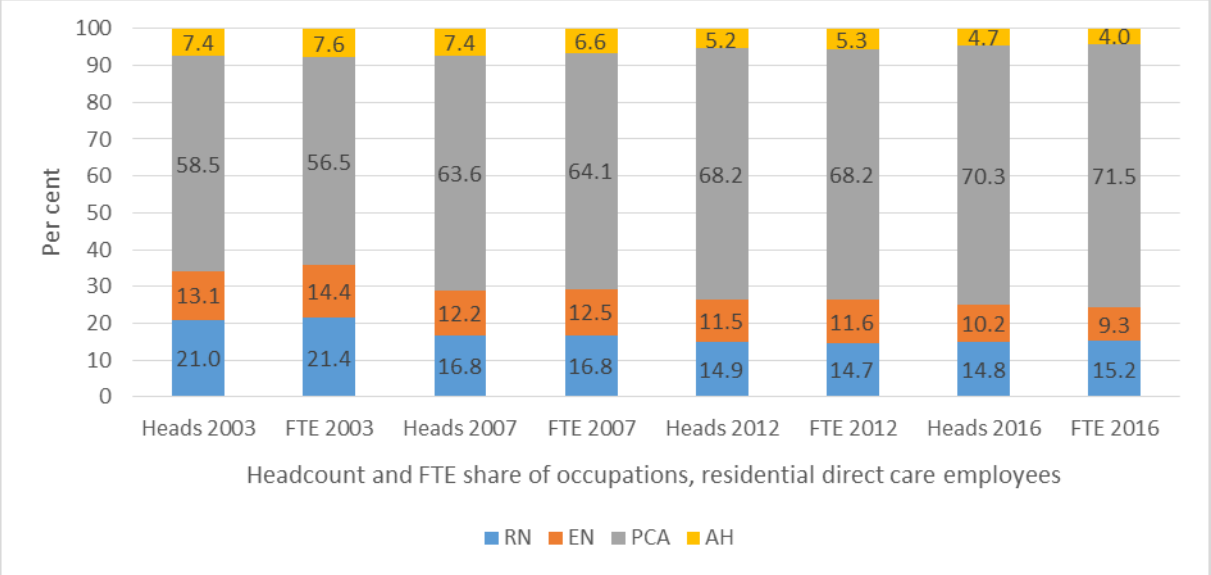

Figure 3.2: Number of the occupations for the residential direct care employees (headcount and FTE)

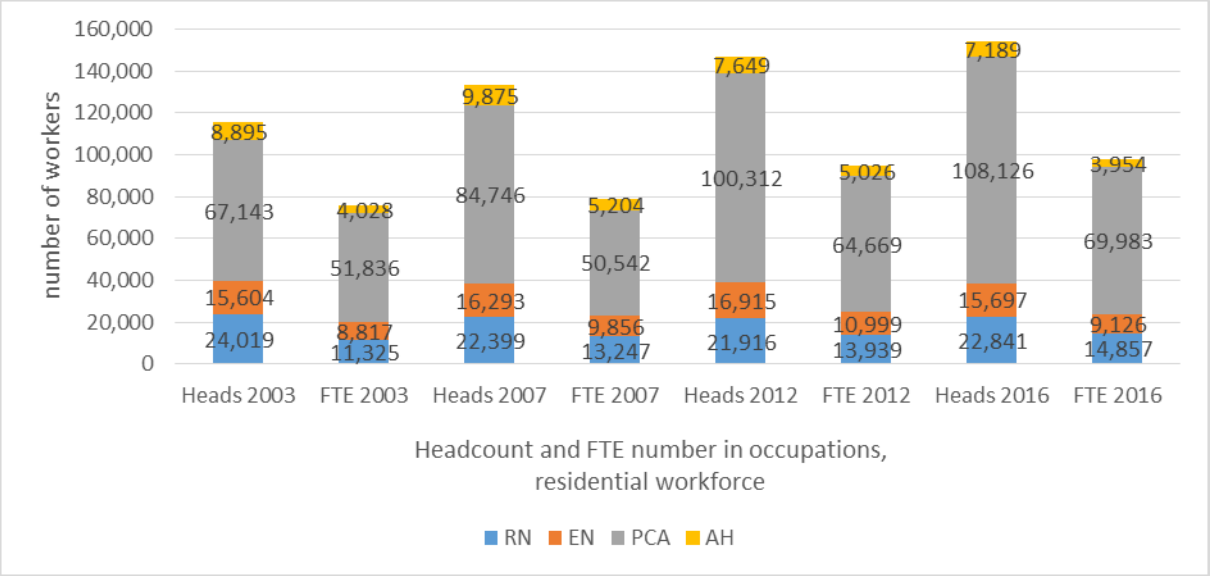

Note: Nurse Practitioners and Registered Nurses were combined under 'Registered Nurse' in 2016 in Figure 3.1 and Figure 3.2. Allied Health Professionals and Allied Health Assistants were combined under 'Allied Health' in 2003, 2007, 2012 and 2016 in Figure 3.1 and Figure 3.2.

The shares of non-direct care occupations are shown in Table 3.4 and are mostly unchanged compared with 2012. The majority of employees working in non-direct care occupations are ancillary workers, and they make up 69 per cent of the non-direct care workforce. There has been a very small increase in the share of care manager/coordinators and management (by 0.7 and 0.5 per cent respectively) and a corresponding small decrease in the share of ancillary workers (from 70 per cent to 69 per cent) and spiritual/pastoral care workers (from 2 per cent to 1 per cent).

Table 3.4: Employees not providing direct care in the residential aged care workforce, by occupation: 2012 and 2016 (per cent)

Occupation	2012	2016
Care Manager/Co-ordinator	6.6	7.3
Management	8.8	9.3
Administration	12.6	12.8
Spiritual/pastoral care	1.7	1.2
Ancillary care	70.4	69.3
Total (weighted)	**100**	**100**

3.2.3 Age and Gender

Previous iterations of the NACWCS conducted in 2003, 2007 and 2012 indicated that the residential aged care workforce was ageing and was, on average, older than the Australian workforce as a whole. In 2016, however, the age of the residential direct care workforce is slightly younger than in previous years.

Table 3.5 and Figure 3.3 show that in 2016 27 per cent of the direct care workforce was aged 55 years or over as in 2012. However, in contrast, the proportion of the workforce under the age of 35 years has risen to 25 per cent in 2016 (up from 19 per cent in 2012) exclusively due to an increase among those aged 25-34 years (from 12 per cent in 2012 to 19 per cent in 2016). The main loss these younger workers are replacing is in the 45–54 year age range which has fallen from 33 per cent (column 3) in 2012 to 28 per cent (column 4) in 2016.

The age distribution of the workforce who have been recently hired (in employment for 12 months or less), presented in columns 5-8 of Table 3.5, emphasises that new hires are a key source of the observed change in the age structure of the workforce. Table 3.5 clearly shows the increased hiring of younger workers within the sector (particularly those aged 25-34 years). Given the strong retention record of the sector, this is an important development, also because younger workers are typically more amenable to up-skilling and to more specialised training. The age group of workers aged 34 years or younger (adding the first two rows) constitutes 46 per cent of all recent hires (column 8), an increase in this share from 36 per cent in 2012 (column 7). This 10 per cent share increase can be decomposed into a rise from 19 to 31 per cent for recent hires aged 25-34 years and a drop from 18 to 16 per cent for recent hires aged 16-24. In contrast the proportion of recent hires aged 55 years and over remained unchanged between 2007 (column 6) and 2012 (column 7) at around 15 per cent and fell slightly to 13 per cent in 2016 (column 8). The share of recent hires in the 45–54 year age group also fell from 25 per cent in 2012 to 22 per cent in 2016. Figure 3.3 also reflects these changes in the share of each age group over time.

Table 3.5: Age distribution of the residential direct care workforce, all direct care employees and recent hires: 2003, 2007, 2012 and 2016 (per cent)

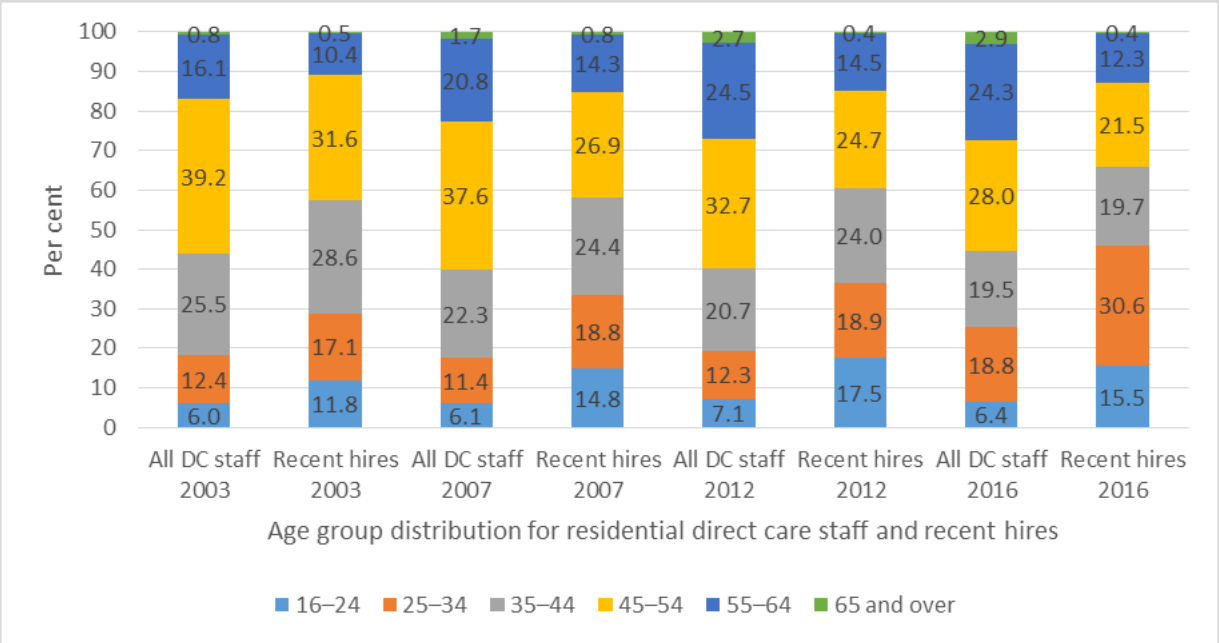
Figure 3.3: Age distribution of the residential aged care workforce: 2003, 2007, 2012 and 2016 (per cent)



The median age (the mid-point where half of the sample are younger and the other half are older) of the residential workforce for each of the occupations, is shown in Table 3.6. This confirms that the workforce is becoming younger. Compared to 2012, the median age of the residential direct care workforce has decreased from 48 years to 46 years. Looking at column 1, with a median age of 46 years in 2016, PCAs are the youngest of the occupational groups (one year less than the median age of PCAs in 2012); RNs are similar with a median age of 47 in 2016 (lower than their median age of 51 in 2012). Workers in the other occupations have a median age of 50 years in 2016 (unchanged since 2012 for AH but slightly higher for ENs). However, Table 3.6 (columns 2 and 3) clearly demonstrates that workers recently recruited into residential aged care are younger than the direct care workforce overall (36 years compared to 46 years); the extent of this differs by occupation. RNs have the oldest median age across occupations for recent hire workers (42 years). This is in contrast to the relatively youthful median age of recently hired PCAs (35 years) and AH workers (33 years).

Table 3.6: Median age of the residential direct care workforce (number of years), by occupation, all direct care employees and recent hires: 2012 and 2016

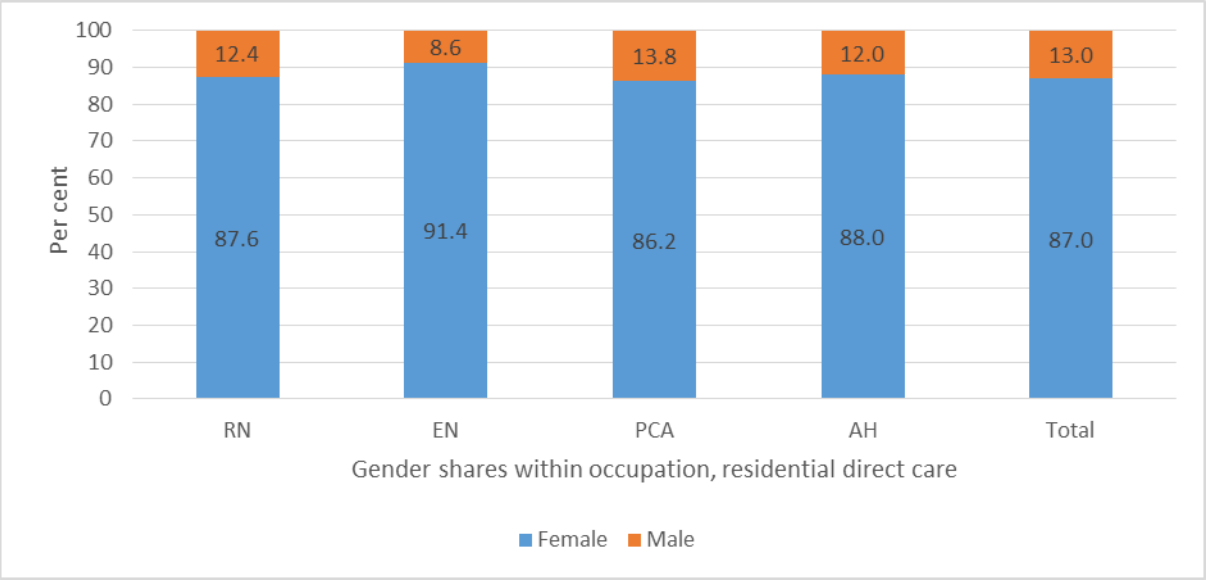
**Recent hires have been employed for 12 months or less.*

While the share of the male workers within the aged care sector has been increasing slowly over time, Figure 3.4 shows that the residential direct care workforce in 2016 remains predominantly female, (with 87 per cent female direct care workers). Among the different occupational groups, ENs have the smallest proportion of male workers at 9 per cent.

Figure 3.4: Gender distribution of the residential aged care workforce: 2016 (per cent)



3.2.4 Country of Birth

Between 2007 and 2012 there was a slight rise in the proportion of the residential direct care workforce that was overseas born (from 33 to 35 per cent). This rise has not continued; the proportion of the residential workforce born overseas has fallen slightly from 35 per cent in 2012 to 32 per cent in 2016 (see row 'other' in Table 3.7). This suggests perhaps that the retention of Australian born direct care workers has improved compared to that of the overseas born workers. However, a different picture emerges when examining the country of birth of

recently hired workers. The proportion of overseas born new hire workers has shown a continual rise from 34 per cent in 2007, to 37 per cent in 2012 and 40 per cent in 2016.

Source: Survey of residential care workers.
**Recent hires have been employed for 12 months or less.*

The distribution of the residential aged care workforce born overseas, by occupation, is explored in Table 3.8. The census form asked facilities to provide the numbers of workers from a culturally and linguistically diverse background (CALD) for each occupation. The worker survey also asked workers to state where they were born and whether they spoke a language other than English. Although not directly comparable, these questions provide different perspectives on the level and distribution of the residential direct care workforce that were born overseas.

Table 3.8 shows that 29 per cent of all workers are migrants (column 1) and that their occupational distribution is broadly similar to that of the overall direct care workforce as reported in Table 3.2, although a slightly higher proportion of the migrant workers are RNs (20 per cent against 15 per cent in the general direct care workforce).

There is a difference in the overall proportion of CALD employees in the residential workforce (column 3), with facilities indicating that 26 per cent of their workers were in the CALD category, while worker responses (column 2) indicated that 22 per cent were both migrant and spoke a language other than English. Care needs to be taken in making direct comparisons of these proportions because they measure slightly different things (but the difference, while noted, is relatively small).

Table 3.8: The CALD residential direct care workforce, by occupation, comparing responses from all workers and all facilities: 2016 (per cent)

Occupation	Worker (migrant)[1] (Column 1)	Worker (migrant + LOTE)[2] (Column 2)	Facility (CALD)[3] (Column 3)
% of direct care employees	28.7	22.2	26.2
Distribution:			
Registered Nurse	19.8	19.8	18.1
Enrolled Nurse	6.0	4.8	5.2

Allied Health	3.9	3.3	2.7
Total	**100**	**100**	**100**

Source: Survey of residential care workers, Census of residential aged care facilities.
1. Workers who report having migrated to Australia.
2. Workers who report being both migrant and speaking a language other than English.
3. Facilities that report employees from culturally and linguistically diverse backgrounds.

In 2016 (as in 2012) the worker survey asked migrant workers who spoke a language other than English how long they had been living in Australia. Although not precise, this allows exploration of the extent to which workers are likely to be familiar with English as a language

and with Australian customs and norms. Table 3.9 shows that in 2016 39 per cent (a lower share compared to the 52 per cent in 2012) of all migrant workers speaking a language other than English have been in Australia for over 10 years. In contrast, in 2016 a total of 31 per cent (lower than the 35 per cent in 2012) have been here for 5 years or less. Of the occupational groups, more PCAs have been in Australia for 5 years or less (34 per cent in 2016, slightly fewer than the 39 per cent in 2012), while similarly in 2016 to 2012, a higher share of nurses and AH workers have been in Australia for more than 10 years.

Table 3.9: Time spent in Australia for migrant residential direct care workers who speak a language other than English, by occupation: 2012 and 2016 (per cent)

	0–2 years	3–5 years	6–10 years	>10 years	Total

3.2.5 Aboriginal and Torres Strait Islander Workforce

Table 3.10 compares responses from the workers survey (column 1) and the facilities census (column 2) regarding the distribution of Aboriginal and Torres Strait Islander people in the residential direct care workforce. The proportion of Aboriginal and Torres Strait Islander people in the residential direct care workforce is low, representing 1 per cent of the workforce and 2 per cent of surveyed workers. This is similar to the corresponding figure in 2012. We note that the small sample size makes these estimates rather imprecise. With this caveat in full view we discuss the relevant parts of Table 3.10. Residential facilities report in 2016 that 1 per cent of the residential direct care workforce (approximately 1,848 workers) are of Aboriginal and Torres Strait Islander descent (Table 3.10 Facility, column 2). Amongst the Aboriginal and Torres Strait Islander workforce, around 10 per cent are RNs, 7 per cent ENs, 81 per cent PCAs, and 2 per cent AH workers.

Compared to the overall residential direct care workforce (Table 3.2), Aboriginal and Torres Strait Islander workers are more likely to be employed as PCAs and are consequently less likely to be in a nursing or allied health role. It is not clear whether this is a result of a shortage of Aboriginal and Torres Strait Islander people with the appropriate qualifications or that those who have the qualifications choose not to work in aged care. However, this imbalance in occupational distribution has improved since 2012. Now a higher proportion of Aboriginal and Torres Strait Islander workers are nurses (17 per cent from 12 per cent) and a lower proportion are PCAs (81 per cent from 85 per cent).

Table 3.10: The Aboriginal and Torres Strait Islander residential direct care workforce, by occupation, comparing facility and worker responses: 2012 and 2016 (per cent)

	Worker survey (Column 1) Workforce	Facility census (Column 2) Workforce

Source: Survey of residential care workers, Census of residential aged care facilities.
**Because the numbers of Nurse Practitioners are small, Nurse Practitioners are included with RNs.*

3.2.6 Health

Health status impacts upon an employee's capacity to undertake work tasks and, ultimately, their job retention. As in previous years, a standard measure of self-assessed health drawn from the ABS is used (rating health as excellent, very good, good, fair or poor). The proportion of employees indicating in 2016 that they are in either 'very good' or 'excellent' health is always greater than 60 per cent, but for recently hired PCAs it is much higher at 73 per cent (Table 3.11). As recently hired PCAs had a median age of 35 years (Table 3.6), the better reported health of PCAs likely reflects their younger age. Very few direct care workers have fair or poor health (fewer than 10 per cent, except for recently hired AH workers at 11 per cent) which may also be indicative of the health requirements for working in aged care.

Table 3.11: Self-assessed health of the residential direct care workforce, all direct care employees and recent hires, by occupation: 2016 (per cent)

Self-assessed health	All direct care employees			Recent hires*		
	Nurse	PCA	AH	Nurse	PCA	AH
Excellent	17.4	19.8	16.9	20.7	26.9	18.2
Very good	44.0	41.3	47.7	42.9	46.5	50.7
Good	32.7	31.1	26.4	31.4	21.8	19.6

Source: Survey of residential care workers.
**Recent hires have been employed for 12 months or less.*

3.2.7 Education

This section focuses on the formal education of the workforce in 2016. The expanded number of questions asked about education and training which started in 2012 has been continued in 2016; this includes the collection of information about the qualifications of care managers and care leaders. Additional categories of qualifications related to disability care were added to the education questions in 2016 for the first time.

As shown in Table 3.12, the worker survey asked respondents about the qualifications they had completed post-school (with multiple responses permitted, hence there can be overlap between the shares of each type of qualification held). Looking firstly at the qualifications held by care managers and leaders, different educational pathways were found for these leadership roles. In 2016, the majority of care managers (64 per cent, against 54 per cent in 2012) have at least a degree in nursing, with 18 per cent (similar to the 19 per cent in 2012) holding a Certificate III or IV in management. In comparison, the most common qualification for care leaders in 2016 is a Certificate III (41 per cent, similar to the 42 per cent in 2012) or Certificate IV in aged care (25 per cent, slightly more than the 22 per cent in 2012), yet a substantial minority hold nursing qualifications, and a relatively low proportion hold a qualification in management. This suggests that while residential facility care managers are drawn primarily from nursing (and especially RNs), in contrast residential care leaders are drawn from a wider cross-section of the workforce.

Focusing now on the educational qualifications held by the direct care workforce as a whole, Table 3.12 shows that 90 per cent of these workers hold post-secondary qualifications, indicating widespread engagement in further education. This is a slight increase from 2012 when 86 per cent of workers had post-secondary qualifications (following an earlier increase from 2007 when 79 per cent had these). As might be expected, there is variation between occupations. For example, in 2016 the share of PCAs who had not undertaken further education (13 per cent compared to 16 per cent in 2012) is much higher than that of RNs (3 per cent, the same as in 2012).

The types of qualifications undertaken by direct care workers show there is a quite close correspondence between qualifications and occupations, which is a strong sign for a well-matched and efficient workforce. A high proportion of nurses have qualifications in health-related areas, with RNs having mostly degree-level qualifications, while ENs are more likely to hold a Certificate IV or diploma. A high proportion of PCAs and AH workers hold Certificate level qualifications in Aged Care.

Examining the educational attainments of PCAs further, we see that around two-thirds have a Certificate III in Aged Care (67 per cent in 2016), which is considered to be the standard qualification for working in this occupation. This proportion has stayed constant since 2012, and going back since 2003. In contrast, the proportion of PCAs with a Certificate IV in Aged Care has steadily increased from 8 per cent in 2003 to 20 per cent in 2012 and 23 per cent in 2016.

Residential aged care direct care workers with a disability related qualification (this question was asked for the first time in 2016) are mainly PCAs and AH workers. For PCAs, this qualification is most typically a Certificate III in Disability. AH workers show no concentration in any specific type of disability related qualification. Note that workers can hold more than one qualification type and there can be overlap where Certificate IV holders also have a Certificate III.

Table 3.12: Post-school qualifications completed by the residential direct care workforce, by occupation: 2016 (per cent)

Source: Survey of residential care workers.
**All DCW (direct care workers), does not include care managers or care leaders.*
Note: Because staff can have more than one qualification, the columns do not sum to 100.

The residential facility census also asked facility managers to provide information about the extent to which PCAs working in their facility had completed a Certificate III or IV in Aged Care (Table 3.13). Their responses reinforce the picture of a highly qualified PCA workforce. The proportion of facilities with no PCAs with Certificate III qualifications was 2 per cent, the same as in 2012, but less than half what it was in 2007 (5 per cent). The proportion of facilities with more than three-quarters of PCAs holding a Certificate III rose from 47 per cent in 2007 to 62 per cent in 2012 and rose slightly more to 66 per cent in 2016. While in the past there was a marked decrease in the number of facilities with no PCAs holding a Certificate IV in Aged Care, dropping from 42 per cent in 2007 to 22 per cent in 2012, there was a slight rise to 24

per cent in 2016. The majority of facilities (56 per cent in 2016, slightly fewer than the 58 per cent in 2012) had 1-24 per cent of their PCAs with a Certificate IV.

The survey of residential care workers specifically collected information regarding the undertaking of specialised qualifications in ageing or aged care. Table 3.14 shows that in residential aged care 71 per cent of RNs, 79 per cent of Care Leaders and 63 per cent of Care Managers do not have specialised qualifications in ageing or aged care. As these are the occupations that provide leadership in the provision of care within a residential aged care facility, the extent to which they understand the specific physical and mental health issues facing older Australians is important and relevant. These proportions are very similar or mostly unchanged since 2012. Of those with the specialised aging or aged care qualifications in 2016, palliative care and gerontology are the most prevalent.

The level of study currently being undertaken by the direct care workforce is shown in Table 3.15. Across all occupations fewer residential aged care workers were found to be studying in 2016 compared to 2012 (16 per cent and 22 per cent respectively). In 2016 17 per cent of

PCAs, 12 per cent of RNs, 15 per cent of ENs and 11 per cent of AH workers were engaged in study (in contrast, in 2012, 25 per cent of PCAs, 13 per cent of RNs, 19 per cent of ENs and 21 per cent of AH workers were engaged in study).

3.3 The Main Characteristics of the Work

The experience of aged care work is strongly impacted upon by the context within which the work takes place. In this section the focus is on aspects of work that are primarily shaped by the employer, comprising the forms of employment offered, the shifts and hours worked, and the extent of training provided. The proportion of workers who hold multiple jobs is also included because this is an indicator of whether their current job is meeting their needs.

3.3.1 Employment Arrangements and Hours Worked

The employment arrangements and working hours available in aged care are important factors affecting the attractiveness of work in the sector. In 2016, as was the pattern since 2003, the majority of workers in all residential aged care direct care occupations are employed on permanent part-time contracts (Table 3.16), with these now forming 78 per cent of the workforce employment arrangements, compared with 72 per cent in 2012, and 69 per cent in 2007. We also note a further shift away from casual/contract arrangements. In 2016 these arrangements represented 10 per cent of all workforce employment arrangements (substantially less than the 19 per cent in 2012 and the 22 per cent in 2007). Staffing within residential aged care is therefore derived from an overwhelmingly part-time direct care workforce.

There also continue to be occupational differences relating to the form of employment in 2016 as in 2012, with a higher proportion of RNs than other occupations employed on a permanent full-time basis (22 per cent in 2016, up from 19 per cent in 2012). The proportion of casual or contract employment was halved between 2012 and 2016 for all occupations, with the exception of AHs where it was reduced to a third (from 15 per cent to 5 per cent). These jobs appear to have shifted to permanent part-time employment.

Table 3.16: Form of employment of the residential direct care workforce, by occupation: 2012 and 2016 (per cent)

	Permanent full-time	Permanent part-time	Casual or contract	Total

Source: Census of residential aged care facilities.
Row percentages shown.

Table 3.17 presents work schedules by occupation. Between 2007 and 2012 there was a marked change in the types of shifts worked, with a move towards employing more nurses on regular shifts rather than rotating ones (a change that was also observed in previous years between 2003 and 2007). This long-standing trend appears to have been reversed in 2016, with the proportion of nurses working a regular daytime shift having fallen to 61 per cent, accompanied by a corresponding rise in the proportion working a rotating shift (19 per cent in 2016 up from 15 per cent in 2012). The work schedules of PCAs and AH workers do not seem to be changing over time with most of the shifts that are not regular daytime shifts being worked by PCAs and with close to all AH workers working regular daytime shifts.

Source: Survey of residential care workers.
Table 3.19 below show the hours worked by employees in residential facilities.

The left side panel of Table 3.18, shows the actual hours worked per week. Over all direct care occupations, 44 per cent of the residential aged care workforce is working for 35 hours or more per week, which falls within the ABS definition of full-time work (this is slightly less than the 46 per cent in 2012). The difference between the proportions reporting to be working

less than 35 hours (35 per cent for RNs, 51 per cent for ENs, 62 per cent for PCAs and 45 per cent for AH workers) in Table 3.18 and those reporting a permanent part-time employment arrangement (68 per cent for RNs, 79 per cent for ENs, 80 per cent for PCAs and 75 per cent for AH workers in Table 3.16). The difference indicates that many people are putting in full-time working hours (i.e. more than 35 hours) while employed on a permanent but part-time contract.

There is some variation in the hours worked across occupational groups. RNs form the occupation with the highest proportion of workers working long hours (>40 hours per week, 23 per cent), while PCAs are most likely to be working for 16–34 hours per week (57 per cent). This suggests a possible skills shortage in RNs and excess capacity among PCAs. This overall picture is similar to 2012.

The columns in the right side panel of Table 3.18, show the hours that employees would prefer to work by the same groups and occupations. As similar to 2012, the hours preferred by the largest proportion of workers are 35–40 hours per week (47 per cent of workers). Table 3.18 highlights some discrepancies between the hours actually worked by aged care workers and the number of hours they would rather work. While only 5 per cent of the RNs express a preference for working more than 40 hours a week, 23 per cent of them report working in excess of 40 hours. A large discrepancy is also seen for AH workers (with 5 per cent preferring to work more than 40 hours per week compared to 5 per cent who actually do). These figures potentially indicate that there is a situation of over-utilisation of some types of aged care workers such as RNs and AHs which may reflect tensions on the labour market, such as skill shortages or other demand-related factors such as rigidities of employment contracts. This is not a new picture and it suggests either the presence of managerial constraints to address these issues or that the training and attraction strategies of the aged care sector have not worked as well as desired.

Table 3.18: Actual working hours and preferred working hours of direct care workers in the residential aged care workforce, by occupation: 2016 (per cent)

Occupation	Actual hours per week				Preferred hours per week			
	1–15	16–34	35–40	>40	1–15	16–34	35–40	>40
Registered Nurse	3.0	32.2	41.8	23.0	2.3	36.6	55.8	5.3
Enrolled Nurse	3.4	47.6	38.2	10.8	3.3	47.0	42.7	7.1
Personal Care Attendant	4.6	57.2	31.8	6.4	2.3	44.7	45.1	7.9
Allied Health	4.7	40.3	43.5	11.6	3.5	36.8	54.3	5.4
All occupations	4.3	51.8	34.4	9.5	2.4	43.4	46.8	7.3

Source: Survey of residential care workers.
Row percentages shown).

In examining the hours worked mismatch shown by the difference between actual and preferred hours worked, Table 3.19 shows the extent of the mismatch in terms of the preferred change in the number of hours (both positive and negative) and how these compare to previous years. Over all, the picture has been stable over time, with between 45-50 per cent wanting different hours. Of these just under two thirds want to increase their hours and just below one third want to decrease them.

The information in Table 3.19 indicates that, similar to 2012, 56 per cent of the workforce are happy with their current hours. Among the 44 per cent of the direct care workforce who reported in 2016 that they would like to change their hours, 14 per cent want to work fewer hours against 30 per cent who would prefer to work longer hours. The proportion of workers wanting to increase their hours has increased slightly since 2012 (from 30 per cent to 27 per cent). Residential direct care workers preferring an increase in hours are most likely to want a relatively small increase per week of 1–5 hours. The reasons for hours worked not being perfectly matched may stem from the inflexibility of employment contracts and the needs of

the employer (the labour demand side), but they may also stem from the specific personal and family circumstances of the workers (the labour supply side). Table 3.19 presents the net mismatch, reflecting all demand and supply pressures. Further investigation would be needed in order to understand what the best policy would be to alleviate the mismatch.

Table 3.19: Preferred change in working hours of the residential direct care workforce: 2003, 2007, 2012 and 2016 (per cent)

Desired change in hours	2003	2007	2012	2016
10+ hours less	5.5	4.0	6.2	4.9
1–9 hours less	8.5	7.5	11.0	9.1

3.3.2 Wages

At the time of the 2012 NACWCS, the Australian Productivity Commission Report (2011) highlighted the need for improved wage rates within aged care in order to improve the attractiveness of the sector to current and future workers. The wages paid to direct care workers in aged care continues to be a pertinent issue and the 2016 survey again collected information on earnings within the sector. Table 3.20 presents the reported gross median weekly earnings[4] for each occupation participating in the residential aged care workers survey by four groupings of number of hours worked per week (1-15, 16-34, 35-40, and more than 40).

In 2016, the gross median weekly wage reported by RNs is $1,352 per week. As discussed above, a high proportion of RNs work more than 35 hours per week and we expect this to be reflected in their median weekly wage. However, even when working part-time, RNs report a higher median weekly wage than other occupations. This was also the case in 2012.

More than half (57 per cent) of residential PCAs work 16–34 hours per week (Table 3.18), and they receive a median weekly wage of $689 (Table 3.20). In contrast, 49 per cent of all ENs work 35 hours or more (Table 3.18), with a median weekly wage of between $1,000 and $1,050 (Table 3.20). While AH Professionals ($820) have a higher median wage than AH Assistants ($750), the difference is relatively small. This is somewhat surprising given the higher qualifications required of AH Professionals. Except for those AH Professionals working more than 40 hours, their median wage is similar to that of PCAs than of ENs or RNs. This is unchanged from 2012. The median wage for AH Assistants is lower than that of any other occupation across all hours worked except for those working more than 40 hours per week, and this is also unchanged from 2012. Part of the reason for AH workers having lower median wages than other occupations may be due to the fact that most work a regular daytime shift (94 per cent, Table 3.17) and would not receive any financial benefits of working evenings, nights or being on call.

[4] As in 2012, the calculation is undertaken within each occupation group. Workers are asked in the survey about the dollar amount of their most recent pay (before tax and other deductions), and over what period those wages were for (week, fortnight, month). The amount is divided by the relevant number to calculate a weekly wage variable (divide by 2 for fortnightly pay, by 4 for monthly).

Table 3.20: Median weekly earnings (gross) of the residential direct care workforce, by occupation and working hours: 2016 ($ per week)**

Occupation	Hours per week				All hours
	1–15	16–34	35–40	>40	
Nurse Practitioner	*	*	*	*	1,000
Registered Nurse	525	1,050	1,493	1,600	1,352
Enrolled Nurse	355	800	1,050	1,000	946
Personal Care Attendant	389	689	860	850	750
Allied Health Professional	340	692	969	942	820
Allied Health Assistant	310	627	855	868	750
All occupations	400	709	940	1,000	800

Source: Survey of residential aged care workers.
**Because the numbers of Nurse Practitioners are small, the wages earned have not been reported for individual categories.*
***As in 2012, the calculation is undertaken within each occupation group. Workers are asked in the survey about the dollar amount of their most recent pay (before tax and other deductions), and over what period those wages were for (week, fortnight, month). The amount is divided by the relevant number to calculate a weekly wage variable (divide by 2 for fortnightly pay, by 4 for monthly).*

3.3.3 Multiple Job Holding

The extent to which employees hold multiple jobs is also an indicator of spare capacity within the existing workforce. In 2016, approximately 9 per cent of residential direct care employees have more than one job (Table 3.21). The figure is roughly the same as in 2012. For those concerned, most of the 'other' jobs held by RNs, PCAs, ENs and AH workers are also in residential aged care (4 out of the 9 per cent), a few were in home care and home support (1 per cent), while a further 4 per cent had another job outside of the aged and disability care sectors. Multiple job holdings within aged care reinforce the picture of a loyal sector workforce.

In the 2016 survey, an additional category was added to the question eliciting the number and nature of the jobs currently held by aged care workers. The workers could report whether they had another job in disability care. This information is particularly relevant given the roll out of the National Disability Insurance Scheme (NDIS) which has the potential to generate labour mobility from the aged care sector. The figures show no evidence that aged care workers who hold multiple jobs are now taking up jobs in the disability care sector (the categories that are in common between 2012 and 2016 do not show significant distributional shifts). Since the NDIS has not yet been fully rolled out, it is too early to make any statements about the effect of the NDIS on the mobility of the aged care workforce.

Table 3.21: Prevalence of multiple job-holding among residential direct care workers, by occupation: 2012 and 2016 (per cent)

Jobs held	RN	EN	PCA	AH	All occupations
2016					
Only have one job	88.8	91.3	91.3	89.6	90.9

** 'Other job in disability care' and 'Other job not in aged care or disability care' only asked in 2016.*

Training

Training is an important activity which contributes to the skilling of the aged care workforce. Previously in Section 3.2.7 the extent of the post-school qualifications held by the residential direct care workforce was examined. Now in Table 3.22 we show the training undertaken 'on the job' or to maintain these qualifications, for example, continuing and professional development (CPD). The residential worker survey asked workers about their participation in different forms of training and what the purpose of this training was. It also asked them about the areas of training they thought they needed in the next 12 months, and this question was also asked of facilities with respect to the additional training they thought was required for their PCA workforce. These questions were repeated in 2016 after they were asked for the first time in 2012.

The majority of workers had engaged in CPD (58 per cent) and training (80 per cent) in the past 12 months. Mandatory training was the most common form of training undertaken, with 76 per cent of the workforce having participated in this type of training in 2016. Some differences can be observed between occupations, with participation in non-mandatory training undertaken by a higher proportion of RNs (38 per) than workers in other occupations. The level of engagement in CPD was lower for PCAs than for other occupational groups (47 per cent). Overall, the 2016 figures differ very little from the situation observed in 2012.

Table 3.22: Participation in training and/or continuing professional development (CPD) by residential aged care employees in the past 12 months, by occupation: 2012 and 2016 (per cent)

	RN	EN	PCA	AH	All occupations
2016					
CPD	91.6	85.4	46.7	63.6	57.8
Training:

Non-mandatory training	40.8	32.6	21.5	32.9	26.5

Source: Survey of residential aged care workers.
Note: Multiple response allowed, columns will not sum to 100.

As Table 3.23 shows, those residential aged care workers who did participate in training stated that developing or improving their skills either for their current job or in general was the main motivation for undertaking training. Another widely nominated aim was to maintain professional/occupational standards; this was particularly important for RNs and ENs. Slightly more than half of the workers who undertook training in each occupational category indicated the need to meet accreditation requirements as their purpose for engaging in training.

A less frequently nominated reason for undertaking training was to address health and safety concerns, although this was more commonly indicated by PCAs (25 per cent) and AH workers (20 per cent) than RNs (14 per cent) and ENs (15 per cent). Smaller proportions of the workforce who undertook training viewed engaging in training as a means to help directly with career development in terms of securing a future job or promotion in residential aged care or to help get started in their aged care job. This pattern is very similar to that of 2012.

Table 3.23: Stated aims of training undertaken by the residential direct care workforce that undertook training during the last 12 months, by occupation: 2016 (per cent)

Aim of training	RN	EN	PCA	AH
Improve skills in current job	65.6	65.5	71.3	64.3
Develop skills generally	51.8	49.2	49.0	44.6
Maintain professional/occupational standards	74.9	69.5	53.2	56.8
Meet accreditation requirement	50.1	53.4	54.9	56.7
Safety/health concerns	14.0	15.4	25.2	20.3
Prepare for future job/promotion	12.2	8.2	8.8	9.0
Help get started in job	6.5	3.6	7.4	7.2
Other	7.1	4.5	4.1	3.6

Source: Survey of residential aged care workers.
Note: Multiple response allowed, columns does not sum to 100.

The types of training viewed as most needed by residential direct care workers are shown in Table 3.24. There was variation between the occupational groups. Residential workers viewed

dementia training and palliative care and, to a lesser extent, wound management, as priority areas. Half of RNs also sought training in management and leadership. The relatively high proportion of workers responding to a number of areas in which training is needed, suggests a willingness to engage in such training where it is offered. The separately gathered responses from residential workers and residential facilities about the training most needed for PCAs show that they are closely matched in terms of priorities, although the extent to which they were nominated differed. The three areas of training viewed as most needed were dementia training, palliative care and wound management. This pattern is similar to that of 2012.

Table 3.24: Areas of training identified as most needed in the next 12 months for the residential direct care workforce, by occupation, comparing facility and worker responses: 2016 (per cent)

Area of training	RN	EN	PCA		AH
	Workers	Workers	Workers	Facilities*	Workers
Dementia training	51.3	54.9	63.3	92.7	68.1
Palliative care	45.9	58.2	52.0	72.4	32.1
Management and leadership training	50.2	27.8	17.5	13.7	27.4
Wound management	38.9	57.0	29.3	44.4	4.7
Mental health	21.0	31.2	32.9	28.8	28.2
Allied health	4.3	4.9	9.0	9.1	24.8
Other	6.1	4.3	5.0	15.0	7.0

Note: Multiple responses were allowed, columns will not sum to 100.
**Facilities were only asked about their training requirements for PCAs.*

3.4 Career Paths

This section looks at the pathways into and out of aged care jobs, both within the sector and within the current roles of direct care workers. This information explores the occupational backgrounds of the workforce, when they first considered entering the direct care workforce, how long they have been in the workforce and what their intentions are in the near future. Some of the common pathways for different occupations are identified and areas that have changed or may be of interest for future planning are highlighted. Career paths can also be good indicators of the attractiveness of a sector and of the loyalty of the workforce to aged care.

3.4.1 Into Aged Care

For about 8 to 9 per cent of residential direct care workers, aged care work is their first occupation, that is, they have not had another occupation before. The proportion is greater for PCAs (14 per cent) than other workers (Table 3.25). Slightly more than one-third of PCAs (36 per cent) had a background in sales, hospitality, cleaning or clerical work, all of which are female dominated occupations that require minimal qualifications. Apart from nursing, there is no clear pathway into aged care for the other occupations. This is shown in Table 3.25 by the large share with ‘other’ occupational backgrounds (25 per cent ENs, 31 per cent for PCAs, 30 per cent for AH workers). For RNs, in total 48 per cent came from previous nursing work in acute or community care settings, showing that they come to aged care after having worked for a portion of their career in the same nursing occupation within a different setting. While about a quarter of ENs (18 per cent) share this occupational background, 59 per cent had worked in non-care occupations before entering aged care. AH workers came to aged care from a range of occupations, 12 per cent with a professional background (other than nurse) and another 20 per cent had worked in health and social care occupations.

Table 3.25: Activity prior to first job in aged care of the residential direct care workforce, by occupation: 2016 (per cent)

Last occupation before first aged care job	RN	EN	PCA	AH
No previous paid employment	8.1	9.4	14.2	7.9
Nurse, acute care	41.0	15.3	2.0	3.2
Nurse, community	7.1	2.8	0.8	1.0
Other health care	9.1	6.2	3.3	7.3
Carer in other setting	3.9	4.7	4.9	5.1
Disability care	2.1	2.9	2.6	3.7
Salesperson	2.3	10.1	7.7	6.6
Clerical worker	2.8	5.4	6.8	8.3
Hospitality worker	4.1	9.9	13.6	10.6
Cleaner	1.1	2.6	7.9	2.8
Professional (other than nurse)	2.4	3.2	2.4	11.7
Manager	4.6	1.9	2.7	2.0
Other paid employment	11.4	25.4	31.1	29.8
Total	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.

Table 3.26 presents the age at which workers entered the aged care sector. As noted for Table 3.25, the majority of direct care workers have worked in other areas prior to entering aged care occupations and this may help explain the relatively high median age of the residential aged care workforce (46 years, Table 3.6). The age at which workers enter aged care also helps to explain the overall age structure of the workforce and its sustainability over time. If workers are consistently recruited from older age groups, then the overall higher median age of the workforce may not be a major issue. Table 3.26 shows that in 2016, 35 per cent of the direct care workforce had entered aged care at age 40 years or above, although there is variation between the occupational groups. For PCAs (39 per cent) and AH workers (38 per cent), slightly fewer than 40 per cent of workers had entered aged care at age 40 years or above, while for RNs (24 per cent) and ENs (24 per cent) this share was around a quarter as these occupations had more often started working in aged care when they were younger. For both nursing occupations, around 48 per cent entered aged care before they were 30 years of age. This likely reflects the educational pathway into aged care for RNs whereby they would complete their education and training within other health sectors before entering aged care on graduation (48 per cent, Table 3.25).

Table 3.26: Age at which began working in aged care of the residential direct care workforce, by occupation: 2016 (per cent)

Age (years)	RN	EN	PCA	AH	All
21 or under	15.4	26.2	14.3	16.1	15.7
22–29	33.4	22.1	20.0	24.1	22.3
30–39	27.6	27.3	26.6	21.9	26.6
40–49	16.3	20.6	27.6	26.4	25.3
50+	7.3	3.7	11.5	11.4	10.1
Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.

The age at which workers enter aged care (shown in Table 3.26) is partly reflected in the number of years they are able to remain in the residential aged care workforce (shown in Table 3.27). For example, a relatively high proportion of PCAs had started working in aged care at 40 years or above (39 per cent Table 3.26), and they form the lowest proportion of workers

(11 per cent in 2016 Table 3.27), who had been part of the residential aged workforce for more than 19 years. This latter proportion is far lower than the 17 per cent in 2012 (Table 3.27). In contrast, for both RNs (37 per cent) and ENs (46 per cent), a far greater share have worked in aged care for 14 years or more. The information in Table 3.27 suggests that a relatively high proportion of workers have committed many years to working in aged care, with 42 per cent of the residential aged care workforce (see all occupations in Table 3.27) having worked in the sector for more than 9 years in 2016 (but this was the case for far fewer PCAs, where the share was 35 per cent).

Compared to 2012, time spent in aged care in 2016 is shorter (Table 3.27). In 2016 42 per cent of the direct care residential aged care workforce had more than 9 years' experience in the sector compared to 58 per cent in 2012. This is partly due to the slightly younger age profile of the residential workforce in 2016. In particular PCAs are now being hired at a younger age (the median age of recent PCAs is 35 years, Table 3.6).

Table 3.27: Total time spent working in aged care of the residential direct care workforce, by occupation: 2016 (per cent)

Total time in aged care (years)	RN	EN	PCA	AH	All occupations
1 year or less	6.1	3.0	13.9	9.3	11.5
More than 1 year–4 years	15.6	9.8	23.5	18.5	20.7

3.4.2 Into their Current Job

This section focuses on mobility within the aged care sector. It explores evidence for 'churn' in the residential direct care workforce, whereby when workers leave their job they move between employers within aged care rather than leaving the aged care sector altogether.

Table 3.28 shows that in 2016 43 per cent of the residential direct care workforce had paid work in aged care prior to getting their current job (in 2012 this had been higher at 49 per cent). Nurses in particular had moved from one aged care job to another (paid or unpaid), with 71 per cent of RNs and 60 per cent of ENs having done this. A much lower proportion of PCAs (35 per cent in 2016, much lower than the 41 per cent in 2012) had paid work in aged care before, indicating that a higher proportion had been recruited from other occupations and sectors.

One route into direct care work is to acquire experience through voluntary work, which may be particularly important if a prospective employee had not held a job previously. This was not often the case in 2016 (similar to 2012), but of the occupational groups, higher proportions of PCAs and AH workers (both 5 per cent) than nurses had done unpaid work in aged care prior to getting their current job.

Table 3.28: Whether had worked in aged care prior to current job of the residential direct care workforce, by occupation: 2016 (per cent)

Whether had previous work in aged care	RN	EN	PCA	AH	All occupations
Yes, paid	69.7	55.2	34.6	54.7	42.7
Yes, unpaid	1.2	4.3	4.9	5.2	4.3

Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.

We now focus specifically on workers who started working in their current job in the last five years to provide information about recruitment patterns for the most recent cohort. Table 3.29 shows many direct care workers previously worked within their current facility prior to getting their current job. While between 13 and 20 per cent of workers had a previous relationship with their current facility, the pattern differs according to occupation. The likelihood of having previously had paid work in their current facility is strongest for RNs (16 per cent) and ENs (17 per cent). In contrast, 14 per cent of PCAs held unpaid work prior, compared to 5 per cent who had had paid work. The findings reinforce the discussion above surrounding Table 3.28, in which unpaid work was most often part of the workforce background for PCAs and AH workers. This unpaid work could be due to participation in a volunteer position or from having a placement as part of a training course or qualification.

Table 3.29: Whether had worked in current facility prior to obtaining current job of residential direct care workers employed in the last five years, by occupation: 2016 (per cent)

Whether had previous work in current facility	RN	EN	PCA	AH
Yes, paid	15.8	16.6	4.5	7.8
Yes, unpaid or volunteer	2.7	2.9	13.9	5.6
No	81.5	80.5	81.6	86.5
Total	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.
N=4,147 (weighted).

The residential aged care worker survey asked those workers who had worked in aged care previously why they left that job. Understanding the reasons why workers leave one job and move into another within the same sector can provide insights into what may need to change in order to improve the retention of staff within a facility. Table 3.30 indicates that while some residential direct care staff turnover may be addressed at management level, there can also be other reasons, possibly related to the personal circumstances of workers.

Table 3.30 shows that in 2016, the reasons related to the personal circumstances of employees (e.g. the need to move house, find work closer to home or fulfil caring responsibilities) accounted for around 45 per cent of the main reasons given for leaving a job by PCAs, 35 per cent by ENs, 26 per cent by RNs, and 36 per cent by AH workers. These proportions have changed very little compared to the 2007 and 2012 surveys. This reflects the ways in which paid work is embedded in the broader context of family responsibilities and in the household decisions about where the family live and work (for these mostly female workers in their middle age).

Other key reasons for leaving their last aged care job were related to conditions in the workplace and hence may be addressed by residential aged care staff management. Two reasons stand out as being consistently cited across occupational groups. First is the desire to find more challenging work, which was a particular issue for nurses and AH workers (RNs 15 per cent, ENs 12 per cent, and 16 per cent for AH workers). This could be an indication of there being willingness within the current workforce to upskill themselves and to have more

variety and greater complexity in their work. The second reason for mobility is 'to get the shifts or hours desired' (strongest for PCAs with 18 per cent). As discussed previously in Table 3.19, while 56 per cent of residential aged care workers do not wish to change their working hours, the remaining 44 per cent would prefer a change. Table 3.30 indicates that the share that had changed employers in order to achieve their desired work patterns was 18 per cent for PCAs, and 15 per cent for ENs. Of the remaining reasons, some were more important for particular occupations. For example, a higher proportion of residential aged care RNs cited their reasons as not getting along with management (10 per cent), wanting to achieve higher pay (11 per cent) or because the job was too stressful (7 per cent).

Table 3.30: Main reason for leaving prior aged care job of residential direct care workers with previous experience in sector, by occupation: 2016 (per cent)

Most important reason	RN	EN	PCA	AH
Moved house/location	16.3	21.1	26.6	15.0
To find more challenging work	15.4	12.3	6.2	15.8
To get shifts or hours of work I wanted	7.7	14.8	17.5	10.0
To avoid managers/management I did not get along with or like	9.8	8.3	3.7	4.3
To achieve higher pay	11.2	6.4	4.8	9.5
To be closer to home	7.9	8.4	13.4	12.8
The job was too stressful	6.8	2.6	3.4	2.7
To fulfil care responsibilities (including having a baby)	2.2	5.3	5.5	8.0
Made redundant/retrenched	3.0	5.1	2.5	4.6
Not able to spend sufficient time with residents	0.8	1.2	3.4	2.4
To avoid workmates/colleagues I did not get along with or like	1.6	2.4	1.2	1.6
To find easier work	0.6	0.2	0.3	0.4
Other	16.8	11.9	11.4	12.9
Total	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.
N=3,606 (weighted).

For all residential direct care workers, Table 3.31 shows the length of time that workers had been in their current jobs. Fourteen per cent of residential direct care workers had been in their jobs for 12 months or less and 26 per cent of workers had been in their jobs for more than 9 years. Slightly less than half of the workforce had worked in their current job for up to 4 years (46 per cent), but there is variation between the occupational groups as for ENs this share was lowest at 30 per cent. A higher proportion of ENs (44 per cent) and AH workers (31 per cent) had been in their current job for more than 9 years but only 24 per cent of PCAs. Compared with other occupations, a higher proportion of RNs (19 per cent) have been in their job for 1 year or less.

Table 3.31: Tenure in current job of the residential direct care workforce, by occupation: 2016 (per cent)

Tenure in current job (years)	RN	EN	PCA	AH	All occupations
12 months or less	19.4	9.0	14.1	15.6	14.4
More than 1 year–4 years	31.2	20.6	33.5	31.2	31.8
More than 4 years–9 years	25.2	25.9	28.3	22.4	27.4
More than 9 years	24.2	44.4	24.0	30.8	26.4
Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.

3.4.3 Into the Future

This section examines the intentions of residential aged care workers as they move into the future, including their intentions to leave their current place of employment. Understanding the intentions of the workforce has an important role in thinking about future behaviour and planning.

Table 3.32 shows the share of those actively seeking work for each direct care occupation group, with information about their current job tenure. The final row shows the overall share actively seeking work within each occupation, and the final column shows the overall share of the residential direct care workforce actively seeking work at each length of job tenure. We see that 10 per cent of the residential workforce is actively seeking work (similar to the 9 per cent in 2012). This share of workers seeking work is similar across all occupations, and the lowest proportion seeking work is found for residential aged care workers with tenure of more than 9 years (6 per cent). In contrast, a relatively higher proportion of RNs (17 per cent) and ENs (20 per cent) who have been with their current employer for 12 months or less are actively seeking work.

Table 3.32: Proportion of the residential direct care workforce actively seeking work, by occupation and tenure in current job: 2016 (per cent)

Tenure in current job (years)	RN	EN	PCA	AH	All occupations
12 months or less	17.1	20.3	15.7	12.9	16.1
More than 1 year–4 years	14.0	11.4	11.9	9.9	12.1
More than 4 years–9 years	9.9	9.6	9.8	5.4	9.6
More than 9 years	5.6	5.4	5.2	8.7	5.5
All years	11.5	9.1	10.2	9.0	10.2

Source: Survey of residential aged care workers.

Workers also indicated where they saw themselves working in 12 months from now. As reported in Table 3.33, the vast majority (82 per cent) of residential direct care workers indicated that they expect to still be with their current employer after 12 months. Of the remaining, the next highest share (10 per cent) did not have pre-existing intentions as to what they would be doing, while 4 per cent intended to leave aged care. Of all the occupational groups, a higher proportion of RNs (5 per cent) expected to leave their current aged care facility. Only 4 per cent of all employees indicated they intended to leave aged care, either to work in another sector or to retire from the paid workforce. This constitutes a relatively small proportion of the existing residential workforce that would be lost to aged care (although a further 10 per cent did not know what they would be doing). This reinforces a perspective of stability in the existing workforce, but with a degree of 'churn' between individual facilities.

Table 3.33: Expected activity in 12 months' time of the residential direct care workforce, by occupation: 2016 (per cent)

Expected activity in 12 months	RN	EN	PCA	AH	All occupations
Working in aged care, this facility	80.5	82.8	82.5	82.7	82.2
Working in aged care, different facility	4.8	1.8	2.2	1.8	2.5
Working in community aged care	0.3	0.5	0.7	0.5	0.6
Working in disability care	0.0	0.0	0.3	0.5	0.3

3.5 Experiences of Working in Residential Aged Care

Findings from the previous aged care census and surveys conducted by NILS in 2012, 2007 and 2003 indicated that aged care workers have relatively high levels of satisfaction in their work. However, this research also indicated particular areas for improvement which could have positive effects on employee retention. In this section we report on what direct care workers think about their work in 2016.

3.5.1 Job Satisfaction

In this section job satisfaction data is presented in Tables 3.34 and 3.35. These tables present responses to questions that were ordered in a scale form, whereby respondents answered on a scale from 1–7 or from 1–10. The discussion needs to be interpreted according to the ordinal nature of these questions which introduce possible limitations:

- First, many of the differences in average satisfaction levels at any point in time between different occupation groups in Tables 3.34 and 3.35 are too small to be of statistical significance and they should not be over-interpreted. Differences in averages will typically also conceal the more informative differences across the whole distribution of the reported values from 1 to 10.

- Second, comparing changes in averages over time for any occupation group (i.e. between the 2007 and 2012 data sets) will depend on the characteristics of the workforces concerned being constant over time, which we know not to be the case in all aspects of the data. This is always a problem when comparing single cross-section data sets and can only be satisfactorily handled through the use of multivariate regression.

- Finally, it should be noted that satisfaction measures are ordinal measures, that is, they can tell us if someone likes something more or less than a clear alternative, but they often lack the capacity to provide convincing information about how much more or less something is liked. This caveat naturally limits the interpretation we can give to these ordinal responses. Further, and more specifically, it means that when we observe two survey respondents, the first being satisfied enough to be ticking the box with value 4, and the second the box with value 6, this does not mean that the second person is 1.5 times more satisfied than the first person because 6 is 1.5 times higher than 4. It may mean that the second person is more satisfied than the first person, but even that may not be a universally accepted conclusion. This limitation is somewhat lessened in the case of comparing the satisfaction scores of a single person provided over time or for different aspects of their lives. The over-time comparison for individuals is not feasible through this data collection as individuals are not observed over time.

The worker survey form asked direct care workers to indicate their level of satisfaction with different aspects of their work on a scale of 1–10. These are subjective assessments about different aspects of work and, as such, they are relative to the context within which they are made. For example, such relative judgements may take into account what people may expect to achieve given their personal circumstances, or what they think they should achieve in their workplace given what they perceive their alternative work options to be. Overall, the findings indicate that workers are satisfied with what they do.

In Table 3.34, the average scores for employees' responses to each aspect of their work is shown. Overall satisfaction measured at 7.9 for all occupations shows that residential direct care workers' average overall satisfaction with direct care work has remained steady since 2012. There are slight differences between the various occupations, with AH workers somewhat more satisfied overall with their work (8.1) than PCAs (7.9) or nurses (7.8). In 2016 total pay stands out as being the area with which residential aged care workers are least satisfied (5.6), with PCAs (5.4) reporting more dissatisfaction with their pay compared to the other occupations. This was also the case in 2012. Apart from pay, residential direct care workers appear to be reasonably satisfied with all other aspects of their work.

Table 3.34: Average scores for responses from the residential direct care workforce, to statements about job satisfaction, by occupation: 2016 (range 1–10)

Satisfaction with	Nurse	PCA	AH	All occupations
Total pay	6.2	5.4	5.6	5.6
Job security	7.5	7.4	7.6	7.4
The work itself	7.8	7.7	8.2	7.8
Hours worked	7.6	7.7	7.8	7.7
Opportunities to develop abilities	7.4	7.5	7.3	7.4
Level of support from your team/service provider	7.6	7.4	7.8	7.5
Level of support from your supervisor	7.9	7.6	8.0	7.7
Flexibility to balance work and non-work commitments	7.4	7.5	7.8	7.5
Overall satisfaction	7.8	7.9	8.1	7.9

Source: Survey of residential aged care workers.
Scale used is 1(totally dissatisfied) to 10 (totally satisfied).

3.5.2 Doing the Work

Residential aged care workers were also asked to respond to a series of statements about their work on a scale of 1 (totally disagree) to 7 (totally agree). These statements refer to different aspects of their work.

Table 3.35 reports the average scores from direct care workers regarding their work and workplace. These subjective evaluations are important indicators of how confident they are in doing their work and what they view as areas that they would like changed. Overall, the highest average scores are in areas relating to skills and training (statements 2, 3 and 4 for all occupations), which receive scores of between 5.7 and 6.3. There is consistency across the occupations in the average scores for these statements. There is less consistency across occupations for the level of agreement with the statement on 'freedom to decide how to do the work' (4.4 for PCAs, 4.9 for nurses, 5.4 for AH). The relatively low average score of 3.9 for 'time to care' (statement 1) amongst residential direct care workers suggests that many workers do not think they have enough time to provide resident care (this is similar to 2012) and this persistence should be the subject of further investigations and policy discussions.

Table 3.35: Average scores for responses from the residential direct care workforce to statements about their work, by occupation: 2016 (range 1–7)

Statement	Nurse	PCA	AH	All occupations
I am able to spend enough time with each care recipient	3.9	4.0	4.1	3.9
I have the skills and abilities I need to do my job	6.2	6.3	6.3	6.3
I use many of my skills and abilities in my current job	6.0	6.2	6.1	6.1
Adequate training is available through my workplace	5.5	5.8	5.4	5.7
I have a lot of freedom to decide how to do my work	4.9	4.4	5.4	4.6
I feel under pressure to work harder in my job	4.4	4.2	4.0	4.2
My job is more stressful than I had ever imagined	4.1	3.9	3.6	4.0
Considering all my efforts and achievements I receive the respect and acknowledgement I deserve	5.0	4.9	5.1	4.9
Management and employees have good relations in my workplace	5.1	5.0	5.2	5.0

Source: Survey of residential aged care workers.
Scale used is 1(strongly disagree) to 7 (strongly agree).

In order to further examine how much time residential workers spend in direct caring, Table 3.36 reports on the time spent caring by each occupation with the final column average reflecting all residential direct care occupations. While in 2016, 65 per cent of all workers spent more than two-thirds of their shifts doing direct care tasks, this varied across occupations. Not surprisingly, PCAs spent the most time providing direct care, with slightly more than three-quarters spending the majority of their shift doing this kind of work (77 per cent). This is similar to 2012. For nurses, lower proportions (33 per cent) were providing care for more than two-thirds of their shift, but there was another 33 per cent providing care for less than one-third of their shift. This reflects the increasing managerial role that nurses are performing while PCAs are taking more responsibility for the direct care tasks. Separating RNs from ENs shows the managerial roles more clearly as 44 per cent of RNs spent less than one-third of their work time caring, but 46 per cent of ENs spent more than two-thirds of their time on direct care tasks.

Table 3.36: Responses of the residential direct care workforce to the question 'In a typical shift, how much time do you spend in direct caring?' by occupation: 2016 (per cent)

Time spent caring	RN	EN	Nurse	PCA	AH	All occupations
Less than one-third	43.5	17.4	32.8	6.4	14.0	13.3
Between one-third and two-thirds	33.0	36.2	34.3	17.1	31.4	22.0
More than two-thirds	23.5	46.4	32.9	76.5	54.6	64.7
Total	**100**	**100**	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.
**Nurse combines RN and EN.*

The quality of relationships between the worker and management, and the worker and colleagues are shown in Tables 3.37 and 3.38. Table 3.37 suggests that most workers consider their relationship with management as good (between 80 and 88 per cent) and some consider it as neither good nor bad (between 7 and 13 per cent). Only a small minority between 4 and 7 per cent report having a bad relationship with their management (6 per cent for nurses, 7 per cent for PCAs and 4 per cent for AH workers). All in all relationships with management are reported to be satisfactory, a good message for a changing sector.

Table 3.37: Residential direct care workforce assessment of the quality of workplace relationships 'between management and yourself', by occupation: 2016 (range 1–7)

	Nurse	PCA	AH	All occupations
Bad	5.9	6.6	4.2	6.3
Neither good nor bad	8.4	12.9	7.5	11.6
Good	85.7	80.5	88.2	82.2
Total	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers, 2016.
Scale used is 1(very bad) to 7 (very good).

Table 3.38 presents reported workplace relationships between colleagues. It suggests that workers are generally very positive with 89 per cent indicating that the relationship between themselves and their colleagues is good. This overall picture of mostly good relationships with management and a slightly higher share with good relationships with colleagues remains unchanged from 2012.

Table 3.38: Residential direct care workforce assessment of the quality of workplace relationships 'between workmates/ colleagues and yourself', by occupation: 2016 (range 1–7)

	Nurse	PCA	AH	All occupations

3.5.3 Job Demands

In 2007 and 2012 the census form asked facilities about several unusual job demands for their workforce that are viewed as stressful (King et al. 2012) in order to establish their prevalence in Australian residential aged care facilities. These demands are:

- Working longer than scheduled
- Variations in hours and location of work
- Working in unsanitary conditions
- Working with aggressive service users
- Working alone late at night.

Facilities were asked if any of these demands are made as (i) part of the normal job requirements; (ii) only in exceptional circumstances; or (iii) never. Their answers are presented in Table 3.39.

Changing work patterns: The most prevalent job demands are associated with changes in work patterns, either in response to unanticipated needs of residents (85 per cent, which is lower than the 91 per cent of facilities in 2012) or because of management needs to vary hours or location at short notice (84 per cent, roughly similar to the 86 per cent in 2012).

Unsanitary conditions: Of the five unusual job demands listed, residential facilities are least likely to ask workers to work in very unsanitary conditions, which is not surprising given that this would breach aged care accreditation standards.

Aggressive service users: Of the more prevalent unusual job demands, working with aggressive service users was a normal expectation in 28 per cent of facilities, with another 56

per cent indicating that workers were required to do this in exceptional circumstances (these are slightly different to 2012 when they were respectively more with normal expectations at 33 per cent and fewer reporting this for exceptional circumstances at 47 per cent). As in 2012, this is likely to be a consequence of the growing number of older Australians with dementia and other mental health problems who are living in residential facilities.

Alone late at night: Twelve per cent of residential facilities ask their workers to work alone at night after 10 pm, but of those that do this is often a normal requirement of the job (9 per cent).

Table 3.39: Prevalence of unusual job demands in residential facilities: 2016 (per cent)

Job demand	Under normal circumstances	In exceptional circumstances	Never	Total
Working longer than scheduled due to unanticipated needs of residents	5.0	79.6	15.5	**100**
Variations in hours or location at short notice	9.9	74.3	15.8	**100**
Working in very unsanitary conditions	0.7	3.3	96.0	**100**
Working with aggressive service users	28.0	55.9	16.1	**100**
Working alone late at night (after 10 pm)	9.2	3.1	87.7	**100**

3.6 Work-related Injury and Illness

Previous research has suggested that workers in caring roles may be at increased risk of work-related injury and illness compared to the general workforce (Howard and Adams 2010; Kim et al 2010). In order to add to understanding of work-related injury and illness in aged care work the 2016 aged care census and survey asked questions regarding the extent, type and causes of these injuries.

Table 3.40 shows combined information from both the facilities census and the workers survey about work related injuries. There can be discrepancies between facilities and workers regarding the extent of reported work-related injuries, for a variety of reasons. Examples would include that workers and facilities may be reporting over different periods; serious work-related injuries may result in the withdrawal from the workforce of the worker, but their injury record remains; and difficulties in accurately recalling incidents over the designated period, especially minor injuries that will be recorded and reported by the facility but often forgotten by the worker. We would expect the reporting differences to be more prominent for the least prevalent injuries and illnesses. Although for these and other reasons the direct comparison between these figures is difficult, we present them together for ease of presentation and reference.

Facilities: The first two columns of Table 3.40 show that in 2016, 77 per cent of residential facilities reported at least one work-related injury/illness in the 3 months prior to the census (roughly similar to the 76 per cent in 2012). The most commonly reported injuries were sprains/strains (45 per cent of all facilities and 69 per cent of those that reported) and superficial injuries (31 per cent of all facilities and 47 per cent of those that reported). These are similar to the 2012 proportions for these same conditions.

Workers: The final two columns of Table 3.40 show work-related injuries and illnesses reported by workers in the previous 12 months. Fourteen per cent of direct care workers experienced a work-related injury or illness during this period. As with reporting by facilities, the most commonly reported injuries are sprains/strains (6 per cent of all workers and 43 per cent of those who reported), followed by chronic joint or muscle condition (4 per cent of all workers and 29 per cent of those who reported). The next most prevalent work-related injury or illness is stress or other mental condition which is reported by 3 per cent of all workers and 19 per cent of those who reported. The 2016 residential worker reports about work-related

injuries and illnesses are very similar to 2012, indicating that no overall sector improvement in health and safety has been achieved between 2012 and 2016.

Table 3.40: Types of reported work-related injuries and illnesses, comparing facilities and workers: 2016 (per cent)

Type of injury/illness	Facilities (last 3 months)		Workers (last 12 months)	
	All facilities	With any incidents	All workers	Who reported incidents
At least one injury/illness reported	76.7	n/a	14.3	n/a
None reported	23.3	n/a	85.7	n/a
Fracture	2.6	4.0	0.3	2.6

Note: Multiple response allowed, totals will not sum to 100.

Table 3.41 shows the causes attributed to reported work-related injuries and illnesses, again jointly presented for the facilities' workforce and workers.

For the 77 per cent of facilities that reported in Table 3.40 one or more incidents during the previous 3 months, there were four chief causes: 'lifting, pushing, pulling or bending'; 'hitting, being hit or cut by person, object or vehicle'; 'a fall' or 'repetitive movement'. These are roughly the same as for 2012. The pattern reported by workers in Table 3.41 is quite similar to that of the facilities. The most commonly identified cause was 'lifting, pushing, pulling, bending', followed by hitting or being hit, and falls.

Table 3.41: Causes of reported work-related injuries and illnesses, comparing facilities and workers: 2016 (per cent)

Cause of injury/illness	Facilities (last 3 months)		Workers (last 12 months)	
	All facilities	With any incidents	All workers	Who reported incidents
At least one injury/illness reported	76.7	n/a	14.3	n/a
None reported	23.3	n/a	85.7	n/a
Lifting, pushing, pulling, bending	43.5	66.8	5.6	43.2
Repetitive movement	10.0	15.3	0.6	4.4

Note: Multiple response allowed, totals will not sum to 100.

The extent to which the employees are on Workcover in 2016 is shown for residential facilities in Table 3.42. Table 3.42 indicates that 44 per cent of facilities had one or more employees on Workcover during the designated fortnight in 2016 (fewer than the 54 per cent in 2012). For each of these facilities, there was an average of 1.9 employees (slightly fewer than the 2.2 in 2012) on Workcover. Although 38 per cent of facilities had PCAs on Workcover in 2016, the proportion of facilities with workers in any of the other occupational groups was much smaller, between 2 and 6 per cent.

Table 3.42: Proportion of facilities with employees on Workcover (per cent) and, of these, the mean number of employees per facility on Workcover during the designated fortnight: 2016

Occupation	Facilities Utilising Workcover (%)	Employees (average per facility)
Registered Nurse	4.7	1.1
Enrolled Nurse	5.7	1.2
Personal Care Attendant	37.8	1.8
Allied Health	2.3	1.3
All occupations	43.6	1.9

Source: Census of residential aged care facilities.

3.7 Cultural and Linguistic Diversity

In Section 3.2.4 it was shown that around a third of respondents in the survey of residential aged care workers were born overseas. This final section of the chapter presents further findings relating to the cultural and linguistic diversity of the residential workforce. In particular, we explore levels of fluency and use of a language other than English and self-assessed English literacy. Finally, this section examines the extent of the employment of PCAs from CALD backgrounds within residential facilities and the stated benefits and difficulties of hiring these workers.

Table 3.43 presents the relatively small proportion of the residential direct care workforce who completed the worker survey and reported that they speak their primary language more fluently than they do English. Of the occupational groups, a higher proportion of ENs (55 per cent) and AH workers (45 per cent) who speak a language other than English are most fluent in English. On the other hand, a higher proportion of RNs (50 per cent) and PCAs (50 per cent) speak both languages equally well. A further 18 per cent of RNs and 19 per cent of PCAs are most fluent in their primary (LOTE) language.

Table 3.43: Fluency in a language other than English (LOTE) of the residential direct care workforce, by occupation: 2016 (per cent)

Speak LOTE, most fluent in:	RN	EN	PCA	AH
English	32.1	54.9	31.8	44.7
LOTE	17.9	8.4	18.5	16.3
Both equally well	50.0	36.8	49.7	39.0
Total	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers (weighted).

A large share (39 per cent) of residential direct care workers reported they speak a language other than English in their work (Table 3.44) which is higher than the 31 per cent found in 2012. Table 3.44 shows that of the occupational groups, ENs and AH workers more often speak a language other than English in their work (58 per cent and 50 per cent respectively), however 38 per cent of PCAs and 33 per cent of RNs also use this ability in their jobs.

Table 3.44: Use of language other than English (LOTE) of the residential direct care workforce, by occupation: 2016 (per cent)

Speak LOTE and	RN	EN	PCA	AH	All occupations
Use LOTE in job	32.9	57.9	38.1	49.8	38.9
Do not use LOTE in job	67.1	42.1	61.9	50.2	61.1
Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of residential aged care workers.

Workers who spoke a language other than English were asked how well they thought they could speak, read and write in English (self-assessment). As shown in Table 3.45, amongst workers who identified as being most fluent in a language other than English, nearly all (93 per cent) indicated that they could read in English 'well – very well' (this is similar to the 95 per cent reporting this in 2012). Of all three English literacy areas, writing was the area in which workers rated themselves lowest, with 14 per cent of workers indicating they could not write in English very well.

Table 3.45: Subjective assessment of English literacy for residential direct care workers most fluent in a language other than English (LOTE): 2016 (per cent)

English literacy	Not at all	Not very well	Well	Very well	Can't say	Total
Speaking	0.6	5.5	61.8	31.7	0.4	**100**
Reading	0.2	6.5	45.8	47.4	0.2	**100**
Writing	0.2	13.9	53.5	32.3	0.2	**100**

Source: Survey of residential aged care workers.

In the following tables we turn our attention to PCAs from culturally and linguistically diverse (CALD) backgrounds. Table 3.46 illustrates the extent to which facilities report how PCAs from diverse backgrounds are distributed among facilities in 2016. Very few (12 per cent, slightly fewer than the 13 per cent in 2012) residential facilities employed no PCAs from a culturally and linguistically diverse background.

Table 3.46: Distribution by proportion of personal care attendants (PCAs) from culturally and linguistically diverse backgrounds (CALD) in residential facilities: 2016 (per cent)

% of CALD PCAs per facility	Facilities
Zero	11.5
1–33	40.5
34–66	20.9
67–100	27.1
Total	**100**

Source: Census of residential aged care facilities.

The 2016 census asked facilities to identify the benefits of hiring PCAs from CALD backgrounds. As shown in Table 3.47, almost all facilities reported one or more benefits. Of the nominated benefits beyond culture and language, the opportunity to enhance cross-cultural understandings and activities was most frequently cited (84 per cent). However, 37 per cent of facilities also indicated that employing these PCAs was important for developing networks into particular communities.

Table 3.47: Stated benefits of employing personal care attendants (PCAs) from culturally and linguistically diverse backgrounds in residential facilities: 2016 (per cent)

Benefits	Facilities
No benefits	0.4
Stated benefits:	
Enhance cross-cultural understandings	83.6
Offer different cultural activities	54.7
Language (other than English) skills	56.0
Link clients to ethnic communities	36.8
Link facility to ethnic communities	33.9
Other	4.5

Source: Census of residential aged care facilities.
Note: Multiple response allowed, totals will not sum to 100.

Facilities that employ PCAs who spoke a language other than English (LOTE) were asked to nominate the most common ethnic or cultural background of those workers. Table 3.48 (column 1) shows that a higher proportion (91 per cent in 2016 against 79 per cent in 2012) of residential facilities employed PCAs from linguistically diverse backgrounds in 2016. India and the Philippines remain the most common source countries for these PCAs.

When we focus on the facilities in which PCAs who speak a language other than English are present (Table 3.48 column 2), the results confirm widespread engagement of Indian and Filipino workers. In facilities where at least one-third of PCAs are identified as LOTE speakers (Table 3.48 column 3), approximately 35 per cent of facilities identified Indian as the major background of these workers, and another 22 per cent of facilities identified their background as Filipino.

Table 3.48: Proportion of residential facilities that employ personal care attendants (PCAs) from linguistically diverse backgrounds: 2016 (per cent)

Ethnic group	All facilities	Facilities with any PCAs speaking LOTE	Facilities with at least 33% PCAs speaking LOTE
At least one PCA from linguistically diverse background	91.1	n/a	n/a
None	8.9	n/a	n/a
Indian[1]	28.3	31.2	34.5
Filipino	26.7	29.0	21.7
African	7.1	7.8	9.9
Pacific Islander	2.5	2.8	2.1
Chinese	3.0	3.4	4.5
Italian	2.3	2.5	1.3
Greek	0.5	0.6	0.7
South East Asian	7.3	8.1	6.4

Total	**100**	**100**	**100**

Source: Census of residential aged care facilities.
[1]Includes Hindi and other languages spoken in India and Sri Lanka.

While we saw in Table 3.47 that facilities reported considerable benefits of hiring PCAs from CALD backgrounds, the management of a multicultural workforce can also present challenges. Facility managers were therefore asked in the census form to nominate, from a list, areas in which employing PCAs who speak a language other than English creates difficulties in providing and managing care services at the facility. About one third (32 per cent) of residential aged care facilities selected at least one area of difficulty from the list in 2016 (Table 3.49), fewer than in 2012 (40 per cent).

Table 3.49 shows that from the list of stated difficulties, communication was the chief area of concern presenting difficulties for facility managers in 2016 (88 per cent communication with residents, 72 per cent communication with the families of residents, and 67 per cent communication with management/staff).

Table 3.49: Stated difficulties of employing personal care attendants (PCAs) who speak a language other than English in residential facilities: 2016 (per cent)

Difficulties	Facilities
No difficulties	67.6
At least one difficulty	32.4
Stated difficulties (% of outlets stating difficulties)	
Occupational health and safety	26.0
Communication with management and/or other staff	66.5
Communication with residents	87.9
Communication with residents' families	72.4
Other – written communication	9.5

Note: Multiple response allowed, totals will not sum to 100.

4. The Census of Residential Facilities

Key Findings

- Almost two thirds of residential direct care workers were located in major cities, with a further third in regional areas.
- Fifty eight per cent of residential direct care workers were employed in not-for-profit facilities, 34 per cent in for-profit facilities and 7 per cent in government-owned facilities.
- Slightly more than half (52 per cent) of residential facilities were large (i.e. had more than 60 places).
- The total number of operational places available in residential aged care in 2016 was 197,046. The average ratio of residential direct care workers to places (0.78) almost unchanged from 2012. However, since 2012, the ratio of the average number of direct care to PAYG workers has fallen across residential facilities of all size indicating a reduced usage of direct care staff.
- Eighty per cent of facilities belonged to a larger provider group. About 10 per cent of residential facilities also offered community care services from the same location.
- A quarter of residential facilities catered for a specific ethnic or cultural group, most frequently of Italian, Aboriginal and Greek backgrounds.
- Almost two thirds of facilities with direct care staff (63 per cent) reported skill shortages; a shortage of RNs was most common (41 per cent) and skill shortages were more prevalent in locations outside major cities.
- Main reasons for skill shortages were lack of suitable applicants (80 per cent), slow recruitment processes (21 per cent) and specialist knowledge required (19 per cent).
- Facilities responded to skill shortages primarily by having existing staff work longer hours (62 per cent) or by making greater use of agency staff (48 per cent).
- Vacancies were most commonly reported for PCA and RN positions (by 24 per cent of facilities). These facilities had an average of 3.3 PCA and 1.8 RN vacancies.
- The average time taken to fill vacancies was 2.5 weeks for PCA positions and 4.3 weeks for RNs. Residential facilities in remote and very remote locations reported more difficulties in filling staff vacancies.
- The proportions of vacancies that were either very quick to fill (less than 1 week) or very hard to fill (more than 26 weeks) was reduced in 2016 when compared with 2012.
- The most common reasons facilities gave for staff vacancies were resignation (84 per cent), the creation of a new position (31 per cent) and retirement (27 per cent).
- Internet job advertisements (34 per cent) and a combination of internet and newspaper advertisements (23 per cent) were the most frequent recruitment strategies for PCA positions.
- For workers seeking employment in aged care, internet job advertisements and word-of-mouth were the most common strategies used. The use of recruitment agencies was also reported by around 16 per cent of nurses and AH workers.

- Over three quarters (79 per cent) of facilities used Enterprise Agreements to set employment conditions for their staff; almost a fifth (19 per cent) of facilities used award-based arrangements.

- Half of all facilities reported employing at least one non-PAYG worker (particularly RNs and PCAs) in the designated census fortnight. Agency workers (41 per cent) were most commonly used in comparison to brokered (8 per cent) and self-employed (7 per cent) workers.

- Agency staff were used to provide short-term cover for staff absences (88 per cent) and to fill vacancies (51 per cent), while brokered and self-employed staff were mainly employed to obtain specialist skills.

- Approximately 23,537 volunteers worked in residential aged care in 2016. Eighty three per cent of facilities reported one or more volunteer workers who mainly assisted with social and planned group activities and companionship/befriending.

- Methods of quality monitoring in residential facilities included monitoring by managers or supervisors (86 per cent), keeping records of service user feedback (57 per cent) and accreditation processes (56 per cent).

4.1 Introduction

This chapter provides an overview of the key characteristics of residential aged care facilities in Australia with information predominantly based on the census of residential aged care facilities (N=2,240). It should be acknowledged that there has been significant reform to the way residential aged care is delivered to consumers since the last workforce census of residential facilities in 2012. A key change has been the removal of the distinction between high-level and low-level residential aged care funding for all new and existing residents from 1 July 2014.

We begin the chapter with a profile of residential facilities showing the distribution of their employees across all states and territories, and information regarding the operational places offered. The relationship that residential facilities have with broader aged care services and whether these facilities cater for specific ethnic or cultural groups are then discussed. The next sections of the chapter provide evidence regarding skills shortages and staff vacancies within the sector, as these are reported by the employers. The industrial methods used by facilities to set employment conditions and the use of non-PAYG staff are then explored. The chapter finishes with a focus on quality monitoring in residential aged care.

4.2 A Profile of Facilities

Table 4.1 shows the distribution of the residential aged care workforce across States/Territories in 2003, 2007, 2012 and 2016. Direct comparison of the distribution of the workforce by geographical location between 2007 and 2012 is not possible because of a change in the measure used to collect this data.[5]

Although South Australia and Western Australia increased their share and Queensland and Tasmania decreased theirs, the changes are relatively small. The picture is similar whether viewing all PAYG employees or only direct care employees. In 2016, almost two-thirds (65 per

[5] In 2007, the Rural, Remote, Metropolitan Area (RRMA) classification was used, whereas in 2012 the information was categorised according to the ABS 2006 Remoteness Areas based on the 2006 Population Census. In 2016, the ABS 2011 Remoteness Areas are used, based on the more recent and updated 2011 Population Census definitions. There was no substantial change in the methodology used to define the ABS Remoteness Areas for 2012 and 2016 and in most cases comparison of the Remoteness Area is valid - ABS Statistical Geography factsheet.

cent) of direct care workers were located in major cities, one-quarter (23 per cent) in inner regional areas, 10 per cent in outer regional, with just over 1 per cent of workers located in both remote and very remote areas. There is no evidence of a significant change in the distribution of the workforce by geographical location between 2012 and 2016.

Examining the distribution of ownership type in the bottom panel of Table 4.1 shows some change. Between 2003 and 2012 there was a decline in the importance of the not-for-profit sector as an employer. This trend seems to level off as we observe a modest rise in the direct care employment proportion from 56 per cent in 2012 to 58 per cent in 2016. There was a corresponding modest decline in employment in for-profit and government facilities between 2012 and 2016.

Table 4.1: Distribution of residential direct care workforce (per cent) by State/Territory, location, ownership type and facility type: 2003, 2007, 2012 and 2016

**Direct comparison of location with previous years is not possible due to change in categories.*

When looking at the size of residential facilities (according to their total number of places), Table 4.2 shows that in 2016 over half of facilities (52 per cent) are large (61+ places). The expansion in the proportion of facilities that are large, as evident between 2007 and 2012, appears to have stopped, with the proportion in 2016 the same as that in 2012 (approximately 52 per cent). This supports the suggestion from the 2012 report (King et al. 2012) that the observed expansion between 2007 and 2012 might be explained by both changes in how the data was collected and changes in government policy. There has been a small increase in the proportion of small facilities (with 1-20 places) between 2012 and 2016 (from 6 per cent to 8 per cent), and a corresponding decline in the proportion of facilities with 41-60 places (from 25 per cent to 23 per cent).

The average size of employment in facilities with more than 60 operational places in 2016 is 113 PAYG employees, and on average 75 of these employees are direct care workers (Table A4.2, Appendix 3). These figures are fairly comparable with those obtained from the 2012 census where the largest facilities employed an average of 107 PAYG employees, with 78 of

these on average being direct care workers. Since 2012, however, the ratio of the average number of direct care to PAYG workers has decreased across residential facilities of all size indicating a decreased usage of direct care staff. This indicates a shift in workforce composition with a lower ration of direct care staff.

Table 4.2: Number of places* (per cent): 2007, 2012 and 2016

Number of places*	2007	2012	2016
1–20	7.4	5.7	7.7
21–40	26.7	17.2	17.5
41–60	30.9	24.9	23.0
61+	35.0	52.3	51.8

**Operational residential places at 3 November 2015 for in-scope aged care facilities.*

We now look at the distribution of residential aged care operational places across Australia. Table 4.3 shows that the distribution of residential care operational places across State/Territories, location and ownership type, closely mirrors the distribution of the residential care workforce in Table 4.1.

Facilities in NSW and Victoria have the largest share of total residential places, followed by Queensland, SA and WA. Two thirds of places are in facilities in major cities. Remote and very remote facilities make up only a very small share of places. Approximately 57 per cent of residential places are in not-for-profit facilities.

Table 4.3: Distribution of residential aged care operational places* (per cent): 2016

		Total

**Operational residential places at 3 November 2015 for in-scope aged care facilities.*

Estimated staffing ratios (obtained by dividing the total number of direct care workers by the total number of operational places) are presented in Table 4.4. In 2016 the average number of residential direct care workers to places across all facilities is 0.78; mostly unchanged from 2012 when it was 0.77.

There is minimal variation in average staffing ratios between States and Territories. There is also minimal variation in staffing ratios by location. Staffing ratios in for-profit facilities are lower than in not-for-profit facilities. Government facilities have the highest ratio, 0.85 direct care workers per residential place in 2016.

Table 4.4: Average ratio of residential direct care workers to operational places: 2012 and 2016

		2012	2016

4.3 Facilities' Relationships with Broader Aged Care Services

Many residential facilities have connections to the broader aged care sector. This is strongly highlighted in Table 4.5 which reports that approximately 80 per cent of facilities belong to a larger provider group, with the proportion highest in for-profit facilities (86 per cent). Overall, the proportion of facilities belonging to a larger group has increased with time, from 73 per cent in 2007 and 76 per cent in 2012.

In addition approximately 10 per cent of all residential facilities offer community care from the same location in 2016. The proportion also offering community care has slowly declined over time, from 13 per cent in 2007 and 12 per cent in 2012.

The proportion of residential facilities offering community care differs widely by ownership type, with approximately 21 per cent of government facilities offering community care but only 3 per cent of for-profit facilities offering these services.

Table 4.5: Proportion of residential facilities that are part of larger provider group* or provide community aged care (per cent), by ownership type: 2016

	Not-for-profit	For-profit	Government	All facilities
Part of larger provider group*	78.6	85.6	76.9	80.4
Providing community aged care	10.6	2.7	20.8	9.7

Source: Census of residential aged care facilities.
**A facility is classed as being part of a larger group if the facility is part of a larger organisation e.g. owned by a company or not-for-profit agency that owns other aged care facilities or services.*

As may be anticipated given that some residential facilities also provide community aged care services, Table 4.6 indicates that just under 17 per cent (all facilities all occupations) of all direct care workers in residential facilities also worked in community care. Allied health workers were more likely to be providing community care (21 per cent), compared to nurses (15 per cent) or PCAs (17 per cent).

Government facilities had a much higher proportion of their workforce working in both residential and community care (39 per cent). Not-for-profit facilities had the lowest proportion providing these services (11 per cent).

Table 4.6: Proportion of residential aged care employees that work in both residential and community aged care (per cent), in facilities that provide some community aged care, by ownership type: 2016

Occupation	Not-for-profit	For-profit	Government	All facilities
Nurse	7.2	25.0	31.5	15.3
Personal Care Attendant	12.8	30.4	44.1	16.8
Allied Health	7.6	26.2	64.9	21.0
All occupations	11.2	28.9	39.0	16.6

Source: Census of residential aged care facilities N=272 facilities [N=305 in 2012] providing community aged care (2016 weighted).

4.4 Ethnic Specialisation

The number of older people in Australia from CALD backgrounds is increasing. It is expected that by 2021, almost a third of those aged 65 years and older will have been born overseas (Department of Social Services, 2015). Older Australians from CALD background are not a homogenous group and this diversity needs to be acknowledged and addressed in the aged care sector. The 2016 census of residential facilities collected information regarding ethnic specialisation within aged care. Table 4.7 shows that 25 per cent of residential facilities catered for a specific ethnic or cultural group in 2016. This figure is comparable to that in 2012 (26 per cent).

Looking at facilities that did cater for a specific ethnic or cultural group, residents from an Italian background were most frequently catered for (54 per cent of these facilities), followed by Aboriginal Australians (52 per cent) and Greeks (44 per cent). Almost 44 per cent of facilities who specialise catered for gay, lesbian, bisexual, transgender and intersex residents, illustrating the increasing demand for aged care services to be inclusive of all backgrounds.

Table 4.7: Residential facilities that cater for specific ethnic or cultural groups (per cent): 2016

Ethnic group	% All facilities	% Among facilities that specialise
Catering for specific ethnic or cultural group	25.1	n/a
No catering for specific ethnic or cultural group	74.9	n/a
Polish	9.4	38.1
Italian	13.4	53.9
Aboriginal	13.0	52.4
Chinese	10.0	40.2

4.5 Skill Shortages

Within the aged care system in Australia, demand for services has reached unprecedented levels and, with a rapidly ageing population, demand is expected to continue rising in the future. In such a case the sector will need to respond, either by expanding its workforce or by increasing its productivity, or, as is usually the case by a mix of the two. As demand increases, and depending on the timeliness and the type of reaction by the sector, the possibility exists that skill shortages for direct care workers may arise. It is important, for effective workforce planning and policy development, that current information is available regarding the presence of skills shortages in the aged care sector, their perceived reasons and consequences, and, finally, how they are being responded to by provider organisations and their workforces. To this purpose, the 2016 census collected information on the incidence and composition of skill shortages, the factors that caused these shortages, the consequences of these skill shortages, and how facilities are actually responding to them. This is valuable information at the individual employer level, for example, for benchmarking and similar purposes, at the level of geographical location, and at the overall national level, for example for training and related policy. Moderate and temporary skill shortages have been considered in the literature to be markers of a successfully growing and developing sector. In contrast, deep and persistent skill shortages have been associated with less well performing firms and with sectors with lower productivity, growth, profitability, and competitiveness (Healy, Mavromaras & Sloane 2015).

Table 4.8 (final column) shows that 47 per cent of residential facilities did not report having any skill shortages in 2016. Almost two-thirds of residential facilities (63 per cent) reported a shortage of workers in at least one direct care occupation. When examining skill shortages for participant occupations, a shortage of RNs was most common (reported by 41 per cent of facilities), followed by PCAs (25 per cent). Only a small proportion of facilities reported a shortage of AH workers (6 per cent). Skill shortages are more prevalent in remote and very remote areas, but we note again that the small number of respondents from remote and very remote locations may have skewed related findings.

Table: 4.8: Proportion of residential facilities reporting skill shortages in 2016 (per cent), by location and occupation affected

Whether had skill shortage	Major cities of Australia	Inner regional Australia	Outer regional Australia	Remote Australia	Very remote Australia	All facilities
Yes (of all facilities)	46.5	61.9	62.8	59.7	81.1	53.4
Yes (of all facilities with direct care staff)*	55.9	72.8	70.8	72.7	87.8	63.2
Skill shortage for occupation:						
Registered Nurse	33.9	50.3	51.5	55.2	58.5	41.2
Enrolled Nurse	15.8	27.4	31.1	29.9	22.6	21.2
Personal Care Attendant	23.6	24.6	30.6	37.3	37.7	25.4
Allied Health	6.1	6.3	4.7	11.9	3.8	6.1

*Source: Census of residential aged care facilities *This not available prior to 2016.*
Note: Multiple responses allowed for skill shortage by occupation, columns do not sum to 100.

Facilities that reported having skill shortages were asked to identify the causes of the shortages. Facilities could select more than one of the response options on the questionnaire and could also nominate other factors which were not listed. Table 4.9 (column 1) indicates that amongst facilities with skill shortages for any occupation, the highest proportion reported no suitable applicants as the cause of skill shortages in their facility (80 per cent), followed by geographical location (38 per cent), slow recruitment processes (21 per cent) and specialist knowledge required (19 per cent).

RN and PCA shortages were similar to the reasons given across all occupations. Facilities with a PCA shortage were more likely to identify 'lack of availability of adequate training' as a reason (16 per cent) than facilities with an RN shortage (12 per cent). Facilities with a PCA shortage were also more likely to report that recruitment was too slow (28 per cent) compared with facilities with an RN shortage (21 per cent).

Table 4.9: Proportion of residential facilities with skill shortages in 2016 that nominated each cause of that shortage (per cent), by occupation affected

Cause of skill shortage	Facilities that reported skill shortages		
	For any occupation	For RNs	For PCAs
Specialist knowledge required	18.9	20.8	21.3
Geographical location of facility	37.9	40.3	37.9
Wages or salary costs too high	9.9	11.2	9.3
Lack of availability of adequate training	12.0	12.3	16.2
Unsure of long term demands for service	4.6	4.8	4.9
Recruitment too slow	20.6	21.2	27.5
No suitable applicants (skills/qualifications/experience/values)	79.6	79.9	83.6
Other	6.2	6.1	6.0
Facilities (weighted)	1498	1156	712

Source: Census of residential aged care facilities.
Note: Multiple responses allowed, columns do not sum to 100.

The census also asked residential facilities to nominate the responses taken to address their skill shortages. Table 4.10 shows that the most common response to a skill shortage for any occupation is to have the existing workforce work longer hours, with 62 per cent of facilities that reported skill shortages saying they undertook this action. The next most common response was 'greater use of agency staff' (48 per cent of facilities that reported a skill shortage) followed by 'on-the-job training of staff' (36 per cent).

There are few differences when analysing responses taken by facilities with RN and PCA skill shortages compared with the overall picture. Facilities with PCA skill shortages are more likely to use student placements (19 per cent) compared with facilities with RN shortages (13 per cent). Residential facilities with PCA shortages are also a little more likely to react with on-the-job training of staff (42 per cent versus 36 per cent for RN shortages). The use of student placements and volunteers as a response to skill shortages were new categories added in 2016.

Table 4.10: Proportion of residential facilities with skill shortages in 2016 that nominated each response to that shortage (per cent), by occupation affected

Response to skill shortage	Facilities that reported skill shortages		
	For any occupation	For RNs	For PCAs
External training of staff	17.8	18.3	21.8
On-the-job training of staff	35.8	36.4	41.6
Existing workforce worked longer hours	61.9	64.2	68.4
Greater use of agency staff	48.1	49.2	51.0
Sub-contracted or outsourced services	5.7	5.4	4.9
Employed staff on short term contracts	16.8	18.1	14.5
Wages, salaries and/or conditions increased	7.3	8.7	8.6
Reduced outputs or production	2.1	1.9	2.2

Note: Multiple responses allowed, columns do not sum to 100.

4.6 Vacancies

Given the anticipated future increased demand for aged care services in Australia, the aged care workforce will need to grow considerably creating challenges for the sector and policy makers alike (CEPAR 2014). The number and types of staff vacancies are important indicators of the adequacy of the labour supply to aged care residential facilities. In the 2016 census, facilities were asked to provide information on the vacancies they had for employees across different occupational classifications. As shown in Table 4.11, the highest number of vacancies in 2016 are reported for RNs and PCAs (both 24 per cent). Vacancies are much lower for AH workers, being reported for only 4 per cent of facilities.

The proportion of residential facilities with vacancies appears lower in 2016 for all direct care occupations compared with the earlier years of 2007 and 2012, particularly for RNs and PCAs. Where facilities do have vacancies, they report a higher number of vacancies for PCAs (3.3) than for other direct care occupations. The mean number of vacancies for each occupation in 2016 was similar to that in 2012.

Table 4.11: Vacancy rate (per cent of all residential facilities) and mean number of vacancies (in facilities with vacancies), by occupation: 2003, 2007, 2012 and 2016

	Full-Time Equivalent			
	2003	2007	2012	2016
Panel 1: % of facilities with any vacancies				
Registered Nurse	25.7	31.3	32.7	23.9
Enrolled Nurse	10.8	17.7	18.7	14.9
Personal Care Attendant	23.3	31.4	36.4	23.6
Allied Health	6.3	6.7	8.8	3.6
Panel 2: Mean number of vacancies in facilities with any vacancies				
Registered Nurse	n/a	n/a	1.7	1.8
Enrolled Nurse	n/a	n/a	2.2	1.9
Personal Care Attendant	n/a	n/a	3.6	3.3
Allied Health	n/a	n/a	1.0	1.4

Source: Census of residential aged care facilities.

In order to further assess shortages for residential aged care workers, the time that facilities took to fill these vacancies is shown in Tables 4.12 and 4.13. The last column of Table 4.12 shows that across all occupations just over a quarter (26 per cent) of the most recent vacancies took less than a week to fill. The first four columns show that there is considerable variation by occupation in how quickly vacancies are filled. The first row shows that 63 per cent of facilities were able to fill their most recent AH vacancy in less than a week. The corresponding proportion was 22 per cent for RN vacancies, and 21 per cent for PCA vacancies. On the whole AH and EN vacancies appear quicker to fill than vacancies for RNs and PCAs.

The proportions of vacancies that were either very quick to fill (less than 1 week) or very hard to fill (more than 26 weeks) was reduced in 2016 when compared with 2012. Compared with 2012, RN vacancies are still sometimes more difficult for facilities to fill than PCA vacancies (for RNs, 28 per cent of vacancies take more than for 4 weeks to fill, while for PCAs this share is only 12 per cent, against 30 per cent and 14 per cent respectively in 2012). Fewer vacancies are taking longer than 8 weeks to fill in 2016 (6 per cent across all occupations in 2016, but 14 per cent in 2012).

Table 4.12: Weeks required for residential facilities to fill most recent vacancy, by occupation: 2016 (per cent)

% of facilities that took	RN	EN	PCA	AH	All occupations
Less than 1 week	22.0	39.1	20.9	62.9	26.2
1 week	7.5	6.8	17.5	4.9	10.5
2 weeks	13.9	10.3	21.4	6.9	11.3
3 to 4 weeks	28.9	24.3	28.1	15.4	30.8
5 to 8 weeks	16.9	13.1	10.0	7.9	15.1
9 to 12 weeks	5.9	3.1	1.7	0.7	3.2
13 to 26 weeks	4.0	2.3	0.3	0.7	2.7
More than 26 weeks	0.9	0.8	0.0	0.6	0.2
Facilities (weighted)	2,149	1,666	2,244	1,340	-

Source: Census of residential aged care facilities.
Facilities reporting weeks for the most recent vacancy, for that occupation.

The time taken to fill staff positions is further examined in Table 4.13 which looks at the average and the median speed at which vacancies are filled. Although there is less information in these two measures, it allows us to look at differences between State/Territories and also across location. The overall figures show that vacancies for PCAs took on average less time to fill (2.5 weeks) compared with vacancies for RNs (4.3 weeks).

There is some variation across States and Territories, with Queensland and NSW taking longer than the average (5.4 weeks and 4.9 weeks respectively) to recruit RNs, and SA and the ACT taking longer than the average to recruit PCAs (in each case 2.9 weeks).

The most pronounced observation emerging from Table 4.13 is that facilities in remote and very remote areas take considerably longer on average to fill vacancies than facilities in major cities. Vacancies for RNs in remote and very remote facilities face an even longer delay before being filled compared with vacancies for PCAs.

Table 4.13 also shows the median duration[6]. This can help give more information about the shape of the distribution of the durations. The median vacancy duration is lower than the average, particularly in cases where the average vacancy duration was high. For example, the average vacancy rates in remote areas were 7 weeks for RNs, and 11.3 weeks in very remote areas and in contrast the median is lower with the median duration for RN vacancies of 5.5 weeks in remote areas, and a median of 8 weeks in very remote areas. The median vacancy duration for all facilities is also lower than the average, at 3 weeks for RNs (the average was 4.3 weeks) and 2 weeks for PCAs (the average was 2.5 weeks). For PCAs the median and average are quite close (2 and 2.5 weeks).

[6] The median is the "middle" of a sorted list of numbers, in this case half of vacancies take longer than the median to fill and half take shorter. Hence, the median can reveal the centre of the durations the outlets reported without distortion. When the median is contrasted with the average, if the median is much lower than the average it shows that the average has been affected by cases with longer durations (and also the other way round if the median is much higher than the average then the average has been influenced by the share with shorter durations).

Link to the ABS website for further information about measures of central tendency.

Source: Census of residential aged care facilities.

The census asked facilities about the causes of staff vacancies, with multiple responses permitted. The most common reason facilities gave for their most recent vacancy for all occupations was resignation (Table 4.14). Around 84 per cent of facilities gave this reason, and it was the most common reason when asked about RNs (52 per cent) and PCAs (73 per cent).

Other important reasons that facilities gave were the creation of a new position (31 per cent) and the retirement of staff (27 per cent). Almost 8 per cent gave injuries/illness as a reason for a vacancy arising, possibly indicating some of the physical risks and demands of residential aged care.

Table 4.14: Proportion of residential facilities giving each reason for their most recent vacancy (per cent), by occupation: 2016

% of facilities stating	RN	PCA	All occupations
New position	20.0	17.1	30.8
Retirement	20.0	20.3	26.9
Injury/illness	0.0	3.8	7.9

Note: Multiple response allowed, columns will not sum to 100.

As shown in Table 4.15, the most common recruitment strategy used to hire new PCAs in 2016 was internet job advertisement (34 per cent of facilities) followed by a combination of internet and newspaper advertisements (23 per cent of facilities). These were also the predominant choices in 2012. This finding supports the view that agency services are very rarely the first option for facilities looking to hire additional PCAs (1 per cent); this was also the case in 2012.

For workers, the most common source of information for all direct care occupations was internet job advertisements followed by word of mouth. Word of mouth is particularly important for PCAs in 2016 (36 per cent), as was the case in 2012. The use of Internet job advertisements has risen for workers since 2012, becoming the most common source of information in job searching for all direct care occupations. The use of agencies is a far more common method amongst nurses and AH workers (16 per cent) compared with PCAs (7 per cent).

**Recently hired workers have been employed for 12 months or less.*

4.7 Setting of Employment Conditions

The 2016 census collected information regarding the industrial methods used by residential facilities to set employment conditions for their staff. Table 4.16 reports the proportions of employees, across all residential facilities, whose employment terms and conditions are prescribed by each of several main methods. We suggest that these figures be treated with some caution, because some of the methods can operate in tandem (for example awards and agreements) and in some instances employers may not recognise clearly the distinctions between them.

Enterprise Agreements are by far the most common method of setting employment conditions. The census form defined these to include union and non-union agreements, whether certified with an industrial authority or not. Facilities reported that 79 per cent of all their employees had their employment conditions determined by Enterprise Agreements in 2016. This is higher than in 2012 when facilities reported 74 per cent of all employee conditions were set in this way. The proportion within each occupation was similar for nurses and PCAs (each 79 per cent), but lower for AH workers (72 per cent). These proportions within occupation are all higher than in 2012, but in particular facilities have reported that AH workers have raised coverage by Enterprise Agreements, rising from 66 per cent in 2012 to 72 per cent in 2016.

Award-based arrangements were the other main method of setting employee conditions in the residential aged care sector with 19 per cent of all facilities reporting this method.

Beyond Enterprise Agreements and Awards, other methods for setting employee conditions were rarely used.

Table 4.16: Industrial methods used by residential facilities to set employment conditions (per cent), by employee occupation: 2016

% of employees with conditions set by method	Nurses	PCA	AH	All occupations
Award	19.3	19.2	21.0	19.3
Enterprise Agreement	78.9	79.1	72.3	78.8
Common Law Contract	0.7	0.4	3.3	0.6
Individual Flexibility Agreement	0.7	0.7	1.9	0.8
Don't Know	0.3	0.5	1.5	0.5
Total	**100**	**100**	**100**	**100**

4.8 Agency, Brokered and Self-employed Staff

Although the 2016 census of aged care facilities predominantly collected information regarding the employment of PAYG direct care workers, providers may also hire non-PAYG staff in order to meet their employment needs. For example, non-PAYG workers may be required to allow service flexibility, cover staff absences or vacancies, or to meet the needs of specific clients on a short-term basis. Facilities were therefore asked about their use of three different types of non-PAYG workers – agency, brokered and self-employed staff. Table 4.17 presents the proportion of facilities that employed at least one non-PAYG worker (in any occupation) in the designated fortnight (last pay period in November 2015). It shows quite widespread use of non-PAYG workers by residential facilities in 2016, with half of all facilities (50 per cent) reporting some use.

Of the three types of non-PAYG workers, agency workers are the most widely used, with 41 per cent of residential facilities reporting using agency workers in 2016. The use of agency workers by facilities is lower in 2016 than that reported in 2012 (46 per cent).

Facilities most often used agency workers for RN or PCA positions. About 28 per cent reported using agency PCAs, 27 per cent agency RNs, 13 per cent agency ENs and 5 per cent agency AHs.

Table 4.17 shows that many facilities engage several agency workers in different occupations at the same time. The fact that 41 per cent of facilities in total use agency workers implies that the 27 per cent of facilities using agency RNs cannot be entirely separate from the 28 per cent using agency PCAs. Rather, these figures tell us that there is overlapping use of agency workers across different occupations within individual facilities.

Table 4.17 suggests that residential facilities use the other two types of non-PAYG workers (brokered and self-employed) mostly in order to acquire AH worker services. We note that the proportion of facilities reporting AH workers in brokered positions increased from 5 per cent in 2012 to 7 per cent in 2016, while reporting AH workers in self-employed positions decreased from 12 per cent in 2012 to 6 per cent in 2016.

Table 4.17: Proportion of residential facilities (per cent) using non-PAYG workers in the designated fortnight, by occupation and type of worker: 2016

Occupation	Agency	Brokered	Self-employed	All non-PAYG
Registered Nurse	27.0	0.9	0.7	28.3
Enrolled Nurse	13.0	0.3	0.3	13.4
Personal Care Attendant	28.0	0.9	0.2	29.1
Allied Health	5.4	7.3	6.2	17.6
All occupations	40.6	8.3	6.5	49.8

Source: Census of residential aged care facilities.

Estimates for each State/Territory of the proportions of residential facilities using non-PAYG RNs and/or PCAs across 2003 to 2016 are shown in Table 4.18.

There are quite noticeable differences in these proportions by State/Territory in 2016. Facilities located in the ACT, SA, Tasmania and the NT had much higher than the average use of non-PAYG RNs in 2016 (28 per cent).

There is evidence of change since 2012, with a strong increase in the use of non-PAYG RNs by ACT facilities (rising from 29 per cent to 38 per cent), and a small increase by NT facilities (up from 40 to 42 per cent). In contrast, with the exception of WA which remained fairly steady in their reported use of agency RNs (28 per cent), the other states recorded declines in the use of non-PAYG RNs (large declines for Queensland, SA, Tasmania).

The pattern of agency worker use to obtain PCA services was different to that of agency worker use to obtain RN services, also with noticeable differences between State/Territory in 2016. Facilities located in the ACT, SA and WA had much higher than average use of non-PAYG PCAs in 2016. Only 6 per cent of Tasmanian facilities reported using agency PCAs, which is much lower than the 29 per cent national average use.

Finally, Table 4.18 presents evidence of a strong increase in the use of non-PAYG PCAs by ACT and WA facilities since 2012. In contrast, the other states recorded reductions in the use of non-PAYG PCAs, since 2012 (with a large reduction in Victoria and a very large reduction in Queensland, SA and NT).

Table 4.18: Proportion of residential facilities (per cent) using any non-PAYG RNs or PCAs in the designated fortnight, by State/Territory: 2003, 2007, 2012 and 2016

State/Territory	RN				PCA			
	2003	2007	2012	2016	2003	2007	2012	2016
NSW	19.1	23.6	26.7	24.1	21.7	25.4	22.2	20.7
Victoria	25.9	31.9	31.2	25.3	31.6	45.7	35.9	29.9
Queensland	27.3	44.1	37.6	29.4	24.1	42.2	35.2	23.4
SA	44.6	44.8	47.3	41.0	51.2	64.1	60.8	46.6
WA	30.3	38.9	28.4	28.3	48.3	62.3	28.4	48.1
Tasmania	15.6	21.4	47.1	40.0	2.2	5.7	10.0	6.2
ACT	44.4	23.5	29.2	37.9	50.0	35.3	29.2	51.7
NT	40.0	81.8	40.0	42.1	50.0	63.6	40.0	26.3
All facilities	26.1	33.3	32.6	28.3	30.1	41.1	34.3	29.1

Source: Census of residential aged care facilities.

Table 4.19 provides a different picture of the extent to which non-PAYG workers contribute to the residential direct care workforce, indicating how many non-PAYG workers had been engaged in the designated fortnight across all residential facilities. Amongst the total number of direct care workers, the most widely used by facilities were non-PAYG PCAs, with 9,085 in residential facilities in the designated fortnight and of these, they were mainly agency PCAs (8,588). The next most widely used were non-PAYG RNs of which there were 3,323 and again the bulk of these were agency RNs (3,185). Reinforcing the findings from previous tables, almost all non-PAYG workers contributing to the residential aged care workforce are RN and PCA agency workers, but also including a sizeable number of ENs (1,708).

Table 4.19: Number of non-PAYG workers in residential facilities in the designated fortnight, by occupation: 2016

Occupation	Number of workers			
	Agency	Brokered	Self-employed	Total
Registered Nurse	3,185	69	69	**3,323**
Enrolled Nurse	1,708	62	51	**1,821**
Personal Care Attendant	8,588	176	321	**9,085**
Allied Health	890	487	369	**1,747**
All occupations	14,371	794	810	**15,976**

Source: Census of residential aged care facilities.
N=2,795 facilities (weighted).

Further questions on the reasons for non-PAYG worker use were added in the 2016 census and are shown in Table 4.20. The two most frequently cited reasons for agency workers were ‘short-term cover for staff absences’ (87 per cent), followed by being ‘unable to fill vacancies’ (51 per cent). These were followed by ‘matching staff to peaks in service user demand’ (14 per cent), ‘covering for maternity leave or annual leave’ (19 per cent) and ‘obtain specialist skills’ (4 per cent). The reasons ‘freeze on permanent staff numbers’ or ‘other reasons’ were rarely cited.

In contrast, the main reason for the much less frequent use of brokered positions and self-employed workers was to 'obtain specialist skills' (65 and 75 per cent respectively).

Table 4.20: Reasons for using non-PAYG workers in residential facilities in the designated fortnight, by type: 2016

Reason	Agency	Brokered	Self-employed
Matching staff to peaks in service user demand	14.2	9.2	6.2
Short-term cover for staff absences	87.2	10.5	9.6
Covering for maternity leave or annual leave	18.6	3.1	5.6
Unable to fill vacancies	51.1	9.2	5.6
Obtain specialist skills	4.3	64.9	75.3
Freeze on permanent staff numbers	1.9	0.9	1.7
Other reason	1.3	8.3	6.2
Facilities (weighted)	1,129	228	178

Source: Census of residential aged care facilities.
Note: Multiple response allowed, columns will not sum to 100.

4.9 Volunteers in Residential Aged Care

As in 2012, the census collected information about the extent of volunteering in residential aged care. In addition, the 2016 census also asked about the roles undertaken by volunteer staff. A high number of volunteers (23,537) provided 114,897 hours of service to residential facilities as a whole in 2016 (Table 4.21). Both the overall number of volunteers and the total hours offered by them are higher than in 2012. Responses from facilities using volunteers indicate they have an average of 10 volunteers per facility (the same as in 2012), with each volunteer contributing an average of 4.9 hours per fortnight (roughly the same as in 2012).

Table 4.21: Total number of volunteers and volunteer hours worked in residential facilities in the designated fortnight: 2012 and 2016

Year	Volunteer numbers, per fortnight	Volunteer hours, per fortnight	Average number of volunteers per facility, per fortnight	Average hours per volunteer, per fortnight
2016	23,537	114,897	10	4.9
2012	22,261	101,555	10	4.8

Source: Census of residential aged care facilities.

As shown in Table 4.22, 83 per cent of facilities have one or more volunteers. Residential facilities in inner regional locations are most likely to have volunteers, while those in remote and very remote areas have fewer volunteers than the average. The use of volunteers by residential facilities also differs by ownership type, with not-for-profit facilities more likely to use volunteers (91 per cent), than for-profit (72 per cent) or government facilities (69 per cent). Residential facility volunteering patterns in 2016 are very similar to those in 2012.

Table 4.22: Proportion of residential facilities employing volunteer workers (per cent) in the designated fortnight, by location and ownership type: 2016

		% of all facilities
All facilities		82.6
Location	Major cities of Australia	81.6
	Inner Regional Australia	88.9
	Outer Regional Australia	85.2
	Remote Australia	71.6
	Very Remote Australia	30.2
Ownership type	Not-for-profit	91.3
	For-profit	72.1
	Government	68.9

Source: Census of residential aged care facilities.

Table 4.23 presents the answers to a new question which was added in 2016 about what roles were undertaken by volunteers in aged care. Residential facilities very often used volunteers for 'social activity support assistance' (82 per cent). A high proportion of facilities also had volunteers undertaking roles such as assisting in the 'planning of group activities' (68 per cent) and to support 'companionship/befriending' (64 per cent). A smaller share of facilities had volunteers undertaking roles of 'transport assistants' (23 per cent), 'shopping/appointment assistants' (16 per cent), and 'gardening assistants' (15 per cent). Proportions of less than 10 per cent of facilities had volunteers undertake 'domestic activity assistance' (9 per cent), 'meal/preparation assistance' (6 per cent) and 'other activities' than those listed (8 per cent) with 'respite care assistance' (2 per cent) and 'home maintenance assistance' (2 per cent) rarely undertaken by volunteers.

Table 4.23: Roles undertaken by residential facility volunteer workers (per cent): 2016

	% of facilities (weighted)
Domestic activity assistance	8.9
Respite care assistance	1.8
Social activity support assistance	81.7
Planned group activity assistance	67.7
Home maintenance assistance	2.3
Gardening assistance	14.6
Transport assistance	22.9
Shopping/appointment assistance	15.7
Meal/preparation assistance	6.4
Companionship/befriending	63.8
Other	7.6
Total (facilities with volunteers, weighted)	2,319

Note: Multiple response allowed, columns will not sum to 100.

4.10 Quality Measures in Residential Aged Care

For the first time, the 2016 residential facilities census contained questions regarding the monitoring of quality in aged care. Information regarding quality in residential aged care is particularly pertinent given the establishment of the Australian Aged Care Quality Agency in 2014.

The most common form of quality monitoring undertaken by facilities/outlets was that 'managers or supervisors monitor quality' (86 per cent of facilities reported this). Keeping records of feedback or complaints from service users' was the second most common method (57 per cent), followed by 'accreditation' (56 per cent). Just over a third of residential facilities also reported that they use 'surveys of service users' (36 per cent) and/or 'inspectors from another organisation monitor quality' (32 per cent). Other less frequently used measures included 'individual employees monitor quality' (20 per cent) and 'external auditing' (16 per cent). The fact that the 'other methods' category was rarely cited (3 per cent) suggests that the list presented covered most measures used.

Table 4.24: The three most important methods for monitoring the quality of aged care services/supports in the facility (per cent): 2016

	% of all facilities
Managers or supervisors monitor quality	86.1
Inspectors from another organisation monitor quality	32.4
Individual employees monitor quality	20.3
Keep records of feedback or complaints from service users	56.9
Surveys of service users	35.6
External auditing	16.2
Accreditation	55.9
Other	2.9

Note: Multiple response allowed, columns will not sum to 100.

5. The Home Care and Home Support Aged Care Workforce

Key Findings

- The total home care and home support workforce has decreased by 13 per cent since 2012 to an estimated 130,263. During the same time period the overall direct care workforce fell by 7 per cent and the FTE workforce by 19 per cent.

- CCWs were the largest home care and home support direct care occupational group (84 per cent) followed by RNs (8 per cent) and AH professionals (5 per cent).

- The median age of the home care and home support direct care workforce was 52 years, and they were predominantly female workers (89 per cent).

- The proportion of overseas born workers in the home care and home support sector has reduced from 28 per cent in 2012 to 23 per cent in 2016.

- Aboriginal and Torres Strait Islander people accounted for 2 per cent of the home care and home support direct care workforce.

- Around 64 per cent of workers reported being in either very good or excellent health.

- Eighty eight per cent of home care and home support workers held post-secondary qualifications. Forty five per cent of outlets reported that more than three-quarters of their CCWs held a Certificate III in an aged-care related field.

- Three-quarters of all home care and home support direct care workers were employed on permanent part-time contracts. The proportion of workers on casual/contract arrangement fell from 27 per cent in 2012 to 14 per cent in 2016.

- A regular daytime shift was the most common work schedule for all direct care occupations. However, 14 per cent of CCWs reported an irregular work schedule.

- Mostly CCWs preferred to work more hours. Less than half (46 per cent) of the home care and home support workforce were happy with their hours of work, 14 per cent wanted to reduce their hours, 40 per cent wanted to increase them.

- Sixteen per cent of the home care and home support workforce reported more than one current job.

- Three quarters of workers had undertaken training over the previous 12 months, with mandatory training the most common form of training. Priority areas identified for future training included dementia, palliative care, and mental health.

- Aged care work was a first occupation for about 5-6 per cent of the home care and home support direct care workforce. No dominant career pathways into home care and home support aged care were identified for CCWs and AH workers.

- Forty two per cent of the home care and home support workforce had paid work in the sector prior to their current job. Improved working conditions, along with changing personal circumstances, were the primary reasons for moving to a different aged care employer.

- Most (81 per cent) home care and home support workers expected to still be with their current employer after 12 months and 6 per cent of the workforce was seeking alternative work.

- Slightly higher levels of job satisfaction were reported by home care and home support than residential care workers.

- The most prevalent unusual job demands made of workers were associated with changes in work patterns (working longer than scheduled, variation to hours/location).

- Twelve per cent of home care and home support direct care workers reported a work-related injury or illness over the previous 12 months, most commonly sprains/strains and chronic joint/muscle conditions.

- Seventy two per cent of outlets employed CCWs from a CALD background, most commonly from Italy and South East Asia.

- All home care and home support outlets reported benefits of employing CALD CCWs – these included enhanced cross-cultural understandings and language skills. Only a fifth of home care and home support outlets reported difficulties in employing CALD CCWs, with communication issues being most common.

5.1 Introduction

This chapter provides detailed information about the home care and home support aged care workforce using responses from both workers (N=7,024) and outlets (N=2,307). The census and survey collected information on the main occupational groups working within the sector. In selected tables we provide details on each of these occupations (including, as in 2012, Nurse Practitioners and Allied Health Assistants). Where these occupational groups are not listed separately, Nurse Practitioners are combined with Registered Nurses, and Allied Health Assistants with Allied Health Professionals under the umbrella of Allied Health worker.

The information provided in this chapter to a large extent parallels that provided for the residential workforce in Chapter 3. In some areas in this chapter direct comparisons are made between the residential and home care and home support workforces. In this chapter we examine the characteristics of the residential workforce and aged care work, career pathways into and out of aged care, the experiences of home care and home support work, the extent of work-related injuries and illness in the sector, and the cultural and linguistic diversity of the workforce.

5.2 Total Employment and Main Workforce Characteristics

The following section provides an overview of the home care and home support aged care workforce including the overall size of the PAYG workforce and how this is distributed across the different occupational classifications within the sector. We then examine key socio-demographic characteristics of the home care and home support workers themselves including age, gender, ethnicity, cultural background, health and education.

5.2.1 Total Employment

The home care and home support sector is likely to play a larger role in the provision of aged care services owing partly to an increasing preference of older Australians to continue to live and receive care in their own homes as they age. Indeed by 2050 it has been estimated that around 80 per cent of all aged care services will be community based (Productivity Commission, 2011). In order to determine how the aged care workforce can most effectively be developed to meet the future care needs of older Australians, an understanding of the size and composition of the existing workforce is necessary. Our estimates of the home care and home support aged care workforce is based on information obtained from the census of home care and home support outlets.

The 2016 census estimates that total employment in home care and home support aged care is 130,263 workers, of which 86,463 are in direct care roles. Table 5.1 compares the 2016 estimates with those from 2012 and 2007. It suggests that the whole home care and home support PAYG workforce reduced in size by 13 per cent between 2012 and 2016 (falling by 19,538 from 149,801 to 130,263). This reduction has followed an earlier rise between 2007 and 2012 (from 87,478 to 149,801).

Direct care employment also fell between 2012 and 2016. It fell by 7 per cent (an estimated fall of 6,896 from 93,359 to 86,463). There was an earlier major employment rise between 2007 and 2012 in the background (a rise of 19,292 from 74,067 to 93,359). These substantial differences indicate that the sector is undergoing considerable structural change and this is reflected in the way labour is used both in numbers but also in the differential use of direct and non-direct care employees.

The proportion of the PAYG home care and home support aged care workforce working in direct care roles continues relatively steady at 66 per cent. In 2016, 66 per cent of home care and home support aged care employees work in direct care roles, compared with 62 per cent in 2012 (85 per cent in 2007).

Table 5.1: Size of the home care and home support aged care workforce, all PAYG employees and direct care employees: 2007, 2012 and 2016 (estimated headcount)

Occupation	2007	2012	2016
All PAYG employees	87,478	149,801	130,263
Direct care employees	74,067	93,359	86,463

Source: Census of home care and home support aged care outlets.

5.2.2 Occupation

The occupational composition of the headcount of home care and home support direct care employees is presented in Table 5.2. Community Care Workers (CCWs) are the largest occupational group in the home care and home support direct care workforce (84 per cent). While their estimated headcount fell by 3,551 (5 per cent) since 2012, as a proportion of the home care and home support direct care workforce the CCW share rose from 81 per cent in 2012 to 84 per cent in 2016.

The number of home care and home support RNs also fell by 662 (9 per cent) between 2012 and 2016, but their share in the whole direct care workforce remained constant at 8 per cent. The number of nurse practitioners still only make up a very small proportion of the home care and home support direct care workforce (0.1 per cent). The number of home care and home support ENs has fallen by 1,753 since 2012 (48 per cent) and as a proportion of the direct care workforce they have fallen from 3.9 per cent to 2.2 per cent. The Allied Health employment categories had a stable share of direct care employment with 6 per cent in 2012 and in 2016.

The overall picture suggests that home care and home support outlets continue to rely on CCWs to provide direct care without much change in the occupational distribution for direct care workers. There has been a small fall in share for most occupations, with a small rise in the share of CCWs, from 81 per cent in 2012 to 84 per cent in 2016.

Table 5.2: Direct care employees in the home care and home support aged care workforce, by occupation: 2007, 2012 and 2016 (estimated headcount and per cent)

Occupation	2007	2012	2016
Nurse Practitioner	n/a	201	53
		(0.2)	(0.1)
Registered Nurse	7,555	7,631	6,969
	(10.2)	(8.2)	(8.1)
Enrolled Nurse	2,000	3,641	1,888
	(2.7)	(3.9)	(2.2)
Community Care Worker	60,587	76,046	72,495
	(81.8)	(81.4)	(83.8)
Allied Health Professional*		3,921	4,062
	3,925	(4.2)	(4.7)
Allied Health Assistant*	(5.3)	1,919	995
		(2.1)	(1.2)
Total number of employees (headcount)	**74,067**	**93,359**	**86,463**
(%)	**(100)**	**(100)**	**(100)**

Source: Census of home care and home support aged care outlets.
** Note: in 2007, these categories were combined under Allied Health.*

A different picture arises from the headcount measure (Table 5.2) compared to the Full Time Equivalent (FTE) employment measure (Table 5.3). These two measures when put together provide a more complete and complementary picture. Table 5.3 shows that there was a 19 per cent fall in the home care and home support FTE direct care workforce (by 10,450 workers from 54,537 in 2012 to 44,087 in 2016). In percentage terms this is a larger decline than in the headcount corresponding comparison (7 against 19 per cent), which suggests that there has been an increase in the proportion of workers employed for fewer hours.

The distribution of the home care and home support FTE direct care workforce in 2016 presented in Table 5.3 is slightly different to that of the headcount number of persons working in direct care occupations shown in Table 5.2. The share of CCWs is lower in the distribution of the home care and home support FTE direct care workforce than in the headcount distribution in Table 5.2 (79 per cent FTE against 84 per cent headcount).

Table 5.3: Full-time equivalent direct care employees in the home care and home support aged care workforce, by occupation: 2007, 2012 and 2016 (estimated FTE and per cent)

Occupation	2007	2012	2016
Nurse Practitioner	n/a	55	41
		(0.1)	(0.1)
Registered Nurse	6,079	6,544	4,651
	(13.2)	(12.0)	(10.5)

		(2.9)	(1.7)
Total number (FTE)	**46,056**	**54,537**	**44,087**
(%)	**(100)**	**(100)**	**(100)**

Source: Census of home care and home support aged care outlets.
** Note: in 2007, these categories were combined under Allied Health.*

Figures 5.1 and 5.2 can help show these changes over time with their patterns. Figure 5.1 portrays the changes over time in distributional proportions for the two measures of headcount

and FTE direct care workforce information shown in Tables 5.2 and 5.3. Figure 5.2 portrays the distribution of the numerical headcount and FTE direct care workforce information shown in Tables 5.2 and 5.3.

Figure 5.1: Share of the occupations for the home care and home support direct care employees (headcount and FTE, per cent)

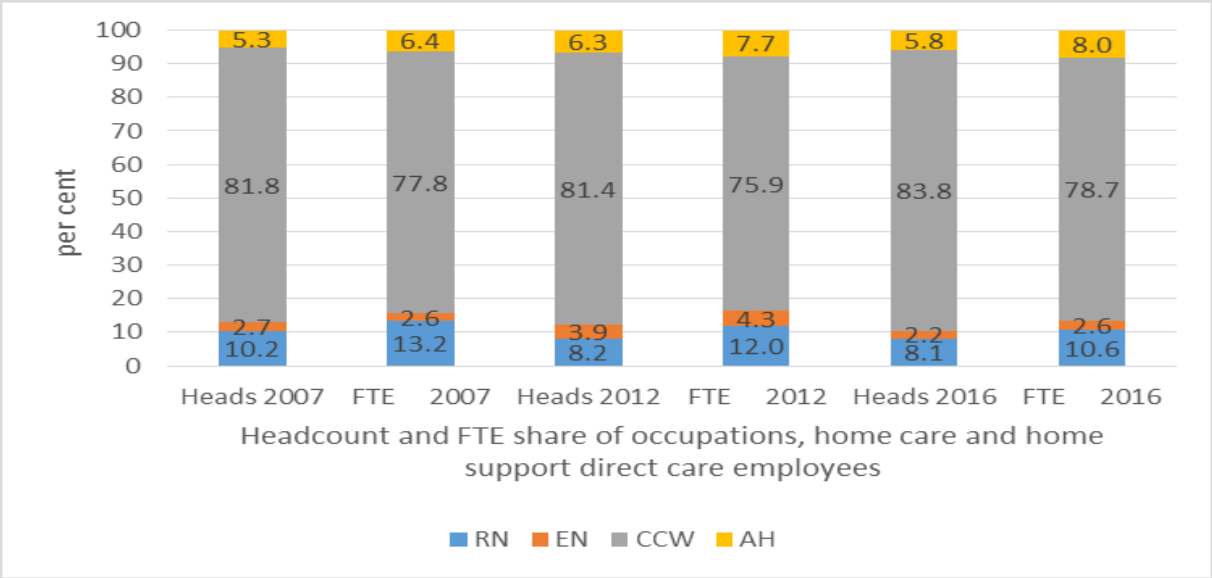

Figure 5.2: Number of the occupations for the home care and home support direct care employees (headcount and FTE)

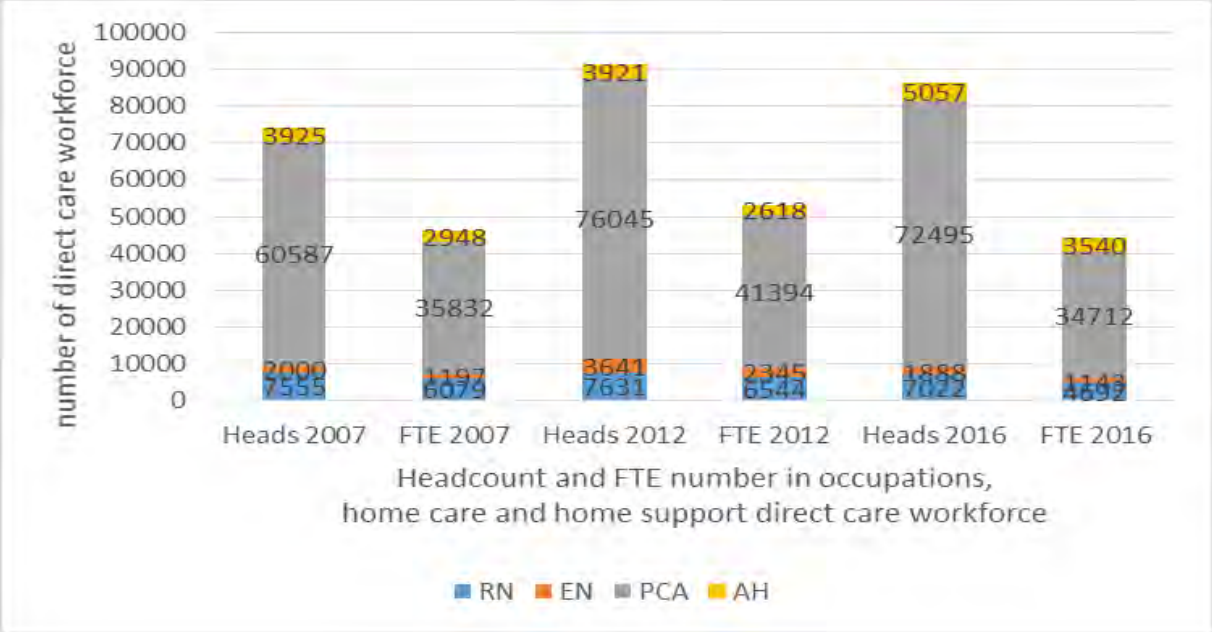

Note: Nurse Practitioners and Registered Nurses were combined under 'Registered Nurse' in 2016 in Figure 5.1 and Figure 5.2. Allied Health Professionals and Allied Health Assistants were combined under 'Allied Health' in both 2007, 2012 and 2016 in Figure 5.1 and Figure 5.2.

Table 5.4 shows the roles of staff not providing direct care in home care and home support aged care. There is a slight change in the distribution of non-direct care staff in home care and home support aged care between 2012 and 2016. Management and administration roles have seen a small rise in their share, while other non-direct care roles have seen a drop in their share.

Table 5.4: Employees not providing direct care in the home care and home support aged care workforce, by occupation: 2016 (per cent)

Occupation	2012	2016
Care Manager/co-ordinator	33.2	29.8
Management	22.3	25.6
Administration	35.3	37.0
Spiritual/pastoral care	1.6	0.5
Ancillary care (home maintenance, modification, etc.)	7.7	7.1
Total	**100**	**100**

Source: Census of home care and home support aged care outlets.

5.2.3 Age and Gender

Understanding the age structure of employees in an industry aids future workforce planning and development. Particular workforce strategies may be required in sectors with an older worker profile, such as the implementation of measures to accommodate the needs of older workers and the addressing of staff turnover due to retirement. The aged care sector (across both residential and home care and home support) has traditionally had an older workforce compared to the Australian workforce in general. Table 5.5 and Figure 5.3 present the age distribution of home care and home support direct care workers for 2007, 2012 and 2016, and compare the direct care workforce with those recently hired (i.e. those who have been employed for 12 months or less). Looking at the whole sample, it is clear that this is an ageing workforce as the only age groups that are continually increasing in share are those above 54 years (with the exception of the 25-34 year olds who show a small increase). This pattern in the age profile of home care and home support direct care workers (Table 5.5) is in clear contrast to that of the residential direct care workforce which is getting younger (Table 3.5).

For home care and home support workers who have been hired in the last 12 months, Table 5.5 shows that 47 per cent are under the age of 45 years (compared with 28 per cent for all direct care workers). This suggests that younger people are attracted into home care and home support aged care. The age profile of recent hires in home care and home support is a little different to that in 2012, but with only slight variation in the two younger age brackets. There was a small fall in 16-24 year old new hires (from 10 per cent in 2012 to 8 per cent in 2016), a slight rise in those aged 25-34 years (from 14 per cent in 2012 to 16 per cent in 2016) and a larger fall in the share of those aged 35-44 years (from 28 per cent in 2012 to 23 per cent in 2016). These are not new hires to the sector, but to their current employers, therefore they may have been working in the aged care sector before. The new hires appear younger than the total workforce. This appears to be a trend as we see the same phenomenon in 2007 and 2012. Observing this flow of younger workers suggests that the home care and home support workforce should have been getting younger since 2007, but this is not what we actually observe. This could be happening for several reasons. It could be, that these are not new hires to the sector, but instead reflect within-sector mobility by younger workers. Alternately, it could be that these new hires may indeed be younger than the average, but those who leave the sector may also be younger than the average, because retention may be lower for the younger workers.

Another way to look at the age of the workforce is to compare the median age (mid-point) of the workforce for each of the occupations, as presented in Table 5.6. Table 5.6 shows that the median age of 52 years in 2016 is slightly higher than the 50 years in 2012. Table 5.6 also shows that the median age of 52 years in 2016 for all direct care workers is higher than that of recent hires (46 years in 2016, but it was 44 years in 2012 and so the home care and home support recent hires are older in 2016 than in 2012).

One of the key differences between the residential and home care and home support aged care workforces is in the median age of CCWs/PCAs. In 2016 residential PCAs had a younger

median age than other occupations across the workforce (46 years, Table 3.6) and for recent hires (35 years), whereas home care and home support CCWs had the highest median age at 52 years (with ENs at 51 years and RNs at 48), with recent hire CCWs (46 years) only 6 years younger. In home care and home support aged care, the youngest median age in the recent hires is for AH workers (41 years in 2016, but this is older than in 2012 when it was 36 years). Recently hired RNs in home care and home support are older by 3 years than RNs for the full direct care workforce.

Table 5.5: Age distribution of the home care and home support direct care workforce, all direct care employees and recent hires: 2007, 2012 and 2016 (per cent)

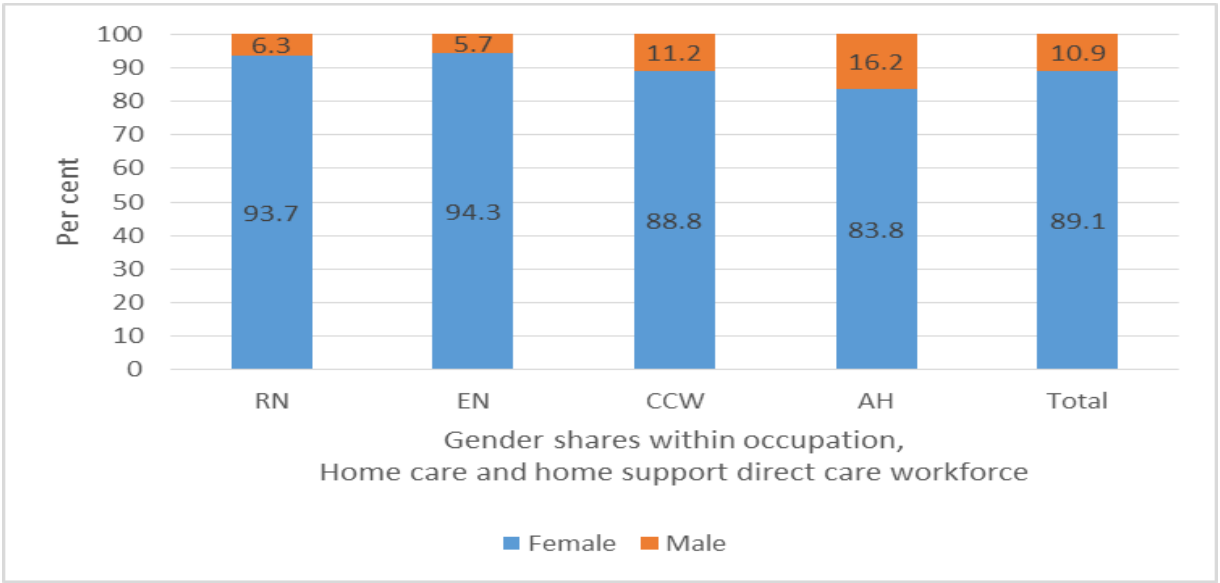
While the proportion of male workers within aged care has slowly been increasing over time, Figure 5.4 shows the home care and home support direct care workforce in 2016 continues to be predominantly female (with 89 per cent female and 11 per cent male direct care workers). While RNs and ENs are occupations where slightly fewer men are employed within the home care and home support direct care workforce (6 per cent), more AH roles are undertaken by men (16 per cent).

Figure 5.4: Gender distribution of the home care and home support aged care workforce: 2016 (per cent)



5.2.4 Country of Birth

Table 5.7 presents the share of the home care and home support workforce born in Australia and elsewhere. The proportion of these workers born outside of Australia has fallen from 28 per cent in 2012 to 23 per cent in 2016. The profile of workers who had been hired in the last 12 months is very similar to that of all direct care workers with the share of those born overseas slightly lower at 21 per cent in 2016. A higher proportion of direct care workers in home care and home support outlets are born in Australia (77 per cent) than amongst residential aged care workers (68 per cent, Table 3.7).

Table 5.7: Country of birth of the home care and home support direct care workforce, all direct care employees and recent hires: 2007, 2012 and 2016 (per cent)

Country of birth	All direct care employees			Recent hires*

** Recent hires have been employed for 12 months or less.*

The distribution of the overseas born workforce by occupation is explored further in Table 5.8. The census asked all facilities to provide the numbers of workers they employ from a culturally or linguistically diverse background for each occupation. The workers survey asked workers themselves to state where they were born and whether they spoke a language other than English. Although not directly comparable, these questions are complementary to each other as they provide different perspectives on the occupational level and distribution of the part of the workforce that were born overseas.

Table 5.8 shows that 23 per cent of all home care and home support direct care workers who responded to the survey are migrants (column 1). It also shows that the migrant worker occupational distribution is broadly similar to that of the overall home care and home support direct care workforce as reported in Table 5.2. Table 5.8 column 2 shows 14 per cent are both a migrant and speaking a language other than English (LOTE). This compares with the information from outlets in column 3 of Table 5.8 which indicates that 18 per cent of employees come from culturally and linguistically diverse (CALD) backgrounds. The proportions of nurses and AH workers derived from the workers' responses in the workers survey are somewhat higher than the proportions derived from the employers' responses in the census. The opposite holds for the CCW proportions.

Table 5.8: The culturally and linguistically diverse (CALD) home care and home support direct care workforce, by occupation, comparing outlet and worker responses: 2016 (per cent)

Occupation	Worker (migrant)[1]	Worker (migrant + LOTE)[2]	Outlet (CALD)[3]

1. Workers who report having migrated to Australia.
2. Workers who report being both migrant and speaking a language other than English.
3. Facilities that report employees from culturally and linguistically diverse backgrounds.

The worker survey asked migrant workers who spoke a language other than English how long they had been living in Australia. This question allows the exploration of the extent to which workers are likely to be familiar with English as a language and with Australian customs and norms. Table 5.9 presents the proportions of time spent in Australia by LOTE migrants, by occupation and for 2012 and 2016. Table 5.9 shows that in 2016 70 per cent of the migrant direct care workforce in home care and home support outlets who speak a language other than English have been in Australia for more than 10 years. There is considerable variation between occupational groups. For example, in 2016, 49 per cent of RNs had been in Australia for 10 years or more, compared to 83 per cent of AH workers.

The proportions of all migrant workers in the sample who speak a language other than English and who have been in Australia for over 10 years in Table 5.9 is 76 per cent for 2012 and 70 per cent for 2016. This is a much different profile to residential aged care workers with a higher proportion of migrants who have recently arrived in Australia, and where only 39 per cent of all residential aged care migrant workers speaking a language other than English have been in Australia for over 10 years, (Table 3.9). The difference relates mainly to workers in CCW/PCA roles, where a higher proportion of home care and home support CCWs (71 per cent, Table 5.9) than residential PCAs (38 per cent, Table 3.9) have been in Australia for longer than 10 years.

Table 5.9: Time spent in Australia of migrant home care and home support direct care workers who speak a language other than English, by occupation: 2012 and 2016 (per cent)

5.2.5 Aboriginal and Torres Strait Workforce

Home care and home support outlets provide a range of services (both culturally specific and as part of broader service options) to older Aboriginal and Torres Strait Islander people. Table 5.10 presents the distribution of the Aboriginal and Torres Strait Islander workforce in home care and home support outlets. We note that the small sample size makes these estimates rather imprecise. Home care and home support outlets report in 2016 that 2 per cent of the direct care workforce are Aboriginal and Torres Strait Islander descent (Table 5.10 Outlet, column 2). Amongst these direct care workers of Aboriginal and Torres Strait Islander origin, home care and home support outlets report in 2016 that their occupational distribution is 3 per cent RNs, 1 per cent ENs, 94 per cent CCWs, 2 per cent AH workers.

The outlet reports from the census reveal that 10 per cent of the home care and home support direct care workforce works in a nursing role (see earlier Table 5.2), three times as many compared with 3 per cent of the Aboriginal and Torres Strait Islander direct care workforce shown in Table 5.10. The vast majority of Aboriginal and Torres Strait Islander home care and home support direct care workers are employed as CCWs (94 per cent, Table 5.10, more than the 84 per cent of all home care and home support workers, Table 5.2). Correspondingly, this means that they are slightly less likely to be in a nursing or AH role.

There is no improvement in the occupational distribution of home care and home support workers for Aboriginal and Torres Strait Islander people since 2012, when also 3 per cent were nurses). The present data collection is not designed to generate information at the required depth for such a small sub-population. More extensive in depth research would be required in this area.

Table 5.10: The Aboriginal and Torres Strait Islander home care and home support direct care workforce, by occupation, comparing outlet and worker responses: 2012 and 2016 (per cent)

Source: Survey of home care and home support aged care workers, Census of home care and home support aged care outlets.

5.2.6 Health

Given the often physical nature of aged care work, the health status of the workforce provides an indication of their capacity to undertake these work tasks. Using a standardised measure of self-assessed health drawn from the ABS (which uses a rating of health as excellent, very good, good, fair or poor), Table 5.11 presents information on the self-assessed health of the home care and home support workforce. Differences between the occupations exist, with a smaller proportion of CCWs saying they had excellent or very good health. Self-assessed health is high across each of the occupations, with around 65 per cent of nurses, 59 per cent of CCWs and 67 per cent of AH home care and home support direct care workers reporting that they are in ‘excellent’ or in ‘very good’ health. This is similar to 2012 when it was about 60 per cent for direct care workers in excellent or very good health, with variation by occupation.

Table 5.11 contrasts the health of all home care and home support direct care workers with that of the new hires. The most notable difference is that both CCW and nurse new hires report much better health than existing workers. The health of recent hires is noticeable for CCWs, where 67 per cent indicate they have excellent or very good health compared with 59 per cent of CCWs in the direct care workforce more generally; and nurses (73 per cent compared with 65 per cent in recent hires).

Table 5.11: Self-assessed health of the home care and home support direct care workforce, all direct care employees and recent hires, by occupation: 2016 (per cent)

Self-assessed health	All direct care employees			Recent hires*		
	Nurse	CCW	AH	Nurse	CCW	AH

**Recent hires have been employed for 12 months or less.*

5.2.7 Education

Having an appropriately qualified and skilled workforce is important for career development within the aged care sector and also for the provision of quality care to older Australians. From the point of view of the sector as a whole and the national aged care policy in the context of an increasing consumer directed home care environment, an appropriately qualified and skilled workforce is not only important, but also critical for attracting the necessary investment for the growth of the sector. In all advanced economies the presence of adequate labour supply in the form of a skilled and well qualified workforce can act like a magnet for investment. The aged care sector has such a well-qualified and skilled workforce at its disposal and our reports since 2003 suggest that it is getting better. The need to monitor regularly is met through the NACWCS data collections.

This section presents information about the formal education of the home care and home support workforce. Additional categories of qualifications related to disability care were added to the 2016 questionnaires for the first time to account for a possible linkage between aged care and disability care labour supply and demand. The questions about the qualifications of care managers and care leaders, which were first asked in 2012, have been continued, together with the further training questions.

Examining the educational qualifications held by the direct care workforce as a whole, Table 5.12 shows that in 2016 88 per cent of home care and home support direct care workers have post-school qualifications, a small rise from 86 per cent in 2012, and is now nearly as high as for residential direct care workers (90 per cent, Table 3.12). Of the occupations, a higher proportion of CCWs than others have no post-school qualification (14 per cent), although this is slightly lower than the 16 per cent recorded in 2012.

The types of qualifications held generally reflect workers' occupational roles. RNs mostly have a Bachelor Degree in Nursing (78 per cent), with many having other nursing or health related qualifications; 86 per cent of ENs have a Certificate IV/Diploma in Enrolled Nursing; and CCWs have mostly certificate level qualifications in aged care (51 per cent Certificate III, 12 per cent Certificate IV). The AH category contains both AH Professionals and AH Assistants, and so their post-school qualifications are split between health and aged care.

The proportion of CCWs with aged care or related qualifications has increased only slightly since 2012. Just over half have a Certificate III in Aged Care (51 per cent in 2016, 48 per cent in 2012) and just over a quarter have a Certificate III in Home and Community Care (27 per cent in 2016, 20 per cent in 2012). However, while in 2012, 19 per cent of CCWs held an Aged Care or Service Co-ordination Certificate IV qualification, this has fallen to 15 per cent in 2016.

For the first time in 2012 information was added about the post-secondary qualifications of care managers and care leaders.[7] The educational profile of these two leadership positions is quite similar. As in 2012, a slightly higher proportion of care leaders have Certificate III in Aged Care (42 per cent in 2016, higher than the 37 per cent in 2012), while care managers are more likely to have a Bachelor Degree in Nursing (27 per cent in 2016, also higher than the 18 per cent in 2012), or management qualifications; but the differences between them are not of the same scale as for the equivalent staff in residential facilities. One of the chief differences between care managers and leaders in residential and home care and home support aged care is that, in home care and home support outlets, a higher proportion hold qualifications in non-work related fields, suggesting that they had a different occupation before entering aged care.

Home care and home support aged care direct care workers with a disability related qualification (asked for the first time in 2016), are mostly CCWs with a Certificate III in Disability (9 per cent), with a Certificate IV in Disability held by 6 per cent (these may overlap since some may hold both). These are slightly greater shares than in residential aged care. In both types of aged care services, it is mainly CCW/PCAs holding a Certificate III in Disability.

[7] Care managers were defined as having responsibility for all direct care workers in the outlet; while care leaders were defined as having responsibility for a team of direct care workers, but reporting to a care manager.

Source: Survey of home care and home support aged care workers.
**All DCW (direct care workers), does not include care managers or care leaders.*
Note: Because staff can have more than one qualification, the columns do not sum to 100.

Table 5.13 shows the percentage of workers with aged care Certificate III and IV within home care and home support outlets for 2007, 2012, and 2016. In 2016, the proportion of outlets with more than 75 per cent of CCWs with a relevant Certificate III was 45 per cent (between 2007 and 2012 this share rose from 28 per cent to 40 per cent)). While CCWs with relevant Certificate IV qualifications are found less often, the proportion of outlets with no CCWs

holding these qualifications was steady with 30 per cent in 2016, against 30 per cent in 2012 (in a substantial earlier change this share decreased from 42 per cent in 2007 to 30 per cent in 2012).

The prevalence of CCWs with relevant Certificate III qualifications in outlets is not as high as it is for PCAs in residential facilities (11 per cent of outlets have no CCWs with Certificate III qualifications Table 5.13, whereas only 2 per cent of residential facilities have no PCAs with Certificate III qualifications Table 3.13).

The share of home care and home support outlets with no CCWs with relevant Certificate IV qualifications is now 30 per cent, against the 24 per cent of residential facilities with no PCAs with Certificate IV qualifications.

Table 5.13: Distribution of community outlets by proportion of Community Care Workers (CCWs) with relevant Certificate-level qualifications: 2007, 2012 and 2016 (per cent)

Source: Census of home care and home support aged care outlets.

As older Australians increasingly choose to stay and receive care within their own homes, direct care workers in the community often provide support to people with a wider range of care needs than previously. The worker survey therefore asked workers if they had specialised qualifications that would help them deal with certain types of aged care needs. These specialisations were selected as being important for aged care, but this is not an exhaustive list.

Table 5.14 shows that in home care and home support aged care, 80 per cent of care leaders and 79 per cent of care managers do not have specialised qualifications in aging or aged care. These proportions have improved since 2012 when 92 per cent of care leaders and 89 per cent of care managers did not have specialised qualifications in ageing or aged care. Of those with the specialised ageing or aged care qualifications in 2016, palliative care and gerontology are the most prevalent, and this is similar to 2012. Across all occupations, the most common specialty was in palliative care.

Just under a quarter of home care and home support RNs (23 per cent) had one of these specialised qualifications and 20 per cent of ENs. This was higher than other occupational groups, with only 14–16 per cent of other direct care workers. More of care managers and care leaders had qualifications in any of the areas of specialty listed (21 per cent and 20 per cent respectively). This reflects a smaller proportion of the home care and home support workforce with specialised qualifications than in residential facilities (Table 3.14).

Table 5.14: Specialised qualifications in ageing or aged care of the home care and home support direct care workforce, by occupation: 2012 and 2016 (per cent)

Source: Surveys of home care and home support aged care workers.

The level of study currently being undertaken by the home care and home support direct care workforce is shown in Table 5.15. Far fewer home care and home support aged care workers are studying in 2016 (11 per cent) than there were in 2012 (21 per cent). Split by their occupation, in 2016 11 per cent of CCWs, 11 per cent of RNs, 16 per cent of ENs and 9 per cent of AH workers were engaged in study. The corresponding 2012 percentages were 21 per cent of CCWs, 13 per cent of RNs, 28 per cent of ENs and 17 per cent of AH workers. Furthermore, in comparison to the residential workforce, fewer home care and home support workers report that they were currently studying in 2016 (11 per cent compared to 16 per cent residential Table 3.15).

5.3 The Main Characteristics of the Work

The next section examines the structural features of working in aged care. These include the types of arrangements under which workers are employed, their shifts and whether they are working their preferred hours, their wages and whether they need to hold multiple jobs, and the opportunities provided by employers for additional training.

5.3.1 Employment Arrangements and Hours Worked

The employment arrangements and working hours in aged care provide an indication of the level of flexibility required by both employers and employees. These factors also reflect the current robustness of the labour market. For example, in a strong labour market employees are more likely to be able to have the form of employment contract, shifts and hours they prefer. Table 5.16 presents the different forms of employment in the home care and home support aged care in 2012 and 2016, distinguishing between permanent full-time, permanent part-time and casual or contract. The proportions have changed since 2012. In particular, the proportion of workers employed under permanent part-time arrangements has increased from 62 per cent in 2012 to 75 per cent in 2016. This increase has been principally through a reduction in casual and contract arrangements, from 27 to 14 per cent. Full time permanent employment remained unchanged at around 11 per cent.

There was an increase of CCWs in permanent part-time employment from 63 per cent in 2012 to 79 per cent in 2016. For nurses, the increase in permanent part-time is modest and the AHs show a decrease. Similarly, what appears to be a constant proportion of overall full-time permanent employment conceals a modest decrease for CCWs (7 to 6 per cent), a modest increase for RNs (33 to 35 per cent), and a sizeable increase for ENs and AHs (17 to 24 per cent and 27 to 39 per cent respectively).

In contrast to the situation in 2012 when a higher proportion of direct care workers were on casual or contract basis (27 per cent) in community aged care, compared with residential aged care (19 per cent, Table 3.16), the situation in 2016 shows a narrowing down of the gap between the two types of care. Indeed in 2016, 14 per cent of home care and home support workers are on casual contracts similar to those in residential aged care (10 per cent, Table 3.16). Also a roughly similar proportion (11–12 per cent) is employed under permanent full-time arrangements across home care and home support and residential care in 2016, but this is largely unchanged from 2012 when it was 10-11 per cent.

Table 5.16: Form of employment of the home care and home support direct care workforce, by occupation: 2012 and 2016 (per cent)

	Permanent full-time	Permanent part-time	Casual or contract	Total

Table 5.17 presents the distribution of work schedules in the home care and home support direct care workforce. Unlike the employment arrangements in the previous Table 5.16, where considerable change was observed between 2012 and 2016, here our evidence goes further back to 2007 and finds no major change between 2007, 2012 and 2016 work schedules. The majority of home care and home support direct care workers continue to be employed on regular daytime shifts. We note some slight changes in rotating shifts and irregular shifts, among nurses and CCWs, but the numbers are too small and this finding of change is probably unreliable and should not be over-interpreted.

Table 5.17: Work schedule of the home care and home support direct care workforce, by occupation: 2007, 2012 and 2016 (per cent)

Work schedule	Nurse			CCW			AH

Source: Survey of home care and home support aged care workers.

The number of hours an employee prefers to work is often associated with the ability to achieve a required level of financial security and also to effectively undertake non-work responsibilities. Table 5.18 presents and contrasts the number of actual hours worked with number of the hours individual workers say they would prefer to work. The majority of home care and home support workers work between 16–34 hours per week (56 per cent), as was the case in 2012 (54 per cent).

There are occupational differences in the hours worked. More than half of the RNs (55 per cent) and half AH workers (50 per cent) work 35 hours or more per week, compared to only 22 per cent of CCWs. CCWs are the major occupational category working 1–15 hours (20 per cent), with the majority of CCWs working 16–34 hours per week (58 per cent). However, since 2012 there has been a fall in the proportion of CCWs working 35 hours or more or longer (from 25 per cent in 2012 to 22 per cent in 2016) and this reverses the rise in their longer hours observed from 2007 to 2012.

When we look at the reported hours that workers would prefer to work, the least preferred categories are working for 1–15 hours or for >40 hours categories, followed by the 35–40 hours per week. The most preferred category for all types of direct workers is 16-34 hours per week. The preference to work 35-40 hours per week is particularly noticeable for RNs, ENs and AH workers who had 16 per cent, 14 per cent and 11 per cent working more than 40 hours per week. The preference for longer hours relates mainly to CCWs where there is a clear preference to move away from working 1-15 or 16-34 hours and into working 35-40 hours. Table 5.18 shows that many people would like to be working different hours than they actually do, some fewer, but most, more hours.

Table 5.18: Actual working hours and preferred working hours of direct care workers in the home care and home support direct care workforce, by occupation: 2016 (per cent)

Occupation	Actual hours per week				Preferred hours per week			
	1–15	16–34	35–40	>40	1–15	16–34	35–40	>40
Registered Nurse	3.6	41.2	38.9	16.3	2.5	51.5	43.5	2.6
Enrolled Nurse	8.0	51.1	27.4	13.6	6.0	51.9	35.0	7.2
Community Care Worker	19.9	58.1	17.6	4.5	13.3	53.7	30.7	2.3
Allied Health	6.9	43.1	38.6	11.4	5.0	48.6	42.4	4.1
All occupations	17.5	55.7	20.8	6.0	11.8	53.2	32.5	2.5

Source: Survey of home care and home support aged care workers (Row totals).

To further investigate these preferences in working hours, Table 5.19 shows the direction of preferred change (more or less hours) and the extent of the preferred change in terms of the number of hours workers want to increase or decrease their hours by. The preferences are compared with those of workers in earlier years 2007 and 2012.

There has been a slight change between 2016 and 2012 in the proportion of home care and home support workers happy with the hours they currently work, falling from 49 per cent in 2012 to 46 per cent in 2016. Alongside this 40 per cent of workers are seeking more hours in 2016 compared with 36 per cent in 2012. The two extreme categories (10+ hours less and 11+ hours more) are mostly stable between 2012 and 2016 for home care and home support, in that there are still few people who would wish to work considerably fewer hours (down from 5 per cent in 2012 to 4 per cent in 2016) and more people who would wish to work considerably more hours (up from 6 per cent in 2012 to 7 per cent in 2016).

The major finding in these two tables is that throughout the period of 2007 to 2016 most of those workers who want to change their hours, are looking to increase their hours. One implication of this finding is that the demand for labour is soft. This suggests that this sector has considerable labour reserves in the form of the observed under-utilisation of its present workforce. This would mean the possibility that present or future skill shortages could be accommodated through the use of the present workforce. This is in line with the evidence presented in the skill shortages section of the report.

Table 5.19: Preferred change in working hours of the home care and home support direct care workforce: 2007, 2012 and 2016 (per cent)

Desired change in hours	2007	2012	2016
10+ hours less	3.5	4.7	3.8
1–9 hours less	7.6	10.6	10.0
No change in hours	47.3	48.7	46.4
1–5 hours more	23.1	19.9	20.3
6–10 hours more	12.6	10.4	12.4
11+ hours more	6.0	5.8	7.1
Total	**100**	**100**	**100**

5.3.2 Wages

The worker survey collected information on the wages earned by direct care workers in the home care and home support sector. Table 5.20 presents the reported gross median weekly earnings for each occupation participating in the residential aged care workers survey by the four groupings of number of hours worked per week (1-15, 16-34, 35-40, and more than 40).

In 2016, the gross median weekly wage reported by RNs is $1,200 per week. As discussed above, a high proportion of RNs work more than 35 hours per week (Table 5.18) and we expect this to be reflected in the overall median weekly wage for the profession. When working part-time, RNs report a higher median weekly wage than other occupations for the 16-34 hours category and a lower weekly wage for the 1-15 hours category, almost certainly reflecting the differences in the weekly hours worked between the occupations.

AH professionals, who have a similar level of qualifications to that of RNs, have a slightly lower median wage than RNs ($1,153), but this is reversed in the 1–15 hour category ($386 whereas RNs $325). AH professionals are the only occupational group with a higher median wage in home care and home support than in residential aged care across all categories. A higher proportion of workers are part-time in home care and home support aged care, especially in the 1–15 hours category. Of these workers only AH Professionals with 1-15 hours per week have a higher median wage than similar workers in residential facilities.

Table 5.20: Median weekly earnings of the home care and home support direct care workforce, by occupation and working hours: 2016 ($ per week)**

Occupation	Hours per week				All hours
	1–15	16–34	35–40	>40	
Nurse Practitioner	*	*	*	*	750
Registered Nurse	325	1,000	1,350	1,400	1,200
Enrolled Nurse	350	781	993	1,274	874
Community Care Worker	330	650	920	1,000	650
Allied Health Professional	386	945	1,311	1,318	1,153
Allied Health Assistant	270	600	982	890	660
All occupations	330	656	1,000	1,117	693

Source: Survey of home care and home support aged care workers.
**As the numbers of Nurse Practitioners are small, the wages earned have not been reported for individual categories.*
***As in 2012, the calculation is undertaken within each occupation group. Workers are asked in the survey about the dollar amount of their most recent pay (before tax and other deductions), and over what period those wages were for (week, fortnight, month). The amount is divided by the relevant number to calculate a weekly wage variable (divide by 2 for fortnightly pay, by 4 for monthly).*

5.3.3 Multiple Job Holding

Within the broader Australian workforce, approximately 5.3 per cent of employees hold more than one job (ABS, 2013). As shown in Table 5.21, multiple job holding is more common within aged care than the national average. In 2016, 16 per cent of home care and home support direct care workers reported holding multiple jobs (comparable to 14 per cent in 2012). Within this 16 per cent, 7 per cent have another job in aged care (5 per cent in home care and 2 per cent in residential care), another 7 per cent have another job not in aged care or disability care, and a final 2 per cent have another job in disability care. This fits in with the information already presented showing low working hours (1-15 hours, Table 5.18) and preference for more hours of work (Table 5.19) for home care and home support CCWs, which shows there is scope for them to hold more than one job. The overall picture of multiple job holding and its split by occupation has not changed in a pronounced way since 2012. Overall 2 per cent are also working in disability care alongside their aged care job. It is possible that as the NDIS expands more aged care sector workers may be attracted to this alternative career.

Table 5.21: Prevalence of multiple job-holding among home care and home support direct care workers, by occupation: 2012 and 2016 (per cent)

	RN	EN	CCW	AH	All occupations
2016

**'Other job in disability care' and 'Other job not in aged care or disability care' category added in 2016. Multiple response.*

5.3.4 Training

In Section 5.2.7 a high proportion of the home care and home support workforce were shown to hold formal post-school qualifications. This next section presents information on the training and continuing professional development (CPD) undertaken 'on the job' or to maintain these qualifications. Within aged care, training is an important element of the work. New questions about training were asked of workers in 2012 to establish their participation, the aims of the training undertaken, and the areas in which they would like further training. This last aspect of training was also asked of outlets in relation to training required for CCWs, the largest component of their workforce. These questions were repeated in 2016 and we present this comparison in Table 5.22.

Table 5.22, shows that 48 per cent of the home care and home support workforce undertook CPD in 2016, a smaller share than the 53 per cent in 2012. It also shows that 75 per cent undertook training during the previous 12 months (slightly fewer than in 2012 at 78 per cent). As with residential aged care, mandatory training was the most common type of training undertaken in home care and home support aged care, 69 per cent of the workforce participated in this type of training (however this is a lower share than the 76 per cent in residential care). A much smaller proportion of CCWs than workers in all other occupations undertook any form of training or CPD, which implies that the training gap between CCWs and the rest of the workforce is set to intensify. Comparing the 2012 and 2016 percentages supports this view. The same lower CPD/training is observed among PCAs in the residential sector (Table 3.22), but not of the same scale as in Table 5.22 among CCWs.

Similar to residential care, the more specialised occupations (nurses and AHs) in home care and home support engage in greater levels of CPD and training. Some of this training/CPD will be a compulsory requirement by their professional associations. ENs show the strongest increase in training between 2012 and 2016, especially in the increasing proportion of mandatory training from 59 per cent to 73 per cent. RNs show the same pattern, but somewhat weaker than ENs. AHs give a mixed picture of more training but less CPD in 2016, whilst CCWs show less training and less CPD. There was an overall fall in CPD from 2012 to 2016 for CCWs (47 per cent in 2012 to 41 per cent in 2016) and AHs (75 per cent in 2012 to 71 per cent in 2016). There is some change in the composition of mandatory versus non-mandatory training for CCWs (non-mandatory training fell from 19 per cent in 2012 to 14 per cent in 2016) and AHs (mandatory training rose from 68 per cent in 2012 to 70 per cent in 2016).

Table 5.22: Participation in training and/or continuing professional development (CPD) by home care and home support aged care employees in the past 12 months, by occupation: 2012 and 2016 (per cent)

	RN	EN	CCW	AH	All occupations
2016					
CPD	95.4	87.1	40.6	70.9	47.8
Training:					
No training	15.8	18.5	26.5	18.7	25.0
Mandatory training	77.4	73.2	67.4	70.1	68.5

Non-mandatory training	36.7	33.7	19.2	31.2	21.8

Source: Survey of home care and home support aged care workers.
Note: Multiple response allowed, totals will not sum to 100.

Workers engage in training with a variety of aims, as illustrated in Table 5.23. The two most commonly selected aims were 'to improve skills' and 'maintain professional/occupational standards. A high proportion of workers, particularly RNs (78 per cent), selected 'to maintain professional/occupational standards' as one of their aims, and this is similar to 2012 when this share was 76 per cent. 'Meeting accreditation requirements' was a relatively popular reason for home care and home support workers undertaking training (over 40 per cent for each occupation) however this was not as high as it was for residential workers (where it was over 50 per cent for each occupation). In line with 2012, just under a quarter of CCWs nominated 'safety/health concerns' as an aim of the training they had undertaken within the last 12 months. A relatively low proportion of workers viewed training as having direct relevance to being able 'to secure a job or promotion' or 'to help get started in their job' and again this was similar in 2012.

Table 5.23: Stated aims of training undertaken by the home care and home support direct care workforce during the last 12 months, by occupation: 2016 (per cent selecting)

Aim of training	RN	EN	CCW	AH
Improve skills in current job	56.8	70.1	66.8	57.5
Develop skills generally	45.1	49.4	43.6	42.6
Maintain professional/occupational standards	77.7	72.6	53.6	56.9
Meet accreditation requirement	45.9	41.5	47.1	48.3
Safety/health concerns	12.2	13.2	24.1	18.2
Prepare for future job/promotion	7.2	3.4	7.1	8.4
Help get started in job	2.5	0.8	6.6	7.3
Other	6.9	7.4	3.6	4.2

Source: Survey of home care and home support aged care workers.
Note: Multiple response allowed, totals will not sum to 100.

In Table 5.24 it can be seen that home care and home support workers identified numerous areas in which they thought additional training was needed for their workplace in the next 12 months. The relatively high proportions of workers that identified multiple areas suggest that they believe their skills could be improved in a range of areas. In particular, for CCWs, dementia training was viewed as needed by the largest share of workers (61 per cent). Outlets also identified dementia training as most needed for CCWs (83 per cent). When compared

with the responses from CCWs, although the proportions are different, the outlet priorities are the same. The top three areas of training are dementia training, mental health and palliative care. In home care and home support mainly it was a higher proportion of RNs (41 per cent) than workers in other occupations (proportions lower than 30 per cent) that sought training in management and leadership.

Table 5.24: Areas of training identified as most needed in the next 12 months for the home care and home support direct care workforce, by occupation, comparing outlet and worker responses: 2016 (per cent)

Area of training	RN Workers	EN Workers	CCW Workers	CCW Outlets	AH Workers
Dementia training	41.8	47.4	61.0	82.7	46.7
Palliative care	35.9	48.3	29.5	28.4	17.7
Management and leadership training	40.5	19.6	20.9	12.9	28.0
Wound management	39.2	59.8	18.3	18.2	7.0
Mental health	14.5	23.8	41.4	42.6	33.2

Note: Multiple responses were allowed, columns do not sum to 100.

5.4 Career Paths

In order to meet the increasing preference for community-based care by older Australians, the sector needs to attract new entrants into home care and community support roles and retain them once employed. This section looks at the pathways into and out of home care and home support aged care jobs, both within the sector and within the current roles of direct care workers. This information explores the occupational backgrounds of the community workforce, when they first considered entering the direct care workforce, how long they have been in the workforce, and what their intentions are in the near future. Some of the common pathways for different occupations are identified and areas that have changed or may be of interest for future planning are highlighted. Similar to residential care, career paths can also be good indicators of the attractiveness of a sector and of the loyalty of the workforce to aged care.

5.4.1 Into Aged Care

Very few workers start their career in aged care. Table 5.25 shows that only 5 to 7 per cent of the home care and home support direct care workforce reported that aged care is their first occupation. Most home care and home support direct care workers have worked in other jobs before aged care. This aspect of the workforce was observed in 2012 as well. Nurses have a clear pathway into aged care, as 69 per cent of RNs (a smaller share than the 77 per cent of RNs in 2012) and 38 per cent of ENs had worked in a different health or social care setting such as acute care, community or other health care (roughly the same as the 43 per cent in 2012). In comparison, a relatively high proportion of CCWs have worked in quite different occupations, as 36 per cent (similar to the 38 per cent of CCWs in 2012) had a background in sales, hospitality, cleaning or clerical work (with AH 24 per cent, 21 per cent of ENs but only 8 per cent of RNs). As noted in 2012, these are areas of work that are dominated by women and often do not require post-school qualifications. AH workers also have diverse backgrounds, 15 per cent with backgrounds of other health or social care jobs and just over a quarter (27 per cent) from professional or management jobs. For CCWs and AH workers there is no dominant pathway into aged care work, as in 2012. Attracting these workers into aged care will continue to require a variety of strategies that emphasise the benefits of this work compared with their current jobs.

In 2016, disability care was added to the list of occupations. Table 5.25 shows that disability care was rarely a prior job for home care and home support nurses and only 5-6 per cent of CCW and AH workers had a disability care background. The implication is that there has not been a shift of workers from disability into aged care due to the National Disability Insurance Scheme (NDIS), which commenced in small volumes in 2013. If there is to be such a change, this will only be discernible after at least one to two years of the NDIS implementation when NDIS volumes will have increased and the various transition agreements with pre-NDIS providers will be coming to an end.

Table 5.25: Activity prior to first job in aged care of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Last occupation before first aged care job	RN	EN	CCW	AH
No previous paid employment	5.2	5.6	6.8	5.8
Nurse, acute care	53.1	23.4	1.7	1.8
Nurse, community	11.5	5.7	1.2	0.5
Other health care	4.2	8.9	4.0	12.3

Source: Survey of home care and home support aged care workers.

Table 5.25 shows that more than 90 per cent of all home care and home support direct care workers have worked in other jobs before aged care and they join the sector at the relatively high median age of 46 for recent hires (Table 5.6). Aged care is not, therefore, a career choice of many young people. Further details on the age profile of the home care and home support workforce is provided in Table 5.26 which shows the age distribution of the workforce on entry into the sector by occupation. In 2016 55 per cent of all direct care workers were 40 years or older when they first started working in home care and home support aged care.

When broken down by occupation, the proportion of the 40 years or older is 60 per cent for CCWs, 33 per cent for AHs, 28 per cent for RNs and 29 per cent for ENs. At the other end of the age spectrum, 40 per cent of RNs, 44 per cent of ENs, 46 per cent of AH workers and just 17 per cent of CCWs began working in aged care before the age of 30. Compared with direct care workers in residential facilities, a greater share of home care and home support direct care workers start working in the sector at a later stage in life. There are no noteworthy differences between the 2012 and the 2016 proportions.

Table 5.26: Age at which began working in aged care of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Age (years)	RN	EN	CCW	AH	All occupations
21 or under	17.4	27.5	7.4	10.5	8.8
22–29	32.1	16.6	9.5	35.9	13.0
30–39	23.0	27.4	22.7	20.5	22.7
40–49	21.2	25.6	35.3	19.4	33.0

Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers.

The age at which workers are first employed in aged care influences the total time they can remain in the workforce. Table 5.27 shows the total time spent working in aged care across the different occupational groups on the home care and home support workforce.

About a third of RNs (34 per cent) and ENs (34 per cent), have been in aged care for more than 19 years, which is in accordance with the younger age at which they started working in aged care, compared to other occupational groups (Table 5.26). The majority of RNs and ENs have been working in home care and home support aged care for more than 9 years, demonstrating that once people come into aged care, they often stay for a considerable length of time (64 per cent and 71 per cent respectively). The lower proportion of CCWs who have been in aged care for more than 9 years (39 per cent) can be in part attributed to their older starting age (25 per cent of CCWs started working in aged care when 50 years or older, as shown in Table 5.26). On the whole, this is a very stable workforce, which may be exposed to the risk of high levels of retirement, but which sees few leakages to other sectors. Whether this picture will persist as parts of the workforce becomes younger (as we see happening in the residential workforce) and as alternative forms of similar employment becomes available through the NDIS, is a question that this data cannot answer.

Table 5.27: Total time spent working in aged care of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Total time in aged care (years)	RN	EN	CCW	AH	All occupations
1 year or less	3.0	5.3	10.3	13.0	9.8
More than 1 year–4 years	11.3	8.7	24.0	14.5	22.1

5.4.2 Into their Current Job

Aged care providers in Australia commonly express concerns regarding difficulties recruiting and retaining skilled staff. It is important, therefore, to understand the level of turnover within the home care and home support sector and the reasons why workers choose to move to a different aged care employer. This next section examines pathways into the current job held by direct care workers and finds out the extent of, and reasons for, job mobility.

Table 5.28 shows that about half of the direct care workers had worked in aged care prior to getting their current job (48 per cent). There were occupational differences, with a lower

proportion of CCWs (45 per cent in 2016 and 44 per cent in 2012) than workers in other occupations who had worked in aged care previously. While the proportion of workers who had worked in aged care on an unpaid basis was low, it appears that unpaid work is a more important pathway for CCWs (6 per cent) and AH workers (6 per cent) than for nurses (1-2 per cent).

Table 5.28: Whether had worked in aged care prior to current job of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Whether had previous work in aged care	RN	EN	CCW	AH	All occupations
Yes, paid	70.4	74.9	38.3	50.2	42.4
Yes, unpaid	0.7	1.6	6.4	6.1	5.9

Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers.

In order to examine recruitment patterns among the newer worker in aged care, Table 5.29 presents the proportion of home care and home support workers who had been in the sector for up to 5 years and whether they had worked in their current outlet previously. Table 5.29 shows that a higher proportion of nurses (RNs 26 per cent, ENs 28 per cent) than CCWs (13 per cent) have worked in the outlet previously. This pattern is similar to that for residential workers but with higher shares than in residential care (RNs 19 per cent, ENs 19 per cent, PCAs 18 per cent, Table 3.29). CCWs (5 per cent) and AH workers (6 per cent) but also ENs (4 per cent) had past unpaid or voluntary work in the outlet of their current job.

Table 5.29: Whether had worked in current outlet prior to obtaining current job of home care and home support direct care workers employed in the last five years, by occupation: 2016 (per cent)

Whether had previous work in current outlet	RN	EN	CCW	AH
Yes, paid work	25.8	23.9	8.0	18.3
Yes, unpaid or volunteer work	0.6	3.9	5.2	6.1

Total	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers.
N=2,644 (weighted).

The home care and home support aged care worker survey asked those employees who had worked in aged care previously why they left their prior job. Understanding the reasons why workers leave one job and move into another within aged care can provide insights into what may need to change to improve the retention of staff within a facility. Table 5.30 indicates that while some of the home care and home support worker turnover may be addressed at management level, other reasons may also be responsible, often related to the personal circumstances of workers.

A third of home care and home support RN and CCW workers (33 and 34 per cent respectively) cited personal reasons for leaving their last job, such as moving house, fulfilling care responsibilities or wanting a job closer to home. These reasons reflect the gender, age and other demographic characteristics of the workforce. It is female dominated (see figure 5.4) and therefore workers are more likely to bear the majority of domestic (day-to-day) responsibilities; and it is largely part-time or casual (Table 5.16) and therefore workers are less likely to be primary wage earners. These factors provide the context within which workers have to make decisions about their aged care work.

Some of the reasons for leaving a job may have to do with work conditions and work roles and may be amenable to management intervention. After moving house, five reasons were cited by home care and home support workers for leaving their previous aged care job that have to do with work conditions and work roles, namely higher pay, challenging work, get preferred hours, avoid managers, relief from stress. Together these five reasons account for more than 40 per cent of the total of workers who left their previous job (41 per cent RNs, 50 per cent ENs, 40 per cent CCWs, 47 per cent AH).There were some differences between the occupational groups in the proportions of workers citing each of these reasons. More AHs had left for higher pay (11 per cent); more ENs and CCWs left in order to get their preferred shifts or hours (20 per cent and 13 per cent respectively), and 18 per cent of RNs and 19 per cent of AH workers left in order to find more challenging work.

Table 5.30: Main reason for leaving prior aged care job of home care and home support direct care workers with previous experience in sector, by occupation: 2016 (per cent)

Most important reason	RN	EN	CCW	AH
Moved house/location	23.6	14.4	19.8	9.8
To find more challenging work	18.3	15.7	9.7	19.1
To get shifts or hours of work I wanted	8.4	19.9	12.7	5.3
To avoid managers/management I did not get along with or like	4.3	3.9	6.3	5.4
To achieve higher pay	5.6	8.9	5.9	11.2
To be closer to home	7.4	2.1	5.1	11.1

To find easier work	2.9	0.9	1.0	0.7
Other	16.1	15.1	14.0	15.0
Total	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers (weighted).

Returning now from those workers who had worked in aged care previously to all direct care workers, Table 5.31 shows the proportion of the home care and home support workforce that has worked in their current jobs for various lengths of time. For all occupations, 47 per cent of the home care and home support direct care workforce has been in their job for up to 4 years (15 per cent 12 months or less and 32 per cent for more than one year and up to 4 years), which is a smaller share than reported by residential direct care workers (46 per cent, Table 3.31).

A very slightly lower proportion of workers in home care and home support outlets have been in their jobs for longer than 9 years (24 per cent, which is higher than the 20 per cent in 2012) than direct care workers in residential facilities (26 per cent, which is slightly lower than their 24 per cent in 2012).

Table 5.31: Tenure in current job of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Tenure in current job (years)	RN	EN	CCW	AH	All occupations
12 months or less	9.8	23.1	14.3	20.7	14.5
More than 1 year–4 years	30.7	20.5	33.1	27.9	32.3
More than 4 years–9 years	30.5	24.7	28.9	26.5	28.8

Source: Census of home care and home support aged care workers.

5.4.3 Into the Future

In this section the focus is on the future intentions of home care and home support workers. Intentions to leave a job have been shown to have a significant impact on actual turnover in aged care (King et al., 2013). The 2016 survey therefore asked direct care workers whether they planned to stay in their current jobs and the future work plans of those seeking a change.

Table 5.32 presents those who are actively seeking alternative work by occupation and tenure. It shows that in 2016 around 9 per cent of home care and home support direct care workers were actively seeking work at the time of the survey, which is largely unchanged from 2012 (8 per cent). This varies across occupational groups, with slightly higher proportions of AH workers (11 per cent) seeking work than other occupations. Across the workforce, intentions to leave are lowest for workers who have been employed in their current job for more than 9 years. Two sub-groups appear to differ in Table 5.32 with relatively high proportions of job seeking (RNs who have been in their jobs for 4 to 9 years, at 16 per cent, and AH workers who have been in their jobs for 1 to 4 years, at 15 per cent).

Table 5.32: Proportion of the home care and home support direct care workforce actively seeking work by occupation and tenure in current job: 2016 (per cent)

Tenure in current job (years)	RN	EN	CCW	AH	All occupations
12 months or less	11.4	5.7	7.2	10.1	7.7
More than 1 year–4 years	8.5	9.1	10.9	15.3	10.9
More than 4 years–9 years	15.7	11.6	9.2	9.9	9.8
More than 9 years	3.5	4.0	5.1	9.8	5.2
All years	9.5	7.3	8.5	11.4	8.7

Source: Survey of home care and home support aged care workers.

What workers thought they would be doing in 12 months is shown in Table 5.33, which indicates that in 2016 the vast majority (81 per cent, slightly more than the 82 per cent in 2012) expect to be working for their current employer. Indeed, around 83 per cent of RNs, 81 per cent of ENs and CCWs, and 74 per cent of AH workers thought they would be staying in their current job. The next large group was those who did not know what they would be doing (between 9 and 16 per cent). A small proportion (2 per cent) of the existing workforce is intending to leave aged care completely (although there was a fairly high share of home care and home support direct care workers who did not know where they would be in 12 months, 12 per cent).

Table 5.33: Expected activity in 12 months of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Expected activity in 12 months	RN	EN	CCW	AH	All occupations
Working in aged care, this outlet	82.4	80.5	80.9	73.5	80.6
Working in aged care, different outlet	3.6	0.7	2.2	3.8	2.4
Working in residential aged care	0.1	2.1	0.7	1.1	0.7
Working in disability care	0.0	0.0	0.7	0.8	0.6
Working, but not in aged care	2.9	4.5	2.2	4.7	2.4
Not working for pay	2.5	1.6	0.9	0.8	1.0
Don't know	8.5	10.6	12.4	15.4	12.2
Total	**100**	**100**	**100**	**100**	**100**

5.5 Experiences of Working in Home Care and Home Support Aged Care

Aged care employees work in the sector for a variety of reasons including enjoyment of care work, wanting to make a difference in the lives of older Australians, financial imperatives, and to enable an effective work-life balance. Findings from the previous aged care worker surveys in 2007 and 2012 indicated widespread job satisfaction amongst the home care and home support workforce. The next section of this report investigates worker experiences of home care and home support work in 2016.

As in the corresponding earlier Section 3.5 for residential care workers, this section presents job satisfaction data in two separate Tables 5.34 and 5.35. These tables show responses to questions that were ordered in a scale form, whereby respondents answered on a scale from 1–10 in Table 5.34 and from 1–7 in Table 5.35. The discussion needs to be interpreted according to the framework set out and described earlier in Section 3.5.1, including the limitations due to the use of an ordinal measure of job satisfaction.

5.5.1 Job Satisfaction

In this section we examine the range of factors that contribute to job satisfaction. The home care and home support worker survey form asked workers to rate their satisfaction with aspects of their work on a 10-point scale with the range of 1 (totally dissatisfied) and 10 (totally satisfied). Average scores from these responses are shown in Table 5.34.

The overall job satisfaction score is 8.1 in 2016, roughly equivalent to the score in 2012 of 8.2, indicating widespread job satisfaction with direct care work. CCWs are slightly more satisfied overall (8.2) than nurses or AH workers (7.8 each). Satisfaction with total pay has risen to 6.3 in 2016 from 5.6 in 2012 (this is also higher for home care and home support workers than the 5.6 for residential workers Table 3.34). Home care and home support direct care workers are slightly more satisfied with their work overall (8.1) than those in residential facilities (7.9). It is interesting that the highest scores are found for 'the work itself', the 'hours worked' and the 'flexibility to balance work and non-work commitments', all of which can be used as, at least partial, explanations for the high retention of the home care and home support sector.

Table 5.34: Average scores for responses from the home care and home support direct care workforce to statements about job satisfaction, by occupation: 2016 (range 1-10)

Satisfaction with	Nurse	CCW	AH	All occupations
Total pay	6.7	6.2	6.4	6.3
Job security	7.0	7.1	6.7	7.1
The work itself	8.0	8.2	7.8	8.1
Hours worked	7.7	7.3	8.0	7.4
Opportunities to develop abilities	7.2	7.3	6.8	7.3
Level of support from your team/service provider	7.6	8.0	7.4	7.9
Level of support from your supervisor	7.7	8.1	7.5	8.0
Flexibility to balance work and non-work commitments	7.4	8.0	7.4	7.9
Overall satisfaction	7.8	8.2	7.8	8.1

Source: Survey of home care and home support aged care workers.
Scale used is 1(totally dissatisfied) to 10 (totally satisfied).

5.5.2 Doing the Work

Home care and home support workers responded to a number of statements about 'doing' care work in the worker survey questionnaire. For each statement, they were asked the extent to which they agreed this to be the case for them, and they could give a score on a scale of 1 (totally disagree) to 7 (totally agree), with 4 being considered the midpoint. Although subjective, these assessments of their work are important indicators of what they would like changed and their confidence in performing the work.

Table 5.35 reports the average scores for each statement by occupation. Home care and home support direct care workers agree most strongly with statements about having skills (statement 2: average score of 6.3), using these skills in their current job (statement 3: 6.1) and the availability of adequate workplace training (statement 4: 5.6). Residential workers also agreed most strongly with these three statements. Average scores on pressure to work harder (statement 6: 3.3) and stress (statement 7: 3.2) were the lowest scores reported, indicating disagreement.

Overall, home care and home support direct care workers had lower average scores than residential workers for statements about pressure/stress indicating they on average disagreed with the statement (statement 6: 4.2 residential workers Table 3.35, 3.3 home care and home support workers; statement 7: 4.0 residential workers Table 3.35, 3.2 home care and home support workers). Having sufficient time to care (statement 1) was more commonly agreed with by home care and home support workers (average score 5.1) than by residential workers who on average disagreed with this statement (average score 3.9 Table 3.35). Having job freedom (statement 5: 5.0) and receiving respect (statement 8: 5.2) are slightly higher than for residential workers (4.6 and 4.9, Table 3.35).

On the whole these satisfaction statements reflect a hard-working workforce, confident in their skills and the way these skills are utilised in their workplace, willing to take on challenges, who like a lot what they are doing, but who are at the same time feeling under pressure regarding some aspects of their jobs.

Table 5.35: Average scores for responses from the home care and home support direct care workforce to statements about their work, by occupation: 2016 (range 1-7)

Statement	Nurse	CCW	AH	All occupations
I am able to spend enough time with each care recipient	4.8	5.2	4.9	5.1
I have the skills and abilities I need to do my job	6.0	6.3	6.2	6.3
I use many of my skills and abilities in my current job	5.8	6.1	5.9	6.1
Adequate training is available through my workplace	5.2	5.7	5.0	5.6
I have a lot of freedom to decide how I do my work	5.2	4.9	5.4	5.0
I feel under pressure to work harder in my job	4.3	3.2	4.1	3.3
My job is more stressful than I had ever imagined	3.8	3.1	3.6	3.2
Considering all my efforts and achievements I receive the respect and acknowledgement I deserve	4.9	5.2	4.8	5.2
Management and employees have good relations in my workplace	5.0	5.4	5.0	5.3

Source: Survey of home care and home support aged care workers.
Scale used is 1(strongly disagree) to 7 (strongly agree).

It is widely acknowledged by care workers that one of the most rewarding and, at the same time, challenging aspects of the job is the time spent actively caring for clients. Table 5.36 shows that in 2016, 61 per cent of direct care workers in home care and home support outlets spend more than two-thirds of their shift actively caring (slightly more than the 59 per cent in 2012). CCWs (68 per cent) are the dominant occupational group who spend more than two-thirds of their shift actively caring. Far fewer of nurses (35 per cent of ENs and 28 per cent of RNs) and AH workers (25 per cent) spend this much time with their clients.

The amount of time spent actively caring is lower for all occupations in home care than in residential facilities (especially CCWs at 68 per cent Table 5.36, compared to residential PCAs at 77 per cent, Table 3.36).

Table 5.36: Responses of the home care and home support direct care workforce to the question 'In a typical shift, how much time do you spend actively caring for care recipients?', by occupation: 2016 (per cent)

Time spent caring	RN	EN	Nurse*	CCW	AH	All occupations
Less than one-third	35.2	27.8	33.6	18.1	38.1	20.9
Between one-third and two-thirds	36.4	37.1	36.6	14.4	36.5	18.0
More than two-thirds	28.4	35.0	29.8	67.5	25.4	61.1
Total	**100**	**100**	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers.
**Nurse combines RN and EN.*

Workers in the home care and home support aged care sector may also provide care to younger people with disability. As Table 5.37 shows, 33 per cent of nurses, 37 per cent of AH workers and 45 per cent of CCWs work solely with aged clients[8]. A further 41 per cent of workers across all occupational groups report that between 75 and 99 per cent of their clientele are aged care clients. The remaining workers have more variety in the type of clients they care for.

[8] Aged clients are non-Indigenous people aged 65 years or over and Indigenous Australians aged 50 years and older.

Table 5.37: Distribution of the proportion of aged clients cared for by home care and home support direct care workers, by occupation: 2016 (per cent)

% of aged clients* cared for	Nurse	CCW	AH	All occupations
Less than 50% aged clients	3.1	7.1	9.6	6.8
50–74	11.8	8.1	14.2	8.8
75–99	52.1	39.4	38.8	40.7
100% aged clients	33.0	45.4	37.4	43.6
Total	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers.
**Aged clients are non-Indigenous people aged 65 years or over and Indigenous Australians aged 50 years and older.*

An important aspect of the functioning of a workplace is the degree to which workers get along with their managers and colleagues. Dissatisfaction with this aspect of the workplace leads to lower job satisfaction, poorer staff retention and is generally associated with worse career progression, outcomes and lower quality of production. Information from workers about their relationships with management and colleagues were separately recorded in Tables 5.38 and 5.39. Most workers report that positive relationships with their management (an average of 85 per cent in Table 5.38) and even more believe that their relationship with colleagues is good (91 per cent in Table 5.39). Table 5.38 shows that CCWs are the most satisfied with the quality of management relationship (86 per cent) followed by nurses (82 per cent) and AH workers (81 per cent). Table 5.39 shows that AHs are the most satisfied with their colleagues (96 per cent) followed by nurses (93 per cent) and CCWs (91 per cent). The overall picture of the sector is one of very good workplace relationships, which is also shown by other related measures of the quality of the job and the workplaces.

Table 5.38: Home care and home support direct care workforce assessment of the quality of workplace relationships 'between management and yourself', by occupation: 2016 (range 1–7)

	Nurse	CCW	AH	All occupations
Bad	8.2	5.5	10.1	6.0

Scale used is 1 (very bad) to 7 (very good).

5.5.3 Job Demands

The home care and home support outlet census form asked questions about the prevalence of unusual job demands that may be made of their workers, shown in Table 5.40. Two types of demands are considered, those that are made under normal circumstances and those that are made only in exceptional circumstances. Such demands may be perfectly justifiable from the point of view of the aged care clients who themselves may face life uncertainties, as it will be perfectly understandable that the employers and the workers will be willing to provide the necessary support. However, they inevitably create an element of uncertainty in organising the workplace for employers and in organising working hours for employees. Especially for smaller size employers where substitutes may not be easy to find, such demands may make it difficult for employees to plan their workload and to meet their non-work responsibilities at the same time.

Of the five unusual job demands listed, the most widely made demand under normal circumstances is to vary hours or location at short notice (36 per cent of outlets). This is slightly higher than the 32 per cent reported in 2012. Working longer than scheduled due to unanticipated needs of clients occurred under normal circumstances for workers in 14 per cent of outlets.

As with residential facilities, in home care and home support outlets the most prevalent job demands are related to unanticipated changes in work patterns, working longer than scheduled or varying hours or location at short notice. While the majority of outlets who make these demands indicated that it was only done in exceptional circumstances, slightly more than a third of outlets (36 per cent) vary hours or location at short notice under normal circumstances, and 14 per cent normally ask employees to work longer than scheduled hours because of unanticipated needs of residents. These demands create an element of uncertainty in working hours for employees and may make it difficult for them to plan their workload or meet their non-work responsibilities.

There are 62 per cent of outlets which in exceptional circumstances ask their direct care employees to work with aggressive service users, with 11 per cent doing so under normal circumstances (both slightly different shares than in 2012 when they were 53 per cent and 16 per cent). Given that most home care and home support direct care workers work alone, the need to visit aggressive service users could raise concerns about safety issues.

Table 5.40: Prevalence of unusual job demands in home care and home support outlets: 2016 (per cent)

Job demand	Under normal circumstances	In exceptional circumstances	Never	Total
Working longer than scheduled because of unanticipated needs of clients	13.7	70.7	15.7	**100**
Variations in hours or location at short notice	35.9	48.0	16.2	**100**
Working in very unsanitary conditions	1.7	29.5	68.8	**100**
Working with aggressive service users	10.8	62.1	27.1	**100**
Working alone late at night (after 10 pm)	7.2	15.3	77.6	**100**

Row percentages shown. Per cent of outlets.

5.6 Work-related Injury and Illness

Within home care and home support the type of work performed and the environment in which it occurs is different to the services provided in a residential aged care setting. Workers often work alone rather than in teams, they work in the private homes of service users rather than in a managed facility, and they can only influence the health and well-being of clients for short

periods of time rather than being able to have them under constant surveillance. This diversity of working environments and the lack of the explicit structure that a single physical workplace can offer, means that home care and home support workers are often exposed to work-related risks in their work that could impact on their own health and safety. The additional questions that were first introduced in 2012 about workplace injuries and illnesses in both the employer census and the workers survey, were continued in 2016. This section presents the findings from both sources.

Table 5.41 shows the types of work-related injuries and illnesses that were reported by outlets and workers separately and independently. These percentages reported by outlets and by workers are not directly comparable, as the outlet ones refer to the incidents for *all workers* in this outlet and the worker ones refer to only the *one worker* who is responding. Further, the outlets refer to the last three months while the worker refers to the last 12 months.

There were no work related incidents reported in the 3 months leading up to the census for 52 per cent of outlets. Of those outlets with incidents, the most commonly reported injuries were sprains and strains (59 per cent), superficial injuries (30 per cent), chronic joint or muscle conditions (26 per cent) and stress or other mental condition (18 per cent).

Twelve per cent of all workers reported a work-related injury or illness had occurred to them in the last 12 months. The most commonly reported incidents (by those who reported one) were similar to those reported by outlets: sprains and strains (43 per cent), chronic joint or muscle conditions (22 per cent), stress and other mental conditions (18 per cent), and superficial injuries (14 per cent). A further 2 per cent of all workers (and 19 per cent of those workers who reported an incident) indicated that they had experienced 'other' (unspecified) injuries or illnesses as a consequence of their work.

Table 5.41: Types of reported work-related injuries and illnesses, comparing outlets and workers: 2016 (per cent)

Type of injury/illness	Outlets (last 3 months)		Workers (last 12 months)	
	All outlets	With any incidents	All workers	Who reported incidents
None reported	51.6	n/a	87.6	n/a
Fracture	2.5	6.7	0.4	3.5
Chronic joint or muscle condition	9.9	26.2	2.5	21.6
Sprain/strain	22.2	58.5	5.0	43.2
Cut/open wound	4.9	12.8	1.0	8.7
Crushing injury/internal organ damage	0.2	0.4	0.1	0.7
Superficial injury (minor)	11.4	30.0	1.6	13.5
Stress or other mental condition	6.9	18.1	2.1	18.1
Amputation	0.0	0.0	0.0	0.0
Burns	2.3	6.0	0.6	5.2
Other	3.8	10.0	2.2	19.3

Source: Census of home care and home support aged care outlets.
Note: Multiple response allowed, columns will not sum to 100.

It is important to understand better the causes of reported injuries, as both employers and employees wish to see their prevalence reduced. Table 5.42 shows the causes of reported work-related injuries and illnesses for home care and home support outlets and workers. For the 48 per cent of home care and home support outlets that had any incident in the last 3 months, the four main causes are: lifting, pushing, pulling and bending (54 per cent); a fall (29 per cent); hitting or being hit or cut by a person, object or vehicle (19 per cent); and repetitive movement (19 per cent). These were similar to the causes identified by workers who reported incidents in the last 12 months: lifting, pushing, pulling and bending (39 per cent); a fall (17

per cent), repetitive movement (9 per cent). Both outlets (15 per cent) and workers (13 per cent) indicated that a substantial minority of work-related injuries and illnesses were due to 'other' causes.

Table 5.42: Causes of reported work-related injuries and illnesses, comparing outlet and worker responses: 2016 (per cent)

Cause of injury/illness	Outlets (last 3 months)		Workers (last 12 months)	
	All outlets	With any incidents	All workers	Who reported incidents
None reported	51.6	n/a	87.6	n/a
Lifting, pushing, pulling, bending	20.6	54.2	3.7	39.1
Repetitive movement	7.3	19.2	0.9	9.4
Prolonged standing, working in cramped or unchanging positions	0.8	2.1	0.1	1.0
Vehicle accident	6.3	16.7	0.3	2.9
Hitting, being hit or cut by person, object or vehicle	7.1	18.8	0.7	7.3
Fall	10.8	28.5	1.6	17.0

Long term exposure to sound	0.2	0.4	0.0	0.0
Contact with chemical of substance	1.0	2.7	0.1	1.6
Fatigue	1.3	3.5	0.3	3.3
Other	5.8	15.2	1.2	13.0

Source: Census of home care and home support aged care outlets.
Note: Multiple response allowed, columns will not sum to 100.

The extent to which Workcover is used by outlets and workers provides an indication of the seriousness of reported occupational injuries and illnesses. Table 5.43 shows that 26 per cent of outlets had one or more employee on Workcover in the designated fortnight, slightly more than the 24 per cent in 2012. Reflecting the relative sizes of each occupation, most outlets had Workcover cases for CCWs. The 25 per cent of outlets that had CCWs on Workcover, used it for an average of 2 CCWs; while the 1 per cent of outlets using Workcover for RNs had an average of 2.5 RNs on Workcover during the designated fortnight.

Table 5.43: Proportion of outlets with employees on Workcover (per cent) and, of these, the mean number of employees per outlet on Workcover during the designated fortnight: 2016

Occupation	Outlets using Workcover (%)	Employees (average per outlet)
Registered Nurse	1.4	2.5
Enrolled Nurse	0.9	1.5
Community Care Worker	24.5	2.0
Allied Health	1.1	1.2
All occupations	26.3	2.1

Source: Census of home care and home support aged care outlets.

5.7 Cultural and Linguistic Diversity

Cultural and linguistic diversity is an important aspect of aged care provision in Australia in terms of both the demand and the supply of aged care services. Currently around a fifth of older Australians are of culturally and linguistically diverse origin and within the next five years it is expected that more than 30 percent of this cohort will have been born overseas (Department of Social Services, 2015). On the demand for services side, service users often prefer or even require the supports that can be afforded by culturally and linguistically sensitive and well equipped service providers. On the supply of services side, some of the labour and skill shortages that are often felt in the Australian health, care, and related services sectors can be addressed by hiring recent migrants. The aged care sector is culturally and linguistically diverse in both these demand and supply perspectives. This section explores the experiences of workers from culturally and linguistically diverse backgrounds in home care and home support aged care.

The next three tables (Tables 5.44 – 5.46) relate only to those respondents to the home care and home support survey who identified that they are fluent in a language other than English. An important aspect of service provision within aged care is the ability to speak fluid English. Table 5.44 shows that a relatively high proportion of workers in home care and home support aged care are most fluent in English although this varies by occupation. Most RNs (73 per cent) and ENs (85 per cent) are most fluent in English, although a substantial minority speak both English and their primary language equally well (12 and 15 per cent respectively). About two thirds of the AH workers are most fluent in English (68 per cent), with another 21 per cent speaking both English and their primary language equally well. For CCWs, 39 per cent speak both languages equally well, with 43 per cent most fluent in English. Of all the occupational groups, CCWs have the highest proportion that is most fluent in LOTE (19 per cent).

Table 5.44: Fluency in a language other than English (LOTE) of the home care and home support direct care workforce, by occupation: 2016 (per cent)

Speak LOTE, most fluent in	RN	EN	CCW	AH
English	73.1	84.8	42.5	68.2
LOTE	14.9	0.0	18.9	10.7
Both equally well	12.0	15.2	38.6	21.1
Total	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers (weighted).

The use of a language other than English in the workplace was far more commonly reported by workers in home care and home support than in the residential sector. As shown in Table 5.45, 67 per cent of home care and home support workers who are fluent in a language other than English use it in their work. This compares to only 39 per cent of direct care workers based in residential facilities (Table 3.44). Of the occupational groups, a higher proportion of ENs (74 per cent) and AH (76 per cent) than other occupations use these language skills in their work.

Table 5.45: Use of language other than English (LOTE) by the home care and home support direct care workforce, by occupation: 2016 (per cent)

Speak LOTE and	RN	EN	CCW	AH	All occupations
Use LOTE in job	58.1	74.0	66.7	76.3	66.8
Do not use LOTE in job	41.9	26.0	33.3	23.7	33.2
Total	**100**	**100**	**100**	**100**	**100**

Source: Survey of home care and home support aged care workers.

Workers who were fluent in a language other than English were asked in the survey form to assess their skills in reading, writing and speaking English. Of the three areas of English literacy, workers are most confident in their ability to speak and read in English (Table 5.46). Slightly more than a quarter of home care and home support direct care workers who speak a language other than English assessed their fluency in writing in English as 'not very well' (26 per cent). This could be viewed as a concerning percentage of workers particularly around service provision where they are expected to undertake important medication or recording roles. As in residential aged care (Table 3.45), writing was viewed as the area in which these home care and home support workers are least fluent in English. As provision becomes more complex with time (older clients and more stringent formal education requirements) this share with low capacity in written English may not be able to continue to be part of the workforce.

Table 5.46: Subjective assessment of English literacy for home care and home support direct care workers most fluent in a language other than English (LOTE): 2016 (per cent)

English literacy	Not at all	Not very well	Well	Very well	Can't say	Total
Speaking	0.8	11.6	55.1	32.6	0.0	**100**
Reading	0.3	10.7	49.7	39.4	0.0	**100**
Writing	0.5	25.9	49.6	24.0	0.0	**100**

Source: Survey of home care and home support aged care workers.

Information provided by outlets about the CCWs they employ who come from culturally and linguistically diverse (CALD) backgrounds are shown in Tables 5.47 to 5.50. CCWs are of special interest because they are the largest occupational group in home care and home support aged care (in 2016 there are over 72, 000 CCW workers, 84 per cent of the home care and home support direct care workforce, Table 5.2).

Table 5.47 shows that 31 per cent of all outlets had no CCWs from CALD backgrounds (slightly fewer than the 35 per cent in 2012). Another 39 per cent of outlets indicated that CCWs from diverse backgrounds comprised between 1 and 33 per cent of their CCW workforce. This indicates that the employment of CCWs from CALD backgrounds is widespread and goes beyond those outlets that provide specialised services to particular groups. However, the employment of CCWs from CALD backgrounds is not as widespread as in residential facilities (where 12 per cent of residential facilities had zero, Table 3.46, compared to 31 per cent of home care and home support outlets, Table 5.47).

Table 5.47: Distribution by proportion of community care workers (CCWs) from CALD backgrounds in home care and home support outlets: 2016 (per cent)

% of CALD CCWs per outlet	Outlets
Zero	30.8
1–33	38.9
34–66	14.4
67–100	15.9
Total	**100**

Source: Census of home care and home support aged care outlets.

Home care and home support outlets were asked in the census about the benefits of employing CCWs from CALD backgrounds. As shown in Table 5.48, all outlets indicated that they received benefits from hiring these workers. Of these benefits, the opportunity to enhance cross-cultural understandings (85 per cent) and the use of language skills (other than English skills (68 per cent) were cited most frequently.

Table 5.48: Stated benefits of employing community care workers (CCWs) from CALD backgrounds in home care and home support outlets: 2016 (per cent)

Benefits	Outlets
No benefits	0
Stated benefits:	
Enhance cross-cultural understandings	84.7
Offer different cultural activities	50.0
Language (other than English) skills	67.6
Link clients to ethnic communities	49.5
Link outlet to ethnic communities	47.7
Other	5.3

Source: Census of home care and home support aged care outlets.
Note: Multiple response allowed, column will not sum to 100.

Outlets that employ CCWs from CALD backgrounds were asked to nominate the most common ethnic or cultural background of those workers. Table 5.49 shows that 72 per cent of all home care and home support outlets employed CCWs who spoke a language other than English (this is much higher than in 2012 when it was 52 per cent). Of those outlets that did employ CCWs who spoke a language other than English (column 2), the most common languages spoken were Italian (16 per cent) and South East Asian (11 per cent). For home care and home support outlets with more than a third of CCWs speaking a language other than English (column 3), Chinese, Italian and South East Asian were the three most widely spoken language groups.

Table 5.49: Proportion of home care and home support outlets that employ community care workers (CCWs) from CALD backgrounds: 2016 (per cent)

Ethnic group	All outlets	Outlets with any CCWs speaking LOTE	Outlets with >33% CCWs speaking LOTE
At least one CCW from a linguistically diverse background	72.1	n/a	n/a
None	27.9	n/a	n/a
Indian[1]	5.4	7.7	5.2
Filipino	6.5	8.8	5.2
African	4.0	5.7	3.2
Pacific Islander	2.5	3.6	0.5
Chinese	6.5	8.9	14.0
Italian	11.2	15.6	13.0
Greek	4.1	5.8	5.9
South East Asian	8.0	11.1	11.1
Other	23.8	32.9	42.0
Total	**100**	**100**	**100**

Source: Census of home care and home support aged care outlets.
[1]Includes Hindi and other languages spoken in India and Sri Lanka.

While Table 5.50 indicates that managing a multilingual workforce can in some instances present challenges, the majority (80 per cent) of home care and home support outlets indicated no difficulty in employing CCWs who speak a language other than English. Of those home care and home support outlets reporting difficulties, the main concerns focused on communication with management/staff (73 per cent) and communications with clients (63 per

cent). Other stated difficulties such as ‘occupational health and safety’ (37 per cent) and ‘communicating with client families’ (43 per cent) were identified by fewer outlets, but still a reasonably high share.This is in contrast to residential aged care, where communication with residents was the main reported area of concern (88 per cent, Table 3.49),

Table 5.50: Stated difficulties of employing community care workers (CCWs) who speak a language other than English in home care and home support outlets: 2016 (per cent)

Difficulties	Per cent of outlets
No difficulties	80.0
At least one difficulty	20.0
Stated difficulties (% of outlets stating difficulties)	
Occupational health and safety	37.4
Communication with management and/or other staff	72.9
Communication with clients	63.0
Communication with client families	42.5
Other – written communication	20.3

Note: Multiple response allowed, column will not sum to 100 N=1391 outlets.

6. The Census of Home Care and Home Support Outlets

Key Findings

- Sixty per cent of home care and home support direct care workers were located in major cities, with a further 36 per cent in regional areas. Since 2012, the proportion of the total PAYG home care and home support workforce based in Victoria increased from 23 per cent to 33 per cent.

- Seventy per cent of PAYG home care and home support workers were employed in the not-for-profit sector and 20 per cent in government outlets. The proportion of workers employed in for-profit outlets has increased since 2012.

- Fourteen per cent of all PAYG employees and a quarter of direct care workers were employed in very small outlets (with 1 to 5 employees).

- Employment numbers in larger outlets (more than 40 PAYG staff) have grown since 2012, particularly for direct care employment.

- Commonwealth Home Support Program (64 per cent) and Home Care Packages Program (45 per cent) services were most commonly provided by outlets. Smaller outlets with 1-5 direct care staff commonly provided CHSP services (28 per cent), while large (21-40 direct care staff) and very large (more than 40 direct care staff) outlets often provided Home Care Packages (53 per cent).

- Sixty one per cent of home care and home support outlets belonged to a larger provider group. Thirteen per cent of outlets also offered residential aged care.

- Forty three per cent of outlets catered for a specific ethnic or cultural group, most frequently Aboriginal and Torres Strait Islander and Italian older adults.

- Almost half of outlets with direct care staff reported skill shortages; a shortage of CCWs was most common and skill shortages were more prevalent in very remote areas. The main reasons for these skill shortages were a lack of suitable applicants (72 per cent), the geographical location of the outlet (39 per cent) and slow recruitment processes (28 per cent).

- Outlets primarily responded to skill shortages by requiring existing staff to work longer hours (55 per cent), providing on-the-job training (37 per cent) and making greater use of agency staff (29 per cent).

- Vacancies were most frequently reported for CCW positions (by 25 per cent of outlets). These outlets had an average of 3.6 CCW vacancies. The average time taken to fill vacancies was 4.1 weeks for CCW positions and 4.7 weeks for RNs.

- The most common reasons for staff vacancies were resignation (63 per cent), creation of a new position (33 per cent) and retirement (21 per cent).

- Internet job advertisements (36 per cent) and a combination of internet and newspaper advertisements (30 per cent) were the most frequent recruitment strategies for CCW positions by outlets.

- For workers seeking employment in home care and home support outlets, internet job advertisements and word-of-mouth were the most common strategies used. The use of recruitment agencies was also reported by 14 per cent of nurses and 13 per cent of AH workers.

- Fifty nine per cent of home care and home support outlets used Enterprise Agreements to set employment conditions for their staff; 39 per cent of outlets used award-based arrangements.

- Seventy per cent of all outlets provided paid time for travel between care appointments; 48 per cent provided a petrol/depreciation allowance for work-related transport costs.

- Twenty seven per cent of outlets reported employing at least one non-PAYG worker (mainly CCWs, 21 per cent) in the designated census fortnight. Brokered staff (15 per cent and agency workers (12 per cent) were most commonly used.

- There were 44,879 estimated volunteers working in home care and home support outlets in 2016. About half (51 per cent) of all outlets had one or more volunteers who mainly assisted with social/group activities and transport.

- Multiple methods of quality monitoring in home care and home support outlets were reported including monitoring by managers or supervisors (78 per cent), keeping records of service user feedback (66 per cent) and undertaking client surveys (52 per cent).

6.1 Introduction

This chapter provides details of the key characteristics of home care and home support aged care outlets in Australia with information predominantly based on the census of home care and home support aged care outlets (N=2,307).

We begin the chapter with an overview of the reforms which have occurred in the sector since the last NACWCS was undertaken in 2012 and the aged care programs which are now provided by home care and home support outlets. A profile of home and community support outlets showing the distribution of their employees across all states and territories, and information regarding the programs offered is presented. The relationship that home care and home support outlets have with broader aged care services and whether these facilities cater for specific ethnic or cultural groups are then discussed. The next sections of the chapter examine the extent of, reasons for, and responses to skills shortages and staff vacancies within the sector. The industrial methods used by outlets to set employment conditions and the use of non-PAYG staff are then explored. The chapter finishes with a focus on how quality of care is monitored in community-based aged care.

6.1.1 Home Care and Home Support Aged Care Programs

Home care and home support outlets provide a range of aged care services delivered usually at the home of the aged care client. There has been significant reform to the way home care and home support aged care is delivered to consumers including the introduction of the new Home Care Packages Program, Commonwealth Home Support Program and the Consumer Directed Care model of care provision.

In this 2016 report we cover and report by these specific programs of services:

- Commonwealth Home Support Program
- Home Care Packages Program
- Home and Community Care in Victoria
- Home and Community Care in Western Australia
- Home Care places under Multi-Purpose Service Program/National Aboriginal and Torres Strait Islander Flexible Aged Care Program/Innovative Pool Program
- DVA Community Nursing, Veteran's Home Care or other DVA administered program[9]

[9] While DVA programs were not part of the in-scope lists, some in-scope outlets also provide services under the DVA programs.

- Transition Care Program

These programs are described below and where relevant, previous programs that have now been replaced are noted.

Home Support Programs

Home support programs provide entry-level support services for frail, older people aged 65 years and older (or 50 years and older for Aboriginal and Torres Strait Islander people) who need assistance to keep living independently at home and in their community. In 2015–16 these services were delivered in most states and territories through the Commonwealth Home Support Program (CHSP). Over the same time period, within Victoria and Western Australia the jointly funded and state-operated Home and Community Care (HACC) programs continued operating.

The CHSP was introduced by the Australian Government on 1 July 2015 to provide streamlined access to services through the consolidation of four former Commonwealth-funded aged care programs. These programs include the Commonwealth Home and Community Care (HACC) program[10], the National Respite for Carers Program (NRCP), the Day Therapy Centres (DTC) program and the Assistance with Care and Housing for the Aged (ACHA) program.

The CHSP provides a range of services to older Australians including:

- transport
- social support
- assistance with food preparation in the home and delivery of meals
- nursing care and personal care
- allied health services like podiatry, physiotherapy and speech pathology
- domestic assistance including help with cleaning, washing and shopping
- support for carers including respite services
- home maintenance and modifications.

Home Care Packages Program

The Australian Government recognises that many older people want to remain living independently in their own homes for as long as possible. To support this, the Government subsidises packages to provide home-based care that can improve older Australians' quality of life and help them to remain in their homes and connected to their communities. Under a home care package, a range of personal care, support services, clinical services and other services is tailored to meet the assessed needs of the consumer.

On 1 August 2013 the Home Care Packages Program replaced the former community packaged care programs – Community Aged Care Packages (CACP), Extended Aged Care at Home (EACH) packages and Extended Aged Care at Home Dementia (EACH-D) packages. Subsequently, from 1 July 2015, all home care packages were required to be delivered on a consumer directed care (CDC) basis. CDC provides greater transparency to consumers about what funding is available under their package and how those funds are spent through the use of an individualised budget. CDC also aims to give a consumer more choice and flexibility about the types of care and services they access and how the care is delivered to best meet their needs.

Eligibility and the level of Home Care Package an older person can receive is determined through an assessment by an Aged Care Assessment Team (ACAT). The Home Care

[10] Except in Victoria and Western Australian where the joint Commonwealth-State HACC programs continued to operate separately to the CHSP in 2015–16.

Packages Program provides four levels of packages, each with a different associated subsidy amount:

- Home Care Level 1 – to support people with basic care needs
- Home Care Level 2 – to support people with low level care needs
- Home Care Level 3 – to support people with intermediate care needs
- Home Care Level 4 – to support people with high care needs.

Multi-Purpose Service Program

The Multi-Purpose Service Program is a joint initiative between the Australian Government and all states and territories (except the ACT). The program recognises that the delivery of some health and aged care services may not be viable in rural and remote communities if they are provided separately. Through the use of pooled funding arrangements, Multi-Purpose Services deliver a mix of aged care, health and community services in rural and remote communities. In general, these services are operated by state, territory, and local governments.

Innovative Pool Program

The Innovative Pool Program (also known as the Innovative Care Program) provides opportunities to develop and test flexible models of service delivery to provide care where mainstream aged care services may not be appropriate for a specific location or target group. This program aims to allocate aged care places to services who will work with client groups for whom current service provision is limited or to client groups which are newly-emerging.

National Aboriginal and Torres Strait Islander Flexible Aged Care Program

Services funded under this program provide culturally appropriate aged care to older Aboriginal and Torres Strait Islander people close to home and community. The program allows the provision of both residential and home care services mainly in rural and remote areas.

Transition Care Program

The Transition Care Program enables older people to return home after a hospital stay, rather than prematurely entering a residential aged care home. A person can only enter transition care directly after being discharged from hospital. The program provides time-limited, goal-oriented and therapy-focused packages of services to older people after a hospital stay.

Department of Veterans' Affairs Programs

Veterans' Home Care (VHC) is a DVA-funded program designed to assist eligible veterans and war widows/widowers who need a small amount of practical help to continue living independently in their own home. Services include domestic assistance, personal care, respite care, and safety-related home and garden maintenance.

The DVA Community Nursing Program provides home community nursing services for entitled persons to meet their assessed clinical and personal care needs.

6.2 A Profile of Service Outlets

Firstly we examine the distribution of the home care and home support workforce by state and territory, location and type of outlet. As shown in Table 6.1, there is evidence of some significant change in the distribution of the workforce across States/Territories between 2012 and 2016. Victoria increased their home care and home support PAYG workforce share substantially, rising from 23 per cent in 2012 to 32 per cent in 2016, with a slightly smaller rise in their direct care workforce (from 21 per cent to 27 per cent). In contrast, NSW had a large

fall in their PAYG workforce (falling from 31 per cent in 2012 to 26 per cent in 2016; and their direct care workforce falling by slightly more than the PAYG total (from 33 per cent to 26 per cent). Further analysis indicates that this change in workforce distribution across Victoria and NSW was due to two factors. Firstly, the share of outlets located in Victoria has increased since 2012. Secondly, while the average number of workers per outlet increased in both Victoria and NSW, this increase was larger in Victoria. Although Tasmania increased their PAYG workforce share very slightly, the share for all other states and territories fell slightly compared to 2012.

The picture is not always similar when viewing PAYG employees or only direct care employees. In WA, for example, while the proportion of PAYG employees fell slightly from 2012 (from 13 per cent to 12 per cent), it rose for direct care employees (from 11 per cent to 14 per cent).

Direct comparison of the distribution of the home care and home support workforce by location category before 2016 is not possible because of a change in the reporting of this data. In 2016 information regarding the location of home care and home support outlets was based on current ABS remoteness area categories; this information was not previously available at the time of the 2012 NACWCS.

Examining ownership type, the distribution shows some change. In 2016, not-for-profit providers employ 70 per cent of the total PAYG workforce in home care and home support aged care services, a slight decline from 74 per cent in 2012 (Table 6.1). The not-for-profit share of direct care employment in home care and home support, now at 68 per cent, has experienced a more marked decline (from 76 per cent in 2012). For-profit outlets employ 9 per cent of the PAYG workforce, and 12 per cent of the direct care workforce, an increase since 2012. The for-profit share of the direct care workforce has grown by 5 per cent since 2007.

Table 6.1: Distribution of home care and home support direct care workforce Total PAYG and Direct Care (per cent) by State/ Territory, location, and ownership type: 2007, 2012 and 2016

	Total PAYG employees			Direct care employees

Source: Census of home care and home support outlets.
**ABS remoteness area categories.*

The home care and home support census uses the number of total PAYG and direct care employees reported by outlets as a method of estimating their size. Table 6.2 shows overall that since 2012, the proportion of smaller outlets (employing up to 10 workers) has decreased while the share of larger outlets (with more than 10 workers) has grown for both all PAYG employees and direct care workers. This suggests that the average size of outlets in the home care and home support sector has increased over time. We also see that in 2016 very small outlets employing 1 to 5 employees now account for a quarter of direct care employees and 14 per cent of all PAYG employees. In contrast large outlets (employing more than 40 people) account for 28 per cent of all PAYG staff and 21 per cent of direct care employees in 2016.

The average size of employment in outlets which employ more than 40 PAYG employees in 2016 is 116 PAYG employees (Table A6.2, Appendix 3); 75 of these are direct care workers. These employment numbers in larger outlets have grown since 2012, particularly for direct care employment (in 2012 larger outlets employed on average 111 PAYG employees of which 65 were direct care workers). This trend was not found for small to medium outlets (with 40 or fewer workers), for these outlets the average number of PAYG and direct care employees has remained stable since 2012.

Table 6.2: Distribution of home care and home support direct care workforce (per cent) by size of outlet, by number of Total PAYG and direct care employees: 2007, 2012 and 2016 (per cent)

Source: Census of home care and home support outlets.

The following tables focus on the distribution of home care and home support outlets that offer particular type of programs to older people living in the community. It should be noted that outlets can provide services under more than one program. Almost two thirds of outlets (64 per cent) provide services under the Commonwealth Home Support Program (CHSP), as shown in Table 6.3. HACC Victoria services are delivered by 15 per cent of outlets and HACC Western Australia by 8 per cent of outlets. There are 45 per cent of outlets providing services under the Home Care Packages Program, while just over 17 per cent of service outlets deliver services for DVA. A further 9 per cent of outlets provide services under the Transition Care Program for post-hospital aged care needs and 3 per cent of outlets deliver home care places under Flexibles Programs (the Multi-Purpose Service Program, National Aboriginal and Torres Strait Islander Flexible Aged Care Program, and Innovative Pool Program).

Table 6.3: Distribution of home care and home support outlets (per cent) between programs in the last reporting period: 2016

Program	% of outlets
Commonwealth Home Support Program*	63.9
Home Care Packages Program	45.1
Home and Community Care Victoria	14.8
Home and Community Care Western Australia	7.8
Home Care places under Multi-Purpose Service Program/National Aboriginal and Torres Strait Islander Flexible Aged Care Program/Innovative Pool Program	3.1
DVA Community Nursing, Veteran's Home Care or other DVA administered program	17.1
Transition Care Program	9.0
All outlets (weighted)	3,040

Source: Census of home care and home support outlets.
Note: Multiple responses allowed, percentages do not sum to 100.
Outlets can provide services under more than one program.
**From 1 July 2015, the Commonwealth Home Support Program brought together Commonwealth HACC Program, Planned Respite from National Respite from National Respite for Carers Program (NRCP), Day Therapy Centres Program (DTC), Assistance with Care and Housing for the Aged Program (ACHA).*

Table 6.4 shows the distribution of home care and home support outlets providing services under these programs across state, location and ownership type. Note that the final row shows the number of outlets providing services under each program type; as outlets can provide services under more than one program each outlet can be counted under one or more columns in Tables 6.4 and 6.5.

Looking first at the state distribution for each program type, we see that outlets providing services under the Commonwealth Home Support Program (Table 6.4, column 1) are chiefly within NSW (35 per cent) and Queensland (29 per cent), and with the two remaining state HACC reflected in the lower 13 per cent for CHSP in Victoria and 4 per cent in WA (HACC Victoria and HACC Western Australia are in columns 3 and 4). The remaining States and Territories in CHSP show fewer than 10 per cent of outlets are within each of these locations.

Outlets providing services for the Home Care Packages Program, which is shown in column 2, is also chiefly serviced with outlets in NSW and Queensland (27 per cent and 28 per cent respectively) with 16 per cent in Victoria, 11 per cent in WA, 8 per cent in SA, 6 per cent in Tasmania and with other States and Territories each at less than 5 per cent.

The DVA administered programs shown in column 6 have a different State and Territory distribution, with the largest share of outlets servicing this program within Queensland (35 per cent) followed by Victoria (22 per cent) and NSW (21 per cent). The remaining States and Territories have a share of less than 10 per cent.

The largest share of outlets servicing the Transition Care Program are found in Queensland (36 per cent), NSW (26 per cent) and Victoria (18 per cent), with the remaining States and Territories each at less than 10 per cent.

Outlets providing services under Flexible Program (column 5) have the highest share within NSW (31 per cent), followed by WA and NT (18 per cent respectively), with 13 per cent in Queensland and the remaining States and Territories with shares lower than 10 per cent.

Table 6.4 also shows the distribution of outlets categorised by the remoteness area classification of their outlet location. The majority of outlets delivering services under most programs are found within major cities: 41 per cent of outlets providing CHSP, 44 per cent of Home Care Packages, 54 per cent of HACC Victoria, and 60 per cent of HACC Western Australia. Exceptions to this city-based concentration are outlets servicing DVA administrated programs where a much lower 33 per cent are within metropolitan cities and a greater share are in the outer regional areas with 33 per cent; and outlets under Transition Care where 30 per cent are within major cities and a greater share are in inner and outer regional areas (32 and 30 per cent respectively). A further exception were outlets delivering home care places under Flexible Programs as only 11 per cent of these outlets were located in major cities compared to 42 per cent in outer regional areas, 16 per cent in remote areas and 20 per cent in very remote Australia.

There is variation in the concentration of outlets amongst ownership types within the programs (bottom part of Table 6.4). Not-for-profit outlets provided the majority of services under all program types (with the exception of the Flexible Programs). For-profit outlets meanwhile were the least common ownership type across all programs, accounting for less than 5 per cent of outlets providing services under the programs of CHSP, HACC Western Australia, and Flexible Programs and none under HACC Victoria. Slightly higher shares of for-profit outlets delivered home care and home support services under the Transition Care Program (9 per cent), the Home Care Packages Program (10 per cent), and DVA administered programs (13 per cent). Outlets delivering services under Flexible Programs had the highest share of government ownership at 63 per cent, reflecting their specialist role in supporting the supply of aged care services in communities mostly within rural and remote areas.

In Table 6.5 we can see that the size of an outlet impacts upon the type of aged care program services offered. For example, there is a higher share of very small outlets (with up to 5 PAYG employees) providing services under CHSP (15 per cent of all outlets), HACC Victoria (18 per cent) and Flexible Programs (17 per cent) compared to other program types such as the Home Care Packages Program (7 per cent) and DVA programs (1 per cent). In contrast very large outlets (with more than 40 PAYG staff) accounted for a greater share of services provided under DVA administered programs (52 per cent), HACC Western Australia (50 per cent), Transition Care Program (44 per cent) and the Home Care Packages Program (40 per cent).

The same trend persists when considering program service provision according to outlet size for direct care employees. Very small outlets (with up to 5 direct care employees) again accounted for a relatively greater share of services provided under CHSP (28 per cent of all outlets), HACC Victoria (27 per cent) and Flexible Programs (26 per cent) compared to other program types. Meanwhile very large outlets (with more than 40 direct care staff) accounted for a greater share of services provided under DVA administered programs (42 per cent), Transition Care Program (33 per cent), HACC Western Australia (38 per cent), and the Home Care Packages Program (31 per cent).

The number of outlets differs to that of Table 6.4 due to the combination of different non-response for employee questions and the effects of weighting.
**From 1 July 2015, the Commonwealth Home Support Program brought together Commonwealth HACC Program, Planned Respite from National Respite for Carers Program (NRCP), Day Therapy Centres Program (DTC), Assistance with Care and Housing for the Aged Program (ACHA).*
***Home Care places under Multi-Purpose Service Program/National Aboriginal and Torres Strait Islander Flexible Aged Care Program/Innovative Pool Program.*
****As outlets can provide services under more than one program, the total number of outlets cannot be derived from the number of outlets offering services across the different program types.*

6.3 Outlets' Relationships with Broader Aged Care Services

Many home care and home support outlets have connections to the broader aged care sector either as part of a larger provider organisation or through the provision of both residential and community-based aged care services. Table 6.6 shows that 61 per cent of all outlets are part of larger organisational groups, the same as in 2012. The proportion of for-profit outlets belonging to a larger group has risen from 67 per cent in 2012 to 76 per cent in 2016, a large increase that continues the consolidation from the 46 per cent of for-profit outlets that were part of a larger organisation in 2007.

There is also evidence of greater specialisation as the proportion of home care and home support outlets also providing residential aged care services has fallen since 2012, from 20 per cent to 13 per cent in 2016. The proportion of outlets providing a combination of home care and home support with residential services has markedly declined since 2012 for all ownership types.

Table 6.6: Proportion of home care and home support outlets that are part of larger provider group or provide residential aged care (per cent), by ownership type: 2012 and 2016

	Not-for-profit	For-profit	Government	All outlets
2016				
Part of larger provider group	62.9	76.1	48.2	61.0
Providing residential aged care	12.3	5.0	20.8	13.4
2012				
Part of larger provider group	65.0	66.9	40.5	60.6
Providing residential aged care	18.2	13.7	26.4	19.5

Source: Census of home care and home support outlets.

Table 6.7 concentrates on those outlets that provide both home care and home support as well as residential care. Focusing on the 13 per cent of outlets (409 outlets) that also provide residential aged care services (Table 6.6), 21 per cent of staff (18 per cent of nurses and 17 per cent of CCWs, Table 6.7) working in these outlets provide both residential and home care and home support care services. In contrast, Allied Health workers commonly provide services for both residential and home care and home support care (53 per cent, Table 6.7). No for-profit outlets reported a joint workforce for residential and home care combined services.

Table 6.7: Proportion of home care and home support aged care employees that work in both residential and home care/home support aged care (per cent), in outlets that also provide some residential aged care, by ownership type: 2016

Occupation	Not-for-profit	Government	All outlets*
Nurse	19.4	17.7	18.2
CCW	18.1	19.5	17.4
Allied Health	55.6	51.9	53.4
All occupations	20.6	23.9	21.0

**For profit not shown (2 cases weighted).*

6.4 Ethnic Specialisation

As previously discussed in Section 4.4, the number of older people from CALD backgrounds in Australia is increasing and therefore also the need for ethnically and culturally appropriate services for this cohort. The 2016 census explored the extent of ethnic specialisation in the

home care and home support aged care sector, and found that almost 43 per cent of outlets cater to a specific ethnic or cultural group (Table 6.8), compared with 41 per cent of outlets in 2012.

Amongst outlets that did cater for a specific ethnic or cultural group, Aboriginal and Torres Strait Islander clients were most frequently catered for (67 per cent of outlets), followed by clients from an Italian (41 per cent), Greek (36 per cent) and Chinese (35 per cent) backgrounds. Almost 41 per cent of outlets who specialise indicated that they cater for gay, lesbian, bisexual, transgender and intersex clients. This figure is much higher than the 1 per cent of community outlets that reported catering to residents with this background in 2012, illustrating the increasing supply of aged care services which are sensitive to and inclusive of diverse backgrounds.

Table 6.8: Home care and home support outlets catering for specific ethnic or cultural groups: 2016 (per cent)

Ethnic group	% All outlets	% among outlets that specialise
Catering for specific ethnic or cultural group	42.5	n/a
No catering for specific ethnic or cultural group	57.5	n/a
Polish	13.1	30.6

Note: Multiple responses were allowed, columns do not sum to 100.

6.5 Skill Shortages

The provision of quality aged care services depends considerably upon adequate numbers of workers with the required skills being employed in the workforce. In order to advance understanding of skill shortages which may exist within the sector, the 2016 census of home care and home support outlets collected information on the incidence of skill shortages, the factors that cause these shortages, and how facilities respond to them. Table 6.9 shows that skill shortages were reported by 42 per cent of all home care and home support outlets, and 49 per cent of outlets with direct care staff (final column Table 6.9). This table also shows the proportion of outlets with skill shortages for particular direct care occupations. Similar to 2012, a shortage of CCWs was the most commonly reported occupation in which there was a skills shortage (33 per cent in 2016, 37 per cent in 2012), followed by RNs (10 per cent of outlets) and AH (7 per cent) with ENs rarely reported to be in shortage (3 per cent).

Table: 6.9: Proportion of home care and home support outlets reporting skill shortages in 2016 (per cent), by location and occupation affected

Whether had skill shortage	Major cities of Australia	Inner Regional Australia	Outer Regional Australia	Remote Australia	Very Remote Australia*	All outlets
Yes (of all outlets)	40.8	43.4	43.3	43.8	51.4	42.4
Yes (of all outlets with direct care staff)	46.9	49.7	51.1	52.2	60.7	49.2
Yes, for:						
RN	7.3	12.5	12.0	16.5	12.5	10.4

Source: Census of home care and home support outlets.
Note: Multiple responses allowed, columns do not sum to 100.
**N=24 cases (weighted); Overall outlets with skill shortages N=1,277 outlets (weighted).*

For those 1,277 outlets reporting skill shortages (42 per cent of outlets, Table 6.9), the managers were asked to identify factors to which the shortage was attributable, shown in Table 6.10. The main skills shortage issue was a lack of suitable applicants reflecting the desired skills, qualifications, experience or values sought (72 per cent), with very little variation by occupation skill type (76 per cent of outlet managers cited this for RNs and 73 per cent for CCWs). The second most commonly reported issue was the geographic location in which the outlet services were delivered (39 per cent), however this was more commonly reported for RN shortages (54 per cent) than for CCW shortages (40 per cent). Recruitment being too slow for the outlet service needs was the third most common issue for skill shortages (28 per cent), and this was also more commonly reported for an RN shortage (35 per cent) than a CCW shortage (27 per cent). Specialist knowledge was reported by home care and home support outlets as a key source of skills shortages for RN occupations by 28 per cent of outlets (in contrast to only 19 per cent reporting this for CCWs). While these three reasons were also the most commonly reported sources of skills shortages for residential facilities, slightly more residential facilities reported no suitable applicants (80 per cent, Table 4.9) than did home care and home support outlets (72 per cent, Table 6.10).

Table 6.10: Proportion of home care and home support outlets with skill shortages in 2016 that nominated each cause of that shortage (per cent), by occupation affected

Cause of skill shortage	Outlets that reported skill shortages		
	For any occupation	For RNs	For CCWs
Specialist knowledge required	20.4	28.2	19.1
Geographical location of outlet	39.3	53.9	39.9
Wages or salary costs too high	11.7	16.1	12.1
Lack of availability of adequate training	15.9	14.6	18.4
Unsure of long term demands for service	17.0	18.6	19.2
Recruitment too slow	28.4	35.0	27.3
No suitable applicants (skills/qualifications/experience/values)	71.7	75.9	72.8
Other	7.9	5.6	7.7

Source: Census of home care and home support outlets.
Note: Multiple responses were allowed, columns do not sum to 100.
N=1,277 outlets (weighted).

For those outlets reporting skill shortages, an additional question asked outlet managers what strategies they used in response to having these shortages (shown in Table 6.11). As also found in 2012, a majority of these outlets (55 per cent) asked their existing staff to work longer hours. This was also the most frequent strategy nominated by residential facilities in 2016 (62 per cent, Table 4.10).

The second most frequent strategy for responding to skills shortages differed by the type of occupation that was in shortage. Outlets responded with greater use of agency staff for a shortage of RNs (38 per cent) but for a shortage of CCWs used on-the-job training of staff (41 per cent). In contrast, and also frequently used, the third most used strategy for an RN skills shortage was on-the-job training of staff (33 per cent) and for a shortage of CCWs was greater use of agency staff (29 per cent).

In 2016, the categories of student placement usage and volunteer usage were added to this question. For a shortage of CCWs, volunteers were reported to be used by 12 per cent of outlets and student placements were used by 7 per cent of outlets. Along with increasing wages, salaries or conditions, these were among the least common responses to skills shortages (reported by up to 10 per cent of outlets for any occupation shortage).

Table 6.11: Proportion of home care and home support outlets with skill shortages in 2016 that nominated each response to that shortage (per cent), by occupation affected

Response to skill shortage	Outlets that reported skill shortages		
	For any occupation	For RNs	For CCWs
External training of staff	20.2	18.3	23.4
On-the-job training of staff	36.8	33.4	41.0
Existing workforce worked longer hours	55.1	57.0	56.9
Greater use of agency staff	28.7	37.5	29.0
Sub-contracted or outsourced services	21.0	24.8	21.9
Employed staff on short term contracts	17.9	22.9	13.7
Wages, salaries and/or conditions increased	7.4	9.0	7.6
Reduced outputs or production	14.4	18.3	12.3
Used student placements	5.5	6.2	6.6
Used volunteers	9.5	3.1	11.7
Other	5.1	4.3	4.0

6.6 Vacancies

The overall number and types of staff vacancies are further indicators of current conditions within the aged care labour market. Combining this information with the data collected on skills shortages, we are able to present evidence on the extent of difficulties experienced by home care and home support outlets in recruiting adequate numbers of skilled staff.

Outlet managers were asked to report in the census form on the number of vacancies they had at the time of completion, for employees in each direct care occupational classification. This information has been used in Table 6.12 to calculate the proportion of outlets with vacancies in each direct care occupation (Panel 1) and the average number of vacancies for these outlets (Panel 2). Outlets that did not report any vacancies were excluded.

Panel 1 of Table 6.12 shows that a small proportion of outlets reported FTE vacancies across the range of occupations, but similarly to 2012 (and also 2007), more outlets reported vacancies for CCWs (25 per cent in 2016) than other occupations. This is understandable given the distribution of the different occupations in home care and home support aged care,

because CCWs comprise the greatest part of the direct care workforce. Panel 2 of Table 6.12 shows that in 2016 amongst outlets with vacancies, the average number of unfilled FTE positions was 3.6 for CCWs but less than 2 for other occupations (this is very similar to 2012 when there were 3.5 for CCWs).

Table 6.12: Vacancy rate (per cent of all home care and home support outlets) and average number of vacancies (in outlets with vacancies), by occupation: 2007, 2012 and 2016

	Full-Time Equivalent		
	2007	**2012**	**2016**
Panel 1: % of outlets with any vacancies			
Registered Nurse	6.1	5.5	5.7
Enrolled Nurse	2.5	2.1	1.0
Community Care Worker	22.2	21.4	25.3
Allied Health	5.2	3.8	4.3
Panel 2: Average number of vacancies in outlets with any vacancies			
Registered Nurse	n/a	1.4	1.5
Enrolled Nurse	n/a	1.6	1.3
Community Care Worker	n/a	3.5	3.6
Allied Health	n/a	2.3	1.7

Source: Census of home care and home support outlets. Outlets that did not report any vacancies were excluded. N=2,473 outlets (weighted).

A further way of investigating vacancies in aged care is to consider the amount of time that it takes to fill positions for different occupations. Tables 6.13 and 6.14 examine vacancy duration (measured in weeks) with reference to the most recent vacancy that outlets advertised. Table 6.13 shows that in 2016, with the exception of AH, two thirds or more of vacancies lasted up to 3-4 weeks (68 per cent RN, 82 per cent EN, 76 per cent CCWs) but for AH only 61 per cent were filled within 4 weeks. Whereas for EN and CCW only 6 per cent of vacancies were reported by outlets as taking longer than 8 weeks to fill, in contrast this was reported for 13 per cent of RN vacancies and 15 per cent of AH vacancies.

Table 6.13: Weeks required by home care and home support outlets to fill most recent vacancy (in outlets with vacancies), by occupation: 2016

% of outlets that took	**RN**	**EN**	**CCW**	**AH**	**All occupations**
Less than 1 week	31.3	48.9	12.5	26.5	13.1
1 week	4.6	3.2	9.4	2.4	8.7
2 weeks	8.8	8.6	18.9	7.4	16.0
3 to 4 weeks	23.1	21.4	35.1	24.3	33.5
5 to 8 weeks	19.5	12.2	18.1	24.8	19.5
9 to 12 weeks	7.0	3.5	3.9	7.9	5.5
13 to 26 weeks	4.1	1.1	1.5	5.7	2.7
More than 26 weeks	1.5	1.1	0.6	1.0	0.9
Total	**100**	**100**	**100**	**100**	**100**

Source: Census of home care and home support outlets.
Outlets that did not report any vacancies were excluded.
N=2,473 outlets (weighted).

Table 6.14 shows that in 2016 there was mixed experience for outlets with a much higher than average vacancy duration for RNs in WA (7.5 weeks) and very slightly higher than average vacancy durations in NSW (4.9 weeks) and Queensland (4.9 weeks). For CCW vacancies, slightly higher than average vacancy durations were reported in WA (4.4 weeks), ACT (4.6

weeks) and marginally higher than average vacancy durations in Victoria (4.3 weeks) and SA (4.3 weeks).

Variation in the average vacancy duration by the outlet's remoteness area location, depending on the occupational classifications was also found. For RN vacancies, outlets in major cities, inner regional areas and also very remote locations reported durations less than the average 4.7 weeks to fill the vacancy. For CCW vacancies, major cities and inner regional located outlets reported durations less than the average 4.1 weeks.

Table 6.14 also shows the median[11] vacancy duration. Contrasting the average with the median can give more information about the distribution of the durations as the median always shows the centre of the distribution. In the case of WA, where the average vacancy duration for RNs was very high (7.5 weeks) the median is much lower at 4 weeks. This indicates that while for half of the outlets in WA the RN vacancies lasted up to 4 weeks (the median), the higher average shows the average was affected by vacancies longer than this. For CCWs, there was a higher average vacancy duration for outlets in outer regional areas (5.6 weeks), and the corresponding median is 3 weeks. This indicates that while for half of the outlets in outer regional areas the CCW vacancies lasted up to 3 weeks, the higher average reflects that it was affected by vacancies that were filled after 5 weeks and longer.

[11]The median is the "middle" of a sorted list of numbers. Hence it can reveal the centre of the durations the outlets reported without distortion. When the median is contrasted with the average if the median is much lower than the average it shows that the average has been affected by cases with longer durations (and also the other way round if the median is much higher than the average then the average has been influenced by the share with shorter durations). Link to the ABS website for further information about measures of central tendency.

Table 6.14: Average and median vacancy duration (weeks) for RNs and CCWs, by State/Territory and location: 2016

Source: Census of home care and home support outlets.
Outlets that did not report any vacancies were excluded.
N=2,473 outlets (weighted).

As vacancies can exist for a variety of reasons, the census asked outlets about the cause(s) for their most recent vacancy for each of the occupations (Table 6.15). As in 2012, the primary reason for an outlet vacancy across all direct care occupations in 2016 was resignation (63 per cent). In the case of CCW vacancies, a quarter of outlets (25 per cent) cited that it was for a new position.

Table 6.15: Proportion of home care and home support outlets giving each reason for their most recent vacancy (per cent), by occupation: 2016

% of outlets stating	RN	CCW	All occupations
New position	5.6	25.3	32.7
Retirement	11.1	18.3	20.7

Total outlets (weighted)	54	1,581	2,686

Source: Census of home care and home support outlets.
Note: Multiple response allowed, columns will not sum to 100.

The census form asked outlets what was the primary method they used when they recruited CCWs. Table 6.16 summarises their responses (see column 3). Outlets in 2016 most commonly advertised these vacancies through the internet (36 per cent), or the internet and newspaper jointly (30 per cent). Newspaper only advertising was reported by far fewer outlets (10 per cent) as well as the use of word of mouth (10 per cent). Fewer than 5 per cent of outlets reported other alternatives such as walk-ins, agency or job-placement/career service routes.

For recently hired home care and home support workers, the pattern is similar to that found for recently hired residential workers (Table 4.15). Word of mouth and internet job advertisements are the most commonly reported sources of job information for workers in Table 6.16. For nurses, word of mouth is the most common source (41 per cent), while CCWs (41 per cent) and AH workers (52 per cent) are more likely to find their jobs through internet job advertisements. Internet job advertisements have grown in importance since 2012, particularly for CCWs. The increasing use of internet job advertisements has corresponded with a decline in use of newspaper job advertisements as a source of information, and for CCWs, internet job advertisements (41 per cent) appear to have all but replaced job placements and career services (less than 1 per cent) as a source of information. While only 3 per cent of outlets use agencies to recruit CCWs, agency use is far more common among the workers themselves, with 9 per cent of CCWs, 14 per cent of RNs and 13 per cent of AH workers finding out about jobs through agencies.

Table 6.16: Sources of information about recruitment opportunities used by recently hired* home care and home support direct care workers and outlets: 2016 (per cent)

Source of job information	Nurse	CCW		AH
	Worker	Worker	Outlet	Worker

**Recently hired workers have been employed for 12 months or less.*

6.7 Setting of Employment Conditions

The industrial method used by a home care and home support outlet when setting employment conditions for their workers provides an indication of the degree of flexibility that an organisation can have over working arrangements. Table 6.17 reports the proportions of employees across all home care and home support outlets that are bound by particularly forms of agreement for employee conditions. It should be noted that some of the methods operate in tandem (e.g. awards and agreements) and employers may not recognise the distinctions between them. However, we report the responses as provided by outlets.

Similar to residential aged care but to a lesser extent, the most common method of setting employment conditions is Enterprise Agreement (Table 6.17), with 59 per cent of home care and home support outlets using this method, compared with 79 per cent of residential facilities (Table 4.16). Alongside this, a higher share of home care and home support outlet employees are under Awards (39 per cent, Table 6.17) than in residential facilities (19 per cent, Table 4.16). This pattern has not changed since 2012.

Table 6.17: Industrial methods used by home care and home support outlets to set employment conditions (per cent), by employee occupation: 2016

% of employees with conditions set by method	Nurses	CCW	AH	All occupations
Award	35.6	39.3	43.6	39.1
Enterprise Agreement	61.5	59.1	52.8	59.0
Common Law Contract	1.1	0.7	0.3	0.8
Individual Flexibility Agreement	0.7	0.3	2.8	0.4
Don't Know	1.1	0.6	0.5	0.7
Total	**100**	**100**	**100**	**100**

Source: Census of home care and home support outlets.

Table 6.18 shows the proportions of home care and home support outlets that reported they supply allowances to their employees. This was a new question added in 2016. Seventy per cent of outlets supply an allowance to employees to account for travel between home care and support appointments. Less than half of outlets (48 per cent) supply a petrol or depreciation allowance for transport costs related to the work home care and support appointments. To offset this some organisations may supply a work car for rostered staff. Slightly less than a fifth of outlets paid allowances for time for travel between home and care/support appointments (17 per cent) and 16 per cent paid no allowances of any type.

Table 6.18: Allowances supplied by home care and home support outlets to employees (per cent): 2016

% of outlets paying allowance to their employees	All outlets
Paid time for travel between care/support appointments	70.1
Paid time for travel between home and care/support appointments	16.7
Petrol/depreciation allowance for transport costs related to care/support appointments	47.5
None of these allowances paid to employees	15.7
Outlets (weighted)	3,049

Source: Census of home care and home support outlets Question A7.
Note: Multiple response allowed, column will not sum to 100.

Table 6.19 reports the proportions of home care and home support outlets that reported they supply allowances to their employees by the remoteness area of the outlet. Differences were found depending on the location of the outlet. Overall, outlets in remote (21 per cent) and especially very remote (36 per cent) locations were less likely to pay allowances to their staff.

Table 6.19: Allowances supplied by home care and home support outlets to employees (per cent) by remoteness area: 2016

% of outlets paying allowance to their employees	Major cities of Australia	Inner Regional Australia	Outer Regional Australia	Remote Australia	Very Remote Australia	All outlets
Paid time for travel between care/support appointments	69.0	74.3	72.4	66.7	45.8	70.1
Paid time for travel between home and care/support appointments	15.4	15.0	16.2	24.7	27.8	16.6
Petrol/depreciation allowance for transport costs related to care/support appointments	53.6	49.3	41.6	37.1	19.4	47.5

6.8 Agency, Brokered and Self-employed Staff

In order to supplement an organisation's regular PAYG workforce, workers may be sourced through nursing or employment agencies, other aged care providers, or through networks of independent care workers. We refer to these 'agency', 'brokered' or 'self-employed' employees as 'non-PAYG'. The traditional use of non-PAYG workers is to fill temporary gaps when permanent or casual staff are on leave, or where there is an unexpected vacancy. Outlets may also use non-PAYG workers on a more permanent basis and view them as part of their core staff. Outlets were asked in the census form to provide information about their use of non-PAYG workers, to gain information about the extent to which these workers augment the workforce in home care and home support aged care.

Table 6.20 shows that a minority of home care and home support aged care outlets (27 per cent) used at least one non-PAYG worker in the designated fortnight. This is the same scale of non-PAYG use as in 2012. Of the three types of non-PAYG workers, outlets were most likely to engage brokered workers (15 per cent), with 12 per cent using agency workers and 5 per cent using self-employed workers. This distribution across the types of non-PAYG staff used by outlets is very similar to that of 2012. The bulk of non-PAYG workers were CCWs (21 per cent). Brokered staff are used more often in home care and home support (15 per cent, Table 6.20) than in residential care (8 per cent, Table 4.17).

Table 6.20: Proportion of home care and home support outlets (per cent) using non-PAYG workers in the designated fortnight, by occupation and type of worker: 2016

Occupation	Agency	Brokered	Self-employed	All non-PAYG
Registered Nurse	3.2	3.2	0.2	6.5
Enrolled Nurse	0.5	0.7	0.0	1.2
Community Care Worker	8.6	12.7	1.8	21.2
Allied Health	2.0	4.0	2.7	8.3
All occupations	11.8	15.4	4.5	27.1

Source: Census of home care and home support outlets.

Table 6.21 reflects the State and Territory variation in the use of non-PAYG workers by outlets in the two occupations of RN and CCW for the years 2007 to 2016. The proportion of outlets using non-PAYG RNs in 2016 is always less than 10 per cent (overall 7 per cent), whereas for CCWs the rate is strikingly higher with an overall rate of 21 per cent and only one state (NT at 5 per cent) having a low share for non-PAYG CCWs. The States and Territories with higher shares of outlets using non-PAYG RNs were NT (8 per cent), WA (9 per cent) and NSW (8 per cent). Meanwhile the locations with higher usage of non-PAYG CCWs were ACT (45 per cent), WA (26 per cent) and SA (25 per cent).

Table 6.21: Proportion of home care and home support outlets (per cent) using any non-PAYG RNs or CCWs in the designated fortnight, by State/Territory: 2007, 2012 and 2016

State/Territory	RN			CCW		
	2007	2012	2016	2007	2012	2016
NSW	7.5	6.9	7.9	14.3	21.1	23.1
Victoria	1.7	11.9	6.3	13.0	26.8	20.6
Queensland	3.0	9.9	5.8	8.8	14.4	17.6
WA	1.9	5.3	8.6	12.1	18.2	25.7
SA	3.3	1.6	4.4	13.0	27.6	25.3
Tasmania	0.0	5.0	2.8	3.4	21.3	16.1
ACT	7.7	5.3	2.6	15.4	28.1	44.7
NT	3.0	6.9	7.7	6.1	20.7	5.1
All outlets	2.2	7.9	6.6	11.6	21.0	21.3

Source: Census of home care and home support outlets.

In our examination of the non-PAYG workforce in the home care and home support aged care sector, Table 6.22 reports the number of non-PAYG workers employed by outlets in the designated fortnight. Overall 12,103 non-PAYG workers were employed during this time period. Across occupations, non-PAYG CCWs were the most widely used direct care occupation hired by outlets; there were 10,099 non-PAYG CCWs in outlets in the designated fortnight, also reflecting their role as the majority of the home care and home support workforce generally. The next most widely utilised occupation were non-PAYG AH workers of which there were 1,443. This is similar to the 2012 distribution of non-PAYG usage by outlets but a lower scale of use. As discussed above, the majority of non-PAYG workers in home care and home support were brokered. Extremely few nurses were reported to be self-employed but there was a reasonable share of CCWs and AH workers that outlets reported were self-employed.

Table 6.22: Number of non-PAYG workers in home care and home support outlets in the designated fortnight, by occupation: 2016

Occupation	Number of workers			
	Agency	Brokered	Self-employed	Total
RN	226	254	5	**484**
EN	26	49	1	**77**
CCW	2,774	6,586	739	**10,099**
AH	220	787	437	**1,443**
All occupations	3,246	7,676	1,182	**12,103**

Source: Census of home care and home support outlets.
N=3,066 outlets (weighted).

Further questions on the reasons for non-PAYG worker use were added in the 2016 census and are shown in Table 6.23. The two most frequently cited reasons for home care and home support use of agency workers were 'short-term cover for staff absences' (66 per cent), followed by being 'unable to fill vacancies' (38 per cent). For the use of brokered staff, the most common reasons were 'matching staff to peaks in service user demand' (44 per cent), and 'short-term cover for staff absences' (43 per cent). Self-employed staff, meanwhile, were most commonly hired to 'obtain specialist skills' (45 per cent) and 'matching staff to peaks in service user demand' (33 per cent). The reason 'freeze on permanent staff numbers' was rarely cited except for self-employed (7 per cent).

Table 6.23: Reasons for using non-PAYG workers in home care and home support outlets in the designated fortnight, by type: 2016

Reason	Agency	Brokered	Self-employed
Matching staff to peaks in service user demand	36.1	44.2	33.1
Short-term cover for staff absences	65.9	42.5	6.6
Covering for maternity leave or annual leave	12.3	12.9	2.2
Unable to fill vacancies	38.4	34.3	8.8
Obtain specialist skills	18.3	29.5	44.9
Freeze on permanent staff numbers	3.2	1.7	6.6
Other reason	7.2	26.1	12.5
Outlets (weighted)	349	464	136

Note: Multiple response allowed, columns will not sum to 100.

6.9 Volunteers in Home Care and Home Support Aged Care

The outlet census collected information on the extent of volunteers in home care and home support aged care programs. Information about the number of volunteers and the hours they contributed in home care and home support outlets, was collected in the census for the first time in 2012. Table 6.24 shows that outlets responding to this question engaged 44,879 volunteers who provided 206,531 hours of service in the designated fortnight. This equates to an average of 29 volunteers per outlet indicating use of volunteers, with each volunteer averaging 4.6 hours for the fortnight.

Table 6.24: Total number of volunteers and volunteer hours worked in home care and home support outlets in the designated fortnight: 2012 and 2016

Year	Volunteer numbers, per fortnight	Volunteer hours, per fortnight	Average number of volunteers per outlet, per fortnight	Average hours per volunteer, per fortnight
2016	44,879	206,531	29	4.6
2012	56,729	258,373	27	4.6

Source: Census of home care and home support outlets. Outlets N=1,536 (weighted).

As shown in Table 6.25, 51 per cent of outlets reported the use of one or more volunteers (the same as in 2012). The distribution of volunteers is fairly consistent for most locations with the exception of remote and very remote areas, where their contribution is lower with 43 per cent of outlets and 11 per cent respectively reporting volunteering activity. The use of volunteers also differs by the ownership type of outlets, with for-profit outlets much less likely to engage volunteers than not-for-profit or government outlets.

Table 6.25: Proportion of home care and home support outlets employing volunteer workers (per cent) in designated fortnight, by location and ownership type: 2016

	% outlets (weighted)
All outlets	50.9

For-profit	5.6
Government	45.9

Source: Census of home care and home support outlets.
**Very remote N=8 (weighted).*

A new question was added in the 2016 census to gain a better understanding of what roles were undertaken by volunteers in aged care (Table 6.26). As found in residential facilities, home care and home support outlets most often used volunteers for 'social activity support assistance' (55 per cent). However the use of these roles was less frequent than in residential facilities (at 82 per cent, Table 4.23). A high proportion of home care and home support outlets also had volunteers undertaking roles such as 'planned group activity assistance' (50 per cent Table 6.26, and this was also lower than for residential settings where 68 per cent of facilities used volunteers for this role, Table 4.23) and 'companionship/befriending' (34 per cent almost half of the 64 per cent in residential facilities). However for 'transport assistance', 44 per cent of outlets reported volunteer roles supporting this service, while a smaller share of residential facilities had volunteers undertaking roles of 'transport assistance' (23 per cent, Table 4.23). 'Shopping/appointment assistance' was also more often a volunteer role for home care and home support outlets (20 per cent against 16 per cent of residential facilities reporting this) as was 'meal/preparation assistance' (30 per cent against 6 per cent of residential facilities). Somewhat surprisingly, volunteer roles for 'gardening assistance' were less commonly reported by home care and home support outlets (8 per cent against 15 per cent by residential facilities). Twelve per cent of volunteers provided 'respite care assistance'. Fewer than 10 per cent of home care and home support outlets had volunteers undertake 'domestic activity assistance' (5 per cent), and 'home maintenance assistance' (3 per cent), with these last activities rarely undertaken by volunteers.

Table 6.26: Roles undertaken by volunteer workers in home care and home support outlets (per cent): 2016

	Outlets where volunteers undertaking roles
Domestic activity assistance	4.8
Respite care assistance	11.5
Social activity support assistance	55.3
Planned group activity assistance	50.1

6.10 Quality measures in Home Care and Home Support Aged Care

Quality monitoring questions were added within the census in 2016 to give a measure of how the quality of the aged care provision is checked (Table 6.27). The most common form of quality monitoring undertaken by home care and home support outlets was that 'managers or supervisors monitor quality' 78 per cent (86 per cent in residential facilities, Table 4.24), with 'keeping records of feedback or complaints from service users' a second key method reported by 66 per cent of home care and home support outlets (57 per cent in residential facilities). About half of home care and home support outlets (52 per cent) had 'surveys of service users to monitor quality'. This last finding about using surveys is in contrast to residential facilities where just over a third of facilities had surveys of service users (36 per cent, Table 4.24), instead reporting 'accreditation' as the third most preferred method (56 per cent of residential facilities, Table 4.24).

Some quality methods were much less commonly reported by home care and home support outlets than by residential facilities. 'Inspectors from another organisations monitor quality' was found in only 16 per cent of outlets (Table 6.27), which is only half of the 32 per cent of residential facilities who reported this method, Table 4.24). Slightly less than a quarter (22 per cent) of home care and home support outlets used 'external auditing' for monitoring quality, whereas in residential facilities 16 per cent undertook this form of quality monitoring. Similar to residential facilities, slightly less than a quarter said that 'individual employees monitor quality' (22 per cent, Table 6.27) against 20 per cent in residential facilities (Table 4.24). Similar to residential facilities, additional methods of quality monitoring were rarely cited (3 per cent).

Table 6.27: The three most important methods for monitoring the quality of aged care services/supports in the facility (per cent): 2016

	% of all facilities
Managers or supervisors monitor quality	78.3
Inspectors from another organisation monitor quality	16.2
Individual employees monitor quality	21.5
Keep records of feedback or complaints from service users	66.2
Surveys of service users	52.1
External auditing	21.6
Accreditation	43.7
Other	3.0

7. Interviews with Direct Care Workers

Key Findings

- In-depth interviews were conducted with 100 direct care workers – 40 mature workers, 30 new hire workers and 30 general workers.
- Most respondents had entered aged care with substantial employment histories. Some reported additional sources of paid work in order to supplement their hours or income.
- Motivations for choosing to enter aged care included a direct interest in the work, job availability, flexible working hours and the potential for future healthcare employment.
- Positive aspects of aged care work included good relationships with clients, making effective use of skills and training, and having autonomy and task diversity.
- Workers reported difficulties in their aged care work, most commonly high workloads and levels of administration. Unsatisfactory working conditions, client care issues, and challenging relationships with managers and co-workers were also reported.
- The majority of respondents wished to remain working within aged care in their current role. Some employees (primarily residential new hire and mature workers) intended to leave the sector to either move to other healthcare settings or retire.
- Effective aged care workers were described as possessing personal qualities and specific skills and qualifications. A range of workers of different ages, gender and cultural background was seen as being beneficial to the sector.
- Adequate staffing and funding, supportive management, positive organisational values and effective workplace policies were seen as contributing to quality client care.
- Respondents had good awareness and understanding of OHS policies and procedures. A quarter of workers expressed OHS concerns in their work, mainly around manual handling techniques, physical hazards and client medication.
- A majority of PCAs and CCWs felt that their Certificate Level III training had equipped them well for their work. Concerns raised about aged care training included the length of courses and placements, a lack of face-to-face training and gaps in content.
- While work-related training was widely available, access was limited in regional/ remote areas. Training in dementia and palliative care was found to be most useful.
- Most workers had extensive responsibilities outside of their aged care work, most commonly caring for children and elderly parents. Strategies used to promote work-life balance included using flexible work arrangements, maintaining boundaries between work and home, and utilising support from family and friends.
- Three emergent themes were raised in the interviews relating to aged care sector reforms and funding, staffing levels in residential facilities, and negative perceptions of aged care work.
- Concerns were raised about the recent aged care reforms including future funding for organisations, possibly leading to reduced service provision and reduced staffing levels, and about re-assessments of clients for higher packages. Home care and home support workers raised concerns about the future sustainability of their organisations and their own employment.

- Concerns were raised regarding staffing levels in residential aged care. Perceptions of insufficient staff numbers and the replacement of RNs with lesser qualified staff were considered to be negatively impacting on resident care.

- Workers were concerned that aged care work was held in low esteem by the general community and those working in other healthcare sectors. Respondents recommended that negative perceptions and working conditions be addressed to make the sector more attractive to potential workers.

Qualitative interviews with 100 direct care workers were undertaken following the aged care workforce survey. These interviews had four primary aims. Firstly, as limited previous research has focused on newly hired and mature workers within aged care, we sought to understand more about their specific experiences of working in the sector. Secondly, a key focus of the qualitative interviews was to investigate issues relating to recruitment and retention in aged care. Thirdly, we sought to explore direct care workers experiences of job satisfaction, knowledge and skills, work-life balance, occupational health and safety, and quality aged care services. Finally, the interviews identified and explored emerging issues for the aged care workforce.

7.1 The Interview Process

Upon completion of the workforce survey, direct care workers were given an opportunity to nominate themselves to take part in a qualitative interview about their experiences of working in the aged care sector. This section outlines the sampling and recruitment strategies undertaken and provides a description of the sample of direct care workers who participated in an interview.

7.1.1 Sampling and Recruitment

A purposive sampling strategy was used to identify eligible participants for the qualitative interviews. In total we aimed to interview 100 aged care workers with equal numbers based in residential and home care and home support facilities/outlets. The sample was then further stratified to oversample our two target groups: new hire workers (who had been working in aged care for a year or less) and mature workers (aged 55 years and older). A third group of general workers (who did not meet the criteria for the other two groups) was also selected. Overall, we aimed to interview 30 new hires, 40 mature workers, and 30 general workers. Within these three groups, we sought to select approximately equal numbers of workers from the two main occupations within aged care - nursing staff (RNs, ENs and nurse practitioners) and care workers (PCAs and CCWs).

The recruitment process for the qualitative component involved randomly generating a sample of workers using the purposive sampling strategy described above. The NILS research team then called potential participants to schedule telephone interviews at a time that was convenient for the participant. Three attempts were made to contact each person and if this was unsuccessful he or she was replaced in the sample. Those who expressed a desire not to take part in an interview were also replaced. This process occurred until interviews with 100 workers were completed.

The interviews were conducted from August to October 2016 and lasted for approximately 30 minutes. A copy of the interview schedule is provided in Appendix 2.

After obtaining consent from each participant, the interviews were digitally recorded and transcribed verbatim by a professional transcription service. The transcribed data were entered into NVivo 11 in order to assist with the management and analysis of the data. Following familiarisation with the data through the reading of the transcripts, a thematic framework was developed and agreed upon by the qualitative research team. This thematic framework was based around the core topics outlined in the interview schedule and included

the main sub-themes which had emerged during the interviews in relation to these topics. The interview transcripts were then coded according to this thematic framework. Key themes were developed and refined throughout the data analysis to enable further emergent categories to be identified.

In order to maintain anonymity, each interviewee was designated an identification number which reflected key attributes of their work sector, employee group and occupation. An identification number with the prefix R indicates a worker from a residential facility, while H indicates a home care and home support worker. The identification suffix identifies the sample group a worker belonged to (with N for new hire, M for mature worker and G for general worker) and their occupational group (RN for registered nurse, EN for enrolled nurse, NP for nurse practitioner, PCA for personal care attendant and CCW for community care worker). Therefore a quote by worker R14M_PCA relates to interview number 14 of the residential workers; and as the suffix is 'M_PCA', this person was a mature worker employed as a PCA.

7.1.2 The Interview Sample

Using the stratification process described above, a randomised sample of employees was selected. Overall, semi-structured interviews were conducted with 100 workers. Of these, residential workers accounted for 52 of the interviews and home care and home support workers for 48 interviews. Across occupational groups, 43 nurses (29 RNs, 11 ENs and 3 NPs) and 57 care staff (31 CCWs and 26 PCAs) were interviewed. Parity with regard to work setting and occupation was unable to be reached due to a relative lack of new hire nurses in the sample, particularly in home care and home support settings (further detail on this is provided below in Section 7.1.2.1).

As planned the total sample included 30 new hires, 40 mature workers and 30 general workers. A description of the workers interviewed in each of these groups is provided below.

7.1.2.1 New hire workers

In total 30 new hire workers were interviewed. Within this group we had aimed to interview equal numbers of nurses and care workers. At the time of recruitment for the qualitative interviews, however, fewer new hire nurses than anticipated nominated themselves to take part in a qualitative interview (in total two new hire nurses in the community and 11 residential nurses). As several of these workers were subsequently unable to be contacted or declined to participate, interviews were only able to be conducted with eight residential new hire nurses (and no nurses from the home care and home support sector). Thus in order achieve a total of 30 new hire interviews, additional CCWs and PCAs were recruited and interviewed.

Thirteen of the new hire workers interviewed were employed in home care and home support outlets (all working as CCWs) and 17 worked in residential care (9 PCAs, 7 RNs and 1 EN). All the new hire interviewees had worked within the sector for a year or less (the shortest tenure was three weeks). The age of these interviewees ranged from 20 to 62 years; including four mature workers who were aged 55 years and older. A fifth of the new hire sample were male workers.

7.1.2.2 Mature workers

Interviews with mature aged care workers were conducted with 20 home care and home support employees (10 CCWs and 10 RNs) and 20 residential workers (10 PCAs, 6 RNs, 3 ENs and 1 NP). These workers were aged from 55 to 72 years of age; 12 workers were aged 55-59 years, 16 were 60-64 years, and 12 were 65 years and older. Experience in the aged care sector ranged from two to 43 years. While several mature aged workers had spent their entire working lives in aged care, around half of the interviewees were relatively new entrants to the sector and had worked in aged care for less than 10 years. The mature worker sample included four males.

7.1.2.3 General workers

The sample of general workers interviewed included 15 home care and home support workers (8 CCWs, 4 ENs and 3 RNs) and 15 residential workers (7 PCAs, 3 RNs, 3 ENs and 2 NPs). The general worker group had between two and 28 years of experience in the sector and their ages ranged from 21 to 54 years. Six of the general worker sample were male.

7.2 Recruitment and Retention in the Aged Care Workforce

Over coming decades the aged care workforce will need to expand considerably if it is to meet the forthcoming anticipated increase in demand for aged care services. It is therefore of primary importance that new workers are attracted to enter the sector and that the retention of the existing workforce is improved. A key aim of the qualitative interviews then was to identify specific issues relating to recruitment and retention in aged care. The interviews examined pathways into aged care including previous work histories, the interviewee's current role in aged care and whether they held more than one paid job. Motivators of becoming an aged care worker were explored with respondents including the reasons for choosing a career in aged care and for selecting to work in their current organisation. In order to examine issues relating to staff retention, interviewees were asked about positive and negative aspects of their work and also about their career plans over the next three to five years.

7.2.1 Pathways into Aged Care

Only a small number of workers reported that their employment in the aged care sector was their first paid work experience. Typically the majority of respondents had entered the sector following quite substantial employment histories. For the new hire sub-sample, the working backgrounds of CCWs and PCAs was diverse, ranging from factory and cleaning work to employment in the corporate sector. Several of the new hire PCAs reported that while they had previously worked in the aged care sector, this was in non-care related roles, such as kitchen assistants.

> *My pathway is completely very, very different. I have no medical background or nursing background or anything like that, I come from completely a corporate world, and it's a huge switch to move into community services.* (H23N_CCW)
>
> *I'd actually worked in another aged care facility, but I was actually in the kitchen. So, I was kitchen staffing before I started my nursing and throughout my first year. And, then at the end of the first year I got my certificate and did my placement.* (R33N_PCA)

A majority of new hire nurses had had established long-term careers in other fields of nursing; only three nurses in the sample reported that their role in aged care was their first position as a qualified nurse.

> *I've only been in aged care for about 12 months. I've been in general practice for seven years and prior to that, nurse management - well I've been in nurse management per se for the past 20 years, but I've been in the acute sector.* (R21N_RN)

Most aged care workers held only one current paid job in aged care and were not seeking additional sources of employment.

> *No, no, this is my only job…I couldn't even work five days, I can't do anymore than - I mean it's such a physically demanding job…so my body could not do any more than I'm doing now.* (H35N_CCW)

However, reports of having additional paid work on top of their primary aged care role were not uncommon within the sample (particularly for the new hire home care and home support and general workers). Some respondents reported that they combined their direct care work with a different role for the same organisation – these secondary roles included administrative work, primary health nursing, diversional therapy and, for some home care and home support

staff, doing residential nursing or care work. Other workers reported having additional employment with different employers, predominantly casual nursing and care worker roles within aged care. However, several direct care workers were also working in non-aged care related roles in other healthcare sectors, research, retail, labouring and some were running their own businesses.

> *I take two roles under the same company. On different days and different shifts as well…in the afternoon is helping out at the aged care facility, and after 3:00, 4:00 to 6:00 PM or 7:00 PM I'll be helping out at the client's house.* (H21N_CCW)

The need to supplement their income from their primary aged care job was a primary reason given for the taking on of additional work, thus indicating the presence of underemployment in the sector. For others, diversity of work and flexibility were motivations for a second paid job.

> *I think it works for me, it gives me lifestyle. And mental stimulation I think, it prevents burnout in one particular area.* (R27N_RN)

7.2.2 Choosing to Work in Aged Care

When asked why they had chosen to work in aged care, direct care workers from across all three groups described their primary motivations. These included having a direct interest in aged care, job availability and opportunity, flexible working conditions and seeing aged care work as a stepping stone to employment in other healthcare sectors.

Around half of the workers interviewed attributed their decision to work in the sector to an active interest in aged care work. Respondents predominantly described wanting to care for the elderly or deriving enjoyment in working directly with people. For some workers, and particularly those in the community, previous experiences of caring for elderly relatives had led them to view aged care as a viable option for paid work.

> *I had been an at-home mother for 18 years, and so was looking to go back into workforce… I've always worked/enjoyed dealing with aged people, and I knew it was a growth sector.* (H29N_CCW)
>
> *Sort of the reason I went into aged care, I was taking my nan up from Sydney and taking her home and doing all her personal care and everything like that, so I had a lot of compassion there and stuff like that, so I just went into retraining myself to go into aged care.* (H22N_CCW)

For other workers, undertaking care work in other industries led to them viewing employment in the aged care sector favourably. The completion of a placement in aged care as part of a training course had also cemented a decision to work in aged care for several interviewees.

> *I was working in childcare before I went on maternity leave and instead of going back to childcare I decided to try something new.* (H24N_CCW)
>
> *When I was doing my study to get my registration back, I did a placement in an aged care facility, and I was absolutely gobsmacked by how much I enjoyed it. I wouldn't have predicted that. And, I think the other thing is that my mother at that time was in an aged care facility and I just saw how important it is.* (R04M_RN)

Half of the mature-aged and general worker sample (and a smaller proportion of new hire respondents) attributed their decision to work in the sector primarily to the presence of an available position when they were seeking work. Some nursing staff had experienced difficulties in securing work in other areas of nursing due to their location or a difficult job climate while a number of care workers described the aged care sector as *"something that I fell into"* (R48G_PCA).

> *It's going to sound awful, but I'm a new grad nurse, and in WA the job climate is just absolutely ridiculous, there's not a lot going on. We've got a freeze on all public health positions, yeah, and so…that's how we ended up in aged care. Not to say that I don't like it.* (R24N_RN)

> *It was probably by accident. I'd had a change of career and in the interim, while I was deciding what to do next, I was working for an agency, and as part of that agency employment I got sent to aged care to do some work, and just being exposed to it through the agency I ended up in this area. So I didn't seek it out, it was just where I ended up and I liked it*. (R47G_PCA)

The ability to achieve a good work-life balance was a common motivator for entering aged care particularly for respondents in home care and home support settings. Working conditions in aged care were perceived as being fairly flexible, enabling a more effective combining of work and non-work responsibilities.

> *Well, I wanted something that was through the week. Because before I'd been doing like hotel work or baking and so having a young child, could no longer do weekends or nights, so I wanted something more nine to five, Monday to Friday, and so the days were perfect. And I enjoy working out in the community and meeting new people.* (H24N_CCW)

Amongst new hire employees, and particularly those working in residential care, a further common reason for choosing to work in the sector was that it would act as a *"stepping stone"* (R23N_RN) for a career in other areas of healthcare. For most of these respondents, aged care work was seen as a first step towards achieving their ultimate goal of qualifying and/or working as a nurse in the hospital system.

> *I've always loved the idea of helping others, and my eventual goal is nursing. There was a study opportunity for me to study under a scholarship, and so I kind of grabbed it. It was to study aged care, and I thought that would be a nice gentle ease into the healthcare industry.* (H32N_CCW)

In addition to providing information about why they had chosen to enter the sector, some new hire workers described the reasons they had specifically selected to work in a home care and home support setting. Positive perceptions of community aged care (compared to residential care) which had influenced this decision-making included views that a home care and home support setting allowed workers to have more time with their clients, leading to more meaningful interactions and greater job satisfaction. Community aged care was also seen as providing more variety and, due to the lower care needs of clients in that setting, necessitating less intensive care responsibilities.

> *When I went for my placement in the nursing home, it sort of gave me a scare, like I didn't expect certain things and I was not ready for it, and I was not prepared, and I thought, oh it's not going to work with this being in high care and low care, it's not going to work out for me with the duty of care. But, the community services I came on again is different. I mean, it is attending to aged care people, but it's in their own home. That was much more easier and more fulfilling at end of the day, because you had a one-to-one interaction with the clients, and you sort of build that bonding and you get to know them better, and you can serve better to them personally…yeah that was the driving point for me.* (H23N_CCW)

When asked why they had chosen to work for their current employer, most respondents identified that this choice had been a matter of convenience rather than a definite preference. For many the availability of work at the organisation was the key factor informing their decision to work there. Others (mostly new hire workers) had secured their employment with the organisation as a result of doing a placement there as part of their studies.

> *It was circumstances, they were recruiting at the time and I wanted to get my foot in the door.* (R27N_RN)
>
> *I was offered a position. I still had to go through a formal application process, in terms of referees and a resume, but I was approached while I was training, if I would be interested in a position.* (H32N_CCW)

The location of the work setting was of particular importance to residential workers across all three groups; geographical convenience contributed to many decisions as to which organisation to work for. The location of the workplace was especially important for those who had made a lifestyle decision to move to the country or were seeking a reduced commute

time: *"I like to work in country hospitals, I don't like working the bigger ones, and I saw this position come up, so yeah. And, I needed to come closer to home for work*" (R10M_RN).

Having had personal contacts within an aged care organisation that had facilitated work opportunities was a further reason noted by several respondents in their choice of employer.

> *Well, we have limited areas available over here, being in the country, for employment…I had friends working out there as well and they said, "They're looking for more people. Put an application in and see how you go." And, yeah that's how I started, I put an application in and I'm still there today.* (R45G_PCA)

Finally a minority of workers reported that an existing positive perception of the organisation had influenced their choice of workplace. Their organisation was seen as having a good reputation and values they admired, provided good quality patient care or was perceived to give their staff job stability and diversity of work experience.

> *Because I actually liked their values, their set of beliefs. It's pride, respect, resilience, teamwork, empathy and trust. I thought, if that's true then that's the place I want to work for.* (R06M_NP)
>
> *I chose to move to [Name of organisation] because…I prefer to work… where you get a range of different clients.* (H20M_CCW)

7.2.3 Job Satisfaction

In order to inform understanding of factors which influence workforce retention in aged care, the interviews explored job satisfaction in the sector. Interviewees were asked about the elements of their work that they liked best. The interviews also examined aspects of aged care work that were perceived to be difficult or stressful, the impact these issues had on the workers themselves and their daily work, and the strategies used to deal with these difficulties.

7.2.3.1 Positive aspects

When asked what they liked best about their work, direct care workers most frequently described the close relationships and interactions they had with their clients.

> *It's the residents. I think once you start doing a job like (this) and you become involved, you recognise their individual personalities and their sense of humour and just everything.* (R14M_PCA)
>
> *Now I'm in community care, I feel I get more of that one-on-one time to socialise with people…when I became involved with people in residential care, I'd have five minutes with them before it was moving onto the next thing, and so I felt like I was being rushed in that sense...Whereas, now that I'm in home care some of my clients I'm with them for an hour, I'm with some of my clients for three hours, so I feel like I get so much time to get to know them, and spend that time with them I suppose.* (H32N_CCW)

The sense of fulfilment gained from knowing that they were making an important difference to the quality of the lives of older people was a further important aspect of job satisfaction for the workers interviewed. For respondents in the community, the understanding that they were helping their clients to remain living in their own homes was also valued.

> *You make a difference because they're able to stay at home. If those services weren't in place they wouldn't be able to stay at home.* (H47G_CCW)

Specific aspects of aged care work which led positively to job satisfaction were also discussed by many interviewees (and particularly by those working in home care and home support settings and by residential nursing staff). These workers appreciated being able to effectively use their skills and training, make autonomous care decisions, and have diversity in their day-to-day work.

> *[I like] the fact that it's different every day. The fact that you get to be autonomous in your role here, and when I say that you don't have doctors sort of over you managing the situation. You're able to use your clinical expertise which you wouldn't be able to do in a hospital system*. (R40G_NP)

Further positive aspects of working in aged care that were highlighted by interviewees included having good relationships with co-workers and valuing the teamwork which occurred within an organisation to provide quality client care. Supportive relationships with management and flexible working conditions were also noted by a small number of interviewees.

> *We've got a really lovely team and we don't let anything stress us or anything and we work as a team to, like, the best we can and to meet all the client's needs, you know.* (H22N_CCW)

> *The managers and everyone is really good, like they appreciate what we do, whereas in other places you just don't get appreciated, which is important I think to get appreciated. So especially with the job like carer, which is really hard, like physically and mentally draining. So it's very important to get appreciated for your work I think.* (R29N_PCA)

7.2.3.2 Negative aspects

While a small proportion of workers reported that there was nothing difficult or stressful about their work, the majority of interviewees identified negative aspects of working in aged care. Excessive workload and perceived time stress was a significant issue for many workers. High workloads were attributed to inadequate staffing numbers (particularly in residential settings) and excessive amounts of administrative tasks and paperwork. Levels of administration were considered by some workers (and particularly those in home care and home support outlets) to have increased with recent changes to the sector.

> *It's usually very, very busy and I think you're just constantly in a state of juggling multiple demands on your time that are often in conflict, and that can be stressful*. (R04M_RN)

> *The most difficult and stressful would be the amount of administration that's required now, from the government basically. And, the regulations and the referral pathways and systems that are being put in place without the support, because that's impacting on patient care*. (H38G_RN)

The difficulties caused by high workloads led many in the sample to undertake significant amounts of overtime and unpaid work or to be unable to take available leave. High staff workloads were also perceived to impact negatively on the care received by clients.

> *Well, you have to shortcut and that's the only honest answer I can give you, you have to shortcut. You don't have the time to do everything that you would like to do and that we should be doing for these residents.* (R12M_PCA)

Some respondents reported feeling overwhelmed and unable to address underlying work pressures: "*because nurses don't complain, we're our own worst enemies, at least a few of us*" (R08M_RN). Other direct care workers related strategies utilised for dealing with excessive work responsibilities. These included leaving the work for the next shift, getting help from or delegating tasks to other staff, prioritising activities that needed to be done, and delaying spending quality time with residents until urgent tasks had been completed. Others felt impelled to be assertive in advocating for change: *"So I am fairly vocal with things that I don't like, and I think that's a personality experience thing, and so far, it's worked"* (H17M_CCW)

Working conditions and arrangements were a further source of stress for many aged care workers. Respondents across all settings and occupations were unhappy about the rates of pay in the sector, comparing their pay rates unfavourably to those offered in different settings.

> *One of the issues that I think all of us have as care workers is the pay rates. It's not very good…For what we do I don't think we are paid enough and I'm not being greedy.* (H25N_CCW)

Further issues relating to working conditions in aged care were raised by home care and home support staff (and predominantly CCWs). Insecure employment – in the form of casual contracts, insufficient hours, being on-call, irregular rosters and split shifts – was a major source of stress for these workers. A lack of financial compensation for travel time when commuting between clients' houses was a further frustration expressed by some home care and home support workers.

> *You might have 10 hours today and next week it's only 15, and next week could be 20 and then back to zero…That would be much easier for me to know that every day I got a normal 35 hour shift, to be able to live out of that. But I understand that it's not the way it is and at the moment it makes things difficult for me, because I need to think of the future too, and eventually I might have to do some other stuff to have a budget to live on.* (H31N_CCW)
>
> *The other day…they wanted me to drive 20 kilometres to do a one-hour service and then drive back home sit around for three hours, well, be off work for three hours, and then go back to the same place 20 kilometres away and work for two hours, and then again come home and have an hour off and then go off and do two more hours work of an evening.* (H17M_CCW)

Interviewees also commonly raised specific concerns about their work with clients and their families. The deteriorating health and death of clients was perceived to be emotionally draining. Workers also reported finding the care needs or challenging behaviours of some clients difficult to deal with; this was particularly pertinent for those working in palliative and dementia care. In addition some respondents expressed concern that unreasonable expectations of clients or family members negatively impacted upon job satisfaction. In order to deal with the psychological impact of these stressors, workers reported relying upon their support networks from both inside and outside their work environment.

> *Since I've started there we've had a few pass on, so we as PCAs tend to have a bit of a chat and remember good things, bad things, funny things, strange things, whatever it is about those residents. When we're working we have a chat and when we are at lunch or dinner we'll often have a few chats, and I'm lucky I've got quite a few friends that are all nurses, so I can speak quite discretely with them about feelings I'm having and not having and go through the process. I'm quite lucky that I've got a large support system around me, at work and outside.* (R31N_PCA)

Difficulties relating to relationships with co-workers and management were a further source of stress for some direct care workers. Some co-workers were perceived as having negative attitudes to their fellow colleagues and providing poor quality care to their clients. Dissatisfaction with management was also reported by several workers. This ranged from concerns about decision-making by senior staff, the absence of supervision and frustrations about the quality of management (including not listening to, understanding or respecting the experience of care staff).

> *There are some staff which didn't attain at least a Cert III in aged care or community service. They just joined the organisation but they've been working with the company for 18 years. So they do things their way, but from my perspective, sometimes I see them carrying out the task but I feel that it's very dangerous for the client.* (H21N_CCW)
>
> *They [management] sit in the office and have a meeting and then make their decisions from that rather than actually (having) the knowledge of what goes on*. (R12M_PCA)

7.2.4 Retention in the Aged Care Workforce

When questioned about their future work plans, around three-quarters of direct care workers (and all but one of the home care and home support new hire staff) expressed a desire to remain working in the sector over the next three to five years. These workers frequently cited enjoyment in their work, positive relationships with clients, and satisfaction with their current employer as contributing to this intention to stay. Some mature-aged workers also reported wanting to stay in aged care in order to complete on-going projects or promote improvements within their organisation.

> *I can see myself still working for the same organisation. I really enjoy working here and I enjoy the people I work with. It's a good work environment. You've got a lot of support. I can't see me being anywhere else.* (H43G_CCW)

> *I'd love to achieve, what I'm chasing now for our unit, is a better practice award. I've come home from this…conference with a bit of a new module of care in my mind, which I want to implement.* (H04M_RN)

Most employees who intended to remain in aged care expected to maintain the same position with their current organisation. Other respondents hoped to pursue other roles within aged care including taking on, or extending, managerial responsibilities. Some staff also planned to undertake further education and training to enhance their skills and job opportunities. This included several CCWs and PCAs, who were either currently undertaking, or expressed a future desire to start, a nursing qualification.

> *With home care I'm not really getting anywhere further. I would like to go further in my career. I'm looking into becoming a nurse, because that's just the next step up from being an aged care carer.* (H46G_CCW)

> *Maybe doing some stints in a managerial role and especially knowing, in aged care about the budgeting and all the sort of administration that goes behind running a nursing home, the healthcare management.* (R27N_RN)

While the vast majority of mature-aged and general workers wanted to remain working with their current employer, some new hire respondents expressed a desire to move to a different aged care organisation. The reasons provided for this proposed move included finding a facility that was closer to home, working in a setting that better matched their personal values, and moving into the community aged care sector.

> *I really want to really get into palliative care in community work. I have done it as a placement, absolutely loved it. Just not quite sure how I'm getting there, but that's my focus right now.* (R25N_RN)

For a small number of new hire respondents (and particularly those working for home care and home support organisations) their future work goals in aged care included improving their working conditions through obtaining more secure employment, increasing their hours or improving rates of pay.

> *It's because I'm casual, like it's really quite simple, like at least 20 hours, but it's not constant and I sometimes get ten hours, sometimes get 15, so it's just being casual, yeah…I would really prefer to have at least 20 hours per week…Yeah, I'm keen to be a permanent part-time.* (H23N_CCW)

> *If a public facility was to offer the same sort of hours and close to home and salary packaging, and the rate of pay that my nursing federation award gives us – because the private actually pay less – I would move. Because they will give me my full awards rate and they would pay me penalties right through Sunday nights, Monday morning where my facility will only pay Sunday rates till midnight on Sunday…So I suppose, you know, for wages wise and pay I would move.* (R27N_RN)

Although several older workers (including some aged 65 years and older) were keen to remain in their roles in aged care, they acknowledged that their future capacity to manage the work was dependent on maintaining their health and fitness as they aged.

> *Providing my fitness and ability to do the job continues I would continue as long as possible in the industry…I do see that in other workers, that people don't always make it to retirement age in the aged care industry. But having said that, as basically unskilled workers they wouldn't have made it in probably any other industry that requires them to be on their feet all day. It's probably not specific to aged care*. (R47G_PCA)

> *I would like to work until the day I die. I really - as long as I'm fit, because I'm pretty fit, as long as I'm fit and well enough*. (R01M_EN)

However, not all respondents planned to remain working within aged care in the longer-term. Intentions to leave aged care were particularly prevalent for residential new hire workers and older workers. A fifth of the new hire workers (mostly residential staff) reported that they planned to leave the sector. Although most were aiming to move into hospital nursing, some were considering a return to aged care once they had expanded their skill set in an acute setting.

> *I'm a new grad that was hoping to get into a hospital…I'm learning a lot and getting to use my clinical skills. So basically just working on doing well at this position and I would still like to get into a hospital. ED is my main goal. But I'm certainly making the most of the job while I'm here. (R24N_RN)*
>
> *I'm not sure if I'll stay in this role for that long. Probably towards the next year or so I'll be staying in here but then I'll be moving over into something else. Just because I'm going into arts and business and that sort of side of things.* (H33N_CCW)

For many in the mature aged cohort retirement was foremost in their minds, with almost half of the sample reporting expectations of retiring in the next three to five years. In some cases poor health or existing workplace injuries were forcing this decision. Some had already begun to make active plans for this transition, for example reducing their hours of work.

> *I just felt really tired…I've got to that 25-year milestone and I thought…"oh no I can't do this anymore. It's been a great job, but I just can't do it anymore*. (H03M_RN)
>
> *My plan is in five years' time, I'm going to be out of here, because I'm already 56 and I've got that many injuries…a couple of whiplash injuries and got multiple fractures in my upper back and six bulging discs in my lower back. And I've got bursitis in my hips and in my shoulders…And my plan for probably next year is to try and find a part-time job, so that I can work part-time for the next five years before I retire.* (R06M_NP)

7.3 Experiences of Working in Aged Care

A further aim of the qualitative interviews was to understand the experiences of direct care workers in relation to quality in aged care, occupational health and safety, job satisfaction, knowledge and skills, and work-life balance.

7.3.1 Quality Aged Care Services

The interviews examined worker perspectives on quality within aged care. Specifically respondents were asked about the characteristics, skills and qualifications that make a good aged care worker. At an organisational level, the factors which enable an aged care outlet to provide quality care to its clients were also discussed.

7.3.1.1 Characteristics of good aged care workers

When respondents were asked about their perception of what makes a good aged care worker, overwhelmingly they spoke about particular "qualities" a person needed to have to be able to work with older people. Possessing personal qualities such as patience, understanding, compassion and empathy were seen as being more important than other characteristics such as aged care skills: "*Well, skills can be taught but a personality can't"* (R23N_RN). Qualities relating to aged care work itself - having a strong work ethic, being a team player, having a willingness to learn and a desire to work with older people – were also valued highly.

To a lesser extent, respondents discussed factors relating to skills and qualifications when describing what makes a good aged care worker. Core skills perceived to be important in aged care work included effective communication, being person rather than task-focused, literacy skills, good time management, conflict resolution skills and being organised. For nursing staff, being comfortable with autonomy and decision-making was also seen as being vital. Many respondents (and particularly those who had been working for longer in the sector) stressed

the importance of minimum requirements for workers to hold a Certificate Level III aged care qualification. However, as discussed below in Section 7.3.3, reservations were expressed regarding the quality of some certificate level courses. Consequently, respondents stressed the importance of care workers also having hands-on experience and ongoing work-related training.

> *I think you just need to be the right sort of person, so qualifications help with knowledge and when you get into situations, but it's as much to do with experience as the qualification.* (H17M_CCW)

Socio-demographic factors such as age, gender and culture were felt to play a minor role as to whether or not someone was a good aged care worker. Having both younger and older workers in the sector was thought to offer benefits to client care. Older workers were seen as contributing valuable life experience and reliability (in presenting for shifts and loyalty to the organisation). Clients were also often reported to be more comfortable working with mature workers. In contrast, younger workers were perceived to bring energy and be a *"breath of fresh air"* (R21N_RN) to the sector.

> *The young ones that work at our facility they're very good. They're very, very caring and most of them want to be nurses so they've got that nurse personality, so very caring.* (R13M_PCA)
>
> *Some of the elderly that we look after prefer to have an older carer because they might be embarrassed about their incontinence or things like that.* (R21N_RN)

Likewise, although the gender of an aged care worker was recognised to be a barrier for some older people (e.g. if they preferred to have their personal care needs undertaken by a male or female worker), on the whole respondents welcomed a mix of both male and female workers in the sector. Some respondents believed that the sector would benefit from more men entering aged care work, particularly with regard to assisting with the care needs of male clients. Male workers were seen as being as competent and skilled as female workers and were particularly valued for their perceived ability to deter threatening behaviour from clients and being able to assist with tasks which required physical strength such as client transfers.

> *Well, a lot of our residents, if they're female, they really struggle with having a male carer. We do have, there's one particular carer that's male that I work with quite a lot. He's absolutely amazing, he's brilliant, and he's very good at helping those ladies that don't really want a male person showering them, and he's very understanding with that, and if it's too much for them, he just steps back*. (H36G_EN)

> *In a lot of ways in so many situations we need the men because there are clients that only want to go out with guys. They want to go down the pub or whatever and they want to be with a guy. At our service we're in a coastal area and there are men that all used to be surfers and beach goers and they need to have a carer that's got more strength to help them down the beach and places like that*. (H44G_CCW)

While respondents reported overall that a worker's cultural background made little contribution as to whether they provided good care or not, having staff who shared a mutual language and cultural background with CALD clients was considered a favourable employee characteristic. The importance of English proficiency in an aged care worker, however, was also thought important by some respondents in order to aid communication with clients.

> *My last facility…was more of a multicultural facility, and staff as well, and certainly if we have staff on that are multicultural and actually can speak a native language to a resident who kind of reverts back to their native tongue in dementia, it's a great resource*. (R39G_NP)

7.3.1.2 Factors enabling aged care organisations to provide quality care

The factor most emphasised by respondents as enabling aged care providers to deliver quality care was the presence of adequate levels of skilled staff. In particular, organisations were seen as needing the ability to cover shifts when staff were absent rather than relying on agency

and casual staff or working short-staffed. Negative impacts of inadequate staffing on client care are discussed further in Section 7.4.2.

> *I think that's the biggest thing, if you have adequate staff and staff that are trained properly, they're able to do their job the best they can.* (H32N_CCW)

Many respondents also noted the importance of good management in contributing to the provision of high quality aged care. Many reported the need for managers to value staff skills and experience, to promote lines of communication with their staff, and to listen to and advocate for their workers. This was thought vital in supporting good teamwork and a respectful and well-functioning workplace. Other respondents suggested effective management provided good oversight and supervision to ensure quality of care, and supported flexible and innovative care options. It was also considered important that managers personally have previous direct care work experience in order to be able to make decisions that lead to quality care.

> *Excellent management. You need good managers because without a good manager, the ship just doesn't go.* (R01M_EN)
>
> *Our manager there worked on the floor for a long time before she took on a management role so she's quite sympathetic to us and she understands. She's quite good. But the higher-ups in the company…are there for the bottom line rather than for the care of the residents I think.* (R23N_RN)

Adequate funding for aged care services was seen as impacting upon an organisation's ability to provide quality care. Appropriate levels of aged care funding (as further described in Section 7.4.1) were important in enabling good staffing levels and also in improving care in residential settings through an enhanced physical environment (e.g. large rooms for residents), a broad range of resident activities and the ability to purchase and maintain specialised equipment.

> *They're quite generous with their funding, so if we feel we need a piece of equipment for a resident, we can get it. So, if I felt if someone needed a pressure mattress, we would have it, if I felt someone needed a specialised wound product we would get it. So, yes they are very accommodating from that point of view*. (R38G_RN)

Some respondents (and especially the mature workers) noted the importance of organisational values in supporting quality client care. Evidence of positive values included communicating expectations of high quality care to staff, providing access to ongoing training, and demonstrating clear accountability (e.g. being responsive when problems occurred). Several respondents highlighted the perceived differences in operational imperatives between for-profit and not-for-profit aged care providers; in order to provide quality aged care services it was seen as being important that organisations prioritised the needs of their clients rather than be driven by business practices.

> *It's always the values of the organisation. It's also the staff. It's the culture of the organisation. What they promote as good care, acceptable care, and the standards that they expect of their staff*. (H01M_RN)

Finally, effective workplace policies and procedures were thought to be core components of a good aged care organisation and assisted in the provision of quality care. Respondents recommended that these policies and procedures should follow best practice, be well-structured and clear, and easily accessible to staff members.

> *Ours (policies and guidelines) up until recently were a little bit outdated, and they've all just been reviewed, basically the whole file got turned upside down and shaken out. And they all got reviewed and rewritten and it has made a vast improvement with the procedure for a lot of the care practices, just being improved and updated, and yeah being monitored to make sure that it's the best practice.* (H36G_EN)

7.3.2 Occupational Health and Safety

The qualitative interviews explored issues relating to occupational health and safety (OHS) in aged care. Interviewees were asked about the OHS policies and procedures in their workplace, how these were communicated to staff, and how well these policies and procedures were working. Participants were also questioned about concerns relating to health and safety in their work and, if raised, the responsiveness of their employer to these issues.

7.3.2.1 OHS policies and procedures in the workplace

Awareness and understanding of OHS policies and procedures in the workplace was high amongst interviewees (including the newly hired workers). These included policies and procedures on manual handling and use of equipment, fire safety, first aid, infection control and hygiene, medication management, and chemical spills and waste disposal. For workers based in the community, policies and procedures were also reported regarding home risk assessments and travel.

Respondents advised that a range of methods were used to communicate information about OHS policies and procedures to staff. The interviews suggested that most organisations undertook initial communication of these policies and procedures at the point of employee induction, followed by annual refresher training (conducted either online or face-to-face). Concerns were raised, however, around access to, and the level and quality of, this training. Some respondents felt that face-to-face training days for staff were occurring less frequently, or not at all in some organisations, attributing this to funding constraints. Others thought that some areas of health and safety – specifically manual handling – were inadequately covered in online modules or in passive face-to-face presentations. Some respondents observed that they were either expected to complete the OHS training in their own time or struggled to attend sessions in worktime due to workload pressures.

> *I think it's something that has to be learnt on the job. You can sit in the classroom and learn something, but I think manual handling and support and all that has to be done on the floor. (*H20M_CCW)
>
> *…so we get a half an hour training during our break sometimes, which I find it a bit hard to cope with because we are trying to have a break and they want us to come for training.* (R29N_PCA)

Respondents suggested OHS policies and procedures were easily accessible in their workplaces. In some cases they were in electronic format: *"You can always go to the computer and if you're not sure what the rules and regulations are you can always access it"* (R09M_RN). Others reported that hard copies of manuals and other OHS documents were centrally placed (e.g. in staff rooms or offices), or noted that some policies were posted to office walls. Changes to OHS policies and procedures were typically communicated to staff at their regular staff meetings or through emails, communication books and message boards.

In addition to the direct reporting of OHS issues, most respondents noted their organisation had administrative procedures in place relating to the reporting of health and safety concerns. These took the form of client and personal incident reports and hazard reporting forms. Completion of these forms ensured concerns were logged and forwarded to site managers. The majority of respondents in both residential and home care and home support settings were satisfied with how well OHS policies and procedures were operating in their workplace. The value of these processes in protecting staff and clients well-being was also recognised.

> *I think some of them [the OHS policies] are a little bit overkill, but…rather be you have it than you don't, because it protects you, it protects the client, it protects your business.* (H45G_CCW)

7.3.2.2 OHS concerns in aged care

While most direct care workers felt that their workplace was a safe environment, around a quarter of those interviewed raised OHS concerns. These concerns were predominantly about co-workers not following appropriate procedures such as manual handling techniques. This was attributed to a lack of available equipment or poor room design not allowing the use of equipment, as well as workers choosing to ignore directives. Furthermore the pressure of work demands was seen as leading to workers rushing their job tasks and staff shortages meant that staff were working alone rather alongside co-workers; these were additional factors which contributed to breaches in OHS protocols. Home care and home support workers also raised specific concerns relating to physical hazards in and around client's homes, a lack of oversight of client medications, and an observation of elder abuse.

Some PCAs also acknowledged that they themselves did not follow recommended OHS protocols due to work pressures when working with residents.

> *These days more and more people are getting sick, so meaning to say we are understaffed. So, by the time that I have to call someone to help me lift one resident and then other carers are engaged with the other residents, I have to find another way to help the resident to stand up, and it's difficult, or else I have to wait for them, when they're going to finish.* (R52N_PCA)
>
> *You become tired, your attention span isn't the same, you take risks and then someone else is hurt, which (has) proved true.* (R20M_PCA)

A fifth of the mature-aged respondents (mostly, but not exclusively, CCWs and PCAs) described having health problems or injuries which were thought related to having worked in aged care for an extended time. Several noted that their conditions were in part a consequence of less stringent policies around manual handling and lifting in previous years. The cumulative stress caused by constant overwork was also reported to have taken an emotional toll for some older workers.

> *I remember all those stupid lifts that they used to make us do when we were younger…They killed our bodies by making us lift patients around. We followed all the rules, we did what they told us to do…It wasn't that we did anything wrong, but by using our body as a lifting machine for years and years, now everyone my age that's been in nursing for years, it's taken its toll. I haven't fell over at work or had a bad accident or anything like that, it's just wear and tear and general deterioration. It's just cracked from working too hard.* (R06M_NP)
>
> *I work a lot of unpaid overtime, I'm certainly stressed, everybody's stressed but yes, it takes a toll over years and years and years of doing this. Things are getting worse not better, so it takes an emotional toll*. (R03M_RN)

Respondents discussed how management in their workplace had responded to OHS concerns which had been reported by themselves, other staff or clients. On the whole satisfaction was expressed that these concerns had been responded to quickly and remedied if possible. Actions undertaken to address OHS concerns included removing hazards, providing more carer hours, organising training or making adjustments to existing policies and procedures. Staff also described the role of facility health and safety representatives in ensuring OHS practices were followed.

> *Any risks that arise are dealt with straight away, any hazards, and management's usually onto any hazards pretty quickly. If we find something that we deem as a worker as a hazard or a risk, we document it straight away, and it's pretty much followed up within a day.* (R45G_PCA)
>
> *We have health and safety representatives all around and they're actually, they're very good. We have one there…and she's actually brilliant. She's right onto it with the people especially if they're not doing anything safely or, she's jumps on them, reports them straightway. She doesn't muck around.* (R13M_PCA)

A lack of management and organisational responsiveness to health and safety concerns, however, was expressed by some workers. These interviewees reported feeling that their

concerns were not being adequately heard and a subsequent lack of action or follow-up had occurred.

> *When these people are getting injured I went to the boss at OH&S, at that time. I said, 'Look, these people are working short, you're going to have trouble. More people are going to get hurt' and he said, 'Well, look, I've got this pie here and this pie is all full. I have no more money.*' (R20M_PCA)

7.3.3 Training and Skills

The qualitative interviews examined issues relating to aged care training and skills. Interviewees were asked about any specific qualifications in aged care that they had undertaken and how well they felt this training had equipped them to work in the sector. The extent that employers supported their staff to do work-related training was also explored as well as the kinds of training direct care workers found most useful for their work.

7.3.3.1 Aged care qualifications

The majority of nurses in the sample did not report holding any aged care specific qualifications, in addition to relevant training received as part of their primary nursing qualification. A small number, however, indicated they had done further post-qualifying training including courses in dementia, mental health, gerontology, and aspects of aged care (continence and wound care).

Some nurses felt that their nursing qualification provided an appropriate basis of their work in aged care, considering their university studies gave: *"a foundation, I think, as with any training should do. You've got to go in with that theory before you apply it to the practical"* (R02M_EN). However, most nursing staff reported that university-level nurse training was too narrowly focused to prepare new entrants for the complexities of working with older people; many instead recommended that nurses in both home care and home support and residential settings have prior practical experience of working with older people before moving into the aged care sector.

> *Aged care is totally different from your normal kind of patient I suppose, because you've got different challenges, it's just not them being sick; it's them being elderly, mobility, (and) communication. And, I think that if you're not or you don't have the right training, even as far as your nurses, we find a very high turnover.* (H05M_RN)

All of the PCAs and a majority of the CCWs interviewed held certificate-level qualifications in aged care. Of the remaining CCWs, some had certificates in other fields of care work including home and community care, disability, health services and child care. The majority of care workers who held aged care qualifications (including many of the new hire group) reported that the training had equipped them well for their subsequent work in the sector. In particular, the course placement undertaken as part of a certificate-level qualification was viewed as being very important in highlighting the realities of aged work. Respondents, however, acknowledged that there were some aspects of care work (such as behaviour management and techniques for working with people with dementia) that could only be learned on the job.

> *I think with this kind of job it needs to be more hands-on training. The Certificate III gives you only the theoretical part of it whereas when you go for placement it gives you the practical part of it. You learn every day I think with this work. You can't just train a carer to be a carer in six months, that's impossible.* (R29N_PCA)

A minority of respondents raised serious concerns about the quality of some certificate-level qualifications in aged care. These included a perception of the declining quality of certificate training with reports of shorter courses and reduced placement times, ineffective online training and significant gaps in the content of courses (e.g. communication skills, behaviour management, dementia care).

I went to a school in north Melbourne. They were a kind of Mickey Mouse school. There's plenty of us. What I know about aged care I think I learned about working there, being not at school. (R34N_PCA)

The standard of training for staff to work in aged care is getting poorer. A person can virtually walk off the street, do sometimes an online course in aged care, and in they come. There's no, from what I can see, no basic standard for these people to achieve. (R02M_EN)

7.3.3.2 Work-related training

The majority of direct care workers interviewed reported that their employer supported them to do work-related training. This included induction training for new staff, mandatory training courses and professional development activities. Support provided by employers to enable their workers to undertake additional training included offering training in-house, disseminating information about training courses, paying for staff time or flexible rostering and, to a lesser extent, funding course fees. Barriers to training were reported by some interviewees including having to undertake training in their own time and a lack of access to training in regional and rural areas.

It's hard for training in regional areas…you have to travel a fair bit for proper training…that is expensive with travel and then accommodation…and expenses aren't reflected in our funding, because they don't care that we live 400 kilometres away from our nearest big centre. (H45G_CCW)

The new hire workers in the sample described the induction training they had received upon commencing their employment in aged care. Induction processes took various forms from full day intensive training, shorter periods of training held over several weeks and the use of buddy shifts with more experienced staff. Induction training commonly included the provision of information about the organisation and its workplace policies and procedures, as well as mandatory training on issues such as manual handling and fire safety. Some criticisms were made regarding induction training with several new hire workers commenting that they would have preferred to receive more initial training or buddy shifts. Furthermore some home care and home support workers felt that their induction training was modelled on a residential rather than a community care setting. Overall, however, most new hire workers found their induction training to be satisfactory.

When I started, we do what they call a buddy shift so I go out with the more experienced carers. I think I did that for about a week, all the different carers, and they explain as you go what they're doing, what you have to do. That was very good. (H25N_CCW)

With regard to work-related training beyond induction, workers reported that most of this training was typically of good quality and of direct relevance to their day-to-day work. Respondents had especially valued opportunities for training in dementia and palliative care; courses in wound management, manual handling, mental health and first aid were also thought to be useful. New hire staff identified topics for further training that would be beneficial in their work and enable them to become more effective aged care workers. This included training on aged care practices (dementia and palliative care, chronic disease management, medication and wound management, first aid) and skills (behaviour management, communication with clients and families, and time management).

I'm fairly new to aged care so there is a big gap there in my knowledge. Yeah, so anything to do with aged care and Parkinson's, dementia management, that kind of thing…I'm very lucky, I'm actually exposed to lots of experts. So they provide lots of onsite training and education. I get invited to symposiums and forums and things like that, so I'm really very lucky. (R21_RN)

7.3.4 Work-life Balance

The final area examined in the qualitative interviews related to work-life balance. Interviewees were asked about the responsibilities and activities they had outside of their work in aged care and how they managed to combine these with their work responsibilities. The most common out-of-work responsibility reported by respondents was the care of family members (primarily children and elderly parents). Other non-work responsibilities and activities undertaken by the sample included studying, business interests, community activities and volunteer work, sport and fitness, and social and recreation activities.

Many workers were able to identify strategies they employed to successfully combine their work and non-work responsibilities. Most frequently cited was taking advantage of the flexibility in working hours or rostering offered by their employer. Part-time work, and having a set shift pattern assisted caring responsibilities to be achieved. Many respondents also noted that their employers where possible adapted rosters to fit in with staff needs or allowed workers to have time off if required. Some home care and home support workers described being able to work "school hours", a major factor that had determined their choice to work in community rather than residential aged care.

> *I've negotiated to have the one Friday off a fortnight, because my parents are ageing and sometimes you've got to spend time with them or take them for appointments.* (R06M_NP)
>
> *When [my supervisors] realised that my husband and I had split up and whilst I needed a really steady income I also had limitations on my time and they customised my roster so that it was almost entirely school hours…Working in an aged care facility would be different because you've got very fixed rosters and none of them are family-friendly…home care is definitely the way to go for me with younger children at home.* (H30N_CCW)

Further strategies centred on the creation and upholding of boundaries between work and home-life including not taking work home, leaving work on time and choosing not to work on weekends. Support was also obtained from family and friends to assist with caring responsibilities and household tasks. Keeping fit and healthy for both work and non-work activities through a good diet and regular exercise was a final strategy reported by some respondents.

> *I didn't have a very healthy work life balance originally and I spent most of my days at work and nights, and that soon wore thin…I've got a very good dear friend who's my deputy here and she makes me go home on time too, and she doesn't allow me not to, and so I get to five o'clock and I'm out the door now.* (R40G_NP)
>
> *I've got a very supporting husband…(he) works permanent very early mornings, so luckily he's home in the afternoon so that I predominantly do an afternoon shift, which is a short shift, a 4 o'clock till 9 o'clock at night. He does a lot of the afterschool runnings, pickups, gets dinner ready sometimes as well, so I'm lucky that I've got someone that can do that without asking or paying for extra care…It's finding that balance which works.* (R31N_PCA)

Barriers to a successful work-life balance were also discussed by some workers. A minority of respondents reported that they had been unable to get their preferred shift pattern or that their employer was reluctant to provide paid time off to staff, instead requiring the use of annual leave days. The availability and cost of child-care was a further factor which hindered the ability of some workers to negotiate an effective work-life balance.

> *I've had my children on the waiting list at their primary school now for over a year-and-a-half. Their before school care and after school care has been fully booked, and it's usually a rollover of children from the previous year, so of course trying to get three children in is nearly impossible.* (H32N_CCW)

Respondents also described factors which, while not in place at present, would assist them to more successfully combine their work and non-work responsibilities. These included having changes to their working conditions (more flexible work arrangements, reduced hours, regular shift patterns or working from home) as well as their employer hiring additional staff to cover

excessive workloads. However, for some these changes were seen as being difficult to achieve due to the demands of current work roles or financial imperatives.

> *I think amount of staff needs to be increased to be honest because as I said I look after 13 residents at work - they have got high demands as well. So I have to prepare myself to give everyone what they want and make sure they're cared for. If I get help from someone, like if they put another staff or someone, so that wouldn't stress me out that much, so I can have, not stressing, but less stress at work. So it's working for my outside work life as well I think.* (R29N_PCA)
>
> *It would be nice to have a proper 30 hours' work that you know that you have, and then you don't worry about anything else.* (H32N_CCW)

7.4 Emergent Themes

The interviews were conducted using a semi-structured approach and respondents were encouraged to raise any issues that they felt were important regarding their experiences of working in aged care. In addition to the themes described in the preceding sections, three emergent themes relating to aged care reforms and funding, staffing in residential care facilities, and perceptions of aged care work were commonly discussed by the interview respondents.

7.4.1 Aged Care Reforms and Funding

Many respondents (and particularly mature aged workers and those working in home care and home support settings) raised concerns about the impact that the recent aged care reforms and associated changes to funding models had had on their workplaces. Within community aged care the move to a consumer-directed care model was perceived to be changing the client base of some organisations and impacting upon the caseloads of home care and home support workers. Staff in the community also raised concerns about the future funding of their organisations and the impact this had on their own job security.

> *It does worry me a bit, the stability of it, because so many services like ours are just going from year to year funding-wise. They don't know where they're going…The only alternative is to go and work for a bigger organisation, to work for a big aged care residence, a company that has a few residences, but that seems pointless to me because everyone wants to stay in the community so aged care service residences should only be for end of life. You generally die within an hour once you're there, so why is that the stable job? The stable one should be out in the community because that's where everyone wants to be.* (H44G_CCW)
>
> *(My employer's funding) contract is up soon so we don't know what work, how much work, if any work we're going to have at the end of that contract…Any organisation in the country can package any client anywhere now. It makes it a bit tougher for us…We've definitely lost clients…I lost seven hours in one hit because a client went to a package with a different company*. (H47G_CCW)

Within the community, workers also expressed concerns for their elderly clients under the new funding arrangements. A lack of general awareness of the changes which had occurred in the aged care system and specific understanding of what could be funded under the scheme was noted. The ability of clients to be re-assessed and moved to a larger package if their support needs increased was also questioned by some workers. Moreover, in both home care and home support and residential settings, examples were provided of changes to funding models leading to reduced service provision (including equipment maintenance) and threatening the future sustainability of some programs.

> *If they're on a smaller package and their needs get more over the years, sometimes it's harder to get onto a higher package.* (H22N_CCW)
>
> *We do a lot of other programs, and it's just it's evolved like that. We sort of started an exercise program…that's been going probably 15 years, of gentle exercise, tai chi and a gym, and then we get extra funding from the carer group and link people in with a music therapist…so we do*

> *some music therapy in the home, and in-home diversional activities for people that don't want to join the other diversional activity group, but eventually we try and transition them across. So, I don't know, I think those programs won't keep going.* (H03M_RN)

Within residential aged care facilities, changes to funding models were not seen as reflecting the actual care needs of residents. As described below in Section 7.4.2, these changes were perceived to have negatively impacted on the overall funding available to aged care organisations leading to reduced staffing levels and increased workloads.

> *For a resident to be classified as high care, which means more funding, it's a lot more difficult. They changed the criteria. That was really disappointing because now, it's based mainly on their cognitive functioning. So if a resident has poor cognitive functioning, e.g. mental health issue or dementia or whatever, they receive more funding. Whereas if we've got a resident who's got PEG feeds or indwelling catheter in or is on two hourly turns, they receive less funding. Which is ridiculous, because they need more or just as much care as the one with the cognitive functioning deficit. So that was pretty disappointing. (R02M_EN)*

A minority of respondents believed that the new aged care reforms had led to positive changes, particularly to service provision in the community. Service quality and flexibility was reported to have increased and clients now had greater choice over their supports.

> *Once upon a time when aged care services were given funding, they were like they said, "You can provide A, B and C. And, that's all you're funded for and you can't do any more." And, that closed our books, and that's what we could do, A, B, and C. But, now under the (new funding model), what things are different is we have a little bit more flexibility, so I think being able to provide flexible services, because every client is different. I think that's really important*. (H45G_CCW)

7.4.2 Staffing Issues in Residential Care Facilities

Concerns regarding staffing levels within residential care facilities were raised by respondents from all three groups (new hires, mature workers and general workers). Funding constraints were felt to be contributing to insufficient numbers of staff within facilities including a lack of cover when regular workers were absent or staff not being replaced when they retired. Subsequently increased staff-to-resident ratios had been experienced and led to workload pressures and poorer quality care for residents.

> *There's not enough staff, either carers and/or nurses on all shifts; that's primarily due to the reduced funding from the government although they spruik on about what they do… but of course the general population doesn't really know that, facilities are being run as a business rather than as a caring organisation…When there's not enough staff it's harder for everybody to give out how they want to and it certainly hard for the recipients or residents who get to come into an aged care facility already stressed but expecting really good end-of-life care and we do our best, everybody does their best but we all know now it's not good enough*. (R03M_RN)

In addition to general concerns regarding inadequate staffing numbers within residential care, respondents reported particular issues affecting nursing care within the sector. Increasing RN-to-resident ratios were reported alongside an emerging trend of replacing RNs with less qualified workers (Certificate IV nurses and PCAs). This trend was largely attributed to inadequate government funding and aged care organisations wanting to generate larger profit margins. In order to ensure quality care within residential facilities, several respondents recommended the need for mandatory staffing ratios and the retention of staff with nursing qualifications.

> *We're losing a lot of nursing staff and I find a lot of organisations are putting in PCAs to do nursing work. I think we just need to be careful that we're not blurring the boundaries a little bit too much…Because it's cheaper to have PCAs to do - so the PCAs can do obs and things like that, but if something goes wrong, they don't necessarily have the depth of assessment skills to really be able to deal with that…I find a lot of the big private companies now are getting rid*

of the RNs and things or only having one RN for 120 residents because it's too expensive to have an RN. (R36G_RN)

7.4.3 Perceptions of Aged Care Work

The existence of poor perceptions of aged care work by the general community was considered to be problematic by some workers. Moreover, the interviews were conducted at a time when a case of abuse within the aged care system was prominent within the media and these negative perceptions were thought to have been exacerbated as a consequence.

> *In the media those handful of bad carers give everyone a bad reputation. That's absolutely distressing for us that do a good job to think that somebody has the audacity to treat someone so badly.* (R31N_PCA)

Respondents also reported that within other areas of healthcare, aged care was seen as offering few career pathways and being a low status job which required little clinical or technical expertise. As a consequence of these factors, the aged care industry was considered to be unattractive to new workers, and students and newly qualified nurses and care workers were reported to be reluctant to join the sector.

> *If you work in aged care you have to know cardiac, you have to know renal, you have to know palliative care, you have to know dementia, because the people you're working with have such a broad range of conditions that you need to know a lot of different skills instead of being specialised…we have students here quite a bit, PCA students and EN students and I always ask them where are you thinking about going with your nursing. I will always say please consider aged care. I said, it's a great industry to work in.* (R36G_EN)

This perceived low value placed on aged care work was seen as being reflected in the relatively poor pay rates offered within the sector and a lack of workforce development by the federal government.

> *They say, "You could be doing a job that pays double this and less manual work. Why are you doing this?" and I said, "Well, apart from the fact that I enjoy the smiling faces, happy, all that type of thing, don't you know the theory of the more that you actually help people, the less you get paid? If I don't turn up for my shift, there's a lot of people that could be sitting in their own filth because they can't get to the toilet. If a CEO of a company that gets a million dollars a year doesn't turn up for a month would anyone know? The more help you have for another individual, the lower you get paid."* (R31N_PCA)

Concerns were also expressed that employment agencies were actively encouraging unemployed people to undertake aged care training without consideration as to whether they were well suited or committed to working in the sector. This was seen as contributing to poor quality care and high staff turnover. Similarly, it was understood that many students (e.g. trainee nurses who aimed to work in a hospital setting) saw aged care work as a stepping stone to other employment opportunities rather than a career in itself.

> *A lot of the time these days I don't know (how) the government sees the unemployed… 'You've been long-term unemployed. How about you do a carer's course?' They shove them out there and do a carer's course and then they get employed and consequently that's not where they ever wanted to be. Out of a group of ten you might get two really good carers, but by God, you get some crap.* (H04M_RN)
>
> *We get a lot of uni students that are filling the gaps while they're doing their uni courses, so you have to cover them when they're off at prac or resi school and things like that, and then when they get the qualifications they leave*. (R15M_PCA)

7.5 Summary

In-depth qualitative interviews were conducted with 100 direct care workers following completion of the aged care workforce survey. This sample included 40 mature workers, 30 new hire workers and 30 general workers. The qualitative interviews aimed to (1) explore the specific aged care experiences of new hire and mature-aged workers, (2) investigate issues relating to recruitment and retention in aged care, (3) explore the experience of working in aged care (with relation to quality services, OHS, training and skills, and work-life-balance) and (4) identify and explore emerging issues for the aged care workforce.

7.5.1 Recruitment and Retention in the Aged Care Workforce

Most respondents had entered aged care with substantial employment histories; care workers reported coming from a diverse range of industries while many nurses brought considerable experience from other fields of nursing. A career in aged care, therefore, was a first job for only a small minority within the sample. Although most of those interviewed held only one current paid job in aged care, some reported having additional sources of paid work (primarily to supplement hours or income from their primary job).

Key motivations for choosing to work in aged care included a direct interest in the work, job availability and opportunity, flexible working hours within the sector, and the perception that aged care work could lead to employment in other healthcare sectors. Employment within the home care and home support sector was also seen as being particularly favourable by some workers due to perceptions of greater time with clients, more work variety and less intensive care responsibilities. Most workers in the sample had not made a direct preference when choosing their aged care employer. Rather this decision was informed by the availability of work, having undertaken a placement at the organisation, the location of the workplace, and having existing personal contacts within the facility.

Direct care workers reported that they gained much job satisfaction from their work in aged care. Positive aspects of their daily work included having good relationships and interactions with clients and a feeling of making an important difference to the lives of older people. Being able to use their skills and training, having autonomy and diversity in their work, and good relationships with colleagues and management were further factors contributing to job satisfaction. These workers also, however, reported encountering stresses and difficulties in their working lives. High workloads and levels of administration were the most common concern among respondents. Unsatisfactory working conditions (in the form of pay rates and insecure employment) was a further source of dissatisfaction for some workers and especially those working for home care and home support outlets. Difficulties relating to client care and relationships with co-workers and managers were also frequently reported by respondents.

Despite these reported difficulties, the majority of interviewees wanted to remain working in the aged care sector into the future. Although many workers were satisfied with their current role and organisation, some respondents sought to undertake training which could enhance their skills and job opportunities; others were hoping to transition to roles which offered greater levels of responsibility. Additionally some workers (particularly in home care and home support outlets) aimed to improve their current working conditions while some new hire workers expressed a desire to move to a different aged care organisation. Intentions to leave the sector were noted primarily by residential new hire workers and mature-aged workers. For the former group this was typically to pursue a nursing career within an acute setting, while retirement was a forthcoming pathway from the sector for half of the mature-aged sample. However, many mature workers were keen to continue working in aged care for as long as their health permitted.

7.5.2 Experiences of Working in Aged Care

The qualitative interviews also examined quality in aged care provision, OHS, training and skills, and work-life balance. Respondents discussed worker and organisational characteristics which they believed promote quality client care. Effective aged care workers were thought to possess innate personal qualities, alongside specific skills and qualifications, which made them suitable for their role. Having a range of workers across different ages, genders and cultural backgrounds within the sector was also perceived as contributing to good client care. Adequate staffing was strongly viewed as being a key factor which enabled organisations to provide quality care to their clients and residents. Supportive management, adequate aged care funding, positive organisational values, and effective workplace policies and procedures were also considered to contribute strongly to care provision.

Awareness and understanding of OHS policies and procedures was high among respondents. Most felt that they had received adequate training in OHS issues and that workplace guidelines operated effectively. Although most direct care workers considered their workplace to be a safe environment, specific OHS concerns were raised by a quarter of workers. The pressure of work demands and staff shortages were felt to contribute to breaches in OHS protocols by respondents and their co-workers (particularly around manual handling techniques). Specific concerns relating to physical hazards, client medication and elder abuse were also raised by some home care and home support workers, while reports of work-related injuries were described primarily by mature aged workers. Overall, however, interviewees expressed satisfaction that their employers addressed any OHS concerns effectively.

The qualitative interviews also examined training and skills in the aged care workforce. All the PCAs and most of the CCWs interviewed reported having undertaken, at a minimum, Certificate Level III training in aged care. While most of these workers considered that their training had equipped them well for working in the sector, concerns were raised regarding the quality of some Level III training courses. These included misgivings about the length of courses and placements, a reliance on online rather than face-to-face training methods, and gaps in course content. Work-related training was available to most of the respondents, including induction training, mandatory training courses and professional development activities. However, barriers to training were described by some workers including a lack of access in regional and rural areas. The training received by respondents was perceived to typically be of good quality and of direct relevance to aged care work; training in dementia and palliative care was reported to be particularly useful. New hire workers also identified specific types of training (centred on aged care practices and skills) which they considered would be beneficial for their future work in the sector.

Work-life balance was a final area explored in the qualitative interviews with direct care workers. Most workers reported extensive responsibilities and activities outside of their work in aged care, most commonly caring responsibilities for children and elderly parents. Strategies used by aged care workers to effectively combine work and non-work responsibilities included taking advantage of flexible working hours or rostering, maintaining boundaries between work and home and utilising support from family and friends. Not all respondents, however, felt able to have an effective work-life balance. Difficulties were reported by some workers in obtaining flexible working conditions or paid leave from their employer; the availability and cost of childcare was a further barrier experienced by some respondents.

7.5.3 Emergent Themes

Three emergent themes were raised by respondents during the interviews relating to aged care sector reforms and funding, staffing levels in residential care facilities and negative perceptions of aged care work. Concerns were expressed regarding the impact of the recent aged care reforms on the sector across provider, worker and client levels. Home care and home support workers were particularly worried about the future funding and sustainability of

their organisations and the potential effects this could have on their own employment. A lack of client awareness and understanding of recent changes within the aged care system was also reported. In contrast, a minority of workers felt that the aged care reforms had been beneficial, enhancing service provision and client choice in the community.

Associated with concerns regarding aged care funding arrangements, were reports of staffing issues within some residential care facilities. Perceptions of insufficient staff numbers and the reported replacement of RNs with lesser qualified staff led to unease about the quality of resident care in some organisations (and particularly within the for-profit sector). A final emerging theme which arose from the interviews with direct care workers was a sense that aged care work was held in low esteem by both the general community and those working in other healthcare sectors. At a time when the aged care workforce needs to expand, respondents recommended that negative perceptions and working conditions be addressed in order to make the sector more attractive to potential workers.

8. Conclusion

8.1 Overview of the 2016 National Aged Care Workforce Census and Survey

The National Aged Care Workforce Census and Survey (NACWCS) 2016 provides information about the size and composition of the workforce, the characteristics of aged care workers and the organisations in which they work, experiences of working in the sector, and factors related to staff recruitment and retention.

The NACWCS consists of two separate data collections: one for the residential facilities and one for home care and home support outlets. Each data collection comprises of two linked parts - a census of all employers and a survey of their employees. From these we have two large employer-employee data sets representing the residential and the home care and home support sides of the aged care sector. The structure of aged care programs and services in Australia has changed considerably since the NACWCS was last conducted in 2012. These changes impacted on the responding framework for the census, which was relaxed in the 2016 data collection, necessitating a longer duration of fieldwork in order to achieve comparable response rates.

The NACWCS gains further in-depth knowledge on the sector through the addition of a qualitative research element connected with issues of specific policy importance. In the 2012 NACWCS we focused on migrant and male workers in aged care, motivated by the expectation that they will form an important source of new workers for the sector. In 2016 we focus on recently hired and mature-aged workers, again motivated in a broader way by issues of attraction and retention of the aged care workforce. We conducted 100 in-depth qualitative interviews with recently hired, mature-aged and general employees from the direct care workforce. These interviews provide further detailed information on experiences of working in the aged care sector including factors related to recruitment and retention.

Throughout the report we have compared the residential and home care and home support workforces (with a particular focus on the direct care occupations), differences between various components of the workforce (including occupational groups and recent hires) and, where appropriate, contrasted the characteristics of the aged care workforce with the broader Australian population. This concluding chapter provides a summary of findings and identifies a selection of emerging issues that may benefit from further investigation.

This was the fourth time that the National Institute of Labour Studies (NILS) has undertaken this important research – previously the NACWCS was conducted by NILS in 2003, 2007 and 2012. The accumulated evidence is remarkable in its continuity and completeness. As a consequence this research is the best available source of information for tracing the changes that have occurred in the Australian aged care workforce over this time period and guiding relevant workforce policy. In doing so however, we need to bear in mind several generally well-understood, but often under-reported or even ignored, statistical caveats.

The structure of aged care programs and services in Australia has changed considerably since the NACWCS started to be conducted in 2003. Measuring and comparing in the midst of change will always remain an imprecise undertaking. For example, a question we asked in 2003 may not have been asked of the same (type of) people as in 2016, or may have a different meaning in 2016 due to sector changes that have happened in the meantime. The answers provided in 2003 and 2016 may, therefore, not be directly or fully comparable. Although the NACWCS employs the most powerful tool for the employers' evidence, that is, a census where all employers in scope are invited to respond, and a large-scale survey for employees, with the added granularity that can be gained through the employer-employee linkage, structural change will nevertheless always have an impact but whose size and magnitude is hard to estimate. Consequently, this statistical caveat should always be kept in mind when making direct comparisons of aged care services across different parts of the

sector over time and we should be careful to not over-interpret the estimates derived from this data. With these thoughts in mind, we turn to the conclusion of this research.

8.2 The Size and Composition of the Aged Care Workforce

In 2016, the estimated total aged care workforce comprised 366,027 PAYG employees (an increase of 4 per cent from 2012). Of these, 235,764 were employed in residential facilities and 130,263 in home care and home support outlets. This report focuses primarily on direct care workers within the sector, i.e. those workers who provide care services to older Australians as a key part of their work. Our 2016 estimates suggest that 240,317 aged care workers were employed in direct care roles; this figure being very close to the corresponding estimate in 2012. There were 153,854 direct care workers in residential facilities and 86,463 in home care and home support outlets.

While both the residential and home care and home support sectors experienced a considerable increase in their direct care workforces between 2007 and 2012 (by 10 per cent and 25 per cent respectively), this increase has not been observed between 2012 and 2016. The 2016 estimates suggest that, since 2012, residential direct care employment has grown (but at the lower rate of 5 per cent and not uniformly) and home care and home support employment has shrunk (at a contraction rate of 7 per cent). When converted to full-time equivalent (FTE) employees we see a different picture. From 2012, the FTE residential direct care workforce has increased by 3 per cent and the home care and home support workforce has decreased by 19 per cent (compared to 5 per cent growth and 7 per cent contraction respectively in the headcount figures). These estimates suggest that the sector is undergoing considerable structural change and that there has been an increase in the proportion of workers employed for fewer hours.

The direct care workforce consists of six primary occupational groups: Nurse Practitioners (NP), Registered Nurses (RN), Enrolled Nurses (EN) Personal Care Attendants (PCA)/Community Care Workers (CCW), Allied Health Professionals (AHP) and Allied Health Assistants (AHA). Within residential aged care, the proportion of PCAs has continued to grow and now constitutes 70 per cent of the residential workforce. The number of RNs in this workforce has also increased since 2012, reversing a previous negative trend seen in the sector since 2003; however, we note that the proportion of RNs in residential care remained unchanged from 2012. In contrast the proportion of ENs and AHPs working in residential aged care has fallen slightly (from 12 per cent to 10 per cent; and from 2 per cent to 1 per cent respectively). The proportion of AHAs in the residential workforce has remained constant at 3 per cent.

Looking at the occupational composition of the home care and home support sector, CCWs are by far the largest group and their share of the workforce has increased from 81 per cent in 2012 to 84 per cent in 2016. While the proportion of ENs working in community-based aged care has fallen since 2012 (from 4 per cent to 2 per cent), minimal change was seen within the other occupational groups.

Almost two thirds of the aged care workforce is located in major cities, with a further third in regional areas. While little change was seen in the distribution of residential workers across the states and territories since 2012, greater changes were observed in the home care and home support workforce. In particular the proportion of the total PAYG workforce in home care and home support increased from 23 per cent to 32 per cent in Victoria, while the proportion of workers located in NSW fell from 31 per cent to 26 per cent. This appears to be due to an increase in the share of outlets located in Victoria and also in the average number of workers per outlet in that state.

The type of organisation a worker is employed in varies considerably between residential and home care. Within residential aged care 58 per cent of direct care workers were employed in not-for-profit facilities, 34 per cent in for-profit facilities and 7 per cent in facilities owned by the

government; this distribution is largely unchanged since 2012. Within home care and home support aged care in contrast, the proportion of workers in not-for-profit outlets has fallen considerably since 2012 to 68 per cent (from 76 per cent), while employment in for-profit organisations has increased to 12 per cent (from 7 per cent).

While the key focus of the 2016 NACWCS was on the direct care workforce, we also examined the use of other types of workers within aged care. Around a third of all PAYG employees across both the residential and home care and home support sectors are non-direct care staff. Since 2012, the proportion of non-direct care staff working in residential settings has increased by 8 per cent; the share found in home care and home support outlets meanwhile remains unchanged. Non-direct care workers are found predominantly in ancillary care roles in residential facilities (70 per cent). In home care and home support outlets, managers (including care managers and co-ordinators) and administrative staff account for 92 per cent of the non-direct care workforce.

During the designated fortnight (the last pay period in November 2015) 28,079 non-PAYG staff (agency, brokered and self-employed workers) were employed across the aged care sector. This constitutes a decrease of 29 per cent in the use of non-PAYG staff since 2012. The use of non-PAYG staff remains more common within residential aged care with 50 per cent of facilities reporting employing at least one non-PAYG worker compared to only 27 per cent of home care and home support outlets. Non-PAYG workers were most commonly employed to fill PCA and RN positions in residential care and CCW roles in the community. For the first time in 2016, the census included a question on the reasons for the employment of non-PAYG workers. Within both residential facilities and home care and home support outlets, agency staff were most commonly hired to provide short-term cover for staff absences and unfilled vacancies.

The use of volunteer staff is widespread within aged care, with 83 per cent of residential facilities and 51 per cent of home care and home support outlets using the services of volunteers. Our estimates suggest that during the designated fortnight, 68,416 volunteers worked in the sector. There were 23,537 volunteers in residential facilities who worked an average of 4.9 hours each per fortnight, and 44,879 volunteers in home care and home support outlets working an average of 4.6 hours each. The 2016 census contained a new question relating to the roles undertaken by volunteer workers in aged care. Volunteer staff were found to provide a variety of roles: in residential facilities they assist most commonly with providing social and planned group activities and also companionship. In home care and home support outlets volunteers most frequently assist with social and group activities and transport.

The overall picture of the size and composition of the aged care workforce is mixed and suggestive of considerable structural change taking place. The institutional changes that have occurred concurrently within the sector make the generation, the reading, and the interpretation of these estimates harder. The overall PAYG workforce is estimated to have increased by 4 per cent as a whole, with its direct workers proportion being 5 per cent higher in residential care and 7 per cent lower in home care (or a 3 per cent increase and 19 per cent decrease in FTE positions respectively). Since 2012, the relative share of both PCAs and CCWs have increased, whilst evidence suggests that non-PAYG numbers have dropped substantially. Meanwhile, the number of volunteers working has increased in residential facilities but fallen in home care and home support outlets.

8.3 Characteristics of the Direct Care Aged Care Workforce

The characteristics of the direct care aged care workforce in 2016 were largely similar to those found previously in 2012, with the exception of some differences traced in the estimated age and sex of the workforce and also in the proportion of migrant workers in the sector.

Previous iterations of the NACWCS (2003 to 2012) had indicated that the aged care workforce was ageing. While this trend has continued within the home care and home support sector (the median age is now 52 years compared to 50 years in 2012), the median age of residential direct care workers has fallen to 46 years (from 48 years in 2012). A similar pattern is seen for recently hired employees: the median age of new hires in the home and community care sector has increased to 46 years but has reduced considerably for recently hired residential workers to just 36 years (from 44 and 40 years respectively in 2012).

Although aged care remains a female dominated sector, the proportion of males in the workforce is continuing to grow, albeit slowly and from a small base. In residential aged care, 13 per cent of workers are now male, and in the home care and home support sector men represent 11 per cent of all workers.

Reversing its previous trend, the overall proportion of the workforce born overseas has decreased since 2012; 32 per cent of the residential and 23 per cent of the home care and home support workforce in 2016 are migrant workers. When looking at the country of birth of recently hired workers, however, the residential sector continues to attract an increasing proportion of overseas-born workers (40 per cent compared to 37 per cent in 2012). In contrast, the share of recently hired migrant employees in home care and home support outlets has fallen to just 21 per cent (from 30 per cent in 2012). Most residential facilities and home care outlets (91 per cent and 72 per cent respectively) reported employing at least one PCA/CCW from a CALD background. Within residential aged care these workers were most commonly from India and the Philippines, and in home care and home support from Italy and South East Asia.

Aboriginal and Torres Strait Islander people account for around 1-2 per cent of the aged care workforce reported by outlets; this share has remained similar since 2012.

The aged care workforce is in relatively good health with 60-65 per cent of workers across all occupational groups rating their health as excellent or very good. Unsurprisingly given their younger age, recently hired employees report higher self-assessed health than the aged care workforce in general.

The aged care workforce has high levels of post-school education and training. Most workers (around 90 per cent) hold a post-secondary school qualification. Around three quarters of RNs reported having a nursing degree (compared to around two-thirds in 2012) while a similar proportion of ENs hold a Certificate IV/Diploma of Enrolled Nursing. The proportion of PCAs with a Certificate III in Aged Care has remained the same since 2012 at around two-thirds of the workforce. Meanwhile, the proportion of CCWs with a relevant certificate-level qualification is growing; in 2016, 51 per cent of CCWs have a Certificate III in Aged Care and 27 per cent a Certificate III in Home and Community Care. Two-thirds of residential facilities and almost half of all home care and home support outlets reported that at least three-quarters of their PCAs/CCWs had relevant Certificate III qualifications.

The qualitative interviews explored the adequacy of Certificate-level courses in preparing workers for a career in aged care. While most PCAs and CCWs felt that their training had equipped them well, concerns were also commonly raised regarding the inadequate length of courses and placements, the use of online training methods, and gaps in course content.

A relatively small proportion of the workforce has a specialised qualification in ageing; the most common areas being palliative care and gerontology. However, the levels of specialised qualifications increased across most occupational groups in home care and home support

from 2012 and are now fairly comparable to those in residential settings. Far fewer direct care workers were currently studying for a qualification in 2016 than in 2012 (11 per cent of home care and home support workers and 16 per cent of residential workers compared to around 20 per cent across both sectors in 2012).

Access to ongoing training is common within aged care; 80 per cent of residential workers and 75 per cent of home care and home support workers had engaged in work-related training (mostly mandatory training) in the previous 12 months. Continuing and professional development was undertaken more frequently by residential than home care and home support workers (58 per cent to 48 per cent). Priority areas identified in both the worker surveys and qualitative interviews for future training included dementia, palliative care and (in home care and home support) mental health. The newly hired workers taking part in the interviews also highlighted the need for further training on aged care practices and skills. Barriers in accessing work-related training were also identified in the interviews with direct care workers; a lack of access to training for workers in regional and rural areas was particularly prevalent.

The NACWCS 2016 finds that the aged care workforce remains predominantly female, older, and in good health. It is a well-qualified and trained workforce, with good access to further work-related training. In 2016 the aged care workforce comprises of a sizeable but reducing migrant share and a very small proportion of Aboriginal and Torres Strait Islander people.

8.4 Characteristics of Aged Care Facilities and Outlets

As in 2012, slightly more than half of all residential facilities were large (i.e. had more than 60 places). Within home care and home support aged care, however, the trend towards larger outlets has continued. Twenty eight per cent of the home care and home support PAYG workforce are now employed within very large outlets (with more than 40 staff).

In 2016, the services most commonly provided by home care and home support outlets were the Commonwealth Home Support Program (by 64 per cent of outlets) and Home Care Packages Program (45 per cent). The size of an organisation strongly determined the type of program services offered. Smaller outlets (with up to 5 direct care staff) were responsible for over a quarter of all CHSP services, while very large outlets (with more than 40 staff) provided almost a third of all Home Care Package supports. Within the residential sector, the 2016 census indicated that the total number of operational places was 197,046. The average ratio of residential direct care workers to places (0.8) was unchanged from 2012.

A strong relationship to the broader age care sector was apparent in both residential and home care and home support. The proportion of residential facilities belonging to a larger provider group increased to 80 per cent in 2016 (from 76 per cent in 2012); the proportion of home care and home support outlets has remained constant (at 61 per cent). The share of providers offering both residential and home care and home support care has fallen since 2012 indicating that provider organisations are becoming increasingly specialised within their respective sectors. The proportion of home care and home support outlets also offering residential care has fallen particularly sharply since 2012, from 20 per cent to just 13 per cent.

Around a quarter of residential facilities and 43 per cent of home care and home support outlets cater for a specific ethnic or cultural group, most frequently Aboriginal and Torres Strait Islander and Italian older adults. A much higher proportion of facilities and outlets reported catering for the needs of gay, lesbian, bisexual, transgender and intersex clients in 2016. This illustrates the increasing supply of aged care services which are inclusive of older adults from diverse backgrounds.

Methods of quality monitoring in aged care were explored for the first time in the 2016 census. Multiple methods were used across both sectors, in particular monitoring by managers or supervisors and keeping records of service user feedback. Issues around quality care provision were more broadly discussed in the qualitative interviews. Factors identified as contributing to quality aged care included having adequate funding and numbers of

appropriately skilled staff, supportive management, positive organisational values, and effective workplace practices and procedures.

The overall picture that emerges of the key characteristics of aged care facilities and outlets in 2016 is somewhat mixed, due to the intense recent organisational change in the sector. A majority of residential aged care facilities are large, and business units within the home care and home support sector appear to be getting larger. The way these business units respond to change also appears to differ by the size of the unit. For example, within home care and home support, the size of an outlet appears to determine the type of program service provision. Moreover, the differentiation between residential and home care appears to be intensifying and service provision which accounts for the diverse needs of older Australians from different ethnic and cultural groups is becoming more mainstream.

8.5 Working Arrangements and Conditions in Aged Care

Working arrangements and conditions offered within aged care are important factors for attracting new workers and retaining current ones. A considerable shift away from casual or contract employment arrangements has been seen since 2012, particularly within the home care and home support sector. In 2016 only 10 per cent of the residential and 14 per cent of the home care and home support workforces were casual or contract employees (compared to 19 per cent and 27 per cent respectively in 2012). In contrast, little change over time was noted in the work schedules of the direct care workforce; the most common shift pattern remains a regular daytime shift across both sectors.

Employment conditions for residential and home care and home support staff were predominantly determined through the use of Enterprise Agreements (79 per cent and 59 per cent respectively). Award-based arrangements were more commonly used by home care and home support outlets (39 per cent compared to 21 per cent of residential facilities). Home care and home support outlets were asked about the allowances supplied to their workers for the first time in 2016. Eighty-four per cent of outlets provided some form of allowance, most commonly paid time for travel between appointments (70 per cent) and for petrol/depreciation (46 per cent).

There are indications of potentially underutilised labour supply within the aged care sector as a considerable proportion of workers (30 per cent of residential and 40 per cent of home care and home support staff) reported that they would prefer to work more hours than they do. The proportion of workers with a preference for more hours has increased slightly across both sectors since 2012, and PCAs and CCWs are the occupation most likely to prefer an increase in their working hours.

The extent of multiple job holding by aged care workers provides further evidence of spare capacity within the existing workforce. Multiple job holding is far more common within aged care than in the whole Australian workforce and rates remain similar to those found in the 2012 NACWCS. In 2016, 9 per cent of residential workers and 16 per cent of home care and home support workers had more than one job (compared to 5 per cent of the whole Australian workforce). Most of the additional jobs of multiple job holders were within the aged and disability care sectors. The need to supplement hours or income from their main aged care job was the primary reason for multiple job holding given in the qualitative interviews.

Working conditions are impacted upon by unusual job demands that an employee may perceive to be stressful. Across both sectors the most prevalent job demands were related to unanticipated changes in work patterns including working longer than scheduled and variations being made to hours or location of work at short notice. While the majority of facilities and outlets that made these demands indicated that it was done only in exceptional circumstances, more than a third of home care and home support outlets vary the hours or location of their workers at short notice routinely. Additionally the overall prevalence of unusual job demands had increased within the home care and home support sector since 2012.

A similar proportion of workers in residential care and home care and home support (14 per cent and 12 per cent respectively) reported sustaining a work-related injury or illness over the previous 12 months; this was unchanged from 2012. These injuries were most commonly sprains/strains and chronic joint/muscle conditions caused by lifting, pushing, pulling or bending. The next most prevalent issue was stress or a mental health condition, reported by around a fifth of aged care workers.

Occupational health and safety was a key topic in the qualitative interviews. While most workers felt that OHS issues were dealt with well by their employer, specific concerns were raised by a quarter of the workers interviewed. These concerns were primarily around breeches in protocols for manual handling techniques due to the pressure of work demands and staff shortages. Reports of work-related injuries were primarily described by mature-aged workers and were attributed to the years of undertaking a physically demanding role and also to following poor manual handling protocols earlier in their careers.

The general picture that emerges regarding working arrangements and conditions is one of improving working conditions without any major imbalances identified by the data. Although there are indications of continuing modest underutilisation of the workforce as a whole, (as preferred hours are longer than actual and some workers hold multiple jobs), this is not to the point of being a driving force for the deterioration of working conditions in the sector.

8.6 Recruitment and Retention

Aged care work has been their first ever occupation for only a small minority of workers. Apart from nursing, we find no clear pathways into aged care for all other occupational groups. The aged care sector typically draws its workers from the broader labour market. These findings were confirmed in the qualitative interviews. While many of the nurses interviewed had previously worked in other fields of nursing, the PCAs and CCWs had come to aged care from a diverse range of previous employment. The interviews also found that workers enter the sector for a variety of reasons including an interest in the work, job availability, and as an employment pathway into other healthcare fields.

The direct care workforce is relatively mobile with almost half of the workforce having had previous work with another employer in the sector. Across the different occupational groups, PCAs and CCWs are more likely to be new entrants to aged care. As in 2012, around a third of job mobility within aged care is due to factors relating to the personal circumstances of workers. However, work conditions and work role are further factors which considerably contribute to churn within the sector. In particular, a desire to find more challenging work, the attainment of preferred shifts or hours of work, and the achievement of higher pay were frequently cited in the worker surveys as reasons for moving to a new aged care employer.

Relatively high levels of job satisfaction were reported by workers in aged care and are similar to those found in 2012. When looking at satisfaction with specific aspects of their job, aged care workers reported most satisfaction in those areas which related to skills and training. Relationships with managers and colleagues were also seen in a positive light by a large majority of the workers. Although aged care workers continued to be least satisfied with their total pay, satisfaction in this domain has increased since 2012. Some salient differences were found across the residential and home care and home support workforces. Home care and home support workers had greater job satisfaction across several domains including time available to care for clients and having freedom in their work. These workers also reported feeling under less pressure and stress in their work than their residential counterparts.

Job satisfaction was further explored in the qualitative interviews. As found in the worker surveys, job satisfaction was high. Positive relationships with service users, colleagues and managers; being able to make effective use of skills and training; and having autonomy and diversity in their work contributed strongly to job satisfaction. However, these workers also

described issues which impacted negatively on their working lives. High workloads (including levels of administration) and unsatisfactory working conditions were commonly discussed.

Aged care has a highly committed and stable workforce that predominantly wishes to stay working in the sector. Similar to 2012, around a tenth of the aged care workforce were actively seeking alternative work. In order to examine future work intentions, we asked workers where they saw themselves working in 12 months' time. About 80 per cent of workers expected to still be with their current organisation and 3 per cent intended to move to a different aged care employer. Around a further tenth of aged care employees were unsure of their future work intentions. Only a small minority of aged care employees (2-4 per cent) reported definite intentions to leave the aged care sector altogether within the next year.

The qualitative interviews explored the longer-term career plans of the direct care workforce. Looking at work intentions over the coming three to five years most interviewees expressed a desire to remain within the sector and also with their current employer. However, some of these workers were seeking to develop their skills and take on more responsibilities in their role, while others (mainly newly hired workers) planned to move to a different aged care organisation. Intentions to leave the sector were primarily expressed by residential new hire workers (seeking nursing careers in acute settings) and mature-aged workers who were considering retirement. It should be noted, however, that many older workers planned to continue working in the sector while their health permitted.

The incidence of skill shortages in the sector has declined considerably since 2012, particularly in the residential sector. Skill shortages were reported by 53 per cent of residential facilities and 42 per cent of home care and home support outlets (compared to 76 per cent and 49 per cent respectively in 2012). Across both sectors skill shortages were more prevalent in locations outside major cities. Within residential care a shortage of RNs was most common, while an inadequate supply of CCWs was noted by home care and home support outlets. A lack of suitable applicants was the primary reason given for these skill shortages; slow recruitment processes leading to skill shortages was also common across both aged care sectors. In addition, residential facilities reported the need for specialist knowledge while the geographical location of the outlet contributed to skill shortages in home care and home support.

Common responses to address skill shortages across both aged care sectors included having existing staff work longer hours and making greater use of agency staff. Home care and home support outlets also frequently provided on-the-job training when addressing skill shortages.

The 2016 census collected information regarding current vacancy rates across the different occupational groups. FTE vacancy rates across all occupational groups have fallen within residential aged care since 2012. Around a quarter of residential facilities reported currently having vacancies for PCA and RN positions. The average number of vacancies reported by aged care organisations across the different occupations meanwhile remains relatively the same as in 2012. The highest average number of vacancies were found for PCA positions (at 3.3 positions per facility reporting a vacancy). The average time taken to fill vacancies was 2.5 weeks for PCA positions and 4.3 weeks for RNs; slightly quicker than in 2012. The pattern as to when vacancies are filled has also changed over time. The proportion of vacancies that are very quick to fill (less than one week) or very hard to fill (more than 26 weeks) has reduced and a greater number of vacancies are now taking around 3 to 4 weeks to fill. As was also found in 2012, residential facilities in remote and very remote locations reported more difficulties in filling staff vacancies.

The proportion of home care and home support outlets reporting vacancies is fairly similar to 2012. Vacancies for CCW positions continue to be most commonly reported by outlets (25 per cent), with an average of 3.6 unfilled CCW positions reported by these outlets. Similar to 2012, the average time taken to fill vacancies was 4.1 weeks for CCW positions and 4.7 weeks for RNs. Similar to the trend found in the residential sector, the proportion of vacancies across all occupational groups which are filled within a week by home care and home support outlets

has reduced and more positions are now taking between 3 to 8 weeks to fill. Also staff vacancies located in remote and very remote Australia take longer to fill, particularly for RNs.

As in the 2012 census, across both sectors the most common reasons given for staff vacancies were resignation, the creation of a new position, and retirement. The use of internet job advertisements has become more widespread since 2012 and is the most common recruitment strategy used by both facilities/outlets and recently hired workers. Word-of-mouth information about recruitment opportunities remains an important source for direct care workers. Although the use of agencies by aged care organisations to recruit PCAs and CCWs has not increased since 2012, considerably more recently hired workers are now using agencies as a method for identifying employment opportunities.

In summary, the 2016 NACWCS showed that the aged care workforce is both stable and committed. Moreover, its workers report relatively high levels of job satisfaction and a large majority wish to stay working in the sector. The overall picture that emerges from the skill shortages and vacancies evidence is that both the retention of current workers and the attraction of new workers to the sector seem to be working well with no major bottlenecks or hurdles that the labour market could not sort out by itself and without intervention.

8.7 Emerging Issues

Several emerging issues have arisen from the information collected in the 2016 NACWCS across the organisational census, worker surveys and qualitative interviews with direct care workers which may require further investigation.

First, findings from the 2016 census and survey indicate that the size of the home care and home support workforce has declined since 2012. Given that demand for home care and home support services by older Australians is expected to increase considerably over coming years, investigation appears to be necessary to examine the reasons for this decline, the impact this may have on the provision of aged care services, and the strategies which need to be implemented for the future planning and development of this workforce.

Second, our findings suggest that as an overall response to change, a majority of residential facilities continue to be large in scale, while outlets in the home care and home support sector are growing in size over time. However, preliminary further investigations suggest that this trend conceals two important differences. The first one is that large outlets within home care and home support are expanding their workforce more than smaller outlets, which raises issues of market power, especially where local monopolies may be likely to emerge for instance in rural settings. The second difference is that facilities within the residential sector are growing by opting for a workforce composition with lower use of direct care staff, which may have future implications regarding quality of provision.

Third, at present there appears to have been very little interaction at the workforce level between the aged care and disability sectors. This is not surprising as at the time of the 2016 NACWCS fieldwork, the NDIS was still in its starting phase with less than 15 per cent of its total participants with operational support plans. As the NDIS rolls out to full implementation and demand for disability supports increase, we can expect that the two sectors will end up sharing some of one another's workforces. Given the large numbers involved in the NDIS full roll out over the next two to three years, this could have substantial impacts on the aged care workforce.

Fourth, the qualitative interviews highlighted worker concerns regarding the impact of the recent aged care reforms. In particular home care and home support workers were fearful of the future sustainability of their organisations and their own working conditions and employment. The consumer-directed model of care which has been introduced into the sector was already perceived to be changing the work undertaken by home care and home support workers. As CDC is further implemented, it is important that resulting impacts on the home care and home support workforce are monitored and addressed.

Concerns regarding staffing within residential care was a further issue raised in the interviews with direct care workers. Strong perceptions were expressed that insufficient staff numbers, higher workloads and the replacement of RNs with less qualified staff were impacting negatively on resident care in some facilities (particularly within the for-profit sector). These perceptions were not strongly supported, however, by the census and survey data. The worker survey confirmed that residential care staff report greater levels of stress and pressure in their work than those in the home care and home support sector; dissatisfaction was also expressed by these workers regarding the time available to care for residents. However, the census indicated that overall staffing ratios and the proportion of RNs in the residential sector had remained constant since 2012. The discrepancies between the perceptions of residential workers and the findings from the census could benefit from further examination.

A final emerging issue which was raised in the qualitative interviews focused on perceptions of aged care work. Interviewees were concerned that aged care was considered an unattractive industry by potential employees due to perceptions that it was a low status job which offered poor pay and few career pathways. Future workforce planning and development of the aged care workforce may need to further explore and address these issues.

Appendix 1: Weights for the National Aged Care Workforce Census and Survey

While the National Aged Care Workforce Census purports to be a complete collection, in practice there is substantial non-response.

To address this, we calculate 'weights' for each respondent such that a tabulation of respondents provides an estimate for the entire population. The general approach is to create strata and assume that within each stratum the respondents are a simple random sample of the corresponding population. By creating strata we allow for differential non-response, at least to some extent; each respondent is assumed to be representative of the strata rather than the whole population.

The strata make use of information which is available for the whole population as well as the sample. The finer the level of the strata, the smaller is the bias caused by differential non-response. On the other hand, if the stratification is too fine then the estimates will become very sensitive to the responses of a small number of respondents. Typically, 20 respondents in a stratum are considered more than adequate. To ensure robustness, the approach is to have a stratification broad enough to have a reasonable number of respondents in each stratum, and a stratification which does not result in an excessive spread of weights. The level of stratification is thus a matter of judgment.

The stratification for the residential outlet census collection is as follows, noting that the strata are mutually exclusive and comprehensive:

Table A1.1: Stratification design for residential aged care service facilities

	Notes
All very remote	All very remote facilities are in a single stratum because of small numbers
All remote	All remote facilities are in a single stratum because of small numbers
All Transition Care[12]	All facilities offering transition care are in a single stratum because of small numbers
Residential and flexibles with residential, excluding those that are remote or very remote	Residential facilities and those offering flexible care as well are combined because of the small number of the latter group. The facilities are then stratified by geography and size (nine cells)
Major cities	
Small	
Medium	
Large	
Inner regional	
Small	
Medium	
Large	
Outer regional	
Small	
Medium	
Large	

[12] All very remote, all remote, and all transition care are mutually exclusive (there are no transition care facilities in remote and very remote Australia.)

The size of the facility is taken from the number of worker forms sent to the facility (4, 6 or 8). The weights are obtained by dividing the number of the facilities in the cell by the number of responding facilities in the cell. Outlets where the questionnaire was 'returned to sender' are excluded from both the numerator and the denominator. Respondents who were 'out of scope' are included, with the idea that the respondents we know to be out of scope are representative of facilities who did not respond. The weights are also adjusted to account for a couple of coding errors (with a residential outlet mistakenly coded as a home care outlet and *vice versa*). The weights are in the table A1.2.

Table A1.2: Weights for the residential census

	N	n	Weight
Very Remote Australia	57	27	1.9655
Remote Australia	75	40	1.6667
All transition care	75	21	2.4194
Major cities			
Small	375	268	1.2931
Medium	612	474	1.2541
Large	670	532	1.243
Inner regional			
Small	246	175	1.337
Medium	243	190	1.2526
Large	185	156	1.1783
Outer regional			
Small	232	147	1.3728
Medium	109	83	1.2976
Large	69	47	1.4375
Total	**2,948**	**2,160**	

There are a number of 'respondents' for whom fundamental data on number of workers is missing in B2 (How many employees in each classification are female and how many are male?). These are treated as 'non-respondents'. There are also a number of 'respondents' for whom B2 is zero, despite evidence from other questions such as A6 (How many of the employees in each classification worked the following hours in the last fortnight pay period in November 2015?) that the facility does have direct care employees. In addition, there are facilities with zero employees recorded in B2 but where workers have returned questionnaires in the worker survey, indicating that the facility also had direct care employees. The estimates on the number of direct care employees will be underestimates to the extent that these respondents actually have direct care employees.[13]

Home Care and Home Support Census

A similar methodology for deriving weights is used, although the program is also used to define strata. The variables used as a proxy for the size of the service outlet is the number of worker

[13] There were some 46 respondents with data for A6 and zero recorded for B2. Based on B2, the estimate of the direct care workforce is of the order 150,000. If these respondents were to be treated as missing then the estimate would increase by around 3,000.

forms sent to the outlet (small is 3, medium is 5, large is 7). The size of some of the outlets was unknown in which case five worker survey forms were sent to the outlet. These are included in the 'medium' size category.

Table A1.3: Stratification design for home care and home support service outlets

	Notes
All very remote	All very remote outlets are in a single stratum because of small numbers
All remote	All remote outlets are in a single stratum because of small numbers
Outlet program types: all except CHSP, VIC_HACC, WA_HACC	
Major cities	
Small	
Medium	
Large	
Inner regional	
Small	
Medium	
Large	
Outer regional	
Small	
Medium	
Large	
CHSP	No remote classification on file
Small	
Medium	
Large	
VIC_HACC	No remote classification on file and only medium outlets
WA_HACC	No remote classification
Small	
Medium	
Large	

Note that the remoteness classification was not available for HC_CHSP, HC_VIC and HC_WA_HACC, so any remote or very remote outlets will be in the strata associated with those programs.

The weights (Table A1.4) are derived using the same rules as for the residential facility census collection.

Prior to finalisation of the data file, the Department of Health identified a number of outlets as being out of scope. These were removed from the population file with the exception of a handful who had supplied valid responses.

As for the residential care, there are a number of respondents for which the essential information on the number of direct care employees is missing for B2 (How many employees in each classification are female and how many are male?). These are treated as non-respondents if the outlet had indicated that it has some PAYG direct care employees (in question A10.3 (If your service outlet does not employ PAYG paid staff, please indicate here) and as a nil response otherwise.

Table A1.4: Weights for the home care and home support outlet census

	N	n	weight
All very remote (excluding CHSP, VIC_HACC, WA_HACC)	93	42	2.214286

Residential Workforce Survey and the Home Care and Home Support Workforce Survey

These worker surveys are two stage collections with service facilities/outlets asked to distribute a specified number of survey forms to a sample of aged care workers. The service managers are asked to ensure that the selected employees work in direct care roles, are

employed as PAYG staff and are randomly selected by choosing the employees with a date of birth closest to the date the letter is received.

While the first stage of the collection is notionally a census, in practice not all service facilities/outlets participated in the workforce census, and of those that did participate in the census not all distributed the survey forms to their workers. Therefore we need to treat the worker survey as a two stage collection where:

- The first stage consists of all those service facilities/outlets who distributed worker survey forms and there is at least one responding worker. For this stage, we adopt the same stratification as for the residential care census (or home care census), and assume that those service facilities/outlets are a random sample of all service facilities/outlets (with at least one direct care employee) in a particular stratum.

- The second stage consists of the responding workers.

The standard way of proceeding is to derive weights for each stage and combine them to an overall weight for the responding worker. However, there is reason to believe that many service facilities/outlets have not followed the instructions about sample selection and therefore the sample of workers is biased. If this is the case then an estimate of say, the number of nurses, obtained from the worker survey will differ from the estimate obtained from the service facility/outlet census collection. We account for this bias by modifying the respondent worker weights so that an estimate of workforce size from the worker survey is the same as the estimate from the service facility/outlet census collection. Moreover, we apply this modification differentially so that the estimates of workforce size are consistent for four groups:

- Registered nurses combined with nurse practitioners
- Enrolled nurses
- Personal care attendants
- Allied health professionals and assistants

The question we use in the service facility/outlet census collection is B2: employee classification by sex. This is the most straight forward question involving employee classification and is considered to be the most robust measure of the total number of direct care employees.[14]

A further complication is that there are cases where worker forms were returned but there was no corresponding return for the service facility/outlet census or the census form recorded zero direct employees, and cases where the number of worker forms exceeds the number of direct care employees recorded in the census form. In the first of these, we impute the number of direct care employees for the service facility/outlet based on the average number of employees in the corresponding stratum. In the latter, we did not change the weights, implying that it is possible that the weights are less than one. This approach was adopted in order to maintain coherence between the worker and service facility/outlet collections. The approach means that the estimates of number of direct care workers for each of the four groups are consistent between the service facility/outlet and worker collections.

[14] That said, we know that there are data quality issues with this question, and the treatment of facilities/outlets without data for B2 (employee classification by sex) has an element of arbitrariness. The main issue is whether the facility/outlet is treated as a non-respondent – that is, has not provided data for B2- or a respondent with no direct care employees.

Appendix 2: Interview Schedule

1. What is your current role in aged care?
    - Do you have more than one job? *If yes - probe:*
        - *What do you do?*
        - *If in aged care, with this provider or another?*
        - *Why do you need to have more than one job?*
        - *How do you manage to combine the jobs?*

2. How long have you worked in aged care?
    - Why did you choose to work in aged care?
    - Why this organisation?

3. What do you like best about your work?

4. Is there anything about your work that you find difficult or stressful? *If yes, - probe:*
        - *What do you find difficult or stressful?*
        - *How does this impact on your work/availability for work?*
        - *What strategies do you use to deal with this issue?*
        - *Is support available at work to help you with this?*

5. What do you think makes a good aged care worker?
   Probe:
        - *Issues re age, gender, culture, language*
        - *Qualifications, skills, qualities*

6. What factors enable an aged care outlet to provide quality care?
   Probe:
        - *Staffing – ratio, skills, working conditions*
        - *Management – support, supervision*
        - *Policies and guidelines*
        - *Organisational values*

7. What health and safety policies and procedures are in place at your work? *Probe:*
        - *Communication of policies and procedures by employer*
        - *Processes for reporting concerns*
    - How well do these policies and procedures work?
    - What training have you received regarding workplace health and safety?

8. Do you have any health and safety concerns in your work?
    - Have you reported these to your employer? *If yes - probe*
        - *How has your employer responded to these?*

9. Do you hold any specific qualifications in aged care?
    - (If yes) How well do you feel this training has equipped you to work in aged care?

10. To what extent does your employer support you to do work-related training?
    - (For new hires only, i.e. less than twelve months in aged care) What induction training did you receive? When did this take place?
    - What kinds of training do you find most useful?
    - Have you done any training that hasn't been useful? If yes, what kinds?
    - Is there any training which you have not done, which you feel would be useful in your work? If yes, what kinds?

11. We are interested in knowing how your work fits into your life. What responsibilities and activities do you have outside of your work in aged care? *Probe:*

- *Caring for children/relatives, other caring responsibilities*
- *Studying*
- *Volunteer work*
- *Community activities*
- *Other main activities, e.g. social, fitness*

12. How do you manage to combine your work and non-work responsibilities and activities?
    - What has worked?
    - What hasn't worked?
    - Is there anything that might make it easier to combine your work and non-work responsibilities and activities? *Probe*
        - *Changes to job (role, hours, schedule)*
        - *Support from employer*
        - *Workplace policies*

13. What would you like to achieve in your work over the next 3-5 years?

14. Is there anything else that you would like to talk about in regards to working in aged care?

Appendix 3: Additional Tables

Table A4.2: Average number of residential direct care workforce by size of outlet (places), by number of Total PAYG and direct care employees: 2012 and 2016

Number of places	Average Total PAYG employees		Average direct care employees		Ratio of Average Direct Care/Total PAYG	
	2012	2016	2012	2016	2012	2016
1–20	31	32	20	19	0.65	0.59
21–40	40	48	29	29	0.73	0.60
41–60	56	63	41	40	0.73	0.63
61+	107	113	78	75	0.73	0.66

Source: Census of residential aged care facilities.
**Operational residential places at 3 November 2015 for in-scope aged care facilities.*

Table A6.2: Average number of home care and home support direct care workforce by size of outlet, by number of Total PAYG and direct care employees: 2012 and 2016

Number of Total PAYG employees	Average Total PAYG employees		Average direct care employees		Ratio of Average Direct Care/Total PAYG	
	2012	2016	2012	2016	2012	2016
1–5	3	3	3	2	1.00	0.67
6–10	8	8	7	5	0.88	0.63
11–20	15	15	12	11	0.80	0.73
21–40	29	29	21	22	0.72	0.76
More than 40	111	116	65	75	0.59	0.65

Invitation to participate in the 2016 National Aged Care Workforce Census and Survey

The Australian Government Department of Health has commissioned the National Institute of Labour Studies to conduct the fourth National Aged Care Workforce Census and Survey. More details can be found at: Survey.ipsos.com.au/NACWCAS.

The National Aged Care Workforce Census and Survey collects important information that allows the Australian Government to make more informed strategic decisions about how to provide quality care to older Australians. The research in 2003, 2007 and 2012 has informed decisions about workforce planning and addressed workforce issues.

Responsibility to complete the census

All approved providers of aged care services must ensure completed census returns, as set out in the *Accountability Principles 2014* Part 5, made under subsection 96-1 of the *Aged Care Act 1997*.

Commonwealth Home Support Programme (CHSP) grant recipients must ensure completed aged care workforce censuses are returned, as set out in Section 5.3.5 within the *CHSP Programme Manual 2015*.

How to participate and distributing the census and survey packages

Provider name has been sent X census and survey package(s) for the number of aged care services your organisation provides.

We request that you send each hardcopy census and survey package to the person best suited for completing the census (and distributing the surveys) in each of your aged care service locations. The person best suited to receive the package and complete the Census is either **the personnel manager or the person who recruits and manages staff at each of your aged care service locations**.

There are two different census and survey packages: the Census of Residential Aged Care Facilities (with a set of Residential Worker Surveys) and the Census of Home Care and Home Support Aged Care Outlets (with a set of Home Care and Home Support Worker Surveys). Please call the free helpline 1800 071 735 if you need any assistance.

Larger organisations with multiple aged care services; co-located services

If your organisation is large and provides multiple aged care services, you should provide information for each type of service (Residential and/or Home Care and Home Support – please see table on the next page), at each aged care service location, in each specific census form.

Services that are provided from one location are called co-located services. If your organisation has co-located services and the workforce for these services is coordinated, only one census and survey pack is required for the co-located services (rather than one for each of the services). Please note that where Residential and Home Care/Home Support services are co-located then both Residential and Home Care/Home Support census and survey packages should be completed.

Ethics and Privacy

All responses to the census and survey are confidential and identifying details will be removed prior to analysis. Your census and surveys will be combined with all other data and no individual site or person will be identified. At the end of the project, the Australian Government Department of Health will receive a list of services that participated in the census. This list will not be associated with any information you provide.

The research has been approved by the Australian Bureau of Statistics (Statistical Clearing House number 02468 - 01) and by the Flinders University Social and Behavioural Research Ethics Committee (Project Number 7069). For more information regarding ethical approval of the project the Executive Officer of the Committee can be contacted by telephone on (08) 8201 3116, by fax on (08) 8201 2035 or by email human.researchethics@flinders.edu.au. It also complies with the National Privacy Guidelines for all data collection processes undertaken for survey research.

This survey has been approved by the ABS Statistical Clearing House. Approval Number *02468 - 01*

Census and Survey Packages

Census of Residential Aged Care Facilities (with a set of Residential Worker Surveys)	**Census of Home Care and Home Support Aged Care Outlets** (with a set of Home Care and Home Support Worker Surveys)
This is for services which provide care under the following programmes: • Residential aged care • Flexible programmes with residential places: National Aboriginal and Torres Strait Islander Flexible Aged Care Programme; Multi-Purpose Services Programme; Innovative Pool Programme • Transition Care (in residential setting)	This is for service outlets which provide care under the following programmes: • Home Care Packages Programme • Flexible programmes with home care places: National Aboriginal and Torres Strait Islander Flexible Aged Care Programme; Multi-Purpose Services Programme; Innovative Pool Programme • Commonwealth Home Support Programme • Home and Community Care (Victoria) • Home and Community Care (Western Australia) • Transition Care (in community setting) • DVA Community Nursing, Veteran's Home Care or other DVA administered programme

If you have any queries about the census or survey, please contact the free helpline on 1800 071 735.

Query	**Action**
More census and survey packs than service locations	Please call the helpline on 1800 071 735.
More service locations than census and survey packs	Please call the helpline on 1800 071 735 and request more census and survey packs.
The services at a single location are of only one type (Residential only or Home Care/Home Support only)	Please call the helpline on 1800 071 735 if you don't have the correct type of census and survey pack. Distribute only the correct census and survey pack (Residential or Home Care/Home Support) to the service location.
The services at a single location are of both types (Residential or Home Care/Home Support)	Please call the helpline on 1800 071 735 if you need another type of census and survey pack. Distribute one of each census and survey pack (Residential and Home Care/Home Support) to the service location.

The National Aged Care Workforce Census and Survey closes on **23 September 2016**.

Yours sincerely

Invitation to participate in the 2016 National Aged Care Workforce Census and Survey

The Australian Government Department of Health has commissioned the National Institute of Labour Studies to conduct the fourth National Aged Care Workforce Census and Survey. The National Aged Care Workforce Census and Survey collects critical information about residential, home care and home support aged-care services and the people who work in aged care. More details can be found at Survey.ipsos.com.au/NACWCAS.

There are two different census and survey packages:
The Census of Residential Aged Care Facilities (with a set of Residential Worker Surveys); and
The Census of Home Care and Home Support Aged Care Outlets (with a set of Home Care and Home Support Worker Surveys).

As the manager of the Home Care/Home Support service outlet at this location, we are asking you to complete the *Home Care/Home Support Census* (pink) and distribute the *Home Care/Home Support worker surveys* (pink) to your employees (see over page).

The census collects information about workers at the ***service outlet location*** at which your aged care services are coordinated. When home care/home support services are co-located (i.e. where more than one service outlet operates from the same location), and the workforce is coordinated, only one Home Care and Home Support Census needs to be completed.

If your aged care service belongs to a larger organisation, the information provided in the census needs to be for the home care/home support service outlets at this location only, not for the whole organisation.

Please call the free helpline 1800 071 735 if you need any assistance.

How to participate in the census

You can participate online via a secure website or by filling in the enclosed census and returning it in the reply paid envelope. The census cover has the website, username and password needed for online participation.

Unless you have told us otherwise, complete only one Home Care/Home Support Aged Care Census about the workforce at this service outlet location.

Some questions require you to refer to your personnel/payroll records (e.g. to calculate numbers of full time equivalent staff or calculate hours worked).

The person best suited to complete the census is either **the personnel manager or the person who recruits and manages staff**.

This survey has been approved by the ABS Statistical Clearing House; Approval Number *02468 - 01*

Distributing the worker surveys

We are asking you to distribute X surveys to a sample of aged care workers.

The person best suited to distribute these surveys is either the **manager or care coordinator**. If you are not this person, please pass the surveys onto this person, along with this letter.

It is important that a broad cross-section of the aged care workforce participate in the survey. This may mean providing encouragement and support to assist employees with literacy or English language difficulties to complete the survey.

When selecting employees (including yourself) for participation, please ensure that they:

a. work in direct care roles (i.e. nurses, allied health professionals, allied health assistants, community care workers), associated with the aged (i.e. they provide care for persons 65 years and older, or 50 years and older if Indigenous); **and**

b. are employed as PAYG staff (i.e. do not include volunteers or agency/brokered/self-employed staff); **and**

c. are randomly selected by choosing employees with a date of birth closest to today's date.

If you follow these distribution guidelines, our survey will include persons who are representative of all aged care workers in all services across Australia.

Aged care workers can participate online via a secure website or by filling in the enclosed survey and returning it in the reply paid envelope. The cover of each worker survey has specific information about online participation.

Ethics and Privacy

All responses to the census and survey are confidential and identifying details will be removed prior to analysis. Your census and surveys will be combined with all other data and no individual site or person will be identified. At the end of the project, the Australian Government Department of Health will receive a list of services that participated in the census. This list will not be associated with any information you provide.

The research has been approved by the Australian Bureau of Statistics (Statistical Clearing House number 02468 - 01) and by the Flinders University Social and Behavioural Research Ethics Committee (Project Number 7069). For more information regarding ethical approval of the project the Executive Officer of the Committee can be contacted by telephone on (08) 8201 3116, by fax on (08) 8201 2035 or by email human.researchethics@flinders.edu.au. It also complies with the National Privacy Guidelines for all data collection processes undertaken for survey research.

If you have any queries about the census or survey, please call the free helpline on 1800 071 735.

The National Aged Care Workforce Census and Survey closes on **23 September 2016**.

Invitation to participate in the 2016 National Aged Care Workforce Census and Survey

The Australian Government Department of Health has commissioned the National Institute of Labour Studies to conduct the fourth National Aged Care Workforce Census and Survey. More details can be found at Survey.ipsos.com.au/NACWCAS.

There are two different census and survey packages:
The Census of Residential Aged Care Facilities (with a set of Residential Worker Surveys); and
The Census of Home Care and Home Support Aged Care Outlets (with a set of Home Care and Home Support Worker Surveys).

As the manager of the residential service at this location, we are asking you to complete the *Census of Residential Aged Care Facilities* (blue) and distribute the *Residential Worker Surveys* (blue) to your employees (see below).

The census collects information about workers at the ***service location*** at which your aged care services are coordinated. When residential services are co-located (i.e. where more than one residential service operates from the same location), and the workforce is coordinated, only one residential census needs to be completed.

If your aged care service belongs to a larger organisation, the information provided in the census needs to be for the facilities at this location only, not for the whole organisation.

Please call the free helpline 1800 071 735 if you need any assistance.

How to participate in the census

You can participate online via a secure website or by filling in the enclosed census and returning it in the reply paid envelope. The census cover has the website, username and password needed for online participation.

Unless you have told us otherwise, complete only one Census of Residential Aged Care Facilities about the workforce at this location. Some questions require you to refer to your personnel/payroll records (e.g. to calculate numbers of full time equivalent staff or to calculate hours worked).

The person best suited to complete the census is either the **personnel manager or the person who recruits and manages staff**.

This survey has been approved by the ABS Statistical Clearing House: Approval Number *02468 - 01*

Distributing the worker surveys

We are asking you to distribute X surveys to a sample of aged care workers.

The person best suited to distribute these surveys is either the **manager or director of nursing**. If you are not this person, please pass the surveys onto this person, along with this letter.

It is important that a broad cross-section of the aged care workforce participate in the survey. This may mean providing encouragement and support to help employees with literacy or English language difficulties to complete the survey.

When selecting employees (including yourself) for participation, please ensure that they:

a. work in direct care roles (i.e. nurses, allied health professionals, allied health assistants, community care workers), associated with the aged (i.e. they provide care for persons 65 years and older, or 50 years and older if Indigenous); **and**

b. are employed as PAYG staff (i.e. do not include volunteers or agency/brokered/self-employed staff); **and**

c. are randomly selected by choosing employees with a date of birth closest to today's date.

If you follow these distribution guidelines, our survey will include persons who are representative of all aged care workers in all services across Australia.

Aged-care workers can participate **online** via a secure website or by filling in the enclosed survey and returning it in the reply paid envelope. The cover of each worker survey has specific information about online participation.

Ethics and Privacy

All responses to the census and survey are confidential and identifying details will be removed prior to analysis. Your census and surveys will be combined with all other data and no individual site or person will be identified. At the end of the project, the Australian Government Department of Health will receive a list of services that participated in the census. This list will not be associated with any information you provide.

The research has been approved by the Australian Bureau of Statistics (Statistical Clearing House number 02468 - 01) and by the Flinders University Social and Behavioural Research Ethics Committee (Project Number 7069). For more information regarding ethical approval of the project the Executive Officer of the Committee can be contacted by telephone on (08) 8201 3116, by fax on (08) 8201 2035 or by email human.researchethics@flinders.edu.au. It also complies with the National Privacy Guidelines for all data collection processes undertaken for survey research.

If you have any queries about the census or survey, please call the free helpline on 1800 071 735.

APPROVED

Additional information about the 2016 National Aged Care Workforce Census

When completing this form, please ensure that you...

1. Make sure you answer every question (unless otherwise stated)
2. Cross the appropriate box/boxes like this [X]
3. Enter numbers into individual boxes like this [1] [2] [3]
4. If the answer to a question is nil, please write '0' and go to the next question.
5. Please write clearly using a BLACK or BLUE pen.
6. Sometimes you will find the box you have marked has an instruction to go to another question.
   By following the instructions carefully you will be able to skip questions that do not apply to you
7. Don't worry if you make a mistake or wish to change a response; simply colour in the wrong box like this [■] and mark the correct box like this [X]
8. Call the toll-free helpline on 1800 071 735 if you have any queries, or visit Survey.ipsos.com.au/NACWCAS

It is important that you are as accurate as possible. Please refer to payroll or staffing records where necessary.
The pay period referred to in the census is the last pay period (i.e. fortnight) in November 2015.

Key Definitions

Throughout this questionnaire, the following definitions are used when referring to employee classifications. Please refer to these as you answer the questions.

Allied health assistants *support allied health professionals in providing personal, social and emotional care to residents. Job titles include recreational officer, occupational therapy assistant, social work assistant and others.*

Allied health professionals *include professional accredited allied health workers such as physiotherapists, diversional therapists, speech therapists, social workers and similar. Exclude employees solely engaged in a coordinator/management role.*

Ancillary care workers *have responsibility for providing services to care recipients such as home repairs, home modification, and home maintenance.*

Care manager *is responsible for all direct care staff; other job titles may be Director of Nursing, Care Co-ordinator and others.*

Community care workers *provide personal, domestic, social and other home care to care recipients as a core part of their jobs. For example: showering, medication, respite, cleaning, meals, transport, shopping. Job titles of community care worker vary widely.*

Direct care staff *provide care directly to care recipients as a core component of their work.*

Enrolled nurses *provide nursing care, working under the direction and (direct or indirect) supervision of the registered nurse.*

Nurse practitioner *is a registered nurse educated and authorised to function autonomously and collaboratively in an advanced and extended clinical role.*

Pastoral/spiritual care workers *include professional pastoral/spiritual care workers (eg chaplains).*

Registered nurses *provide and supervise nursing care.*

Section A: About the Service Outlet

The following questions ask for basic information about the home care and home support aged care services provided at this location. We refer to these as your 'service outlet'. The information will help us to understand how the aged care workforce is distributed across different types of service outlets.

A1.1 Where is your service outlet located? *(Please describe the actual location from which these services are delivered. ABS Remoteness Areas category)*

- Major Cities of Australia ☐ 1
- Inner Regional Australia ☐ 2
- Outer Regional Australia ☐ 3
- Remote Australia ☐ 4
- Very Remote Australia ☐ 5
- Don't Know ☐ 6

A1.2 What is the postcode for the location of this service outlet?

☐☐☐☐

A1.2a What is the name of the suburb/town/locality for the location of this service outlet?

A2 Is your service outlet:

- Not-for-Profit ☐ 1
- For Profit ☐ 2
- Government ☐ 3

A3.1 In the last reporting period, under which programmes did your service outlet provide services?

- Commonwealth Home Support Programme* ☐ 1
- Home Care Packages Programme ☐ 2
- Home and Community Care Victoria ☐ 3
- Home and Community Care Western Australia ☐ 4
- Home Care places under Multi-Purpose Service Programme ☐ 5
- Home Care places under National Aboriginal and Torres Strait Islander Flexible Aged Care Programme ☐ 6
- Home Care places under Innovative Pool Programme ☐ 7
- DVA Community Nursing, Veteran's Home Care or other DVA administered programme ☐ 8
- Transition Care Programme ☐ 9

A4 Is your service outlet part of a larger organisation, ie owned by a company or not-for-profit agency that owns other aged care facilities or services?

Yes ☐ 1 No ☐ 2

A5.1 Does your service outlet aim to cater for specific cultural or ethnic groups?

Yes ☐ 1 No ☐ 2 → **If 'no', go to A6.1**

A5.2 For which cultural or ethnic group/s does your service outlet cater? *(Cross all relevant boxes)*

- Aboriginal and/or Torres Strait Islander ☐
- Chinese ☐
- Dutch ☐
- Gay, lesbian, bisexual, transgender, intersex ☐
- Greek ☐
- Italian ☐
- Polish ☐
- German ☐
- Indian ☐
- Other *(please specify)* ☐

A5.3 Does your service outlet employ staff with particular language or other cultural knowledge in order to cater to the group/s listed in A5.2?

Yes ☐ 1 No ☐ 2

A6.1 What qualifications does the Care Manager/ Care Coordinator in your service outlet have? *(Cross one box only)*

- Nursing qualifications ☐ 1
- Managerial qualifications ☐ 2
- Nursing and managerial qualifications ☐ 3
- None of the above ☐ 4
- Don't know ☐ 5

A6.2 What specialised qualifications in ageing does the Care Manager/Care Coordinator in your service outlet have? *(cross all relevant boxes)*

- Gerontology ☐
- Palliative Care ☐
- Psychogeriatrics ☐
- Other ☐
- None of the above ☐
- Don't Know ☐

**From 1 July 2015, the Commonwealth Home Support Programme brought together Commonwealth HACC Programme, Planned Respite from National Respite for Carers Programme (NRCP), Day Therapy Centres Programme (DTC), Assistance with Care and Housing for the Aged Programme (ACHA).*

A6.3 What are the three most important methods used to monitor the quality of aged care services/supports provided by this outlet?
(Cross three boxes only)

- Managers or supervisors monitor quality ☐ 1
- Inspectors from another part of the organisation monitor quality ☐ 2
- Individual employees monitor quality ☐ 3
- Keep records of feedback or complaints from service users ☐ 4
- Surveys of service users ☐ 5
- External auditing (beyond accreditation, e.g. third party inspectors) ☐ 6
- Accreditation ☐ 7
- Other *(please specify)* ☐ 8

A7 Do employees receive?
(Cross all relevant boxes)

- Paid time for travel between care/support appointments? ☐
- Paid time for travel between home and care/support appointments? ☐
- Petrol/depreciation allowance for transport costs related to care/support appointments? ☐
- None of these ☐

A8 How many people does your service outlet employ in total, including all full-time, part-time and casual employees, excluding agency staff?
(Count all employees for whom PAYG tax is deducted by your organisation, including those on paid leave for the last fortnight pay period.)

☐☐☐☐ **PAYG Employees**

A9 How many of the employees in each classification worked the following hours in the last fortnight pay period in November 2015?
(Count all employees for whom PAYG tax is deducted by your organisation, including those on paid leave. Be sure to write '0' if no employees in a particular classification. Where an employee works in more than one classification, provide the number of hours for each classification. For example, if an employee works 40 hours per fortnight as a care manager and 20 hours per fortnight as a registered nurse, mark 1 in the care manager 31-69 hours category and 1 in the registered nurse 1-30 hours category).

Employee Classification (Definitions on Page 2)	Hours worked in a fortnight 1 – 30	31 – 69	70 – 80	81+	On leave
Management					
Administration					
Pastoral/spiritual care worker					
Direct care staff					
• Care manager/care co-ordinator					
• Nurse practitioner					
• Registered nurse					
• Enrolled nurse					
• Community care worker – personal, domestic or social care					
• Allied health professional					
• Allied health assistant					
• Ancillary care worker (e.g home repairs, modification, maintenance)					

A10.1 **Does this service outlet provide residential as well as home care/home support aged care services?**

Yes ☐ 1 No ☐ 2 → **If 'no', go to A10.3**

A10.2 **How many of your direct care PAYG employees in each classification work in your home care/ home support and/or residential services?** *(Please be sure to write '0' if no employees in a particular classification work in both services)*

Employee Classification	Number of direct care employees working in.... Residential ONLY	Home care/ home support ONLY	BOTH residential and home care/ home support
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Personal care attendant/Community care worker			
Allied health professional			
Allied health assistant			

A10.3 **If your service outlet does not employ PAYG paid staff, please indicate here and go to Section D, page 12.**

No PAYG paid staff ☐ 1

Section B: About the Direct Care Workforce

The following questions ask about the direct care workforce currently employed in your service outlet. Please note:

- *Definitions for employee classifications of direct care staff are on the inside cover, page 2.*
- *Only employees for whom PAYG tax is deducted by your organisation should be included. Agency and other non-PAYG contract staff are covered in Section D.*
- *Include staff who were on paid leave during the designated period.*
- *Only employees providing home care/home support aged care, including staff working in BOTH home care /home support and residential aged care, should be included here. Information about employees who ONLY provide residential aged care will be in the Census of Residential Aged Care Facilities.*

Unless otherwise indicated, when completing Section B please provide information based on the last pay period (ie fortnight) in November 2015.

If you have ***no employees in a category*** *please* ***write '0'*** *in the appropriate space.*

It is important to be as ***accurate*** *as possible. Please refer to your records where necessary.*

B1.1 **How many people employed in each classification work in your outlet as permanent full-time, permanent part-time or casual/fixed term contract?** *(Include staff on paid leave)*

Employee Classification	Permanent full-time*	Permanent part-time*	Casual/ contract full-time*	Casual/ contract part-time*
Nurse practitioner				
Registered nurse				
Enrolled nurse				
Community care worker				
Allied health professional				
Allied health assistant				
Total				

**The ABS definition of full-time work is 35 hours or more per week.*

B1.2 **Please record the number of full-time equivalent (FTE) employees*, in each classification in your outlet for the last pay period in November 2015.** *(Include staff on paid leave)*

**To calculate the full time equivalent (FTE) employee number for an employee classification, divide the total number of hours worked per fortnight by workers of that classification by 70 (the standard used by the Australian Bureau of Statistics for full-time work is 35 hours per week). This takes into account both the number of employees and the fraction of full-time work status of each. For example, an employee working full-time will register as 1 FTE; while an employee working a fractional load of half-time will register as 0.5 FTE. If an employee is on leave, count the number of hours they would usually have worked in the FTE calculation.*

Employee Classification	Total hours worked	Divide by 70 to calculate	Full-time equivalent employees (FTEs)*
Nurse practitioner		Divide by 70=	
Registered nurse		Divide by 70=	
Enrolled nurse		Divide by 70=	
Community care worker		Divide by 70=	
Allied health professional		Divide by 70=	
Allied health assistant		Divide by 70=	
Total			

We now ask for more detail about the employees listed in B1.1

Please ensure that:

- *You include all these employees in your answers.*
- *If you have no employees in a particular category, write '0' in your answer.*
- *The information is for the last pay period in November 2015 (unless stated otherwise in question).*

B2 **How many employees in each classification are female and how many are male?**

Employee Classification	Female	Male	Employee Classification	Female	Male
Nurse practitioner			Community care worker		
Registered nurse			Allied health professional		
Enrolled nurse			Allied health assistant		

B3 **How many of the employees in each classification fall into the following age categories?**

Employee Classification	Under 30 years	30 – 39 years	40 – 49 years	50 – 59 years	60+ years
Nurse practitioner					
Registered nurse					
Enrolled nurse					
Community care worker					
Allied health professional					
Allied health assistant					

B3a For this outlet, what was the direct care staff headcount?

Employee Classification	Care staff headcount for the last pay period in November 2014	Number of care staff who left in the 12 months to the last pay period in November 2015	Number of care staff hired in the 12 months to the last pay period in November 2015
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Community care worker			
Allied health professional			
Allied health assistant			

B4 How many employees in each classification identify as being of Aboriginal and/or Torres Strait Islander origin?

Employee Classification	Number of employees	Don't know	Employee Classification	Number of employees	Don't know
Nurse practitioner			Community care worker		
Registered nurse			Allied health professional		
Enrolled nurse			Allied health assistant		

B5 For each employee classification, how many are from culturally and linguistically diverse backgrounds*? *(not including those reported in B4)*

Employee Classification	Number of employees	Don't know	Employee Classification	Number of employees	Don't know
Nurse practitioner			Community care worker		
Registered nurse			Allied health professional		
Enrolled nurse			Allied health assistant		

**Individuals who identify as having a specific cultural or linguistic affiliation because of their place of birth, ancestry, ethnic origin, religion, preferred non-English main language or language(s) spoken at home, or because of their parents' identification on a similar basis.*

B6.1 For each employee classification, please indicate how many employees you have working under each form of employment contract.

Employee Classification	Award	Enterprise Agreement*	Common Law Contract	Individual Flexibility Agreement	Don't Know
Nurse practitioner					
Registered nurse					
Enrolled nurse					
Community care worker					
Allied health professional					
Allied health assistant					

** Enterprise Agreements include union agreements, non-union agreements and certified agreements.*

B6.2 **For each employment classification, please indicate all awards that apply to employees in your service outlet.** *(Note. all agreements will have a base condition award)*

Employee Classification	Aged Care Award 2010	Nurses Award 2010	SACH Award 2010	Other *(please specify relevant State Award)*	
Nurse practitioner	☐	☐	☐	☐	
Registered nurse	☐	☐	☐	☐	
Enrolled nurse	☐	☐	☐	☐	
Community care worker	☐	☐	☐	☐	
Allied health professional	☐	☐	☐	☐	
Allied health assistant	☐	☐	☐	☐	

B7.1 **For each employee classification, please indicate whether you had skill shortages during the last 12 months.** *(cross all relevant boxes)*

Employee Classification	Yes
Nurse practitioner	☐
Registered nurse	☐
Enrolled nurse	☐
Community care worker	☐
Allied health professional	☐
Allied health assistant	☐
No skill shortages	☐

If no skill shortages go to B8.1

B7.2 **Were these skill shortages due to any of the following?** *(cross all relevant boxes)*

- Specialist knowledge required ☐
- Geographical location of service ☐
- Wages or salary costs too high for business ☐
- Lack of availability of adequate training ☐
- Unsure of long-term demands for service ☐
- Recruitment too slow ☐
- Lack of suitable applicants (skills/ qualifications/experiences/values) ☐
- Other *(please specify)* ☐

If specialist knowledge go to B7.2a, otherwise go to B7.3

B7.2a **If specialist knowledge was required, was this ?** *(cross all relevant boxes)*

- ICT/IT ☐
- Dementia Care ☐
- Palliative Care ☐
- Clinical skills for high care ☐
- Medications ☐
- Other *(please specify)* ☐

B7.3 **How were these skill shortages addressed in the last 12 months?** *(cross all relevant boxes)*

- More use of external training of staff ☐
- More use of on-the-job training of staff ☐
- Existing workforce worked longer hours ☐
- Made greater use of agency staff ☐
- Sub-contracted or outsourced services to other businesses ☐
- Employed staff on short-term contract basis ☐
- Wages, salaries and/or conditions increased ☐
- Reduced outputs or production ☐
- Used student placements ☐
- Used volunteers ☐
- Other *(please specify)* ☐

B8.1 How many vacancies do you currently have in each classification?

Employee Classification	Total vacancies Full-time Equivalent*	How many POSITIONS are vacant? Full-time	Part-time
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Community care worker			
Allied health professional			
Allied health assistant			

**To calculate the full time equivalent (FTE) employee number for an employee classification, divide the total number of hours worked per fortnight by workers of that classification by 70 (the standard used by the Australian Bureau of Statistics for full-time work is 35 hours per week). This takes into account both the number of employees and the fraction of full-time work status of each. For example, an employee working full-time will register as 1 FTE; while an employee working a fractional load of half-time will register as 0.5 FTE.*

B8.2 Approximately how long did it take you to fill the MOST RECENT vacancy for employees in each classification?

Employee Classification	Weeks	Employee Classification	Weeks
Nurse practitioner		Community care worker	
Registered nurse		Allied health professional	
Enrolled nurse		Allied health assistant	

B8.3 What was the reason for the most recent vacancy for employees in each classification?
(cross all relevant boxes)

Reason	New position	Retirement	Injury/ illness	Resignation	End of contract	Involuntary separation	Other
Nurse practitioner							
Registered nurse							
Enrolled nurse							
Community care worker							
Allied health professional							
Allied health assistant							

B9 Are direct care workers required to do any of the following as part of their job?
(cross one box per row)

	Under normal circumstances	In exceptional circumstances	Never
Working longer than scheduled due to unanticipated needs of care recipients			
Variations in hours or location at short notice			
Working in very unsanitary conditions			
Working with aggressive service users (due to dementia etc)			
Working alone late at night (after 10 pm)			

B10.1 **In the last three months, how many instances of the following work-related injuries or illnesses were reported at your service outlet for direct care workers? Please check your records/incident reports.**
(If no work-related injuries or illnesses were reported, please write '0' and go to B11)

Reported Work-related Injury/Illness	Number	Reported Work-related Injury/Illness	Number
Fracture		Stress or other mental condition	
Chronic joint or muscle condition		Amputation	
Sprain/strain		Burns	
Cut/open wound		Other *(please specify)*	
Crushing injury/internal organ damage			
Superficial injury (minor injury)			

B10.2 **How many of these work-related injuries or illnesses reported at your service outlet were caused by:**

Cause of Reported Work-related Injury/Illness	Number	Cause of Reported Work-related Injury/Illness	Number
Lifting, pushing, pulling, bending		Fall	
Repetitive movement with low muscle loading		Exposure to mental stress	
Prolonged standing, working in cramped or unchanging positions		Long-term exposure to sound	
Vehicle accident		Contact with a chemical or substance	
Hitting, being hit or cut by person, object or vehicle		Fatigue	
		Other *(please specify)*	

B11 **How many of your PAYG direct care employees in each classification were on Workcover or other injury related leave or a graduated return to work program during the last three months?**

Employee Classification	Number of employees	Employee Classification	Number of employees
Nurse practitioner		Community care worker	
Registered nurse		Allied health professional	
Enrolled nurse		Allied health assistant	

Section C: Community Care Workers

We would like to know some further information about the community care workers (CCWs) employed in your aged care outlet. If no CCWs please go to Section D.

C1 **How many of your CCW employees have completed a Certificate III or Certificate IV in an area related to their direct care work?**

☐ **Completed** Certificate III (only) ☐ **Completed** Certificate IV

C2 **In the next 12 months, what areas of training will your CCWs most need/like to undertake:**
(cross all relevant boxes)

Dementia	☐	Allied health	☐
Mental health	☐	ICT/IT	☐
Management and leadership	☐	Other *(please specify)*	☐
Wound management	☐		
Palliative care	☐		

C3 **If you wished to employ additional CCWs, how would you be most likely to find them?** *(cross one box only)*

- Wait for walk-ins ☐ 1
- Word of mouth ☐ 2
- Place a newspaper job advertisement ☐ 3
- Place an internet job advertisement ☐ 4
- Place both newspaper and internet job advertisements ☐ 5
- Employ those already working through a job placement program ☐ 6
- Agency ☐ 7
- Other ☐ 8
- Don't know ☐ 9

C4.1 **Does your outlet employ CCWs from culturally and linguistically diverse backgrounds*?**

Yes ☐ 1 No ☐ 2 → **If 'no', go to D1**

**Individuals who identify as having a specific cultural or linguistic affiliation because of their place of birth, ancestry, ethnic origin, religion, preferred non-English main language or language(s) spoken at home, or because of their parents' identification on a similar basis.*

C4.2 **Please indicate the benefit which employing CCWs from culturally and linguistically diverse backgrounds has for your outlet** *(cross all relevant boxes)*

	Yes		Yes
Enhance cross-cultural understandings	☐	Link clients to ethnic communities	☐
Offer different cultural activities	☐	Link service to ethnic communities	☐
Language (other than English) skills	☐	Other *(please specify)*	☐
Don't know	☐		

C5.1 **What proportion of your current CCWs speak a language other than English as their first language?**

None ☐ 1 → **If 'none', go to D1** OR ☐☐☐ **Per cent (%)**

A number 1 to 100

C5.2 **What is the most common ethnic or cultural background of CCWs who speak a language other than English as their first language?** *(cross one box only)*

- African ☐ 1
- Chinese ☐ 2
- Filipino ☐ 3
- Greek ☐ 4
- Indian ☐ 5
- Italian ☐ 6
- Pacific Islands ☐ 7
- South-East Asian (other) ☐ 8
- Other *(please specify)* ☐ 9

C5.3 **Does lack of English language skills amongst your CCWs cause any difficulties in your outlet?**

Yes ☐ 1 No ☐ 2 → **If 'no', go to D1**

C5.4 **In which areas does lack of English language skills amongst your CCWs cause difficulties?** *(cross all relevant boxes)*

- Occupational Health and Safety ☐
- Communication with management and/or other staff ☐
- Communication with residents ☐
- Communication with residents' families ☐
- Other *(please specify)* ☐

Section D: Volunteers, Agency, Brokered, and Self-Employed Staff

We would now like to ask about the nursing or employment agency staff, brokered staff, self-employed staff and volunteers for whom you do not deduct PAYG tax, who worked in your service outlet during the last pay period in November 2015. If you did not have any of these staff types, please write '0' for each category.

D1 **How many people from nursing or employment agencies, brokered or self-employed staff worked at your aged care service outlet during the last pay period in November 2015?**

Employee Classification	Number of agency staff	Number of brokered staff	Number of self-employed staff
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Community care worker			
Allied health professional			
Allied health assistant			

Definitions:

Agency staff are contracted from a nursing or employment agency (i.e. labour hire agency). Your service outlet has responsibility for training and supervising these staff members.

Brokered staff are contracted from other care providers.

Self-employed staff are individuals who have their own ABN and operate as independent care workers. Your service outlet would broker directly with the individual to engage their services.

D2 **Why does this outlet choose to use agency, brokered, or self-employed staff?** *(cross all that apply)*

	Agency staff	Brokered staff	Self-employed staff
Matching staff to peaks in service user demand			
Short-term cover for staff absences			
Covering for maternity leave or annual leave			
Unable to fill vacancies			
Obtain specialist skills			
Freeze on permanent staff numbers			
Other *(please specify)*			

D3 **How many volunteers worked in your service outlet in the last two weeks?**

☐☐☐ **Volunteers** → **If '0', go to survey end**

If 'volunteers' at D3

D4 **What was the total amount of hours worked by all volunteers in the last two weeks?**

☐☐☐☐

If 'volunteers' at D3

D5 **If you have volunteers, what is the area or role that they undertake?**

Domestic activity assistance	☐ 1	Transport assistance	☐ 7
Respite care assistance	☐ 2	Shopping/appointment assistance	☐ 8
Social activity support assistance	☐ 3	Meal preparation/delivery assistance	☐ 9
Planned group activity assistance	☐ 4	Companionship/befriending	☐ 10
Home maintenance assistance	☐ 5	Other *(please specify)*	☐ 11
Gardening assistance	☐ 6

THANK YOU FOR YOUR HELP

For future surveys, please tell us approximately how long it took to complete this form. ☐☐☐ **Minutes**

Flinders UNIVERSITY

Australian Government
Department of Health

MAILING DATE
Service Name: Service name, Service ID
Provider Name: Provider name
Form Type: Residential Census
Unique Service Identification: XX-XXXXXX-XX

Invitation to participate in the 2016 National Aged Care Workforce Census

The Australian Government Department of Health has commissioned the National Institute of Labour Studies to conduct the fourth National Aged Care Workforce Census and Survey. More details can be found at Survey.ipsos.com.au/NACWCAS.

How to participate in the census

We are asking you to complete this census for the residential services provided by Provider name at this location only.

You can participate online via a secure website. Go to Survey.ipsos.com.au/RC2016 and enter your username and password:

Username: XXXXXX

Password: XXXXXX

You can also fill in this form and use one of the reply paid envelopes to return it.

Please call the free helpline 1800 071 735 if you need any help.

Ethics and Privacy

All responses to the census are confidential and identifying details will be removed prior to analysis. Your census will be combined with all other data and no individual site or person will be identified. At the end of the project, the Australian Government Department of Health will receive a list of services that participated in the census. This list will not be associated with any information you provide.

The research has been approved by the Australian Bureau of Statistics (Statistical Clearing House approval number 02468 - 01) and the Flinders University Social and Behavioural Research Ethics Committee (Project Number 7069). For more information regarding ethical approval of the project the Executive Officer of the Committee can be contacted by telephone on (08) 8201 3116, by fax on (08) 8201 2035 or by email human.researchethics@flinders.edu.au. It also complies with the National Privacy Guidelines for all data collection processes undertaken for survey research.

The National Aged Care Workforce Census and Survey closes on **23 September 2016**.

Thank you for your assistance.

Yours sincerely

Professor Kostas Mavromaras
Director, National Institute of Labour Studies
Flinders University, SA

This survey has been approved by the ABS Statistical Clearing House: Approval Number 02468 - 01

APPROVED

Additional information about the 2016 National Aged Care Workforce Census

When completing this form, please ensure that you...

1. Make sure you answer every question (unless otherwise stated)
2. Cross the appropriate box/boxes like this ☒
3. Enter numbers into individual boxes like this 1 2 3
4. If the answer to a question is nil, please write '0' and go to the next question.
5. Please write clearly using a BLACK or BLUE pen.
6. Sometimes you will find the box you have marked has an instruction to go to another question.
   By following the instructions carefully you will be able to skip questions that do not apply to you
7. Don't worry if you make a mistake or wish to change a response; simply colour in the wrong box like this ■ and mark the correct box like this ☒
8. Call the toll-free helpline on 1800 071 735 if you have any queries, or visit Survey.ipsos.com.au/NACWCAS

It is important that you are as accurate as possible. Please refer to payroll or staffing records where necessary. **The pay period for the census is the last pay period (i.e. fortnight) in November 2015.**

Key Definitions

Throughout this questionnaire, the following definitions are used when referring to employee classifications. Please refer to these as you answer the questions.

Allied health assistants *support allied health professionals in providing personal, social and emotional care to residents. Job titles include recreational officer, occupational therapy assistant, social work assistant and others.*

Allied health professionals *include professional accredited allied health workers such as physiotherapists, diversional therapists, speech therapists, social workers and similar. Exclude employees solely engaged in a coordinator/management role.*

Ancillary staff – other *have responsibility for ensuring that the buildings, property and gardens are maintained.*

Ancillary staff – resident wellbeing *have responsibility for cleaning residents rooms, providing meals and other services that support the personal care provided by direct care staff.*

Care manager *is responsible for all direct care staff; other job titles may be Director of Nursing, Care Co-ordinator and others.*

Direct care staff *provide personal care directly to residents as a core component of their work.*

Enrolled nurses *provide nursing care, working under the direction and (direct or indirect) supervision of the registered nurse.*

Nurse practitioner *is a registered nurse educated and authorised to function autonomously and collaboratively in an advanced and extended clinical role.*

Pastoral/spiritual care workers *include professional pastoral/spiritual care workers (e.g. chaplains).*

Personal care attendants *provide personal care to residents as a core part of their jobs (usually under direction of nursing staff). Job titles of personal care attendants vary widely. They include assistant or aide, personal care worker, assistant-in-nursing and others.*

Registered nurses *provide and supervise nursing care.*

Section A: About the Facility

The following questions ask for information about your aged care facility. This information will help us to understand how the aged care workforce is distributed across different types of homes.

A1 **Is your facility part of a larger organisation eg owned by a company or not-for-profit agency that owns other aged care facilities or services?**

Yes ☐ 1 No ☐ 2

A2.1 **Does your facility aim to cater for specific cultural or ethnic groups?**

Yes ☐ 1 No ☐ 2 → **If 'no', go to A3.1**

A2.2 **For which cultural or ethnic group/s does your facility cater?** *(cross all relevant boxes)*

- Aboriginal and/or Torres Strait Islander ☐
- Chinese ☐
- Dutch ☐
- Gay, lesbian, bisexual, transgender, intersex ☐
- Greek ☐
- Italian ☐
- Polish ☐
- German ☐
- Indian ☐
- Other *(please specify)* ☐

A2.3 **Does your facility employ staff with particular language or other cultural knowledge in order to cater to the group/s listed in A2.2?**

Yes ☐ 1 No ☐ 2

A3.1 **What qualifications does the Care Manager/ Care Coordinator in your facility have?** *(cross one box only)*

- Nursing qualifications ☐ 1
- Managerial qualifications ☐ 2
- Nursing and managerial qualifications ☐ 3
- None of the above ☐ 4
- Don't know ☐ 5

A3.2 **What specialised qualifications in ageing does the Care Manager/Care Coordinator in your facility have?** *(cross all relevant boxes)*

- Gerontology ☐
- Palliative Care ☐
- Psychogeriatrics ☐
- Other ☐
- None of the above ☐
- Don't know ☐

A3.3 **What are the three most important methods used to monitor the quality of aged care services/supports provided by this facility?** *(cross three boxes only)*

- Managers or supervisors monitor quality ☐ 1
- Inspectors from another part of the organisation monitor quality ☐ 2
- Individual employees monitor quality ☐ 3
- Keep records of feedback or complaints from service users ☐ 4
- Surveys of service users ☐ 5
- External auditing (beyond accreditation, e.g. third party inspectors) ☐ 6
- Accreditation ☐ 7
- Other *(please specify)* ☐ 8

A5 **How many people does your facility employ in total, including all full-time, part-time and casual employees, excluding agency staff?** *(Count all employees for whom PAYG tax is deducted by your facility, including staff on paid leave, for the last fortnight pay period.)*

☐☐☐☐ **PAYG Employees**

A6 **How many of the employees in each classification worked the following hours in the last fortnight pay period in November 2015?** *(Count all employees for whom PAYG tax is deducted by your organisation, including those on paid leave. Be sure to write '0' if no employees in a particular classification. Where an employee works in more than one classification, provide the number of hours for each classification. For example, if an employee works 40 hours per fortnight as a care manager and 20 hours per fortnight as a registered nurse, mark 1 in the care manager 31-69 hours category and 1 in the registered nurse 1-30 hours category).*

Employee Classification (definitions on page 2)	Hours worked in a fortnight 1 – 30	31 – 69	70 – 80	81+	On leave
Management					
Administration					
Pastoral/spiritual care work					
Direct care staff					
• Care manager/care co-ordinator					
• Nurse practitioner					
• Registered nurse					
• Enrolled nurse					
• Personal care attendant					
• Allied health professionals					
• Allied health assistants					
Ancillary staff					
• Resident wellbeing (e.g. cleaning, kitchen)					
• Other ancillary staff (e.g. gardening, maintenance)					

A7.1 **Does this facility provide home care/home support aged care services as well as residential services?**

Yes ☐ 1 No ☐ 2 → **If 'no', go to A7.3**

A7.2 **How many of your direct care PAYG employees in each classification work in your residential and home care/home support services?** *(Please include staff on paid leave. Be sure to write '0' if no employees in a particular classification work in both services)*

Employee Classification	Number of direct care employees working in…. Residential ONLY	Home care/ home support ONLY	BOTH Residential and home care/home support
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Personal care attendant/Community care worker			
Allied health professional			
Allied health assistant			

A7.3 **If your facility does not employ PAYG paid direct care staff, please indicate here and go to Section D (page 11).**

No PAYG paid staff ☐ 1

Section B: About the Direct Care Workforce

The following questions ask about the direct care workforce currently employed in your facility. Please note:

- *Definitions for employee classifications of direct care staff are on the inside cover, page 2.*
- *Only employees for whom PAYG tax is deducted by your organisation should be included. Agency and other non-PAYG contract staff are covered in Section D.*
- *Include staff who were on paid leave during the designated period.*
- *Only employees providing residential aged care, including staff working in BOTH residential and home care/home support aged care, should be included. Information about employees who ONLY provide home care/home support based aged care will be captured in the Census of Home Care and Home Support Aged Care Outlets.*

Unless otherwise indicated, when completing Section B please give information for the last pay period (i.e. fortnight) in November 2015.

*If you have **no employees in a category** please **write '0'** in the appropriate space.*

It is important to be as accurate as possible. Please refer to your records where necessary.

B1.1 How many people employed in each classification work in your facility as permanent full-time, permanent part-time or casual/fixed term contract*?
(Include staff on paid leave)

Employee Classification	Permanent full-time*	Permanent part-time*	Casual/ contract full-time*	Casual/fixed term contract part-time*
Nurse practitioner				
Registered nurse				
Enrolled nurse				
Personal care attendant				
Allied health professional				
Allied health assistant				
Total				

**The ABS definition of full-time work is 35 hours or more per week.*

B1.2 Please record the number of full-time equivalent (FTE) employees*, in each classification in your facility for the last pay period in November 2015. *(Include staff on paid leave)*

**To calculate the full time equivalent (FTE) employee number for an employee classification, divide the total number of hours worked per fortnight by workers of that classification by 70 (the standard used by the Australian Bureau of Statistics for full-time work is 35 hours per week). This takes into account both the number of employees and the fraction of full-time work status of each. For example, an employee working full-time will register as 1 FTE; while an employee working a fractional load of half-time will register as 0.5 FTE. If an employee is on leave, count the number of hours they would usually have worked in the FTE calculation.*

Employee Classification	Total hours worked	Divide by 70 to calculate	Full-time equivalent employees (FTEs)*
Nurse practitioner		Divide by 70=	
Registered nurse		Divide by 70=	
Enrolled nurse		Divide by 70=	
Personal care attendant		Divide by 70=	
Allied health professional		Divide by 70=	
Allied health assistant		Divide by 70=	
Total			

We now ask for more detail about the employees listed in B1.1

Please ensure that:

- *You include all these employees in your answers.*
- *If you have no employees in a particular category, write '0' in your answer.*
- *The information is for the last pay period in November 2015 (unless stated otherwise in question).*

B2 How many employees in each classification are female and how many are male?

Employee Classification	Female	Male	Employee Classification	Female	Male
Nurse practitioner			Personal care attendant		
Registered nurse			Allied health professional		
Enrolled nurse			Allied health assistant		

B3 How many of the employees in each classification fall into the following age categories?

Employee Classification	Under 30 years	30 – 39 years	40 – 49 years	50 – 59 years	60+ years
Nurse practitioner					
Registered nurse					
Enrolled nurse					
Personal care attendant					
Allied health professional					
Allied health assistant					

B3a For this facility, what was the direct care staff headcount?

Employee Classification	Care staff headcount for the last pay period in November 2014	Number of care staff who left in the 12 months to the last pay period in November 2015	Number of care staff hired in the 12 months to the last pay period in November 2015
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Personal care attendant			
Allied health professional			
Allied health assistant			

B4 How many employees in each classification identify as being of Aboriginal and/or Torres Strait Islander origin?

Employee Classification	Number of employees	Don't know
Nurse practitioner		
Registered nurse		
Enrolled nurse		
Personal care attendant		
Allied health professional		
Allied health assistant		

B5 For each employee classification, how many are from culturally and linguistically diverse backgrounds* *(not including those reported in B4)*?

Employee Classification	Number of employees	Don't know
Nurse practitioner		
Registered nurse		
Enrolled nurse		
Personal care attendant		
Allied health professional		
Allied health assistant		

**Individuals who identify as having a specific cultural or linguistic affiliation because of their place of birth, ancestry, ethnic origin, religion, preferred non-English main language or language(s) spoken at home, or because of their parents' identification on a similar basis.*

B6.1 For each employee classification, please indicate how many employees you have working under each form of employment contract.

Employee Classification	Award	Enterprise Agreement*	Common Law Contract	Individual Flexibility Agreement	Don't know
Nurse practitioner					
Registered nurse					
Enrolled nurse					
Personal care attendant					
Allied health professional					
Allied health assistant					

** Enterprise Agreements include union agreements, non-union agreements and certified agreements.*

B6.2 For each employment classification, please indicate all awards that apply to employees in your facility. *(Note: all agreements will have a base condition award)*

Employee Classification	Aged Care Award 2010	Nurses Award 2010	SACH Award 2010	Other *(please specify relevant State Award)*
Nurse practitioner				
Registered nurse				
Enrolled nurse				
Personal care attendant				
Allied health professional				
Allied health assistant				

B7.1 For each employee classification, please indicate whether you had skill shortages during the last 12 months.

Employee Classification	Yes
Nurse practitioner	
Registered nurse	
Enrolled nurse	
Personal care attendant	
Allied health professional	
Allied health assistant	
No skill shortages	

If no skill shortages go to B8.1

B7.2 Were these skill shortages due to any of the following? *(cross all relevant boxes)*

- Specialist knowledge required
- Geographical location of facility
- Wages or salary costs too high for business
- Lack of availability of adequate training
- Unsure of long-term demands for service
- Recruitment too slow
- Lack of suitable applicants (skills/qualifications/experience/values)
- Other *(please specify)*

If specialist knowledge go to B7.2a; otherwise go to B7.3

B7.2a If specialist knowledge was required, was this? *(cross all relevant boxes)*

- ICT/IT
- Dementia care
- Palliative care
- Clinical skills for high care
- Medications
- Other *(please specify)*

B7.3 How were these skill shortages addressed in the last 12 months? *(cross all relevant boxes)*

- More use of external training of staff
- More use of on-the-job training of staff
- Existing workforce worked longer hours
- Made greater use of agency staff
- Sub-contracted or outsourced services to other businesses
- Employed staff on short-term contract basis
- Wages, salaries and/or conditions increased
- Reduced outputs or production
- Used student placements
- Used volunteers
- Other *(please specify)*

B8.1 How many vacancies do you currently have in each classification?

Employee Classification	Total vacancies Full-time Equivalent/FTE*	How many POSITIONS are vacant? Full-time	Part-time
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Personal care attendant			
Allied health professional			
Allied health assistant			

**To calculate the full time equivalent (FTE) employee number for an employee classification, divide the total number of hours worked per fortnight by workers of that classification by 70 (the standard used by the Australian Bureau of Statistics for full-time work is 35 hours per week). This takes into account both the number of employees and the fraction of full-time work status of each. For example, an employee working full-time will register as 1 FTE, while an employee working a fractional load of half-time will register as 0.5 FTE.*

B8.2 Approximately how long did it take you to fill the MOST RECENT vacancy for employees in each classification?

Employee Classification	Weeks	Employee Classification	Weeks
Nurse practitioner		Personal care attendant	
Registered nurse		Allied health professional	
Enrolled nurse		Allied health assistant	

B8.3 What was the reason for the most recent vacancy for employees in each classification?
(cross all relevant boxes)

Reason	New position	Retirement	Injury/ illness	Resignation	End of contract	Involuntary separation	Other
Nurse practitioner	☐	☐	☐	☐	☐	☐	☐
Registered nurse	☐	☐	☐	☐	☐	☐	☐
Enrolled nurse	☐	☐	☐	☐	☐	☐	☐
Personal care attendant	☐	☐	☐	☐	☐	☐	☐
Allied health professional	☐	☐	☐	☐	☐	☐	☐
Allied health assistant	☐	☐	☐	☐	☐	☐	☐

B9 Are direct care workers required to do any of the following as part of their job?
(cross one box per row)

	Under normal circumstances	In exceptional circumstances	Never
Working longer than scheduled due to unanticipated needs of residents	☐	☐	☐
Variations in hours or location at short notice	☐	☐	☐
Working in very unsanitary conditions	☐	☐	☐
Working with aggressive service users (due to dementia etc)	☐	☐	☐
Working alone late at night (after 10 pm)	☐	☐	☐

B10.1 **In the last three months, how many instances of the following work-related injuries or illnesses were reported at your facility? Please check your records/incident reports.** *(If no work-related injuries or illnesses were reported, please write '0' and go to B11)*

Reported Work-related Injury/Illness	Number
Fracture	
Chronic joint or muscle condition	
Sprain/strain	
Cut/open wound	
Crushing injury/internal organ damage	
Superficial injury (minor injury)	
Stress or other mental condition	
Amputation	
Burns	
Other *(please specify)*	

B10.2 **How many of these work-related injuries or illnesses reported at your facility were caused by:**

Cause of Work-related Injury/Illness	Number
Lifting, pushing, pulling, bending	
Repetitive movement with low muscle loading	
Prolonged standing, working in cramped or unchanging positions	
Vehicle accident	
Hitting, being hit or cut by person, object or vehicle	
Fall	
Exposure to mental stress	
Long-term exposure to sound	
Contact with a chemical or substance	
Fatigue	
Other *(please specify)*	

B11 **How many of your PAYG employees in each classification were on Workcover or other injury related leave or a graduated return to work program during the last three months?**

Employee Classification	Number of employees
Nurse practitioner	
Registered nurse	
Enrolled nurse	
Personal care attendant	
Allied health professional	
Allied health assistant	

Section C: Personal Care Attendants

We would like to know some further information about the personal care attendants (PCAs) employed in your aged care facility. If there are no PCAs please go to Section D.

C1 **How many of your PCA employees have completed a Certificate III or Certificate IV in an area related to their direct care work?**

☐ **Completed** Certificate III (only) ☐ **Completed** Certificate IV

C2 **In the next 12 months, what areas of training will your PCAs most need/like to undertake:** *(cross all relevant boxes)*

Dementia	☐	Allied health	☐
Mental health	☐	ICT/IT	☐
Management and leadership	☐	Other *(please specify)*	☐
Wound management	☐		
Palliative care	☐		

C3 **If you wished to employ additional PCAs, how would you be most likely to find them?** *(cross one box only)*

Wait for walk-ins	☐ 1	Employ those already working through a job placement program	☐ 6
Word of mouth	☐ 2	Agency	☐ 7
Place a newspaper job advertisement	☐ 3	Other	☐ 8
Place an internet job advertisement	☐ 4	Don't know	☐ 9
Place both newspaper and internet job advertisements	☐ 5		

C4.1 **Does your facility employ PCAs from culturally and linguistically diverse backgrounds*?**

Yes ☐ 1 No ☐ 2 → **If 'no', go to D1**

**Individuals who identify as having a specific cultural or linguistic affiliation because of their place of birth, ancestry, ethnic origin, religion, preferred non-English main language or language(s) spoken at home, or because of their parents' identification on a similar basis.*

C4.2 **Please indicate the benefits which employing PCAs from culturally and linguistically diverse backgrounds has for your facility:** *(cross all relevant boxes)*

	Yes		Yes
Enhance cross-cultural understandings	☐	Link facility to ethnic communities	☐
Offer different cultural activities	☐	Don't know	☐
Language (other than English) skills	☐	Other *(please specify)*	☐
Link clients to ethnic communities	☐		

C5.1 **What proportion of your current PCAs speak a language other than English as their first language?**

None ☐ 1 → **If 'none', go to D1** OR ☐☐☐ **Percent (%)**

A number 1 to 100

C5.2 **What is the most common ethnic or cultural background of PCAs who speak a language other than English as their first language?** *(cross one box only)*

African	1	Italian	6
Chinese	2	Pacific Islands	7
Filipino	3	South-East Asian (other)	8
Greek	4	Other *(please specify)*	9
Indian	5		

C5.3 **Does lack of English language skills amongst your PCAs cause any difficulties in your facility?**

Yes 1 No 2 → **If 'no', go to D1**

C5.4 **In which areas does lack of English language skills amongst your PCAs cause difficulties?** *(cross all relevant boxes)*

Occupational Health and Safety		Communication with residents' families	
Communication with management and/ or other staff		Other *(please specify)*	
Communication with residents			

Section D: Volunteers, Agency, Brokered, and Self-Employed Staff

We would now like to ask about the nursing or employment agency staff, brokered staff, self-employed staff and volunteers, for whom you do not deduct PAYG tax who worked in your facility during the last pay period in November 2015 (fortnight). If you did not have any of these staff in your facility, please write '0' for each category.

D1 **How many people from nursing or employment agencies, brokered or self-employed staff worked in your aged care facility during the last pay period in November 2015?**

Employee Classification	Number of agency staff	Number of brokered staff	Number of self-employed staff
Nurse practitioner			
Registered nurse			
Enrolled nurse			
Personal care attendant			
Allied health professional			
Allied health assistant			

Definitions:
Agency staff are contracted from a nursing or employment agency (i.e. labour hire agency). Your facility has responsibility for training and supervising these staff members.
Brokered staff are contracted from other care providers.
Self-employed staff are individuals who have their own ABN and operate as independent care workers. Your facility would broker directly with the individual to engage their services.

D2 Why does this facility choose to use agency, brokered, or self-employed staff?
(cross all that apply)

	Agency staff	Brokered staff	Self-employed staff
Matching staff to peaks in service user demand	☐	☐	☐
Short-term cover for staff absences	☐	☐	☐
Covering for maternity leave or annual leave	☐	☐	☐
Unable to fill vacancies	☐	☐	☐
Obtain specialist skills	☐	☐	☐
Freeze on permanent staff numbers	☐	☐	☐
Other *(please specify)*			

D3 How many volunteers worked in your facility in the last two weeks?

☐☐☐ **Volunteers** → **If '0', go to survey end**

If 'volunteers' at D3

D4 What was the total amount of hours worked by all volunteers in the last two weeks?

☐☐☐☐ **Volunteer Hours**

If 'volunteers' at D3

D5 If you have volunteers, what is the area or role that they undertake?
(cross all relevant boxes)

Domestic activity assistance	☐	Transport assistance	☐
Respite care assistance	☐	Shopping/appointment assistance	☐
Social activity support assistance	☐	Meal preparation/delivery assistance	☐
Planned group activity assistance	☐	Companionship/befriending	☐
Home maintenance assistance	☐	Other *(please specify)*	☐
Gardening assistance	☐		

THANK YOU FOR YOUR HELP

FOR FUTURE SURVEYS, PLEASE TELL US APPROXIMATELY HOW LONG IT TOOK TO COMPLETE THIS FORM. ☐☐☐ **Minutes**

Department of Health

MAILING DATE

Form Type: Home Care and Home Support Workforce Survey

Unique Service Identification: XX-XXXXXX-XX

Invitation to participate in the 2016 National Aged Care Workforce Survey

The Australian Government Department of Health has commissioned the National Institute of Labour Studies to conduct the fourth National Aged Care Workforce Census and Survey. More details can be found at Survey.ipsos.com.au/NACWCAS.

Workers in aged-care services across Australia are being approached to take part in this survey.

In order to provide an accurate picture of the aged care workforce it is important to include information from workers such as yourself. We are interested in your experiences of working in aged care; your characteristics (such as age and gender etc.), the conditions under which you work, and how you feel about what you do.

How to participate in the survey

We are asking you to complete this survey as an employee of the home care and home support services provided at this location. To take part online go to the secure website Survey.ipsos.com.au/HW2016 and enter your username and password:

Username: XXXXXX

Password: XXXXXX

You can also fill in this form instead and use the reply paid envelope to return it.

If you have any queries regarding the survey, please contact the free helpline on 1800 071 735.

Ethics and Privacy

All responses to the survey are confidential and identifying details will be removed prior to analysis. The information from your survey will be combined with all other data and no individual site or person will be identified.

The research has been approved by the Australian Bureau of Statistics (Statistical Clearing House approval number 02468 - 01) and the Flinders University Social and Behavioural Research Ethics Committee (Project Number 7069). For more information regarding ethical approval of the project the Executive Officer of the Committee can be contacted by telephone on (08) 8201 3116, by fax on (08) 8201 2035 or by email human.researchethics@flinders.edu.au. It also complies with the National Privacy Guidelines for all data collection processes undertaken for survey research.

The National Aged Care Workforce Census and Survey closes on **23 September 2016**.

Thank you for your assistance.

Yours sincerely

Professor Kostas Mavromaras

Director, National Institute of Labour Studies

Flinders University, SA

This survey has been approved by the ABS Statistical Clearing House: Approval Number 02468 - 01

APPROVED

Additional information about the 2016 National Aged Care Workforce Survey

When completing this form, please ensure that you...

1. Make sure you answer every question (unless otherwise stated)
2. Cross the appropriate box/boxes like this [X]
3. Enter numbers into individual boxes like this [1] [2] [3]
4. If the answer to a question is nil, please write '0' and go to the next question
5. Please write clearly using a BLACK or BLUE pen
6. Sometimes you will find the box you have marked has an instruction to go to another question. By following the instructions carefully you will be able to skip questions that do not apply to you.
7. Don't worry if you make a mistake or wish to change a response, simply colour in the wrong box like this [■] and mark the correct box like this [X]
8. Call the toll-free helpline on 1800 071 735 if you have any queries
9. More detailed information about the National Aged Care Workforce Census and Survey can be found at the following website: Survey.ipsos.com.au/NACWCAS

It is important that you are as accurate as possible.

Section A: About Your Work

Please answer the questions in this section by thinking about the direct care job you do for this aged care service outlet, unless the question refers specifically to another job you may have. Please remember that this questionnaire is completely confidential. Only the independent survey company will ever see your response. Your answers will be added to those of many other people who work in aged care, to give an overall picture.

A1.1 What is your main job?

- Nurse practitioner ☐ 1
- Registered nurse ☐ 2
- Enrolled nurse ☐ 3
- Physiotherapist ☐ 4
- Occupational therapist ☐ 5
- Social worker ☐ 6
- Speech therapist ☐ 7
- Diversional therapist ☐ 8
- *Community care worker ☐ 9
- *Allied health assistant ☐ 10

If 9 'community care worker' or 10 'allied health assistant', go to A1.2. Otherwise go to A2

- Other *(please specify)* ☐ 11

Definitions:

Community care worker: provides personal, domestic, social and other home care to care recipients as a core part of their job. Job titles of community care workers vary widely.

Allied health assistant: supports allied health professionals in providing personal, social and emotional care to care recipients. Job titles include recreational officer, occupational therapy assistant, social work assistant and others.

A1.2 If you are a community care worker or allied health assistant, what is your main role?

- Personal care ☐ 1
- Home care/domestic assistance ☐ 2
- Respite care ☐ 3
- Planned activity group assistant ☐ 4
- Home maintenance/modification ☐ 5
- Gardening ☐ 6
- Transport ☐ 7
- Shopping/appointments ☐ 8
- Meal preparation/delivery ☐ 9
- Therapeutic support assistance ☐ 10
- Social activity support assistance ☐ 11
- Other *(please specify)* ☐ 12

A2 What proportion (percent) of the care recipients you work with are:

☐☐☐ **% Aged***

☐☐☐ **% Younger people with a disability**

☐☐☐ **% Other**

Definition:

Aged clients are non-Indigenous people aged 65 years or over and Indigenous Australians aged 50 years and older.

A3 Does your role involve managing or supervising direct care staff?

- Yes, I am a care manager/co-ordinator* ☐ 1
- Yes, I am a care leader* ☐ 2
- Yes, but neither of the above ☐ 3
- No ☐ 4
- Don't know ☐ 5

Definitions:

A care manager or care co-ordinator has responsibility for all direct care staff; other job titles may be Director of Nursing and others.

A care leader has responsibility for a team of direct care staff but will report to a care manager.

A4.1 Which of the following best describes your current work schedule?

- A regular daytime shift ☐ 1
- A regular evening shift ☐ 2
- A regular night shift ☐ 3
- A rotating shift (changes from days to evening to nights) ☐ 4
- Split shift (two distinct periods each day) ☐ 5
- On call ☐ 6
- Irregular schedule ☐ 7
- Other ☐ 8

A4.2 **Would you prefer to maintain your current work schedule or change it?**

- Prefer to maintain current schedule — If 'maintain', go to A5.1 → ☐ 1
- Change to a different schedule ☐ 2

A4.3 **Which describes the work schedule you would *prefer*?**

- A regular daytime shift ☐ 1
- A regular evening shift ☐ 2
- A regular night shift ☐ 3
- A rotating shift (changes from days to evening to nights) ☐ 4
- Split shift (two distinct periods each day) ☐ 5
- On call ☐ 6
- Irregular schedule ☐ 7
- Other ☐ 8

A5.1 **How many hours on average do you *usually* work each week in this job** *(include all paid and unpaid hours)*?

☐☐ **Hours per week**

A5.2 **How many hours would you *like* to work in this job?**

☐☐ **Hours per week**

A6 **How many of the hours you usually work each week are paid and unpaid?** *(If you do not work any unpaid hours write '0' in the corresponding box)*

☐☐ **Paid hours**

☐☐ **Unpaid hours**

A7 **What was the minimum number of hours in a day that you were required to work last week?** *(ie the minimum number of hours that you worked before your roster/shift ended)*

☐☐ **Hours**

A8 **Thinking about a typical shift, how much of your shift would you spend actively caring for recipients of the aged care service** *(as opposed, for example, to doing paperwork, attending meetings, or in discussions with other staff)*?

- Less than a third ☐ 1
- Between one third and two thirds ☐ 2
- More than two thirds ☐ 3

A9 **Which best describes your form of employment?**

- Casual ☐ 1
- Permanent (full or part-time) ☐ 2
- Fixed term contract ☐ 3

A10 **Are you entitled to paid sick leave?**

- Yes ☐ 1
- No ☐ 2
- Don't know ☐ 3

A11.1 **For this job, what was the total amount of your most recent pay before tax or anything else was taken out?** *(Amount to the nearest dollar)*

$ ☐,☐☐☐.~~0~~ 0

A11.2 **For what period does that cover?**

- Week ☐ 1
- Fortnight ☐ 2
- Month ☐ 3

A12 **How long have you worked for this home care / home support aged care service?**

☐☐ **Years** ☐☐ **Months**

A13 **How old were you when you first began working in aged care?**

☐☐ **Years**

A14 **Excluding any breaks from working in aged care, for how many years have you actually worked in aged care?**

☐☐ **Years**

A15 **Before you first obtained this job, had you done any work for this provider?**

- No 1
- Yes, paid work 2
- Yes, unpaid work/volunteer 3

A16.1 **When you approached this aged care provider for your job, did you know there was a job available?**

- Yes 1
- No 2 — If 'no', go to A17.1 →
- Don't know 3

A16.2 **How did you find out your job was available?** *(cross one box only)*

- Job network employment agency 1
- Other employment agency 2
- Career service at a tertiary educational institution 3
- School programs 4
- Newspaper advertisements 5
- Internet sites 6
- Centrelink job search services/ touchscreens 7
- Company or professional contacts 8
- Workplace noticeboards 9
- Word of mouth 10
- Other *(please specify)* 11

A17.1 **What was your last paid job before you FIRST worked in aged care?**

- No previous paid employment 1 — If 'no', go to A18 →
- Nurse, acute care 2
- Nurse, community care 3
- Other healthcare 4
- Carer in other setting 5
- Disability care 6
- Salesperson 7
- Clerical worker 8
- Hospitality worker (waitress, etc.) 9
- Cleaner 10
- Professional (other than nurse) 11
- Manager 12
- Other paid employment 13

A17.2 **Why did you leave that job?** *(cross one box only)*

- Family reasons 1
- Personal reasons (including health) 2
- Did not like job 3
- Contract ended 4
- Redundancy 5
- Career change 6
- Other 7

A18 **Had you worked in aged care before you began your CURRENT job?**

- Yes, paid 1
- Yes, unpaid/voluntary 2
- No 3 — If 'no', go to A20.1 →

A19 **What was the most important reason you left the last (paid) aged care job you held before your current one?** *(cross one box only)*

- To achieve higher pay 1
- To avoid workmates/colleagues I did not get along with or like 2
- To avoid managers/management I did not get along with or like 3
- The job was too stressful 4
- Not able to spend sufficient time with clients 5
- To get shifts or hours of work I wanted 6
- To be closer to home 7
- To fulfil care responsibilities (including having a baby) 8
- To find more challenging work 9
- To find easier work 10
- Made redundant/retrenched 11
- Moved house/location 12
- Other *(please specify)* 13

A20.1 **Did you have more than one job last week?**

- Yes 1
- No 2 — If 'no', go to A21 →

A20.2 **Where did you work in your other job(s) last week?** *(cross all relevant boxes)*

- A residential aged care facility
- Another home care / home support aged care service
- Disability care
- Not in aged or disability care, something else

A20.3 How many hours each week do you usually work in your other AGED CARE job(s)?

☐☐ Hours p.w. in other AGED CARE jobs

A20.4 How many hours each week do you usually work in your other job(s) OUTSIDE OF aged care?

☐☐ Hours p.w. in NON aged care jobs

A21 Are you currently actively seeking work outside of this aged care provider?

- Yes ☐ 1
- No ☐ 2

A22.1 Do you expect to be working for this aged care provider in 12 months time?

- Yes — If 'yes', go to A23 → ☐ 1
- No ☐ 2
- It depends ☐ 3
- Don't know ☐ 4

A22.2 Where do you see yourself working 12 months from now?

- Working in aged care, different provider ☐ 1
- Working in residential aged care ☐ 2
- Working in disability care ☐ 3
- Working, not in aged or disability care ☐ 4
- Not working for pay ☐ 5
- Don't know ☐ 6

A22.3 What is the main reason you may finish work for this aged care provider in the next 12 months? *(cross one box only)*

- Family reasons ☐ 1
- Financial reasons ☐ 2
- Employment conditions ☐ 3
- Nature of care work ☐ 4
- Stress/burnout ☐ 5
- Other health related reasons ☐ 6
- Returning to study ☐ 7
- Travel ☐ 8
- Retiring ☐ 9
- End of contract ☐ 10
- Retrenchment/redundancy ☐ 11
- Falling quality of care ☐ 12
- Other *(please specify)* ☐ 13

A23 Where do you see yourself working 3 years from now? *(cross one box only)*

- Working in aged care, this provider ☐ 1
- Working in aged care, different provider ☐ 2
- Working in residential aged care ☐ 3
- Working in disability care ☐ 4
- Working, not in aged care or disability care ☐ 5
- Not working for pay ☐ 6
- Don't know ☐ 7
- Other ☐ 8

A24 The following statements are about your current job for this home care / home support aged care provider.

(Please indicate, by putting a cross in one box on each line, how strongly you agree or disagree with each. The more you agree the higher the number you should choose. The more you disagree, the lower the number you should choose.)

	Strongly disagree						Strongly agree
a) I am able to spend enough time with each care recipient	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
b) I have the skills and abilities I need to do my job	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
c) I use many of my skills and abilities in my current job	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
d) I have a lot of freedom to decide how I do my work	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
e) I feel under pressure to work harder in my job	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
f) My job is more stressful than I had ever imagined	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
g) Considering all my efforts and achievements, I receive the respect and acknowledgement I deserve	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
h) Management and employees have good relations in my workplace	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7
i) Adequate training is available through my workplace	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7

A25 **In general, how would you describe relations at your workplace?**
(Using a scale from 1 to 7, where 1 is when workplace relations are very bad and 7 is when workplace relations are very good, please put a cross in one box on each line)

	Very bad						Very good
Between management and yourself	1	2	3	4	5	6	7
Between workmates/colleagues and yourself	1	2	3	4	5	6	7

A26 **The following questions ask about how satisfied or dissatisfied you are with different aspects of your job.**
(Using a scale from 1 to 10, where 1 is 'totally dissatisfied' and 10 is 'totally satisfied', please put a cross in one box on each line to indicate how satisfied or dissatisfied you are with the following aspects of your aged care job. The more satisfied you are, the higher the number you should pick. The less satisfied you are, the lower the number)

	Totally dissatisfied									Totally satisfied
a) Your total pay	1	2	3	4	5	6	7	8	9	10
b) Your job security	1	2	3	4	5	6	7	8	9	10
c) The work itself (what you do)	1	2	3	4	5	6	7	8	9	10
d) The hours you work	1	2	3	4	5	6	7	8	9	10
e) The opportunity to develop your abilities	1	2	3	4	5	6	7	8	9	10
f) The level of support from your team/ service provider	1	2	3	4	5	6	7	8	9	10
f2) The level of support from your supervisor	1	2	3	4	5	6	7	8	9	10
g) The flexibility available to balance work and non-work commitments	1	2	3	4	5	6	7	8	9	10
h) All things considered, how satisfied are you with your job	1	2	3	4	5	6	7	8	9	10

A27.1 **In relation to the balance between your work and the rest of your life, please put a cross in one box on each line on the scale from 1-6** *(where 1 = never, 5 = almost always and 6=don't know)*, **for how often your WORK:**

	Never	Rarely	Some-times	Often	Almost always	Don't know
a) Interferes with your responsibilities or activities outside of work.	1	2	3	4	5	6
b) Keeps you from spending the amount of time you would like with family or friends.	1	2	3	4	5	6
c) Interferes with your ability to develop or maintain connections and friendships in your community.	1	2	3	4	5	6

A27.2 Thinking about your life in general, how often do you feel rushed or pressed for time?

Never	Rarely	Some-times	Often	Almost always	Don't know
☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6

A27.3 Thinking about your life right now, how satisfied are you with the balance between your work and the rest of your life?

Not at all satisfied	Not very satisfied	Neither satisfied nor dissatisfied	Somewhat satisfied	Very satisfied	Don't know
☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6

A28.1 In the last 12 months have you sustained a work- related injury or illness at work (in this job)

- Yes ☐ 1
- No ☐ 2 — If "no", go to A28.6 →

A28.2 What kind(s) of work-related injury or illness did you sustain in the last 12 months?
(cross all relevant boxes)

- Fracture ☐
- Chronic joint or muscle condition ☐
- Sprain/strain ☐
- Cut/open wound ☐
- Crushing injury/internal organ damage ☐
- Superficial injury (minor injury) ☐
- Stress or other mental condition ☐
- Amputation ☐
- Burns ☐
- Other ☐

A28.3 Did the <u>most recent</u> work-related injury or illness sustained in the last 12 months result in you taking time off work?

- Yes ☐ 1
- No ☐ 2 — If "no", go to A28.5 →

A28.4 How long did you take off work?

- Part of 1 day ☐ 1
- 1 whole day ☐ 2
- 2-5 days ☐ 3
- 6-15 days ☐ 4
- More than 15 days ☐ 5

A28.5 What was the cause of your <u>most recent</u> work-related injury or illness you sustained in the last 12 months?
(cross one box only)

- Lifting, pushing, pulling, bending ☐ 1
- Repetitive movement with low muscle loading ☐ 2
- Prolonged standing, working in cramped or unchanging positions ☐ 3
- Vehicle accident ☐ 4
- Hitting, being hit or cut by person, object or vehicle ☐ 5
- Fall ☐ 6
- Exposure to mental stress ☐ 7
- Long term exposure to sound ☐ 8
- Contact with chemical or substance ☐ 9
- Fatigue ☐ 10
- Other *(please specify)* ☐ 11

A28.6 For your daily work, do you receive?
(cross all relevant boxes)

- Paid time for travel between care/support appointments? ☐
- Paid time for travel between home and care/support appointments? ☐
- Petrol/depreciation allowance for transport costs related to care/support appointments? ☐
- None of these ☐

Section B: About You

Please remember that this questionnaire is completely confidential. We do not even ask your name. No-one but the independent survey company will ever see your response. Your answers will be added to those of many other people who work in aged care, to give an overall picture.

B1 Are you male or female?

- Male ☐ 1
- Female ☐ 2

B2 How old were you on your last birthday?

☐☐ **Years**

B3.1 In what country were you born?

- Australia — If 'Australia', go to B4 → ☐ 1
- Other (please specify) ☐ 2

☐

B3.2 In what year did you first arrive in Australia to live for six months or more (even if you have spent time abroad since)?

☐☐☐☐

B3.3 Are you an Australian citizen?

- Yes — If 'yes', go to B3.5 → ☐ 1
- No ☐ 2

B3.4 Are you a permanent resident of Australia?

- Yes ☐ 1
- No ☐ 2

B3.5 Which of the following categories best describes your migration category when you or your family first arrived in Australia to stay? *(cross one box only)*

- Skilled migrant ☐ 1
- Business migrant ☐ 2
- Family migrant ☐ 3
- Refugee or special humanitarian migrant ☐ 4
- New Zealand citizen ☐ 5
- None of the above ☐ 6
- Don't know ☐ 7

B4 Are you of Aboriginal or Torres Strait Islander origin? *(cross one box only)*

- No ☐ 1
- Yes, Aboriginal ☐ 2
- Yes, Torres Strait Islander ☐ 3
- Yes, both ☐ 4

B5.1 Are you fluent in a language other than English?

- Yes ☐ 1
- No — If 'no', go to B6.1 → ☐ 2

B5.2 Do you use this language in your job?

- Yes ☐ 1
- No ☐ 2

B5.3 Which language are you most fluent in?

- English — If 'English', go to B6.1 → ☐ 1
- Language other than English ☐ 2
- Both equally well ☐ 3

B5.4 How well would you say you: *(cross one box on each row)*

	Not at all	Not very well	Well	Very well	Can't say
Speak English	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Read English	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Write English	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

B6.1 **Do you have financial dependents?**

- No — If 'no', go to B7 → ☐ 1
- Yes, spouse/partner only — If 'spouse/partner only', go to B7 → ☐ 2
- Yes, children only ☐ 3
- Yes, spouse/partner and children ☐ 4
- Yes, other ☐ 5

B6.2 **How many financially dependent children do you have in each of the following age groups?**

☐ **0 – 5 years**

☐ **6 – 15 years**

☐ **16 – 24 years**

B7 **In a normal week, about how many unpaid hours would you spend caring for family members (eg children or disabled or elderly relatives)?**
(if you have no care responsibilities write '0')

☐☐ **Hours**

B8 **In general, would you say your health is:**

- Excellent ☐ 1
- Very good ☐ 2
- Good ☐ 3
- Fair ☐ 4
- Poor ☐ 5

B9.1 **What is the highest level of primary or secondary school you have completed?**

- Did not go to school ☐ 1
- Year 8 or below ☐ 2
- Year 9 or equivalent ☐ 3
- Year 10 or equivalent ☐ 4
- Year 11 or equivalent ☐ 5
- Year 12 or equivalent ☐ 6

B9.2 **Have you completed any post-school qualifications?**

- Yes ☐ 1
- No — If 'no', go to B11.1 → ☐ 2

B9.3 **What qualifications have you completed?**
(cross all relevant boxes)

Health
- Bachelor Degree in Nursing ☐
- Bachelor Degree in Allied Health Profession ☐
- Certificate IV/Diploma in Enrolled Nursing ☐
- Other basic nursing qualification ☐
- Post-basic nursing qualification (not in aged care) ☐
- Post-graduate allied health qualification ☐
- Other (health related) ☐

Aged Care
- Certificate III in Aged Care ☐
- Certificate III in Home and Community Care ☐
- Certificate IV in Aged Care ☐
- Certificate IV in Service Coordination (Ageing and Disability) ☐
- Other Certificate in Care Work ☐
- Post basic nursing qualification in aged care ☐
- Other (aged care related) ☐

Disability
- Certificate III Disability/Disability work ☐
- Certificate IV Disability/Disability work ☐
- Diploma Disability/Disability work ☐
- Diploma Community Service (Disability work) ☐
- Other (Disability related) ☐

Management
- Certificate III or IV ☐
- Diploma ☐
- Bachelor or Postgraduate Degree ☐

Other
- Certificate III or IV ☐
- Diploma ☐
- Bachelor or Postgraduate Degree ☐

B9.4 **Where did you complete your highest level of qualification?**

- Australia ☐ 1
- Overseas ☐ 2
- Overseas, with recognition obtained in Australia ☐ 3
- Overseas, not recognised ☐ 4

B9.5 **Do you have other relevant specialised qualifications in ageing or aged care?** *(cross all relevant boxes)*

- No ☐
- Yes, in gerontology ☐
- Yes, in palliative care ☐
- Yes, in psychogeriatrics ☐
- Yes, other ☐

B9.6 **How satisfied or dissatisfied are you with the match between your work and your qualifications?** *(Using a scale from 1 to 10, where 1 is 'totally dissatisfied' (ie a bad match) and 10 is 'totally satisfied' (ie a good match), please cross one box)*

Totally dissatisfied										Totally satisfied
☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10	

If at B9.3 your qualification is 3 'Certificate IV/Diploma in Enrolled Nursing' (box 3)

B10 **Did you study for a Certificate IV/Diploma in Enrolled Nursing while working as a community care worker (CCW)?**

- Yes ☐ 1
- No ☐ 2
- Never worked as a CCW ☐ 3
- Do not have a Cert IV/diploma in enrolled nursing ☐ 4

B11.1 **Are you currently studying for any qualifications?**

- Yes ☐ 1
- No — If 'no', go to B12 → ☐ 2

B11.2 **What qualification are you currently studying for?** *(eg Certificate III in Aged Care)*

B12 **During the last 12 months have you undertaken any continuing professional development / education?**

- Yes ☐ 1
- No ☐ 2

B13.1 **During the last 12 months have you undertaken any training (not including professional development), as part of your employment?** *(cross all relevant boxes)*

- No — If 'no', go to B14 → ☐
- Yes, mandatory training ☐
- Yes, non-mandatory training ☐

B13.2 **What were the aims of this training?** *(cross all relevant boxes)*

- To help you get started in your job ☐
- To improve your skills in your current job ☐
- To maintain professional status and/or meet occupational standards ☐
- To prepare you for a future job or facilitate promotion ☐
- To develop your skills generally ☐
- Because of safety/health concerns ☐
- To meet the provider's accreditation requirement ☐
- Other aims ☐

B13.3 **Have you contributed towards the cost of any of this training?**

- No ☐ 1
- Yes, contributed to some of the cost ☐ 2
- Yes, paid for all of it ☐ 3

B13.4 **To what extent do you think you can use the new skills you have acquired from any of this training in your current job?** *(cross one box only)*

- Not at all ☐ 1
- Only to a limited extent ☐ 2
- To a moderate extent ☐ 3
- To a great extent ☐ 4
- To a very great extent ☐ 5
- Did not learn any new skills ☐ 6

B14 **In the next 12 months, what is the area of training you think you will most need / you would most like to undertake:** *(cross all relevant boxes)*

- Dementia ☐
- Mental health ☐
- Management and leadership ☐
- Wound management ☐
- Palliative care ☐
- Allied health ☐
- ICT/IT ☐
- Other (please specify) ☐

B15 What are the best things about your job at the moment?

B16 What are the worst things about your job at the moment?

Thank you for sharing your experiences of working in aged care.

PLEASE TELL US HOW LONG IT TOOK YOU TO COMPLETE THIS SURVEY ☐☐☐ Minutes

Do you have more to say about your work?

We invite you to tell us more about your work. We would like to add to our understanding of your experiences of working in aged care by interviewing 100 direct care workers like yourself. These interviews will be by phone and will take approximately 30 minutes of your time.

If you would like to participate please provide your name and phone number:

Name: **Telephone Number:**

Please be assured that these details will be removed from the survey form and will not be associated with your responses in the questionnaire.

If you are selected to be interviewed, you will be contacted by researchers from the National Institute of Labour Studies, Flinders University in August/September 2016.

Form Type: Residential Workforce Survey

Unique Service Identification: XX-XXXXXX-XX

Invitation to participate in the 2016 National Aged Care Workforce Survey

The Australian Government Department of Health has commissioned the National Institute of Labour Studies to conduct the fourth National Aged Care Workforce Census and Survey. More details can be found at Survey.ipsos.com.au/NACWCAS.

Workers in aged-care services across Australia are being approached to participate in this survey.

In order to provide an accurate picture of the aged care workforce it is important to include information from workers such as yourself. We are interested in your experiences of working in aged care; your characteristics (such as age and gender etc.), the conditions under which you work, and how you feel about what you do.

How to participate in the survey

We are asking you to complete this survey as an employee of the residential aged care services provided at this location.

To take part online go to Survey.ipsos.com.au/RW2016 and enter your username and password:

Username: XXXXXX

Password: XXXXXX

You can also fill in this form instead and use the reply paid envelope to return it.

If you have any queries regarding the survey, please contact the free helpline on 1800 071 735.

Ethics and Privacy

All responses to the survey are confidential and identifying details will be removed prior to analysis. The information from your survey will be combined with all other data and no individual site or person will be identified.

The research has been approved by the Australian Bureau of Statistics (Statistical Clearing House approval number 02468 - 01) and the Flinders University Social and Behavioural Research Ethics Committee (Project Number 7069). For more information regarding ethical approval of the project the Executive Officer of the Committee can be contacted by telephone on (08) 8201 3116, by fax on (08) 8201 2035 or by email human.researchethics@flinders.edu.au. It also complies with the National Privacy Guidelines for all data collection processes undertaken for survey research.

The National Aged Care Workforce Census and Survey closes on **23 September 2016**.

Thank you for your assistance.

Yours sincerely

Professor Kostas Mavromaras
Director, National Institute of Labour Studies
Flinders University, SA

APPROVED

This survey has been approved by the ABS Statistical Clearing House. Approval Number 02468 - 01

Additional information about the 2016 National Aged Care Workforce Survey

When completing this form, please ensure that you...

1. Make sure you answer every question (unless otherwise stated)
2. Cross the appropriate box/boxes like this [X]
3. Enter numbers into individual boxes like this [1][2][3]
4. If the answer to a question is nil, please write '0' and go to the next question
5. Please write clearly using a BLACK or BLUE pen
6. Sometimes you will find the box you have marked has an instruction to go to another question. By following the instructions carefully you will be able to skip questions that do not apply to you
7. Don't worry if you make a mistake or wish to change a response; simply colour in the wrong box like this [■] and mark the correct box like this [X]
8. Call the toll-free helpline on 1800 071 735 if you have any queries
9. More detailed information about the National Aged Care Workforce Census and Survey can be found at the following website: Survey.ipsos.com.au/NACWCAS

It is important that you are as accurate as possible.

Section A: About Your Work

Please answer the questions in this section by thinking about the direct care job you do in this aged care facility, unless the question refers specifically to another job you may have. Please remember that this questionnaire is completely confidential. Only the independent survey company will ever see your response. Your answers will be added to those of many other people who work in aged care, to give an overall picture.

A1 What is your main job?

- Nurse practitioner ☐ 1
- Registered nurse ☐ 2
- Enrolled nurse ☐ 3
- Physiotherapist ☐ 4
- Occupational therapist ☐ 5
- Social worker ☐ 6
- Speech therapist ☐ 7
- Diversional therapist ☐ 8
- *Personal care attendant ☐ 9
- *Allied health assistant ☐ 10
- Other *(please specify)* ☐ 11

Definitions:
Personal care attendant: provides personal care to residents as a core part of their jobs (usually under direction of nursing staff). Job titles of personal care attendants vary widely. They include, for example: personal care attendant, assistant or aide, personal care worker, assistant-in-nursing and others
Allied health assistant: supports allied health professionals in providing personal, social and emotional care to residents. Job titles include recreational officer, occupational therapy assistant, social work assistant and others.

A2 Does your role involve managing or supervising direct care staff?

- Yes, I am a care manager ☐ 1
- Yes, I am a care leader ☐ 2
- Yes, but neither of the above ☐ 3
- No ☐ 4
- Don't know ☐ 5

Definitions:
A care manager has responsibility for all direct care staff in the facility; other job titles may be Director of Nursing and others.
A care leader has responsibility for a team of direct care staff but will report to a care manager.

A3.1 Which of the following best describes your current work schedule?

- A regular daytime shift ☐ 1
- A regular evening shift ☐ 2
- A regular night shift ☐ 3
- A rotating shift (changes from days to evening to nights) ☐ 4
- Split shift (two distinct periods each day) ☐ 5
- On call ☐ 6
- Irregular schedule ☐ 7
- Other ☐ 8

A3.2 Would you prefer to maintain your current work schedule or change it?

- Prefer to maintain current schedule **If 'maintain', go to A4.1→** ☐ 1
- Change to a different schedule ☐ 2

A3.3 Which describes the work schedule you would *prefer*?

- A regular daytime shift ☐ 1
- A regular evening shift ☐ 2
- A regular night shift ☐ 3
- A rotating shift (changes from days to evening to nights) ☐ 4
- Split shift (two distinct periods each day) ☐ 5
- On call ☐ 6
- Irregular schedule ☐ 7
- Other ☐ 8

A4.1 How many hours on average do you *usually* work each week in this job *(include all paid and unpaid hours)*?

☐☐ **Hours per week**

A4.2 How many hours would you *like* to work in this job?

☐☐ **Hours per week**

A4.3 How many of the hours you usually work each week are paid and unpaid? *(If you do not work any unpaid hours write '0' in the corresponding box)*

☐☐ **Paid hours**

☐☐ **Unpaid hours**

A5 **Thinking about a typical shift, how much of your shift would you spend actively caring for residents of the aged care facility** *(as opposed, for example, to doing paperwork, attending meetings, or in discussions with other staff)*?

- Less than a third ☐ 1
- Between one third and two thirds ☐ 2
- More than two thirds ☐ 3

A6 **Which best describes your form of employment?**

- Casual ☐ 1
- Permanent (full or part-time) ☐ 2
- Fixed term contract ☐ 3

A7 **Are you entitled to paid sick leave?**

- Yes ☐ 1
- No ☐ 2
- Don't know ☐ 3

A8.1 **For this job, what was the total amount of your most recent pay before tax or anything else was taken out?** *(Amount to the nearest dollar)*

$ ☐,☐☐☐.~~0~~0

A8.2 **For what period does that cover?**

- Week ☐ 1
- Fortnight ☐ 2
- Month ☐ 3

A9 **How long have you worked in this aged care facility?**

☐☐ **Years** ☐☐ **Months**

A10 **How old were you when you first began working in aged care?**

☐☐ **Years**

A11 **Excluding any breaks from working in aged care, for how many years have you actually worked in aged care?**

☐☐ **Years**

A12 **Before you first obtained this job, had you done any work for this facility?**

- No ☐ 1
- Yes, paid work ☐ 2
- Yes, unpaid work/volunteer ☐ 3

A13.1 **When you approached this aged care facility for your job, did you know there was a job available?**

- Yes ☐ 1
- No **If 'no', go to A14.1** → ☐ 2
- Don't know ☐ 3

A13.2 **How did you find out your job was available?** *(cross one box only)*

- Job network employment agency ☐ 1
- Other employment agency ☐ 2
- Career service at a tertiary educational institution ☐ 3
- School programs ☐ 4
- Newspaper advertisements ☐ 5
- Internet sites ☐ 6
- Centrelink job search services/ touchscreens ☐ 7
- Company or professional contacts ☐ 8
- Workplace noticeboards ☐ 9
- Word of mouth ☐ 10
- Other *(please specify)* ☐ 11

A14.1 **What was your last paid job before you FIRST worked in aged care?**

- No previous paid employment **If 'no', go to A15** → ☐ 1
- Nurse, acute care ☐ 2
- Nurse, community care ☐ 3
- Other healthcare ☐ 4
- Carer in other setting ☐ 5
- Disability care ☐ 6
- Salesperson ☐ 7
- Clerical worker ☐ 8
- Hospitality worker (waitress, etc.) ☐ 9
- Cleaner ☐ 10
- Professional (other than nurse) ☐ 11
- Manager ☐ 12
- Other paid employment ☐ 13

A14.2 Why did you leave that job? *(cross one box only)*

- Family reasons 1
- Personal reasons (including health) 2
- Did not like job 3
- Contract ended 4
- Redundancy 5
- Career change 6
- Other *(please specify)* 7

A15 Had you worked in aged care before you began your CURRENT job?

- Yes, paid 1
- Yes, unpaid/voluntary 2
- No — If 'no', go to A17.1 → 3

A16 What was the most important reason you left the last (paid) aged care job you held before your current one? *(cross one box only)*

- To achieve higher pay 1
- To avoid workmates/colleagues I did not get along with or like 2
- To avoid managers/management I did not get along with or like 3
- The job was too stressful 4
- Not able to spend sufficient time with residents 5
- To get shifts or hours of work I wanted 6
- To be closer to home 7
- To fulfil care responsibilities (including having a baby) 8
- To find more challenging work 9
- To find easier work 10
- Made redundant/retrenched 11
- Moved house/location 12
- Other *(please specify)* 13

A17.1 Did you have more than one job last week?

- Yes 1
- No — If 'no', go to A18 → 2

A17.2 Where did you work in your other job(s) last week? *(cross all relevant boxes)*

- Another residential aged care facility
- Home care/home support aged care service
- Disability care
- Not in aged or disability care, something else

A17.3 How many hours each week do you usually work in your other AGED CARE job(s)?

☐☐ **Hours p.w. in other AGED CARE jobs**

A17.4 How many hours each week do you usually work in your other job(s) OUTSIDE OF aged care?

☐☐ **Hours p.w. in NON aged care jobs**

A18 Are you currently actively seeking work outside of this aged care facility?

- Yes 1
- No 2

A19.1 Do you expect to be working for this aged care facility in 12 months time?

- Yes — If 'yes', go to A20 → 1
- No 2
- It depends 3
- Don't know 4

A19.2 Where do you see yourself working 12 months from now?

- Working in aged care, different facility 1
- Working in home care/home support aged care 2
- Working in disability care 3
- Working, but not in aged or disability care 4
- Not working for pay 5
- Don't know 6

A19.3 **What is the main reason you may finish work for this aged care facility in the next 12 months?** *(cross one box only)*

- Family reasons 1
- Financial reasons 2
- Employment conditions 3
- Nature of care work 4
- Stress/burnout 5
- Other health related reasons 6
- Returning to study 7
- Travel 8
- Retiring 9
- End of contract 10
- Retrenchment/redundancy 11
- Falling quality of care 12
- Other *(please specify)* 13

A20 **Where do you see yourself working 3 years from now?** *(cross one box only)*

- Working in aged care, this facility 1
- Working in aged care, different facility 2
- Working in home care/home support aged care 3
- Working in disability care 4
- Working, not in aged care or disability care 5
- Not working for pay 6
- Don't know 7
- Other 8

A21 **The following statements are about your current job in this aged care facility.** *Please indicate, by putting a cross in one box on each line, how strongly you agree or disagree with each. The more you agree the higher the number you should choose. The more you disagree, the lower the number you should choose.*

	Strongly disagree						Strongly agree
a) I am able to spend enough time with each care recipient	1	2	3	4	5	6	7
b) I have the skills and abilities I need to do my job	1	2	3	4	5	6	7
c) I use many of my skills and abilities in my current job	1	2	3	4	5	6	7
d) I have a lot of freedom to decide how I do my work	1	2	3	4	5	6	7
e) I feel under pressure to work harder in my job	1	2	3	4	5	6	7
f) My job is more stressful than I had ever imagined	1	2	3	4	5	6	7
g) Considering all my efforts and achievements, I receive the respect and acknowledgement I deserve	1	2	3	4	5	6	7
h) Management and employees have good relations in my workplace	1	2	3	4	5	6	7
i) Adequate training is available through my workplace	1	2	3	4	5	6	7

A22 **In general, how would you describe relations at your workplace?**
(Using a scale from 1 to 7, where 1 is when workplace relations are very bad and 7 is when workplace relations are very good, please put a cross in one box on each line.)

	Very bad						Very good
Between management and yourself	1	2	3	4	5	6	7
Between workmates/colleagues and yourself	1	2	3	4	5	6	7

A23 **The following questions are about how satisfied or dissatisfied you are with different aspects of your job.**
(Using a scale from 1 to 10, where 1 is 'totally dissatisfied' and 10 is 'totally satisfied', please put a cross in one box on each line to indicate how satisfied or dissatisfied you are with the following aspects of your aged care job. The more satisfied you are, the higher the number you should pick. The less satisfied you are, the lower the number)

	Totally dissatisfied									Totally satisfied
a) Your total pay	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
b) Your job security	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
c) The work itself (what you do)	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
d) The hours you work	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
e) The opportunity to develop your abilities	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
f) The level of support from your team /service provider	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
f2) The level of support from your supervisor	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
g) The flexibility available to balance work and non-work commitments	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10
h) All things considered, how satisfied are you with your job	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6	☐ 7	☐ 8	☐ 9	☐ 10

A24.1 **In relation to the balance between your work and the rest of your life, please put a cross in one box on each line on the scale from 1 – 6** *(where 1 = never, 5= almost always and 6=Don't know)*, **for how often your WORK:**

	Never	Rarely	Some-times	Often	Almost always	Don't know
a) Interferes with your responsibilities or activities outside of work.	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6
b) Keeps you from spending the amount of time you would like with family or friends.	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6
c) Interferes with your ability to develop or maintain connections and friendships in your community.	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6

A24.2 **Thinking about your life in general, how often do you feel rushed or pressed for time?**

Never	Rarely	Some-times	Often	Almost always	Don't know
☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6

A24.3 **Thinking about your life right now, how satisfied are you with the balance between your work and the rest of your life?**

Not at all satisfied	Not very satisfied	Neither satisfied nor dissatisfied	Somewhat satisfied	Very satisfied	Don't know
☐ 1	☐ 2	☐ 3	☐ 4	☐ 5	☐ 6

A25.1 **In the last 12 months have you sustained a work- related injury or illness at work (in this job)**

- Yes ☐ 1
- No — **If 'no', go to Section B →** ☐ 2

A25.2 **What kind(s) of work-related injury or illness did you sustain in the last 12 months?** *(cross all relevant boxes)*

- Fracture ☐
- Chronic joint or muscle condition ☐
- Sprain/strain ☐
- Cut/open wound ☐
- Crushing injury/internal organ damage ☐
- Superficial injury (minor injury) ☐
- Stress or other mental condition ☐
- Amputation ☐
- Burns ☐
- Other ☐

A25.3 **Did the <u>most recent</u> work-related injury or illness sustained in the last 12 months result in you taking time off work?**

- Yes ☐ 1
- No — **If 'no', go to A25.5 →** ☐ 2

A25.4 **How long did you take off work?**

- Part of 1 day ☐ 1
- 1 whole day ☐ 2
- 2-5 days ☐ 3
- 6-15 days ☐ 4
- More than 15 days ☐ 5

A25.5 **What was the cause of the most recent work-related injury or illness you sustained in the last 12 months?** *(cross one box only)*

- Lifting, pushing, pulling, bending ☐ 1
- Repetitive movement with low muscle loading ☐ 2
- Prolonged standing, working in cramped or unchanging positions ☐ 3
- Vehicle accident ☐ 4
- Hitting, being hit or cut by person, object or vehicle ☐ 5
- Fall ☐ 6
- Exposure to mental stress ☐ 7
- Long term exposure to sound ☐ 8
- Contact with a chemical or substance ☐ 9
- Fatigue ☐ 10
- Other *(please specify)* ☐ 11

Section B: About You

Please remember that this questionnaire is completely confidential. We do not even ask your name. No-one but the independent survey company will ever see your response. Your answers will be added to those of many other people who work in aged care, to give an overall picture.

B1 Are you male or female?

- Male ☐ 1
- Female ☐ 2

B2 How old were you on your last birthday?

☐☐ **Years**

B3.1 In what country were you born?

- Australia — **If 'Australia', go to B4** → ☐ 1
- Other *(please specify)* ☐ 2

☐

B3.2 In what year did you first arrive in Australia to live for six months or more (even if you have spent time abroad since)?

☐☐☐☐

B3.3 Are you an Australian citizen?

- Yes — **If 'yes', go to B3.5** → ☐ 1
- No ☐ 2

B3.4 Are you a permanent resident of Australia?

- Yes ☐ 1
- No ☐ 2

B3.5 Which of the following categories best describes your migration category when you or your family first arrived in Australia to stay? *(cross one box only)*

- Skilled migrant ☐ 1
- Business migrant ☐ 2
- Family migrant ☐ 3
- Refugee or special humanitarian migrant ☐ 4
- New Zealand citizen ☐ 5
- None of the above ☐ 6
- Don't know ☐ 7

B4 Are you of Aboriginal or Torres Strait Islander origin? *(cross one box only)*

- No ☐ 1
- Yes, Aboriginal ☐ 2
- Yes, Torres Strait Islander ☐ 3
- Yes, both ☐ 4

B5.1 Are you fluent in a language other than English?

- Yes ☐ 1
- No — **If 'no', go to B6.1** → ☐ 2

B5.2 Do you use this language in your job?

- Yes ☐ 1
- No ☐ 2

B5.3 Which language are you most fluent in?

- English — **If 'English', go to B6.1** → ☐ 1
- Language other than English ☐ 2
- Both equally well ☐ 3

B5.4 How well would you say you: *(cross one box on each row)*

	Not at all	Not very well	Well	Very well	Can't say
Speak English	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Read English	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Write English	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

B6.1 Do you have financial dependents?

- No — If 'no', go to B7 → ☐ 1
- Yes, spouse/partner only — If 'yes', go to B7 → ☐ 2
- Yes, children only ☐ 3
- Yes, spouse/partner and children ☐ 4
- Yes, other ☐ 5

B6.2 How many financially dependent children do you have in each of the following age groups?

- ☐ 0 – 5 years
- ☐ 6 – 15 years
- ☐ 16 – 24 years

B7 In a normal week, about how many unpaid hours would you spend caring for family members (eg children or disabled or elderly relatives)?
(if you have no care responsibilities write '0')

☐☐ Hours

B8 In general, would you say your health is:

- Excellent ☐ 1
- Very good ☐ 2
- Good ☐ 3
- Fair ☐ 4
- Poor ☐ 5

B9.1 What is the highest level of primary or secondary school you have completed?

- Did not go to school ☐ 1
- Year 8 or below ☐ 2
- Year 9 or equivalent ☐ 3
- Year 10 or equivalent ☐ 4
- Year 11 or equivalent ☐ 5
- Year 12 or equivalent ☐ 6

B9.2 Have you completed any post-school qualifications?

- Yes ☐ 1
- No — If 'no', go to B11.1 → ☐ 2

B9.3 What qualifications have you completed?
(cross all relevant boxes)

Health
- Bachelor Degree in Nursing ☐
- Bachelor Degree in Allied Health Profession ☐
- Certificate IV/Diploma in Enrolled Nursing ☐
- Other basic nursing qualification ☐
- Post-basic nursing qualification (not in aged care) ☐
- Post-graduate allied health qualification ☐
- Other (health related) ☐

Aged Care
- Certificate III in Aged Care ☐
- Certificate III in Home and Community Care ☐
- Certificate IV in Aged Care ☐
- Certificate IV in Service Coordination (Ageing and Disability) ☐
- Other Certificate in Care Work ☐
- Post basic nursing qualification in aged care ☐
- Other (aged care related) ☐

Disability
- Certificate III Disability/Disability work ☐
- Certificate IV Disability/Disability work ☐
- Diploma Disability/Disability work ☐
- Diploma Community Service (Disability work) ☐
- Other (Disability related) ☐

Management
- Certificate III or IV ☐
- Diploma ☐
- Bachelor or Post-graduate Degree ☐

Other
- Certificate III or IV ☐
- Diploma ☐
- Bachelor or Post-graduate Degree ☐

B9.4 Where did you complete your highest level of qualification?

- Australia ☐ 1
- Overseas ☐ 2
- Overseas, Australian recognised ☐ 3
- Overseas, not recognised ☐ 4

B9.5 **Do you have other relevant specialised qualifications in ageing or aged care?** *(cross all relevant boxes)*

- No ☐
- Yes, in gerontology ☐
- Yes, in palliative care ☐
- Yes, in psychogeriatrics ☐
- Yes, other ☐

B9.6 **How satisfied or dissatisfied are you with the match between your work and your qualifications?** *(Using a scale from 1 to 10, where 1 is 'totally dissatisfied' (ie a bad match) and 10 is 'totally satisfied' (ie a good match), please cross one box)*

Totally dissatisfied ☐1 ☐2 ☐3 ☐4 ☐5 ☐6 ☐7 ☐8 ☐9 ☐10 Totally satisfied

If at B9.3 your qualification is 'Certificate IV/Diploma in Enrolled Nursing' (box 3)

B10 **Did you study for a Certificate IV/Diploma in Enrolled Nursing while working as a Personal care attendant (PCA)?**

- Yes ☐1
- No ☐2
- Never worked as a PCA ☐3
- Do not have a Cert IV/diploma in enrolled nursing ☐4

B11.1 **Are you currently studying for any qualifications?**

- Yes ☐1
- No **If 'no', go to B12** → ☐2

B11.2 **What qualification are you currently studying for?** *(eg Certificate III in Aged Care)*

B12 **During the last 12 months have you undertaken any continuing professional development/education?**

- Yes ☐1
- No ☐2

B13.1 **During the last 12 months have you undertaken any training (not including professional development), as part of your employment?** *(cross all relevant boxes)*

- No **If 'no; go to B14** → ☐
- Yes, mandatory training ☐
- Yes, non-mandatory training ☐

B13.2 **What were the aims of this training?** *(cross all relevant boxes)*

- To help you get started in your job ☐
- To improve your skills in your current job ☐
- To maintain professional status and/or meet occupational standards ☐
- To prepare you for a future job or facilitate promotion ☐
- To develop your skills generally ☐
- Because of safety/health concerns ☐
- To meet the facility's accreditation requirement ☐
- Other aims ☐

B13.3 **Have you contributed towards the cost of any of this training?**

- No ☐1
- Yes, contributed to some of the cost ☐2
- Yes, paid for all of it ☐3

B13.4 **To what extent do you think you can use the new skills you have acquired from any of this training in your current job?** *(cross one box only)*

- Not at all ☐1
- Only to a limited extent ☐2
- To a moderate extent ☐3
- To a great extent ☐4
- To a very great extent ☐5
- Did not learn any new skills ☐6

B14 **In the next 12 months, what is the area of training you think you will most need / you would most like to undertake:** *(cross all relevant boxes)*

- Dementia ☐
- Mental health ☐
- Management and leadership ☐
- Wound management ☐
- Palliative care ☐
- Allied health ☐
- ICT/IT ☐
- Other *(please specify)* ☐

B15 What are the best things about your job at the moment?

B16 What are the worst things about your job at the moment?

Thank you for sharing your experiences of working in aged care.

PLEASE TELL US HOW LONG IT TOOK YOU TO COMPLETE THIS SURVEY ☐☐☐ Minutes

Do you have more to say about your work?

We invite you to tell us more about your work. We would like to add to our understanding of your experiences of working in aged care by interviewing 100 direct care workers like yourself. These interviews will be by phone and will take approximately 30 minutes of your time.

If you would like to participate please provide your name and phone number:

Name: **Telephone Number:**

Please be assured that these details will be removed from the survey form and will not be associated with your responses in the questionnaire.

If you are selected to be interviewed, you will be contacted by researchers from the National Institute of Labour Studies, Flinders University in August/September 2016.

NDIS Price Guide

Victoria, New South Wales, Queensland, Tasmania

Valid from: 1 July 2018

Copyright Notice

Table of Contents

2018/19 National Disability Insurance Scheme (NDIS) Price Guide

This Price Guide (Guide) is a summary of NDIS price limits and associated arrangements (price controls) that will apply from 1 July 2018 as set by the National Disability Insurance Agency (NDIA). It is designed to assist participants and disability support providers, both current and prospective, to understand the way that price controls for supports and services work in the NDIS.

The NDIA sets price controls for certain NDIS supports to ensure NDIS participants obtain reasonable value from their support packages. The price limits in this Guide are the **maximum prices** that Registered Providers can charge NDIS participants for specific supports. There is *no requirement* for providers to charge at the maximum price for a given support or service. Participants and providers are free to negotiate lower prices.

Price controls must be sustainable, which means that efficient providers must be able to recover the cost of delivering high quality disability supports. The NDIA takes into account market risks, when setting price controls to protect against supply gaps and ensure participants receive critical supports. This is important especially in markets that are immature or where there is limited choice for participants. Over time, the need for price controls will reduce, as disability support markets develop and competitive tension increasingly keeps support prices at reasonable levels.

Not all NDIS support items have price limits, and this NDIS Price Guide is not a comprehensive list of all supports that are available to NDIS participants. Instead, this Guide lists the specific supports that have maximum prices, and also sets out other rules and support definitions that are part of NDIA' market intervention approach. A complete list of disability supports recognised by the NDIS (Support Catalogue) is maintained on the NDIS website (https://www.ndis.gov.au/providers/pricing-and-payment).

Application of Price Controls

This Guide should be read in conjunction with the NDIS Terms of Business for Registered Support Providers[1].

The price limits and other arrangements in this Guide must be followed when supports are delivered to NDIS participants who have either an agency-managed plan or a plan manager:

- Providers of supports to participants with agency-managed plans must be a 'Registered Provider' with the NDIS , and are subject to the NDIS *Terms of Business for Registered Support Providers* (the NDIS Terms of Business), which states that "Registered Providers must adhere to the NDIS Price Guide" (p. 4).
- Plan managers can purchase supports on behalf of participants from either registered or unregistered providers, but they are Registered Providers themselves, and therefore **responsible for ensuring that prices paid for supports on behalf of their participant clients adhere to the arrangements in the NDIS Price Guide, including price limits**.

Self-Managing participants can use registered or unregistered providers and are ***not*** subject to the pricing arrangements in the NDIS Price Guide.

NDIS Supports Overview – Purpose, Categories and Line Items

This section describes the way that the NDIS categorises disability supports. These categories can be relevant to rules for participants about how they can spend their support budgets, and for providers when seeking payment for delivered supports.

Support Purpose Types

NDIS participant budgets can be allocated to three separate types of support purpose:

1. CORE – Supports that enable participants to complete activities of daily living. Participant budgets often have a lot of flexibility to choose specific supports with their core support budgets, but cannot reallocate this funding for other support purposes (i.e. capital or capacity building supports).

2. CAPITAL – An investment, such as assistive technologies - equipment, home or vehicle modifications, or for Specialist Disability Accommodation (SDA). Participant budgets for this support purpose are restricted to specific items identified in the participant's plan. The NDIS publishes separate price guides for Assistive Technology[2] and Specialist Disability Accommodation[3].

3. CAPACITY BUILDING - A support that enables a participant to build their independence and skills. Participant budgets are allocated at a support category level (see next section) and must be used to achieve the goals set out in the participant's plan.

[2] https://www.ndis.gov.au/providers/at/supplying-at.html
[3] https://www.ndis.gov.au/specialist-disability-accommodation.html

Support Categories: aligned to the NDIS Outcomes Framework

Support purpose categories are aligned with the NDIS Outcomes Framework, which has been developed to measure goal attainment for individual participants and overall performance of the Scheme. There are 8 Outcome Domains (‘Domains’) in the Framework, which help participants think about goals in different areas of their life and assist planners explore where supports in these areas already exist and where further supports are required. These Domains are:

1. Daily Living
2. Home
3. Health and Well-being
4. Lifelong Learning
5. Work
6. Social and Community Participation
7. Relationships
8. Choice and Control

The Outcomes Framework directly relates to the 15 support categories outlined in the next section. NDIS service providers should be aware that all supports and services for NDIS participants must contribute to the achievement of their individual goals as outlined in the participant’s plan.

Support purpose categories are designed to align with the Outcomes Framework and the 15 support categories. This helps participants choose supports that help them in achieving their goals, and providers to understand how the supports they provide contribute to the participant’s goals. The following table shows the links between support purpose types, domains in the Outcomes Framework, and support categories.

SUPPORT PURPOSE	OUTCOMES FRAMEWORK DOMAIN	SUPPORT CATEGORY (Allocated to plans)
CORE	Daily Living	Assistance with Daily Life (1.01)
	Daily Living	Transport (1.02)
	Daily Living	Consumables (1.03)
	Social & Community Participation	Assistance with Social & Community Participation (1.04)
CAPITAL	Daily Living	Assistive Technology (2.05)
	Home	Home Modifications and Specialised Disability Accommodation (SDA) (2.06)
CAPACITY BUILDING	Choice & Control	Support Coordination (3.07)
	Home	Improved Living Arrangements (3.08)
	Social and Community Participation	Increased Social and Community Participation (3.09)
	Work	Finding and Keeping a Job (3.10)
	Relationships	Improved Relationships (3.11)
	Health & Wellbeing	Improved Health and Wellbeing (3.12)
	Lifelong Learning	Improved Learning (3.13)
	Choice and Control	Improved Life Choices (3.14)
	Daily Living	Improved Daily Living Skills (3.15)

Support Line Items

Although most are not all listed in this document, each support category has many specific supports and services that are recognised in the NDIS payment system. These are referred to as ‘line items’ and are in most cases are not prescribed in participant plans. A comprehensive listing of support line items is kept up to date as a separate file (csv format) on the NDIS website[4]. This file includes item descriptors to assist providers to claim payments using a “best-fit” approach, and to assist participants in engaging and negotiating with service providers.

Providers should claim payments against a support line item that most closely aligns to the service they have delivered.

Each support line item has a unique reference number, which is explained in the next section.

[4] https://www.ndis.gov.au/providers/pricing-and-payment

Claiming for 2018/19 NDIS supports and services using this Guide

This Price Guide applies for services delivered from 1 July 2018 onwards. Providers and participants can make service agreements under or at the 2018/19 price limits as long as the service is delivered on or after 1 July 2018.

Registered Providers can make a claim for payment once that support has been delivered or provided. Prepayment is not permitted unless the NDIA has given prior approval in writing to the Registered Provider. This will only occur in exceptional circumstances such as home modifications and remote area servicing.

Where price limits apply, prices charged to participants must not exceed the price limit prescribed for that support in this Guide. No other charges are to be added to the cost of the support, including credit card surcharges, or any additional fees including any 'gap' fees, late payment fees or cancellation fees unless otherwise stated in this Guide. Providers should refer to the NDIS Terms of Business for further details or the *Other Considerations* section within this Guide.

When claiming, it is the responsibility of the provider to ensure that the claim accurately reflects the supports delivered, including the frequency and volume of supports. Falsifying claims for any aspect of supports delivered, is a serious compliance issue and may result in action against the provider. Providers are also required to keep accurate records of claims, which are subject to audit at any time.

Service Bookings

2018/19 NDIS payment system allows Service Bookings to be created between the participant and their provider. This ensures that both parties are aware of the requirements for service, the length of time the service is required for, and that the participant will be able to pay for the service. For more information please refer to Section 5.2 of the Provider Toolkit[5].

To help participants keep track of their Service Bookings and budget, a Monthly Payment Statement will be available on the NDIS participant portal. Payment Statements will be available to the participant (and/or their nominee) on the first business day of each month, containing a summary of the previous month's payments, available budget remaining, committed budget and spent budget. It will list which participant and provider claims have been received, which Service Bookings they relate to, which Support Categories the money was deducted from and on which dates the deductions were made. The Payment Summary will be available in their preferred document format, either pdf or word. The participant (and/or their nominee) will be sent an email or SMS notification when their statements are available online.

[5] https://providertoolkit.ndis.gov.au/52-service-bookings

Support Item Reference Numbers

NDIS payments system applies unique numbers for each support line item, according to the following structure:

For example:

Assistance With Self-Care - Active Overnight - Complex line item number is: 01_018_0104_1_1

Support Category	Line Item	Reg Group	Domain	Funding Type
1	018	0104	1	1

Support Connection line item number is: 07_001_0106_8_3

Support Category	Line Item	Reg Group	Domain	Funding Type
7	001	0106	8	3

Units of Measure

The NDIS payment system for 2018/19 includes units of measure to suit each support line item as follows:

- Each
- Hour
- Daily
- Week
- Month
- Annual

Special NDIS Pricing Arrangements

In certain circumstances, providers may be entitled to charge for expenses incurred in the provision of supports. These may include certain transport and travel costs, or servicing remote or very remote areas, which are outlined below.

Supports for participants with high intensity or complex needs

The delivery of supports to a participant with higher intensity or complex needs can require specialised or more skilled support worker/s, and other arrangements that increase the cost of support delivery for providers.

To allow for these additional costs, this Price Guide defines both ‘standard needs’ and ‘high intensity’ line items for some supports, such as assistance with self-care activities and group-based community participation supports. High intensity line items will have price limits that are set at higher price levels than the equivalent ‘standard needs’ support.

Regional, Remote and Very Remote Areas

Supports delivered in remote and very remote areas may have higher additional service delivery costs, and may require higher price limits in place to accommodate for this. The Modified Monash Model (MMM) is used to determine regional, remote and very remote areas using a scale from 1-7 based on population size and locality. Participants located in MMM4 and MMM5 areas are classified as ‘Regional’, MMM6 as ‘Remote’, and MMM7 as ‘Very Remote’. Further details on the MMM can be found on the

Department of Health's DoctorConnect website[6]. This website also contains a resource to look up the MMM area for particular locations[7].

There are separate Price Guides for Remote and Very Remote areas. Prices are 20% higher in remote areas and 25% higher in very remote areas for some supports. There is no additional loading applied for delivery of supports in regional areas.

Providers should refer to support price limits based on where the support is delivered, which is not necessarily where the participant lives. For example, if a participant living in a Remote location visits a therapist in their capital city, the therapist should not attempt to claim a price that is higher than the price limit for the support in that city. On the other hand, if the therapist was to visit the participant in their local area to deliver the support, then the therapist could claim a price that is within the limit set by the 'Remote' Price Guide (i.e. 20% higher).

If local providers are not available, the NDIA may enter into arrangements (and at times contracts) with specific providers for provision of services to more remote regions. The contract with a service provider will specify the cost of travel and any other associated expenses in these areas.

[7] http://www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/MMM_locator

Provider Travel and Participant Transport

Provider travel and participant transport are different concepts. This section explains the differences and notes specific rules and arrangements for both travel and transport in the NDIS payments system.

Provider Travel

Providers who intend to claim travel costs from a participant must have the **agreement of the participant in advance** (i.e. the service agreement between the participant and provider should specify the travel costs that can be claimed).

Travel to provide personal care and community access

Providers may not claim travel costs for the time that a support worker spends travelling from home to the workplace (or first participant) and from the workplace (or last participant).

Where a support worker travels from one participant appointment to another, up to 20 minutes of time can be claimed against the next appointment at the hourly rate for the relevant support item.

Where a worker travels from one participant appointment to another in an MMM4 or MMM5 area, up to 45 minutes of time can be claimed against the next appointment at the hourly rate for the relevant support item.

Travel to provide therapy supports

Therapy providers may claim travel costs when travelling to and from appointments:

- For travel to a first participant appointment each day, or for travel from one participant appointment to another, therapy providers can claim up to 20 minutes of time against the appointment they are travelling to, at the hourly rate for the relevant support item. If the appointment is in a MMM4 or MMM5 area, therapy providers can claim up to 45 minutes of travel time against the appointment they are travelling to, at the hourly rate for the relevant support item.
- Therapy providers can also claim for return travel from the final appointment in a day.

In remote areas, therapy providers may enter specific arrangements with participants to cover travel costs, up to the relevant hourly rate for the support item. Providers should assist participants to minimise the travel costs that they need to pay (e.g. co-ordinating appointments with other participants in an area, so that travel costs can be shared between participants).

Participant Transport: Accompanying participants for community access

Providing community access supports may, at the request of a participant, involve a worker accompanying a participant on a community outing and/or transporting a participant from their home to the community. In these situations, the worker's time can be claimed at the hourly rate for the relevant support item for the total time the worker provides support to one or more participants, including time spent accompanying and/or transporting the participant. Where a provider is transporting two or more participants on the same trip, the worker's time should be claimed at the appropriate group rate for the relevant support.

Participant Transport: Contribution towards costs of transport itself

If a provider incurs costs, in addition to the cost of a worker's time, when accompanying and/or transporting participants in the community (such as cost of ticket for public transport), they may negotiate with the participant for them to make a reasonable contribution towards these costs. A participant's support budget may include funding for transport, and this funding can be used for these types of contributions, which should be clearly specified in the service agreement.

Cancellations and “no shows” for scheduled supports

Providers should have business arrangements in place to minimise the risk of cancellations, "no shows” or late changes to the delivery of a scheduled support. Service agreements between participants and providers need to include details of these arrangements including: rescheduling the appointment; notice periods for cancellations and the cancellation fee that can apply; and changes to agreed appointments.

If a participant makes a short-notice cancellation, which is after 3pm the day before the service, the provider may charge up to 90% of the agreed price for the cancelled appointment. A fee may be charged against a participant plan up to 12 times per year for personal care and community access supports. Beyond this threshold, the NDIA will require the provider to demonstrate they are taking steps to actively manage cancellations.

For other cancellations, where the participant has provided notice of cancellation prior to 3pm the day before the scheduled service, providers may not charge a cancellation fee.

Where participants make short-notice cancellations for therapy services, the therapist can charge a cancellation fee up to 90% of the agreed price for the cancelled appointment. Within the period of any Service Booking between a provider and participant, the total of cancelled appointments charged by the provider must not exceed six hours.

Where a participant fails, at short-notice or without notice, to keep the scheduled arrangement for the support, the provider must make every effort to contact the participant to determine if there is an additional problem (e.g. the person has fallen out of bed and cannot raise an alarm, or there is a sudden breakdown in the informal supports and additional support is likely to be required).

Where there is a specific risk that a participant will frequently make short-notice cancellations for a support due to the nature of a person's disability or the nature of the support (e.g. behaviour intervention supports), the provider should make individual arrangements to minimise the number of cancellations.

No fee is payable by the NDIA or the participant, for cancellation by a provider or due to the provider's failure to deliver the agreed supports, unless previously agreed to and documented in the Service Agreement with the participant.

NDIA does not permit collection of deposits, or money as a bond from participants that a provider would retain in the event of cancellation of a support per the NDIS Terms of Business.

Other Payment Considerations

This section outlines various other considerations that may be relevant to participants and providers. These should be reviewed when entering into a new Service Agreement or if there is a significant change in the participant's circumstances.

Medicare and insurance

Some elements of a participant's care may be covered by funds outside the NDIS. These expenses are commonly medical, including those covered by private health insurance or Medicare. These medical expenses are not funded under the NDIS, even if they are related to, or a symptom of the disability. These expenses should be claimed under the relevant health care scheme or insurance policy. Some providers (e.g. therapists) may need to distinguish between the health services and disability supports that they provide to a single client, and make separate payment claims (e.g. claim payments from Medicare for health services, and the NDIS for disability supports).

Prepayments

Prepayments are generally not required under the NDIS, unless the NDIA has given prior approval to the Registered Provider. Providers should make claims only for supports that have been delivered. Approval for prepayment may be given for certain assistive technologies where this has been agreed to by the participant.

Co-Payments for Capital items, including assistive technology

Co-Payments by the participant are not required; however, where the participant would like a customisation to a support or assistive technology that is not considered reasonable or necessary, they are required to pay for this themselves. These may

include an aesthetic customisation to an assistive technology or modifications to a vehicle that are additional to the assistive components.

Goods and Services Tax (GST)

Most items are GST exempt, as per Australian Tax Office information about GST and NDIS and the application of section 38-38 of the GST Act[8]. For a small number of items where GST is applicable (for example, delivery fees and building materials), the price is inclusive of GST.

Other fees (Commissions and exit fees)

Participants are generally not required to pay exit fees, even when changing providers part way through a plan. A core principle of the NDIS is choice and control for participants, allowing them to change providers without expense. Further information on establishment fees claimable by the incoming provider can be found below under *Establishment fee for personal care/community access*.

CORE SUPPORTS

This section describes the rules and arrangements that apply to core supports. It also notes price limits that apply to specific line items.

Assistance with Daily Living (Support Category 1.01)

Assistance with daily personal activities

This support category relates to assisting with and/or supervising personal tasks of daily life to enable the participant to live as autonomously as possible. These supports are provided individually to participants and can be provided in a range of environments, including but not limited to, the participant's own home.

A hierarchy of price controls apply to the category of support, based on:

A. The **level of support** required: a higher intensity support may be paid where a participant requires assistance from a support worker with additional qualifications and experience relevant to the participant's complex needs. The **high intensity rate** may be considered when:

- Frequent (at least 1 instance per shift) assistance is required to manage challenging behaviours that require intensive positive behaviour support and/or
- Continual active support is required due to high medical support needs (such as unstable seizure activity or respiratory support)

B. The time of day that the support is provided:

- Daytime starts at 6am and finishes at 8pm
- Evening is where the support finishes after 8pm and before 12 midnight, where the evening rate applies to the entire shift
- Overnight is where the support finishes after 12 midnight and before 6am.

C. The day of the week that the support is provided:

- A weekday is Monday to Friday;
- The extra rates paid for Saturday, Sunday and Public holidays are in substitution for, and not cumulative upon, the shift premiums payable for evening and overnight supports.
- The extra rates for Saturday/Sunday/Public holidays do not increase further when the support finishes after 8pm.

Provisions for 'shadow shifts'

Shadow shifts may be considered where the participant has complex individual support needs that are best met by introducing a new worker to the participant before it is reasonable that they commence providing the support independently. These are considered where the specific individual support needs include:

- Very limited communication;
- Behaviour support needs; and/or

- Medical needs/procedures such as ventilation or home enteral nutrition.

Where the individual would require shadow shifts to assist with the introduction of new workers, and this is the desired method by the participant or their family, the provider may claim for up to 6 hours of weekday support per year.

Introducing new workers is not designed to replace formal, recognised training that will be provided by an employer to their workforce, such as Shadowing (or “Buddying”) less experienced staff or new staff with experienced workers or informal carers to help build knowledge and social capital (worker retention), which is not claimable under the NDIS.

Establishment fee for personal care/community access

This fee applies to all new NDIS participants in their first plan where they receive at least 20 hours of personal care/community access support per month. This payment is to cover non-ongoing costs for providers establishing arrangements and assisting participants in implementing their plan. The establishment fee is claimable by the provider who assists the participant with the implementation of their NDIS Plan, delivers a minimum of 20 hours per month of personal care/community access support and has made an agreement with the participant to supply these services.

The establishment fee will operate as follows:

- Providers can charge $500 against a plan if assisting a new participant, who is new to NDIS and new to the provider.
- A provider can charge $250 when they are maintaining an existing client of theirs who is commencing as a participant of the NDIS.
- Should a participant wish to change providers on commencing their first NDIS plan, $250 is available to the new provider. This is to assist the participant in changing providers.

- A budget of $750 is included in the first plan for NDIS participants, in case they need to this type of assistance from providers to design and implement support arrangements.

Assistance with household tasks

Assistance with household tasks enables participants to maintain their home environment. This may involve undertaking essential household tasks that the participant is not able to undertake.

Preparation and delivery of meals

This support item is for the preparation and delivery of food to participants who are unable to do this themselves, and are not in receipt of other supports that would meet the same need. The cost of the food itself is not covered by the NDIS. The cost of this support will vary based on the number of meals prepared and the deliveries required.

Assistance in Shared Living Arrangements – Supported Independent Living (SIL)

SIL is the assistance with and/or supervising tasks of daily life in a shared living environment, with a focus on developing the skills of each individual to live as autonomously as possible. The support is provided to each person living in the shared arrangement in accordance with their need.

SIL does not include rent, board and lodging or other day to day usual living expenses such as food and activities. It also does not include the capital costs associated with a participant’s accommodation.

SIL does not have fixed price limits, and providers can quote for the specific SIL service that they offer to each participant. To assist providers with quoting, the NDIA has developed a Provider SIL Pack[9]. The Provider SIL Pack contains templates that assist providers in developing an individualised quote. The purpose of this quote is to identify:

- The individual supports that will be available for the person, focused on maximising the person's capacity to be as independent as possible with household decision making, personal care and domestic tasks,
- The typical roster of supports that is shared between participants to maximise the efficient use of resources, and
- What supports are available to all residents to ensure the smooth operation and running of the household.

Once a quote is received, the NDIA uses a 'SIL Tool' to analyse provider quotes and to make sure that they represent value for money. In some cases, negotiation between the NDIA and providers will be necessary to agree appropriate prices for SIL.

For those providers who wish to continue to use the previous version of the quoting templates they may do so as these will continue to be accepted by the Agency.

Note on removal of 'benchmark' prices: Previous NDIS Price Guides have included benchmark prices for SIL. These benchmarks do not have any function in the SIL tool process, which recognises the individual support needs of participants. For this reason, the NDIA has removed the benchmarks from this Price Guide.

Short Term Accommodation and Assistance

From time to time, participants may require temporary supports that are different from their usual arrangements. These are non-typical days and may include short stays in a group-based facility (short term accommodation), or the purchase of additional in-home support.

For the purposes of this Price Guide, the 'short term accommodation' price limit includes all expenses in a 24 hour period including assistance with daily personal activities, accommodation, food and negotiated activities. Typically, this type of support would be used for short periods of up to 14 days at a time. For longer term arrangements, other options are likely to be more appropriate (e.g. Supported Independent Living).

In cases where a participant will receive substantially less than 24 hours of assistance with daily personal activities, it may be appropriate for the participant and provider to negotiate a lower price than the maximum price specified in this Guide, based on the actual support provided. This situation might arise, for example, if a participant enters a short term accommodation facility in the evening, and exits again early the following morning. Also, where a participant enters accommodation late in the day, it may be appropriate to claim the daily rate for the day of the week that the majority of the support is provided. In each case, support arrangements, including price, should be **agreed with participants in advance**.

Short term accommodation price limits vary according to the support needs of the participant and the day of the week the support is provided. Providers claiming at the rates for high intensity (i.e. ratio of 1 support worker for 2 participants) or 1:1 support must deliver assistance with daily personal activities at those support ratios for the duration of the participant's stay.

Transport Support (Support Category 1.02)

Transport enables participants to access disability supports outside their home, and to pay for transport that helps them to achieve the goals in their plan. Transport supports generally do not have price controls; however, participants should use the least expensive transport that meets their needs. Transport funding is paid fortnightly in advance to self-managed participants. Funding transport assistance is limited to those who cannot use public transport due to their disability. If the participant has questions about their transport support, providers may direct them to the NDIS factsheet available on the NDIS Website[10].

Consumables (Support Category 1.03)

Consumables are a support category available to assist participants with purchasing everyday use items. Supports such as continence and home enteral nutrition (HEN) products are included in this category. More information on these supports can be found in the *Assistive Technology and Consumables Code Guide*[11].

[10] https://www.ndis.gov.au/document/participant-transport-funding-informati

[11] https://www.ndis.gov.au/medias/documents/hf5/hae/8800885211166/AT-and-consumables-guide.pdf

Assistance with Social and Community Participation (Support Category 1.04)

These supports enable a participant to engage in community, social or recreational activities. They may be provided in a centre or in community settings at standard or higher intensity rates. If arranged in advance with participants, providers may charge up to 4 hours for each plan period to document proposed supports and expected outcomes. Price limits vary according to the support needs of the participant and the day of the week the support is provided.

Providers should not claim payment for:

- Expenses related to recreational pursuits, such as event tickets for the participant, as they are not covered by the NDIS.
- The cost of travel or entry for a paid support worker to attend a social or recreational event

Community and social activity costs

This support is included in a participant's plan to enable them to pursue recreational activities and engage in the community when associated with a participant's disability and goals. Participants may use this funding for activities such as camps, vacation and outside school hours' care, course or membership fees. More information can be found in the Operational Guidelines[12]

[12] https://www.ndis.gov.au/Operational-Guideline/including-10.html

Where appropriate, funded hours in a Community Access budget may be converted to a fee and claimed by a provider for these purposes.

New structure for group-based supports

Assistance to access community, social and recreational activities is often provided in a group setting.

This Price Guide introduces a new, consistent price limit structure for this support category. These new price limits allow for per-person costs within each group, and for capital costs for centre-based group care to support providers meeting increased costs associated with delivering care in a facility. The allowance will be charged at $2 per participant, per hour, and has been reflected in the relevant price tables below.

For support ratios that are not stated in this Guide (e.g. two workers for three participants), participants and providers should discuss and agree the most appropriate line item to be used for payments, and the appropriate price to be paid (which might be lower than the price limit for that line item).

Price Controls for Core Supports

This section lists Support Item price limits and benchmarks for Core supports.

Assistance with self-care activities

Standard needs: Assistance with self-care activities

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Assistance With Self-Care Activities - Standard - Weekday Daytime	01_011_0107_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$48.14
Assistance With Self-Care Activities - Standard - Weekday Evening	01_015_0107_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$52.79
Assistance With Self-Care Activities - Standard - Saturday	01_013_0107_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$66.77
Assistance With Self-Care Activities - Standard - Sunday	01_014_0107_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$85.45
Assistance With Self-Care Activities - Standard – Public Holiday	01_012_0107_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$104.08

Complex needs: Assistance with self-care activities

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Assistance With Self-Care Activities - Complex - Weekday Daytime	01_008_0104_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$49.63
Assistance With Self-Care Activities - Complex - Weekday Evening	01_009_0104_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$54.42
Assistance With Self-Care Activities - Complex - Saturday	01_006_0104_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$68.85
Assistance With Self-Care Activities - Complex - Sunday	01_007_0104_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$88.09
Assistance With Self-Care Activities - Complex – Public Holiday	01_005_0104_1_1	Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible.	Hour	$107.33

Assistance with self-care activities: Overnight

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Assistance With Self-Care - Night-Time Sleepover	01_010_0107_1_1	Assistance with, or supervision of, personal tasks of daily living where overnight support is needed, but the care giver can sleep when not required to provide support.	Each	$204.81
Assistance With Self-Care - Active Overnight - Standard	01_002_0107_1_1	Assistance with, or supervision of, personal tasks of daily living where overnight support is needed and the care giver will not have the option to sleep.	Hour	$53.71
Assistance With Self-Care - Active Overnight - Complex	01_018_0104_1_1	Assistance with, or supervision of, personal tasks of daily living where intensive overnight support is needed and the care giver will not have the option to sleep.	Hour	$55.40

Assistance with daily life

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Assistance With Personal Domestic Activities	01_004_0107_1_1	Assist participant to undertake and/or develop skills to maintain their home environment where the participant owns their own home and/or has sole or substantial responsibility for its maintenance. Includes assisting participant to do basic house and yard work.	Hour	$44.61
Specialised Home Based Assistance For A Child	01_016_0104_1_1	Specialist assistance in the home required due to additional requirements of a child's disability; may be provided to strengthen the sustainability of informal supports.	Hour	$47.02
House And/Or Yard Maintenance	01_019_0120_1_1	Performing essential house and/or yard activities that the participant is not able to undertake.	Hour	$46.20
House Cleaning And Other Household Activities	01_020_0120_1_1	Performing essential house cleaning activities that the participant is not able to undertake.	Hour	$41.43

Short Term Accommodation

The cells in the table contain the price limits for each support and the support item reference number in the following format:

Price Limit	**$522.80**
Support Item Reference Number	*01_045_0115_1_1*

Support ratio	Weekday (per 24 hour day)	Saturday (per 24 hour day)	Sunday (per 24 hour day)	Public Holiday (per 24 hour day)
1:1	**$1,479.80** *01_058_0115_1_1*	**$1,855.80** *01_059_0115_1_1*	**$2,317.80** *01_060_0115_1_1*	**$2,779.80** *01_061_0115_1_1*
1:2	**$841.80** *01_054_0115_1_1*	**$1,029.80** *01_055_0115_1_1*	**$1,260.80** *01_056_0115_1_1*	**$1,491.80** *01_057_0115_1_1*

CAPITAL SUPPORTS

This section describes the rules and arrangements that apply to capital supports.

Assistive Technology (Support Category 2.05)

This category includes all aids or equipment supports that assist participants to live independently or assist a carer to support the participant. It also includes related delivery, set-up and some training support items. Usually providing independent advice, guidance, trials, set-up and training (not bundled with sale of an item) is funded through **Capacity Building (Support Category 2.15)**. More detailed information on assistive technologies and consumables codes can be found in the *Assistive Technologies and Consumables Guide*[13].

Vehicle Modifications

Vehicle modifications include the installation of, or changes to, equipment in a vehicle to enable a participant to travel safely as a passenger or to drive.

A participant is free to choose a more expensive option at their own expense, where the more expensive option is not considered to be reasonable and necessary. An example of this situation would be where a vehicle modification has been approved for a

[13] https://www.ndis.gov.au/medias/documents/hf5/hae/8800885211166/AT-and-consumables-guide.pdf

participant, but the participant would like cosmetic or personalised fittings that are not related to their disability or are more expensive than others that have an equivalent function. In this situation, the NDIA will cover the reasonable and necessary component of the modification, and the participant will pay the additional cost.

Home (Support Category 2.06)

This category includes home modifications and Specialist Disability Accommodation (SDA) supports.

Home Modifications

Home modifications include design, construction, installation of or changes to equipment or non-structural components of the building, and installation of fixtures or fittings, to enable participants to live as independently as possible or to live safely at home. All home modifications in excess of $1,500 are quotable.

A participant is free to choose a more expensive option or modification that achieves the same outcome at their own expense, where the more expensive option is not reasonable and necessary. For example, where a home modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not reasonable and necessary, the NDIA will provide funding for the reasonable and necessary component of the modification, and the participant will pay any extra costs.

Specialist Disability Accommodation (SDA)

SDA funding is intended for participants who require a specialist dwelling that reduces their need for person-to-person supports, or improves the efficiency of the delivery of person-to-person supports. SDA funding will only be provided for participants who meet the eligibility criteria. Participants who meet the eligibility criteria will have an extreme functional impairment and/or very high support needs.

SDA does not refer to the support services, but the homes in which these are delivered. SDA may include special designs for people with very high needs or may have a location or features that make it feasible to provide complex or costly supports for independent living.

SDA payments are an adjusted contribution to the cost of capital required for the land and physical building required for SDA needs. Importantly, SDA funding is not intended to cover personal support costs, which are assessed and funded separately by the NDIS. SDA also does not cover accommodation costs where these are not linked to a person's disability or where specialist accommodation with integrated supports is not required. SDA is a separate support category and does not replace Supported Independent Living (SIL) or any other support. Participants receiving SDA could also be eligible for SIL supports in their package.

All providers who are registered with the NDIA for the Registration Group 'Specialist Disability Accommodation' will also be required to declare and ensure that the infrastructure meets the NDIA's specialist built form requirements and the relevant legislation and standards applicable to the state in which the accommodation is situated. These individual sites/locations must also be enrolled with the NDIA.

Due to the nature of the support, the identification of maximum SDA prices and the process by which providers can claim for SDA are more complex than for most other supports. Providers should refer to the Specialist Disability Accommodation section of the

NDIS website for detailed information about maximum prices that can be charged, dwelling enrolment and participant assessments[14].

SDA has two support line items: Specialist Disability Accommodation and SDA person-specific adjustments.

Specialist Disability Accommodation

Each SDA dwelling has a unique maximum price, based on a standard set of factors. There are also limits on the amount that providers of SDA can charge participants in addition to the SDA price, for rent and other board-like services provided. Providers should refer to the SDA section of the NDIS website for detailed guidance on maximum prices[15]. Participants are able to choose to move between SDA dwellings, as long as the SDA dwelling is commensurate with their SDA budget.

SDA person specific adjustments

In certain limited circumstances, the NDIA will continue to make SDA payments on behalf of a participant who has moved out of an enrolled SDA dwelling. Provided all conditions are met in section 6.3 of the National Disability Insurance Scheme (Specialist Disability Accommodation) Rules 2016, vacancy payments may continue to be made for a period of up to 90 days if the dwelling is enrolled to house four or five residents, or up to 60 days if the dwelling is enrolled to house two or three residents[16]. Vacancy

[14] https://www.ndis.gov.au/specialist-disability-accommodation.html

[15] https://www.ndis.gov.au/SDA-pricing-payments.html

[16] https://www.legislation.gov.au/Details/F2017L00209

payments will not be made where a dwelling is only enrolled to house one resident. Vacancy payments will only be payable if the vacancy is available to another NDIS participant and the NDIA has been notified.

CAPACITY BUILDING SUPPORTS

This section describes the rules and arrangements that apply to capacity-building supports. It also notes price limits that apply to specific line items.

Support Coordination (Support Category 3.07)

There are three items in the NDIS Price Guide that describe different layers of support coordination activity:

Support Connection

Assistance for participants to implement their plan by strengthening the ability to connect with the broader systems of supports and understand the purpose of the funded supports and participant in the community. Support Connection will assist a participant to understand the aspects of the plan, assisting in ongoing management of supports, and answer questions as they arise. Support Connection will increase a participant's capacity to maintain support relationships, resolve service delivery issues, and to participate independently in NDIA processes.

The intended outcomes of support connection is for participant's to have the confidence and capacity to lead their plan, with the ongoing need for connection based supports reduced as a participant builds their capacity including, but not limited to:

- Understand the plan: assist the participant to understand their plan, the role of the broader systems of support, and the purpose of funded supports.

- Connection to broader system of support: assist the participant by linking to the broader systems of supports.
- Establish Supports: assist the participant to identify and consider support options.
- Coach, Refine, Reflect: Assist the participant through challenges that come up. Helps participant prepare for review and report on achieved participant outcomes.

Where a participant aged 0-6 years is receiving assistance from Partners in the Community (PITC) delivering Early Childhood Early Intervention (ECEI) services, linking the family to a service provider/s (under ECEI best practice principles a service provider operating under the key worker approach) and support through changes in circumstance will be delivered through Partner arrangements.

Where a participant aged 7 and over is receiving assistance from Partners in the Community (PITC) delivering Local Area Coordination (LAC) services, plan implementation and monitoring support will be delivered by a Participant's Local Area Coordinator.

Support Coordination: Coordination of Supports

The delivery of Coordination of Supports is to assist strengthening a participant's ability to design and the build their supports with an emphasis on linking the broader systems of support across a complex service delivery environment. Coordination of Supports is to focus on supporting participants to direct their lives, not just their services. This involves working together to understand the funding, identify what participants expect from services, and how participants want this designed. Coordination of Supports also includes coaching participants, and working with participants to develop capacity and resilience in their network.

The intended outcomes of providing Coordination of Supports is that a participant's capacity and ability to design, develop and implement their supports is sustained and includes, but is not limited to:

- Connection: assist the participant to develop knowledge, experience and connections with the community and broader systems of support.
- Support Design: works together with participant to understand plan funding and its purpose. Support Coordinator will understand the participant's confidence and skills, and helps participant identify what they want from services. Will develop and design support solutions to meet participant outcomes.
- Establish Supports: assist the participant to identify and consider support options, and link the participant to the broader systems of supports. Where practical creates a supports and action plan to facilitate the participant to implement their plan.
- Crisis: Assistance to resolve points of crisis and developing capacity and resilience in the participant's network.
- Coach, Refine, Reflect: Coach the participant through challenges that come up. Helps participant prepare for review and report on achieved participant outcomes.

Over time as a participants capacity is strengthened this support may be replaced by Support Connection or the introduction of a Local Area Coordinator or Early Childhood Early Intervention Partner in subsequent plans.

Specialist Support Coordination

Specialist Support Coordination is delivered utilising an expert or specialist approach, necessitated by specific high complex needs or high level risks in a participant's situation. Specialist Support Coordination is generally delivered in a time limited, outcomes focused manner and by an appropriately qualified and experienced practitioner to meet the individual needs of the participant's circumstances such as a Psychologist, Occupational Therapist, Social Worker, or Mental Health Nurse. Specialist Support Coordination will address highly complex barriers impacting on the ability to implement their plan.

Specialist Support Coordination should reduce complexity in the participant's support environment in the context of broader systems of support, whilst also assisting the participant to connect with NDIS supports, negotiate solutions with multiple stakeholders and build capacity and resilience. Specialist Support Coordination may also involve assisting in resolving points of crisis for participants, and ensuring a consistent delivery of service during crisis situations.

The intended outcome of specialist support coordination is that complexities and barriers affecting a participant's capacity and ability to implement their plan is reduced, and may be replaced by support coordination in subsequent plans. Specialist Support Coordination may also involve development of an intervention plan which will be put in place by disability support workers.

Improved Living Arrangements (Support Category 3.08)

Support is provided to guide, prompt, or undertake activities to ensure the participant obtains and/or retains appropriate accommodation. This may include assisting to apply for a rental tenancy or to undertake tenancy obligations in line with the participant's tenancy agreement.

Increased Social and Community Participation (Support Category 3.09)

This category involves supports for participation in skills-based learning to develop independence in accessing the community.

Innovative Community Participation

This support item is designed to allow providers to offer new and innovative services to NDIS participants. Any standards applicable to the industry in which the provider operates would need to be met.

Community Participation Activities

This item will enable providers to claim for tuition fees, art classes, sports coaching and similar activities that build skills and independence. Camps, classes and vacation activities that have capacity building components. These may include assistance to establish volunteer arrangements in the community, mentoring, peer support or individual skill development.

The group rates are based on a staff/participant ratio of 1:3. If the group size differs, providers should claim at the rate applicable for the group size. A higher staff ratio for groups may indicate when a participant has challenging behaviour or high medical support needs which require additional assistance from another worker and this is referred to as a higher intensity support.

All supports funded under this item need to be determined as reasonable and necessary given the participant's plan goals and could include, but are not limited to:

- Universal recreational activities: A limited number of lessons could be funded to enable a participant to try out an activity and test their capability and interest in pursuing this activity further – such as horse riding, art, dance or singing classes
- Funding to attend a "camp" or groups that build a person's relationship skills and offer a range of activities and opportunities to explore wider interests.

Other items or adjustments such as customised tools required because of the person's disability, could also be funded.

Finding and Keeping a Job (Support Category 3.10)

Workplace assistance that enables a participant to successfully obtain and/or retain employment in the open or supported labour market. Australian Disability Enterprise's (ADEs) provide supported employment for people with disability who require ongoing support to find and maintain employment.

School Leaver Employment Supports (SLES) (Support Category 3.10)

School Leaver Employment Supports (SLES) is support for Year 12 school leavers to assist them transition from school into employment if they have a goal or aspiration to be employed.

Supports may include work experience generally in open employment, job site training, travel training and activities that contribute to achieving an employment outcome and linkages to ongoing employment support.

This support is now offered nationwide and providers from all states providing this service may be able to claim for this if the participant is funded for SLES.

Improved Relationships (Support Category 3.11)

This category is the provision of specialised assessment where the participant may have complex or unclear needs, requiring long term and/or intensive supports to address behaviours of concern.

Behaviour Support

Behaviour support requires a behaviour support plan to be developed that aims to limit the likelihood of behaviours of concern developing or increasing once identified. This plan outlines the specifically designed positive behavioural support strategies for a participant, their family and support persons that will achieve the intended outcome of eliminating or reducing behaviours of concern. This support category includes specialist behavioural intervention support, which is an intensive support for a participant, intending to address significantly harmful or persistent behaviours of concern.

Improved Health & Wellbeing (Support Category 3.12)

Physical Wellbeing Activities

All activities to support, maintain or increase physical mobility or well-being such as personal training or exercise physiology. Physical well-being activities promote and encourage improved physical capacity and health.

These supports can be funded by NDIS where the physical and wellbeing difficulties are directly attributable to their disability and can assist them to participate in the community.

Dietetics

Individual advice to a participant on managing diet for health and wellbeing due to the impact of their disability.

Improved Learning (Support Category 3.13)

This category is for provision of skills training, advice, assistance with arrangements and orientation to assist a participant moving from school to further education.

Improved Life Choices (Support Category 3.14)

Plan and Financial Capacity Building

This reasonable and necessary support focuses on strengthening the participant's ability to undertake tasks associated with the management of their supports. This includes:

- Building financial skills
- Organisational skills
- Enhancing the participant's ability to direct their supports
- Develop self-management capabilities

Plan and Financial Capacity Building providers are expected to assist the participant to develop their skills for self-management in future plans, where this is possible. As a part of this capacity building support, providers are to assist the participant with the overall management of the plan including assisting the participant to engage providers, develop service agreements, paying providers and claiming payment from the NDIA and assisting the participant to maintain records.

Funding for plan management includes an establishment fee and payments at an hourly rate for completing this work.

Plan Management – Financial Administration *(previously referred to as Financial Intermediary)*

Plan Management – Financial Administration funding applies to registered providers who undertake financial administration of a plan on behalf of a participant.

Plan Management – Financial Administration funding includes a setup fee to establish the payment arrangements with providers and a monthly processing fee. This support assists a participant by:

- Giving increased control over plan implementation and utilisation with plan financial assistance
- Managing and monitoring budgets over the course of the plan
- Managing NDIS claims and paying providers for delivered service
- Maintaining records and producing regular statements showing the financial position of the plan
- Providing advice on commercial terms within service agreements
- Providing access to a wider range of service providers, including non-registered providers whilst remaining in line with the price limits contained within this Guide.

A Plan Management – Financial Administration provider will typically possess bookkeeping/accounting skills and have systems in place for efficiently processing payments on behalf of a participant.

Improved Daily Living (Support Category 3.15)

This category includes the assessment, training, development and/or therapy to assist in the development or increase in skills for independence and community participation. Supports can be delivered in groups or individually.

Therapy Services

In the NDIS, therapy supports are for participants with an established disability, where maximum medical improvement has been reached, to facilitate functional improvement.

For people who access the Scheme as ‘early intervention’ NDIS participants, reasonable and necessary supports are likely to be a blend of medical and disability therapies, but should be predominantly disability therapy supports. Therapy in this context must be aimed at adjustment, adaption and building capacity for community participation.

For NDIS participants whose medical condition, illness or disease requires a particular treatment to maintain the functioning of a body part, or slow/prevent the deterioration, the NDIS may fund reasonable and necessary training for non-skilled personnel to undertake this intervention as part of the usual daily personal care. For participants where such treatment can only be met through skilled rather than non-skilled care, this treatment is to be funded through medical funds, not the NDIS.

Ongoing funding for therapy is subject to a detailed support plan that is designed to deliver progress or change for the participant. Providers develop this plan with the participant and it should clearly state the expected therapy outcomes and demonstrate a link to the participant’s goals, objectives and aspirations.

Therapists often spend time making notes at the end of appointments as part of the delivery of support to participants. This is standard practice, and part of individual support for participants, even when this activity is not during face-to face time. Therapists may charge for a portion of this time, as long as this is agreed with the participant in advance.

Maintenance Therapy

Where maintenance therapy is reasonable and necessary, it is funded as part of ongoing direct support hours (delivered by carers who are or can be trained in this if required), and is not funded as ongoing therapy.

For participants whose medical condition or disability requires a particular regime to maintain functioning of a body part, or to slow the deterioration of a medical condition or body part, the NDIS will fund reasonable and necessary training for non-qualified personnel to assist the individual as part of usual daily care.

Where a skilled therapist is involved in establishing a therapy program for a participant, funding can include the development of a plan and training for a therapy assistant, informal or funded carers, as part of usual care. Building capacity with family and carers to undertake therapy or exercises under the supervision of a skilled therapist can deliver ongoing benefit to NDIS participants.

Massage Therapy

Massage, delivered directly to impact a body part or body system, is more appropriately provided by the health system and is therefore not funded by the NDIS.

Multidisciplinary Team Intervention

This support item enables a coordinated multidisciplinary approach to be delivered to participants beyond the age covered by the Early Childhood Early Intervention approach. All team members will claim against a single support item, thereby increasing flexibility in service delivery to reflect the changing needs of a participant.

Therapy reports

Therapists will be expected to provide progress reports to the participant and NDIS at agreed times. A provider may charge for the time taken to write a therapy report that is requested by the NDIA, and claim this against the appointment at the hourly rate for the relevant support item. A report requested by the NDIA is considered a report that is required at the commencement of a plan which outlines plan objectives and goals, and at plan review which measures against the originally stipulated goals. Providers may also charge for any other NDIA-requested therapy report that is stipulated as being required in a participant's plan.

Early Childhood Intervention Supports

Early Childhood Early Intervention (ECEI) is a nationally consistent, best practice support approach for children 0-6 years old who have a developmental delay or disability, which provides individualised support for each child based on their needs.

The NDIS ECEI approach has been designed to support all children and their families to achieve better long-term outcomes, regardless of diagnosis. All children and families will be treated as individuals to ensure that they receive the right support to meet their goals and aspirations. The type of supports will be different for every child and their family according to their needs.

Eligible participants will have budgets built by ECEI Partners to reflect the child and family individual needs, applying the reasonable and necessary criteria. Budgets will allow flexibility in service delivery by ECEI providers to reflect the changing needs of the participant.

The provision of supports under early childhood intervention are expected to deliver outcomes for the child that will enable participation in mainstream or education from commencement of school. Each child's NDIS plan will summarise the outcomes expected from early intervention and will be reviewed at least annually.

Providers of these supports can use the same claiming rules for travel, cancellation and report writing as those providing therapy supports.

Group Supports for Therapy

The NDIA prefers to allow participants and providers flexibility in negotiating arrangements, so there may not be price controls or support items for specific group ratios beyond what is currently in place. For support ratios that are not stated in this Guide (such as one therapist to two participants, or one therapist to four participants), the NDIA encourages participants and providers to discuss arrangements both parties agree to, including price. Therapy delivered in a group may be claimed using the relevant therapy support line item but with lower prices than the price limit as agreed between provider and participant. This arrangement for support ratios is intended to allow providers to offer a range of services and discuss with participants about more flexible arrangements which both parties prefer.

Support Coordination

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Support Connection	07_001_0106_8_3	Assistance for participants to implement their plan by strengthening the ability to connect with the broader systems of supports and understand the purpose of the funded supports and participant in the community. Support Connection will assist a participant to understand the aspects of the plan, assisting in ongoing management of supports, and answer questions as they arise.	Hour	$58.92
Coordination Of Supports	07_002_0106_8_3	Further qualifications/experience required to strengthen a participant's ability to design and the build their supports with an emphasis on linking the broader systems of support across a complex service delivery environment. Coordination of Supports is to focus on supporting participants to direct their lives, not just their services. This may include resolving points of crisis, and developing resilience in the participant's network.	Hour	$96.04
Training In Planning And Plan Management	07_003_0117_8_3	Capacity building and training in plan administration and management for participants unable to do this independently but who could do all or part of the task with training.	Hour	$57.32
Specialist Support Coordination	07_004_0132_8_3	Generally delivered in a time limited, outcomes focused manner and by an appropriately qualified and experienced practitioner to meet the individual needs of the participant's circumstances. Necessitated by specific high complex needs or high level risks in a participant's situation, to reduce complexity in the participant's support environment in the context of broader systems of support, whilst also assisting the participant to connect with NDIS supports, negotiate solutions with multiple stakeholders and build capacity and resilience.	Hour	$182.74

Improved Living Arrangements

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Assistance With Accommodation And Tenancy Obligations	08_005_0106_2_3	Support is provided to guide, prompt or undertake activities to ensure the participant obtains and/or retains appropriate accommodation. May include assisting to apply for a rental tenancy or to undertake tenancy obligations.	Hour	$58.92

Increased Social and Community Participation

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Life Transition Planning Including Mentoring, Peer-Support And Individual Skill Development	09_006_0106_6_3	Establishing volunteer assistance within the participant's home or community to develop skills. For instance, assistance in attending appointments, shopping, bill paying, taking part in social activities and maintaining contact with others.	Hour	$58.92
Skills Development In A Group	09_007_0117_6_3	Training for the participant in a group of 2 or more to increase their independence in daily personal activities.	Hour	$28.66
Individual Skills Development And Training	09_009_0117_6_3	Individual life skills development and training including public transport training and support, developing skills for community, social and recreational participation.	Hour	$57.32

Finding and Keeping a Job

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Employment Related Assessment And Counselling	10_011_0128_5_3	Workplace assessment conducted by a workplace rehabilitation provider to determine adjustments or modifications to the workplace or work processes to ensure employment is maintained and matches the employee's capabilities.	Hour	$182.74
Individual Employment Support	10_016_0102_5_3	Time limited, on-the-job training including post placement support related to the participant's disability that enables them to adjust and manage demands of the job in the workplace environment, and to assist employers to successfully manage the participant's placement.	Hour	$57.82

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Employment Preparation And Support In A Group - Group Of 3	10_017_0102_5_3	In a group setting, building capacity by providing skills training such as transport, time/financial management and self-care to support a participant to get a job post school. This assumes a group of 3.	Hour	$19.28

Improved Relationships

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Specialist Behavioural Intervention Support	11_022_0110_7_3	Highly specialised intensive support interventions to address significantly harmful or persistent behaviours of concern. Development of behaviour support plans that temporarily use restrictive practices, with intention to minimise use of these practices.	Hour	$200.58
Behaviour Management Plan Including Training In Behaviour Management Strategies	11_023_0110_7_3	Training for carers and others in behaviour management strategies required due the participant's disability.	Hour	$182.74
Individual Social Skills Development	11_024_0117_7_3	Social skills development with an individual, for participation in community and social activities.	Hour	$57.32

Improved Health and Wellbeing

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Dietician Consultation And Diet Plan Development	12_025_0128_3_3	Individual advice to a participant on managing diet for health and well-being due to the impact of their disability.	Hour	$182.74
Dietitian Group Session – Group of 3	12_026_0128_3_3	Group based specialist dietary advice on managing diet for well-being due to the impact of their disability. This assumes a group of 3.	Hour	$60.92
Exercise Physiology	12_027_0126_3_3	Individual advice to a participant regarding exercise required due to the impact of their disability.	Hour	$148.69

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Exercise Physiology In A Group - Group of 3	12_028_0126_3_3	Advice to a participant regarding exercise required due to the impact of their disability, provided in group setting, assuming a group of 3.	Hour	$49.56
Personal Training	12_029_0126_3_3	Personal training provided to a participant due to the impact of their disability.	Hour	$55.72

Improved Learning

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Transition Through School And To Further Education	13_030_0102_4_3	Provision of skills training, advice, assistance with arrangements and orientation to assist a person with disability moving from school to further education.	Hour	$58.92

Improved Life Choices

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Plan and Financial Capacity Building	14_031_0127_8_3	Undertaking regular liaison with a participant to strengthening their ability to undertake tasks associated with the management of their supports. Providers of this support are to assist the participant with the overall management of the plan including assisting the participant to engage providers, develop service agreements, paying providers and claiming payment from the NDIA and assisting the participant to maintain records.	Hour	$55.27
Plan Management And Financial Capacity Building - Set Up Costs	14_033_0127_8_3	A one-off (per plan) establishment fee for setting up of the financial management arrangements for managing of funding of supports.	Each	$222.85
Plan Management – Financial Administration	14_034_0127_8_3	A monthly fee for the ongoing maintenance of the financial management arrangements for managing of funding of supports.	Monthly	$100.18

Improved Daily Living Skills

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Assistance With Decision Making, Daily Planning and Budgeting	15_035_0106_1_3	Provision of time limited support to assist a person to develop and maintain daily budget, including assisting in planning purchases.	Hour	$44.54
Individual Assessment And Support By A Nurse	15_036_0114_1_3	Provision of care, training and supervision of a delegated worker to respond to the complex care needs of a participant where that care is not the usual responsibility of the health system.	Hour	$97.78
Individual Skill Development And Training Including Public Transport Training	15_037_0117_1_3	Individual training provided in the home for general life skills to increase independence.	Hour	$44.54
Training For Carers/Parents	15_038_0117_1_3	Training for carers in matters related to caring for a person with disability.	Hour	$57.32
Specialised Group Early Childhood Interventions - Max Group Of 4	15_039_0118_1_3	Group based specialist interventions to assist a child with disability or developmental delay and their family in home, care, community and education settings. Maximum group of 4.	Hour	$60.92
Capacity Building Supports For Early Childhood	15_040_0118_1_3	Individual specialist interventions to assist a child with disability or developmental delay and their family in home, care, community and education settings.	Hour	$182.74
Counselling Group - Group Of 3	15_042_0128_1_3	Facilitating self-knowledge, emotional acceptance and growth and the optimal development of personal resources through a group session. Assisting participants to gain their personal goals and gain greater insight into their lives. Group of 3.	Hour	$50.98
Individual Counselling	15_043_0128_1_3	Facilitating self-knowledge, emotional acceptance and growth and the optimal development of personal resources on a one to one basis. Assist participants to work towards their personal goals and gain greater insight into their lives.	Hour	$152.95
Group Therapy – Group Of 3	15_044_0128_1_3	Provision of interventions by more than one professional in a group session towards the participants agreed goals. Group of 3.	Hour	$59.76

Support Item	Support Item Ref No.	Description	UOM	Price Limit
Community Engagement Assistance	15_045_0128_1_3	Program to empower participants and improve interactions between participants and their social networks. Assistance to engage effectively in the community through a group approach to help achieve goals, gain insight into their lives and make informed decisions.	Hour	$42.59
Therapy Assistants (Level 1)	15_052_0128_1_3	Support role for an allied health assistant working under the supervision of a therapist.	Hour	$45.66
Selection And/Or Manufacture Of Customised Or Wearable Technology	15_047_0135_1_3	Selection and/or manufacturing of customised or wearable technology.	Hour	$164.91
Individual Assessment, Therapy And/Or Training (Includes Assistive Technology)	15_048_0128_1_3	Assessment, therapy, training, fitting and any approved travel to deliver support.	Hour	$179.26
Community Nursing Care For Continence Aid	15_051_0114_1_3	Continence aids: assessment, recommendation, and training delivered by a nurse.	Hour	$97.78

Dear Providers

This letter provides an update on the Independent Pricing Review (IPR).

In response to market feedback that, in some areas, price limits set by the NDIA required more detailed consideration, the National Disability Insurance Agency (NDIA) Board engaged McKinsey & Company in June 2017 to undertake an Independent Pricing Review for the National Disability Insurance Scheme (NDIS). As the NDIS is rolled out across Australia, the establishment of the IPR reflected the NDIA's commitment to developing a vibrant provider sector that can provide reasonable and necessary supports to NDIS participants to help them live a better life.

As part of this independent process, McKinsey & Company consulted with over 1000 individuals, held ten open forums, nine webinars, and 45 one-on-one meetings in the second half of 2017.

The IPR was commissioned recognising the important role that price plays as a key driver of value for participants, particularly during transition. In commissioning the review, it was acknowledged that prices paid to providers must be sufficient to create adequate supply to meet the short and longer term needs of participants. To that end, the IPR undertook detailed analysis of provider economics, market development, and Scheme and sector data, resulting in a deeper understanding of the complex environment in which providers operate.

In March 2018, the full IPR and the NDIA Response were published, including in principle endorsement of the report's 25 recommendations. The NDIA response also outlined that additional work was required prior to implementation for some of the more complex recommendations.

The disability sector has welcomed the IPR's message that close attention must be paid to price, and in particular that action was needed to support providers during their transition to the participant centred funding approach that is integral to the NDIS . The NDIA has continued to engage and consult with providers about the impact of the IPR's recommendations, and has committed to communicate with providers and implement the IPR recommendations in a thorough and timely way. Following those initial soundings, the NDIA provided an update to the market in April, 2018 revising those recommendations that would be progressed immediately and those where further work was required.

The NDIA now confirms the specific IPR recommendations that will be implemented for 2018/19 from 1 July 2018. These changes will give providers immediate support to meet the challenges of transitioning to the participant centred NDIS funding approach.

Price limits for most supports will increase. For standard intensity attendant care supports, price limits will include a new 2.5% loading, following the IPR recommendation to give providers temporary support for their overhead costs (TSO). 'Attendant care' refers both to assistance with daily personal activities and assistance with community participation.

The initial IPR recommendation was that this should be put in place for one year. However, the NDIA Board has decided that this TSO measure will remain partially in place (at 1.25%) in 2019/20, rather than be removed after 12 months as originally recommended. While this

TSO loading is in place, the NDIA will continue to work to deliver initiatives which will reduce provider administrative costs and deliver a better NDIS provider experience. Significant progress has been made, with the NDIA delivering provider portal enhancements, payments process improvements, and continuous development of helpful tools such as the provider finder. The NDIA has clear initiatives for delivery over the coming financial year, which will build on this work, and will also work with providers to help improve their efficiency.

New price limits will also take full account of growth in wage costs under the Social, Community, Home Care and Disability Services Industry Award and the Equal Remuneration Order. The cumulative impact of both is 5.14%. When combined with the TSO of 2.5% for the year, this means that the price limit for standard attendant care supports will increase by 7.6% from 1 July 2018.

Group community participation supports will be converted to a new, consistent structure in the NDIS support catalogue, to give providers and participants more clarity and flexibility. Providers will also benefit from new price limits that recognise per-person costs when delivering group supports, and include an allowance for capital costs when these supports are delivered in a specialist centre.

New, more flexible arrangements for provider travel and appointment cancellations will also be introduced from 1 July 2018.

To ensure that participants are not adversely impacted by this price increase and that they can purchase their reasonable and necessary supports, the 1 July 2018 price limit changes will be accompanied by automatic updates to participant budgets and service bookings. These adjustments will reflect the additional costs that each individual participant will face as a result of the increases in price limits. Other changes, such as for cancellation and travel cannot readily be adjusted, but will be monitored closely for individual participants to ensure they are not adversely affected.

Full details of all price limit changes are being published at the same time as this advice is provided.

As advised in April, some other changes—originally envisaged to be implemented on July 1—will be delayed pending further consultation.

Specifically, this applies to therapy support. Therapy support is crucial for many participants, and providers are responding to the opportunity that the roll-out of the NDIS provides. For instance, while variations in growth rates occur among states and territories, in the year to 30 March 2018, the number of registered providers across Australia offering therapeutic supports more than doubled from 3560 to 7161. Therapy providers are the single largest group of registered providers in all states, other than Western Australia where many are expected to register now that the NDIS is fully national.

However, based on therapy provider feedback since the IPR; the interrelationship of therapy prices with the IPR's recommendations in relation to pricing for complexity; and Western Australia's decision to join the NDIS, the NDIA has asked McKinsey & Company to ensure the appropriateness of its therapy price control recommendations. The NDIA was particularly eager to ensure that initial IPR recommendations captured differences among states, including those with a substantial number of participants in remote areas, along with differentiation by therapy types. For this reason, adjustments to therapy prices will only be implemented after this work is complete and fully considered.

This approach reflects the NDIA's commitment to working collaboratively with the sector to deliver a strong, vibrant and innovative market for quality disability supports.

Following implementation of the first set of IPR recommendations, the NDIA will move immediately to finalise the next set of recommendations, including therapy price limits and complexity. Consultation with provider groups and experts from the sector in relation to these recommendations will occur before implementation. We expect the outcomes of the important work on therapy and complexity to be implemented in late 2018.

You can find more information relating to the implementation of IPR recommendations on the NDIS website: https://www.ndis.gov.au/providers/independent-pricing-review.html.

Regards

Robert De Luca
Chief Executive Officer
National Disability Insurance Agency

IPR Implementation

The NDIA confirms that the Independent Pricing Review (IPR) recommendations that will be implemented for 2018/19, taking effect on 1 July 2018 are as follows:

- 4 - Regional Travel
- 9 – High intensity loading for centre-based activities
- 10 - Short Term Accommodation
- 14 - Temporary Support for Overheads (TSO)
- 15 - Cancellation policy for core supports
- 16 - Group supports
- 18 - Therapy Assistants (phase one)
- 19 - Therapy travel (phase one)
- 20 – Cancellation policy for therapy
- 21 – Reports requested by the NDIA

Full details of these changes are available in the link to the 2018-19 NDIS Price Guide. Key changes, to take effect on 1 July 2018, include the following:

- A TSO loading of 2.5 per cent will be applied to all standard intensity attendant care price limits in the 2018-19 Price Guide.
  - This measure will provide temporary financial relief for providers as they transition to the NDIS funding approach of individualised participant packages.
  - Half of this loading (1.25%) will remain in place during 2019-20.
  - The loading will be removed in 2020-21, as an adjustment to the annual price review.
  - While the TSO loading is in place, the NDIA will continue to work on pathway initiatives that will provide ongoing cost reductions and an improved and easier experience for disability support providers.. Initiatives already underway or completed include improvements to the provider portal, provider payments systems, and helpful tools such as the provider finder.

Standard needs attendant care price limit per hour	Without TSO	TSO for 12 months	Decision - extended TSO
2017/18	$44.72	$44.72	$44.72
2018/19	$47.02	$48.14	$48.14
2019/20*	$49.44	$49.44	$50.02

*The 2019/20 figures are projections only, assuming a 3.5% growth in Modern Award wage levels on 1 July 2019.

- As in previous years, price limit increases for attendant care take full account of growth in wages under the *Social, Community, Home Care and Disability Services Industry (SCHADS) Award* as well as the Equal Remuneration Order (ERO) by Fair Work Australia. This results in the following adjustments.

	Component	Cumulative
ERO 1 December 2017	2.27%	
SCHADS wage growth 1 July 2018	3.50%	5.14%*
TSO (applies to standard intensity supports)	2.50%	7.64%

* See Appendix A for further detail.

- Combined with annual 'indexation' adjustments to account for growth in provider costs, this means that price limits will increase in 2018/19 by:
  - 7.64% for standard intensity attendant care supports (including TSO),
  - 5.14% for high intensity attendant care supports (TSO does not apply – see Appendix A), and
  - 2.1% for capacity-building supports, including therapy, based on growth in the national Wage Price Index (these supports are delivered by highly skilled workers, for whom the SCHADS award is not an appropriate reference).
- Based on provider feedback, a new price limit will be added for Short Term Accommodation (STA) to allow for a 1:3 support worker to participant ratio. The new limit will be consistent with existing STA price limits, and will provide more flexibility to providers and participants in making support arrangements.
- Providers will be able to charge 90 per cent of the service booking price for short notice cancellations, up to a maximum of 12 cancellations per year for core supports and 6 hours per year for therapy.
- New price limits will be introduced for both standard and high intensity community-based group supports, to allow for support ratios of 1:4 and 1:5 (i.e. worker:participant ratio).
- A capital allowance will be included in the price limits for centre-based group care.
- Therapy travel recommendations that will benefit providers will also be introduced from 1 July 2018 (i.e. allowing providers to charge up to 45 minutes of travel time in rural areas). More specific travel claiming arrangements for remote areas that were flagged in the IPR (allowing travel costs on a quote basis) will be implemented as soon as possible. In the meantime, travel cost arrangements for remote areas can still be claimed, subject to explicit agreement by the participant in advance.

The implementation schedule for the remaining IPR recommendations remains as outlined in the 24 April update (https://www.ndis.gov.au/news/ipr-implementation-update.html).

The NDIA is committed to ensuring that providers are supported as they transition from block funding to the participant-led NDIS, and the eventual creation of a deregulated market for services.

Participant Plans will be adjusted to match the indexation increases in price limits for disability supports, ensuring participants will maintain their purchasing power for reasonable

and necessary supports. The specific impact on each participant's budget will vary, according to the mix of supports that are reasonable and necessary for each individual.

Changes to the group support price limit tiers and cancellation and travel policies will not be adjusted in participant plan budgets. While these changes will have a positive impact on individual participants through increased flexibility, changes to support arrangements between providers and participants will only come into effect through an individual participant's choice, making it difficult to make broader adjustments. The NDIA will monitor cancellation practices, particularly in areas with high risk of cancellations and heavy reliance on provider travel (e.g. participants living in regional areas). The NDIA will consider targeted action if there is a risk to the delivery of reasonable and necessary supports, without the need for a plan review.

The 'Supported Independent Living (SIL) tool', used to determine reasonable and necessary support budgets for participants in shared accommodation arrangements, will be updated before 1 July 2018. The new version, for use in 2018/19, will include specific changes to provide for an 'indexation' adjustment of 5.14% to account for growth in wages. Consistent with the IPR recommendation, the TSO will not apply to SIL calculations. Because the SIL tool will be in use from July 1, there is no requirement for SIL benchmarks, and they will be removed from the NDIS Price Guide.

Nonetheless, existing service bookings between providers and participants for SIL will be updated as appropriate in the following ways:

- The NDIA understands that SIL providers will experience the same wage cost growth on 1 July 2018 as other providers of attendant care supports, but may not have factored this growth into their original quotes. For this reason, the NDIA is taking steps to make sure that any SIL service bookings (and participant budgets) that continue into the 2018/19 financial year are adjusted appropriately.
- In future years, SIL service bookings will not be subject to automatic updates to account for inflation. Instead, the NDIA expects that SIL providers will use the updated SIL tool to anticipate wage growth during the course of their service bookings and factor in indexation as part of their quote.

APPENDIX A

Price limits increase in the NDIS line with the increase in costs that providers face in delivering different supports. For attendant care, most of the cost is driven by wages of support workers, who are employed under the *Social, Community, Home Care and Disability Services Industry* (SCHADS) Award. Their wages increase in line with national minimum wage decisions and the Equal Remuneration Order (ERO). Some other costs that providers face, such as overheads, increase at a different rate, typically in line with general measures of inflation such as CPI. Combining these increases for different costs results in an indexation adjustment to attendant care price limits of 5.14% in 2018-19. The following table explains this calculation in detail.

<table>
<tr><th colspan="3">Components of cost growth</th><th>Cost growth</th><th>Estimated proportion of costs</th><th>Weighted average cost growth</th></tr>
<tr><td rowspan="2">Labour cost</td><td>ERO 1 December 2017</td><td>2.27%</td><td rowspan="2">A. 5.8%</td><td rowspan="2">C. 82%</td><td rowspan="3">5.14%
A * C + B * D</td></tr>
<tr><td>SCHADS wage growth 1 July 2018</td><td>3.5%</td></tr>
<tr><td>Other Cost</td><td>CPI</td><td>1.9%</td><td>B. 1.9%</td><td>D. 18%</td></tr>
</table>

Combined with annual ‘indexation’ adjustments to account for growth in provider costs, this means that price limits will increase in 2018/19 by:

- 7.64% for standard intensity attendant care supports (including TSO),
- 5.14% for high intensity attendant care supports (high intensity supports will be addressed by more specific IPR recommendations, so the IPR recommended that the TSO apply to standard intensity supports only), and
- 2.1% for capacity-building supports, including therapy, based on growth in the national Wage Price Index (these supports are delivered by highly skilled workers, for whom the SCHADS award is not an appropriate reference).

Acknowledgements

NDS gratefully acknowledges the expert advice and guidance of Dr Ian Watson in the development of Workforce Wizard, and the innovative work of software company Mozzler.

This data for this report was collected in part through the NDS Disability Workforce Innovation Network project 2014-16 which took place with the assistance of funding provided by the Australian Government. NDS also recognises the significant contribution of the industry in embracing Workforce Wizard, helping shape it and making it the successful tool it is today.

About this report

This is the third edition of a twice yearly publication. It was prepared by Adrian Lui and Caroline Alcorso, NDS. The next edition will be published in February 2019.

About National Disability Services

National Disability Services ('NDS') is the peak body for non-government disability services. Its purpose is to promote quality service provision and life opportunities for people with disability. NDS's Australia-wide membership includes more than 1000 non-government organisations, which support people with all forms of disability. NDS provides information and networking opportunities to its members and policy advice to state, territory and federal governments.

National Disability Services

Contents

Introduction

This midyear update is part of NDS's on-going tracking of disability workforce trends using data from Workforce Wizard, the sector's quarterly workforce data collection. Eleven quarters of Workforce Wizard data, now covering some 45,000 workers nationally, are presented.

The update examines whether the patterns comprehensively analysed in our February 2018 Australian Disability Workforce Report (available through the NDS website) are continuing, stalling or reversing.

In addition, it discusses state-level features which highlight the challenges faced by the sector in different parts of the country. Finally, the results of the two latest 'spotlight topics' are included, providing new information about topics providers report on a one-off basis.

This report does not give a detailed account of our methodology, nor does it present all the data behind trends. For methodology, please read the February 2018 Australian Disability Workforce Report available at the NDS Workforce Hub, on the Knowing Your Workforce page. If you would like to receive tables with the data behind the trends presented here, please contact Adrian Lui (email: adrian.lui@nds.org.au).

As always, we are keen to hear your suggestions about reports, and what you would like Workforce Wizard to tackle next. Workforce Wizard is your workforce data tool, built for convenience, rigour and maximum usefulness for the sector.

Chapter 1: The latest trends in the disability support workforce

Workforce Wizard data over the last two years has shown that the majority of disability support workers in Australia are employed either as permanent or casual employees, with very few people on short-term contracts. Permanent employment has been more common, but a gradual trend towards increased casual employment has been emerging. Has this trend continued during 2018?

Employment type

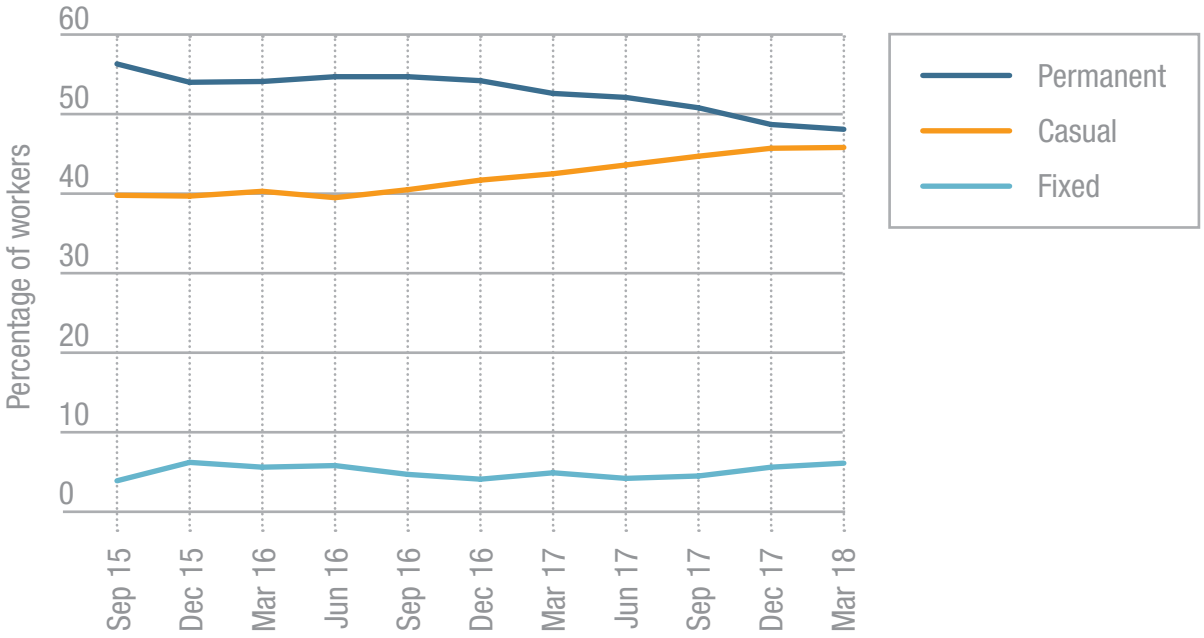
The latest data shows that most (48%) disability support workers are still employed on a permanent basis, whether part-time or full-time. However, the proportion continues to fall. Casual employment, alternatively, is rising and in March 2018 accounted for nearly half of the total workforce (see Figure 1).

Key points

- In September 2015, permanent workers made up 56% of the disability support workforce
- In March 2018, permanent workers made up 48% of the disability support workforce
- Casual employment as a proportion of the total increased from 40% in September 2015 to 46% in March 2018

Increased use of casual workers has been particularly notable in the last four quarters.

Figure 1: *Forms of employment*

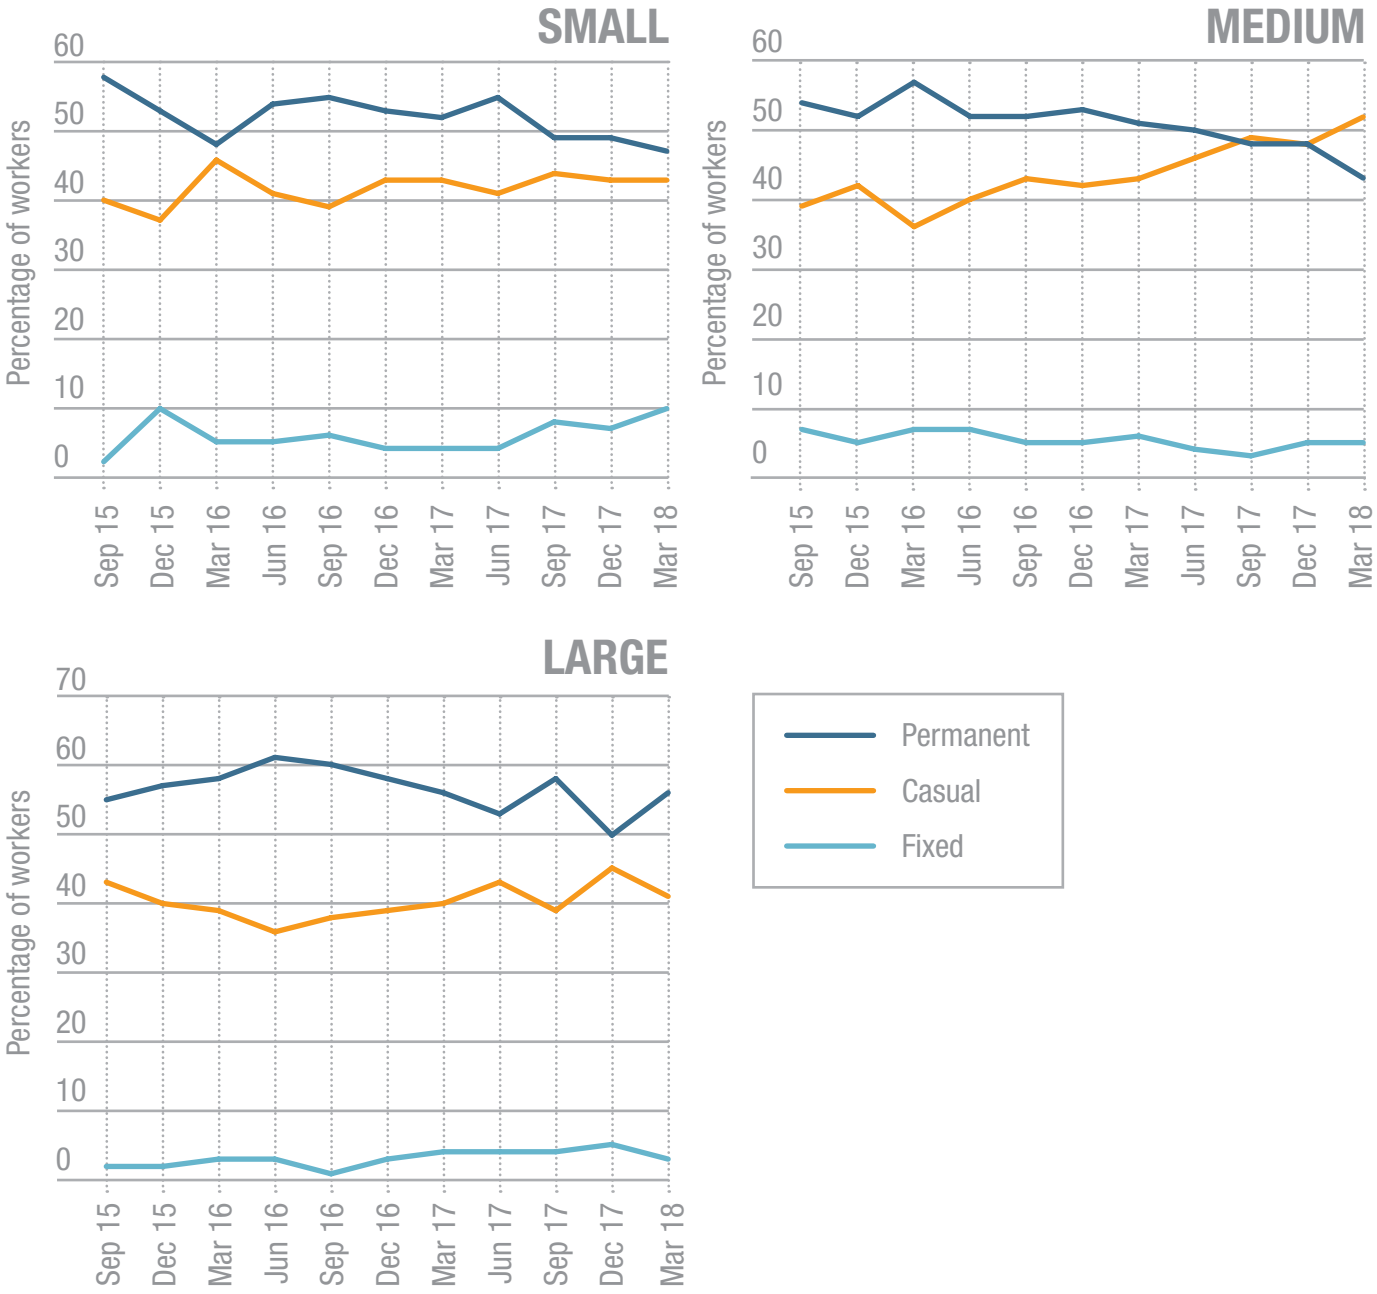


Small and medium organisations[1] — where casualisation takes place

The casualisation trend, however, is not universal. In the February 2018 Australian Disability Workforce Report (available at www.nds.workforce-hub/knowing-your-workforce), we observed that casualisation is more prevalent in small and medium organisations, with the trend absent in large organisations. This pattern has held.

In small organisations, the gap between permanent and casual employment shares has been closing since September 2017. In medium organisations, casual employment has already become the most common form of employment. Only in large organisations does a notable preference for permanent workers remain (see Figure 2).

Figure 2: *Forms of employment by organisation size*



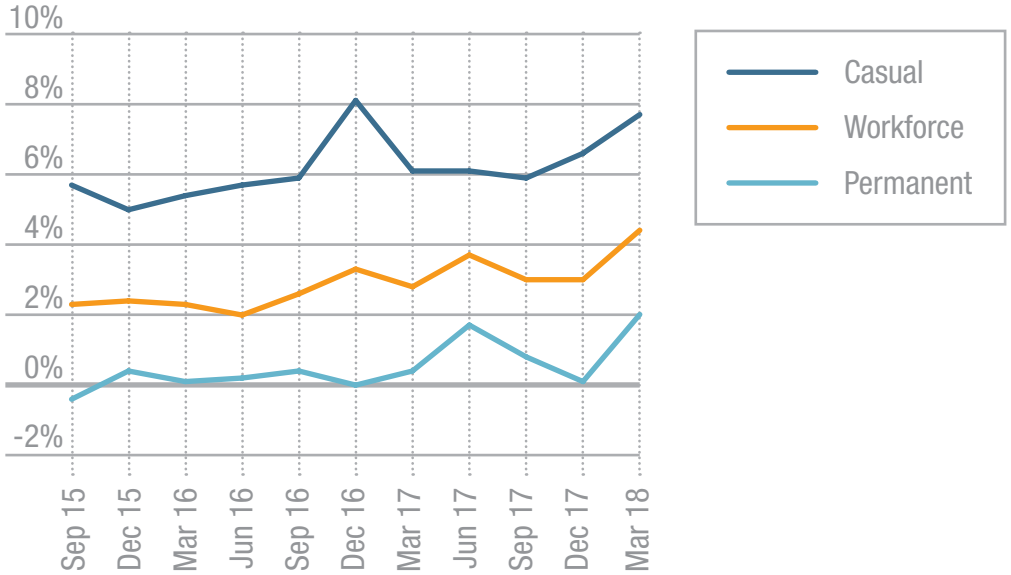
1 Organisational size is classified on the basis of the number of disability support workers in the organisation, as follows: Small = less than 50 workers; Medium = 50 to 199 workers; and Large = 200 or more workers.

Employment growth

The disability workforce has been growing strongly. According to NDS's February 2018 report, the disability support workforce growth rate was 11.1% per year (averaged over a two-year period between September 2015 and 2017). This compares with growth of just 1.6% for the Australian workforce as a whole at the time.

This remarkable growth rate came overwhelmingly from the recruitment of casual workers. The average permanent workforce growth rate was just 1.3% per year, while the casual growth rate was 26% per year.

Figure 3: *Quarterly workforce growth rate by form of employment*



During the December 2017 and March 2018 quarters, net workforce growth continued to be strong. Both the permanent and casual workforces grew at a stronger pace than in the earlier periods.

This is consistent with faster employment growth across the Australian economy, albeit not as fast as in disability. National employment growth (trend) was 2.6% between May 2017 to May 2018.[2]

Key points

- Overall, the disability support workforce grew by 13.8% in the 2017-18 financial year
- This reflected an average growth rate of 3.8% for the permanent component and 26.8% for the casual component.

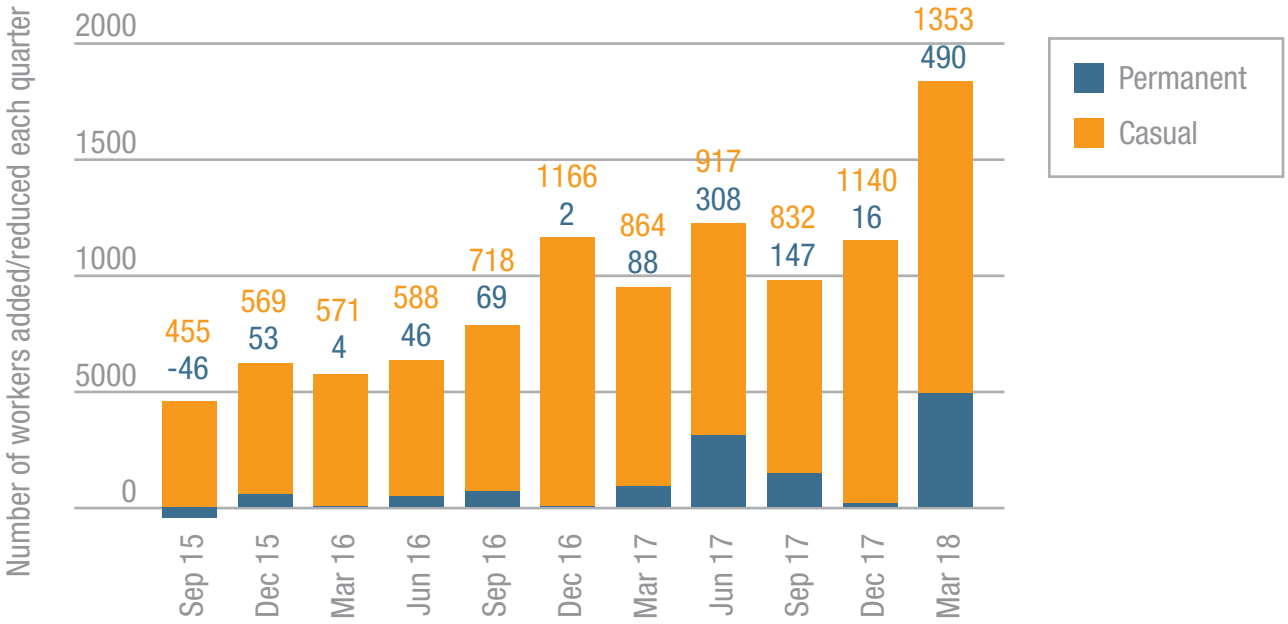
Employment gains and losses by organisational size

Of note is that in March 2018, Workforce Wizard data indicated a large net increase in permanent employment. This was due to one large organisation acquiring services previously provided by a public sector agency, as part of the NSW Government's divestment program.

Figure 4 shows the 'net component change' in the disability workforce. Employment losses in the sector tend to come from permanent workers departing while most of the gains are from increased recruitment of casuals.

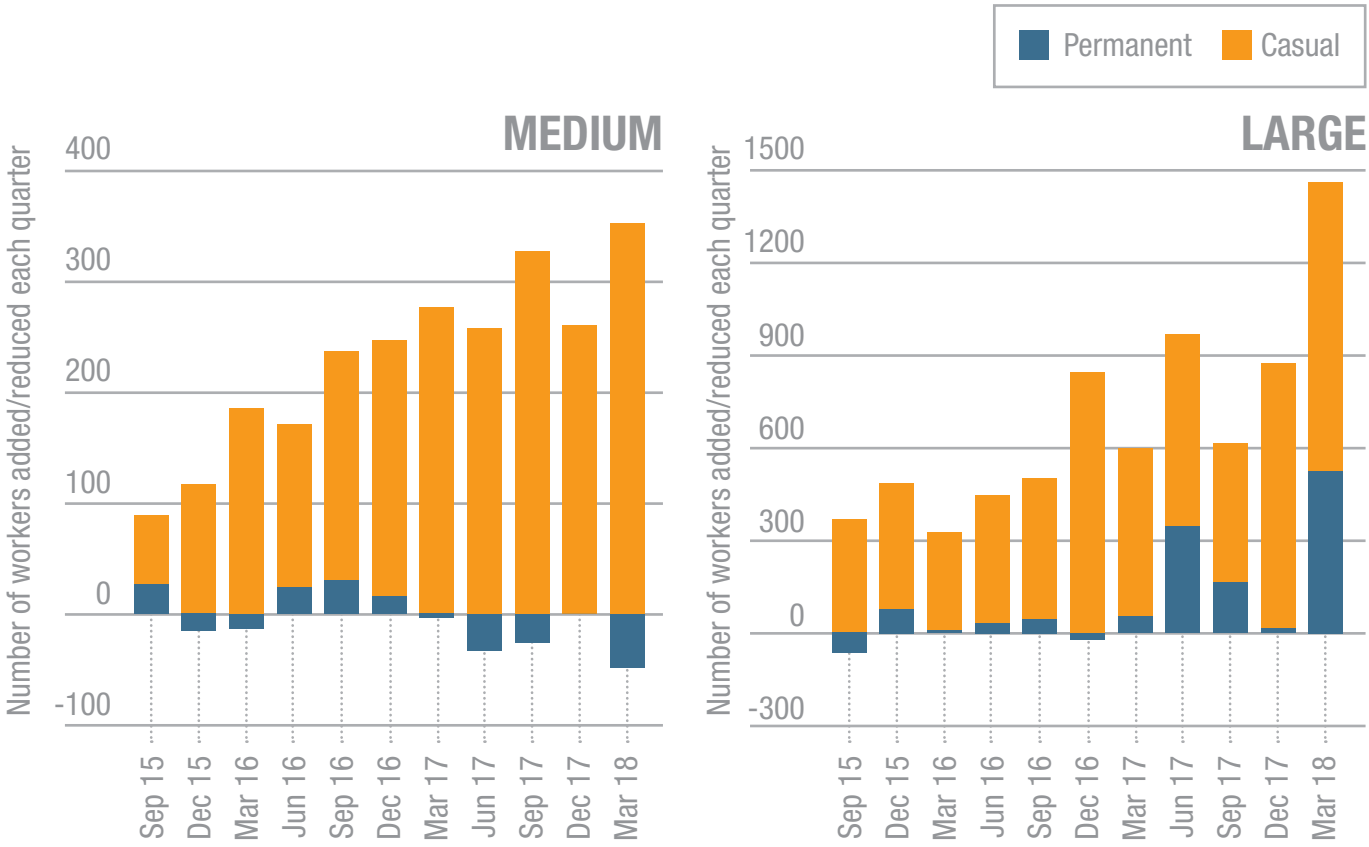
2 ABS, Labour Force Australia, Cat no. 6202.0, May 2018.

Figure 4: *Net change in permanent and casual staff*



The gain in permanent employment in March 2018 came mainly from large organisations, continuing the pattern described earlier. In medium size organisations, the proportion of casual workers also grew, sometimes at the expense of permanent employment, while in large organisations, both workforces grew, albeit at different speeds (see Figure 5).

Figure 5: *Net change in permanent and casual workers, by organisational size*



Workforce turnover

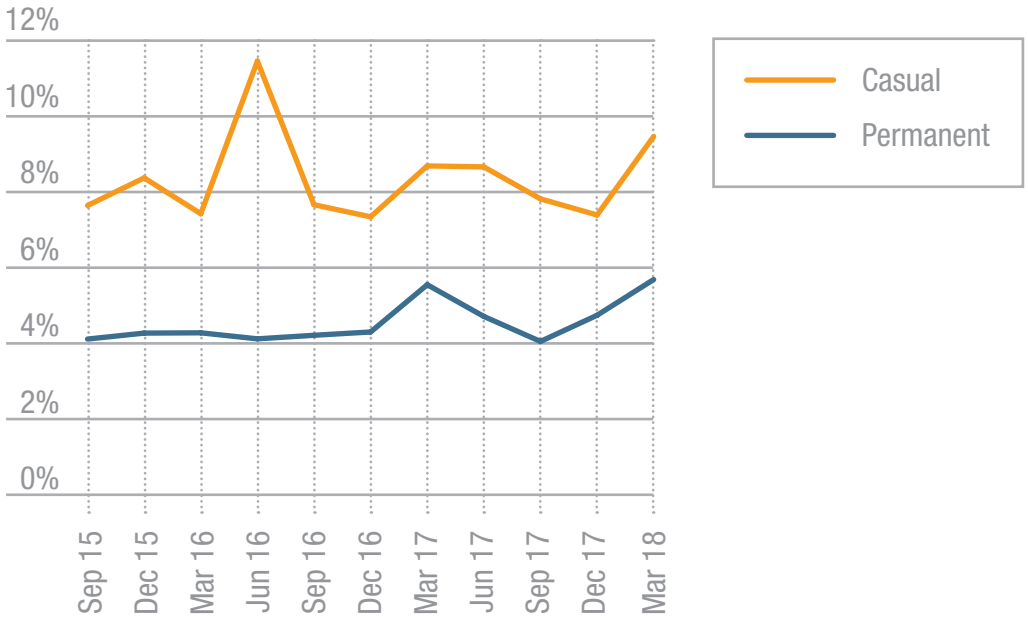
Workforce turnover[3] is inevitable as the personal circumstances of workers alter, and also organisations need different staff to adapt to changing environments.

However, high workforce turnover can reflect lower employee engagement, and also disrupt continuity of care, leaving clients less satisfied with the quality of service. Rapid turnover means more expenditure on recruitment and training.

Workforce Wizard has consistently shown casual workers to have considerably higher turnover rates than permanent workers. Historically, this has been a difference of four percentage points/quarter, or 16 percentage points/year.

In the last two quarters, both casual and permanent workforce turnover are trending upwards, as shown in Figure 6 below. This could be related to the more buoyant labour market and the accelerating NDIS rollout.

Figure 6: *Quarterly turnover rates by form of employment*



Key points

- In the two most recent quarters workforce turnover for permanent disability support workforce has averaged 5.2% per quarter
- Casual workforce turnover in the same period has been 8.5% per quarter

3 We measure workforce turnover as follows: the number of workers who leave an organisation during a quarter, as a percentage of the total number of workers, averaged over two recent quarters.

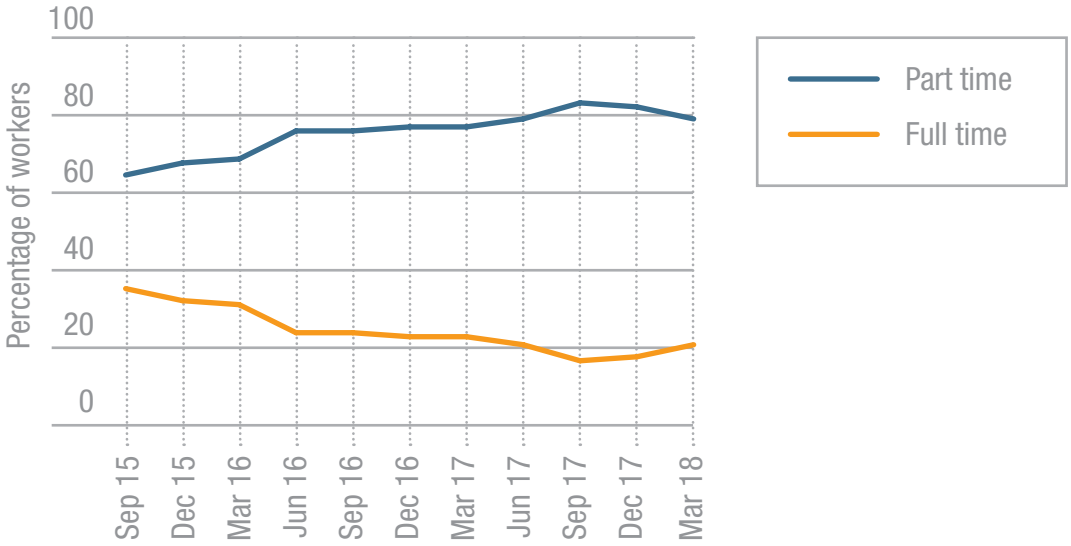
Working hours

In the February 2018 Australian Disability Workforce Report, we observed that the disability sector displays an intensified version of the part-time employment profile characteristic of the health care and social assistance sector.[4]

In the past two years, the proportion of permanent workers who worked part-time increased from 65% in September 2015 to 83% in September 2017.

In the most recent two quarters this trend reversed (see Figure 7) with part-time employment falling back to 79%.

Figure 7: *Full-time and part-time work: employment shares (%)*



In addition, the average hours worked by a disability support worker increased for the March 2018 quarter to 22 hours/week. This compares to 21 hours/week in the preceding two quarters. It remains to be seen whether this is a reversal of the previous falling hours trend, or simply a one-off variation.

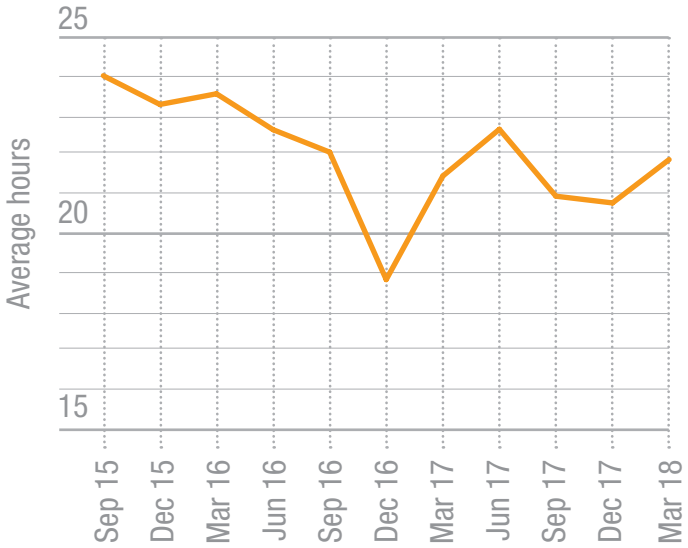
Previously, average hours have trended downwards from 24 hours per week in September 2015 to 21 hours per week at the end of 2017. The data shows some volatility which is likely due to the changing nature of the sample, and seasonal factors.

Recent ABS data indicates that while employment growth has been relatively strong, utilisation rates have changed little. In the health care and social assistance industry, average hours per job remained lower at the end of 2017 than in 2010. This industry had the second lowest hours per job of the 19 ABS industry categories.[5]

4 Part-time workers refer to workers who work less than 38 hours, while full-time workers refer to workers who work 38 hours or more.

5 ABS, Labour Account Australia, Quarterly Experimental Estimates, Cat no. 6150.0.55.003, Sept 2018.

Figure 8: *Average hours of work per week per worker*



Key points

- Full-time work, which has been falling in the disability support workforce has recovered slightly in the March 2018 quarter
- Average working hours also rose slightly, to 22 hours/week.

Summary

In this mid-year analysis, trends observed in previous reports are again evident. The casual workforce has grown strongly. Casual workers continue to have a higher turnover than permanent workers. The different strategies employed by organisations of different sizes to cope with flexible demands appear to persist.

The March 2018 quarter has however been a period of strong sustained growth, more rapid even than in the past. Perhaps as a result, we see two new trends:

- a substantial net increase in the permanent workforce; and
- a minor reversal of the trend of increasing part-time work, coupled with declining working hours

It is not yet clear if the longer term trajectory of the disability workforce is shifting or if these are one-off reversals. However, it is undoubtedly the case that disability providers are experimenting with their workforce strategy, switching between forms of employment and approaches to employee engagement to obtain the best balance between client, worker and financial imperatives.

In the following chapter, we will examine the patterns of disability workforce in the states and territories.

Chapter 2: The disability workforce in the states and territories

Workforce casualisation — a converging trend

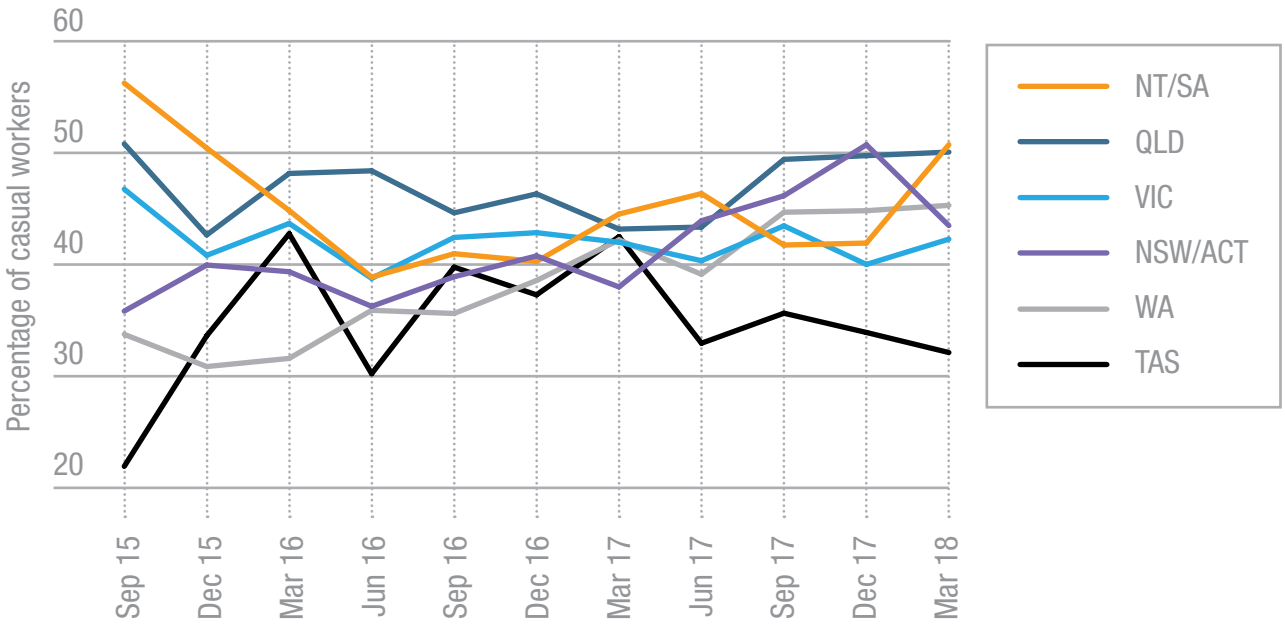
The analysis in Chapter 1 shows that there is a slow but steady trend towards casualisation in Australia. Is this trend universal in each state and territory?

In fact casualisation has risen substantially in most states, including Western Australia and NSW/ACT, which employed fewer casual workers in the beginning of the period. Casual employment growth tended to be lower in states where the employment of casuals was already high, such as Victoria. Note that Tasmania shows fluctuations which are probably due to the small sample size.

Key point

- Casualisation appears to be a converging trend; states where fewer casuals were employed have been catching up with states which had higher rates of casual employment in the first place.

Figure 9: *The proportion of casual workers by state*

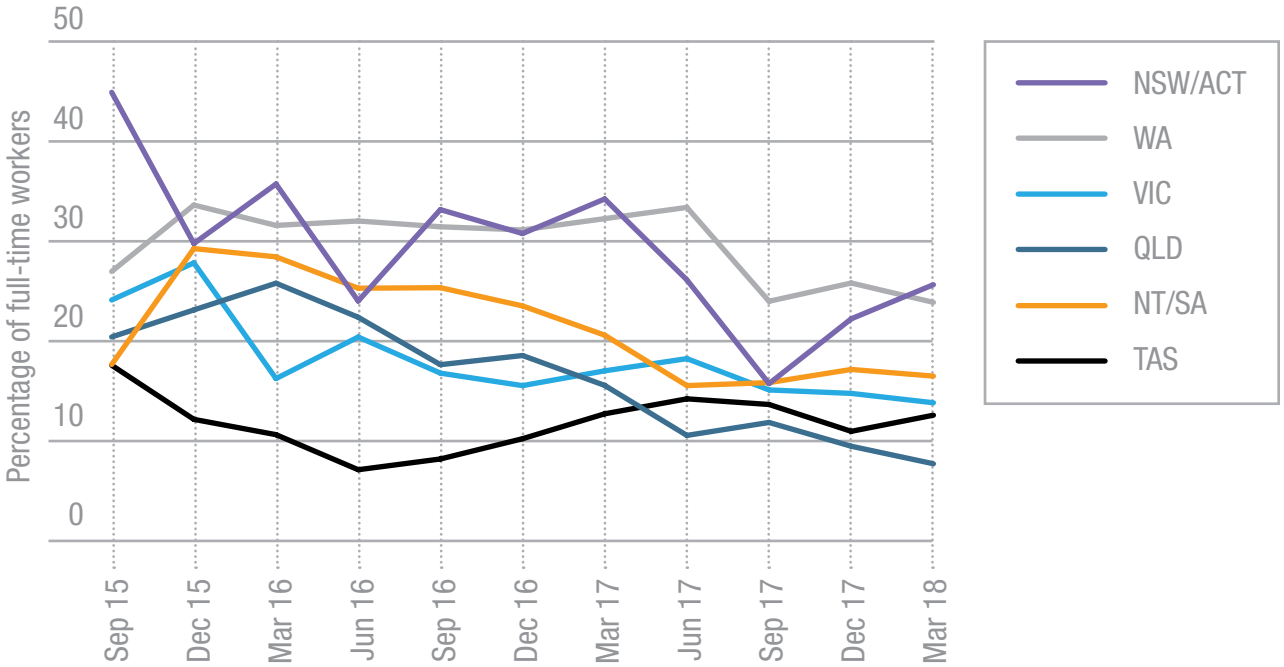


Western Australia charts a different course on forms of employment

The changing share of full-time and part-time employment work however is not standard across the states and territories.

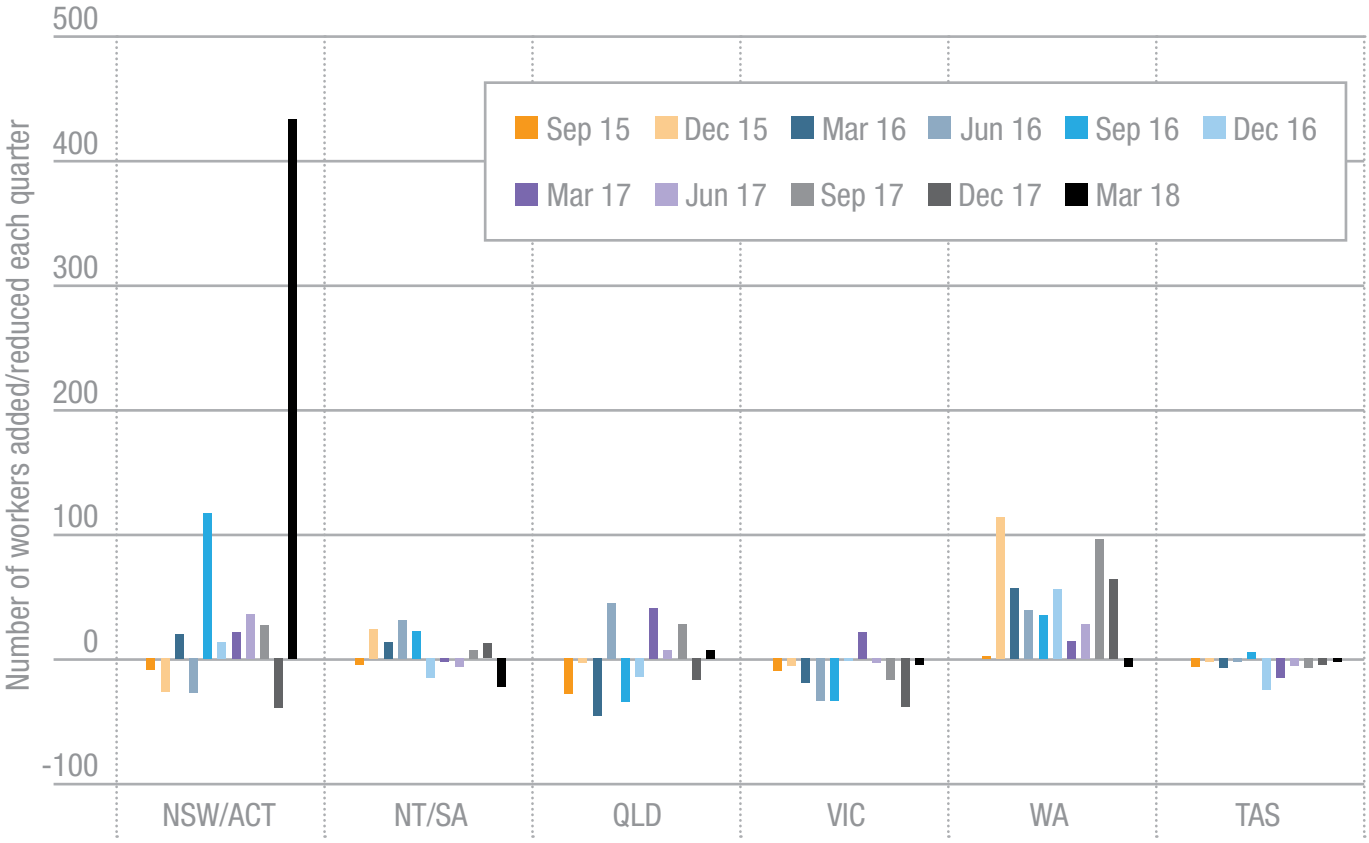
The decline in full-time work is only marked in Queensland, NT/SA and to a certain extent, Victoria. Western Australia has maintained a relatively high proportion of full-time workers, compared to the rest of the country. Tasmania, on the other hand, has a much lower proportion of full-time workers throughout the period. Recently, Queensland overtook Tasmania as the state with the lowest proportion of full-time workers in the permanent disability workforce (See Figure 10).

Figure 10: *The proportion of full-time employment in the permanent disability workforce*



In Figure 11, the net change in permanent workers shifts between positive and negative growth in all states, with the exception of Western Australia. In Western Australia, the permanent workforce has grown in all quarters except March 2018. Tasmania, on the contrary, has negative growth of permanent workers in all but one quarter.

Figure 11: *Net change in permanent workers, by state*



Workforce turnover

The 11-quarter average turnover rate for permanent workers in Australia is about 4.6% per quarter. This rate remains reasonably stable across states and quarters. Casual turnover at nearly 8.5% per quarter, on average, which is higher and more volatile. Western Australia has the highest casual workforce turnover rate, with double digit rates in seven of the last 11 quarters. This could be linked to Western Australia's lower reliance on casual workers than other states.

Figure 12: *Quarterly turnover rates of permanent workers, by state*

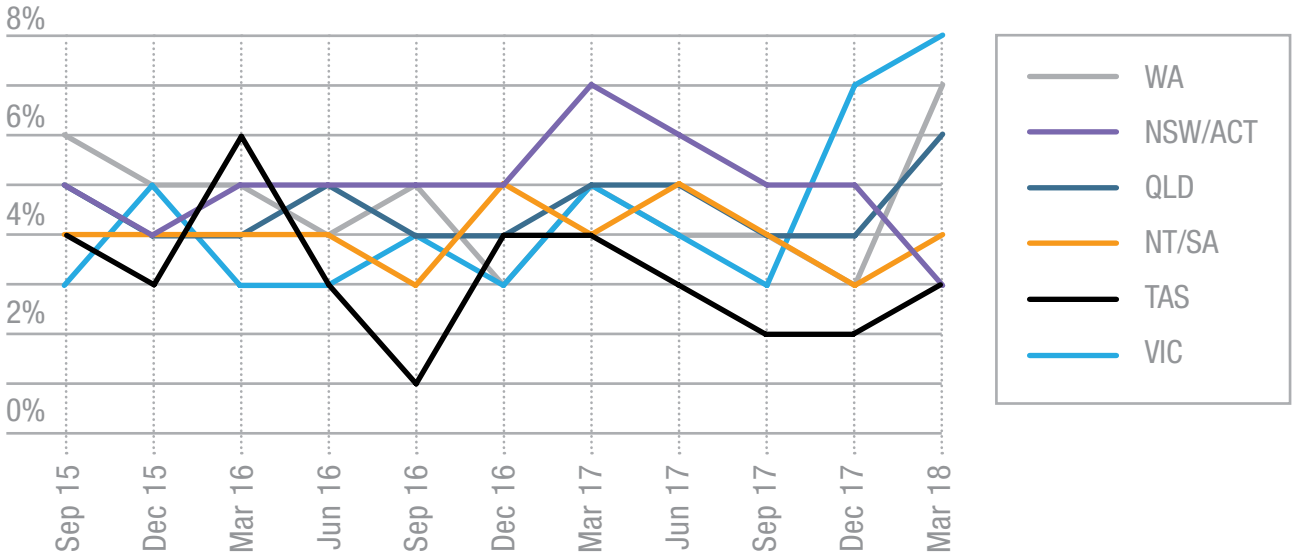


Figure 13: *Quarterly turnover rates of casual workers, by state*

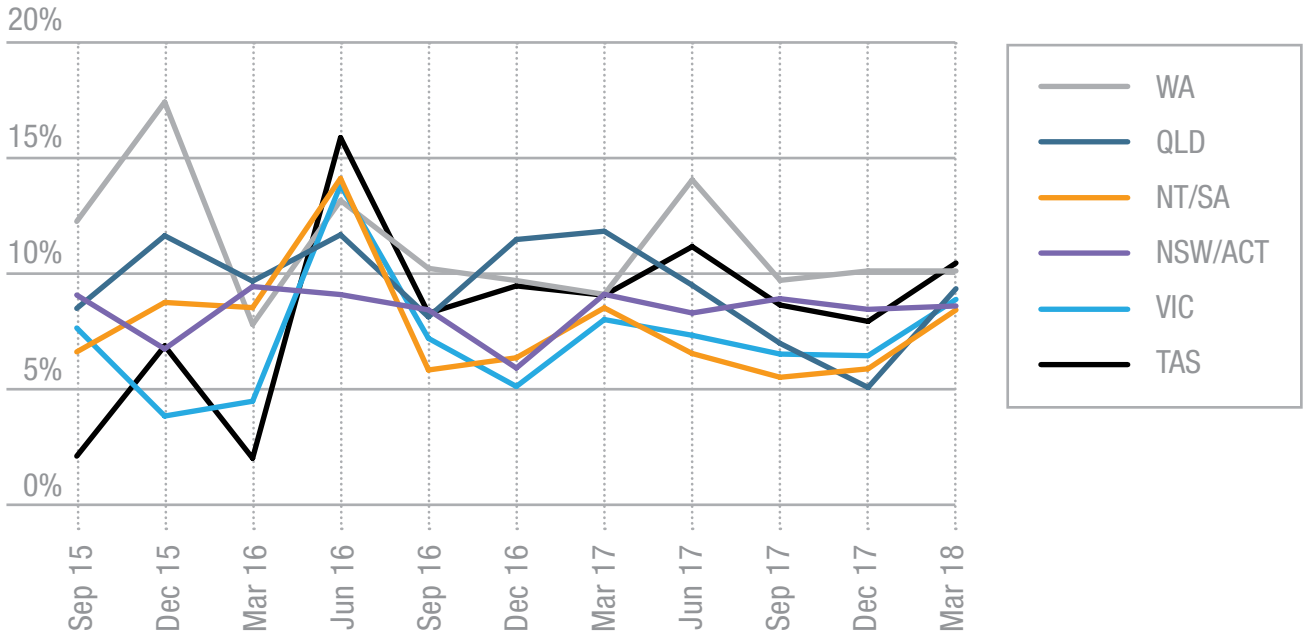


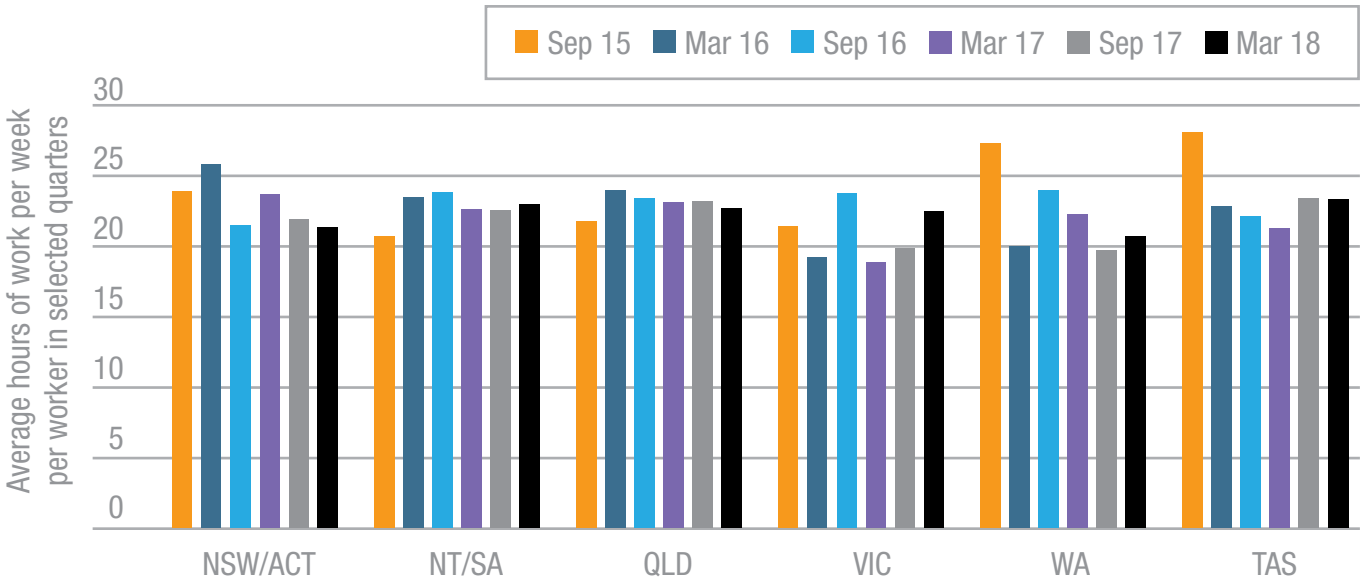
Working hours variability

The average permanent disability worker works 22 hours per week. As Figure 14 shows, there is some variation between states and considerable volatility.

Key points

- Victoria has the lowest working hours, with average hours dropping to 21 hours or below in seven out of the past eleven quarters
- In contrast, workers in NT/SA and Queensland, on average, worked 22 hours or more in all quarters except December 2016
- There appears to be a declining trend in working hours in NSW/ACT and Western Australia, but this trend is not clear in other states.

Figure 14: *Average hours of work per week per worker in selected quarters*



Consistent gender and age disparities

The female-to-male ratio in the disability support workforce is 7:3.

Key point

- The gender ratio is roughly the same in all states and has been stable for the past eleven quarters.

Similarly, the disability support workforce is older than the Australian workforce as a whole across the country.

Key points

Australian workers over 45 years old make up around 34% of the total workforce[6]. By comparison,

- the 'youngest' state is Western Australia where disability workers over 45 years old made up 40% of the workforce in March 2018
- in Queensland, which has the oldest disability workforce, workers of this age group made up of nearly half of the workforce (49%) in March 2018.

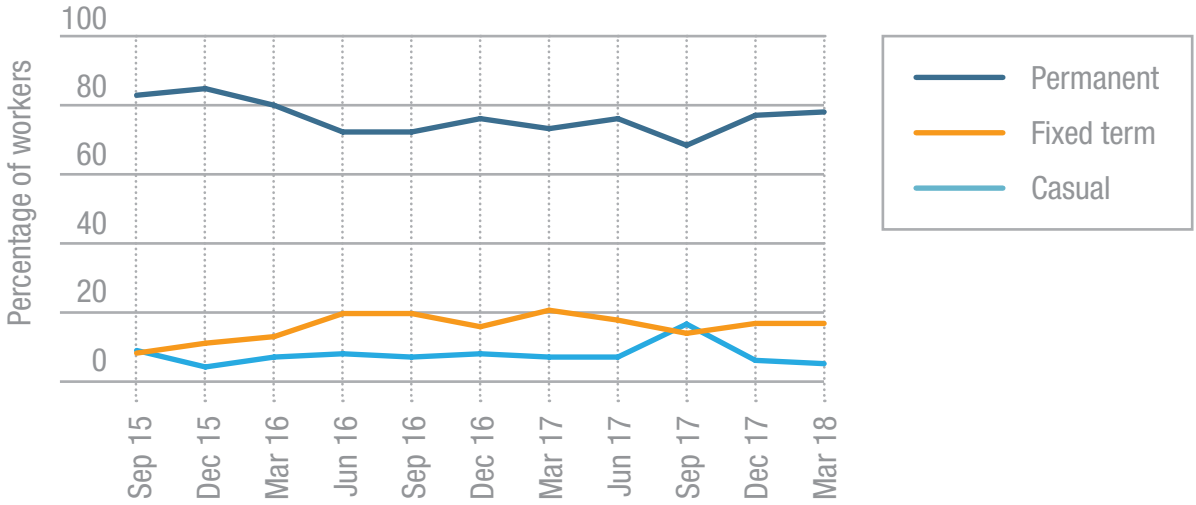
6 ABS, Labour Force, Australia, Detailed, Quarterly, May 2018. Cat. No. 6291.0.55.003.

Chapter 3: The profile of the allied health professionals

Forms of employment

Unlike disability support workers, casual employment is uncommon among allied health workers. Fixed-term employment has risen in recent years - from 8% in September 2015 to 17% in March 2018. However, permanent employment remains the dominant form of employment for allied health workers.

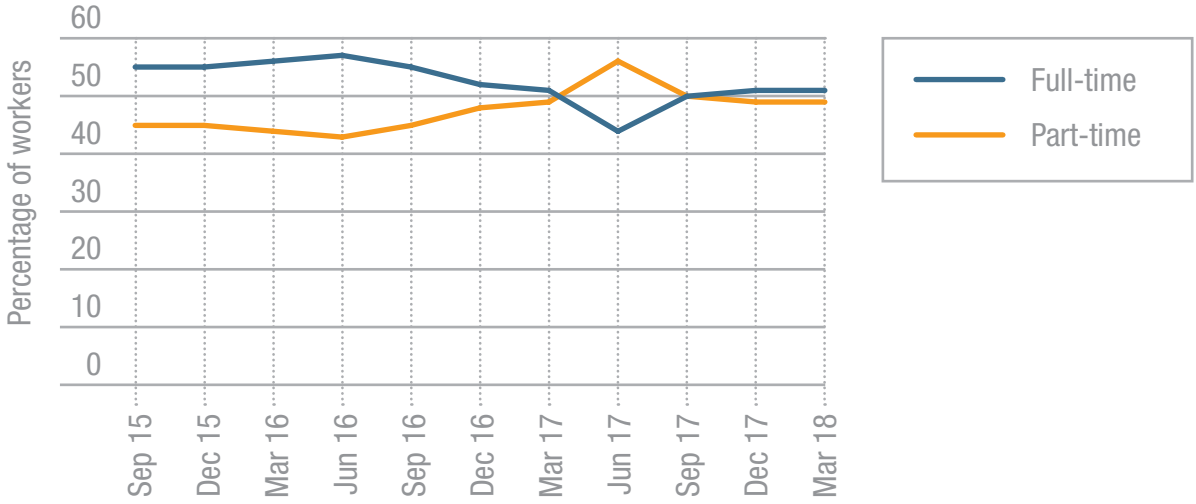
Figure 15: *Forms of employment*



Part-time work has been increasing among allied health professionals as in the support workforce, although the rate of increase has been much less.

In September 2015, full-time employment was a little more common than part-time, making up 55% of the permanent workforce. More recently, the shares of full-time and part-time employment have equalised (see Figure 16).

Figure 16: *Full-time and part-time allied health professionals: employment shares (%)*

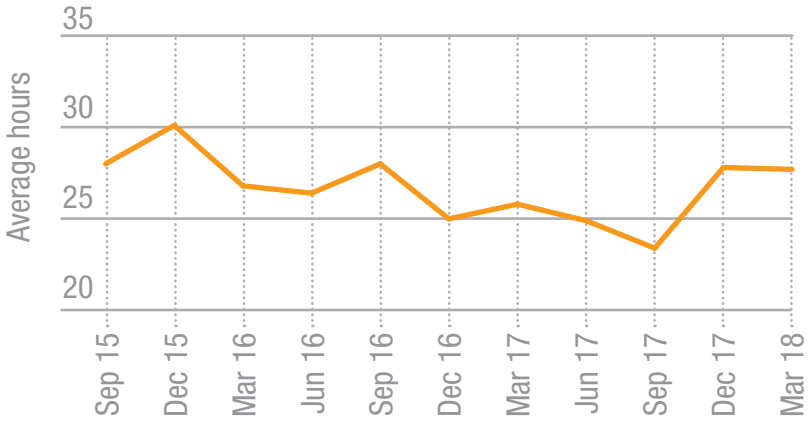


More positively, Figure 17 indicates that the long-term downward trend in working hours among allied health workers has reversed in the last two quarters.

Key point

- In March 2018, allied health professionals worked on average 28 hours per worker per week – the same amount as in September 2015.

Figure 17: *Average hours of work per week per worker*

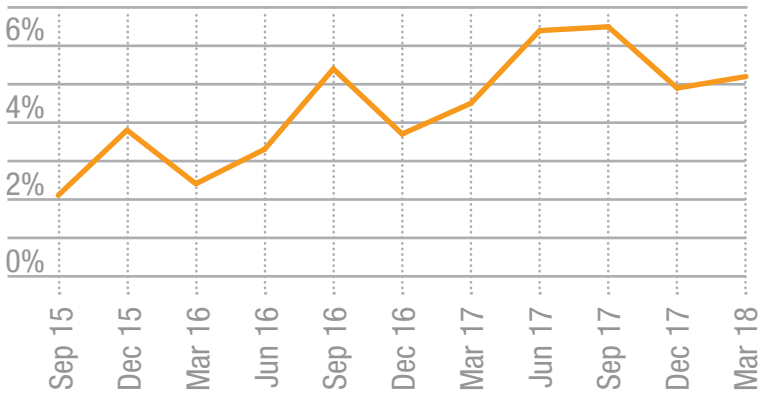


Workforce turnover

The turnover rate[7] of the permanent allied health workforce is lower than that of the direct support workforce in the period between September 2015 and June 2016. However, workforce turnover trends upwards after June 2016, as shown in Figure 18. Allied health professionals appear to be changing jobs more frequently as the NDIS rolls out.

Since they are an expensive workforce to recruit, on-board and induct, and may take clients with them when they move, workforce instability can have a negative impact on providers.

Figure 18: *Quarterly turnover rate of permanent allied health workforce*



7 Due to the small sample size of allied health workforces, the quarterly workforce turnover rates of permanent allied health workforces using the organisational average tend to be volatile. Hence, a different measure is used. The turnover rates presented here are measured by the aggregate number of permanent workers who left the workforce as a proportion of all permanent workers in a quarter. The trend of increasing turnover rates is notable in both measurements of workforce turnover.

The age and gender profile of allied health professionals

The allied health workforce is overwhelmingly female. In March 2018, 93% of allied health professionals were women.

It is also a remarkably young workforce. In March 2018, 70% of allied health workers were in the middle years of 25 to 44. Only 21% of the workers were older than 45 years, relatively fewer than the Australian workforce generally[8] (34%) and the disability support workforce (45%).

8 ABS, Labour Force, Australia, Detailed, Quarterly, May 2018, Cat. No. 6291.0.55.003.

Chapter 4: Spotlight topics

Introduction

Each quarter the Workforce Wizard 'Spotlight Topic' shines a light on an issue of importance to the sector but not suitable for quarterly tracking. Some of these topics are repeated every one or two years to provide the sector a long-term perspective on them. NDS is particularly grateful to disability organisations for providing answers to these occasional questions, as they require extra effort to complete.

In December 2017, the qualifications of new recruits was the Spotlight Topic, while in the March 2018 quarter it was recruitment difficulty. The results are summarised below (reporting is also provided to Workforce Wizard users on closure of the data entry period).

Spotlight Topic 1: The qualifications of newly recruited disability workers

Nearly two-thirds of all users (65%) responded to the December 2017 questions asked about the qualifications of newly recruited disability support workers.

How many new recruits are formally qualified?

Providers reported that approximately one in five new recruits had a disability-related qualification (Certificate III and above). Among 3,246 newly recruited disability support workers, around 660 people had a disability-related qualification.

This appeared to be at least in part a matter of employer policy. In a sizable portion of workforces all new recruits had a disability-related qualification (24%). On the other hand, an equally substantial portion (20%) did not recruit any new workers with formal qualifications. See Table 1.

Table 1: *Disability workforces by new recruits with a disability-related qualification*

New workers who had a disability related qualification	Disability workforces (%)
All new recruits	24
75% - 99% of new recruits	4
50% - 74% of new recruits	18
25% - 49% of new recruits	18
1% - 24% of new recruits	15
No new recruits	20

Small organisations[9] were more likely to recruit people with a disability-related certificate qualification. A third of workforces in small organisations (33%) had all new recruits with a disability-related qualification, while only 14 per cent of medium to large organisations and none of the large organisations had this level of formally qualified new recruits.[10]

How states vary in the level of qualified new recruits

Most states and territories are in line with the national average, 21%. Victoria has the highest level of formally qualified workers (30%), while Queensland has the lowest (15%).

Table 2: *Newly recruited workers with a disability-related qualification, by state and territory*

State or territory	Formally qualified new workers (%)
Victoria	30
Northern Territory	24
NSW/ACT	23
South Australia	22
Tasmania	21
Western Australia	20
Queensland	15
Multi-state	14
Total	**21**

Spotlight Topic 2: Recruitment difficulty

The same three recruitment difficulty questions were asked as Spotlight Topics in the March 2017 and March 2018 quarters. Over 90 per cent of users who entered data on their disability support workforce also responded to these questions. In 2018 there were 176 valid responses.

Level of recruitment activity

Nearly fourth-fifths of organisations (79 per cent) indicated that they advertised to fill at least one disability support worker position in the March 2018 quarter, a little higher than 12 months before (76 per cent).

---

9 Small organisations are those with less than 50 disability support workers. Medium organisations are those with 50 to 199 disability support workers. Large organisations are those with more than 200 disability support workers.

10 The figures for large organisations need to be used with caution. Only 6 workforces from large organisations provided data on this question. The numbers of workforces in small, small-to medium, medium to large organisations which provided data are 42, 46 and 43 respectively.

Organisations in every state except NSW had become more active in recruitment in the March 2018 quarter. In 2017, NSW was the most active state in recruiting direct support workers (88% of organisations advertised to recruit in the March 2017 quarter). However, NSW was the least active state in the March 2018 quarter (71% of organisations advertised to recruit). Not surprisingly, multi-state organisations were most active in recruitment, with almost all organisations advertising to fill a position (94%).

Table 3: *Recruiting organisations, by state, March 2018 & 2017 quarters*

State	Yes, we recruited to fill DSW roles (%)		Number of organisations responding	
	March 18	March 17	March 18	March 17
Multi-state	94	75	16	12
South Australia	89	75	18	20
Western Australia	86	82	29	33
Queensland	82	70	28	33
Victoria	74	68	35	44
New South Wales	71	88	35	33
Other states & territories	N/A	N/A	15	17
Total	**79**	**76**	**176**	**192**

Were employers successful in filling their vacancies?

Seven out of ten organisations (70 per cent) were able to fill all disability support positions advertised in the March 2018 quarter. Recruitment has become a little easier than a year before when 65 percent of organisations were able to fill all advertised positions.

The level of difficulty varied across the states. For example, Western Australia, which had the lowest rate of filled vacancies (56%) in the March 2017 quarter, became the state with the highest rate (75%) this quarter. Queensland, alternatively, had the highest rate (79%) in the March 2017 quarter but dropped to below the national average (67%) in 2018. South Australia had the lowest rate of filled vacancies in the March 2018 quarter, with only 53% of organisations saying they had filled all advertised positions.

A handful of organisations (3.6%) indicated that direct support worker positions are advertised all year around and that they have no recruitment limit, rather taking all suitable candidates.

Table 4: *Organisations with advertised positions filled/unfilled, March 2018 and 2017 quarters, by state (%)*

State	Filled (%)		Unfilled (%)		n	
	March 18	March 17	March 18	March 17	March 18	March 17
Multi-state	80	N/A	20	N/A	10	N/A
Western Australia	75	56	25	44	24	25
Victoria	73	62	27	38	26	29
Queensland	67	79	33	21	21	19
New South Wales	65	67	35	33	23	27
South Australia	53	64	47	36	15	14
Other states & territories	N/A	N/A	N/A	N/A	9	19
Total	**70**	**65**	**30**	**35**	**128**	**133**

Note: n is the number of organisations in the sample. A small proportion (7 per cent) of users did not answer whether or not their advertised positions were filled.

The ratio of filled positions to unfilled vacancies in the March 2018 quarter was 12.3. This was higher than March 2017 quarter (11.4), consistent with earlier results, suggesting organisations are now more able to fill their advertised positions than a year ago. Since there has not been a significant change in unemployment or underemployment rates, this result may reflect improved recruitment techniques learned through experience.

Reasons for unfilled vacancies

The reasons given for unfilled vacancies are similar in the March 2018 and the March 2017 quarters:

- the lack of suitable or qualified candidates was the most cited reason (43%), followed by
- candidates being unable or unwilling to meet specific job requirements (29%)
- geographical factors (13%)
- poor employment conditions and/or job prospects (9%).

Similar to the results a year ago, a number of responses advised that the advertised roles required one or more of the following:

- specific job skills or experiences (e.g. behaviour support for clients with complex needs)
- personality or demographic characteristics that match customer preferences
- ability to work flexible hours in order to fit shifts that align with client needs.

Some organisations (13% in 2017 and 9% in 2018) mentioned poor employment conditions, especially the lack of permanent full-time roles, short working hours and low rates of pay as possible reasons for unfilled vacancies.

Table 5: *Reasons positions were unfilled at the end of the recruitment round*

Reason given	%		n	
	March 18	March 17	March 18	March 17
Lack of suitable/qualified candidates	43	29	24	20
Candidates unable/unwilling to meet job requirements	29	22	16	15
Geographical factors	13	13	7	9
Poor employment conditions and/or job prospects	9	13	5	9
Organisational factors	2	9	1	6
Limited labour supply for the expanding vacancies	2	7	1	5
Seasonal factors	0	3	0	2
Total (including other)	**100**	**100**	**57**	**69**

Notes: n is the number of times the reason was cited. This was an open-ended question so a respondent could mention more than one factor.

It is important to note that the success rate of filled vacancies is only one way of measuring recruitment difficulty. Indeed, a number of organisations remarked that even though they were successful in filling all advertised positions, they did so reluctantly by recruiting unqualified staff just to meet the growing demand. In other words, there are 'hidden recruitment difficulties' not picked up through this data.

Recruiting allied health professionals

Twenty five out of 26 organisations which entered data on allied health professionals responded to the Spotlight Topics on recruitment difficulty (96 per cent). Of these, 20 respondents indicated that they advertised to fill an allied health professional position in the March 2018 quarter (80%). This was more than in the March 2017 quarter, when only 62 per cent of organisations did so.

While more organisations advertised, a smaller proportion of them were successful in filling all the vacancies. Only eight out of eighteen organisations (44%) were able to fill all advertised positions, compared to 64% in the March 2017 quarter.

An estimated 27 allied health professional positions were unfilled (from 9 organisations reporting unfilled vacancies) in the March 2018 quarter, while 88 permanent and casual allied health positions were filled. In the March 2017, an estimated 10 positions were unfilled (from 4 organisations reporting unfilled vacancies), while 64 permanent and casual positions were filled. Note the sample size of allied health workforces is small in both quarters, hence, a direct comparison on the number of filled and unfilled positions between these the quarters is not recommended.

Some of the challenges in recruiting allied health professionals are similar to those faced by organisations recruiting disability support workers. They include the lack of suitable/qualified candidates, poor pay and rural and

remote locations. A number of responses mentioned that the salary they can offer is unattractive when compared with the private sector or the adjacent aged care sector.

Unlike disability support workers, increasing specificity in job requirements was not mentioned as a problem for organisations employing allied health professionals. A number of organisations did look for allied health professionals with specific professional skills which were an ongoing problem for them to locate.

Summary

The results indicate the difficulty experienced by organisations in the disability sector in employing allied health professionals.

This result echoes the NDS Market Survey 2017, which found that organisations ranked allied health employees as the most difficult group to recruit.[11] Providers reported 'extreme difficulty' in recruiting specific allied health professions, with the following percentages saying this about:

- psychologists (41%)
- physiotherapists (36%)
- occupational therapists (27%)
- speech therapists (25%)

The NDIS rollout and state government divestment of services previously provided by public sector agencies means the disability sector is an industry growing quickly, rich with new jobs. It is not surprising that recruitment is a key focus for most services, with many experimenting with new ways to creatively source and attract workers.

Workforce Wizard Spotlight Topic data highlights the volume of recruitment activity occurring, and the relative success providers are having with front line workers. Attracting allied health professionals to the sector is a different story, despite the fact that the number of registered professionals in Australia has been growing at a healthy rate in recent years.

As disability providers become more used to the NDIS and the pace of change eases, it will be important for them to focus as strongly on techniques to keep workers as to recruit them. Recently turnover rates have been increasing in both the disability support and allied health workforces. The next Australian Disability Workforce Report will address this issue in more depth.

National Disability Services

NDIS Price Guide 2019-20

Valid from: 1 October 2019

(Version 1.3 – Publication Date: 1/10/2019)

Delivered by the National Disability Insurance Agency

Version Control

The NDIS Price Guide is subject to change. The latest version of the NDIS Price Guide is available on the NDIS website.

Version	Page.	Details of Amendment	Date
1.0			25 June 2019
1.1	6	• Text added to clarify the link between the Price Guide and the Support Catalogue	28 June 2019
	12	• Text added to clarify that non-registered providers are not eligible for the TTP.	
	13	• Text added to better distinguish between Core travel and Capacity Building travel • Added 4 examples of the application of the travel rules	
	18	• Text added to clarify that “no shows” are treated as short notice cancellations. • Added an example of the application of the cancellation rules;	
	29	• Price limits in the Support Catalogue for group-based supports have been substantially revised. • Text added to clarify that providers of group-based supports are not permitted to bill for non-face-to-face services as the hourly price limits for these supports include an allowance for non-face-to-face services.	
	39	• Further text added on Employment Related Assessment and Counselling supports.	
	39	• Further text added on Workplace Assistance supports.	
1.2	10	• Update reference and link to the MMM website.	23 Sep 2019
	11	• Added definition and list of isolated towns that were reclassified as Remote locations	
	15	• Inclusion of Participant Transport examples for claiming purposes.	
	20	• Included information on Disability Related Health Supports	
	25	• Content update for Supported Independent Living (SIL) providers using the latest SIL Tool template.	
	46	• Content updates for Early Childhood Early Intervention (ECEI).	
	47	• Included information on nursing support items	
1.3	23	• Terminology change from Weekday Evening to Weekday Afternoon.	1 Oct 2019
	38	• Clarification on claim types applicable to these supports.	

Contents

Scope of the NDIS Price Guide

Where possible, the National Disability Insurance Agency (NDIA) utilises market mechanisms to deliver the level of supply required by the he National Disability Insurance Scheme (NDIS) to meet participant demand and deliver the correct mix of goods/services, produced at market clearing (efficient) prices. However, in underdeveloped or non-existent markets, reliance on a deregulated market mechanism may not meet participant demands; may not deliver adequate supply; may not deliver the correct mix of disability supports and may not produce efficient prices. To address these issues, the NDIA has a role, as market steward, to create an efficient and sustainable marketplace through a diverse and competitive range of suppliers who are able to meet the needs of a consumer driven market.

As part of its market stewardship role, the NDIA imposes price controls on some supports by limiting the prices that registered providers can charge for those supports and by specifying the circumstances in which registered providers can charge participants for supports. Price controls are in place to ensure that participants receive value for money in the supports that they receive. In the short to medium term, price controls are required for some disability supports because the markets for disability goods and services is not yet fully developed. The longer-term goal of the NDIA is to remove regulatory mechanisms from the markets for disability supports.

This Price Guide is a summary of NDIS price limits and the associated pricing arrangements that will apply from 1 July 2019 as set by the NDIA. It is designed to assist participants and disability support providers, both current and prospective, to understand the way that price controls for supports and services work in the NDIS. The price limits within this Price Guide are the maximum prices that Registered Providers can charge NDIS participants for specific supports. There is no requirement for providers to charge at the maximum price for a given support or service. Participants and providers are free to negotiate lower prices.

Currently, the NDIA varies its approach to the regulation of prices, depending on market conditions, between:

- **No regulation** (deregulated markets): this is typically used in cases where markets are highly competitive – for example, transport.
- **The imposition of price limits**: these represent a maximum allowable price payable by participants for types of supports. This approach is used in a significant number of markets, which are still developing and growing, such as those for attendant care.
- **Quotable supports**: in which participants are expected to obtain quotations from suppliers to provide to the NDIA, which will verify that the prices are fair and reasonable. This approach is typically used in the case of highly specialised, differentiated supports that may not have a high level of competition – for example, assistive technology. They are also used in cases, such as supported independent living, where a bundle of supports is being purchased.

This Price Guide is principally concerned with the rules that apply to NDIS supports that are subject to price limits.

A comprehensive list of all NDIS supports (“the Support Catalogue”) is at https://www.ndis.gov.au/providers/price-guides-and-information.

The Support Catalogue:

- **includes item descriptors to assist providers to claim payments using a "best-fit" approach, and to assist participants in engaging and negotiating with service providers; and**
- **lists the price limits of those support items that are subject to price limits.**

In general, support items subject to price controls have a single national price limit. However, some Capacity Building supports have two price limits: one for New South Wales, Victoria, Queensland and the Australian Capital Territory; and a different price limit for South Australia, Western Australia, Tasmania and the Northern Territory.

The NDIA publishes separate price guides for:

- Assistive Technology at https://www.ndis.gov.au/providers/essentials-providers-working-ndia/providing-assistive-technologies-and-home-modifications
- Specialist Disability Accommodation at https://www.ndis.gov.au/providers/essentials-providers-working-ndia/specialist-disability-accommodation

Application of this Price Guide

The price limits and other arrangements in this Guide must be followed when supports are delivered to NDIS participants who have either an agency-managed plan or a plan manager.

A provider of supports to a participant with an agency-managed plan (or of a support that is agency managed):

- must be a registered provider with the NDIS;
- must declare relevant prices to participants before delivering a service, including any notice periods or cancellation terms;
- must adhere to the arrangements in the Price Guide, including ensuring that their prices do not exceed the price limits prescribed in the Pricing Guide

Plan managers can purchase supports on behalf of participants from either registered or unregistered providers, but they are registered providers themselves, and therefore responsible for ensuring that prices paid for supports on behalf of their participants adhere to the arrangements in the Price Guide, including price limits.

Self-managing participants can use registered or unregistered providers and are not subject to the pricing arrangements in the Price Guide.

In addition, all registered providers, regardless of whether funding for the support is managed by the participant, by a registered provider, or by the NDIA, must not add any other charge to the cost of the supports they provide, including credit card surcharges, or any additional fees including any 'gap' fees, late payment fees or cancellation fees.

Support Purposes, Categories and Line Items

This section describes the way that the NDIS categorises disability supports. These categories can be relevant to rules for participants about how they can spend their support budgets, and for providers when seeking payment for delivered supports.

Support Purpose Types

NDIS participant budgets can be allocated to three separate types of support purpose:

1. CORE – Supports that enable participants to complete activities of daily living. Participant budgets often have a lot of flexibility to choose specific supports with their core support budgets, but cannot reallocate this funding for other support purposes (i.e. capital or capacity building supports).
2. CAPITAL – Investments, such as assistive technologies - equipment, home or vehicle modifications, or for Specialist Disability Accommodation (SDA). Participant budgets for this support purpose are restricted to specific items identified in the participant's plan.
3. CAPACITY BUILDING - Supports that enable a participant to build their independence and skills.

Support Categories aligned to the NDIS Outcomes Framework

Participant budgets are allocated at a support category level and must be used to achieve the goals set out in the participant's plan.

Support categories are aligned with the NDIS Outcomes Framework, which has been developed to measure goal attainment for individual participants and overall performance of the Scheme. There are eight outcome domains in the Framework, which help participants think about goals in different areas of their life and assist planners explore where supports in these areas already exist and where further supports are required. These domains are:

1. Daily Living	5. Work
2. Home	6. Social and Community Participation
3. Health and Wellbeing	7. Relationships
4. Lifelong Learning	8. Choice and Control

NDIS service providers should be aware that all supports and services for NDIS participants must contribute to the achievement of their individual goals as outlined in the participant's plan. Support purpose categories are designed to align with the Outcomes Framework and the 15 support categories (listed below). This helps participants choose supports that help them achieve their goals, and providers to understand how the supports they provide contribute to the participant's goals. The following table shows the links between support purpose types, domains in the Outcomes Framework and support categories.

SUPPORT PURPOSE	OUTCOME DOMAINS in FRAMEWORK	SUPPORT CATEGORY
CORE	Daily Living Daily Living Daily Living Social & Community Participation	Assistance with Daily Life Transport Consumables Assistance with Social & Community Participation
CAPITAL	Daily Living Home	Assistive Technology Home Modifications and Specialised Disability Accommodation (SDA)
CAPACITY BUILDING	Choice & Control Home Social and Community Participation Work Relationships Health & Wellbeing Lifelong Learning Choice and Control Daily Living	Support Coordination Improved Living Arrangements Increased Social and Community Participation Finding and Keeping a Job Improved Relationships Improved Health and Wellbeing Improved Learning Improved Life Choices Improved Daily Living Skills

Support items

Each support category has many specific supports and services that are recognised in the NDIS payment system. These are referred to as ‘support items’ and are, in most cases, not prescribed in participant plans.

Providers should claim payments against a support item that most closely aligns to the service they have delivered.

Each support item has a unique reference number, according to the following structure:

For example:

01_013_0107_1_1 - Assistance with Self-Care Activities - Standard - Saturday

Support Category	Sequence Number	Registration Group	Outcome Domain	Support Purpose
01	013	0107	1	1

Units of Measure

The NDIS payment system includes units of measure to suit each support item as follows:

• Each	• Hour	• Daily
• Week	• Month	• Annual

Claiming supports and services

Registered Providers can make a claim for payment for a support once that support has been delivered or provided. Where price limits apply, prices charged to participants must not exceed the price limit prescribed for that support in this Guide. Providers cannot add any other charges to the cost of the support, including credit card surcharges, or any additional fees including any 'gap' fees, late payment fees or cancellation fees unless otherwise stated in this Price Guide.

When claiming, it is the responsibility of the provider to ensure that the claim accurately reflects the supports delivered, including the frequency and volume of supports. Falsifying claims for any aspect of supports delivered is a serious compliance issue and may result in action against the provider. Providers are also required to keep accurate records of claims, which are subject to audit at any time.

Providers should claim payments against a support item that most closely aligns to the service they have delivered.

Service Agreements

A Service Agreement is a formal agreement between a participant and provider. They help to ensure there is a shared understanding of:

- expectations of what supports will be delivered and how they will be delivered; and
- the respective responsibilities and obligations of the provider and the participant and how to resolve any problems that may arise.

Service Bookings

Service bookings are used to set aside funding for an NDIS registered provider for a support or service they will deliver. Each service booking sets out the specific supports or support domains agreed to be provided and the length of time that agreement is applicable within the current participant plan dates. Service bookings are not the same as 'service agreements', which set out the terms and conditions negotiated with the participant.

The Agency recommends that service bookings should be created at the category level, where possible. This allows providers and participants to negotiate or access supports on a more flexible basis, especially for on-the-spot assessments or less predictable support needs. This is preferable to having to edit existing service bookings or create another service booking for that item at a later date or have funds locked into a support item that may not eventuate, which restricts funding for alternate services. **A provider must have a service booking in place to make a payment claim in the Portal.**

See the 'NDIS Myplace Provider Portal Step-by-step guide' on the Provider Toolkit for further information.

Special NDIS Pricing Arrangements

Regional, Remote and Very Remote Areas

The NDIA uses the Modified Monash Model (MMM) to determine regional, remote and very remote areas using a scale based on population size and locality (see Table below).

Description	Zones	MMM	Inclusion
Metropolitan	MMM 1-3	1	All areas categorised as Major Cities of Australia.
Regional Centres		2	Areas categorised as Inner Regional Australia or Outer Regional Australia that are in, or within 20km road distance, of a town with population >50,000.
		3	Areas categorised as Inner Regional Australia or Outer Regional Australia that are not in MM 2 and are in, or within 15km road distance, of a town with population between 15,000 and 50,000.
Regional Areas	MMM 4-5	4	Areas categorised as Inner Regional Australia or Outer Regional Australia that are not in MM 2 or MM 3, and are in, or within 10km road distance, of a town with population between 5,000 and 15,000.
		5	All other areas in Inner Regional Australia or Outer Regional Australia.
Remote	MMM 6	6	All areas categorised Remote Australia that are not on a populated island that is separated from the mainland and is more than 5km offshore.
Very Remote	MMM 7	7	All other areas – that being Very Remote Australia and areas on a populated island that is separated from the mainland in the ABS geography and is more than 5km offshore.

Providers and participants can determine the MMM rating of a location using the Health Workforce Locator tool on the Department of Health's website.[1] NDIS geographic locations are based on the 2015 MMM (not the 2019 MMM).

In general, price limits are 40% higher in remote areas and 50% higher in very remote areas. There is no additional loading applied for supports in Metropolitan areas, regional centres or regional areas.

Providers should refer to support price limits based on where the support is delivered, which is not necessarily where the participant lives. For example, if a participant living in a Remote location visits a therapist in their capital city, the therapist should not attempt to claim a price that is higher than the price limit for the support in that city. On the other hand, if the therapist was to visit the participant in their local area to deliver the support, then the therapist could claim a price that is within the limit set by the 'Remote' Price Guide.

If local providers are not available, the NDIA may enter into arrangements (and at times contracts) with specific providers for provision of services to more remote regions. The contract with a service provider will specify the cost of travel and any other associated expenses in these areas.

[1] https://www.health.gov.au/resources/apps-and-tools/health-workforce-locator/health-workforce-locator#hwc-map

Isolated Towns

From 1 August 2019, the NDIA has amended its geographic arrangements so that areas classified as ‘regional’ that are completely surrounded by ‘remote’ or ‘very remote’ areas are classified as ‘remote’ for planning and pricing purposes.

Postcode	Location Name	State	MMM Rating	Reclassified MMM Rating
2711	Hay	NSW	5	6
2715	Balranald	NSW	5	6
2880	Broken Hill	NSW	3	6
4455	Roma	QLD	4	6

6430	South Kalgoorlie	WA	3	6
6430	West Kalgoorlie	WA	3	6
6430	West Lamington	WA	3	6
6430	Williamstown	WA	3	6
6442	Kambalda West	WA	5	6
6442	Kambalda East	WA	5	6

Temporary Transformation Payment (TTP)

Providers of attendant care and community participation supports who meet the eligibility criteria set out below will have access to a higher price limit through a Temporary Transformation Payment (TTP). This conditional loading will assist providers to continue transforming their businesses in the move towards a more competitive marketplace. This replaces the Temporary Support for Overheads. In order to access the higher TTP price limits, providers will have to:

- publish their service prices;
- list their business contact details in the Provider Finder and ensure those details are kept up-to-date; and
- participate annually in an Agency-approved market benchmarking survey.

TTP Providers will have to until 31 December 2019 to meet these requirements, and to include in their contractual arrangements with their participants that they are entitled to use the TTP support items (and price limits) because they are compliant with the TTP terms.

That is, in the first year, providers can commence making claims using the TTP items from 1 July 2019, and will have until 31 December 2019 to meet the three compliance requirements. In later years, providers will need to be compliant by the start of the financial year, noting that the Benchmarking Requirement is met up until 31 December of any year by the provider's intention to take part in the next Benchmarking Survey, and after that date by actual participation in the most recent Benchmarking Survey.

Providers who become non-compliant during a financial year should not claim for TTP items while they are non-compliant.

Every support item in scope of the TTP has two support items and two price limits. The non-TTP items should be used by providers who are not compliant with the TTP conditions. The TTP items should be used by providers who are compliant with the TTP conditions, an example is given in the following Table.

01_011_0107_1_1	Assistance With Self-Care Activities - Standard - Weekday Daytime
01_011_0107_1_1_T	Assistance With Self-Care Activities - Standard - Weekday Daytime - TTP

There will be no formal registration process for TTP providers. Providers indicate that they intend to fulfil the TTP conditions by making a claim for a TTP support item through the payment system. They will be required to acknowledge compliance to the Price Guide terms, including the TTP terms if applicable, when submitting a payment request through the Myplace Provider Portal. By claiming TTP items through the NDIA payment system, or from a plan manager, providers are warranting that they have complied with the TTP conditions, or intend to comply with the TTP conditions by the relevant time.

Plan managers will not be responsible for ensuring providers are TTP compliant. They can accept the claim for a TTP support item by a registered provider as proof of TTP compliance. However, non-registered providers are not eligible for the TTP and plan managers should not use TTP line items to claim for services delivered by non-registered providers.

Claims for the new TTP support items can be made against existing service bookings that were made at the support category level.

Billing for non-direct services

Provider Travel

Providers can only claim travel costs from a participant in respect of the delivery of a support item if:

- the Support Catalogue indicates that providers can claim for Provider Travel in respect of that support item;
- the provider has the agreement of the participant in advance (i.e. the service agreement between the participant and provider should specify the travel costs that can be claimed); and
- the provider is required to pay the worker delivering the support for the time they spent travelling as a result of the agreement under which the worker is employed; or the provider is a sole trader and is travelling from their usual place of work to or from the participant, or between participants.

Where a provider claims for travel time in respect of a support then the maximum amount of travel time that they can claim for the time spent travelling to each participant (for each eligible worker) is 30 minutes in MMM1-3 areas and 60 minutes in MMM4-5 areas. (Note the relevant MMM classification is the classification of the area where the support is delivered.)

In addition to the above travel, capacity-building providers who are permitted to claim for provider travel can also claim for the time spent travelling from the last participant to their usual place of work. The maximum amount of travel time that they can claim for the time spent on return travel (for each eligible worker) is 30 minutes in MMM1-3 areas and 60 minutes in MMM4-5 areas. (Note the relevant MMM classification is the classification of the area where the support is delivered.)

Where a worker is travelling to provide services to more than one participant in a ‘region’ then the provider can apportion that travel time (including the return journey where applicable) between the participants, with the agreement of each participant in advance.

Claims for travel in respect of a support must be made separately to the claim for the primary support (the support for which the travel is necessary) using the same line item as the primary support and the “Provider Travel” option in the Myplace portal. When claiming for travel in respect of a support, a provider should use the same hourly rate as they have agreed with the participant for the primary support (or a lower hourly rate for the travel if that is what they have agreed with the participant) in calculating the claimable travel cost.

Remote and very remote travel

In remote areas, capacity-building providers may enter specific arrangements with participants to cover travel costs, up to the relevant hourly rate for the support item. Providers should assist participants to minimise the travel costs that they need to pay (e.g. co-ordinating appointments with other participants in an area, so that travel costs can be shared between participants).

Provider Travel Example 1 – Core support – Single Participant – MMM 1-3
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A Provider travels for 25 minutes to a participant who is located in zone 3 of the Modified Monash Model. They provide two hours of support to the participant They then spend 25 minutes returning to their usual place of business.

The provider and participant have agreed an hourly rate of $50.00, which is below the price limit for this item. **They have also agreed that the provider can claim for travel time.**

The provider is entitled to apply the 30-minute time-cap against the 25 minutes of travel to the participant. They are not entitled to claim for the time spent travelling back to their usual place of business, even though some of that time is could fit within the 30-minute time-cap. In total, 25 minutes of travel can be claimed.

The provider's claim for this support is in two parts, which should be shown separately on their invoice to the participant and claimed for separately in the system.

- $100.00 for the two hours of support
- $20.83 for the 25 minutes travel to the participant.
  $\left(\frac{25}{60}\right) \times \$50\ agreed\ price = \$20.83\ travel\ claim$

Provider Travel Example 2 – Capacity building support – Multiple Participants – MMM 1-3
(In this example, the support is 15_056_0128_1_3, which has a price limit of $193.99 per hour)

A Provider travels for 35 minutes to a participant who is located in zone 3 of the Modified Monash Model. They provide two hours of support to the participant They then spend 25 minutes returning to their usual place of business.

The provider and participant have agreed an hourly rate of $190.00. **They have also agreed that the provider can charge for their travel time.**

The provider is entitled to apply the 30-minute time-cap against the 35 minutes of travel to the participant. They are also entitled to claim for the time spent travelling back to their usual place of business by applying the 30-minute time-cap against the 25 minutes of return travel. In total, 55 minutes of travel can be claimed.

The provider's claim for these supports is in two parts, which should be shown separately on their invoice to the participant and claimed for separately in the system.

- $380.00 for the two hours of support
- $174.17 for the 55 minutes travel to the participant.
  $\left(\frac{55}{60}\right) \times \$190\ agreed\ price = \$174.17\ travel\ claim$

Provider Travel Example 3 – Core support – Multiple Participants – MMM 4-5
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A Provider travels for 65 minutes to Participant A who is located in zone 4 of the Modified Monash Model. They then provide two hours of the support to participant A. The provider then travels 25 minutes to Participant B, who is also located in zone 4. They deliver one hour of support to participant B. They then spend 45 minutes returning to their usual place of business.

The provider and participants have agreed an hourly rate of $50.00. **They have also agreed that the provider can charge for their travel time and that the provider can apportion the costs of the travel between the participants.**

The provider is entitled to apply the 2x60 minute time-cap against the 65 minutes of travel to participant A and the 25 minutes of travel to participant B. They are not entitled to claim for the time spent travelling back to their usual place of business, even though some of that time is could fit under the 2x60 minute time-cap. In total, 90 minutes of travel can be claimed.

The provider's claim for these supports is in two parts for each participant, which should be shown separately on their invoice to the participant and claimed for separately in the system.

Participant A
- $100.00 for the two hours of support to the participant
- $37.50 for the 45 minutes travel to and between participants

Participant B
- $50.00 for the two hours of support to the participant
- $37.50 for the 45 minutes travel to and between participants

Provider Travel Example 4 – Core support – Multiple Participants – MMM 1-3
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A Provider travels for 35 minutes to Participant A who is located in zone 3 of the Modified Monash Model. They then provide two hours of the support to participant A. The provider then travels 10 minutes to Participant B who is also located in zone 3. They deliver one hour of support to participant B. They then spend 25 minutes returning to their usual place of business.

The provider and participants have agreed an hourly rate of $50.00. **They have also agreed that the provider can charge for their travel time. They have not agreed that the provider can apportion the costs of the travel between the participants.**

The provider is entitled to apply the 30-minute time-cap against the 35 minutes of travel to participant A. They are also entitled to apply the 30-minute time-cap against the 10 minutes of travel to participant B. They are not entitled to claim for the time spent travelling back to their usual place of business, even though some of that time is could fit under the 30-minute time-cap. In total, 40 minutes of travel can be claimed.

The provider's claim for these supports is in two parts for each participant, which should be shown separately on their invoice to the participant and claimed for separately in the system.

Participant A
- $100.00 for the two hours of support to the participant
- $25.00 for the 30 minutes travel to the participant

Participant B
- $50.00 for the two hours of support to the participant
- $8.33 for the 10 minutes travel to the participant

Participant Transport

Participant transport as part of a community participation support

Providing community participation supports may, at the request of a participant, involve a worker accompanying a participant on a community outing and/or transporting a participant from their home to the community. In these situations, the worker's time can be claimed at the agreed hourly rate for the relevant support item for the total time the worker provides support to one or more participants, including time spent accompanying and/or transporting the participant. Where a provider is transporting two or more participants on the same trip, the worker's time should be claimed at the appropriate group rate for the relevant support.

This claim should be made using the relevant community participation support item and against the participant's core budget. In essence, the participant transport is a part of the community participation activity and should be billed accordingly.

Contribution towards costs of transport itself

If a provider incurs costs, in addition to the cost of a worker's time, when accompanying and/or transporting participants in the community (such as cost of ticket for public transport, road tolls, parking fees and the running costs of the vehicle), they may negotiate with the participant for them to make a reasonable contribution towards these costs.

A participant's support budget may include funding for transport, and this funding can be used for these types of contributions, which should be clearly specified in the service agreement. If the participant's support budget does not include funding for transport, then these costs should not be met from the participant's plan, but can be charged as an out of pocket expense to the participant.

Participant Transport Example 1:

- the support being delivered is 04_104_0125_6_1 with a price limit of $52.85 per hour
- the participant receives a **fortnightly instalment/periodic payment** towards transport costs.*

A Provider is delivering Assistance with Social and Community Participation services and is required to transport a participant from their home to a local swimming pool and back again, as part of that service.

The transport by taxi takes 25 minutes to arrive at the swimming pool, including the time to assist the participant to and from the vehicle and getting them set up to participate in the activity. They then provide 40 minutes of support to that participant. Afterwards, they spend 20 minutes returning the participant to their home by taxi.

The provider and participant have agreed an hourly rate of $50.00, which is below the price limit for this item. This amount also applies to the **support worker's time when transporting participants**.

The provider's claim for the **support worker's time** will be claimed in the portal as:

- 40 minutes of direct service at the agreed price of $50.00 per hour – that is, $30.00 against line item 04_104_0125_6_1; and
- 45 minutes of transport time at the agreed price of $50.00 per hour – that is, $37.50 against line item 04_104_0125_6_1.

In addition, the participant pays for the taxi fares as an out-of-pocket expense in accordance with **the Service Agreement in place with the provider**—participants can use their fortnightly instalment/periodic payment or their own funds to pay the taxi fare directly or to reimburse the provider for the cost of the taxi fare.

*While a fortnightly instalment/periodic payment is displayed as transport in the participant's Core Support budget, providers cannot claim against this item because it is paid in fortnightly/periodic instalments to the participant.

Participant Transport Example 2:

- the support being delivered is 04_104_0125_6_1, which has a price limit of $52.85 per hour
- the participant has a **budget** allocated under **Transport as a core support** in their plan and is not receiving a fortnightly instalment/periodic payment.

A Provider is delivering Assistance with Social and Community Participation services and is required to transport a participant from their home to the shops and back again, as part of that service.

The transportation involves the provider's time to accompany the participant and the non-labour transportation costs associated with using the provider's/support worker's car, which takes a total of 40 minutes. The service delivery (time spent at the shops) takes 60 minutes.

The provider and participant have agreed on using the price limit, when claiming for the **support worker's time**. The participant has a **transport budget** and has agreed for the provider to claim for **the non-labour transport costs**, which in this case are the support worker's car park fee ($5) and vehicle running costs at a rate as agreed with the participant of $0.78* a kilometre (20 km) against support line 02_051_0108_1_1.

The provider's claim for the **support worker's time** will be shown separately to the **claim for the agreed non-labour transport costs** on the payment claim in the portal:

- 60 minutes of direct service at $52.85 per hour – that is, $52.85 against line item 04_104_0125_6_1;
- 40 minutes of transport time at $52.85 per hour – that is, $35.23 against line item 04_104_0125_6_1; and
- The non-labour transport costs for the provider's car park fee and vehicle running costs of $20.60 against line item 02_051_0108_1_1.

*This is an example only and an agreed rate is negotiated between the provider and participant in the Service Agreement.

If the participant receives a **fortnightly instalment/periodic payment** towards transport costs rather than having a **budget** allocated under **Transport as a core support** in their plan, then they would pay for the non-labour transport costs as an out-of-pocket expense in accordance with **the Service Agreement in place with the provider.** Participants can use their fortnightly instalment/periodic payment or their own funds to pay this out-of-pocket expense directly or by reimbursing the provider.

Participant Transport Example 3:

- the support being delivered is 04_104_0125_6_1, which has a price limit of $52.85 per hour
- participant A has a **budget** allocated under **Transport as a core support** in their plan and is not receiving a fortnightly instalment/periodic payment
- participant B shares a house with participant A and receives a **fortnightly instalment/periodic payment** towards transport costs.

A Provider is delivering Assistance with Social and Community Participation services to the two participants and is required to transport them from their home to the library and back again, as part of that service.

The transportation involves the provider's time to accompany the participants and the non-labour transportation costs associated with using the provider's/support worker's car, which takes a total of 40 minutes. The service delivery (time spent at the library) takes 60 minutes.

The provider and participants have agreed on using the price limit, when claiming for the **support worker's time**. Participant A has a **transport budget** and has agreed for the provider to claim for their share of **the total non-labour transport costs**, which in this case includes the support worker's car park fee (total $5) and vehicle running costs at a rate as agreed with the participants of $0.78* a kilometre in total (20 km) against support line 02_051_0108_1_1. Participant B has also agreed to pay their share of the total non-labour transport costs.

The provider's claim for the **support worker's time** will be shown separately to the **claim for the agreed non-labour transport costs** on the payment claim in the portal, and will apportion the costs between the participants:

- 30 minutes of direct service at $52.85 per hour to participant A – that is, $26.42 against line item 04_104_0125_6_1;
- 30 minutes of direct service at $52.85 per hour to participant B – that is, $26.42 against line item 04_104_0125_6_1;
- 20 minutes of transport time at $52.85 per hour to participant A – that is, $17.62 against line item 04_104_0125_6_1;
- 20 minutes of transport time at $52.85 per hour to participant B – that is, $17.62 against line item 04_104_0125_6_1; and
- **Half** the transport costs for the provider's car park fee and vehicle running costs to participant A – that is $10.30 against line item 02_051_0108_1_1.

In addition, Participant B pays the provider for half the transport costs for the provider's car park fee and vehicle running costs ($10.30) as an out-of-pocket expense.

*This is an example only and an agreed rate is negotiated between the provider and participant in the Service Agreement.

Cancellations

Where a provider has a short notice cancellation (or no show) they are able to recover 90% of the fee associated with the activity, subject to the terms of the service agreement with the participant. Providers are only permitted to charge for a short notice cancellation (or no show) if they have not found alternative billable work for the relevant worker and are required to pay the worker for the time that would have been spent providing the support.

A cancellation is a short notice cancellation if the participant:

- does not show up for a scheduled support within a reasonable time, or is not present at the agreed place and within a reasonable time when the provider is travelling to deliver the support; or
- has given less than two (2) clear business days' notice for a support that meets both of the following conditions:
    - the support is less than 8 hours continuous duration; AND
    - the agreed total price for the support is less than $1000; or
- has given less than five (5) clear business days' notice for any other support.

Claims for a short notice cancellation should made using the same support item as would have been used if the support had been delivered, using the "Cancellation" option in the Myplace portal. When making a claim for a cancelled support the provider should claim for the full-agreed price of the support and indicate in the payment system that the claim is for a cancellation. The payment system will reduce the claim to 90% of the full-agreed price.

Cancellation Example 1:
(In this example, the support is 01_301_0104_1_1, which has a price limit of $58.31 per hour)

A one-hour support is scheduled for 10 am on a Tuesday following a Public Holiday Monday.

The provider and participant have agreed an hourly rate of $50.00 and have agreed that the provider can charge for short notice cancellations and no shows.

The participant cancels the support after 10 am on the preceding Thursday and the provider is not able to find alternative billable work for the relevant worker and is required to pay the worker for the time that would have bene spent providing the support.

The provider's claim for this support should be made at the agreed rate for the service and indicate that the support was cancelled at short notice. The system will reduce the claimed amount by 10%.

There is no limit on the number of short notice cancellations (or no shows) that a provider can claim in respect of a participant. However, providers have a duty of care to their participants and if a participant has an unusual number of cancellations then the provider should seek to understand why they are occurring.

The NDIA will monitor claims for cancellations and may contact providers who have a participant with an unusual number of cancellations.

NDIA Reporting

Providers will be expected to provide progress reports to the participant and NDIS at agreed times. A provider may charge for the time taken to write a therapy report (including functional assessment) that is requested by the NDIA, and claim this against the appointment at the hourly rate for the relevant support item. A report requested by the NDIA is considered a report that is required at the commencement of a plan that outlines plan objectives and goals, and at plan review, which measures functional outcomes against the originally stipulated goals. Providers are also expected to make recommendations for ongoing identified needs (informal/community/mainstream and/or funded supports). Providers may charge for any other NDIA-requested therapy report that is stipulated as being required in a participant's plan.

Claims for a NDIS requested reports are made using the relevant support item, using the "NDIA Report" option in the Myplace portal.

Non-Face-to-Face Supports

Non face-to-face activities are billable as a support if:

- the activities are part of delivering a specific disability support item to that participant (rather than a general activity such as enrolment, administration or staff rostering); and
- the provider explains the activities to the participant, including why they represent the best use of the participant's funds (i.e. explains the value of these activities to the participant); and
- the proposed charges for the activities comply with the NDIS Price Guide, and
- the participant agrees to pay for the activities (preferably in a service agreement).

For example, the Assistance with Self Care support items are described as covering activities "Assisting with, and/or supervising, personal tasks of daily life to develop skills of the participant to live as autonomously as possible". Therefore, time spent on non-face to face activities that assist the participant - for example, writing reports for co-workers and other providers about the client's progress with skill development – could be charged against this support item. The costs of training and upskilling staff, and of supervision, are also included in the base price limits for supports and are not considered billable non-face-to-face supports. However, research undertaken by a capacity-building provider specifically linked to the needs of a participant and to the achievement of the participant's goals may be billable as a non-face-to-face support with the participant's prior agreement.

Service agreements with each client can 'pre-authorise' these activities, but providers should only charge a participant for delivering a support item if they have completed activities that are part of the support for that participant. Charging a fee that is not linked to completed activities would not be appropriate.

Time spent on administration, such as the processing of NDIS payment claims for all clients, is outside the description of the support item and should not be claimed from a participant's budget as a non-face-to-face support. The NDIS price limits include an allowance for overheads, so that providers can fully recover the efficient costs, including the costs of administration tasks. Examples of administrative activities that are covered by the overhead component of the primary support price limits and that should not be billed as non-face-to-face supports include:

- Pre-engagement visits
- Developing and agreeing Service Agreements
- Entering or amending participant details into system
- Making participant service time changes
- Staff / participant travel monitoring and adjustment
- Ongoing NDIS plan monitoring
- Completing the Quoting tool
- Making service bookings and payment claims

In working out the cost of non-face-to-face supports, it is not appropriate to charge all participants an average additional fee. The additional fee must be worked out in each case and related specifically to the non-face-to-face supports delivered to the particular participant. This is not to say that the same additional fee might end up being charged to a number of participants, but it must be worked out separately.

Claims for a non-face-to-face supports are made using the relevant support item, using the “Non-face-to-face” option in the Myplace portal.

Disability-Related Health Supports

From 1 October 2019, the NDIS will fund disability-related health supports where these supports directly relate to a participant’s significant and permanent functional impairment and assist them to undertake activities of daily living. These supports are provided individually to participants and can be provided in a range of environments, including, but not limited to, the participant’s own home.

Participants are not permitted to claim for health supports from their plans when those health supports do not relate to their disability and when they do not require health supports on a regular basis. Those health supports will continue to be provided by the health system. Additionally, if a participant’s support needs become acute, that support should be provided in a hospital or another health setting by the relevant state/territory health care system or private health system and not be claimed from the participant’s plan.

The list below provides an indication of the majority of disability-related health supports that may be required by NDIS participants; however, it is not an exhaustive list. Disability-related health supports are expected to assist in areas such as:

- **Dysphagia**: for participants who have trouble eating, drinking or swallowing on a daily basis.
- **Respiratory**: for participants requiring help with their breathing and maintenance of their respiratory health, including any associated care, comfort, planning or supports
- **Nutrition**: for participants requiring help with the way they eat or understanding the food they need.
- **Diabetes**: for participants who have daily problems with how much sugar is in their blood.
- **Continence**: for participants who need daily assistance with toileting (bladder and bowel).
- **Wound & Pressure Care**: for participants who need daily wound and pressure care (resulting from pressure wounds or swollen limbs).
- **Podiatry**: for participants who require help looking after their feet, ankles and lower limbs.

- **Epilepsy**: for participants who need daily help managing the way epilepsy affects the way their brain and nerves work.
- **Botox and Splinting**: It is unlikely Botox and splinting supports will be reasonable and necessary to include in a plan, as these are generally provided in a clinical setting.

Five types of disability-related health supports have been identified in the *NDIS Support Catalogue*:

a) Provision of Disability-Related Health Supports by Disability Support Workers – these supports should be claimed using the standard Daily Personal Activities and High Intensity Daily Personal Activities support items;
b) Assessment, planning and the provision of Disability-Related Health Supports by therapists these supports should be claimed using the standard ECEI and Therapy support items;
c) Assessment, planning and the provision of Disability-Related Health Supports by nurses – these supports should be claimed using the new nursing support items;
d) Consumables related to Disability Related Health Supports – these supports should be claimed using the new Low-Cost or High-Cost Disability Related Health Consumables support line items; and
e) Assistive Technology related to Disability Related Health Supports – these supports should be claimed using the new Disability Related Health Assistive Technology support line items.

Other Payment Considerations

This section outlines various other considerations that may be relevant to participants and providers. These should be reviewed when entering into a new Service Agreement or if there is a significant change in the participant's circumstances.

Medicare and insurance

Some elements of a participant's care may be covered by funds outside the NDIS. These expenses are commonly medical, including those covered by private health insurance or Medicare. These medical expenses are not funded under the NDIS, even if they are related to, or a symptom of the disability. These expenses should be claimed under the relevant health care scheme or insurance policy. Some providers (e.g. therapists) may need to distinguish between the health services and disability supports that they provide to a single client, and make separate payment claims (e.g. claim payments from Medicare for health services, and the NDIS for disability supports).

Prepayments

Registered Providers can make a claim for payment once a service booking has been created and the support has been delivered or provided. Prepayment is not permitted unless the NDIA has given prior approval in writing to the Registered Provider. This will only occur in exceptional circumstances such as for certain assistive technologies, home modifications and remote area servicing where this has been agreed to by the participant.

Co-Payments for Capital items, including assistive technology

Co-Payments by the participant are not required; however, where the participant would like a customisation to a support or assistive technology that is not considered reasonable or necessary, they are required to pay for these themselves. These may include an aesthetic customisation to an assistive technology or modifications to a vehicle that are additional to the assistive components.

Goods and Services Tax (GST)

Many, but not all, NDIA supports provided to NDIS participants are GST-free. Further information about the NDIS and GST can be accessed on the Australian Taxation Office website[2]. Providers should seek independent legal or financial advice if they require assistance with tax law compliance. If GST is applicable to a support, the price limit is inclusive of GST.

Other fees (Commissions and exit fees)

Participants are generally not required to pay exit fees, even when changing provider's part way through a plan. A core principle of the NDIS is choice and control for participants, allowing them to change providers without expense. Further information on establishment fees claimable by the incoming provider can be found below under *Establishment fee for personal care/community access*.

Core – Assistance with Daily Life (includes Supported Independent Living)

This support category relates to assisting with and/or supervising personal tasks of daily life to enable the participant to live as autonomously as possible. These supports are provided individually to participants and can be provided in a range of environments, including but not limited to, the participant's own home.

Daily Personal Activities, including High Intensity Daily Personal Activities

A hierarchy of price limits applies to this group of supports, based on:

A) the time of day that the support is delivered;

B) the day of week that the support is delivered;

C) whether the support is Standard Intensity or High Intensity;

D) if the support is High Intensity then whether it is a Level 1 (Standard), Level 2 (High Intensity) or Level 3 (Very High Intensity) support; and

E) whether the provider is eligible for the Temporary Transformation Payment.

Time of day

In determining which price limit is applicable to a support, providers should note that a support is considered to be:

- a Daytime Support is it is delivered between 6 am and 8 pm;
- an Afternoon (formerly Evening) Support if it is delivered after 8 pm and before 12 midnight; and
- an Overnight Support is it is delivered between 12 midnight and 6 am.

Day of week

In determining which price limit is applicable to a support, providers should note:

- a weekday is Monday to Friday;
- the extra rates paid for Saturday, Sunday and Public holidays are in substitution for, and not cumulative upon, the shift premiums payable for afternoon and overnight supports; and
- the extra rates for Saturday/Sunday/Public holidays do not increase further when the support finishes after 8pm.

High intensity supports

A support is considered a high intensity support if the participant requires assistance from a support worker with additional qualifications and experience relevant to the participant's complex needs. The high intensity price limits may be considered when:

- frequent (at least 1 instance per shift) assistance is required to manage challenging behaviours that require intensive positive behaviour support; and/or

- continual active support is required due to high medical support needs (such as unstable seizure activity or respiratory support)

In determining which price limit for High Intensity Supports should apply to a given support, the provider should consider the skills and experience of the worker delivering the support. In general, the Level 2 price limit applies to most high intensity supports. However, if the particular instance of support is delivered by a worker who does not have the skills and experience to deliver a high intensity support then the Level 1 price limit should be applied. If the particular instance of the support is delivered by a more highly skilled or experienced worker then the provider can consider applying the Level 3 price cap, with the participant's prior agreement.

Other matters

Provisions for 'shadow shifts'

Shadow shifts may be considered where the participant has complex individual support needs that are best met by introducing a new worker to the participant before it is reasonable that they commence providing the support independently. These are considered where the specific individual support needs include:

- Very limited communication;
- Behaviour support needs; and/or
- Medical needs/procedures such as ventilation or Home Enteral Nutrition (HEN).

Where the individual would require shadow shifts to assist with the introduction of new workers, and this is the desired method by the participant or their family, the provider may claim for up to 6 hours of weekday support per year.

Introducing new workers is not designed to replace formal, recognised training that will be provided by an employer to their workforce, such as Shadowing (or "Buddying") less experienced staff or new staff with experienced workers or informal carers to help build knowledge and social capital (worker retention), which is not claimable under the NDIS.

Establishment fee for personal care/community access

This fee applies to all new NDIS participants in their first plan where they receive at least 20 hours of personal care/community access support per month. This payment is to cover non-ongoing costs for providers establishing arrangements and assisting participants in implementing their plan.

An establishment fee is claimable by the provider who assists the participant with the implementation of their NDIS Plan, delivers a minimum of 20 hours per month of personal care/community access support and has made an agreement with the participant to supply these services.

A budget of $750 is included in the first plan for NDIS participants, in case they need this type of assistance from providers to design and implement support arrangements. Providers can draw against this budget as follows:

- If the participant is new to the NDIS and new to the provider, then the provider can charge a maximum of $500 against the participant's plan;
- If the participant is new to the NDIS but is an existing client of the provider, then the provider can charge a maximum of $250 against the participant's plan; and

- If the participant is choosing to change providers, then the new provider can charge a maximum of $250 against the participant's plan to assist the participant in changing providers.

Assistance with household tasks

These support items enable participants to maintain their home environment. This may involve undertaking essential household tasks that the participant is not able to undertake.

Preparation and delivery of meals

This support item is for the preparation and delivery of food to participants who are unable to do this themselves, and are not in receipt of other supports that would meet the same need. The cost of the food itself is not covered by the NDIS. The cost of this support will vary based on the number of meals prepared and the deliveries required.

Assistance in Shared Living Arrangements – Supported Independent Living

Supported Independent Living (SIL) is the assistance with and/or supervising tasks of daily life in a shared living environment, with a focus on developing the skills of each individual to live as autonomously as possible. The support is provided to each person living in the shared arrangement in accordance with their need.

SIL does not include rent, board and lodging or other day-to-day usual living expenses such as food and activities. It also does not include the capital costs associated with a participant's accommodation.

SIL does not have fixed price limits, and providers can quote for the specific SIL service that they offer to each participant. To assist providers with quoting, the NDIA has developed a Provider SIL Pack[3]. The Provider SIL Pack contains templates that assist providers in developing an individualised quote. The purpose of this quote is to identify:

- The individual supports that will be available for the person, focussed on maximising the person's capacity to be as independent as possible with household decision making, personal care and domestic tasks;
- The typical roster of supports that is shared between participants to maximise the efficient use of resources; and
- What supports are available to all residents to ensure the smooth operation and running of the household.

Once a quote is received, the NDIA uses a 'SIL Tool' to analyse provider quotes and to make sure that they represent value for money. In some cases, negotiation between the NDIA and providers will be necessary to agree appropriate prices for SIL.

The Agency will only accept SIL quotes in the current templates, which can be downloaded as part of the Provider SIL pack from the NDIS internet page 'Supported Independent Living'.[4] This means that quotes can be processed in a much timelier, consistent and effective manner and the duplication of work is also reduced through simple automation. The new Provider SIL Pack allows for much more flexibility – among other things, providers are now able to specify overnight

[3] https://www.ndis.gov.au/providers/essentials-providers-working-ndia/supported-independent-living
[4] https://www.ndis.gov.au/providers/essentials-providers-working-ndia/supported-independent-living

information, cross-over shift information, and choose their own ratios of support. This means that providers should experience fewer delays in getting their SIL quotes approved.

Queries about the Provider SIL Pack should be made to sil@ndis.gov.au.

Short Term Accommodation and Assistance

From time to time, participants may require temporary supports that are different from their usual arrangements. These are non-typical days and may include short stays in a group-based facility (short term accommodation), or the purchase of additional in-home support.

For the purposes of this Price Guide, the 'short term accommodation' price limit includes all expenses in a 24-hour period including assistance with daily personal activities, accommodation, food and negotiated activities. Typically, this type of support would be used for short periods of up to 14 days at a time. For longer-term arrangements, other options are likely to be more appropriate (e.g. Supported Independent Living).

In cases where a participant will receive substantially less than 24 hours of assistance with daily personal activities, it may be appropriate for the participant and provider to negotiate a lower price than the maximum price specified in this Guide, based on the actual support provided. This situation might arise, for example, if a participant enters a short term accommodation facility in the evening, and exits again early the following morning. In addition, where a participant enters accommodation late in the day, it may be appropriate to claim the daily rate for the day of the week that the majority of the support is provided. In each case, support arrangements, including price, should be agreed with participants in advance.

Short term accommodation price limits vary according to the support needs of the participant and the day of the week the support is provided. Providers claiming at the rates for high intensity (i.e. ratio of 1 support worker for 2 participants) or 1:1 support must deliver assistance with daily personal activities at those support ratios for the duration of the participant's stay.

Core - Transport

Transport enables participants to access disability supports outside their home, and to pay for transport that helps them to achieve the goals in their plan. Transport supports generally do not have price limits; however, participants should use the least expensive transport that meets their needs. Transport funding is paid fortnightly in advance to self-managed participants. Funding transport assistance is limited to those who cannot use public transport due to their disability. If the participant has questions about their transport support, providers may direct them to the NDIS factsheet available on the NDIS Website[5].

Accompanying participants for community access

Providing community access supports may, at the request of a participant, involve a worker accompanying a participant on a community outing and/or transporting a participant from their home to the community. In these situations, the worker's time can be claimed at the agreed hourly rate for the relevant support item for the total time the worker provides support to one or more participants, including time spent accompanying and/or transporting the participant. Where a provider is transporting two or more participants on the same trip, the worker's time should be claimed at the appropriate group rate for the relevant support.

This claim should be made using the relevant community participation support item and against the participant's core budget. In essence, the participant transport is a part of the community participation activity and should be billed accordingly.

Contribution towards costs of transport itself

If a provider incurs costs, in addition to the cost of a worker's time, when accompanying and/or transporting participants in the community (such as cost of ticket for public transport, road tolls, parking fees and the running costs of the vehicle), they may negotiate with the participant for them to make a reasonable contribution towards these costs.

Further details can be found at page 3.

Core - Consumables

Consumables are a support category available to assist participants with purchasing everyday use items. Supports such as Continence and Home Enteral Nutrition (HEN) products are included in this category. More information on these supports can be found in the *Assistive Technology and Consumables Code Guide* on the Assistive Technology webpage.[6]

[6] https://www.ndis.gov.au/providers/essentials-providers-working-ndia/providing-assistive-technologies-and-home-modifications

Core - Assistance with Social and Community Participation

These supports enable a participant to engage in community, social or recreational activities. They may be provided in a centre or in community settings at standard or higher intensity rates. If arranged in advance with participants, providers may charge up to four hours for each plan period to document proposed supports and expected outcomes. Price limits vary according to the support needs of the participant and the day of the week the support is provided.

Providers should not claim payment for:

- expenses related to recreational pursuits, such as event tickets for the participant, as they are not covered by the NDIS; and
- the cost of entry for a paid support worker to attend a social or recreational event.

A hierarchy of price limits also applies to this group of supports, based on:

A) the time of day that the support is delivered;

B) the day of week that the support is delivered;

C) whether the support is Standard Intensity or High Intensity;

D) if the support is High Intensity then whether it is a Level 1 (Standard), Level 2 (High Intensity) or Level 3 (Very High Intensity) support; and

E) whether the provider is eligible for the Temporary Transformation Payment.

(See the definitions and notes in the Assistance with Daily Living Support Category.)

Community and social activity costs

This support is included in a participant's plan to enable them to pursue recreational activities and engage in the community when associated with a participant's disability and goals. Participants may use this funding for activities such as camps, vacation and outside school hours' care, course or membership fees. More information can be found in the Operational Guidelines[7]

Where appropriate, funded hours in a Community Access budget may be converted to a fee and claimed by a provider for these purposes.

Group based supports

Assistance to access community, social and recreational activities is often provided in a group setting, either in the community or in a centre.

A hierarchy of price limits applies to group based supports, based on:

A) the time of day that the support is delivered;

B) the day of week that the support is delivered;

C) whether the support is Standard Intensity or High Intensity (complex);

D) whether the provider is eligible for the Temporary Transformation Payment;

[7] https://www.ndis.gov.au/about-us/operational-guidelines/planning-operational-guideline/planning-operational-guideline-deciding-include-supports-participants-plan

E) the size of the group and ratio of staff to participants; and

F) whether the support is provided in a Centre or in the community.

(See the definitions and notes in the Assistance with Daily Living Support Category.)

For support ratios that are not stated in this Guide (e.g. two workers for three participants), participants and providers should discuss and agree the most appropriate line item to be used for payments, and the appropriate price to be paid (which might be lower than the price limit for that line item).

Providers of group-based supports are not permitted to bill for non-face-to-face services as the hourly price limits for these supports include an allowance for non-face-to-face services.

Capital – Assistive Technology

This support category includes all aids or equipment supports that assist participants to live independently or assist a carer to support the participant. It also includes related delivery, set-up and some training support items. Usually, providing independent advice, guidance, trials, set-up and training (not bundled with the sale of an item) is funded through a capacity building support.

More detailed information on assistive technologies and consumables codes can be found in the *Assistive Technology and Consumables Guide* on the Assistive Technology webpage[8].

Vehicle Modifications

Vehicle modifications include the installation of, or changes to, equipment in a vehicle to enable a participant to travel safely as a passenger or to drive.

A participant is free to choose a more expensive option at their own expense, where the more expensive option is not considered to be reasonable and necessary. An example of this situation would be where a vehicle modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not related to their disability or are more expensive than others that have an equivalent function. In this situation, the NDIA will cover the reasonable and necessary component of the modification, and the participant will pay the additional cost.

[8] https://www.ndis.gov.au/providers/at/supplying-at.html

Capital – Home Modifications and Specialist Disability Accommodation

This support category includes home modifications and Specialist Disability Accommodation (SDA) supports.

Home Modifications

Home modifications include design, construction, installation of or changes to equipment or non-structural components of the building, and installation of fixtures or fittings, to enable participants to live as independently as possible or to live safely at home. All home modifications in excess of $1,500 are quotable.

A participant is free to choose a more expensive option or modification that achieves the same outcome at their own expense, where the more expensive option is not reasonable and necessary. For example, where a home modification has been approved for a participant, but the participant would like cosmetic or personalised fittings that are not reasonable and necessary, the NDIA will provide funding for the reasonable and necessary component of the modification, and the participant will pay any extra costs.

Specialist Disability Accommodation (SDA)

SDA funding is intended for participants who require a specialist dwelling that reduces their need for person-to-person supports, or improves the efficiency of the delivery of person-to-person supports. SDA funding will only be provided for participants who meet the eligibility criteria. Participants who meet the eligibility criteria will have an extreme functional impairment and/or very high support needs.

SDA does not refer to the support services, but the homes in which these are delivered. SDA may include special designs for people with very high needs or may have a location or features that make it feasible to provide complex or costly supports for independent living.

SDA payments are an adjusted contribution to the cost of capital required for the land and physical building required for SDA needs. Importantly, SDA funding is not intended to cover personal support costs, which are assessed and funded separately by the NDIS. Additionally, SDA does not cover accommodation costs where these are not linked to a person's disability or where specialist accommodation with integrated supports is not required. SDA is a separate support category and does not replace Supported Independent Living (SIL) or any other support. Participants receiving SDA could also be eligible for SIL supports in their package.

All providers who are registered with the NDIA for the Registration Group 'Specialist Disability Accommodation' will also be required to declare and ensure that the infrastructure meets the NDIA's specialist built form requirements and the relevant legislation and standards applicable to the state in which the accommodation is situated. These individual sites/locations must also be enrolled with the NDIA.

Due to the nature of the support, the identification of maximum SDA prices and the process by which providers can claim for SDA are more complex than for most other supports. Providers should refer to the Specialist Disability Accommodation section of the NDIS website for detailed

information about maximum prices that can be charged, dwelling enrolment and participant assessments[9].

SDA has two support items: Specialist Disability Accommodation and SDA person-specific adjustments.

Each SDA dwelling has a unique maximum price, based on a standard set of factors. There are also limits on the amount that providers of SDA can charge participants in addition to the SDA price, for rent and other board-like services provided. Providers should refer to the SDA section of the NDIS website for detailed guidance on maximum prices[10]. Participants are able to choose to move between SDA dwellings, as long as the SDA dwelling is commensurate with their SDA budget.

SDA person specific adjustments

In certain limited circumstances, the NDIA will continue to make SDA payments on behalf of a participant who has moved out of an enrolled SDA dwelling. Provided all conditions are met in section 6.3 of the *National Disability Insurance Scheme (Specialist Disability Accommodation) Rules 2016*, vacancy payments may continue to be made for a period of up to 90 days if the dwelling is enrolled to house four or five residents, or up to 60 days if the dwelling is enrolled to house two or three residents[11]. Vacancy payments will not be made where a dwelling is only enrolled to house one resident. Vacancy payments will only be payable if the vacancy is available to another NDIS participant and the NDIA has been notified.

Capacity Building - Support Coordination

Support Coordination (if required) is included in the Capacity Building budget. This is a fixed amount for strengthening participant's abilities to coordinate and implement supports in their plans and to participate more fully in the community.

Three items in the NDIS Price Guide describe different layers of support coordination activity.

Level 1: Support Connection

Assistance for participants to implement their plan by strengthening the ability to connect with the broader systems of supports and understand the purpose of the funded supports and participant in the community Support Connection will assist a participant to understand their NDIS plan, connect participants with broader systems of supports, and provide assistance to connect with providers. Support Connection will assist participants to achieve effective utilisation of their NDIS plan.

Support Connection will increase a participant's capacity to maintain (or in some cases change) support relationships, resolve service delivery issues, and participate independently in NDIA processes. Support Connection includes, but not limited to:

- Understand the Plan;
- Connect with Supports and Services;
- Establish Supports;
- Coach, Refine, Reflect; and
- Report to the NDIA.

Where a participant aged 0-6 years is receiving assistance from Partners in the Community (PITC) delivering Early Childhood Early Intervention (ECEI) services, linking the family to a service provider/s (under ECEI best practice principles, a service provider operating under the key worker approach) and support through changes in circumstance will be delivered through Partner arrangements.

Where a participant aged seven (7) and over is receiving assistance from Partners in the Community (PITC) delivering Local Area Coordination (LAC) services, plan implementation and monitoring support will be delivered by a Participant's Local Area Coordinator.

Level 2: Coordination of Supports

The delivery of Coordination of Supports is to assist strengthening a participant's ability to design and then build their supports with an emphasis on linking the broader systems of support across a complex service delivery environment. Coordination of Supports is to focus on supporting participants to direct their lives, not just their services. This involves working together to understand the funding, identify what participants expect from services, and how participants want this designed. Coordination of Supports also includes coaching participants, and working with participants to develop capacity and resilience in their network.

Support coordinators are focussed on assisting participants to build and maintain a resilient network of formal and informal supports.

It is generally expected that participants will develop their capacity to implement and manage their supports and network more independently over time. Some participants however will require Coordination of Supports funding in subsequent plans to support ongoing capacity building or

manage the complexity within the participants support environment and/or circumstances. This is to be identified in the plan review process. Coordination of Supports includes, but is not limited to:

- Understand the Plan;
- Connect with Supports and Services;
- Design Support Approaches;
- Establish Supports;
- Coach, Refine, Reflect;
- Targeted Support Coordination;
- Crisis: Planning, Prevention, Mitigation and Action;
- Build Capacity and Resilience; and
- Report to the NDIA.

Over time as a participant's capacity is strengthened, this support may be replaced by Support Connection or the introduction of a Local Area Coordinator (LAC) or Early Childhood Early Intervention (ECEI) Partner in subsequent plans.

Level 3: Specialist Support Coordination

Specialist Support Coordination is delivered utilising an expert or specialist approach, necessitated by specific high complex needs or high level risks in a participant's situation. Specialist Support Coordination is delivered by an appropriately qualified and experienced practitioner to meet the individual needs of the participant's circumstances such as a Psychologist, Occupational Therapist, Social Worker, or Mental Health Nurse. Specialist Support Coordination will address highly complex barriers impacting on the ability to implement their plan.

Specialist support coordination is expected to address complex barriers impacting a participant's ability to implement their plan and access appropriate supports. Specialist support coordinators assist participants to reduce complexity in their support environment, and overcome barriers to connecting with broader systems of supports as well as funded supports.

Specialist support coordinators are expected to negotiate appropriate support solutions with multiple stakeholders and seek to achieve well-coordinated plan implementation. Specialist support coordinators will assist stakeholders with resolving points of crisis for participants, assist to ensure a consistent delivery of service and access to relevant supports during crisis situations.

Specialist support coordination is generally delivered through an intensive and time limited period necessitated by the participant's immediate and significant barriers to plan implementation. Depending on individual circumstances, a specialist support coordinator may also design a complex service plan that focusses on how all the stakeholders in a participant's life will interact to resolve barriers and promote appropriate plan implementation. Once developed, a specialist support coordinator will continue to monitor the plan, but it may be maintained by one of the participant's support workers or other care supports.

In some instances depending on the individual circumstances, a participant may have specialist support coordination as well as Coordination of Supports funded in the same plan. For instance, when immediate complex barriers have been addressed and the participant still requires more general coordination of supports for the remainder of their plan period. For others, they may have specialist support coordination in one plan and Coordination of Supports in subsequent plans. Specialist Support Coordination includes, but is not limited to:

- Understand the Plan;
- Connect with Supports and Services;
- Design Support Approaches;
- Establish Supports;
- Coach, Refine, Reflect;
- Targeted Support Coordination;
- Crisis: Planning, Prevention, Mitigation and Action;
- Address Complex Barriers;
- Design Complex Service Plan;
- Build Capacity and Resilience; and
- Report to the NDIA.

Capacity Building and Training in Plan and Financial Management by a Support Coordinator

This reasonable and necessary support focusses on strengthening the participant's ability to undertake tasks associated with the management of their supports. This includes:

- Building financial skills
- Organisational skills
- Enhancing the participant's ability to direct their supports
- Develop self-management capabilities

Plan and Financial Capacity Building providers are expected to assist the participant to develop their skills for self-management in future plans, where this is possible. As a part of this capacity building support, providers are to assist the participant to build capacity in the overall management of the plan including engaging providers, developing service agreements, paying providers and claiming payment from the NDIA and maintain records.

Capacity Building - Improved Living Arrangements

Support is provided to guide, prompt, or undertake activities to ensure the participant obtains and/or retains appropriate accommodation. This may include assisting to apply for a rental tenancy or to undertake tenancy obligations in line with the participant’s tenancy agreement.

Capacity Building - Increased Social and Community Participation

This support category involves supports for participation in skills-based learning to develop independence in accessing the community.

Skills Development and Training

These support items are price controlled. Providers of these supports can also claim for: Provider Travel and Cancellations.

The group rate is based on a staff/participant ratio of 1:3. If the group size differs, providers should claim at the rate applicable for the group size. A higher staff ratio for groups may be indicated when a participant has challenging behaviour or high medical support needs, which require additional assistance from another worker and this is referred to as a higher intensity support.

Innovative Community Participation

This support item is not price controlled. It is designed to allow providers to offer new and innovative services to NDIS participants. Any standards applicable to the industry in which the provider operates would need to be met.

Community Participation Activities

These support items are not price controlled. They are designed to enable providers to claim for tuition fees, art classes, sports coaching and similar activities that build skills and independence. Camps, classes and vacation activities that have capacity building components. These may include assistance to establish volunteer arrangements in the community, mentoring, peer support or individual skill development.

All supports funded under these items need to be determined as reasonable and necessary given the participant's plan goals and could include, but are not limited to:

- Universal recreational activities: A limited number of lessons could be funded to enable a participant to try out an activity and test their capability and interest in further pursuing this activity – such as horse riding, art, dance or singing classes
- Funding to attend a "camp" or groups that build a person's relationship skills and offer a range of activities and opportunities to explore wider interests.
- Other items or adjustments such as customised tools required because of the person's disability could also be funded.

Capacity Building - Finding and Keeping a Job

Employment Related Assessment and Counselling

This support is designed to provide workplace assessment and/or counselling to assist participants successfully engage in employment. For workplace assessments - if a participant is employed and on award wages, then in most instances a work place assessment is available through the Employment Assistance Fund administered by JobAccess and is a free service to employers. For employment related counselling, this service may benefit participants who have, for example, experienced traumatic injury and need significant support (over and above a mainstream employment related service) to develop a new work pathway.

Please note that this support item falls under a different registration group, therapeutic supports, and as such, a provider needs to have registration for this group to deliver this supports.

Workplace assistance

These supports provide workplace assistance that enables a participant to successfully obtain and/or retain employment in the open or supported labour market.

These supports can be applied to any working age participant (including students reaching working age) with an employment goal. This may include supports to:

- explore what work would mean for them (discovery);
- build essential foundation skills for work;
- managing complex barriers to obtaining and sustaining employment;
- specialised job customisation;
- supports to transition from an Australian Disability Enterprise (ADE) to open employment;
- develop a career plan; and
- other capacity building supports that are likely to lead to successful engagement in a Disability Employment Service (DES).

School Leaver Employment Supports (SLES)

School Leaver Employment Supports (SLES) is a support for school leavers to assist them to transition from school into employment. Some students may already be engaged with the mainstream DES Eligible School Leaver (ESL) program during Year 12 and therefore not require SLES.

These supports are designed to plan and implement a pathway to inclusive employment, focussing on capacity building for goal achievement. With appropriate supports, it is expected that the majority of SLES participants will transition to DES to undertake the job seeking, placement and post placement support phases of their pathway.

Supports will have an individualised approach, with a strong emphasis on “try and test” work experience opportunities, (generally in work places that would pay award wages). Capacity building should focus on hard and soft skill development.

Supports, more generally, should facilitate positive experiences that contribute to developing an understanding of work capability and confidence to step into employment. SLES should also help inform the level and nature of future supports needed to obtain and sustain employment.

Capacity Building - Improved Relationships

This support category is the provision of specialised assessment where the participant may have complex or unclear needs, requiring long term and/or intensive supports to address behaviours of concern.

Behaviour support requires a behaviour support plan to be developed that aims to limit the likelihood of behaviours of concern developing or increasing once identified. This plan outlines the specifically designed positive behavioural support strategies for a participant, their family and support persons that will achieve the intended outcome of eliminating or reducing behaviours of concern.

This support category includes specialist behavioural intervention support, which is an intensive support for a participant, intending to address significantly harmful or persistent behaviours of concern.

Capacity Building - Improved Health and Wellbeing

Physical Wellbeing Activities

These activities support, maintain or increase physical mobility or well-being through personal training or exercise physiology. Physical well-being activities promote and encourage improved physical capacity and health.

Dietetics

These supports provide individual advice to a participant on managing diet for health and wellbeing due to the impact of their disability.

Capacity Building - Improved Learning

This support is for provision of skills training, advice, assistance with arrangements and orientation to assist a participant moving from school to further education.

Capacity Building - Improved Life Choices

Plan Management – Financial Administration

Plan Management – Financial Administration funding applies to registered providers who undertake financial administration of a plan on behalf of a participant.

Plan Management – Financial Administration funding includes a setup fee to establish the payment arrangements with providers and a monthly processing fee. This support assists a participant by:

- Giving increased control over plan implementation and utilisation with plan financial assistance
- Managing and monitoring budgets over the course of the plan
- Managing NDIS claims and paying providers for delivered service
- Maintaining records and producing regular (at least monthly) statements showing the financial position of the plan
- Providing access to a wider range of service providers, including non-registered providers whilst remaining in line with the price limits contained within this Guide.

A Plan Management – Financial Administration provider will possess bookkeeping / accounting skills and qualifications. They will have systems in place for efficiently processing payments on behalf of a participant.

Capacity Building and Training in Plan and Financial Management by a Plan Manager

This reasonable and necessary support focusses on strengthening the participant's ability to undertake tasks associated with the management of their supports. This includes:

- Building financial skills
- Organisational skills
- Enhancing the participant's ability to direct their supports
- Develop self-management capabilities

Plan and Financial Capacity Building providers are expected to assist the participant to develop their skills for self-management in future plans, where this is possible. As a part of this capacity building support, providers are to assist the participant to build capacity in the overall management of the plan including engaging providers, developing service agreements, paying providers and claiming payment from the NDIA and maintain records.

Capacity Building - Improved Daily Living

This support category includes assessment, training, strategy development and/or therapy (including Early Childhood Intervention) supports to assist the development or increase a participant's skills and/or capacity for independence and community participation. Supports can be delivered to individuals or groups.

Therapy Supports (over 7 years)

In the NDIS, therapy supports are for participants with an established disability, where maximum medical improvement has been reached, to facilitate functional improvement. For people who access the Scheme as 'early intervention' NDIS participants, reasonable and necessary supports are likely to be a blend of medical and disability therapies, but should be predominantly disability therapy supports. Therapy in this context must be aimed at adjustment, adaption and building capacity for community participation.

For NDIS participants whose medical condition, illness or disease requires a particular treatment to maintain the functioning of a body part, or slow/prevent the deterioration, the NDIS may fund reasonable and necessary training for non-skilled personnel to undertake this intervention as part of the usual daily personal care. For participants where such treatment can only be met through skilled rather than non-skilled care, this treatment is to be funded through medical funds, not the NDIS.

Ongoing funding for therapy is subject to a detailed support plan that is designed to deliver progress or change for the participant. Providers develop this plan with the participant and it should clearly state the expected therapy outcomes and demonstrate a link to the participant's goals, objectives and aspirations.

Massage Therapy (over 7 years)

Massage, delivered directly to impact a body part or body system, is more appropriately provided by the health system and is therefore not funded by the NDIS.

Maintenance Therapy (over 7 years)

Where maintenance therapy is reasonable and necessary, it is funded as part of ongoing direct support hours (delivered by carers who are or can be trained in this if required), and is not funded as ongoing therapy.

For participants whose medical condition or disability requires a particular regime to maintain functioning of a body part, or to slow the deterioration of a medical condition or body part, the NDIS will fund reasonable and necessary training for non-qualified personnel to assist the individual as part of usual daily care.

Where a skilled therapist is involved in establishing a therapy program for a participant, funding can include the development of a plan and training for a therapy assistant, informal or funded carers, as part of usual care. Building capacity with family and carers to undertake therapy or exercises under the supervision of a skilled therapist can deliver ongoing benefit to NDIS participants.

Group Supports for Therapy (over 7 years)

The NDIA prefers to allow participants and providers flexibility in negotiating arrangements, so there may not be price limits or support items for specific group ratios beyond what is currently in place.

For support ratios that are not stated in this Guide (such as one therapist to two participants, or one therapist to four participants), the NDIA encourages participants and providers to discuss arrangements both parties agree to, including price. Therapy delivered in a group may be claimed using the relevant therapy support line item, but with lower prices than the price limit, as agreed between provider and participant. This arrangement for support ratios is intended to allow providers to offer a range of services and discuss with participants about more flexible arrangements that both parties prefer.

Early Childhood Intervention Supports (under 7 years)

Early Childhood Intervention (ECI) provides specialised support and services for infants and young children with development delay and/or disability and their family/carers, to work towards increased functional independence and social participation. Children learn best in everyday situations with familiar people and ECI builds on opportunities for learning and development in the activities and daily routines of their everyday life.

This category includes supports provided in small groups or to individually to children and their family/carers. An ECI provider will usually offer supports via the key worker model, where the key worker has expertise in child development, learning and wellbeing more generally as well as professional qualifications, including special/early childhood education, speech pathology, occupational therapy, psychology, social work and physiotherapy. Following best practice, a key worker should take a lead role in ensuring that the professionals work in collaboration with the family/carer to provide a ‘team around the child’. Supports under this category can also be provided by an allied health assistant working under the supervision of a suitably qualified allied health professional and/or any other combination of ECI supports.

Participants under 7 years will have budgets built by Early Childhood (EC) Partners to reflect the child and family individual needs, applying the reasonable and necessary criteria as per the Early Childhood Early Intervention (ECEI) approach. Budgets will allow flexibility in service delivery by ECI providers (under the key worker model) to reflect the changing needs of the participant.

The provision of supports under ‘capacity building supports for early childhood’ are expected to deliver outcomes for the child that will enable them to participate meaningfully in everyday life. Each child’s NDIS plan will focus on functional, participation based goals and will be reviewed by the EC partner at regular intervals.

Group ratios stated in this Guide are intended to be flexible and the NDIA encourages participants and providers to discuss arrangements that both parties agree to, including price. Capacity building group programs for early childhood should be delivered by an appropriately qualified allied health professional or early childhood educator who could co-facilitate with an allied health assistant or another allied health professional or early childhood educator from the team.

ECI Providers of these supports can also claim for: Provider Travel, Cancellations, NDIA Report Writing and Non Face to Face supports.

Multidisciplinary Team Intervention (over 7 years)

This support item enables a coordinated multidisciplinary approach to be delivered to participants beyond the age covered by the Early Childhood Early Intervention approach. All team members will claim against a single support item, thereby increasing flexibility in service delivery to reflect the changing needs of a participant. This support item is not price controlled.

Delivery of Health Supports by a Nurse

A hierarchy of price limits applies to this group of supports, based on:

A) the time of day that the support is delivered;
B) the day of week that the support is delivered; and
C) who the support is delivered by:
    - Enrolled Nurses (EN)
    - Registered Nurses (RN)
    - Clinical Nurses (CN)
    - Clinical Nurse Consultant (CNC)
    - Nurse Practitioner (NP)

(See the definitions for time of day and day of week in the Assistance with Daily Living Support Category.)

Definitions

An **enrolled nurse** is a person who provides nursing care under the direct or indirect supervision of a RN. They have completed the prescribed education preparation, and demonstrate competence to practise under the Health Practitioner Regulation National Law as an EN in Australia. Enrolled nurses are accountable for their own practice and remain responsible to an RN for the delegated care.

A **registered nurse** is a person who has completed the prescribed education preparation, demonstrates competence to practise and is registered under the Health Practitioner Regulation National Law as a RN in Australia.

A **clinical nurse** is a more experienced and skilled RN. Duties of a CN will substantially include, but are not confined to:

- delivering direct and comprehensive nursing care and individual case management to a specific group of patients or clients in a particular area of nursing practice within the practice setting;
- providing support, direction, orientation and education to RNs, ENs, student nurses and student ENs;
- being responsible for planning and coordinating services relating to a particular group of clients or patients in the practice setting, as delegated by the CNC;
- acting as a role model in the provision of holistic care to patients or clients in the practice setting; and
- assisting in the management of action research projects, and participating in quality assurance programs and policy development within the practice setting.

A **clinical nurse consultant** (also known as an advanced practice nurse) is a nurse practising in the advanced practice role. Advanced practice nursing is a qualitatively different level of advanced nursing practice to that of the registered nurse due to the additional legislative functions and the

regulatory requirements. The requirements include a prescribed educational level, a specified advanced nursing practice experience, and continuing professional development. Nurses practising at an advanced level incorporate professional leadership, education and research into their clinically based practice. Their practice is effective and safe. They work within a generalist or specialist context and they are responsible and accountable in managing people who have complex health care requirements.

Duties of a clinical nurse consultant will substantially include, but are not confined to:

- providing leadership and role modelling, in collaboration with others including the Nurse manager and the Nurse educator, particularly in the areas of action research and quality assurance programs;
- staff and patient/client education;
- staff selection, management, development and appraisal;
- participating in policy development and implementation;
- acting as a consultant on request in the employee's own area of proficiency; for the purpose of facilitating the provision of quality nursing care;
- delivering direct and comprehensive nursing care to a specific group of patients or clients with complex nursing care needs, in a particular area of nursing practice within a practice setting;
- coordinating, and ensuring the maintenance of standards of the nursing care of a specific group or population of patients or clients within a practice setting; and
- coordinating or managing nursing or multidisciplinary service teams providing acute nursing and community services.

A **nurse practitioner** is an advanced practice nurse endorsed by the Nursing and Midwifery Board of Australia who has direct clinical contact and practises within their scope under the legislatively protected title 'nurse practitioner' under the Health Practitioner Regulation National Law.

IN THE FAIR WORK COMMISSION

4 Yearly Review of Modern Awards

National Disability Services

Submission – AM2018/26

Substantive Issues

1. NDS makes the following submission pursuant to the Directions made on 1 May 2019.

A. Modern awards containing reference to translators and interpreters

2. FWC has published a Background Document which sets out existing award provisions regarding community language allowances and similar provisions for employees required to perform occasional interpreting duties.

3. A number of these awards list unqualified and qualified interpreters as indicative duties for particular classification levels. The minimum rates of pay for these levels can be compared with the minimum rates of pay for SACS employees as set out in the following table.

Award	**Classification**	**Pay rate**	**SCHADS – nearest equivalent SACS classification and paypoint**	**Pay rate**
Aged Care Award 2010	Level 5 (Secretary interpreter unqualified)	$865.70	Level 2.2	$863.60
	Level 7 Interpreter (qualified)	$928.80	Level 3.1	$913.70
Amusement, Events & Recreation Award 2010	Grade 3 International host required to speak a second language	$794.70	Level 1.1	$782.00
	Grade 4 Interpreter	$837.40	Level 2.1	$837.40
Health Professionals and Support Services Award 2010	Level 5 Interpreter (unqualified)	$865.70	Level 2.2	$863.60

	Level 7 Interpreter (qualified)	$928.80	Level 3.1	$913.70

4. The SACS rates shown in the above table do not include the equal remuneration component. This means that the rates reflect the skill based relativities applied to award rates without the addition of a component that applies uniquely to the SCHADS award to remedy historic undervaluation due to gender. In other words, this enables a comparison of "apples with apples".

5. Where awards have classified the duties of interpreters they are generally at skill levels equivalent to SACS level 2 for unqualified interpreters, and SACS level 3 for qualified interpreters.

6. The *Aged Care Award* and the *Health Professionals and Support Services Award* are awards that apply to similar types of workers and workplaces as the SCHADS Award.

7. The SACS classification definitions contemplate a far wider and non-exhaustive range of skills than the classification definitions for most of the awards identified as having community language allowances and similar provisions. In those awards, the definitions are typically restricted to a short and narrow list of duties and skills at each level.

8. The relevance of the SACS classification definitions is dealt with further in the section of this submission regarding community language skills and the classification structure.

D. Industry data and the Equal Remuneration Order

9. The operation of the Equal Remuneration Order (ERO) will be the subject of a separate submission to be filed jointly by NDS, AFEI and ASU.

10. The Industry Profile published by FWC on 12 April 2019 draws on 2016 census data for employees working in the "other residential care services" and "other social assistance services" industry classes. Total employment is shown as being 167,793 in 2016.

11. The use of these industry classes is consistent with the approach of the Commonwealth Government in its submission of 18 November 2010 in the equal remuneration case for social and community services workers (C2010/3131)[1]. The Commonwealth's submission also pointed to a number of limitations to this approach[2], but concluded that nevertheless it provided a reasonable basis for estimating the size and characteristics of the sector.

12. No party disputed the approach taken by the Commonwealth in their submission regarding the size and characteristics of the sector.

13. In that submission, the Commonwealth provided an overview of the industry that would be covered by the proposed ERO. They estimated that in 2007 there would have been 6,093

[1] Australian Government submission in the matter of C2010/3131, 18 November 2010 https://www.fwc.gov.au/documents/sites/remuneration/submissions/austgovt_submission.pdf
[2] *ibid*, footnote 41 at page 64

organisations that could be subject to the ERO. Of these, it was estimated that 2,607 were employing businesses.

14. The Commonwealth Government's submission also reported that by 2009, the ABS Community Services survey estimated there were 4,033 businesses in the SACS sector subject to the equal remuneration case. These employed around 153,322 employees (90,271 fulltime equivalent). Some 90% of these employees were employed by not for profit organisations.

15. Data presented by the NSW Government in the equal remuneration case also points to a similar order of magnitude for the size of the sector. That submission drew on a report[3] of survey of state government funded organisations in NSW and indicated about 1500 such employers in NSW in 2010.

16. The estimate of employment in the current Industry Profile published by FWC is a similar order of magnitude to that of estimates provided by the Commonwealth government in the equal remuneration case.

17. By using data for the same industry classes as was used in submissions for the equal remuneration case, the same limitations of precisely defining the sector identified by the Commonwealth will also apply.

18. NDS concludes that the approach taken in the Industry Profile results in a reasonable estimate of the likely size of the sector.

E. **Community language skills and the classification structure**

19. The classification definitions for SACS employees are set out at Schedule B of the SCHADS award.

20. The classification definitions set out

    a) generic characteristics of work at each classification level, together with

    b) a non-exhaustive list of indicative duties and responsibilities that would sit at each classification level, and

    c) Skills and experience required, and

    d) Organisational relationships and extent of authority at each level.

21. NDS submits that while "community language skills" are not explicitly named in the classification definitions, they can be considered to be contemplated by the reference to generic related skills.

22. SACS Level 2 specifies (at B.2.3 (a) (i)) that skills needed to perform work at that level include *"…basic skills in oral and written communication with clients and other members of the public…"*

23. The reference to skills in communication does not specify any particular language. Ordinarily it would be presumed that the relevant language is English. However in services where

[3] Social Policy Research Centre, UNSW (2010) *Profiling non-government community services organisations in New South Wales*. Report prepared for Department of Human Services NSW. https://www.fwc.gov.au/documents/sites/remuneration/submissions/austgovt_submission.pdf

workers are required to use their native non-english language in working within the community, the level of skill required will be equivalent to "basic skills in oral and written communication".

24. SACS Level 2 is the entry level for Certificate qualified workers and equivalent to the classification levels used for unqualified interpreters in the modern awards tabulated at paragraph 3 of this submission.

25. Work at SACS Level 2 may be quite highly skilled and can cover work performed by certificate 4 qualified workers with significant experience.

26. One of the general characteristics of SACS level 2 is that a worker "…*may contribute specific knowledge and/or specific skills to the work of the organisation*…" (B.2.1 (b)).

27. Knowledge of a second language can be considered to be a "specific knowledge or skill".

28. SACS Level 3 specifies

    a) At B.3.2 (j), that responsibilities may include *"……scope for exercising initiative in the application of established work procedures…"* and

    b) At B.3.2 (n), that "…*where prime responsibility lies in a specialised field, employees at this level would undertake at least some of the following:*

        a. ……;

        b. perform duties of a specialised nature;

        c. *provide a range of information services;…*"

    c) At B.3.3 (a) (iii) that in relation to skills and knowledge needed for work at this level, the employee "…*may utilise limited professional or specialised knowledge*…"

29. SACS level 3 is the entry level for degree qualified workers and equivalent to the classification levels used for qualified interpreters in the modern awards tabulated at para 3 of this submission.

30. Work at SACS Level 3 covers graduates as well as experienced workers without formal qualifications. One of the general characteristics of the level is that the work may "…*involve solving problems of limited difficulty using knowledge, judgment and work organisational skills acquired through qualifications and/or previous work experience*…" (at B.3.1 (b)).

31. The definitions at both SACS levels 2 and 3 are not a narrow list of tasks or occupations. Rather they describe a range of generic skills and indicative tasks. Where a job role has duties not specifically mentioned in the classification definitions, the generic descriptors enable an assessment of the classification to be made by referring to equivalent types of skills and responsibilities.

F. Part-time employment and casual employment Full Bench (AM 2014/196 and AM 2014/197)

32. The operation of the NDIS is described by the Full Bench in the Part-time and casual employment decision.[4]

33. NDS submits that the observations of the Full Bench were accurate at the time and remain broadly relevant in 2019.

34. However, since that decision in 2017 the NDIS has continued to grow and has undergone some changes in the detail of its operation.

35. NDIS participant numbers are behind the original NDIS Bilateral agreements participant estimates (i.e. by about 100,000). This means the current rate of rollout of NDIS is at about 75% of the level originally planned in 2011[5]. Consequently the rollout will be extended well into 2019-20 and is unlikely to be completed before then.

36. At paragraph [631] of the Full Bench decision, reference is made to cancellations of supports by clients. Since that time, the approach of NDIA to cancellations has been modified. The current NDIS Price Guide allows for 90% of the fee to be charged if a participant cancels later than 3pm the day before the appointment. The participant can be charged up to 12 times in a year, after which NDIA may review the situation.

37. If a participant provides notice prior to 3pm the previous day, the provider cannot charge the participant.

38. The workforce has also undergone changes since the 2017 decision. At paragraph [633] of the Full Bench decision there is discussion of the characteristics of the disability workforce. That discussion referred to workforce reports published by NDS using 2016 data.

39. NDS has developed a Data Metrics Tool called Workforce Wizard designed to assist disability organisations track workforce trends. This was the source of the data referred to by the Full Bench in its decision at [633].

40. NDS have published a comprehensive report with data to July 2018[6]. Since then Workforce Wizard for the December 2018-19 quarter have been obtained, and this included data from 187 organisations, comprising of 41,119 workers in the disability and allied health sectors.

41. The average proportion of casual employment increased from 40.9% in September 2015 to 45.2% in December 2018. However, it has remained at around 45% since September 2017, with the exception of the September 2018 quarter (47.3%). While disability service providers are hiring more casual workers, the trend towards increased casual employment since 2015 appears to have stabilised.

42. It is important to note that the rate of casual employment has increased to 45.2% from a low of 39.2% in the June 2016 quarter.

Operation of the Equal Remuneration Order

1. The Equal Remuneration Order commenced on 1 July 2012, and provides for equal remuneration payments in addition to the *Social, Community, Home Care and Disability Services Industry Award 2010* (SCHADS Award) minimum rates for SACS classifications 2-8 and Crisis Accommodation classifications 1- 4.
2. The Order provides for rates of pay which will be between 23-45% above the SCHADS Award minimum rates, depending on the classification level once fully phased in (the 'final ER rates'). These are inclusive of a 4% loading to compensate for obstacles to bargaining in the sector.
3. The final ER rates are being phased in between 2012 and 2020 via nine equal instalments[1], as outlined in 5.5 of the Order.
4. Table 1 shows the percentage difference between the SCHADS Award rates, and the final ER rates, for each SACS classification level. As the final ER rates are being phased in via nine equal instalments, the table also shows the approximate percentage difference per annum.

SACS Level	Final ER rates by 2020 (% above Award rates)	1/9 instalment per annum (%)*
2	23	2.6
3	26	2.9
4	32	3.6
5	37	4.1
6	40	4.4
7	42	4.7
8	45	5
*The exact percentage varies slightly in the years after 2012 due to the effects of compounding, incorporation of national wage increases and rounding. Note: The payments for Crisis Accommodation are identical, with CA levels 1-4 aligning with SACS levels 3-6.		

Table 1 Final ER rates, as a percentage above the SCHADS Award rate at each SACS classification level

[1] [2012] FWAFB 5184 at [73]

5. The ERO case ran during the first 2 years of implementing the modern award system, and the transition from pre-reform award and NAPSA classifications and pay rates to the modern award was put on hold pending the outcome of the ERO case.
6. A Fair Work Commission audit of awards for award modernisation indicated 39 pre-reform awards and NAPSAs that would transition to the SCHADS Award. These instruments had different classification and pay structures, with some classification and pay points having rates lower than the SCHADS rate for the equivalent classification (as set out in clauses 15 and 16 of the Award), and some above.
    a) Where a pre-reform award or NAPSA pay rate was below the equivalent SCHADS Award rate (cl 15 & 16 of the award), from July 2012 the rate transitioned fully to the SCHADS Award rate, without the phasing in process that applied to other modern awards.
    b) Where a pre-reform award or NAPSA pay rate was above the equivalent SCHADS Award rate, that rate was preserved as a transitional minimum rate of pay by Clause A.3.9 of the SCHADS Award. Although A.3.9 ceased effect on 1 July 2014, it is preserved in 5.3 of the ERO, for the duration of the phasing in of the final ERO rates.
7. In order to determine whether a transitional minimum rate applies to a particular position, it is necessary to:
    a) Classify the position under the SCHADS Award;
    b) Classify the position under the relevant pre-reform award or NAPSA, as if it still applied;
    c) Compare the pay rates for the classification for each of the two instruments at 1 January 2010;
    d) If the relevant pre-reform award or NAPSA rate is higher, then a transitional rate applies and is used as the basis for the calculation of ERO payments.
8. Each December from 2012-2020 an ERO instalment is payable. This is 1/9 of the difference between the applicable SCHADS or transitional minimum rate, and the final full ER amount calculated on the SCHADS rate.
9. The effect is that if a transitional minimum rate applies that is above the SCHADS Award rate, a smaller increase is payable.
10. Figures 1 and 2 illustrate how this works.

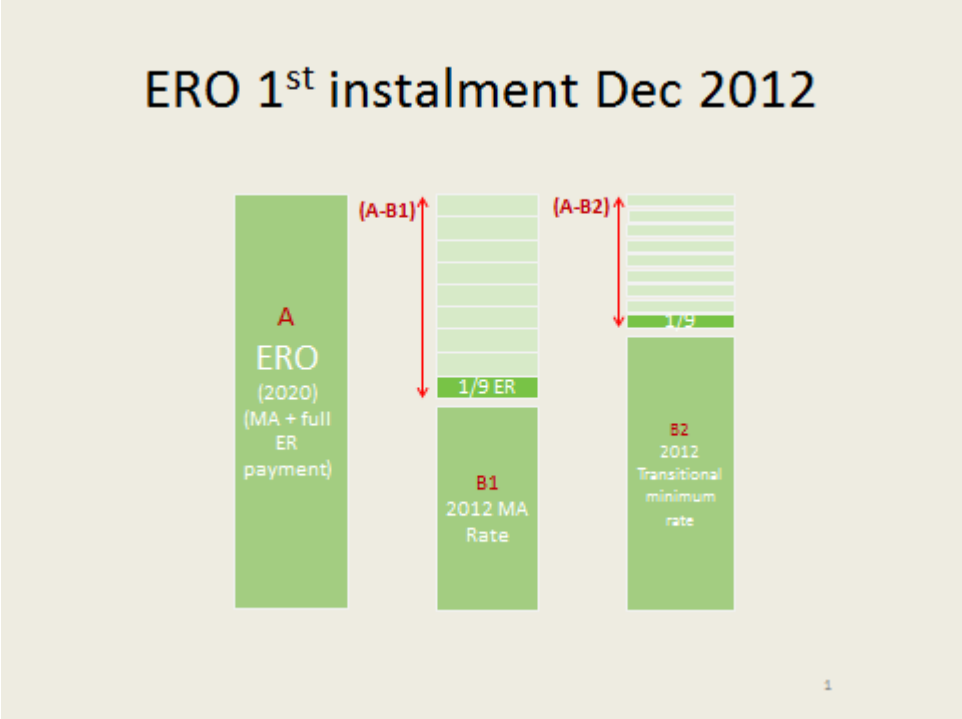

Figure 1 The application of the first ERO instalment in 2012. Column A represents the full ER payment calculated on the relevant SCHADS rate of pay (MA) for a classification level. Column B1 shows the payment of the first instalment of 1/9 of the ER payment on the SCHADS rate (MA). Column B2 shows the payment of the first instalment where a transitional minimum rate applies.

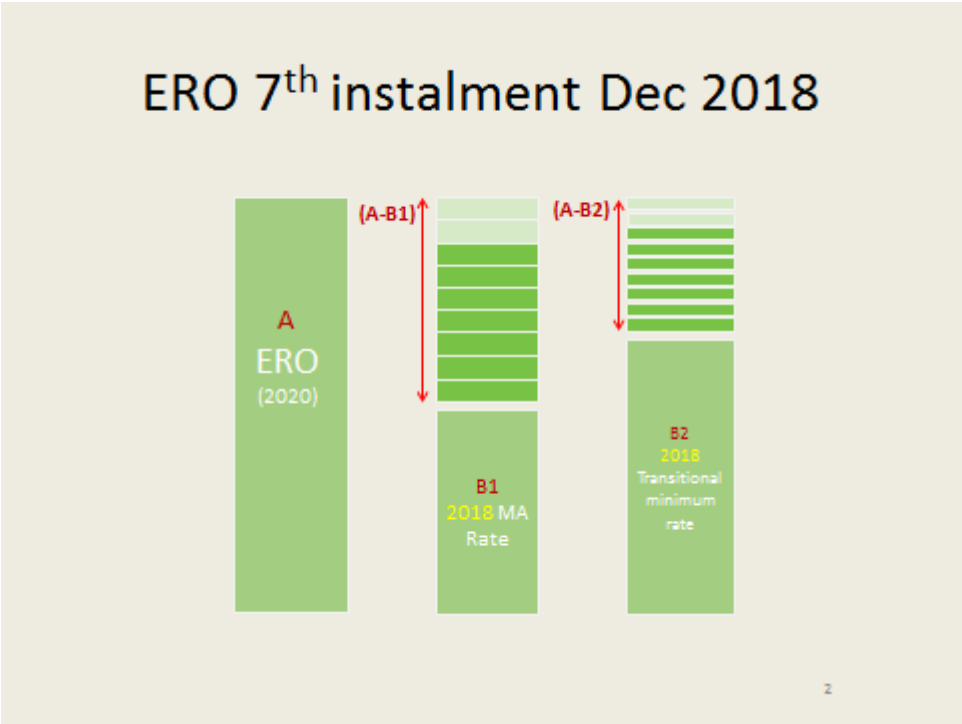

Figure 2 The application of the most recent, 7th, instalment in December 2018.

11. Figures 1 and 2 show how at any point in time, the actual rate paid will be different for different transitional pay rates derived from pre-reform awards or NAPSAs.

12. Figure 3 illustrates how the gap between a transitional rate plus ER and the SCHADS rate plus ER closes over time, and disappears by December 2020.

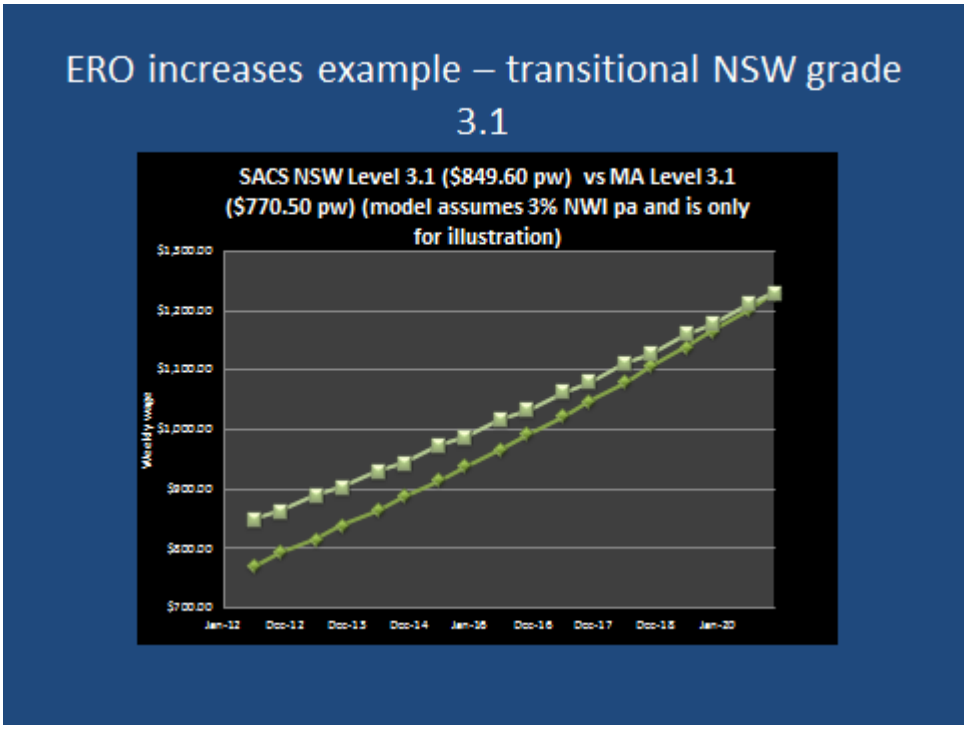

Figure 3 Example of how the gap between SCHADS plus ER pay rates and transitional award + ER pay rates closes over the period 2012-2020. The example is based on ERO payments for the transitional rate for SACS Level 3.1 (derived from Grade 3.1 of the SACS NSW NAPSA), compared with ERO payments for the SCHADS rate for SACS Level 3.1 set by clause 15.

13. Payments under the ERO count as part of the ordinary rate of pay for all purposes. The Standard Rate of the award that is used for the calculation of allowances does not however incorporate the ER payment.

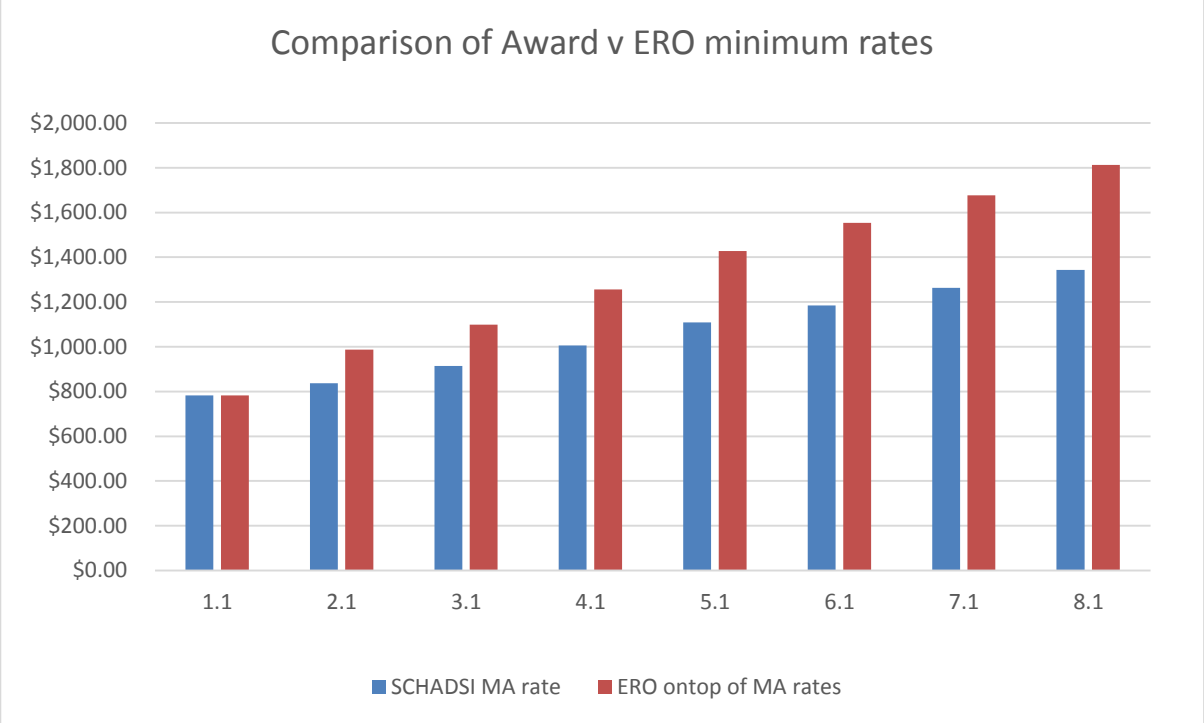
14. From December 2020, the final ER rates will be fully phased in, and forms part of the ordinary rate of pay for all purposes. The transitional rates will no longer apply from this date, and will no longer be relevant because the final ER rate is the same irrespective of pre-modern award coverage.

15. One consequence of the ERO is that the rates set out in clauses 15 and 16 of the SCHADS Award do not represent the minimum rates actually paid.

16. Table 2 below compares the clause 15 rates for SACS classifications in the SCHADS Award (used in the Information Note published by FWC on 9 April 2019), with the actual rates payable for the current instalment under the ERO, where the pre-modern award instrument was not higher than the SCHADS award at 1 January 2010. In these circumstances, calculation of the current ER instalment is based on the SCHADS Award rate in Cl. 15 only.

SACS Level	SCHADS Cl 15 rate	ERO rate	% difference after the December 2018 increase
1.1	$782.00	n/a	0
2.1	$837.40	$987.20	17.9
3.1	$913.70	$1098.47	20.2
4.1	$1005.90	$1256.26	24.9
5.1	$1108.70	$1427.76	28.8
6.1	$1185.30	$1554.06	31.1
7.1	$1264.00	$1676.91	32.7
8.1	$1343.00	$1813.05	35

Table 2 Rates payable under the ERO where the pre-modern award instrument was not higher than the SCHADS Award rate at 1 January 2010.



Graph 1: gives a visual representation of Table 2

17. There are thousands of potential paypoints that could apply for the various possible classification translations and transitional pay rates from about 39 pre-reform awards and NAPSAs. Table 3 uses one SCHADS Award paypoint - the 4 year degree entry point (SACS 3.4) - to illustrate the different transitional rates that apply for some of the more commonly used pre-reform awards and NAPSAs that specified a 4 year degree entry point.

Pre-reform award or NAPSA	Current ER rate (Dec 2018)	Difference compared to current ER rate calculated on SCHADS CL.15 rate only	% Difference
SACS awards from ACT, Qld, SA, & WA Community Services Award Tas	$1177.72* (pre-modern awards not higher than SCHADS Award rate)	-	-
SACS Vic - Social worker classification	$1184.54*	$6.87	0.6%
SACS NT	$1185.99*	$8.27	0.7%
Disability Services Vic	$1202.61**	$24.89	2.1%
SACS NSW	$1207.78	$30.02	2.6%
Qld TPEO^	$1257.70*	$79.98*	6.8%*

*The Fair Work Ombudsman Pay Guide Rates

** Rates may vary depending on rounding

Table 3 Comparison of current ER rates where pre-modern award was higher than the SCHADS Award at 1 January 2010, with ER rates where pre-modern award was not higher than SCHADS Award, for Level 3.4 (calculated on the SCHADS Award rate only).

18. ^The final example in Table 3 is the rate from the Queensland Transitional Pay Equity Order which applies to a small number of organisations in Queensland. The TPEO preserves the effect of the 2009 Queensland pay equity order of the QIRC which delivered payments similar to the national ERO. Those equal remuneration payments were delivered in full by 2015. The December ER payments do not apply to those rates. National wage increases do apply to the TPEO, and the TPEO rates will align with the equal remuneration order rates based on the modern award by December 2020.

National Disability Services

Submission – AM2018/26

Social, Community, Home Care and Disability Services Industry Award 2010

Substantive Issues Tranche 2 – Claims advanced by ABI and others

Introduction

1. National Disability Services (NDS) makes the following submission pursuant to the Directions made on 13 May 2019 and amended on 28 June 2019.

2. This submission is in support of the variations proposed by Australian Business Industrial, the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia (ABI & others).

3. ABI & others filed a draft determination on 2 April 2019. The draft determination provided for substantive changes in relation to provisions of the *Social, Community, Home Care and Disability Services Industry Award 2010* (SCHADS, or the Award) regarding:

    a) Ordinary hours of work;

    b) Client cancellation; and

    c) Remote response work and consequential amendments to the clause relating to on call allowance and also to the clause for recall to work overtime.

A. Ordinary hours of work

Variation to Clause 25.1 – ordinary hours of work

4. Clause 25.1 of the Award currently prescribes three ways in which fulltime hours may be worked.

> **(a)** *The ordinary hours of work will be 38 hours per week or an average of 38 hours per week and will be worked either:*
>
> > **(i)** *in a week of five days in shifts not exceeding eight hours each;*
> >
> > **(ii)** *in a fortnight of 76 hours in 10 shifts not exceeding eight hours each; or*
> >
> > **(iii)** *in a four week period of 152 hours to be worked as 19 shifts of eight hours each, subject to practicality.*
>
> **(b)** *By agreement, the ordinary hours in clause 1.1(a) may be worked up to 10 hours per shift.*

5. The list is exhaustive and on the face of it does not permit alternative arrangements for fulltime work.

6. The effect of the current clause is that it prevents other arrangements from being mutually agreed. For example, it does not permit an employee to work a compressed 4 day working week of shifts of 9 hours 30 minutes each, and having the benefit of three consecutive days off as a long weekend.

7. The draft determination retains the current protections for employees in relation to a default maximum shift of 8 hours which can only be increased, to a maximum of 10 hours, by mutual agreement between the employer and employee.

8. The effect of the changes to clause 25.1 would simply be that the ordinary hours of work for a fulltime employee are subject to the same constraints as currently apply in relation to shift length, span of hours and rest breaks, but allows an employer and employee to agree on a wider range of mutually agreeable arrangements within those constraints.

9. The draft determination has no effect on other key hours of work provisions such as the span of hours (clause 25.2) or rest breaks between shifts (clause 25.3).

10. NDS submits that the restriction of fulltime hours of work to the three formulations allowed by the current clause 25.1 (a) is unnecessary and limits flexibility and options for work life balance for the employee.

Variation to clause 25.4 – Rest breaks between rostered work

11. It is proposed by ABI & others that clause 25.4 (a) be varied by the deletion of the phrase "or period of work". The phrase in question does not seem to serve any particular purpose that is not already covered by the term "shift" in the same clause. The phrase "period of work" is not used anywhere else in the award in relation to hours of work and so its deletion simply helps with clarity.

Variation to clause 25.5(d) - Rosters

12. It is also proposed that clause 25.5(d)(ii) be varied to allow a roster to be varied at any time by mutual agreement, or where the employee is absent on specified types of paid leave.

13. The ability to change the roster by mutual agreement facilitates reasonable flexibility without restricting the rights of employees. An example might be if two employees approach their employer to swap shifts at short notice for non-urgent reasons. The current provision appears to mean that if an employee and employer genuinely agree to such a change with less than 7 days' notice, they may be in breach of the award.

14. The specification of the types of paid leave relevant to the ability to change the roster at short notice serves to update the provision in relation to the range of leave entitlements that are available for use in situations that can occur at short notice, such as family and domestic violence.

15. The proposed variation does not confer on the employer any new expanded right to roster at short notice without the agreement of the employee.

Conclusion

16. The variations in the terms sought for the ordinary hours of work and rostering provisions would be consistent with the modern awards objective, in particular the need to promote

flexible modern work practices and efficient and productive performance of work (s136 (d) of the Act).

B. Client cancellation

17. Clause 25.5 (f) currently prescribes arrangements for when a client cancels a rostered home care service. The clause only applies to home care services and so appears to only apply to workers classified in accordance with Schedule E of the Award as Home Care Employees.

18. The current clause allows an employer to withhold payment to the employee provided notice of the cancellation is given by 5pm of the day prior to the rostered shift. It also enables the employer to direct the employee to work make up time in exchange for payment, as set out below.

> *(f)* ***Client cancellation***
>
> *(i) Where a client cancels or changes the rostered home care service, an employee will be provided with notice of a change in roster by 5.00 pm the day prior and in such circumstances no payment will be made to the employee. If a full-time or part-time employee does not receive such notice, the employee will be entitled to receive payment for their minimum specified hours on that day.*
>
> *(ii) The employer may direct the employee to make-up time equivalent to the cancelled time, in that or the subsequent fortnightly period. This time may be made up working with other clients or in other areas of the employer's business providing the employee has the skill and competence to perform the work.*

19. The proposed variation does three things:

    a) It removes the option of withholding payment from a worker in the event of a cancellation;

    b) It extends the operation of the clause to disability support work; and

    c) It provides more flexibility around the timetabling of make up time.

Payment in the event of client cancellation

20. The proposal from ABI & others removes the ability of the employer to withhold payment to an employee in the event of a client cancellation where notice has been provided by 5pm the previous day.

21. Instead, it is proposed that a more flexible approach to make up time is a more appropriate way to deal with the operational difficulties that arise from client cancellations.

22. NDS supports this approach as the current provision for home care employees would appear onerous, while at the same time, employers face genuine operational difficulties in relation to client cancellations.

Application of client cancellation provisions to disability services

23. NDS submits that the implementation of the National Disability Insurance Scheme (NDIS) has resulted in a major expansion in the amount of disability support work being performed for individual clients in private residences and community settings. Client cancellations are an

increasingly common occurrence in disability services, usually for perfectly legitimate reasons such as illness of the client.

24. The NDIS commenced in 2013 and previous submissions and evidence in these proceedings, including from the union parties, have attested to the fundamental changes occurring in the organisation of work under the NDIS.

25. A result of the changes under NDIS is that client cancellation in disability services is a much greater operational issue than was the case at the time of the making of the modern award in 2010. It is therefore appropriate to revisit the issue in the context of this four yearly review.

26. NDS also refers to the witness statement of Steven Miller, from Endeavour Foundation, filed in these proceedings as evidence in relation to this matter.

27. Mr Miller reports that cancellations are a frequent occurrence in his organisation with around 50 cancellations per month across the services of Endeavour Foundation.[1]

Flexibility and make up time

28. As a practical reality, it is not always possible to simply allocate a support worker to another customer when there has been a cancellation. In the example of Endeavour Foundation, the practice (consistent with the award rostering requirements) is to ensure rosters are set 2 weeks in advance which means that support workers are already allocated to customers by the time a cancellation occurs. Mr Miller reports that even where another service becomes available to be filled at short notice, a particular support worker might not be able to cater to the specific needs of the client if they have not undergone specific training or orientation[2].

29. NDS submits that additional considerations include the personal preference of clients regarding which worker is assigned to provide their support. This is a fundamental aspect of choice and control for people with disabilities under the NDIS and reflected in care plans negotiated with clients. The personal preference of clients regarding the identity of their workers is an additional constraint on the ability to reallocate work.

30. The NDIS Price Guide for 2019-2020 has modified funding arrangements in the event of client cancellation. Specifically, providers can claim 90% of the charge for the cancelled appointment where the client provides up to 2 days' notice, and there is no cap on the number of times this can be done. The Guide states[3]:

> *Where a provider has a short notice cancellation (or no show) they are able to recover 90% of the fee associated with the activity, subject to the terms of the service agreement with the participant.*
>
> *A cancellation is a short notice cancellation (or no show) if the participant has given*
>
> - *less than 2 clear business days' notice for a support that is less than 8 hours continuous duration and worth less than $1000; and*

[1] Statement of Steven Miller [40-41]
[2] Miller [43-46]
[3] NDIS Price Guide 2019-2020, (1 July 2019), pages 12-13

- *less than 5 clear business days' notice for any other support.*

There is no limit on the number of short notice cancellations (or no shows) that a provider can claim in respect of a participant.

However, providers have a duty of care to their participants and if a participant has an unusual number of cancellations then the provider should seek to understand why they are occurring.

The NDIA will monitor claims for cancellations and may contact providers who have a participant with an unusual number of cancellations.

31. The changes for 2019-2020 mean that the financial impact on the employer of a cancellation made with 2 days' notice is slightly reduced compared to previous years, because the previous cap of payment for a maximum of 8 occasions per year has been removed.

32. Nevertheless, client cancellation remains a problem. An employer still needs to be able to reallocate work in the event of a cancellation, if other work is available. An example where this is important for reasons of efficiency and productivity, is if the worker can be redeployed to backfill for another worker on unplanned personal leave.

33. Notwithstanding the changes to the arrangements for cancellations under the NDIS Price Guide, the employer still has a problem in relation to cancellations made with more than 2 days' notice but less than 7 days. If no other work is available to be allocated to the worker, then the worker is paid without having to perform work, and the employer is unable to charge the customer for this. Furthermore, clause 25.5 (d) limits the ability of an employer to change a roster with less than 7 days' notice to situations of illness or emergency.

34. The current clause 25.5(f) deals with this situation for home care workers by providing the option using make up time by the end of the following fortnightly period.

35. The proposed new clause 25.5(f) extends this option to disability support workers, but also extends the time available for the employer to find suitable work to 3 months.

36. NDS submits that an extended period is needed to enable suitable work to be found for the working of make-up time because of the difficulty of matching appropriate workers to individual clients[4].

37. Client choice and control in the operation of the NDIS is also a factor in the need for an extended period to organise make up time, because the individual client has enhanced negotiating power with providers in relation to the timetabling of supports, as well as the identity of the worker as previously mentioned. The provider cannot unilaterally schedule work for their own administrative convenience without reference to the client.

38. The proposed variation provides that the employee must be consulted in accordance with clause 8A about rostering the make-up time.

39. If make up time is to be performed it must be rostered, in accordance with the relevant award clause (25.5(a)), which means the onus is on the employer to use the provision. It cannot be delayed indefinitely but must be arranged by the employer within 3 months. This

[4] Miller, [43-46]

provides reasonable certainty for the employee about the expectations around future make up time that may be required of them.

40. NDS supports the proposed variation to the client cancellation provisions. The variations would be consistent with the modern awards objective, in particular the need to promote flexible modern work practices and efficient and productive performance of work (s136 (d) of the Act).

E. **Remote response**

41. The award is currently silent on how to deal with work performed outside ordinary rostered hours that does not require travel to a physical workplace. This has the potential to create confusion and disputation around the application of clause 28.4 which deals with recall to work overtime.

42. Since the making of this modern award in 2010 there has been a rapid growth in the use of technology to enable remote working arrangements.

43. NDS is aware that on call arrangements are widely used throughout the social and community services sector, not just in disability services. The purpose of on call varies but includes availability for dealing with client emergencies, ensuring frontline workers can access advice from senior employees for non-routine circumstances, and in the context of the NDIS, handling short term rostering issues such as client cancellation or employee absences.

44. The draft determination filed by ABI & others seeks to do a number of things that clarify the operation of the Award, while ensuring reasonable protections for employees.

45. The first proposal is to vary clause 20.9 to the effect that the on call allowance applies to workers who are required to be on call, with on call defined to include availability for remote response duties in addition to the existing requirement of "*available for recall to duty*".

46. The second proposal is to insert a new clause 20.10 which deals with the category of work called remote response. It defines such work as the type of work that is very common in the twenty first century, including using email and phones to respond to work requirements.

47. The key difference between remote response duties and recall to duty, is that recall to duty requires physical travel to a workplace from the employee's private out of hours location.

48. The current clause 28.4 deals with recall to work overtime after the employee has left the employers' premises and provides for payment for a minimum of two hours of work. The purpose of the two hours' minimum payment is to compensate the employee for the time, inconvenience and costs associated with travel to the workplace. In this respect it is analogous to a minimum engagement payment. The work performed is overtime because it is not rostered ordinary hours, and is paid at the appropriate rate for the employee.

49. NDS submits that clause 28.4 as it stands does not apply to an employee who responds to a phone call or email while on call but who does not need to travel to a workplace. However, we are aware of the potential for confusion in relation to this and support the need for the Award to be amended to remove any ambiguity.

50. The effect of the draft determinations for variations to clauses 20.8 and 28.4, and a new clause 20.9 would be to remove any ambiguity and also to set reasonable minimum entitlements for employees who perform remote response duties.

51. NDS submits that when an employee performs remote response duties while on call, the work does not meet the definition of ordinary hours or a rostered shift because the work itself is not timetabled or rostered. The employee is rostered and paid an on call allowance as compensation for keeping themselves available to work. There is no certainty as to whether they will be required to perform any work at all.

52. In the event that remote response duties need to be performed, the work will therefore be overtime. If the matter was left there, the employer would simply be required to pay overtime for the exact amount of time worked. NDS submits that this leads to some practical administrative difficulties with tracking short duration tasks. It also potentially does not adequately compensate for the disruption associated with short tasks at unpredictable intervals. The draft variation addresses this by proposing a minimum payment of 15 minutes.

53. In addition, by its nature, on call is usually used for out of normal office hours availability. This includes overnight and raises the prospect of employees having their sleep disturbed by late night calls. The proposal from ABI & others recognises the need to compensate employees for the disruption associated with calls during the night by providing for a one hour minimum payment for remote response duties performed between the hours of 10pm to 6am.

54. The draft variation then sets out administrative requirements for ensuring accurate record keeping and facilitating the operation of the clause.

55. NDS submits that this proposal removes ambiguity about the operation of the Award in relation to on call and recall.

56. The draft determination also fill a gap in the safety net for employees who are required to perform remote response duties, by specifying reasonable minimum payments for such work in compensation for the interruptions and inconvenience imposed, while not requiring the employer to match the compensation required for a physical recall to a different location.

57. NDS supports the proposed variations to establish entitlements in relation to remote response duties and the consequential amendments to the on call and recall provisions of the Award.

IN THE FAIR WORK COMMISSION

4 Yearly Review of Modern Awards

National Disability Services

Submission in Reply – AM2018/26

Social, Community, Home Care and Disability Services Industry Award 2010

Substantive Issues Tranche 2 – Claims advanced by Unions (Attachment C)

Introduction

1. National Disability Services (NDS) makes the following submission in reply, pursuant to the Directions made on 13 May 2019 and amended on 11 July 2019.
2. This submission is in response to variations proposed by the Australian Services Union (ASU), United Voice (UV), and Health Services Union (HSU) as summarised in Attachment C of the Directions.

Industry Context

3. National Disability Services (NDS) is the peak organisation for non-government disability providers with about 1,000 members across Australia.
4. NDS members operate several thousand services for Australians with all types of disability. Members range in size from small support groups to large multi-service organisations. They provide person-centred support for people with a disability – through personal one-to-one care in homes and in group settings, professional therapy, education, training and life-skills development, employment, accommodation support, respite and recreation.
5. The disability sector is undergoing profound change as a consequence of the implementation of the National Disability Insurance Scheme (NDIS). The NDIS is a major social program that, when fully implemented, will deliver supports to an estimated 460,000 people with disability.
6. Our submission of 5 April 2019 in these proceedings made brief reference to earlier submissions and evidence about the impact of the NDIS on this industry. We now also refer to the witness statement of David Moody[1], acting CEO of NDS, which provides an updated summary of the implementation of the NDIS, how it is affecting the operations of providers and the delivery of care by workers, and the relevance of NDIS to consideration of proposed changes to the Award.
7. In short, the NDIS is more than just another funding program. It represents a complete overhaul of the delivery of disability services, requiring an investment when fully

[1] Witness Statement of David Moody.

implemented of about 1% of GDP[2]. The scheme has bipartisan political support and can be expected to underpin disability service delivery for a long time to come.

8. The NDIS has similarities to the introduction of consumer directed care in aged care, which applies in the home care sector covered by the *Social, Community, Home Care and Disability Services Industry Award 2010* (SCHADS award). The arrangements deliberately place more power in the hands of the individual being supported (the participant) in determining how, when and by whom their supports will be provided. There is a corresponding reduction in the power of the provider to dictate these things to participants.

9. The relevance of the NDIS is apparent in relation to the raft of claims made by the unions in both tranches 1 and 2 of the present review of the SCHADS award. Most of the claims respond directly to issues that arise as a consequence of the NDIS.

10. The introduction of the NDIS post-dates the making of this modern award, and so we submit that it is appropriate that the review take account of these changes. Our submission of 2 July 2019 in support of proposals made by other employer parties, was made in recognition of the need for change in some aspects of the award.

11. Nevertheless, NDS submits that a balanced approach is needed to considering claims to vary the award. The tight pricing approach of the NDIS, together with the choice and control available to participants, places employers under very real pressure to be able to be flexible in the delivery of services. At the same time, NDS is aware of the risks of unfettered flexibility that might be expected to drive casualisation, high turnover and de-skilling of the workforce[3].

Minimum Engagement

12. The HSU proposal seeks to impose a minimum engagement of 3 hours for all part-time and casual employees subject to this award.

13. The two key aspects of the draft variation are

    a) an increase in the minimum engagement for disability and home care workers to 3 hours, and

    b) the extension of the minimum engagement provision to fulltime and part-time employees.

14. The minimum engagement provided by the SCHADS award for casual employees in disability services of 2 hours reflect the realities of work in the context of the NDIS. Disability support work often involves catering to personal care needs of disabled clients who only require 45 minutes to 2 hours of assistance at a time. As an example, evidence from Steven Miller describes the high level of demand for short periods of support experienced by a major

[2] David Moody, [14]
[3] David Moody, [23-40]

disability service provider that provides a range of supports[4]. This evidence is consistent with the observations of NDS across the sector[5]

15. The award already provides an incentive for the employer to attempt to create longer shifts by arranging for workers to visit a number of clients sequentially, in order to avoid the cost of paying, for example, 2 hours wage when only one hour of work is needed. Despite this, outside densely populated metropolitan areas, there may not be sufficient clients to allow this type of bundling of work to occur.

16. Under NDIS, there is no payment to the provider for topping up to the minimum engagement if only a shorter period of work is required.

17. We note that the issue of minimum engagement was dealt with in depth by a Full Bench in the *Casual and Part Time Employment Decision*[6]. That decision took account of a wide range of factors to be considered in general in relation to the establishment of minimum engagements, including the need to consider industry-specific circumstances and the potential downsides for employees of unduly long minimum engagements.

18. Factors that are relevant in the context of the SCHADS award include the provisions of clause 10.3 which require employers to provide part-time employees with guarantees regarding their hours of work on a weekly and daily basis. These requirements provide a degree of stability for part-time employees compared to the situation for casuals.

19. The effect of the HSU claim for a 3 hour minimum engagement will simply be to increase the cost of the minimum engagement for disability support workers, with there being no mechanism available for the employer to recover that cost. Where short shifts are currently used, it is because there is no other work available. A 3 hour minimum will not result in 3 hours work appearing where it currently does not exist.

20. The proposal to increase the minimum engagement clashes with the public policy objective of giving people with disability a long needed capacity to tailor the delivery of services to meet their individual needs, including the timetabling of supports that do not require anywhere near 3 hours of work.

21. The claim to apply a minimum engagement provision to fulltime and part-time employees interacts with a number of other parts of the award, including provisions relating to types of employment, and ordinary hours of work and rostering.

22. NDS submits a minimum engagement is unnecessary in the case of fulltime employees because the setting of fulltime ordinary working hours in accordance with clause 25.1 already imposes significant constraints on how engagements can be set.

23. The claim to extend minimum engagements to part-time employees is also relevant to the claims relating to broken shift. We deal with broken shift in more detail elsewhere in this submission.

24. The HSU in their submission are critical of how clause 10.3 (c) of the award operates in relation to part-time employees and also point to evidence of the use of short shifts in the

[4] Witness statement of Steven Miller, [21-39]
[5] David Moody, [51-54]
[6] [2017] FWCFB 3541

industry[7]. This reflects the emerging reality about the organisation of work in the NDIS environment. NDS is concerned that the increasing pressure to arrange for short shifts that change from time to time, in response to the legitimate needs of clients, has the potential to drive unnecessary casualisation if the requirements of clause 10.3 (c) make part-time employment too difficult.

25. NDS is not opposed to consideration of a minimum engagement for part-time disability services employees limited to work performed for the purpose of delivering client services, provided such a minimum reflects the 2 hours that currently applies with regard to casual employees. This is part of the balance that we submit needs to be struck in reviewing this award. However any such consideration needs to be in the context of also considering how clause 10.3 operates together with the rostering provisions of clause 25.5, to enable some reasonable degree of flexibility in the rostering of part-time employees.

26. The HSU claim does not take sufficient account of the modern award objectives in relation to the needs of business, particularly at ss 134 (d) and (f).

27. In the case of the provision of disability services, it is not just employers who require the modern award safety net to promote flexibility and efficiency, but also the users of those services, people with disability who rely on NDIS to improve the quality of their lives.

Broken Shift

28. The three unions have each made different claims in relation to broken shift.

29. The evidence in this review, including the witness statements of Steven Miller and David Moody, shows that the use of broken shift is driven by the needs of clients. NDS supports the NDIS objective that people with disability should be able to exercise choice and control over how they live their lives and how supports are provided. The consequence of that objective is that broken shift will often be the only practicable way of meeting those needs.

30. NDS opposes the detail of most of the union claims relating to broken shift. However, as indicated above, we accept that an appropriate balance has to be struck between flexibility needed in order to deliver services in the context of tight pricing, and the need for employees to have some level of stability in their employment.

31. We also note that some of the union proposals interact with concerns regarding travel time, and we will make further submissions in relation to travel time, pursuant to the amended directions of 11 July 2019.

<u>United Voice claims – Broken Shift</u>

32. United Voice seek to

    a) Restrict broken shift to just 2 sessions, and

    b) provide that any shift penalty be determined by the starting or finishing time of the broken shift, whichever is highest.

[7] HSU submission 15 February 2019, at [26] and [29]

33. The proposal to restrict broken shift to just 2 parts is an unnecessary restriction that would impact on the ability of participants to schedule supports for when they actually need them throughout the day.

34. The evidence of Steven Miller points to a pattern of peaks and troughs in the times that clients require supports[8]. But while there are clear peaks at the beginning and of day, there are also varying amounts of service delivery required throughout the day. The operational need is to be able to cover a variety of different individual patterns of supports through the day, and this might reasonably require a worker to work a broken shift with more than one break.

35. The concentration of supports around a few hours at each end of the day means broken shift arrangements are often the only way to offer some workers enough hours for a living wage, especially if the worker is engaged on a casual basis. It is likely that the restriction sought by United Voice would also affect the ability of part-time and casual employees to obtain additional hours where they seek them. NDS opposes that part of the United Voice claim.

36. We accept that in relation to shift penalties that apply, the current award provision results in an employee working broken shift not receiving a shift penalty in some circumstances where such a shift penalty would apply to a continuous shift. This is the case for work that commences before 6am Monday to Friday (clause 29.2 (b) of the award). The example provided by United Voice of a broken shift commencing at 5am but receiving no shift penalty is a valid example of this scenario.

37. The relevant clause (clause 25.6 (b)) was varied in the two-yearly review[9] to provide that the finishing time of the shift would determine any shift penalty. This aligned the broken shift clause with the provision of clause 29 which deals with shiftwork. NDS submits that the problem identified by United Voice is an unintended consequence of that variation.

38. NDS does not oppose the United Voice proposal to provide that any shift penalty be determined by the starting or finishing time of the broken shift, whichever is highest.

<u>HSU Claims – Broken Shift</u>

39. HSU propose that

    a) Broken shift should only be worked by agreement between the employer and employee;

    b) There be a limit of one break in a broken shift;

    c) The minimum engagement apply to each period of work in a broken shift; and

    d) That travel time be paid for travel between clients including during any break.

40. NDS will address the travel time proposal in a further submission pursuant to the amended directions of 11 July 2019.

41. NDS opposes the claim for a limit of one break per broken shift, for the reasons set out above at paras 33-35.

[8] Steven Miller, [21-39]
[9] PR531544

42. The draft variation from HSU includes a requirement that broken shift only be worked by mutual agreement between the employee and employer. NDS does not consider this part of the draft variation to be necessary given the requirements clause 10.3 in relation to part-time employment, and the provisions of clause 25.5 in relation to rosters. However, NDS does not oppose that aspect of the claim.

43. The HSU claim for a minimum engagement to be applied to each period of work is unworkable in the context of NDIS because it does not reflect the reality of participant requirements, as we discuss above in relation to the general claim regarding minimum engagements.

44. As outlined at para 25 above, NDS is not opposed to considering a minimum engagement of 2 hours for part-time disability services employees, limited to work performed when delivering client services, as a way of providing some amelioration of the concerns raised by HSU.

ASU claims – Broken Shift

45. The ASU have proposed a 15% loading to apply to a broken shift, including during breaks.

46. NDS opposes this claim, particularly in the context of the tight pricing arrangements that affect provision of disability services.

47. The quantum of the loading is out of kilter with the provisions of other awards that deal with broken shift.

48. The current award clause regulates the length of a broken shift and also provides for shift penalties as appropriate.

49. NDS submits that the restrictions imposed by clause 10.3 (c) in the setting of hours in part-time contracts provides significant protection for part-time employees in relation to the predictability of their hours of work, while casual employees receive a casual loading in compensation for irregular hours of work.

Rosters

50. United Voice have proposed that overtime penalty rates should apply where less than 7 days' notice of a change in roster is provided to an employee.

51. NDS opposes this claim as it is unnecessary. A failure to provide such notice is a breach of the award and the employer can be prosecuted and exposed to fines as a result.

52. We also refer to the protection afforded to part-time employees by the requirements of clause 10.3 (c), while fulltime employees have the protections of the ordinary hours provisions of clauses 25.1-25.4.

Recall to work

53. HSU have made a claim in relation to the performance of work by phone or email after leaving the employer's or client's premises. The draft variation provides for a one hour minimum payment.

54. NDS accepts that remote response work of this type should be paid. However, there is no reasonable basis for the payment of a minimum of one hour for a task that might require only a few minutes.

55. The HSU proposal requires that all such work be paid at "the overtime rate". NDS accepts that in may circumstances, such work will be overtime – for example work that arises during a period of on-call and that has not been rostered. But t is not necessarily the case that all work performed from home will be overtime. Some employees perform their rostered ordinary hours by working from home as part of a flexible working arrangement, for example.

56. The drafting of the HSU variation in relation to payment at "the overtime rate" is also problematic because the relevant overtime rate will depend on whether the employee is fulltime, part-time or casual.

57. The HSU claim is an alternative to the draft variation proposed by Australian Business Industrial, the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia (ABI & others) and which was the subject of a submission in support from NDS on 2 July 2019.

58. The alternative variation from ABI & others avoids the problems associated with the HSU proposal, in particular by limiting the provision to situations of on-call or other work that has not been rostered as ordinary hours.

59. We reiterate our support for the alternative proposal from ABI & others.

60. NDS opposes the HSU claim.

Client Cancellation

61. The HSU claim in relation to client cancellation is limited to the home care sector and seeks to increase the notice period required.

62. NDS notes the alternative draft determination filed by ABI & others in April 2019, their submission of 2 July 2019, and we rely on our submission in support of that proposal also filed on 2 July 2019.

63. NDS reiterates its support for the proposal from ABI & others.

64. NDS opposes the HSU claim as it does not provide for any flexibility for dealing with client cancellation in the disability sector.

IN THE FAIR WORK COMMISSION

4 Yearly Review of Modern Awards

National Disability Services

Submission in Reply – AM2018/26

Social, Community, Home Care and Disability Services Industry Award 2010

Substantive Issues Tranche 2 – Travel Time Claims

Introduction

1. National Disability Services (NDS) makes the following submission in reply pursuant to the Directions made on 13 May 2019 and as amended on 2 September 2019.
2. NDS is the peak organisation for non-government disability providers with about 1,000 members across Australia.
3. NDS members operate several thousand services for Australians with all types of disability. Members range in size from small support groups to large multi-service organisations. They provide person-centred support for people with a disability – through personal one-to-one care in homes and in group settings, professional therapy, education, training and life-skills development, employment, accommodation support, respite and recreation.
4. The implementation of the National Disability Insurance Scheme (NDIS) is driving a growth in the amount of work performed for participants in their private homes, and a consequent growth in the use of broken shift arrangements in order to accommodate participant preferences regarding the time of delivery of supports[1,2].
5. In particular, a core aim of the NDIS is to provide participants with more choice and control in their daily lives. This is an important public policy objective informed by a human rights approach to disability.
6. A corollary is that employers who are engaged by clients to provide supports have less power than in the past to dictate timetabling to meet their administrative convenience.
7. NDS makes the point that the use of broken shift is not something that is done at the whim of the employer. Broken shift is a necessary way of organising certain types of work in a manner that meets the legitimate needs and preferences of people with disabilities.
8. Similarly, the way in which an employer arranges the work of employees who are required to travel between clients at different locations is constrained by the requirements of the clients, as well as by the pricing arrangements which limit the amount that the employer can claim to cover the costs of employee travel.

[1] Witness statement of David Moody [51-63]
[2] Witness statement of Steven Miller [19], [21-39]

9. At the same time, NDS is aware of international evidence of the risks of a market-based system such as NDIS leading to employment practices that undermine reasonable minimum employment standards, resulting in high levels of employee turnover and deskilling of the workforce, resulting in a higher risk of abuse and neglect of clients[3].

10. NDS acknowledges that there are potential ambiguities and problems with the way in which travel time connected with broken shifts is currently treated by the award. If the Commission determines that the award needs to be varied with respect to travel time, and in light of the foregoing discussion, this submission outlines some possible approaches.

11. NDS opposes the union claims as currently drafted because they go further than is necessary to resolve the potential problems that we identify.

The travel time claims

12. There are three claims made by unions to vary the award with respect to travel time:

    a) United Voice travel time claim. United Voice propose a variation to the effect that time required to travel between clients shall be treated as time worked, but excluding commuting the beginning and end of the shift;

    b) HSU travel time claim. HSU propose that where a broken shift is worked an employee will be paid for the reasonable time of travel from the location of the last client before a break to the next client at the end of that break; and

    c) HSU travel allowance claim. HSU also propose that the current travel allowance for an employee's use of their private vehicle be varied to specifically require payment for commuting to and from their residence and any client, as well as requiring payment when travelling between clients.

13. The claims are related to a number of other claims made by the unions regarding broken shift and minimum engagements. They reflect union concerns that the growth in non-standard working arrangements together with pricing and other commercial pressures, are leading some employers to arrange work in such a way as to avoid paying workers for significant periods of time during their working day.

Terminology

14. In this submission, NDS will use the following terminology.

15. A "**shift**" is taken to be the rostered day's work for an employee. If a shift is rostered outside the span of hours a shift penalty may apply in accordance with clause 29 of the award. Clause 29.4 then also states that

    "*Shifts are to be worked in one continuous block of hours that may include meal breaks and sleepover*".

[3] See for example, Moody [36] and reference therein

16. For home care and disability workers, clause 25.6 provides that the shift may be broken by one or more breaks which are not meal breaks and prescribes certain requirements to be met. In effect, this clause provides an exception to the requirement of clause 29.4 that shifts be continuous.

17. For the purpose of this submission, the parts of the shift that are worked before and after a break will be referred to as "**portions**". We make this point because in common usage, the separate periods of work in a broken shift are sometimes also referred to as shifts, which is potentially confusing in the context of responding to the present union claims regarding travel and broken shift.

General concepts about travel

18. NDS submits that conceptually there are three types of travel that the union claims seek to deal with.

    a) Direct travel between clients. Travel directly between clients during a continuous shift or within a portion of a broken shift.

    b) Travel during breaks. Travel between the last client of a portion of a broken shift and the first client of the next portion, which occurs during a break in the shift; and

    c) Commute. Travel between the employee's residence and a client;

19. The first and second types of travel are covered by both the United Voice and HSU travel time claims.

20. The third of these types of travel is covered in the HSU travel allowance claim.

21. NDS submits that it is useful to distinguish between the different types of travel as each requires different considerations in responding to the union claims.

Response to the union claims

Direct travel between clients

22. NDS accepts that where an employee is required to travel directly from one client to the next as directed by their employer in order to perform their duties (11 (a) above), without any break, then the employee should be compensated for that time.

23. Under this award, where employees other than home care or disability workers are required to travel between different locations or clients in the course of their duties that time would form part of their shift for the day and would be paid at the appropriate rate for hours worked.

24. NDS submits that the same logic would apply to direct travel required within a portion of a broken shift.

25. The United Voice travel time claim would capture travel associated with breaks, but it would also apply to direct travel between clients as part of a continuous shift or within a portion of

a broken shift. In our view that aspect of the United Voice claim reflects the current position and so is not necessary.

26. However, to the extent that there is any doubt about payment for such travel under the current provisions of the award, NDS does not oppose a variation to clarify the situation.

27. Where such travel requires the employee to use their private vehicle "*in the course of their duties*", clause 20.5 (a) requires the payment of an allowance of $0.78 per kilometre. This allowance is compensation for the cost of running and maintaining the vehicle and is separate to payment for time.

28. Our understanding is that generally employers pay the travel allowance for such travel, and may also pay travel time. The union witnesses also provide evidence that at least some employers also pay travel time, or have done until recently.[4]

Travel during breaks

29. The more difficult issue is the question of how to deal with travel that is undertaken during the unpaid break between portions of a broken shift.

30. A break, other than a meal break, in a broken shift can total several hours. During that time the employee is at least notionally free to do as they please, provided they arrive in time to attend at their next location of work for the next portion of the broken shift.

31. The component of travel that is necessarily required to get from the last client of the earlier portion to the first client of the next portion of the shift has the appearance of being a commute.

32. The unions object that, in fact, this is travel that is required by the employer and is undertaken in the course of their duties. It is not travel for private or recreational purposes.

33. When an employee is on a break, they are not on duty and their movements are not controlled by the employer. NDS considers there are practical difficulties in quantifying the travel required when undertaken during a break. It is different to the situation of direct travel between clients where the employer has some control over the timetabling of appointments within a portion of a broken shift.

34. Alternatively, if travel during breaks were to be considered as akin to the commute at the start and finish of the working day, then on the face of it there should not be any separate compensation.

35. However, NDS accepts that there is the potential for this to be onerous on the employee where there are a number of such periods of travel and in particular where the portions of the shift are of short duration.

36. To the extent that the modern award system acknowledges the cost and disruption of a commute, it is in the concept of a minimum engagement which is taken to ensure that each engagement to attend the workplace provides sufficient compensation for the employment to be economically viable for the employee.

[4] United Voice supplementary witness statements of Dion Fleming and Trish Stewart, 1 April 2019

37. The SCHADS award sets minimum engagements for casual home care employees of one hour, and for casual SACS employees engaged in disability work, two hours (clause 10.4 (c)). There is no minimum engagement for part-time or fulltime employees.

38. NDS notes the reasoning of the Full Bench in the review of the *Aged Care Award 2010*, in relation to broken shifts[5]. The SCHADS award does not specify whether the casual minimum engagement applies to each portion of a broken shift, or only to the sum of the hours worked across a broken shift.

39. If the Commission were to determine that there is ambiguity in relation to the application of minimum engagements in broken shifts, then consistent with our earlier submission in relation to union claims regarding broken shifts[6], NDS submits that resolving that ambiguity by specifying a minimum engagement for each portion of a broken shift could provide a basis for ensuring reasonable compensation for associated travel during the break.

40. NDS is aware of the submission filed on behalf of ABI, NSWBC, ACSA and LASA (ABI & others) and their alternative formulation for an allowance to deal with this issue.

41. If the Commission is not persuaded that the issue can be adequately resolved by setting a minimum engagement for each portion of a broken shift, NDS does not oppose the alternative formulation for an allowance instead, as proposed by ABI & others.

42. Finally, the United Voice claim applies to all employees covered by this award and is not limited to home care or disability employees engaged to work broken shifts. As submitted above at [22-25], the claim is not necessary for workers who do not work a broken shift.

<u>Commute</u>

43. There is a longstanding presumption that employees are not entitled to payment for the daily commute to and from their place of work.

44. NDS opposes the HSU travel allowance claim that would impose an allowance to be paid for the daily commute.

45. Modern awards are required to provide minimum entitlements and the payment of an allowance for an employee's commute goes beyond the terms allowed by s139 of the Act. Commuting is not carried out in the course of an employee's duties, the extent of commute is unique to each employee and is outside the control of the employer.

46. The HSU travel allowance claim should be refused.

Michael Pegg
on behalf of National Disability Services
16 September 2019

[5] [2019] FWCFB 5078, 26 August 2019
[6] NDS submission in reply, 16 July 2016 [28-49]

BEFORE THE FAIR WORK COMMISSION

MATTER NO. AM2018/26

S.156 – FOUR YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

Statement of David Moody

I, David Moody, of Level 6, 369 Royal Parade, Parkville in the State of Victoria say:

1. I am the acting Chief Executive Officer of National Disability Services (NDS).
2. I commenced with NDS in July 2015 in the role of Victorian State Manager.
3. Before working at NDS I was employed in a number of different roles, including as a private lawyer, practising in workers' compensation and OHS; and as an executive at WorkSafe Victoria and in the Victorian Public Service, including as Assistant Director, NDIS Secretariat at the Department of Premier and Cabinet, from January 2011 until August 2013.
4. I hold a BA and LLB from Monash University.
5. In my role as acting CEO of NDS, I provide information, representation and policy advice to government on disability and related issues.
6. I make this statement on the basis of my own knowledge and inquiries, save where otherwise stated. Where I make statements based on information provided to me by others, I believe such information to be true.

About NDS

7. NDS has more than 1,000 members across Australia. Collectively, NDS members operate several thousand services for Australians with all types of disability.
8. NDS is the only organisation that represents the full spectrum of disability service providers. Members range in size from small support groups to large multi-service organisations and are located in every region of Australia.
9. NDS traces its roots back to 1945. It was founded by charitable organisations – many of them founded by the families of people with disability – that recognised the value of national representation. From an initial advisory council, the Australian Council for the Rehabilitation of the Disabled was established which evolved into National Disability Services.

10. In 2008 NDS, Carers Australia and the Australian Federation of Disability Organisations formed an alliance and in 2011 founded the Every Australian Counts Campaign to promote a national disability insurance scheme. The strong campaigning of Every Australian Counts highlighted to politicians and the general community the chronic under-funding and disrepair of the existing system and the need for a new, well-funded system responsive to the needs and choices of people with disability and their families.

The National Disability Insurance Scheme (NDIS)

11. Having campaigned hard for its introduction, NDS is a strong supporter of the NDIS. We are convinced that a service system that is responsive to the individual goals, needs and preferences of people with disability will boost their quality of life and their opportunities to participate in social and economic life.
12. The NDIS represents a major transformation of the role of disability service organisations, with implications for every aspect of their operations, including their model of service provision, financial management, marketing, the way they engage with their service users and their workforce.
13. From 2013 to end June 2016, the NDIS was the subject of 'trials' in various sites around Australia. Roll-out of the full scheme commenced progressively from July 2016.
14. When the NDIS is fully implemented across Australia, 460,000 Australians with severe disability will benefit. Government expenditure on disability services will double from 0.5 to 1 per cent of GDP ($22 billion in 2019-20). The Scheme was scheduled to be rolled-out fully in all states and territories, other than WA, by July 2019, and in WA by July 2020.
15. At present, however, the pace of roll-out is such that this schedule will not be met and will require at least another year, with full roll-out not expected to be complete until mid-2020 (a year later in WA).
16. As of 31 March 2019, 277,155 people with disabilities had become NDIS participants. This contrasts with the original bilateral estimates for the states and territories during NDIS transition of approximately 377,000 people accessing the scheme by 30 June 2019.
17. The disability services market is growing. As of 31 March 2019, 20,208 organisations are now registered as providers with the NDIS. However, of those providers, only 57% (or 11,418) were active at 31 March 2019.
18. Most State and Territory Governments have already or are planning to withdraw partially or fully from direct service delivery and to transfer services to the non-government sector, adding another dimension to disability industry restructuring.

19. NDS has provided support to the sector during the roll-out and in every state has a direct role in assisting organisations to understand the impact of the Scheme and assist in their transition to the NDIS.
20. In 2013-4, NDS led a national consortium that provided the Australian Government with an analysis of workforce supply, demand and utilisation in the NDIS trial sites; it included several reports that outlined policy and program responses to increase workforce sustainability under the NDIS[1].
21. NDS has also managed multiple workforce readiness projects funded to support NDIS roll-out. As a result of its research program, practical support to providers and ongoing direct engagement with the sector, NDS is acutely aware that service providers have found and find it difficult to deploy workers flexibly within the current award settings, which is exacerbated by tight NDIS pricing.
22. More recently, NDS administered the Innovative Workforce Fund on behalf of the Commonwealth Department of Social Services. The Fund supported 30 projects, some of which focussed specifically on issues associated with managing workforce under award conditions in the NDIS environment. One of the key findings was that service providers find it increasingly difficult to support training, professional development and practice leadership under NDIS pricing. This finding is consistent with other research which found that time for training and professional development has diminished under NDIS operating environment[2].

Workforce management

23. NDS regularly surveys its members regarding workforce issues, particularly through its Workforce Wizard Tool. Workforce Wizard data forms the basis of NDS's Australian Disability Workforce Report (most recent editions in February and July 2018).
24. The July report was informed by data from 45,000 workers around Australia, collected over 11 quarters from service providers through Workforce Wizard.
25. Workforce Wizard is intended to monitor how the workforce is changing during the rollout of the NDIS. It was also intended to support NDS's advocacy work on behalf of the sector.

[1] Roadmap to a Sustainable Workforce, A National Disability Services Report prepared for the Australian Government Department of Social Services. K Windsor and C Alcorso, 2014

[2] Building an Industry of Choice: Service Quality, Workforce Capacity and Consumer-Centred Funding in Disability Care Final Report for United Voice, Australian Services Union, and Health and Community Services Union Natasha Cortis, Gabrielle Meagher, Sharni Chan, Bob Davidson & Toby Fattore March 2013 SPRC Report 02/13

26. Workforce Wizard tracks if more people are being employed as casual rather than permanent workers, changes in the mix of skills and demographics and what is happening to hours of work, working conditions and training. Previously, there was no reliable, high quality, up-to-date data on those matters. As more services have used Workforce Wizard, data on key trends is emerging and is providing useful evidence on issues such as workplace relations, NDIS pricing and market development.
27. Workforce Wizard allows providers to benchmark their data with other providers in the sector who have entered the same information and other national data sources such as the ABS.
28. The last set of Workforce Wizard figures were collected for the December 2018-19 quarter, but not publicly released. This included data from 187 organisations, comprising of 41,119 workers in the disability and allied health sectors. While disability service providers are hiring more casual workers, the trend towards increased casual employment since 2015 appears to have stabilised.
29. The average proportion of casual employment increased from 40.9 per cent in September 2015 to 45.2 per cent in December 2018. However, it has remained at around 45 per cent since September 2017, with the exception of the September 2018 quarter (47.3 per cent). It is important to note that the rate of casual employment has increased to 45.2% from a low of 39.2% in the June 2016 quarter.
30. This casualisation trend is not universal and is more prevalent in small and medium organisations, with the trend absent in large organisations. This pattern has held since September 2015.
31. I am aware that the recent 'Survey - Social, Community, Home Care and Disability Services Industry Award 2010' conducted by the Fair Work Commission contained a question on category of worker employment. Over 40% of the employees of the 854 respondent enterprises were engaged on a casual basis, while 63% of the respondent enterprises were engaged in the provision of disability services.
32. The disability workforce has been growing strongly. According to NDS's February 2018 report, the disability support workforce growth rate was 11.1% per year (averaged over a two-year period between September 2015 and 2017). This compares with growth of just 1.6% for the Australian workforce as a whole at the time.
33. This remarkable growth rate came overwhelmingly from the recruitment of casual workers. The average permanent workforce growth rate was just 1.3% per year, while the casual growth rate was 26% per year.

34. NDS has previously expressed concerns about the possible consequences of rapid growth in the casualisation of the disability workforce. Firstly, there is a very high turnover rate of casual workers – a two-year average of nearly 9% per quarter (equal to 35% per annum).
35. This is a significant cost and administrative burden for providers and also presents challenges to providers wishing to offer continuity of support and care to NDIS participants. Secondly, detailed investigation of NDS carecareers job board data shows job applicants have a clear preference for permanent over casual roles. In the competition for talented people, employers that predominantly offer casual jobs will be at a disadvantage.
36. In addition, as evidence from overseas suggests, heavy concentrations of casual and part-time work within the sector is very likely to result in high turnover, low morale and inconsistent standards of service provision[3], including instances of participant abuse and neglect.
37. The projected growth of the workforce required to meet the needs of the remaining 183,000 people with disability still to access the NDIS (and within the next 12 months) presents a huge challenge for the sector.
38. For this growth to be achieved, the sector must, amongst other things, be seen as providing competitive and reasonable employment conditions as well as longer term career options.
39. Should the impending Royal Commission into Violence, Abuse, Neglect and Exploitation of People with Disability reveal a pattern of unacceptable outcomes driven by a lack of stable and attractive employment options for disability support workers, then the need to address this situation will become critical.
40. Consequently, NDS regards it as imperative that the SCHADS Award review does not result in variations to the Award that would accelerate the casualisation of employment in the Disability Support Sector. Our research indicates that a balance needs to be struck between flexibility that is needed to meet the requirements of NDIS participants, while still enabling reasonable stability and security in employment for the support workforce.

Pricing

41. Following on the Independent Pricing Review conducted in 2017 as well as further advocacy from NDS and other sector stakeholders, there have been a significant raft of recent changes to NDIS pricing for supports, many of which are both substantial and

[3] Do personal budgets increase the risk of abuse? Evidence from English national data.
Ismail, M., Hussein, S., Stevens, M. Woolham, J, Manthorpe, J., Baxter, K., Samsi, K. and Aspinal, F. (2017) Journal of Social Policy 46 2 291-311

welcome. Pricing for NDIS supports is now largely standardised across the country, with adjustments for some locations.

42. Maximum prices are still set by the Agency. The most common supports are specified in Plans and purchased on an hourly basis, though some allied health services, equipment purchases and other services are allocated a maximum amount or require the participant to tender quotations.
43. There are a number of business consequences. A service only receives payment after the successfully delivery of a funded support/service. There is minimal support for vacancy rates, inquiries and referrals and no-shows or cancellations.
44. These tighter funding arrangements require far greater financial vigilance from services. Under previous state and territory programs, governments often recognised the need to at least partly underwrite the financial viability of funded service providers. Under the NDIS, any such risk sits squarely with the service provider.
45. It should also be understood that client plans change, and can change considerably at short notice. At the end of 2015, 30 months into the Scheme, of the approximately 22,300 participants to that point in time, the NDIA reported there were 15,134 second plans, 8,613 third plans, 444 fourth plans, and 20 fifth plans among their participants.
46. In March, the NDIA announced indicative increases in the base prices for attendant care and community participation and the introduction of a Temporary Transformation Payment (TTP) for services that comply with certain criteria. These base prices have been indexed in line with ABS Wage and Consumer Price Indexes and the national minimum wage order of the Fair Work Commission.
47. Other price announcements, made in late June, reflect increased loadings for remote and very remote areas (40 and 50 per cent respectively, up from 20 and 25 per cent).
48. There is now more clarity around non-face-to-face billing arrangements. Non-face-to-face activities are billable if:
    - provided as part of mutually agreed one to one support arrangements
    - the activities are part of delivering a disability support such as report writing
    - the provider has explained all activities to be billed to the participant
    - the charges for the activities comply with the NDIS Price Guide
49. One of the key features of the NDIS is that the stated needs of the individual are the focus for funding and service delivery. Previously, many services adopted person-centred service planning within the programs they were funded to deliver. However, under the

NDIS only those activities listed on a person's individual plan are funded. This plan is not developed by the service provider, but by the person with disability, their family and carers and the National Disability Insurance Agency (NDIA) planner. The plan-holder then chooses the services they want to provide the various elements of the Plan. The power to purchase rests with the participant and their family.

50. Consequently, these arrangements differ significantly from the provision of home care services and require far more flexibility from disability service providers and support workers.

Broken Shift

51. I am aware that one of the variations sought to the Award (by the HSU in its draft determination of 19 February 2019) seeks to define a broken shift as: "For the purposes of this clause, broken shift means a shift worked by a casual or part-time employee that includes **no more than one break** (other than a meal break) and where the span of hours is not more than 12 hours."
52. The variation sought above does not align with the reality of operational need being driven by the NDIS and reported to NDS by its members, particularly the flexibility required of disability services and workers in order to meet the widely differing support needs of NDIS participants in an increasingly competitive market.
53. In the area of assistance with daily living (in home and community), individualisation and choice and control means many NDIS participants have no need for continuous shifts associated with their supports. Their time of most intense needs will be concentrated at the beginning and end of each day and will tend to be of a short duration (e.g. 2-3 hours).
54. This support usage pattern has been borne out repeatedly in evidence provided to the FWC by NDS members. These regular supports are likely to be supplemented by different types of supports provided during the day. These supports will be provided by disability support workers that possess the relevant skills and in a large number of instances will not be provided by one support worker for a period of, for example, eight hours.
55. Service mix is important. Service providers that offer a mix of services (or that use staff sharing arrangements) that enable them to deploy workers over home care and SIL/day care services will be better placed to avoid the use of broken shifts.
56. In addition, there is no way for employers to determine if workers are engaged by other employers or as casuals through various platforms. These workers could consequently be working long hours, potentially placing NDIS participants at risk.

57. Our research indicates that there is underemployment in the sector with many workers seeking additional hours.
58. The concentration of supports around a few hours at each end of the day means broken shift arrangements are often the only way to offer some workers enough hours for a living wage, especially if the worker is engaged on a casual basis.

Travel

59. I am aware of recent changes in the NDIS Price Guide in relation to travel. The length of time providers can claim for travel has changed from 1 July 2019.
60. If agreed by participants, providers can now claim for travel up to 30 minutes per participant per day between appointments within city areas and up to 60 minutes per participant per day in regional areas. This is an increase from 20 and 45 minutes, respectively.
61. Providers delivering capacity-building supports are also able to claim time spent travelling from the last participant to their usual place of work. The maximum amount that can be claimed for return travel is 30 minutes within city areas and 60 minutes in regional areas.
62. Before providers can charge for travel, they must obtain agreement from the participant.
63. Clause 20.5 (a) in the Award mandates a vehicle travel allowance for employees of $0.78 per kilometre. The Agency has not made provision for covering the cost of a vehicle used by a worker as they travel from appointment to appointment. These costs are substantial, cannot be avoided, and are not covered by the current price limits.

Client Cancellation

64. From NDS's work with providers throughout implementation of NDIS, I am aware that a direct result of the implementation of the NDIS is that providers have carried substantial costs associated with cancellations. New arrangements for client cancellations have recently been announced by the NDIA and incorporate amendments designed to alleviate some key service provider concerns.
65. A short notice cancellation is now defined as being when there is a failure to provide two clear business days' notice for a support or service which is eight hours or less in duration and less than $1,000, or five clear business days' notice, in all other cases.
66. As of 1 July 2019 there is no limit on the number of short notice cancellations (or no shows) that a provider can claim, however these will only be paid at 90% of the full fee. If a participant has an unusual number of cancellations then the provider should seek to understand why these are occurring, as for higher rates of short notice cancellations, the

Agency “will require the provider to demonstrate they are taking steps to actively manage cancellations”.

David Moody

Acting Chief Executive Officer

National Disability Services

12 July 2019

BEFORE THE FAIR WORK COMMISSION

MATTER NO. AM2018/26

S.156 – FOUR YEARLY REVIEW OF MODERN AWARDS – SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

Statement of Steven Miller

I, Steven Miller, of 225 California Creek Road, Cornubia, say:

1. I am employed by Endeavour Foundation as the Head of Operations, Service Delivery.
2. I commenced with Endeavour Foundation on 19th November 2018. My role involves the leadership of Endeavours Support Services including billing, rostering and the NDIS support function (policy, process, customer onboarding and funding management).
3. Prior to my current role I have held numerous leadership roles in the community services sector encompassing Aged Care, Carer Support and NDIS services. These roles included NDIS Lead for Vision Australia, Customer Service Manager for Uniting Vic Tas and Customer Service Manager for Uniting LifeAssist.
4. I hold a Graduate Diploma in Business and a Masters of Business Administration.
5. I make this statement on the basis of my own knowledge and inquiries, save where otherwise stated. Where I make statements based on information provided to me by others, I believe such information to be true.

Endeavour Foundation

6. Endeavour Foundation was established in 1951 by a group of parents of children with an intellectual disability. The purpose was to provide more educational options and opportunities in life for children with intellectual disabilities.
7. Today Endeavour Foundation exists to make possibilities a reality for people living with disability and achieves this by collaborating with our customers to imagine the possibilities and then work together to make them happen.
8. In the 68 years since being established, Endeavour Foundation has grown to a major provider of a range of disability services. Under the NDIS Endeavour provides services to over 800 customers in accommodation (Supported Independent Living), over 2000 supported employees in supported employment services (Assisted Disability Employment Facilities) and over 500 customers in home and community participation supports (Learning and Lifestyle Centres).

9. Endeavour Foundation operates across Queensland, New South Wales and Victoria.

Workforce of Endeavour Foundation

10. Endeavour Foundation employs 4684 people including 1260 Support Workers and 2106 Supported Employees.

11. The Support Worker workforce includes 236 full time, 901 part time and 123 casual employees.

12. Most of the support workforce in Queensland is covered by the Endeavour Foundation Union Collective Agreement 2009, but as a result of mergers, some staff in NSW and Victoria are employed under the Social, Community, Home Care and Disability Services Industry Award 2010 (SCHADS).

NDIS

13. The National Disability Insurance Scheme (NDIS) launched in July 2013, and has gradually rolled out across all Endeavour operations. Transition to the NDIS for all Endeavour customers will be complete in July 2019.

14. The NDIS is a transformational change in service approach for people with severe and profound physical and psychological disabilities. As a result, the rollout of the National Disability Insurance Scheme (NDIS) has required significant changes in the ways in which Endeavour Foundation organises its work.

15. A key purpose of NDIS is to provide participants with more choice and control over how they live their lives. This includes giving participants more control over the timing of when supports are delivered by their provider.

16. As a result of the introduction of the NDIS, Endeavours organisational systems and processes have been required to adapt to accommodate:
    a. Enhanced Customer control of their service options and usage of services
    b. A significantly expanded and competitive market model
    c. Payment and pricing systems tightly defined and controlled by NDIA

17. For Supported Independent Living (accommodation) services the NDIA undertakes the service provision planning with the customer directly, this customer plan then tightly defines the services and support ratios that the customer will receive. The NDIA will also approve a SIL quote per accommodation facility which defines the exact income that Endeavour can claim to deliver these services to all customers.

18. If Endeavour delivers services in these Supported Independent Living facilities over and above the customers plan or the SIL quote there is no mechanism to receive additional income and the services will be unfunded.

19. For in home supports the same restrictions apply. Customers services will be outlined in the customers plan and services pricing is capped. Customers also have the ability to choose what times they want to receive services.

20. The NDIS pricing structure incorporates tight assumptions in pricing. These pricing models are designed to provide value for both the customer and the NDIS and will only benefit "efficient" providers (NDIS Price Guide 2018/19). Registered Providers cannot charge over prices defined in the NDIS price guide.

Broken Shift

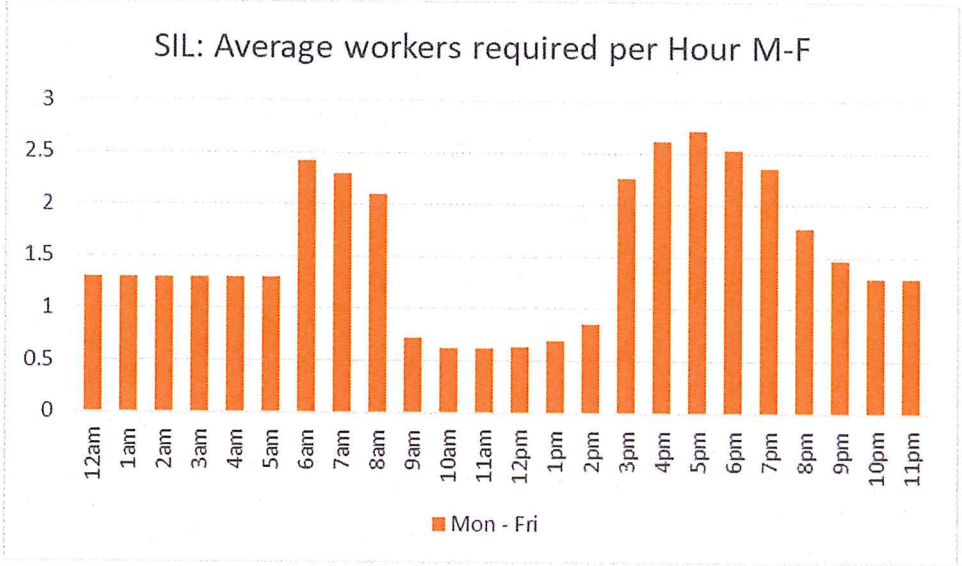
21. Our experience is that participants are asserting their preferences regarding the timing of supports. The result is that there are peaks and troughs of demand during the day.

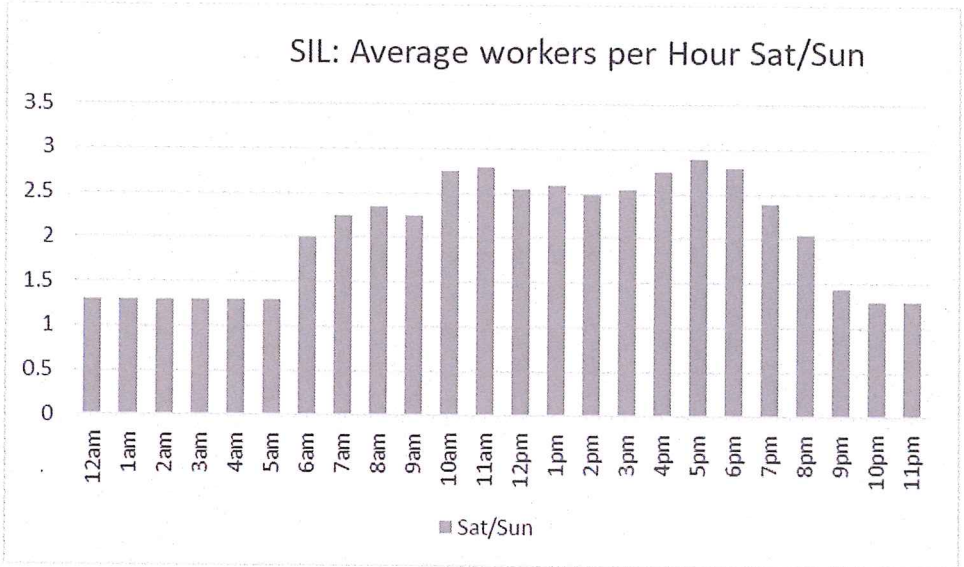
22. The NDIS approves appointments for customers for Accommodation and In-Home services with a minimum appointment length of one hour in many cases.

23. Customers can choose when they receive services, most customers choose to have these services during peak times, these include morning from 6am to 9am and Evening for 3pm to 7pm.

24. In the data that is presented below, an appointment for a client is not necessarily the whole shift for an employee, as they may have other appointments, although sometimes it may be. The data is intended to show customer demand.

25. Below is a breakdown across 10 Endeavour Accommodation facilities (Approx. 40 customers) and the spread of hours approved in the relevant SIL quotes from the NDIS.





26. We can see that in accommodation services customers require supports primarily only during peak hours with an average appointment length of two hours in the morning (6-8) to get up and ready for work or recreation activities and an average of 4 hours in the evening to arrive home from work or recreational activities and prepare for bed.
27. This is mitigated somewhat on weekends when customers spend more time in the accommodation facilities.
28. In this way we are seeing customers exercise choice and control over the provision of services that would align with the preferences of people without disabilities.
29. Note that the hours indicated in the above data are the hours approved by the NDIA for these facilities and the only hours of service which Endeavour can claim revenue to deliver.
30. For In-Home Supports an analysis is also provided of 6 Endeavour Customers over a two-week roster period, results of appointment start times and average requested durations

are below. The term "shift" in these tables relates to individual customer supports, not necessarily an individual employee's total shift.

Start Time	# Shifts	%	Average Shift Duration
5 AM	11	6%	2.5
6 AM	26	14%	2.4
7 AM	19	10%	1.8
8 AM	22	12%	4.0
9 AM	11	6%	4.5
10 AM	8	4%	3.9
12 PM	4	2%	1.0
1 PM	6	3%	1.7
2 PM	1	1%	2.0
3 PM	16	9%	2.0
4 PM	29	16%	1.9
5 PM	6	3%	1.5
6 PM	8	4%	1.0
7 PM	2	1%	1.0
8 PM	2	1%	1.5
9 PM	14	8%	2.5

Shift Length	# Shifts	%
1	31	17%
1.5	2	1%
2	83	45%
2.5	37	20%
3	3	2%
4	9	5%
5	4	2%
6	6	3%
6.25	10	5%

31. For In-Home Care 42% of all appointments have a start time between 5am and 9am with an average length of 2.7 hours. An additional 24% of appointments have a start time between 3pm and 4pm with an average length of 2 hours.

32. Overall for In-Home Care, 83% of appointments have a length between 1-2.5 hours with only 8% of requested appointments being in excess of 6 hours.

33. As additional information, below are some example rosters (employees and customer details redacted) to demonstrate the type of In-Home services approved by the NDIS and requested by customers.

05:00 PM - 06:00 PM	18/06/2019	Employee: [redacted] House cleaning and other household activities

34. In example one we see a standard weekly in-home support service profile for a NDIS customer with shifts occurring at consistent peak times during the morning and afternoon.

35. In example two we see a customer moving between 1:1 services at peak times in-home and 1:3 services in a group based environment during the day.

36. Shorter support durations at peak morning and afternoon times are a requirement in the NDIS market. Customers are exercising their choice to have supports at these peak times.

37. Supports are required for short durations in the peak hours during the morning and afternoon to allow customers to attend employment and day programs, and allow them to live a normal lifestyle

38. The inability to roster broken shifts would severely restrict the capability of Endeavours workforce to cover the services required.

39. The inability to allocate staff broken shifts would require Endeavour to engage a higher number of support workers working contracts with less hours to cover peak customer periods in both the morning and afternoon.

Customer Cancellation

40. From time to time participants need to cancel their appointments. This can be for a variety of circumstances and is often last minute.

41. Our data shows, that for Endeavours 1:1 support and Group Based Services we average over 50 cancellations per month.

42. For affected support workers it is not always possible to find alternative work immediately.

43. To meet customer requirements and to ensure safety of customers Endeavour aims to have all support shifts covered two weeks out from the service delivery date.

44. As a result, if a service is cancelled by the customer at the last minute there is not always an available support shift for the support worker to be allocated to.

45. Support workers who have their shifts cancelled will be allocated shifts should another staff member call in sick.

46. This may not be an available option if it is not a service the support worker normally undertakes as due to the specific care needs of customers support workers need to have been orientated and signed off to work in specific Endeavour services.

47. The NDIS price guide outlines that Endeavour can claim for up to 90% of the cost of a customer cancelled shift. This is only available if the customer cancels with less than 2 clear business days' notice.

48. There is not ability or recourse to funding if the client cancels before with more than two clear business days' notice.

49. If there is more than 2 day's notice, but less than 7 days, then for employees covered by the Award, our ability to change the employee's roster is restricted, and no payment can be claimed from the NDIS to cover the cancelled hours of work.

50. Only customer service shifts are funded under the NDIS. Moving staff to other types of work such as administration shifts would not be sustainable as these are not funded under customer plans.

28/6/2019.

UNITED VOICE TRANCHE 2 DRAFT DETERMINATIONS

Fair Work Act 2009
s.156–4 yearly review of modern awards

4 yearly review of modern awards
[AM2018/26]

Social, Community, Home Care and Disability Services Industry Award 2010
[MA0000100]

Social, community, home care and disability

ROSS, PRESIDENT SYDNEY, XX YYY 2019

4 yearly review of modern awards

A. Further to the Full Bench decision issued by the Fair Work Commission on XX XXX 2019[1], the above award is varied as follows:

1. By inserting new clause 20.2(b) at clause 20.2 as follows:

20.2(b) An adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.

2. By renumbering clauses 20.2 (b) to (d) as clauses 20.2 (c) to (e) respectively.

3. By amending clause 20.6 as follows:

20.6 Telephone allowance

(a) Where the employer requires an employee to install and/or maintain a telephone for the purpose of being on call, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.

(b) Where the employer requires an employee to use a mobile phone for the purpose of being on call, for the performance of work duties or to access work related information, the employer will either:

(i) provide a mobile phone fit for purpose and cover the cost of any subsequent charges; or

(ii) provide a mobile phone and reimburse subsequent costs on the production of receipts, or

[1] [Insert decision reference]

(iii) reimburse the employee for the cost of the phone and its use according to clause (c).

(c) Where the employer requires the employee to use the employee's own mobile phone in the course of employment:

(i) where the mobile telephone is provided under a mobile phone plan from a telecommunications provider, the employer and employee must agree in writing on the amount of reasonable reimbursement payable by the employer to the employee for the use of the employee's mobile phone in the course of employment provided that such reimbursement must not be less than 50% of the cost of the employee's monthly mobile phone plan, up to a maximum monthly phone plan of $100; or

(ii) where the mobile phone is a pre-paid mobile phone, the employer and employee must agree in writing on the amount of reasonable reimbursement payable by the employer to the employee for the use of the employee's pre-paid mobile phone.

(d) If requested, the employee must provide the employer with a copy of the mobile phone plan associated with the mobile telephone to be used by the employee in the course of employment.

(e) If the employee enters into a new mobile phone plan or arrangement with a telecommunications provider entitling the employee to a different allowance under this sub-clause, the new allowance will become payable from the first full pay period after the date the employee provides the employer with a true copy of the new mobile phone plan.

4. By amending clause 25.5(d)(i) as follows:

(i) Seven days' notice will be given of a change in a roster. Full time and part time employees will be entitled to the payment of overtime for roster changes where seven days' notice is not provided.

5. By deleting clause 25.6(b) and inserting the following:

25.6(b) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the starting or finishing time of the broken shift, whichever is the greatest.

6. By amending clause 25.6(a) as follows:

This clause only applies to social and community services employees when undertaking disability services work and home care employees.

(a) For the purposes of this award a broken shift is a shift where an employee works in two separate periods of duty on any day within a maximum spread of twelve (12) hours and where the break between periods exceeds one hour.

7. By inserting new clause 25.7 Travel time as follows:

Clause 25.7 Travel time

(a) Where an employee is required to work at different locations they shall be paid at the appropriate rate for reasonable time of travel from the location of the preceding client to the location of the next client, and such time shall be treated as time worked. The travel allowance in clause 20.5 also applies.

(b) This clause does not apply to travel from the employee's home to the location of the first client nor does it apply to travel from the location of the last client to the employee's home.

8. By renumbering clause 25.7 as 25.8.

B. This determination will come into operation from XX YYY 2019. In accordance with s.165(3) of the *Fair Work Act 2009* (Cth) these items do not take effect until the start of the first full pay period that starts on or after XXX XXXX 2019.

PRESIDENT

IN THE FAIR WORK COMMISSION

Matter No: 2018/26

Section 156 - Four Yearly Review of Modern Awards – *Social, Community, Home Care and Disability Services Industry Award 2010*

SUBMISSION OF UNITED VOICE

1. This submission is made pursuant to the amended directions of the Fair Work Commission ('the Commission') made on 4 February 2019 requiring any '*interested party*' to file evidence and submissions in support of '*their claims*' in the 4 yearly review of the *Social, Community, Home Care and Disability Services Industry Award* 2010 ('the Award').
2. The directions had as their point of reference a report of the Commission published on 30 October 2018 in which outstanding claims of parties were listed together with the report of a conciliation.
3. From 3 June 2016 to 28 February 2017, conciliation was conducted by Deputy President Booth ('the conciliation') concerning substantive claims made by both union and employer participants in the review of the Award. The conciliation ran in parallel with conferences conducted by Commissioner Lee concerning technical and drafting issues in the review of the Award.
4. United Voice was a participant in the conciliation.
5. On 8 May 2017, a document titled '*Joint Report of the interested parties to the Social, Community, Homecare and Disability Services Award 2010'* ('the Joint Report') was agreed by the union and employer parties that participated in the conciliation. The Joint Report annexed draft determinations which represented the participants' agreement concerning a number of matters. The Joint Report included a summary of claims that had been withdrawn. The Australian Industry Group ('AiG') did not participate in the conciliation but did participate in the conferences on technical and drafting matters.
6. On 22 October 2018, a directions hearing took place conducted by the President. The President noted that a consolidated list of claims and the Joint Report would be published and any party who opposed the Joint Report was invited to indicate their concerns.
7. On 30 October 2018, a report of the Commission containing draft directions for the further review of the Award was published. This report contemplated an arbitration taking place concerning the remaining claims on the basis that some claims were resolved by the Joint Report.
8. On 9 November 2018, a further directions hearing took place conducted by the President. At this hearing the AiG expressed opposition to the Joint Report on behalf of unnamed employers.
9. On 13 November 2018, directions were made in relation to the remaining substantive issues in the review of the Award. These directions were amended but are essentially the directions pursuant to which our materials here are being filed. We have prepared our materials on the basis of the claims we

are listed as seeking to progress in the report of 30 October 2018. These claims are the '*claims'* that were not resolved by the conciliation.

10. On 31 January and 8 February 2019, Commissioner Lee conducted conciliation conferences concerning the draft determinations that formed the substance of the Joint Report. Confidential discussions took place with some matters noted on the record.

11. The AiG has never clearly particularised its concerns or said who it represents. The status of the Joint Report is not clear and there are now further draft clauses from the conferences conducted by Commissioner Lee which appear to supersede the Joint Report. There is no unanimity concerning these most recent draft clauses. Accordingly, we have been unable to identify which additional substantive claims we should pursue as a consequence of the possible obsolescence of the Joint Report and related draft clauses. Timing has also made it practically impossible to make appropriate new claims and present evidence concerning matters that may or may not be resolved by the Joint Report or a related process.

12. We reserve our position concerning the Joint Report and our capacity to make appropriate substantive claims in the event that in whole or part the Joint Report is not given effect to.

13. We remain committed to a timely, efficient and fair review of this Award by the Commission.

Introduction

1. United Voice has 10 outstanding claims in the review of the Award. These claims can be identified as the following items on the '*Revised Summary of Proposed Substantive Variations*' ('the Revised Summary') dated 22 November 2017:

- *S2A -Variation to Clothing and equipment allowance (Uniforms)*
- *S3A -Variation to Rosters clause*
- *S21 –Variation to Telephone allowance*
- *S37 –Variation to Broken shifts clause*
- *S40 –Variation to Sleepover clause*
- *S44A –Deletion or variation to 24 Hour care clause*
- *S47 –Variation to Excursions clause*
- *S49 –Variation to Meal breaks clause*
- *S51 –Variation to Overtime clause*
- *S57 –Variation to Public Holiday clause*

2. We seek to pursue the above claims with the exception of *S49 –Variation to Meal breaks clause*. This claim is withdrawn.

3. Claim *S51 –Variation to Overtime clause* is pursued in part.

4. We also have 3 other claims that were withdrawn as a result of the Joint Report, dated 8 May 2017 ('Joint Report').

5. As stated previously, if the Joint Report is not endorsed by the Commission United Voice reserves our right to pursue the withdrawn claims. The withdrawn claims we withdrew pursuant to the conciliation which lead to the Joint Report are:

- *S2 – Travel time*
- *S3 – Variations to Rosters clause*
- *S30 –Client cancellation*

S44A –Deletion or variation to 24 Hour care clause and S47 –Variation to Excursions clause, S40 –Variation to Sleepover clause

S44A –Deletion or variation to 24 Hour care clause

6. Clause 25.8 '*24 hour care*' is problematic. Whilst this clause is part of the industrial '*landscape'* of the care sector, it requires more than cursory review.

7. Clause 25.8 states:

> '*This clause only applies to home care employees.*
>
> *(a) A 24 hour care shift requires an employee to be available for duty in a client's home for a 24 hour period. During this period, the employee is required to provide the client with the services specified in the care plan. The employee is required to provide a total of no more than eight hours of care during this period.*
>
> *(b) The employee will normally have the opportunity to sleep during a 24 hour care shift and, where appropriate, a bed in a private room will be provided for the employee.*
>
> *(c) The employee engaged will be paid eight hours work at 155% of their appropriate rate for each 24 hour period*.'

8. The clause permits an employer to require an employee to work for 24 hours whilst only paying the employee for 8 hours.

Legislative context

9. The only legislative assumption, made through the deeming provision in item 4 of the Schedule 5 to the *Fair Work (Transitional Provisions and Consequential Amendments) Act 2009* ('Transitional Act'), was that a modern award made pursuant to the award modernisation process was a modern award for the purposes of the Act and there is no absolute acceptance that such an award made was meeting the modern awards objective. In the context of the 2 yearly transitional review the Full Bench observed that awards made as a result of award modernisation demonstrated a legislative acceptance that the terms of the existing modern award are consistent with the modern awards objective.[1] The Full Bench in the 2014 Jurisdictional Issues Decision clearly indicated that the 4 yearly review '*will proceed on the basis that* ***prima facie*** (emphasis added) *the modern award being reviewed achieved*

[1] *Re Modern Awards* [2012] FWAFB 5600; 223 IR 49, at 69.

the modern award objective at the time it was made'.[2] The Full Federal Court *Shop, Distributive and Allied Employees Association and another v The Australian Industry Groups and others*[3] ('the Federal Court Penalty Rates case') also observed item 4 in the Transitional Act appeared with items 6 which mandated a transitional review.[4]

10. As the Full Federal Court in *Construction, Forestry, Mining and Energy Union v Anglo American Metallurgical Coal Pty Ltd*[5] recently observed:

> *It is of the essence to appreciate that a modern award is not an instrument the product of agreement, or conciliation and arbitration as representing all the terms and conditions of employment of identified employees. Rather, together with the National Employment Standards its purpose is to provide* ***a fair and relevant minimum safety net*** *of terms and conditions.*[6]

11. The Commission in conducting its function under section 156 of the Act and is not bound by the claims of participants. The Award must be reviewed '*in its own right*' and the Commission can and should act independently and where appropriate disregard claims made by participants in the review process subject to the *Fair Work Act* 2009 and the rules of natural justice.

12. Recently, the Full Federal Court in *Shop, Distributive and Allied Employees Association and another v The Australian Industry Groups and others* [2017] FCAFC 161 ('the Federal Court Penalty Rates case') observed at paragraph 38:

> *The meaning of s 156(2) is clear. The FWC must review all modern awards under s 156(2) (a). In that context "review" takes its ordinary and natural meaning of "survey, inspect, re-examine or look back upon". Consequential upon a review the FWC may exercise the powers in s 156(2) (b). In performing both functions the FWC must apply the modern awards objective as provided for in s 134(2) (a).*

13. The Full Court observation of the meaning of '*review'* noted above was made in the context of the Court dismissing a point of appeal made by United Voice and another union that a material change in circumstances was required for alteration in the modern award safety net. No material change in circumstances is required to enliven the Commission's capacity to review these clauses but as noted below, it is apparent that there has likely been a material change in circumstances in the sector covered by the Award.

---

2 *Four Yearly Review of Modern Awards–Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at para. 24.
3 [2017] FCAFC 161.
4 At [26].
5 [2017] FCAFC 123.
6 As above at paragraph 18.

14. In *Re Four Yearly Review of Modern Awards –Preliminary Jurisdictional Issues* [2014] FWCFB 1788, (2014) 241 IR 189 ('Jurisdictional Issues Decision') the Full Bench identified that in addition to section 156 a range of other provisions in the Act are relevant to the review. Those provisions included the objects of the Act (s. 3), the interaction with the NES (s. 55) and those provisions providing for the performance of functions and exercise of powers by the Commission (ss. 577 and 578).[7]

Focus of review

The sector has changed

15. First, the sector covered by the Award has under gone significant change since award modernisation notably the introduction of the National Disability Insurance Scheme and a greater focus on consumer directed care as the funding model. The sector can be described as more deregulated, diffuse and subject to greater competitive pressures in relation to labour costs.
16. Further the sector is expanding with greater focus on homecare and competition between providers. While these clauses are problematic in themselves, they become more awkward as part of the modern award safety net when contextualised with recent changes in the sector.

Legal issues

17. It is questionable whether clause 25.8 is compliant with the Act. There are a number of issues and these are distinct from the merit consideration as to whether it is appropriate to have such a clause in a safety-net instrument. Merit considerations are principally whether the clause complies with the modern awards objective.

18. Clause 25.8 provides no certainty concerning the hours or work of an employee. Subsection 62(1) reads:

> *(1) An employer must not request or require an employee to work more than the following number of hours in a week unless the additional hours are reasonable:*
>
> *(a) for a full-time employee--38 hours; or*
>
> *(b) for an employee who is not a full-time employee--the lesser of:*
>
> *(i) 38 hours; and*
>
> *(ii) the employee's ordinary hours of work in a week.*

[7] *Four Yearly Review of Modern Awards–Preliminary Jurisdictional Issues* [2014] FWCFB 1788 at paragraph 10.

Employee may refuse to work unreasonable additional hours

19. Subsection 62(2) further provides '*the employee may refuse to work additional hours (beyond those referred to in paragraph (1) (a) or (b)) if they are unreasonable.*' Subsection 62(3) of the Act sets out some considerations to determine whether a request or direction to work additional hours is reasonable. One consideration as to whether a direction to work additional hours is reasonable is:

> *(d) whether the employee is entitled to receive overtime payments, penalty rates or other compensation for, or a level of remuneration that reflects an expectation of, working additional hours;*

20. The 24 hour care shift clause creates situations where an employee is effectively liable to work in excess of the notional hours attributed to the engagement. Whilst the clause states the employee will be required to provide a total of no more than eight hours of care during a 24 hour care shift, in reality the hours that such engagements will '*require'* the employee to work are not foreseeable. At best when an employer directs an employee to undertake a 24 hour care shift there is a contingent request by the employer, if necessary, for the employee to work additional hours in relation to emergencies and unforeseen care needs of clients. These hours may be additional hours in terms of section 62. While section 62 does not deal with intra-day durations of work, there is the merit consideration that the clause allows unreasonable intraday durations of work, and here the issue of the employee working the additional hours is in a practical sense non-negotiable.

21. At least in terms of subsection 62(1), the Act clearly contemplates the employer requesting or requiring an employee to work their hours. A provision in a modern award that effectively places on an employee the responsibility to perform what could be considerable additional hours of work is problematic.

22. Subsection 62(2) provides a right for employees to refuse additional work beyond 38 hours a week. Where a 24 hour care shift falls late in the weekly roster cycle, it is not inconceivable that an employee will be effectively compelled to work greater than 38 hours. This clause provides no facility for the employee to refuse additional hours that may be required during the engagement. The employee will literally be '*stuck'* overnight at '*premises'* or a '*client's home.*' If something happens the employee has to respond and '*work'*.

23. The 24 hour care clause is not an '*on call*' provision but an engagement at a work site with a start and finish time. The employee is required to attend and remain at '*premises'* or a '*client's home'* by the terms of the engagement and cannot leave although it is contemplated that the employee can sleep. Sleep is not antithetical to the work. As work is contractual in origin. If an employer wants to contract

with an employee on the basis that for some part of a work engagement, the employee is asleep, this is still work.

24. A more fundamental concern with this clause is that the entire engagement is work and should be remunerated as such. Notionally attributing a certain number of hours as work to what could be a significantly longer duration of work is problematic.

25. If an employer and employee are unencumbered by legislative restrictions what payment (or even lack of payment) that can be made for '*work'* is a matter for the parties.[8] This is not the case here and particularly not so as the Commission is concerned with a safety-net provision.

26. The so called English Truck Acts of 1831[9] sought to restrict the faux contractual freedom of the parties (but in reality employers' prerogative) to pay for work other than in money. The Truck[10] Acts required payment in '*current coin of the realm'* and these Acts were principally designed to prevent employees being paid by way of tokens that had to be spent in the employer's shop and to prevent unreasonable and excessive deductions from wages.

27. Division 2, Part 2-9 of the Act which contains sections 322 to 327 are in some ways the modern successor of the English Truck Acts with some qualifications and innovations. A possible innovative aspect of the Part is that may contain a guarantee that an employer must generally '*pay'* an employee for work in codifying how work is paid for and when.

28. Mark Irving notes:

> *Section 323 (1) in part states 'an employer must pay an employee amounts payable to the employee in relation to the performance of work …in full… in money…at least monthly.' … It creates a statutory obligation to pay amounts that are payable for the performance of work. This is not a traditional part of Truck Act schemes, though it is clearly part of the scheme established by s 323. The obligation is imposed on all national system employers for their national system employees. It is not limited to employees covered by awards or industrial instruments. Section 323 is a civil penalty provision. A contravention carries a significant pecuniary penalty.*[11]

29. Justice Buchanan note in *APESMA v Wollongong Coal Ltd* [2014] FCA 878 at [28]–[30]:

> *It is certainly apparent, as the respondents contend, that ss 323 and 324 of the FW Act are intended to provide for matters dealt with in the Truck Acts – i.e. payment in money*

8 *Smith & Wood's Employment Law*, Oxford, 12th edition, 2015, p. 201.
9 As above, p. 226.
10 '*Truck'* in this sense means barter.
11 M Irving, *The Contract of Employment*, 2nd ed (forthcoming).

(not in kind), without unauthorized deductions, and with specific and reasonable periodicity.

However, that conclusion does not suffice to exclude the possibility that s 323 of the FW Act has an additional role to play.

The ordinary language of s 323 is apt to identify, and provide for the enforcement of, an obligation to pay amounts which have become payable, as well as the more specific obligation to pay such amounts in full, in money and at least monthly (subject to the statutory exemptions which accompany the obligation). It does so by permitting the imposition of a civil penalty for contravention of the obligation.

30. Clause 25.8 may breach s 323 of the Act in that it permits an employer to require an employee to work for a 24 hour period but does not require the employer to pay the employee in full for the performance of the work. Under clause 25.8, in each 24 hour care shift, an employee is performing 16 hours of unpaid work.

Merit consideration

31. These clauses are not appropriate parts of a safety net instrument. They do not comply with the modern awards objective. It is hard to characterise a provision that demands an employee is required to attend and remain at '*premises'* or a 'c*lient's home'* for durations of up to 24 hours where the employee's remuneration for the work has a rigid ceiling as consistent with a fair and relevant minimum safety net of terms and conditions.

32. The remuneration provided for the unsocial nature of the work is too low. On 1 January 2014, section 134(1) (da) became part of the modern awards objective and is relevant.

33. Presumably the employee has to make some arrangements for his or her children to be cared for by someone else when engaged on a 24 hour care shift.

34. The terms would appear to not be apt to promote '*social inclusion though increased workforce participation'*[12]. The employee for an extended period cannot do any other work effectively. The practices further are also arguably inflexible, inefficient and not conducive to productivity[13]. Leaving one employee for lengthy periods on duty dealing with complex interpersonal matters is problematic.

35. Whilst the clause contemplates that the employee will not be required to provide a total of no more than 8 hours of care during the 24 hour period, this has no practical application. A home care worker in a client's home cannot realistically turn aside from assisting a client with their needs even when 8 hours of care have already been provided. This is especially so given clients who require 24 hour care are likely to be clients who require a high level of care. Yet there is no provision within the

[12] 134(1)(c).
[13] 134(1)(d).

clause for overtime rates beyond the 8 hours of care or even for the home care worker to be paid at all beyond the 8 hours.

36. Further, that the home care worker is required to be at the client's home for 24 hours by the employer is by necessity, *work*. The home care worker is not free to leave and should appropriately be paid for all hours they are required to be present at a client's home.

37. It is our position that clause 25.8 should be deleted.

38. It is our position that the existence of clause 25.7, the 'Sleepover' clause, negates the requirement for clause 25.8.

39. The sleepover clause at least assumes the employee will sleep and requires payment for work performed prior to or following the sleepover shift. The 24 hour clause permits an employee being left alone in a client's home where there may be a number of persons living and 'normally' the employee will have the opportunity to sleep. The current phrasing of the clause is ambiguous as to whether the employee will be provided with a safe and clean space to sleep during the 24 hour care shift.

40. The sleepover clause also provides that employees will receive an allowance and payment for time worked during a sleepover. This is far more appropriate than the 24 hour care clause, which provides no payment for the sleepover portion of the shift.

41. Clause 25.8 does not meet the modern award objectives and should be deleted from the Award.

42. Clause 25.7(a) should be amended to remove the words '*and is not a 24 hour care shift pursuant to clause 25.8*' to ensure that employees previously undertaking 24 hour care shifts will be covered by the provisions of the sleepovers clause.

S47 –Variation to Excursions clause

43. Clause 25.9 (ii) of the award provides that where an employee agrees to supervise clients on excursion activities that may involve overnight stays, then '*the employer and employee may agree to accrual of time instead of overtime payment for all other hours*'.

44. This clause is ambiguous as to whether the accrual of time would be equivalent to the normal hourly rate or overtime. Therefore we seek to vary the existing clause to read:

> '*The employer and employee may agree to accrual of time instead of overtime payment. The time accrued will be calculated at the overtime rate*.'

45. The modern award objective s134 (1) (da) should be taken into consideration when reviewing clause 25.9(ii). The clause is currently in contravention of this objective because it is ambiguous as to whether employees will be compensated for working overtime. Amending clause 25.9(ii) as proposed would satisfy this objective by ensuring that workers who are required to undertake excursion shifts at unsocial hours are compensated appropriately.

46. United Voice does not consider it to be fair to employees to be provided with the accrual of time at an hour for hour rate rather than to be paid overtime. Such an arrangement clearly benefits employers and does not reflect the true value of the work undertaken by the employee. We submit that

the clause in its current form allows employers to apply pressure to employees to accept accrual of time at an hour for hour rate instead of paying overtime or accrual of time at the overtime rate for the hours worked during an excursion in which they would ordinarily be entitled to overtime rates. The power imbalance that exists between employer and employee should not be underestimated in circumstances regarding wages. If an employee works hours that are unsocial or outside of their normal hours of work, then they should be entitled to overtime rates. Amending clause 25.9(ii) as proposed ensures that employees are compensated appropriately if they are to work unsocial or unusual hours.

S40 –Variation to Sleepover clause

47. We seek the deletion of the words '*and is not a 24 hour care shift pursuant to clause 25.8'*. The claim that these words be deleted is a consequence of the claim concerning the deletion of clause 25.8 concerning 24 hour shifts.

S2A -Variation to Clothing and equipment allowance (Uniforms)

48. Clause 20.2(a) states:

> *'Employees required by the employer to wear uniforms will be supplied with an adequate number of uniforms appropriate to the occupation free of cost to employees. Such items are to remain the property of the employer and be laundered and maintained by the employer free of cost to the employee.'*

49. Clause 20.2 (a) of the Award provides that where an employee is required to wear a uniform by the employer, then the employer must provide the employee with '*an adequate number of uniforms*' free of cost to the employee.

50. The Award does not define '*adequate*' and as a result, the decision as to what constitutes an '*adequate*' number of uniforms is often made solely by the employer. When this decision is solely made by the employer, the cost of providing uniforms can carry greater weight than other relevant considerations, and employees are often not provided with a genuinely adequate number of uniforms.

51. Many of the employees covered by the Award carry out work which can easily result in uniforms becoming stained or dirty quickly. For example, home care workers carry out tasks such as cooking, doing laundry, cleaning, helping clients shower and assisting clients with personal hygiene tasks. One home care worker may assist several different clients with these tasks in the course of one day.

52. Where employees are not provided with a genuinely adequate number of uniforms, the burden of ensuring they have a clean uniform for work falls on individual employees, and can result in employees having to wash their uniform multiple times a week.

53. Having to wash uniforms several times a week can be onerous.

54. Employees covered by the Award should be provided with enough uniforms to ensure that they are able to attend work in a clean uniform, without having to wash their uniforms more than once a week.

55. The evidence indicates that there are employees in this sector who are not provided with an adequate number of uniforms.

56. Our witness, Belinda Sinclair, indicates that she was not provided with enough uniforms to attend work in a clean uniform without having to wash her uniforms more than once a week.[14] As she states: '*When I only had 2 shirts, I had to wash them every day of employment, so one was ready to wear the next day. Working five days in a row meant I had to wash them at least three times per week.*'[15]

57. It was only after Belinda Sinclair advocated for herself on several occasions that she was provided with an adequate number of shirts, one and a half years after she had commenced work with this employer.[16]

58. We seek to vary clause 20.2 of the Award to ensure that the employee will be given a sufficient number of uniforms that they will not need to launder their work wear more than once a week. The variation we seek is the insertion of a new clause 20.2(b) (with the subsequent clauses renumbered):

> *'20.2(b) An adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.'*

59. This variation is in line with the modern awards objective, specifically:

- s 134(1)(a) – '*relative living standards and the needs of the low paid*' -this variation would assist provide for the needs of the low paid. Employees covered under the SCHDS Award can generally be considered low paid. This is further exacerbated by the fact that the majority of work in the sector is part-time.
- s 134(1)(c) – '*the need to promote social inclusion through increased workforce participation'* – participation in the workplace is facilitated by the dignity in having a clean uniform.

S3A -Variation to Rosters clause

60. Clause 25.5(d)(i) states:

> *'(d) Change in roster*
>
> *(i) Seven days' notice will be given of a change in a roster.*
>
> *(ii) However, a roster may be altered at any time to enable the service of the organisation to be carried on where another employee is absent from duty on account of illness, or in an emergency.*

[14] Statement of Belinda Sinclair at [18]-[19].
[15] Sinclair at [19].
[16] Sinclair at [20].

(iii) This clause will not apply where the only change to the roster of a part-time employee is the mutually agreed addition of extra hours to be worked such that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle, as the case may be.'

61. Clause 25.5(d) (i) provides that seven days' notice will be given of a change in roster. There are two exceptions to this, which are listed in clause 25.5(d) (ii) and (iii).

62. Clause 25.5(d) (ii) provides that rosters may be altered without seven days' notice where another employee is absent due to illness or emergency and the service of the organisation must still be carried out, and clause 25.5(d) (iii) provides that rosters may be altered with agreement for part time employees, provided they still have the required number of days off within that work period.

63. We note that the Joint Report contains an agreed position in respect of clause 14.3(f)(ii) of the Exposure Draft of the Award dated 6 January 2017, which corresponds clause to clauses 25.5(d)(ii) and (iii) of the Award.

64. Our submission here does not seek to disrupt that position.

65. Our submission is made only in respect of clause 25.5(d) (i) of the Award (which corresponds with clause 13.5(f) (i) of the Exposure Draft of the Award, dated 26 March 2018).

66. Clause 25.5(d) (i) of the Award provides that seven days' notice will be given of a change in roster.

67. The Award does not explicitly identify what the consequence is for the employer for failing to providing seven days' notice of a roster change in a situation where the exceptions in clause 25.5(d) (ii) and (iii) do not apply.

68. The logical interpretation is that any roster changes where seven days' notice has not been provided must be paid as overtime. This is also the stand industrially generally.

69. However, many employers in the sector do not heed this, and regularly make changes to employee rosters without the required notice and without the payment of overtime.

70. Our witness, Belinda Sinclair, provides evidence that her employer frequently makes late roster changes, sometimes without her agreement.[17] She states that the roster changes '*make it difficult for me to plan things for when I am not rostered or to make a weekly budget, despite that I am a permanent employee, not a casual.*'[18]

71. This needs to be considered in the context of a sector in which there are constant and unpredictable shift changes. Our witnesses all indicate that there are frequent changes to their rosters and a significant variability in hours from week to week[19]. This creates financial uncertainty.[20]

72. United Voice proposes that clause 25.5(d)(i) is amended as follows:

---

17 Sinclair at [23] and [25].
18 Sinclair at [25].
19 Statement of Deon Fleming at [13], [15] and [16]; statement of Trish Stewart at [9], Sinclair at [25].
20 Fleming at [16], Stewart at [10], Sinclair at [25].

'*Seven days' notice will be given of a change in a roster. Full time and part time employees will be entitled to the payment of overtime for roster changes where seven days' notice is not provided*'.

73. The proposed amendment will remove any ambiguity about what occurs when seven days' notice is not provided.

74. Roster changes without adequate notice can be disruptive and can have a significant impact on the ability of members to attend to their family and caring responsibilities.

75. For example, employees who are parents generally need to make arrangements for children in advance – whether that is for pick up/drop off, attending after school activities or care at home. Late changes to a roster can disrupt arrangements that have been made in advance.

76. Employees who have caring responsibilities for parents, spouses or others may have made arrangements for hospital and other appointments in advance. Again, late changes to a roster can disrupt these arrangements.

77. The Award currently offers employers a significant level of flexibility in rostering. As noted above, clause 25.5(d) (ii) and (iii) provide two exceptions to the requirement to provide seven days' notice. In addition, clause 25.5(f) provides the employer with flexibility in rostering when a client cancels.

78. Whilst the roster change clause would ideally provide for a greater period of notice for roster changes, the seven days' notice required for change of roster under clause 25.5(d)(i) at least provides some measure of security for employees in planning out their outside of work commitments.

79. However, clause 25.5(d) (i) is not currently having the intended effect, as the clause does not explicitly identify the penalty for failing to provide 7 days' notice of a roster change. United Voice's proposed amendment will ensure that the clause has the intended effect.

80. This variation is in line with the modern awards objective, specifically section 134 (1) (da) (ii) '*the need to provide additional remuneration for employees working unsocial, irregular or unpredictable hours*'. There should be proper compensation for employees who are required to work unpredictable hours as a result of late roster changes.

S21 –Variation to Telephone allowance

81. Clause 20.6 of the Award reads:

> ***20.6 Telephone allowance***
>
> *Where the employer requires an employee to install and/or maintain a telephone for the purpose of being on call, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.*

82. Currently, the Award contains no clear allowance or mechanism for an employee who is required to purchase and maintain a mobile phone for work purposes to receive any reimbursement of costs

associated with the worked related use of the device. Notionally, the entire cost of a work related mobile phone use is '*shifted'* onto the employee unless the employer has some policy which provides for work related phone use.

83. The Award contains a number of classifications where the work takes place outside of a conventional workplace office, individually and in some cases in the recipient of the care's home. For example, all classifications of home care workers except level 5 supervisors will spend a substantial proportion of their work hours outside of the workplace providing services in a person's home.

84. Our draft determination seeks the insertion of a new clause 20.6:

> *Where the employer requires an employee to install and/or maintain a telephone **or mobile phone** for the purpose of being on call, **for the performance of work duties or to access work related information**, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.*

85. The Health Service Union has a similar claim.

86. United Voice has a similar claim for an allowance where an employee is directed to possess a mobile phone for work related purposes in the review of the *Aged Care Award 2010.*

87. For this award, the addition of an appropriate allowance that reflects current technology and workplace practise is an appropriate object of review.

88. As the Full Federal Court observed in *Shop, Distributive and Allied Employees Association v The Australian Industry Group*[21] at [38]

> *In that context "review" takes its ordinary and natural meaning of "survey, inspect, re-examine or look back upon". Consequential upon a review the FWC may exercise the powers in s 156(2) (b). In performing both functions the FWC must apply the modern awards objective as provided for in s 134(2) (a).*

89. More relevantly, the *Telecommunications Award* 2010 contains a telephone allowance that at clause 17(c):

> ***(c) Telephone allowance***
>
> ***(i)** Where an employee does not have a telephone, modem or broadband connection and, at the written request of the employer, the employee is required to have such equipment, the employer must reimburse the cost of purchase, installation and rental.*
>
> ***(ii)** Where an employee makes telephone calls in connection with the business on their private telephone at the direction of the employer, the employer must reimburse the cost*

[21] [2017] FCAFC 161 (11 October 2017).

> *of such calls. Provided that the employer may request details of all such calls claimed by the employee.*

90. The principle that an employee should be reimbursed where an employer requires that the employee have access to a mobile telephone for work is of continuing relevance and should form part of the modern award safety net where mobile phones have become tools of trade and an employee is directed to use one for work. More generally, the established principle that the modern award system generally provides some compensation to an employee when the employer directs that a particular tool of trade is used is relevant.

91. In recent decision[22] which dealt with the tool allowances in the *Restaurant Industry Award* 2010 and *Hospitality Industry (General) Award* 2010, the Full Bench noted in the context of increasing the allowance in the Hospitality Award and expanding the scope of the allowances in both awards:

[242] *The variations we propose to make to the tool allowance provisions in these awards will assist the low paid to meet their needs (s 134(1)(a)) and will have an adverse impact on employment costs (s 134(1)(f)), albeit the impact is not likely to be significant ... Taking into account the s 134 considerations (insofar as they are relevant) we are satisfied that the variations proposed are necessary to ensure that the Hospitality Award and the Restaurant Award achieve the modern awards objective.*

92. On 30 November 2018, the Australian Communications and Media Authority released data indicating that 5.78 million Australians, about 31 % of the population, have no fixed landline at home.[23]

93. *'Digital disruption'* has been a matter of comment by many workplace experts and the subject of a 2016 research report by the Productivity Commission[24]. Associate Professor Sarah Kaine has summarised some of the consequences of '*disruption'*:

> *In the traditional economy businesses provide capital and employees provide labour. This is being challenged by the disruption wrought by technology, specifically the multitude of digital matching platforms.*
>
> *There are now a vast array of organisations providing very different goods and services using digital platforms to match consumers and service providers in the sharing economy (also known as the collaborative economy, access economy or peer economy).*

[24] Productivity Commission, *Digital Disruption: What do governments need to do*? Australian Government, June 2016.

> *In this type of economy many organisations are "asset light". This means businesses make money through providing access to goods and services and making connections between smaller providers and consumers. In doing so, the risk shifts from business to individual gig workers.*[25]

94. The Productivity Commission in its 2016 report explicitly drew a link between the greater use of technology and improved productivity[26] and workplace participation.[27]

Witness evidence

95. Our witnesses, Trish Stewart, Deon Fleming and Belinda Sinclair, all indicate that possession of a mobile phone is necessary to perform their duties as home care workers.[28] The work takes place almost exclusively outside of a conventional office environment remotely and rosters and other important work related materials are provided by the employer to the employee via their own mobile phone.[29] The evidence indicates that the employers do not routinely provide to home care workers with a phone or reimbursement for costs when the employees' personal mobile phone is used for work related purposes during rostered hours.[30]

96. A number of the witnesses indicate that the possession of a personal mobile phone was '*presumed'* by the employer, their mobile numbers were asked for and the employer commenced communicating and incorporating the employee's personal mobile into its work.[31] Trish Stewart notes:

> *One of my duties involves making phone calls to clients to check that they have taken their medications. I am directed to do this as part of my job. I normally make 2-3 of these phone calls per working day. I am also required to call clients if I am running late to meet them for an appointment. This can happen frequently due to traffic.*

25 Sarah Kaine, *Workers are taking on more risk in the gig Economy*, 6 July 2016, the Conversation, https://theconversation.com/workers-are-taking-on-more-risk-in-the-gig-economy-61797.

26 As above, Part 1.4, *The economic impact of new technologies*, pages 27 to 30.

27 As above, part 3.6, Technology can enable participation in the workforce, pages 94 to 95.

28 Stewart at [20] to [22]; Fleming at [18] to [20]; and Sinclair at [14] to [16].

29 Stewart at [22]; Fleming at [28]; and Sinclair at [17].

30 Stewart at [21]; Fleming at [30]; and Sinclair at [16].

31 Stewart at [21]; Fleming at [28]; and Sinclair at [16].

I make these phone calls from my personal mobile phone. I am not provided with a phone by my employer to make these phone calls. My employer asked me for my mobile and made it clear this was because I would be contacted by my employer on my own mobile for work related matters. I have never been provided with a work mobile and the only device I can use for work related calls is my own mobile. I am not reimbursed for the cost of making these phone calls or the cost required to maintain my personal phone to ensure I can make these phone calls. My phone bill costs approximately $170 per month. If I was not required to make as many work calls, I could consider dropping to a cheaper mobile phone plan.

Since August 2018, my employer has been emailing our rosters to us, so I am required to have access to an email account and the internet in order to check my roster. I also scan and email timesheets to my employer at the end of each week, which also requires access to the internet. I am also reliant upon the internet at home if I am asked to pick up a shift with a client I am not familiar with. I will have the care plan emailed to me and I will read it from home prior to attending the appointment so that I am aware of their history and requirements.[32]

97. The evidence of Belinda Sinclair clearly indicates the utility and need for a home care worker to possess a mobile phone and lists a range of common work events for which it is necessary to possess a mobile phone:

a. *if the client doesn't open the door when I visit them,*

b. *if there is traffic that is going to make me late,*

c.*if the clients home phone/call alarm is not working,*

d. *if the work email or tablet system is not working properly, and*

e.*report a hazard/incident in line with Wesley Mission's policy and procedures*.[33]

98. All three witnesses can be described as low paid workers and the practical necessity to maintain a mobile phone is a significant expense. The witnesses also all indicate a level of vulnerability in wanting to maintain their hours.[34]

99. The employers further have not adopted policies or processes to reimburse their employees for work related mobile phone use or a practical reality do not.[35]

100. This claim reflects recent changes in technology and patterns of work that have occurred after award modernisation in 2009. The rise of the so called '*smart phone'* as a workplace tool has occurred after 2009.[36] Accordingly, award histories and the *status quo* are of limited utility as the need for

33 Sinclair at [14].

34 Stewart at [11]; Fleming at [16] to [17]; and Sinclair at [26].

35 Stewart at [21]; Fleming at [30]; and Sinclair at [16].

36 Charles Arthur, *The History of Smartphones: timelines*, 25 January 2012, the Guardian: https://www.theguardian.com/technology/2012/jan/24/smartphones-timeline.

review stems from a recent change that has not been reflected industrially in the modern award system.

101. The telephone allowance in the Award is anachronistic, does not reflect the current ubiquity of mobile '*smart'* phone use and their status as work tools. So far as one is necessary, a significant change of circumstances has taken place since this Award was made which requires the Commission to conduct a substantive review of this matter.

102. Australia's social safety net needs to reflect changes in technology and the greater use of such technologies. Costs associated with the use of new technology should not be shifted onto low income workers. The Productivity Commission noted:

> *There will be adjustments that come with digital disruption. Some workers will struggle to adjust to changes in demand for their skills and new, more flexible but less reliable, work options. Australia's social safety net will remain important in mitigating risks for workers and lessening the effects of a widening distribution in incomes.*[37]

103. Award reliant home care workers are not part of the '*gig'* economy but their evolving patterns of work demands greater reliance of mobile phone technology which make some of the general findings of the Productivity Commission apposite.

104. The witness evidence clearly indicates that much of the work covered by the Award takes place in the community where possession of a mobile phone is a practical necessity. The evidence further supports the thesis of Dr Kaine and others concerning technology having the practical effect of allowing employers to shift costs onto workers. A fair characterisation of the evidence is that the employers here appear to be '*free riding*' and shifting an expense that in whole or in part should be attributed to the employer. This behaviour is driven by the ubiquity of possession of a mobile phone. Award reliance which often equates with being low paid and some precariousness also does not place the employee in a position to demand reimbursement of all work related expenses. This is especially the case in relation to work expenses associate with technological change where there is not a clear industrial custom concerning the attribution of the cost.

105. As noted, the evidence indicates the employers are not adopting policies or practices to reimburse their employees for work related mobile phone use. This indicates a clear need for a safety-net instrument such as the Award to deal with the issue.

106. In circumstances where the employee does not possess an appropriate device and the employer directs the employee to possess one for the purpose of their employment, it is appropriate that the employee is reimbursed for the associated costs. Where an employer provides a work phone for the employee, the allowance would have no application.

---

[37] As above at page 2.

107. The proposed allowance covers the quite specific circumstance where an employer requires an award covered employee as a condition of their employment to possess a mobile phone and use it. Currently, the award provides no clarity concerning the attribution of the cost of the purchase and use of such technology.

108. The Award is a safety net instrument and intended to provide '*a fair and relevant minimum safety net of terms and conditions taking into account relative living standards and the needs of the low paid*.' In light of the expense of purchasing and maintaining a mobile phone and its status as a tool of trade; it is appropriate that a reimbursement allowance as proposed is part of the safety net of this modern award.

109. Much of the work covered by the Award can be classified as low paid and the cost of purchasing and maintaining a mobile phone because the employer demands its employees use this technology is a significant imposition and a cost which the employer should properly make some contribution towards. The allowance as proposed would also provide certainty to employers that any direction to possess and use a mobile phone as a tool of work is a lawful and reasonable direction. It is unarguable that any work direction to use a personal mobile phone without some reimbursement provision for expenses is not '*reasonable'*.

110. Further, such an allowance can be characterised apt to '*promote flexible modern work practices and the efficient and productive performance of work,*'[38]and greater workforce participation.[39]

S37 –Variation to Broken shifts clause

111. There are two parts to our claim to vary clause 25.6(a) broken shifts. The first is that the clause should be varied to explicitly state that a broken shift can only be worked in 2 parts. The second is that the higher of the shift loadings should apply. Each part of our claim is addressed separately.

Number of broken shifts per day

112. Clause 25.6(a) of the Award states:

> *'This clause only applies to social and community services employees when undertaking disability services work and home care employees.*
>
> *(a) A broken shift means a shift worked by an employee that includes one or more breaks (other than a meal break) and where the span of hours is not more than 12 hours.'*

113. A significant number of employers in the sector are interpreting this clause as if it allows for an unlimited number of broken shifts per day.

[38] Paragraph 134(1) (d).
[39] Paragraph 134(1) (c).

114. It is common for employers to only provide employees with a few paid hours of work in several broken shifts over a long span of hours. For example, a home care employee could have 4 hours of work across a span of 10 hours, and these 4 hours of work could be split into 6 different broken shifts.
115. The impact of the Award being read by employers as providing for an unlimited number of broken shifts is compounded by several other issues within the Award.

Travel time

116. The time spent by an employee travelling from one client to another is rightfully time worked and should be paid as such. However, a significant number of employers in this sector '*de-roster*' employees for travel time between shifts to avoid paying the employee their rightful wages. This type of '*de-rostering*' is facilitated by an interpretation of clause 25.6(a) that allows for an unlimited number of broken shifts.
117. For example, a home care worker may commence work at the first client's home at 7am for 30 minutes to undertake a medication check. The worker will then drive 30 minutes to the next client's home. The worker will attend the second client's home for 1 hour from 8am to 9am for meal preparation duties and then travel 40 minutes to the third client's house, where they will undertake cleaning duties for 1 hour.
118. Many employers will characterise this period of work as consisting of 3 separate broken shifts, and only pay the worker for 2 hours and 30 minutes of work. The 1 hour and 10 minutes spent travelling by the worker at the direction of the employer would be unpaid.
119. United Voice has a separate claim in this review in relation to payment of travel time (*S2 – Travel time).* This claim was withdrawn subject to the endorsement of the Joint Report, which is yet to be confirmed. We do not re-agitate it here but highlight this issue to draw attention to how employers improperly utilise broken shifts to avoid paying employees for time worked.

Minimum engagement

120. Employment within this sector is predominately part-time and casual.
121. There is no minimum engagement period for part-time employees under this Award.
122. The minimum engagement period for casual employees varies depending on type of work. The broken shifts clause only applies to home care employees and disability services workers, and the minimum engagement for each is 1 hour and 2 hours respectively.
123. Employees working broken shifts are commonly working shifts of short duration. One to 2 hours shifts are common. Employers frequently roster employees on shifts as short as 15 minutes (for tasks such as 'medication checks'). Employees are also commonly rostered on for telephone shifts of 5 minutes duration.

124. The lack of minimum engagement provisions for part-time employees within this Award (and the short minimum engagement periods for casual employees) exacerbates the impact of multiple broken shifts. This is explored further in the next section.
125. We note the HSU has a claim for a 3 hour minimum engagement period for all employees under this Award. We support this claim.

The disruptive effect of broken shifts

126. The interpretation by employers that clause 25.6(a) allows an unlimited number of broken shifts is disruptive to the lives of employees.
127. It provides employers with an extreme and unjustifiable degree of flexibility in rostering at the expense of the employee.
128. Witness evidence from Trish Stewart, Deon Fleming and Belinda Sinclair indicates that broken shifts are common within the sector. Stewart and Fleming commonly work broken shifts, whilst Sinclair sometimes worked broken shifts until around mid-2018.[40]
129. Employees are expected to be available for a long span of hours across the day if they want a reasonable number of hours of work. Our witness Trish Stewart states: '*The way that these appointments are broken up across my day requires me to be available for 12-13 hours during the day, but I will only be paid for 4-5 hours of work.*'[41]
130. This is also an issue for Deon Fleming, who states '*The broken shifts which spread across the day mean I am effectively working the entire day. I may only be paid for 4-5 hours.*'[42]
131. This creates difficulties for employees who have caring responsibilities, who may struggle to find appropriate care arrangements for intermittent work over a long span of hours.
132. This also requires employees to forego making other plans. This may include foregoing spending time with and caring for children or grandchildren, foregoing time with friends and family and foregoing time spent on personal interests. The evidence of Trish Stewart indicates that she foregoes time that could be spent with grandchildren in order to be available for lengthy broken shifts.[43]
133. This may also include foregoing other work opportunities –which can be critical to earning enough income, given the low wages and levels of underemployment within this sector. Both Stewart and Fleming both give evidence that obtaining secondary employment is difficult, given that they are required to be available upwards of 12 hours per day.[44]
134. For some employees working broken shifts, the cost of being available for work can sometimes be greater than the income derived from the work.

---

40 Stewart at [13], Fleming at [18]-[20], Sinclair at [12].
41 Stewart at [16].
42 Fleming at [23].
43 Stewart at [19].
44 Stewart at [18] and Fleming at [24].

135. The importance of minimum engagement provisions in ensuring that employees are provided with an adequate amount of compensation for the cost of each attendance in the workplace was considered in the Decision on Casual employment and Part-time employment dated 5 July 2017[45] ('the July Decision'):

> *[399] Minimum engagement periods in awards have developed in an ad hoc fashion rather than having any clear founding in a set of general principles. However their fundamental rationale has essentially been to ensure that the employee receives a sufficient amount of work, and income, for each attendance at the workplace to justify the expense and inconvenience associated with that attendance by way of transport time and cost, work clothing expenses, childcare expenses and the like. An employment arrangement may become exploitative if the income provided for the employee's labour is, because of very short engagement periods, rendered negligible by the time and cost required to attend the employment. Minimum engagement periods are also important in respect of the incentives for persons to enter the labour market to take advantage of casual and part-time employment opportunities (and thus engage the consideration in paragraph (c) of the modern awards objective in s.134).*

136. The manner in which broken shifts are rostered within this sector, alongside the lack of minimum engagement provisions for part-time employees (and the short minimum engagement periods for casual employees), result in what can be properly classified as an exploitative employment arrangement.

137. This is particularly so when considering that employees in home care and disability support are predominately women on low wages.

138. The number of broken shifts that can be worked within any one day should be limited.

139. Traditionally, broken shifts have consisted of a shift that is split into two parts. This is explicitly stated in some awards:

Modern Award	**Clause**
Security Services Industry Award 2010	***15.6 Broken shift allowance*** A broken shift allowance is payable to an employee who is required to work a rostered shift in two periods of duty (excluding crib breaks).
Children's Services Award 2010	***15.1 Broken shift allowance*** Where an employee works two separate shifts in a day, they will be paid an allowance of 1.91% of the standard rate per day for each day on which a broken

[45] [2017] FWCFB 3541.

	shift is worked.
Cleaning Services Award 2010	***17.1 Broken shift allowance*** An employee who works a broken shift will be paid an allowance of 0.458% of the standard rate per day up to a maximum of 2.29% of the standard rate per week. For the purposes of this award a broken shift is a shift where an employee works in two separate periods of duty on any day within a maximum spread of thirteen 13 hours and where the break between periods exceeds one hour.

140. The wording of clause 25.6(a) of this Award requires variation so that it is explicit that a broken shift can only be worked in two parts. United Voice proposes the following wording:

> '*For the purposes of this award a broken shift is a shift where an employee works in two separate periods of duty on any day within a maximum spread of twelve (12) hours and where the break between periods exceeds one hour*.'

141. This variation is in line with the modern awards objective, specifically:

- s 134(1)(a) – '*relative living standards and the needs of the low paid*' – Amending the Award to provide that a broken shift can only be worked in two parts would improve the living standards of low paid workers covered by this Award. Employers would have to properly roster shifts so that there would only be one break (excluding meal and rest breaks) at a maximum. This would reduce the ability of employers to avoid paying travel time and would reduce the occurrence of intermittent work in this sector. This variation would also likely reduce the need for employees to seek secondary employment, as more regular steady work would be available.
- s 134(1)(c) – '*the need to promote social inclusion through increased workforce participation'* – This amendment would result in improved conditions for part-time and casual employees under this Award, and would encourage employees staying in employment in this sector.

Broken shift allowance

142. Clause 25.6(b) of the Award states:

> *(b) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shift work, with shift allowances being determined by the finishing time of the broken shift.*

143. Under the Award, the shift allowance applicable to a broken shift is determined by the finishing time of the broken shift.

144. Clause 29.2 contains the shift definitions under this award and clause 29.3 contains the penalties.

145. Clause 29.2 Definitions states:

> *(a)* ***Afternoon shift*** *means any shift which finishes after 8.00 pm and at or before 12 midnight Monday to Friday.*
>
> *(b)* ***Night shift*** *means any shift which finishes after 12 midnight or commences before 6.00 am Monday to Friday.*
>
> *(c) A* ***public holiday shift*** *means any time worked between midnight on the night prior to the public holiday and midnight of the public holiday.*

146. Clause 29.3 Shift allowances and penalty rates states:

> *(a) An employee who works an afternoon shift will be paid a loading of 12.5% of their ordinary rate of pay for the whole of such shift.*
>
> *(b) An employee who works a night shift will be paid a loading of 15% of their ordinary rate of pay for the whole of such shift.*
>
> *(c) An employee who works a public holiday shift will be paid a loading of 150% of their ordinary rate of pay for that part of such shift which is on the public holiday.*

147. Under the Award, an employee who commenced a broken shift at 5am and finished at 3pm would not receive any shift loadings.

148. This creates an anomaly, in that whilst an employee who was working a continuous shift would rightfully receive the night shift penalty of 15% of their ordinary rate of pay for the whole of the shift, an employee working a broken shift receives no shift loading for the whole of the shift.

149. The Award in this respect is inconsistent with the modern award objectives in that for employees working broken shifts, the Award does not provide adequate '*additional remuneration for employees working shifts*' (s134 (1)(da)(iv) of the Act).

150. United Voice has proposed the following variation:

> *25.6(b) Payment for a broken shift will be at ordinary pay with penalty rates and shift allowances in accordance with clause 29—Shiftwork, with shift allowances being determined by the starting or finishing time of the broken shift, whichever is the greatest.*

151. This is an appropriate variation that will ensure that employees who undertake shift work are appropriately remunerated for the disutility of working early or late hours.

S51 –Variation to Overtime clause

152. We support the HSU in their claim to vary clause 28 to ensure all time worked beyond rostered hours is paid at overtime rates. Otherwise we do not make further submissions on that matter.
153. We withdraw our claim to amend clause 28.1(b) (iii) to make overtime payable after 8 hours instead of 10 hours.
154. We maintain our claim to amend clause 28.1(b) (iv) to ensure casual employees are paid the casual loading when working overtime.
155. Clause 28.1(b)(iv) of the Award states:

> *(iv) Overtime rates payable under this clause will be in substitution for and not cumulative upon:*
> *(A) the shift premiums prescribed in clause 29—Shiftwork; and*
> *(B) the casual loading prescribed in clause 10.4(b),*
> *and are not applicable to ordinary hours worked on a Saturday or a Sunday.*

156. Our proposed amendment is as follows:

> *(iv) Overtime rates payable under this clause will be in substitution for and not cumulative upon the shift premiums prescribed in clause 29—Shiftwork and are not applicable to ordinary hours worked on a Saturday or a Sunday.*

157. In the decision of 23 February 2017, *4 yearly review of modern awards – Penalty Rates* [2017] FWCFB 1001 ('the Penalty Rates Decision'), the Commission made repeated reference to the views of the Productivity Commission concerning the interaction of penalty rates and the casual loading. At paragraph 333 of the Penalty Rates Decision, the Commission noted that the Productivity Commission in its Final Report observed:

> *In some awards, penalty rates for casual employees fail to take into account the casual loading, which distorts the relative wage cost of casuals over permanent employees on weekends (and particularly Sundays). The wage regulator should reassess casual penalty rates on weekends, with the goal of delivering full cost neutrality between permanent and casual rates on weekends, unless clearly adverse outcomes can be demonstrated. This would imply that casual penalty rates on weekends would be the sum of the casual loading and the penalty rates applying to permanent employees.*

158. The Productivity Commission described a '*default approach*' where:

> *… the casual loading is always set as a percentage of the ordinary/base wage (and not the ordinary wage plus the penalty rate). The rate of pay for a casual employee is therefore always 25 percentage points above the rate of pay for non-casual employees.*[46]

[46] The Decision, paragragh [335].

159. At paragraph 337 of the Penalty Rates Decision, the Commission indicated a preference for the default approach as:

> *… the casual loading is paid to compensate casual employees for the nature of their employment and the fact that they do not receive the range of entitlements provided to full-time and part-time employees, such as annual leave, personal/carer's leave, notice of termination and redundancy benefits.*

160. The Commission further observed that the default approach is consistent with consideration 134(1) (g) of the modern award objective which requires that modern awards are '*simple, easy to understand, stable and* [provide a] *sustainable system for Australia that avoids unnecessary overlap of modern awards'*.[47] This consideration most clearly identifies consistency in the treatment of terms and conditions across all modern awards as *prima facie* an element of the modern award objective.

161. While the Commission did not make any specific reference to consideration 134(1) (da) (iii) which deals with the need to provide additional remuneration for employees working unsocial hours, United Voice contends that the insertion of this consideration into the modern award objective in January 2013 also provides support for the casual loading being an additional amount paid when any penalty or loading applies to work at an unsocial time. Subsuming the casual loading into other penalties and loadings also means that a casual employee is not compensated for disutility determined to apply for the hours worked.

162. The Commission in the Penalty Rates Decision stated a preference for the default approach generally whenever it reduced or altered rates in relation to the modern awards the subject to the review. Examples of specific applications of this approach are found in the general consideration of weekend penalty rates for casuals;[48] in the Commission's proposed reductions in the Sunday rate in the *Hospitality Industry (General) Award* 2010 ('Hospitality Award'), [49] in the Commission's proposed reductions in the public holiday rate in the Hospitality Award, *Restaurant Industry Award* 2010, *General Retail Industry Award* 2010 ('Retail Award'), *Fast Food Industry Award* 2010 ('Fast Food Award) and *Pharmacy Industry Award* 2010 ('Pharmacy Award') (it was not applied to the Registered and Licensed Clubs Awards 2010 as the rates in this award were not altered);[50] in effect in the proposed reductions in the Saturday and Sunday rate for casuals under the Fast Food Award;[51] in the Commission's proposed reductions in the Sunday rate in the Retail Award;[52] and for the proposed reductions in the Sunday rate in the Pharmacy Award.[53] The principle can be said to be one of general

53 As above [1878] to [1884].

application within the modern award system unless there is some cogent industry or sector specific reason for it not to be applied here. The reliance by the Commission on consideration 134(1) (g) of the modern award objective as justification for its adoption is significant.

163. Accordingly, the preferred position in relation to the treatment of the casual loading is that it should be disaggregated from penalties and loadings generally. This is not the case in the Award and United Voice urges the Commission to ensure that the Award is consistent with current preferred practice in relation to the treatment of the casual loading.

S57 –Variation to Public Holiday clause

164. Section 114 of the *Fair Work Act 2009* ('the Act') provides that an employee is entitled to be absent from their employment on a public holiday.

165. Section 116 of the Act states that an employee absent from their employment on a public holiday must be paid their base rate of pay for the employee's ordinary hours of work.

166. There are some employers who are altering the rosters of part-time employees to avoid the payment of public holiday rates.

167. Clause 34.2 of the Award should be amended with the addition of clause 34.2(c) as follows:

34.2(c) Rosters must not be altered for the purpose of avoiding public holiday entitlements under this Award and the NES.

168. This amendment will assist in ensuring that employees do not have their rosters altered by the employer to avoid the payment of public holiday entitlements.

169. This variation is in line with the modern awards objective, primarily in ensuring that the Award is '*fair and relevant*' and provides that part-time employees do not receive less pay than they are entitled to.

IN THE FAIR WORK COMMISSION

Matter No: 2018/26

Section 156 - Four Yearly Review of Modern Awards – *Social, Community, Home Care and Disability Services Industry Award 2010*

SUPPLEMENTARY SUBMISSION OF UNITED VOICE

1. This submission supplements our submission filed on 15 February 2019 ('*the submission'*) in the review of the *Social, Community, Home Care and Disability Services Industry Award 2010* ('*the SCHDS Award'*). In the submission, we reserved our right to pursue withdrawn claims if the document referred to as '*the Joint Report'* was not endorsed by the Commission.
2. It is apparent that the Joint Report no longer has the support of significant interested parties and as such we intend to pursue our claim for travel time, which is identified as *Item 2 – Travel time* in the revised summary of proposed substantive variations republished on 22 November 2017.
3. We file the following statements in support of our claim:
    - Supplementary statement of Deon Fleming dated 28 March 2019.
    - Supplementary statement of Trish Stewart dated 1 April 2019 (collectively including earlier statement evidence filed: 'the evidence').
4. It is apparent from the evidence of our witnesses that the non-payment of travel time is a significant issue for employees within the sector covered by the Award. Home care workers and some disability services workers spend the majority of their working time at the homes of different persons in need of care and assistance. These workers do not have a '*workplace*' in the traditional sense of an office or a depot in which they commence and finish duties. It is rare that these workers would work in their employer's head office for any length of time, although they may attend on occasion for induction, training and related purposes. Rather, these workers commonly travel from their own home to the home of their first client, and then to the next client, and so on throughout the working day. This time spent travelling between the homes of clients is essential to perform the duties of the job, and should be paid and considered as time worked.

5. Our witnesses Trish Stewart and Deon Fleming provide evidence that travel between client homes is an essential part of their jobs as home care workers.[1] Both travel by car between shifts, are required to have a driver's licence as a requirement of their role.[2]
6. Both witnesses were previously paid travel time when employed by Excelcare. However, once Excelcare was taken over by LiveBetter in around July 2017, they no longer received travel time.[3]
7. The non-payment of travel time is significant. Witness Trish Stewart states that she '*can spend up to 1-2 hours accumulatively during a working day travelling between appointments. This is time that I used to be paid for and now I miss out on that pay. It has been a significant paycut for me*.'[4] Witness Deon Fleming states '*I have lost roughly up to 4-5 hours of pay per week.*'[5]
8. Our claim for travel time is interrelated to our claim *S37 –Variation to Broken shifts clause*, which is intended to address the use of unlimited broken shifts within this sector. We refer to and rely upon paragraphs 111 to 141 of the submission.
9. The combination of the non-payment of travel time, the unrestricted use of broken shifts, and the lack of minimum engagement provisions do not provide a fair and relevant minimum safety net of terms and conditions. The current terms and conditions of the Award lend themselves to inappropriate and unsustainable work patterns. There is little or no incentive for employers in what is an increasingly competitive and diverse sector to structure work efficiently. The cost of poor rostering decisions and the taking on work which is geographically remote or at different times of the day are able to be shifted onto employees. This is inappropriate and inefficient.
10. We seek that the Award is varied in the terms of the attached draft determination.
11. This variation is in line with the modern awards objectives, specifically:
    - s 134(1)(a) – '*relative living standards and the needs of the low paid*' – The SCHDS Award cannot be said to be '*fair and relevant*' when low paid award reliant employees are not paid for time that they are required to travel in the course of their duties. Varying the SCHDS Award to clarify that travel time must be paid will address this and ensure that employees are paid for all time worked.
    - s 134(1)(c) – '*the need to promote social inclusion through increased workforce participation*' – Intermittent broken shifts, unpaid travel time and no minimum engagement have created a situation in which part time employees covered by the

[1] Supplementary Statement of Trish Stewart dated 1 April 2019, paragraph 4, supplementary statement of Deon Fleming dated 28 March 2019, paragraph 7.
[2] Supplementary Statement of Trish Stewart, paragraph 5, supplementary statement of Fleming, paragraph 8.
[3] Supplementary Statement of Trish Stewart, paragraph 6-7, supplementary statement of Fleming, paragraph 6.
[4] Supplementary Statement of Trish Stewart, paragraph 9.
[5] Supplementary statement of Deon Fleming, paragraph 6.

SCHDS Award are required to be available to work across long periods of the day to undertake paid work. Part time workers covered by the Award will have '*dead time*' during the day will precludes them from undertaking other work or participating in family or social activities. There are also negative impacts on the ability of employees to manage their caring responsibilities and outside of work commitments. The current terms and conditions of the Award promote social exclusion rather than social inclusion.

United Voice
1 April 2019

IN THE FAIR WORK COMMISSION

Matter No: 2018/26

Section 156 - Four Yearly Review of Modern Awards – *Social, Community, Home Care and Disability Services Industry Award 2010* – Substantive review

SUBMISSION IN REPLY OF UNITED VOICE

1. This submission is made in accordance with the amended directions of the Fair Work Commission ('the Commission') dated 11 July 2019, and is made in reply to the claims made by Australian Business Industrial ('ABI'), the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia to vary the *Social, Community, Home Care and Disability Services Industry Award 2010* ('the Award') as set out in their draft determination filed on 2 April 2019. ABI, the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia will be collectively referred to as the '*ABI and others*' within this submission.

Ordinary hours of work claim

2. ABI and others seek to vary clause 25.1 to amend the manner in which ordinary hours can be worked. In their submission, dated 2 July 2019, ABI and others claim this is a minor technical change rather than a substantive one.[1] We oppose this variation as it will have a substantive detrimental effect on employees covered by the Award.
3. The Award currently permits ordinary hours to be worked in one of three distinct ways:
   (i) in a week of five days in shifts not exceeding eight hours each;
   (ii) in a fortnight of 76 hours in 10 shifts not exceeding eight hours each; or
   (iii) in a four week period of 152 hours to be worked as 19 shifts of eight hours each, subject to practicality.
4. The variation sought by ABI and others removes these restrictions and provides employers with greater discretion to allocate ordinary hours provided there is an average of 38 hours ordinary hours across a 4 week period.
5. This will be detrimental for full time employees covered by this Award, especially if the averaging facility is used. Under the current Award, an employer may only roster an employee across a 4 week period where the employee receives a rostered day off ('RDO') as the '*benefit*' for having a 4 week roster. If the variation sought by the employer parties was

[1] Submission of ABI and others dated 2 July 2019, paragraph 4.9.

made, employees could be required to have hours averaged over 4 weeks without receiving a RDO.

6. National Disability Services ('NDS') submit that the current Award clause prevents other arrangements from being mutually agreed.[2] The Award already permits an employer and an employee to mutually agree to specific arrangements for when work is performed under clause 7.1(a) which deals with individual flexibility agreements. Such agreements can only be made on the basis that agreement results in the employee being better off overall at the time the agreement is made than if the agreement had not been made.[3]
7. No evidence has been filed by ABI and others in support of this variation. There is no evidence that the current clause is ineffective or unworkable.
8. The variation sought is unnecessary, contrary to the modern awards objective and should be rejected.

'*Period of work'*

9. Clause 25.4(a) specifies that an employee must be provided with a break of not less than 10 hours between the end of one shift or period of work and the start of another. ABI and others seek to vary clause 25.4(a) to delete the words '*period of work*'. We oppose this variation.
10. ABI and others claim that this is a minor technical change, and will not have any substantive effect.[4] United Voice has concerns that deleting the words '*period of work*' may have unintended consequences.
11. The term '*period of work*' has relevance within this Award, as there are several circumstances in which an employee may be engaged in a '*period of work*' that may not be recognised as part of a shift. These periods of work are:
    (a) team meeting;
    (b) 24 hour care engagements; and
    (c) excursions.
12. For example, clause 25.8 which deals with 24 hour care requires an employee to be at a client's home for a 24 hour period, but states that the employee is required to provide a total of no more than 8 hours of care during this period. United Voice has previously made submissions as to why the whole period is properly considered work, and why this clause should be deleted, but as it currently stands, there is a possibility that some part of the shift may not be considered '*work*'. The removal of the term '*period of work*' from clause 25.4(a) could result in some employees under the Award not receiving sufficient breaks in between such shifts.

---

2 NDS Submission dated 2 July 2019, paragraph 6.
3 Clause 7.5.
4 Submission of ABI and others dated 2 July 2019, paragraph 4.10.

Change of roster

13. Clause 25.5(d)(i) of the Award requires an employer to give seven days' notice of a roster change, however subclause (ii) provides that the roster may be altered at any time to enable the service of the organisation to be carried on where another employee is absent from duty on account of illness, or in an emergency. ABI and others seek to vary clause 25.5(d)(ii) to extend the circumstances in which an exception to the 7 days' notice of roster applies, to include when another employee is absent due to '*compassionate leave, community service leave, ceremonial leave, leave to deal with family and domestic violence.'*
14. United Voice opposes this variation.
15. The current exception in the Award is limited, and only applies where another employee is absent due to '*illness, or in an emergency'*. Despite this limitation, employees covered by the Award experience a high level of change in their rosters without the payment of any overtime
16. United Voice witness Ms Belinda Sinclair, a home care worker with Wesley Mission states: '*My employer is constantly making changes to my roster and these changes make it difficult for me to plan things for when I am not rostered or to make a weekly budget, despite that I am a permanent employee, not a casual*.'[5] Similarly, witness Trish Stewart states: '*At least once per week, my roster will be altered as a result of either another support worker who has called in sick or a client cancelling their appointment. If a client cancels their appointment before 5pm the day before their scheduled appointment then I do not get paid for the shift. If they cancel after 5pm the day before, then I will get paid. This means that I can never be certain of the amount of hours I am going to receive and how much I will be paid each week.'*[6]
17. Increasing the circumstances in which rosters can be changed without notice will increase the level of uncertainty and unpredictability for employees in this sector.
18. There is no evidence that this change is necessary. Clause 25.5(d)(ii) is not the only exception to the requirement that seven days' notice of a change of roster be given. Subclause (iii) also provides that the seven days' notice does not apply '*where the only change to the roster of a part-time employee is the mutually agreed addition of extra hours to be worked such that the part-time employee still has four rostered days off in that fortnight or eight rostered days off in a 28 day roster cycle, as the case may be*.'
19. There is evidence that indicates that there is a high level of under-employment in this sector, and that employees willingly agree to work additional hours. Ms Sinclair gives evidence that: '*I agree to changes in my roster because I need the hours and am concerned that if I*

5 Witness statement of Belinda Sinclair dated 16 January 2019, paragraph 25.
6 Witness statement of Trish Stewart dated 17 January 2019, paragraph 10.

complain or don't accept additional hours, I will be rostered less. This is not an accusation against my employer but my concern. I have a tight budget and cannot afford to lose hours.'[7]

20. Ms Stewart states: '*Most weeks I would like to pick up more hours because I do not receive enough hours to cover my weekly expenses. My managers normally ask me to cover a shift at short notice if a colleague has taken sick leave. I will normally accept these hours if I am available because I need to accept all of the hours I am offered to make enough money.'*[8]
21. In a similar manner, Ms Deon Fleming states: *'At least once per fortnight my manager will ask me if I can take on extra work because a colleague has called in sick. If I am available, I will take these extra shifts because I want to work more hours.'* [9]
22. Research also supports the existence of underemployment within the sectors covered by this Award. The NDS State of the Disability Sector Report 2017 stated that '*Underemployment in health care and social assistance is among the highest of any industry at nearly 11 per cent. Average hours worked for disability support workers is 21 hours per week and 24 hours per week for allied health professionals*.'[10]
23. The Joint Standing Committee on the National Disability Insurance Scheme Report on '*Market readiness for provision of services under the NDIS'* released in September 2018 expressed concerns about the lack of incentives to choose a career in the disability support sector, finding:

> '*Submitters who have worked for a very long time in the sector described how working conditions have dramatically deteriorated under the NDIS. In short, they reported a rise in underemployment and insecure work arrangements, inadequate wages and no prospect of professional development opportunities. Under these conditions, it is hard to imagine how to retain highly experienced and qualified workers and attract new workers, including young people entering the workforce*.'[11]

24. With respect to home care, the Department of Health Aged Care Workforce, 2016 report found that 40% of home care and home support workers were seeking more hours.[12]
25. Similarly, the Future of Employment and Skills research centre report titled 'Attraction, Retention and Utilisation of the Aged Care Workforce' released in April 2018 identified that

11 Joint Standing Committee on the National Disability Insurance Scheme, 'Market readiness for provision of services under the NDIS', September 2018, paragraph 3.96 available at https://www.aph.gov.au/Parliamentary_Business/Committees/Joint/National_Disability_Insurance_Scheme/MarketReadiness/~/media/Committees/ndis_ctte/MarketReadiness/report.pdf

12 Department of Health, 'The Aged Care Workforce 2016 report', released March 2017, page 86, available at https://www.gen-agedcaredata.gov.au/www_aihwgen/media/Workforce/The-Aged-Care-Workforce-2016.pdf

whilst low pay was the dominant concern for workers, in addition: '*concerns were raised regarding irregular and split shift patterns, insufficient and variable working hours, and casual employment contracts*.'[13]

26. Given the high levels of underemployment, and the evidence that employees are regularly agreeing to additional shifts, there is no justification for further exceptions to the requirement to provide 7 days' notice of a roster change.
27. The following modern awards objectives are relevant:
    - s134(1)(a) *relative living standards and the needs of the low paid* – a significant number of employees covered under this Award are low paid. The proposed variation would increase the insecurity of working hours, with a corresponding increase in stress and uncertainty for employees. This would be detrimental to the living standards of the low paid employees covered by this Award.
    - s134(1)(da)(ii) *the need to provide additional remuneration for employees working unsocial, irregular or unpredictable hours* – Enabling a roster to be altered at any time in certain circumstances results in employees working unpredictable hours. The current clause 25.5(d)(ii) already permits an employer to vary the roster at any time in certain circumstances without any corresponding penalty or benefit. Expanding the circumstances in which the roster can be varied at any time will increase the incidence of employees under this Award working unpredictable hours without any additional remuneration.
28. The variation sought by ABI and others should be rejected.

Client cancellation

29. Clause 25.5(f) of the Award currently only applies to home care workers. The clause permits an employer to withhold payment of rostered work for an employee where the client cancels or changes the rostered shift, and the employee is provided with notice or a change in roster occurs, by 5pm the day prior. As an alternative to withholding payment, the employer may direct the employee to make-up time equivalent to the cancelled time, in the current roster or the subsequent fortnightly period.
30. ABI and others seek to extend the client cancellation clause to disability support workers. ABI and others also seek to amend the client cancellation clause to delete the provision enabling an employer to withhold payment, but enable make up time to be worked within 3 months

[13] Future of Employment and Skills research centre, 'Attraction, Retention and Utilisation of the Aged Care Workforce', April 2018, page 15 available at https://agedcare.health.gov.au/sites/default/files/documents/09_2018/retention_and_utilisation_of_the_aged_care_workforce_uni.of_adelaide_-_20.4.18.pdf

rather than within the next fortnightly period. Unlike the current clause, the proposed variation does not require that the employee is notified by any particular time.

Home care workers

31. For home care workers, the current client cancellation clause creates instability and uncertainty. Employees can lose a shift provided they are notified by 5pm the day before. The weekly income of the employee can be quite different to what was expected, and this creates difficulties in planning and managing income.
32. All three United Voice member witnesses identify that the uncertainty caused by client cancellation has a significant impact on their weekly income.[14] Ms Fleming's evidence is indicative:

> '*If clients cancel on the same day of their appointment, then I am paid for the shift. But if a client cancels a home care visit before 5pm the day before the scheduled appointment, then I am not paid for that appointment and these are hours I miss out on. At least once per week, I will have a client cancel their appointment with the required notice. This creates a lot of uncertainty for me in being able to anticipate how much I will get paid in the week*.' [15]

33. The current client cancellation clause unjustly shifts the burden of client cancellation from the provider to the employee. This cost properly should be principally borne by the employer rather than their low paid employees. Providers have greater capacity to absorb the risks and costs of variable client demand and mitigate those risks and costs. The employer as the provider of the service has some control over the terms and conditions of service provision and the organisation of the work. It is dysfunctional to perpetuate a term within a modern award that in effect shifts the cost of events that can be in part characterised as the product of poor management onto low income employees.
34. Our primary position is that there should be no client cancellation clause in the Award.
35. If there is to be a client cancellation clause for home care workers in the Award, ABI and others' proposal to extend the period in which make-up time may be worked to three months could create logistical difficulties. Given that roster variation occurs with some frequency in the home care sector, it may be difficult for employees to keep track of make-up hours over three monthly periods and to identify if they have been correctly paid.
36. ABI and others' proposed clause also does not provide a '*cut off*' time at which the employee must be notified. Home care is generally provided under the terms of a Home Care Agreement, with the terms of service set out and negotiated between the home care provider

[14] See witness statement of Trish Stewart, paragraph 10, witness statement of Belinda Sinclair, paragraph 25 and witness statement of Deon Fleming, paragraph 16.
[15] Witness statement of Deon Fleming, paragraph 16.

and the consumer. In general, a consumer must provide a set amount of notice of a cancelled service in accordance with the terms of their Home Care Agreement; otherwise they must pay a cancellation fee. Any client cancellation clause should retain a cut-off point by which the employee must be notified. Without a time frame for cancellations, an employee's shift could be '*cancelled'* as he or she completes travel at their own expense to the client's home and is just about to knock on the client's door.

37. The proposed clause does have a beneficial effect in that it would provide employees with a more stable and secure income as the employer would either have to pay the employee for the shift or may '*deploy*' the employee to another shift rather than withhold payment altogether. In this respect, this clause is an improvement on the current client cancellation clause.
38. United Voice supports the variation ABI and others seek in respect of home care workers *provided* that:
    - There is a set time by which the employee must be notified of the cancelled shift. If the employee is notified by that timeframe, then the employer could require the employee to work make up time. If the employee is not notified by that timeframe, then the employee should be paid for the shift as rostered (and cannot be required to work make up time). The current standard of 5pm the day prior should be the starting point.
    - Clause 25.5(f)(v) is amended to reference clause 25.5(f)(iv)(A) instead of (B). It is unclear if this is a drafting error. As currently drafted clause 25.5(f)(v) states that the make-up time arrangement *cannot* be utilised where the employee is notified of a cancelled shift after arriving at the relevant place of work to perform the shift, and states that clause 25.5(f)(iv)(B) applies instead, which itself refers back to the make-up time arrangement.
    - There is greater clarity around when the '*make-up time'* must be paid. Where an employee is required to work make-up time, they should be paid for as if the shift was not cancelled. We would support a form of words as follows:

      (vii) Where 25.5(f)(iv)(B) applies the employee will receive payment for the cancelled service as if they had worked it (including any applicable penalties or loadings).

      (viii) Where the applicable rate of pay for working the make-up time is higher than the rate of pay the employee received for the cancelled service under 25.5(f)(vii) the employee will be paid the difference between the two rates of pay.
    - The time within which make-up may be worked should not be three months. Three months is an excessive length of time. The three month time frame will allow larger balances of make-up time to accrue and also greater deficits in remuneration for work

performed when make-up time is worked. The current Award clause requires that make-up time must be worked in '*that, or the subsequent fortnightly period*'. We propose that the time in which make up can be worked is extended to only the next *two* fortnightly periods *i.e*. a month. This extension should enable employers to find an appropriate make-up shift for the employee, whilst not being so long to lose the nexus between the paid shift and the make-up time shift.

- Under the current award provision concerning make-up time, it is likely that if the employer does not direct the employee to work any balance within the fortnight, the right of the employer to direct the employee to perform work as make up time lapses. A clear provisions that this is in fact the case, is necessary and particularly if the Commission is considering longer durations for the accumulation of make-up time.

39. United Voice would not support extending the period in which make up time can be worked where the employer retains the ability to withhold payment of wages to an employee when a client cancels. Such a clause would extend the detriment suffered by employees under the current client cancellation clause without any corresponding benefit. In this respect, it is notable that whilst a significant number of employees covered under this Award are low paid, home care workers have the lowest rates of pay under this Award, and s134(1)(a) '*the relative living standards and the needs of the low paid*' is a relevant consideration. The current combination of low pay and insecure working conditions creates significant uncertainty for low paid employees in home care. Extending the period for client cancellation make up time, without any benefit, would increase the level of insecurity experienced by such employees.

Disability support workers

40. United Voice does not support extending the client cancellation clause to disability support workers. Extending this to disability support workers will create greater instability for the disability workforce. As referred to above, there is already increasing levels of '*insecure work arrangements'* in the disability sector[16], and award changes that increase further insecurity are not warranted.
41. There is no cogent reason to extend the client cancellation clause to disability sector workers. Disability sector work is now primarily funded via the National Disability Insurance Scheme (NDIS). The NDIS Price Guide sets out the amount that can be charged for a client cancellation, and the timeframe in which the cancellation must be made. Previous price guides contained restrictions on the amount of cancellations that could be claimed against a participant. The 2018-19 price guide (NSW/Vic/Qld/Tas) stated that if a participant made a short-notice cancellation (after 3pm the day before the service), then the provider could

[16] Joint Standing Committee on the National Disability Insurance Scheme, 'Market readiness for provision of services under the NDIS', paragraph 3.96.

charge up to 90% of the agreed price for the cancelled appointment.[17] The fee could be charged against the participant's plan up to 12 times per year for personal care and community access supports. For other cancellations, where the participant provided notice prior to 3pm the day before, providers were not able to charge a cancellation fee. The 2018-19 price guide for WA/SA/ACT/NT contained the same cancellation scheme.[18]

42. That cancellation scheme has been significantly altered in the 2019-20 Price Guide. Under the latest guide, where a provider has a short notice cancellation (or there is a '*no show'* on the part of the client) a provider is able to recover 90% of the fee, subject to the terms of the service agreement with the participant. There is no limit on the number of cancellations a provider can claim for.[19]
43. The definition of what is considered a short notice cancellation has also changed. Under the current NDIS Price Guide 2018-19, a short notice cancellation was defined as one that occurred after 3pm the day before the service.
44. Under the NDIS Price Guide 2019-20, a short notice cancellation is where the participant has given less than two clear business days' notice for a support where the support is for less than 8 hours duration and the cost of the service is less than $1000. Where the support is for a longer period or of a higher cost, a short notice cancellation is where the participant has given less than 5 clear business days' notice.
45. Under the NDIS Price Guide 2019-20 providers have greater ability to manage and claim for short notice cancellations than under previous guides.
46. Further, as is demonstrated by recent changes to the NDIS Price Guide, funding arrangements change and sometimes within short time frames.
47. The Commission should be principally guided by the extent to which any proposed variation is necessary to ensure a fair and relevant safety-net in accordance with the modern awards objectives and not by the funding scheme. Extending the client cancellation clause to disability support workers would not provide such workers with a '*fair and relevant*' safety net.
48. As stated above in paragraph [33], the client cancellation clause in home care unjustly shifts the burden of client cancellation from the provider to the employee. There is no reason to extend this unjust practice to disability support workers. Part time employment should be reasonably regular and consistent, and part time employees should be able to rely on a certain amount of hours of work, as agreed upon, and as notified on their roster. An Award clause

---

[18] The NDIS 2018-19 price guide (WA/SA/ACT/NT), page 18, available at https://www.ndis.gov.au/media/1156/download

[19] The NDIS 2019-20 Price guide, pages 18-19, available at https://www.ndis.gov.au/media/1455/download

enabling an employer to withhold payment for a rostered shift with minimal (or no) notice undermines the security of part time employment, and should not properly be part of a '*fair and relevant*' minimum set of employment conditions. Even if, as per ABI and others' proposed determination, the employer could not withhold the payment but rather require the employee to '*make up*' the hours within a three month period, this would still have the effect of increasing employment insecurity for disability support workers, and such a clause should not be inserted to a modern award that must provide a fair and relevant minimum safety net of terms and conditions.

Remote response

49. ABI and others have filed a draft determination to insert a clause addressing remote response duties. We do not oppose the insertion of a remote response clause, however we do not support the terms as proposed by ABI and others.
50. The variation proposed by ABI and others does not adequately distinguish between remote response work performed whilst on call, and remote response work performed ad hoc, and only requires payment at the applicable rate of pay for remote response work performed.
51. A distinction between remote response duties performed whilst on call, and not, is necessary. When an employee is not on call, an employee should be able to expect that they are free to go about their life without any intrusion from the workplace. This is particularly so when employees are award-reliant. Any remote response duties that the employer requires the employee to perform when they are not on call should be costed at a higher rate. This would encourage an employer to roster effectively, and ensure that an appropriate employee is available '*on call*' to address issues that may arise. Placing a higher cost on remote response work performed by employees not on call also provides some compensation for the greater disutility associated with the work.
52. Remote response duties are performed outside of rostered hours, and should be paid at overtime rates. If remote response duties are not costed effectively, this could result in some employers requiring employees to work multiple instances of remote response across a long period of time, effectively disrupting any rest break the employee is entitled to between shifts.
53. ABI and others' proposed variation also explicitly excludes '*administrative duties*' from the ambit of remote response. We oppose this exclusion. If the employer directs or authorises an employee to perform administrative duties outside of ordinary hours, then there is no reason why such duties should not be paid for under this clause.
54. The variations ABI and others propose to the on call allowance (clause 20.9) and the recall to work overtime clause (clause 28.4) are consequential to the insertion of their remote response clause. If an appropriate remote response clause was to be inserted into the Award, that upheld a distinction between remote response duties performed whilst on call and not, and

provided for overtime rates for remote response work, we would not oppose the relevant consequential amendments.

IN THE FAIR WORK COMMISSION

Matter No: 2018/26

Section 156 - Four Yearly Review of Modern Awards – *Social, Community, Home Care and Disability Services Industry Award 2010*

SUBMISSION OF UNITED VOICE

1. This submission is made pursuant to the Directions of the Fair Work Commission ('the Commission') made on 1 May 2017 requiring any '*interested party*' to provide their comments in respect of several matters in the 4 yearly review of the *Social, Community, Home Care and Disability Services Industry Award* 2010 ('the Award').
2. United Voice makes this submission in respect of matter F. *'Part-time employment and casual employment Full Bench (AM2014/196 and AM2014/197)*'.
3. In the Directions, the Commission stated '*in the Part-time employment and casual employment decision the Full Bench described the operation of the NDIS at paragraphs [554] and [630] – [633]. Do the parties take issue with any of the observations made at those paragraphs? Is there any more up to date information?*'
4. The relevant paragraphs of the Part-time employment and casual employment decision[1] ('the Decision') are reproduced below:

> ***[554]*** *The NDIS, broadly speaking, funds persons with disability directly, rather than via disability services organisations, and thereby allows persons with disability and their carers to purchase the support services they need in accordance with individualised NDIS plans. This has meant that persons with disability are able to exercise a far greater level of choice and control over how, when, where and by whom their disability support services are delivered. ABI contends that the NDIS is radically changing the disability support services sector, in that employers have lost a large degree of control over when work is required to be performed, and accordingly require much greater flexibility in the allocation of working hours to part-time employees so that they can operate in a way which is responsive to client demand. Absent such flexibility, ABI contends that there is a substantial risk that the workforce in the sector, which will need to expand significantly in order to meet the demand for individualised services generated by the NDIS, will become casualised. The ABI claim was supported by Jobs Australia,*

[1] [2017] FWCFB 3541.

which is a national peak body of non-profit organisations that assist disadvantaged people into work.

5.14 Consideration – the ABI/NSWBC claim

Findings re the operation of the NDIS

[630] *We have earlier briefly described the concept of the NDIS. Participants in the scheme (and their carers) are required to prepare a NDIS plan in conjunction with the National Disability Insurance Agency (NDIA) which, in an itemised way, sets out their support needs and the way in which these support needs are to be met. Supports may be fixed – that is, regularly required at a fixed time each day or week – or be flexible, which means the participant has scope to rearrange the supports to suit themselves within the overall budget. In the early trial phase, these plans were prepared in a highly prescriptive format, but by the time of hearing they had become far less so. An example plan that was provided to us 466 set out the basic details of the participant and his/her immediate support persons and lifestyle, the participant's goals for the plan, and the supports to be provided. The supports were identified under the headings of transport to access daily activities; assistance with daily life at home and in the community, education and at work; supported independent living; improved daily skills; assistive technology; improved living arrangements; and improved life funding. Specific supports were identified in the example plan under each heading, and an annual budget (for the period 15 June 2016 to 14 June 2017) set out for each support item. For some items, a maximum number of hours of a particular service per week or per year were specified. The example plan required each identified support to be purchased as described, and prohibited swaps from one item to another. The items in the plans are budgeted for in accordance with a "NDIS Price Guide" issued by the NDIA. In pricing items, the NDIA has been aggressive in trying to set the absolute minimal cost so as to control the cost to government of the NDIS as a whole. Labour costs are calculated by reference to the SCHCDSI Award.*

[631] *Once the plan is prepared, the majority of participants who are self-managed (as distinct from having their plans managed by a support agency) may then "buy" the services budgeted for in the plan from providers which are registered with the NDIA (although the actual payment is made by the NDIA to the provider in accordance with the plan and the NDIS Price Guide). There is no obligation to obtain all the services in a plan from a single provider, so a participant may have*

multiple service providers. The participant, once he or she has chosen the provider of a specific service, will then enter into a service agreement with the provider. We were provided with an example of a service agreement [467], which included the following provisions of significance:

- *the provider was required to "Work with you the Participant to provide supports that suit your needs and at the times preferred by you" (underline added) and to "Consult with you regarding decisions about how your supports are provided";*
- *the participant was required to keep the provider "informed of any changes to my support need which may impact on the supports they provide";*
- *in relation to payment for the services provided, "The NDIA sets the prices to be claimed for each support item and [the provider] may choose to accept or decline the provision of certain support items if the price set does not cover business operating costs";*
- *in relation to variations to the participant's plan, "The Participant and/or their Plan nominee is responsible for informing [the provider] when their NDIA Plan has been reviewed and/or modified in any way ... [the provider] requires this information so your Service Agreement can be reviewed and modified to ensure it reflects the most current supports you require [the provider]to provide";*
- *the participant was requested to inform the provider at the time of developing or reviewing the Service Agreement if they intended using multiple service providers "to ensure that sufficient support hours and funds are available as per the Service Agreement" and "Failure to provide this information may result in over-use of certain supports and impact on [the provider's] ability to claim for supports provided";*
- *in relation to cancellations of supports by the participant, "We understand that situations may occur that mean participants need to change or cancel support. When this happens, it is appreciated if participants provide at least 24 hours notice to reduce any impact on business... Should the Participant not provide 48 hours notice of his or her inability to participate in the service, [the provider] will be entitled to claim from NDIA for payment of such Service... When cancellations or 'no shows' exceed 8 times per year, [the provider] must notify the NDIA so that consideration can be made to review the plan"; and*
- *in relation to termination of the service agreement by either party, a minimum of 4 weeks' notice was required, and "If the participant chooses to cease services or engages the services of another provider without giving the agreed notice, an early exit payment will be charged of up to 4 weeks"*

[632] *Until mid-2016, the NDIS was implemented in various trial areas throughout the country. The full implementation rollout began in July 2016, but it is not expected to be completed until 2019. It is expected that the total number of participants in the NDIS will increase to about 460,000 by 2019, about 20 times the number of participants in 2016. Many of the new participants will not be living in institutionalised care or group homes with regimented support demands, but will require supports that are shorter in duration and more flexible in order to undertake work, education and social activities. The number of registered providers is also expected to increase significantly. In 2016 there were over 2,000 registered providers, the large majority of which had not been disability support providers prior to the advent of the NDIS.*

[633] *At the time of hearing, according to data collected and benchmarked by NDS, there were about 26,000 disability support workers in Australia, of which 23% were full-time, 35% were part-time, 37% were casual, and 6% were on fixed-term contracts. This workforce is predominantly female. It was estimated in 2011 that the workforce would have to double by the time of full implementation of the NDIS. There was some evidence that some employers had increased the usage of casuals in order to meet the work demands of the NDIS, against their preference to employ mainly permanent part-time employees, mainly because of the variability associated with the one-on-one attendances which are a new industry feature introduced as part of the NDIS.*

5. United Voice takes issue with some of the observations made in paragraphs [554], [631] and [633] of the Decision.
6. In respect of paragraph [554] we make the following submissions.
7. The introduction of the NDIS has created a change in the sector with a greater focus on consumer directed care. We generally agree with the statement in [554] that '*the NDIS, broadly speaking, funds persons with disability directly, rather than via disability services organisations, and thereby allows persons with disability and their carers to purchase the support services they need in accordance with individualised NDIS plans. This has meant that persons with disability are able to exercise a far greater level of choice and control over how, when, where and by whom their disability support services are delivered*.'

8. However, we disagree with the next statement, insofar as it is taken as a general observation (as opposed to a statement of ABI's position): '*ABI contends that the NDIS is radically changing the disability support services sector, in that employers have lost a large degree of control over when work is required to be performed, and accordingly require much greater flexibility in the allocation of working hours to part-time employees so that they can operate in a way which is responsive to client demand. Absent such flexibility, ABI contends that there is a substantial risk that the workforce in the sector, which will need to expand significantly in order to meet the demand for individualised services generated by the NDIS, will become casualised*.'
9. In the part-time and casual proceedings, ABI sought to vary the Award to create an exception to the requirement that on commencement, an employer and a part-time employee will agree in writing on a regular pattern of work including the number of hours to be worked each week, the days of the week the employee would work, and the starting and finishing times each day (clause 10.3(c)). The exception sought by ABI was that '*if the employee is engaged to provide supports to clients in circumstances where the client has discretion to vary when the support is provided*' the employer and employee would agree in writing only on the number of hours to be worked each week (or the average number of hours) and the days and/or times of the week that the employee was not available to work.[2]
10. Such a variation would have increased unpredictability and instability for employees covered by the Award. The variation that was sought by ABI, and the argument made in favour of it, was based on the premise of shifting the risk onto the employee rather than the employer. We say this is an inappropriate and unfair way to manage risk.
11. The NDIS has changed the disability support services sector; however employers still control when work is required to be performed. A service provider determines which type of services it will provide and when those services will be provided. People with a disability who are participants in the NDIS will determine which service provider best suits their needs.
12. The NDIS represents a move from a block-funded welfare model of support to a fee-for-service market-based approach.[3] This necessitates that services will compete in the market place for consumers. There is an inherent level of risk when competing in such a market.

---

[2] See paragraph [558] of the Decision.

[3] Productivity Commission Study Report, *National Disability Insurance Scheme (NDIS) Costs*, October 2017, page 8, available at https://www.fwc.gov.au/documents/sites/awardsmodernfouryr/13f-am201826-productivitycommission-ndis-costs-hsu-150219.pdf

13. Providers have a choice when faced with increased demand for flexibility in service provision; absorb the risks and potential costs as organisational costs, or pass them on to the workforce in the form of reduced security and consistency in shifts and hours worked, with flow on effects including reduced pay. It is not inevitable that increased flexibility for NDIS participants must be borne as a cost by individual workers. The allocation of risk occasioned by the funding model is properly a choice which resides with employers. As the choice is one of employers, the attendant risk should be managed and if necessary absorbed by employers.
14. The industrial arrangements for the sector should not assist or facilitate employers passing on these risks to employees by a reduction in their terms and conditions.
15. The Award covers a service based sector[4] with clearly identified issues associated with skills shortages and retention.[5]The sector is also predominately funded by the Commonwealth Government applying uniform criteria albeit with greater autonomy given to the recipient of services about the provider accessed. Community and personal care workers comprise more award reliant employees that most other industries.[6] These workers are not in a position to absorb risks irrespective of the question of the appropriateness of attributing risk to them.
16. Reasonable core minimum employment standards provide a critical mechanism that informs providers' decision making. Employment standards are one of the mechanisms available to governments to demonstrate '*stewardship'* to mitigate risk and regulate the sector.[7] The marketization of employment terms and conditions which is implicit in the flexibility sought by the ABL is not inevitable and will in the long term be destructive of high quality and sustainable service provision.
17. David and West[8] note:

> *Given the established relationship between quality support workers and quality services, it is important that mechanisms which promote and protect quality are not simply left to the private interaction between service user and support worker in a market context.*

---

[4] See the definition of '*social and community services sector'* at clause 3.1 of the Award.

[5] National Disability Insurance Agency, *Integrated Market, Sector and Workforce Strategy*, (2015), Canberra, NDIA, at page 9.

[6] Research Report 1/2017, Jimenez and Rosenbes, *Award-reliant workers in the household income distribution*, February 2017, FWC, at page 16, the authors note '*the most common occupation for award-reliant employees are Community and personal service workers, labours and Sales workers*.'

[7] David and West, *NDIS Self-Management Approaches: Opportunities for choice and control or an Uber-style wild west?* Australian Journal of Social Issues, 2017, **52**, 331 at 342.

[8] As above.

The maintenance of a fair and relevant minimum safety net of terms and conditions for the employees engaged in the sector is a critical mechanism available to promote and protect quality.

18. Further, providers have more capacity to absorb the risks and costs of higher flexibility than low-paid workers. Providers are better positioned to mitigate those risks and costs, given that they have control of rostering and work organisation. The allocation of these risks as the principal responsibility of providers also places the risk where it is likely to provide the greatest overall utilitarian benefit.
19. Given that many NDIS workers already undertake unpaid work due to unpaid travel time and a desire to provide quality care, further shifting the burden of absorbing client flexibility onto workers will likely serve to increase workforce turnover and intention to leave.[9]
20. Further, there is already significant flexibility in respect of the rostering of part time employees under the Award. Part time employees have no minimum engagement period, and can work up to 10 hours a day or 38 hours a week or 76 hours per fortnight without payment of an overtime rates (clause 28.1(b) (iii)). Further, there are already mechanisms in the Award providing flexibility for employers in the circumstances of client cancellation (clause 25.5(f)).
21. In the part time and casual employment decision, the Commission found that the variation sought by ABI was not necessary, and the reasoning behind this decision, found in paragraphs [636] to [640], remains accurate today.
22. In respect of paragraph [631], it is important to note that the majority of participants in the NDIS are not self-managed. In June 2018, only 24% of participants were either partly or fully self-managed.[10]
23. In respect of paragraph [633], there has been some change in rates of permanent and casual employment in the sector. According to the National Disability Services (NDS) Australian Disability Workforce Report of July 2018, 48% of disability support workers were permanent (full-time or part-time) and 46% were casual.[11]
24. The NDS Workforce Report also stated that the trend towards casualisation was not universal across the sector, was more prevalent in small and medium organisations, and

was absent in large organisations.[12] This suggests that large organisations may better be able to manage the risks associated with increased market competition under the NDIS.

25. Most employers welcomed the marketisation of disability support services, which entails more competition between providers who need to offer high quality services. If providers are unable to compete in this market without eroding workers' pay and conditions through unreasonable demands for flexibility, they may need to revaluate their business models.
26. A secure and stable workforce is a precondition for the delivery of sustainable quality services and also the long term viability of providers. A fair and relevant minimum safety net of terms and conditions should not encourage providers to shift on to employees risks associated with increased demand for flexibility in service provision.

IN THE FAIR WORK COMMISSION

Matter No: 2018/26

Section 156 - Four Yearly Review of Modern Awards – *Social, Community, Home Care and Disability Services Industry Award 2010* – Substantive review

OUTLINE OF FURTHER SUBMISSIONS IN REPLY OF UNITED VOICE

1. This submission is made in accordance with the amended directions of the Fair Work Commission ('the Commission') dated 13 September 2019, and is made in reply to the submissions made by Australian Business Industrial ('ABI'), the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia, AFEI, and Business SA in response to union claims to vary the *Social, Community, Home Care and Disability Services Industry Award 2010* ('the Award'). ABI, the NSW Business Chamber, Aged & Community Services Australia and Leading Age Services Australia will be collectively referred to as '*ABI and others*' within this submission.
2. In this submission, we respond to key issues raised within the various employers' submissions. Otherwise we rely on our submission filed on 15 February 2019.

S2 - Travel time claim

Queensland proceedings

3. United Voice is assisting members employed as a home care workers, Margaret Blackhurst, Deon Fleming, Trish Stewart and Tanya McKenzie, in the Queensland Magistrates Court ('the Queensland proceedings') for unpaid work related to travel.[1] These proceedings were filed with the Court in June 2019 following an attempt to resolve the matter through an industrial dispute lodged with the Commission. The employer refused to consent to the arbitration of the dispute and this necessitated the commencement of the Queensland proceedings. The Queensland proceedings have not yet been determined and the employer is seeking a stay of the proceedings on the basis that this review of the Award is incomplete.[2]
4. The basis of our claim in the Queensland proceedings is that where an employer directs an employee to travel between different locations, then that time spent travelling is time worked and should be paid at the applicable rate of pay. This is especially the case with home care workers under the Award as their work is '*domestic assistance'* of clients in their residences

[1] Matter numbers MEC/2019/24, MEC/2019/27, MEC/2019/28 and MEC/2019/29.
[2] See witness statement of United Voice Industrial Officer Jared Marks signed 3 October 2019.

and this necessarily means travel to and between clients' residences. When a home care worker undertakes travel it is done at the direction of the employer and is part of the '*job'*. We regard this as the proper legal state of the employment relationship between an employer and an award reliant home care worker.

5. However, as is apparent many employers do not share this view. The Queensland proceedings clearly demonstrate this. United Voice is seeking to address this by prosecuting one employer in the Queensland Magistrates Court *and* by seeking a variation to the Award to clarify the position of home care workers and other employees under the Award directed by their employer to undertake travel as part of their duties. Our claim concerning travel time in this review is not a concession that travel time is not currently payable. The variation is necessary due to the apparent uncertainty concerning the Award travel time provisions. The Award should clearly identify that work related travel for home care workers is work.

Response to employer submissions

6. The employer submissions in reply to our travel time claim vary. ABI and others state in their submission, dated 13 September 2019, that to the extent the Commission finds the existing broken shifts clause does not meet the modern awards objective; then the appropriate manner in which to deal with the travel time issue is to introduce an allowance.[3] United Voice opposes travel time being compensated by way of an allowance.
7. When an employer directs an employee to undertake work at different locations, the employee is in service to the employer, and the time spent travelling between those locations is properly regarded as time *worked*. The proper approach for time worked is payment at the applicable rate of pay, in accordance with the employee's classification under the Award. An allowance should not be paid for what are hours of work. Allowances deal with some additional duty, out of pocket expense or disutility experienced in addition to the employee performing work. The Award currently contains an allowance for out of pocket travel expenses.[4] The current extraordinary practise of some employers in the sector is that the entire cost of travel is shifted on to low income home care workers. This includes travel which in a traditional employment law analysis would be considered part of work.
8. ABI and others argue that there are difficulties with considering travel time as time worked. Australian Industry Group (AiG) also raises similar issues in their submission, dated 16 September 2019.[5] This submission is inconsistent with the wide spread current and ostensibly successful recognition of travel time within other modern awards and other instruments. It is commonplace to treat travel time as time worked.

---

3 Submission in reply of ABI and others re: travel time dated 13 September 2019, paragraph 9.2.

4 Clause 20.5.

5 Submission in reply of AiG re: travel time dated 16 September 2019, part 6.

9. The pre-award modernisation *Community Services (Home Care Service of New South Wales) Care Workers Award 2002* recognised travel time as '*work'* for all purposes. Clause 25.4 of this award noted:

> '*All travel time between clients during an engagement shall be regarded as time worked for all purposes of the award*.'

10. Numerous other modern awards recognise that travel time as time worked. **Attachment A – '*Table of travel time clauses'*** provides many examples of travel being treated as work. Annexure A is not a comprehensive list. Whilst the circumstances of work related travel under different modern awards vary, the various clauses demonstrate that it is practical to recognise travel time as time worked and is *prima facie* part of a fair and relevant safety-net of conditions
11. ABI and others have raised a concern about whether United Voice's travel time claim is intended to regard '*reasonable time of travel*' as '*time worked*' for all purposes.[6] The United Voice travel time draft determination states that such time will be treated as '*time worked*' and no exclusions are listed. Our proposed clause is intended to ensure that it is clear that travel time is time worked for *all* purposes including the calculation of ordinary time hours worked, the accumulation of leave and in respect of any work, health and safety obligations.
12. For clarity, we confirm that our travel time clause is intended to apply to social and community services employees when undertaking disability services work and home care employees.
13. NDS in their submission, dated 16 September 2019, state that a minimum engagement period or a travel allowance could compensate for travel in between breaks.[7] Minimum engagement periods are important in providing employees with fair periods of work, and United Voice supports the HSU claim for minimum engagement periods. However, minimum engagement periods cannot solely resolve the issue of unpaid travel time. United Voice opposes an allowance to compensate for travel time for the reasons discussed above in response to the submissions of ABI and others.
14. AFEI argue in their submission, dated 17 September 2019, that if the travel time claim was accepted, the proposed variation would mean that service providers would be delivering less direct care services for the same number of employee hours.[8] We would note that some employers do already pay for travel time, and where it is not paid, the employee is effectively subsidising the cost of service provision. It is not in any way '*fair*' for an employee, particularly a low paid employee, to subsidise the cost of service provision.

---

6 Submission in reply of ABI and others re: travel time, paragraph 8.32.

7 Submission in reply of NDS dated 16 September 2019 re: travel time, paragraphs 39-40.

8 Submission in reply of AFEI re: travel time dated 17 September 2019, paragraph 16.

15. The AiG raises the issue of funding and the payment of travel time.[9] As indicated in the AiG's own submission, a NDIS service provider does have the capacity to claim for travel time (within certain time limits) as part of revenue received.[10] In the home care sector, providers and the client must enter into a Home Care Agreement prior to service provision.[11] The Home Care Agreement is a legal agreement that sets out how services will be provided, who will provide the service, the cost of the service and what comprises the cost of the service. Service providers can and it is intended that they should negotiate appropriate terms and conditions within Home Care Agreement to '*price in*' travel as part of the work for the service that will be provided.

16. In the Decision[12] on the Tranche 1 issues within the Award, the Commission stated that:

> *'[137] In the context of the provision of social services where employers are largely dependent on government funding, or, in the case of the NDIS, a fixed price, we are cognisant of the fact that significant unfunded employment cost increases may result in a reduction in services to vulnerable members of the community – a point made by the NDS. But such outcomes are a consequence of current funding arrangements, which are a matter for Government. Further, as we have mentioned earlier (at [75] above) the evidence as to the impact of the recent budgetary increase to the NDIS is somewhat unsatisfactory. Nor was there much consideration given to the extent to which the impact of an increase in casual overtime work and work on weekends and public holidays may be ameliorated by the utilisation of part time and full time employees.*
>
> *[138] The Commission's statutory function is to ensure that modern awards, together with the NES, provide a fair and relevant minimum safety net. It is not the Commission's function to make any determination as to the adequacy (or otherwise) of the funding models operating in the sectors covered by the SCHADS Award. The level of funding provided and any consequent impact on service delivery is a product of the political process; not the arbitral task upon which we are engaged.*
>
> *[139] We recognise that it may take time for a funding arrangement to adapt to a change in circumstances, such as an increase in employment costs occasioned by a variation to the award safety net. Such matters can be addressed by appropriate transitional arrangements.'*

17. We trust a similar approach will be adopted in respect of the Tranche 2 matters and agree with the Commission's insightful analysis. The main issue is whether this Award provides a '*fair and relevant*' minimum safety net of terms and conditions. It is '*fair and relevant*' for a modern award covering a significant number of low paid employees in an industry in which travel between clients is a core part of the role, to clearly ensure that employees are paid for time spent travelling between those locations as time worked.

---

9 Submission in reply of AiG re: travel time, part 5.

10 Submission in reply of AiG re: travel time, paragraph 46.

11 https://www.myagedcare.gov.au/agreeing-home-care-package

12 [2019] FWCFB 6067.

18. As the funding model assumes that travel time will be incorporated into the cost of the service when agreements are negotiated between clients and providers, there is clear scope for the current funding arrangements to accommodate work travel. If service providers underestimate or fail to account for travel when negotiating client service agreements this is not a cost that should then be borne by the employee. Alternatively, if providers are pricing travel within its provision of services to clients and being paid for travel undertaken by its employees but not paying the employee for travel this is entirely inappropriate.
19. The absence of clear provisions within the Award concerning travel time allows for such possibilities and the evidence indicates that very clear *'sign posts'* are necessary concerning the obligation of employers to treat employer directed travel as work.

S37 - Broken shifts claim

20. United Voice has a claim in these proceedings to limit the number of breaks between broken shifts to one (*i.e.* a maximum of two portions within any broken shift). ABI and others in their submission dated 12 July 2019 have indicated that they would not oppose a variation to the Award that would permit a broken shift of more than two portions of work to be worked only by agreement with an individual employee.[13]
21. Such a variation would not genuinely address the disadvantage caused under the broken shifts clause in respect of this Award. As indicated in the evidence, there is a high level of under-employment in this sector, and employees who are in need of work are likely to agree to lower conditions in order to obtain that work. The evidence of United Voice witness, Ms Stewart, demonstrates the effect of underemployment: '*My managers normally ask me to cover a shift at short notice if a colleague has taken sick leave. I will normally accept these hours if I am available because I need to accept all of the hours I am offered to make enough money*.'[14]
22. An appropriate variation to the broken shifts clause should operate in a manner that facilitates effective rostering by employers so that work can be performed in two portions of a broken shift (if not in one continuous shift). The evidence filed by the employer parties generally indicates that there are typically '*peak*' demand periods that occur during the morning, afternoon and/or evening.[15] Given this, an employer should have the capacity to roster in a manner that limits the broken shift portions worked by employee to no more than two.

---

[13] Submission in reply of ABI and others re: outstanding union claims dated 12 July 2019, paragraph 7.27.

[14] Witness statement of Trish Stewart dated 17 January 2019, paragraph 11. See also witness statement of Deon Fleming dated 16 January 2019, paragraph 17 and witness statement of Belinda Sinclair dated 16 January, paragraph 26.

[15] Witness statement of Therese Adami dated 12 July 2019, paragraph 42, witness statement of Jeffrey Wright dated 12 July 2019, paragraph 41, witness statement of Wendy Mason, dated July 2019, paragraph 66.

23. As noted by ABI and others, we do acknowledge the connection between broken shifts, travel time and minimum engagements; however we do not accept that the issues can be addressed by the '*modest*' adjustments that ABI and others have proposed.[16] There is a pressing need for significant reform of the broken shifts, travel time and minimum engagement provisions to ensure this Award provides a '*fair and relevant*' safety net of terms and conditions.
24. NDS submits that the concentration of supports around a few hours at each end of the day means broken shift arrangements are often the only way to offer some workers enough hours for a living wage.[17] In contrast, we would submit that if there were minimum engagements for each portion of a broken shift, and a limit on the number of breaks within a broken shift, then the Award would facilitate the provision of decent hours of work for employees in this sector. For example, under such provisions, an employee could be rostered to work 6am to 9am in the morning, have one break and then be rostered to work 12pm to 3pm. This would provide the employee with 6 hours of paid work during the day, and would reduce periods of (potentially) unpaid travel time in between portions of broken shifts. It would also reduce periods in which the employee was '*waiting around*' in between shifts.
25. Such a rostering method is patently '*fairer*' than what occurs under the current Award, as evidenced by Ms Stewart:

    '*A typical day for me can consist of my shift being broken up in the following manner (the start and end times for each appointment can vary by about 30 minutes day to day):*

    a. *6am – 90 minute appointment*
    b. *7.50am – 10 minute medication check phone call (which I usually make from my home)*
    c. *8am – 45 minute appointment*
    d. *9.30am – 60 minute appointment*
    e. *12 pm - 10 minute medication check phone call*
    f. *Break at 12.10pm until around 4 pm*
    g. *4pm – 30 minute appointment*
    h. *6pm – 10 minute medication check phone call (which I usually make from my home).*'[18]

26. AiG in their submission dated 15 July 2019 states that '*the case advanced by the unions assumes that employers are implementing broken shift arrangements in a deliberate and*

---

16 Submission in reply of ABI and others re: outstanding union claims, paragraph 7.23.
17 Submission in reply of NDS re: outstanding union claims filed 16 July 2019, paragraph 35.
18 Witness statement of Trish Stewart signed 17 January 2019, paragraph 15.

improper attempt to reduce their costs. Moreover, it rests on the startingly simplistic and erroneous assumption that employers in this sector will have the capacity to, and will as a matter of fact, offer hours of work on a continuous basis if access to broken shifts is limited and that they will respond to the proposed changes by restructuring the engagement of their employees in such a manner.'[19]

27. It is not simplistic or erroneous to acknowledge that service providers have choices and the capacity to decide how to absorb the risks and potential costs associated with funding models. This was addressed in paragraphs [13] to [19] of our submission dated 17 May 2019. A feature of a fair and relevant safety-net is that it informs good choices both from the perspective of the employer and the employee.
28. In response to the United Voice claim that the shift allowances be determined by either the starting time or the finishing time of the broken shift, whichever is greater, ABI and others have indicated that they do not oppose this variation.[20] NDS has also indicated that they do no oppose this variation.[21]
29. AiG opposes this claim and states that the most obvious difficult with the claim is that the Award definitions for night shift and afternoon shift only relate to finishing times.[22] This is incorrect. The definition for night shift in clause 29.2(b) of the Award states: '*night shift means any shift which finishes after 12 midnight* ***or commences before 6.00 am*** *Monday to Friday*.'
30. AiG also states that the United Voice claim would operate unfairly to the employer.[23] Under the current award, an employee who works a continuous shift that attracts a shift penalty is entitled to be paid the shift loading for the whole of their shift. An employee working a broken shift who would be entitled to a shift penalty at the start of their shift, but not the end, would not currently be entitled to a shift penalty. The current operation of the clause is unfair to the *employee* working a broken shift. AiG have not properly articulated any unfairness is to the employer in this claim.

S3A -Variation to Rosters clause

31. In response to our claim to vary clause 25.5 to ensure that overtime is paid where a roster variation occurs (outside the listed exceptions in clause 25.5(d)(ii) and (iii)), ABI and others have submitted that there are already limitations on roster variations in clause 8A and clause 10.3(c).[24] The limitation in clause 8A only applies in specific circumstances: '*8A.1 Clause 8A*

19 Submission in reply of AiG re: outstanding union claims filed 15 July 2019, paragraph 268.
20 Submission in reply of ABI and others re: outstanding union claims) paragraph 7.32.
21 Submission in reply of NDS re: outstanding union claims, paragraph 38.
22 Submission in reply of AiG re: outstanding union claims, paragraph 283.
23 Submission in reply of AiG re: outstanding union claims, paragraph 284.
24 Submission in reply of ABI and others re: outstanding union claims, paragraph 14.10.

applies if an employer proposes to change the regular roster or ordinary hours of work of an employee, other than an employee whose working hours are irregular, sporadic or unpredictable.' We acknowledge that clause 10.3(c) and (e) are intended to have a protective effect, and would apply, in many cases consistent with clause 25.5(d) (iii). However, this clause does not provide sufficient protection and it is necessary to ensure that where an employer seeks to change a roster without 7 days' notice, overtime should apply.

32. AiG opposes the variation sought on the basis any change in roster without 7 days' notice is not permitted by the Award (save for the exceptions in clause 25. (d)(ii) and (iii)) and would constitute a breach of the Award.[25] NDS make a similar argument.[26] In reply, we say that roster changes without proper notice do occur in this sector, and that for an employee subject to these late roster changes, there is value in having a clause within the Award that provides for payment of overtime. It is appropriate that the employee has an entitlement to overtime rather than a right to allege a breach of the Award.

S21 - Telephone allowance claim

33. ABI and others have opposed our telephone allowance claim and state that it should be dismissed.[27] ABI and others have raised concerns about the drafting of our claim and concerns that employers will be required to reimburse all personal use by the employee.[28] Business SA and AFEI raise similar concerns, although Business SA does acknowledge that employees are, at times, required to use personal mobile phones in the course of their employment.[29]
34. To address some of drafting concerns raised by the employer parties, we file a revised draft determination with this submission. The revised draft determination provides the employer with several options in respect to reimbursing an employee for the cost of a mobile phone. The employer can provide a mobile phone, or alternatively, the employer can reimburse costs associated with use of the employee's own mobile phone. The reimbursement is of '*reasonable*' costs incurred in the course of employment.
35. For avoidance of doubt, our clause does not require an employer to purchase a phone for an employee to continue to use if the employment *ends*. An employer can purchase a phone, provide it to the employee to use during the period of their employment and then require the return of the phone once the employment of that employee is terminated. This method may be attractive to employers as they are able to determine the type of device purchased and any

service arrangement entered into. The employer is also able to ensure that the device purchased is one that can properly display any apps the employer requires the employee to use in the course of duties.

36. ABI and others argue that it is difficult to understand how an employer can reasonably be expected to reimburse an employee for mobile phone costs where an employee primarily uses it for personal use.[30] In response, we say it is difficult to understand how an employer can reasonably expect an employee to use their own mobile phone in the course of their employment without providing any reimbursement for that expenditure. The notion that an employee '*primarily*' uses the mobile phone for personal use is misleading. An employee may or may not use their mobile phone primarily for personal use, but the key issue is whether the employee is *required* to use their mobile phone for work purposes and how the employee should be reimbursed for that work-related use.
37. AiG have noted a Deloitte report from 2018, in which a survey of 2,000 Australian consumers found that 89% of those surveyed own a smart phone.[31] We acknowledge that most employees will own a phone. This does not negate the need for a mobile phone allowance. There are costs associated with using a mobile phone for work, whether that is direct charges for work-related use, having to pay for a higher plan to ensure work-related use is covered, or increased wear and tear on the device. For example, United Voice witness Ms Stewart gives evidence that '*my phone bill costs approximately $170 per month. If I was not required to make as many work calls, I could consider dropping to a cheaper mobile phone plan*.'[32] It cannot be considered '*fair*' for the cost of work-related mobile phone use to be shifted onto employees and it is appropriate that there be an Award clause that provides for compensation for work-related mobile phone usage.

S2A –Variation to Clothing and equipment allowance (uniforms)

38. With respect to this claim, we rely on our submissions filed on 15 February 2019.

United Voice
3 October 2019

30 Submission of ABI and others re: outstanding union claims, paragraph 9.31.

32 Witness statement of Trish Stewart signed 17 January 2019, paragraph 21.

Attachment A –Travel time clauses

Note: This is not a comprehensive list.

Modern Award	Clause
Aboriginal Community Controlled Health Services Award 2010	15.5(d) Where an employee is required to work at a place away from their normal place of work, all time reasonably spent travelling to and from the place of work will be credited at their ordinary rate of pay.
Animal Care and Veterinary Services Award 2010	22.3 Veterinary surgeons The following provisions apply to veterinary surgeons: (a) Time taken for travel required in the performance of duties, except for active on call duty, will contribute to hours of work. Required in the performance of duties includes travel additional to one return trip between the associate's place of residence and the place of work in any one day and travel between different locations of a practice.
Aquaculture Industry Award 2010	15.4 Travel time and allowance (a) An employee who on any day or from day to day is required to work at a workplace away from the usual workplace will, at the direction of the employer, present for work at such workplace at the usual starting time; but all time reasonably spent in reaching and returning from such workplace (in excess of the time normally spent in travelling from the employee's home to their usual workplace and returning) will be paid at ordinary rates of pay.
Architects Award 2010	16.2(c) Where an employee is directed to work at a place other than their usual place of employment, all time occupied by them on any day in travelling which is in excess of the time normally occupied by them in travelling when working at their usual place of employment will be deemed to be working time and must be paid for at the appropriate rate prescribed by this award. Provided that where the excess travelling time is in excess of one hour each way, the employer will have the option of providing reasonable living away from home expense reimbursement for any period in excess of four weeks.

Broadcasting, Recorded Entertainment and Cinemas Award 2010	33.4 Other duties counted as time worked (c) Time spent in servicing of a client advertiser of the employer by an employee at the direction of the employer must be paid for at ordinary rates of pay. Any travelling time incurred by an employee in carrying out such servicing must be paid for at ordinary rates of pay. (d) Should an employee be directed to travel away from the usual studios to broadcast, or record or perform any other duties, the time involved in travelling to and from such location will be counted as time worked, provided the maximum travelling time to be paid for will be eight hours on any one day. 80.1 All travel required between the daily commencement of work and the daily conclusion of work including all travel to and from location will be the responsibility of the employer, subject to the provisions of this clause. 80.2 All time spent in travelling will be counted as time worked, subject to the provisions of the award. 80.3 Where an employee elects, with the written agreement of the employer, to provide their own transport to a location which is at a distance of more than 25 km from the capital city in which the employer's usual place of business is located, time spent in travel will be regarded as time worked and will be calculated as between a radius of 25 km from the GPO and the place of location, such distance to be measured on the basis of the shortest practicable route by road between the employer's usual place of business and the location, and the time taken will be calculated on the basis of two minutes for each kilometre of distance between the 25 km radius and the location. If the location is within the 25 km radius the location may be considered the place of call and the employee's time worked may be calculated from their call time at such location.
Business Equipment Award 2010	22.2 Commercial travelers stream (c)(iii) Employees whilst travelling on their employer's business will be regarded as being "on duty" for all purposes of this award and for the purposes of all relevant State workers compensation legislation.
Car Parking Award 2010	15.4 Transfer from job-to-job allowance An employee transferred by the employer from one job to another job on the same day will be paid for the time spent in travelling as for time worked. An employee will be reimbursed all reasonably incurred travel costs.

Concrete Products Award 2010	16.2 Transfer from job to job An employee transferred by the employer from one job to another job on the same day will be paid for the time spent in travelling as for time worked.
Fitness Industry Award 2010	18.7 Travelling time and fares An employee who is required by the employer to travel from one place of work to another must be reimbursed by the employer all fares necessarily incurred by the employee. All time occupied in such travel is deemed to be working time and the employee must be paid at the appropriate rate.
Live Performance Award 2010	26.2(c) Travel time to be counted as time worked Should the employer during the course of a normal day's work require the employee to travel, the travelling time inclusive of regular stops for comfort and refreshment will be counted as time worked.
Local Government Industry Award 2010	15.4(b)(ii) Where a community services employee providing home care is required by the employer to travel between two or more work locations in any one day the employee will be reimbursed for travel expenses incurred for travel between the first and successive service points and will be paid at the appropriate rate of pay during travel time between the first and successive service points.
Wine Industry Award 2010	24.1 Travel and expenses (a) Where an employee is required by the employer to travel from one place of work to another: (i) the time occupied in such travel must be counted as time worked and paid for as such; and (ii) the transport and fares for such travel must be provided by the employer or the expense incurred by the employee for such travel must be reimbursed by the employer.

BEFORE THE FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF THE MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Statement of Deon Fleming

I, Deon Fleming, [redacted] say:

1. I am a member of United Voice and have been a member of my union since about 2016.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. My date of birth is 31 July 1968.

4. I live by myself. I own my own home.

Work History

5. I am a qualified hairdresser and worked in the hairdressing industry until about 2014.

6. Between about 2014 and mid-2016, I worked as a cleaner at Friendly Society Hospital in Bundaberg.

7. I received my Certificate III in Aged Care in about 2016. I began working as a support worker at Comlink in mid-2016. My duties included attending home visits for clients to perform medication checks, showering and dressing clients and transporting clients to and from appointments.

Current Work

8. In June 2017, I stopped working at Comlink and took up a role as a support worker at Excelcare. Around August 2018, Excelcare merged with Live Better. Live Better is my current employer.

9. My main duties at Live Better as a support worker include but are not limited to, client transport to and from appointments, showering and dressing clients, medication checks for clients and assistance with general self-care such as meal preparation. I also offer social support to clients by taking them shopping, to the hairdressers or out for coffee.

10. I am employed under the *Social, Community, Home Care and Disability Services Award* 2010 ('the Award'). I am a classified under the Award as a home care worker at level 2.

11. I am employed as a permanent part time employee and I work 5 days per week.

12. Attached to this statement and marked **Annexure 'A'** is a copy of my terms and conditions of employment with Live Better.

Roster changes

13. I am rostered, on average, to work approximately 20-25 hours per week. However, the amount of hours can decrease if there are cancellations of client appointments. Some weeks I have worked as much as 32 hours in the week.

14. I produce at attachment marked **Annexure 'B'** copies of my rosters for the period 4 May 2018 to 21 September 2018.

15. My roster is frequently changed. Most weeks the roster that is released at the beginning of the week is varied due to client cancellations and my colleagues taking sick leave.

16. If clients cancel on the same day of their appointment, then I am paid for the shift. But if a client cancels a home care visit before 5pm the day before the scheduled appointment, then I am not paid for that appointment and these are hours I miss out on. At least once per week, I will have a client cancel their appointment with the

required notice. This creates a lot of uncertainty for me in being able to anticipate how much I will get paid in the week.

17. At least once per fortnight my manager will ask me if I can take on extra work because a colleague has called in sick. If I am available, I will take these extra shifts because I want to work more hours.

The Impact of Broken Shifts

18. The structure of my roster as a support worker is varied and can be broken up into numerous short shifts over an 8-10 hour period.

19. My working day is structured by the appointments that have been booked by clients. An appointment can last from 15 minutes up to 1.5 hours or longer.

20. My first shift will usually begin somewhere between 6am to 7.30am. I will then normally attend 2-3 appointments during the day and finish at 4.30 - 5pm.

21. When I began working as a support worker with Live Better, it was common that I would be rostered on for appointments during the late afternoon or evening for 15 minutes to do medication checks. This meant that I may work from 7.30am until 2pm or 3pm with short breaks in between shifts then have a 2 hour break and then work a 15 minute shift at the end of the day.

22. These '*broken shifts*' are very disruptive to my day because it means that I will need to sit around for 2-3 hours waiting for a shift to start that only lasts for 15 minutes. I usually need to drive around 10 minutes to reach the location of the appointment. Some appointments can be a 40 minute drive away. I am not paid for the time it takes me to travel to and from these appointments.

23. The broken shifts which spread across the day mean I am effectively working the entire day. I may only be paid for 4-5 hours. These shifts prevent me from using my time off to take part in social activities with friends or family.

24. Because of these shifts, I am also not able to seek secondary employment because in order to maximize the amount of hours I will be paid for as a support worker, I have to be available for a minimum 12 hours per day.

Mobile Phone Allowance

25. When I was employed by Excelcare, they provided me and other employees with a tablet computer at no cost to us. I used the tablet to check my roster and check and respond to work emails from colleagues and my supervisor. At the time, I did not own a smart phone. The tablet was my only way of checking my roster and work emails.

26. When Excelcare merged with Live Better, these tablets were taken away from homecare workers.

27. Because I no longer had access to the tablet, I was forced to upgrade my '*flip*' style phone to a smart phone so that I could access the Internet to check my roster and my work emails. I have not been reimbursed for this expense. If I did not buy a smart phone, then I would not have been able to access my work roster or work emails. I pay approximately $65 per month for this mobile phone. Attached to this statement and marked **Annexure 'C'** is a copy of the receipt and the monthly bill.

28. My current employer asked for my mobile number and informed me that it would use it to contact me for work purposes, send my rosters via my device and other work related materials.

29. I use my phone for work related reasons regularly and would make approximately 10 calls per week on my mobile. The reasons why I have to use my own mobile are: making calls to clients for medication checks, calling clients if I am running late for an appointment, checking my roster and work emails.

30. I am not reimbursed for use of my own mobile for work related purposes.

Income and expenses

31. I am paid an hourly rate.

32. On average I earn a gross weekly amount of $250 - $500 for work, dependent on the hours I work. Attached to this statement and marked **Annexure 'D'** are copies of my pay slips for the period 24 May 2018 to 13 December 2018.

33. My average weekly expenses (excluding entertainment and savings) are approximately $457.00, comprised of:

Rates, household bills and groceries	$248.00
Car expenses, including registration and petrol:	$104.00
Other expenses: mobile phone bill, health insurance.	$105.00
Total:	**$457.00**

[redacted]

Witness Signature

DEON FLEMING 16-1-2019

Witness Name (printed) Date:

live etter

community services

27 June 2018

Deon Fleming
23 Letinic Street
BUNDABERG QLD 4670

Dear Deon,

I am pleased to offer you employment with LiveBetter Services Limited (LiveBetter) on the terms set out in this Letter of Employment. Please read these terms carefully and, if you wish to accept this offer, sign and return the attached copy to the Human Resources Department.

TERMS AND CONDITIONS OF EMPLOYMENT

1. Commencement date

This Letter of Employment will be effective from the 1 July 2018.

2. Term of employment

Your employment with LiveBetter will continue for an indefinite period, subject to successful relevant background checks including a review of your national police record, and working with children check. You will also be required to successfully complete a health & wellness check. If you do not consent to these background checks and health & wellness check or, if your background checks reveals past behaviours that are inconsistent with the expectations of you in this role and this Letter of Employment, then this offer of employment will be revoked immediately.

3. Role, duties and performance

You are engaged as Support Worker on a permanent, part time basis of 20 nominal hours per fortnight plus any reasonable additional hours. You will be working in the Bundaberg / Wide Bay area, in the Aged Care Services and reporting to Jennifer Bruce, Coordinator.

During your employment with LiveBetter, in addition to those duties outlined in your position description, you are required to:

- comply with all policies and procedures (as amended from time to time) that pertain to your employment and the performance of your duties, which are published by e-mail and/or located on the LiveBetter Intranet;
- perform the duties assigned to you from time to time and comply with all lawful and reasonable directions given to you by your Manager;
- perform your duties and responsibilities in a proper and efficient manner;
- except in the case of absence by reason of illness or incapacity or leave in accordance with this contract of employment, devote your time, attention and abilities during normal business hours exclusively to the business of LiveBetter;
- use your best endeavours to promote and enhance the interests, welfare, business, growth and reputation of LiveBetter; and

live etter
community services

- not intentionally do anything which is or may be harmful to LiveBetter.

Your duties, responsibilities, team and location may be revised from time to time in consultation with you to meet the changing needs of the organisation. Any changes will be discussed with you in advance and confirmed in writing.

4. Remuneration

Classification
Your conditions of employment will be governed by the applicable provisions of the Social, Community, Home Care and Disability Services Industry Award 2010 (SCHCDSI).

Due to the nature and scope of your role, your position has been classified as SCHCDSI Level 2 Pay Point 2 Schedule (E) Home Care Employee on the basis of the nature and scope of the role and your qualifications and experience.

Rate of Pay
Your rate of pay upon commencement will be $22.24 per hour which represents an above Award payment. This rate is subject to change as per LiveBetter's obligations under the *Social, Community, Home Care and Disability Services Industry Award 2010*. LiveBetter will also make superannuation contributions on your behalf in accordance with the Superannuation Guarantee legislation.

Payment of Salary
Payment of your salary will be made on a fortnightly basis, in arrears, by electronic deposit to an account nominated by you. Your manager will confirm if you are required to complete a timesheet.

Superannuation contributions
You are free to direct your superannuation contributions to a regulated complying superannuation fund of your choice. If you do not advise us of your choice of a regulated complying fund, your contributions will be made to the superannuation fund chosen by LiveBetter as the default fund, currently HESTA. If you choose your own fund and do not become a member of the LiveBetter default fund, you are required to provide the information about your chosen fund as listed in the Choice of Superannuation Fund form.

Additional contributions to superannuation
In addition to the legislated employer superannuation contributions, you may direct an additional amount to the fund by means of automatic deduction from your pay. For further information please contact the Payroll Officer.

Salary packaging
You may be entitled to participate in LiveBetter's salary packaging scheme, which at present is administered by AccessPay.

Remuneration reviews
Salaries are reviewed annually in conjunction with the annual performance review process, the relevant industrial Award and the LiveBetter remuneration framework.

5. Hours of work

You are engaged on a permanent part time basis of 20 hours per fortnight. Your usual days and times of work are variable and dependant on a roster system which is published and communicated fortnightly. The

roster is based on the needs of the service and will potentially include some stand up shifts, sleep over shifts, afternoon shifts, evening shifts and potentially weekend work. Any variation of hours will be published in the roster.

6. Overtime

All overtime worked must be approved by your manager in advance and, providing approval is obtained, you will be paid in accordance with the overtime provisions of the appropriate Award. Alternatively, you may like to make use of time in lieu provisions, if mutually agreed between yourself and your supervisor and in accordance with the relevant Modern Award.

7. Leave entitlements

Annual leave
You will be entitled to accrue entitlements to paid annual leave at the rate of 20 days for each year of continuous service (or, if part-time, pro-rated) in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time and the appropriate Award.

Annual leave loading of 17.5% will be paid on accrued leave when it is taken.

Unused annual leave will be paid out on termination of employment.

Personal/carer's leave
You will be entitled to ten days paid personal/carer's leave for each year of continuous service (or, if part-time, pro-rated) in accordance with the LiveBetter Leave Entitlements Policy as amended from time to time.

You are not entitled to any payment in lieu of accrued personal leave on termination of your employment.

Compassionate leave
You will be entitled to up to two days paid compassionate leave per permissible occasion in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time.
Parental leave
You will be entitled to parental leave in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time and relevant industrial instruments, such as the Fair Work Act.

Long Service Leave
You will be entitled to long service leave in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time.

Public holidays
You will be entitled to public holidays as proclaimed in your relevant state or territory without loss of pay. Payment will be made in accordance with the National Employment Standards.

Other leave
For information regarding all other leave such as community service leave, religious holidays, study leave and leave without pay, refer to LiveBetter's Leave Entitlements Policy or contact the HR team.

Service Date
For the purpose of calculating service and leave accruals, your original start date with Excelcare Australia Limited will be used.

live better
community services

Transfer of leave entitlements
As part of your transition from Excelcare Australia Limited, LiveBetter will be transferring your statutory entitlement accruals. This transfer is conditional upon LiveBetter receiving sufficient funds from Excelcare Australia Limited to cover these entitlements prior to commencement.

8. Workers' compensation

LiveBetter has workers' compensation insurance in accordance with the relevant state or territory legislation. In the event of any injury occurring during working hours you should immediately notify your manager.

9. Code of Conduct

LiveBetter is committed to ensuring that all individuals are treated with dignity and respect. The LiveBetter Code of Conduct explains what is meant by equal employment opportunity, discrimination, harassment, victimisation and bullying. It is essential that you understand and comply with the Code of Conduct as amended from time to time. A copy of the Code of Conduct is included in your employee handbook which is issued at induction and is also available on the intranet.

10. Conduct and attire

You will be expected to conduct yourself in a manner that enhances the professional standing of LiveBetter, whether in the office, at third party locations, or any forum in which you may be seen as representing LiveBetter.

11. Driver's Licence

Given the nature of the role, a condition of employment is that you must possess and maintain a valid unrestricted Australian driver's licence. You must provide LiveBetter with a copy of your valid driver's licence and must notify LiveBetter immediately if you are disqualified from driving.

12. Confidentiality

You must not disclose, or allow access to, any confidential information, to any person except in the proper course of your duties, or as permitted by LiveBetter, either during or after the course of your employment. Confidential information is defined as any information relating to LiveBetter employees and clients, which is not lawfully available to the general public.

Further, as an employee of LiveBetter you will have access to "Know-How", and have a detailed knowledge of LiveBetter's clients and business' clients. You will have the opportunity to build professional relationships with those clients, employees and others engaged in LiveBetter's Business (goodwill). It is reasonable for LiveBetter to protect the goodwill of the business and as such, you must not during or post employment with LiveBetter, induce, solicit, canvas or approach any customers of LiveBetter on behalf of any other business. This includes, but is not limited to soliciting or approaching LiveBetter clients/and or families to move providers, or encouraging LiveBetter client/ and or families to select another service provider on the basis of your employment with that provider.

live etter

community services

In addition, you must not during or post employment with LiveBetter, do or say anything that may be harmful to the reputation of LiveBetter in any forum, or that may lead a person to cease, curtail or alter their dealings with LiveBetter.

13. Medical Examinations and Considerations

Where a specific medical examination is not required for your position, LiveBetter assumes that you are medically fit to undertake employment with LiveBetter unless you notify it otherwise. If you have a medical condition that may have an impact upon your ability to carry out your duties or may require LiveBetter to provide you with assistance to undertake your duties then it is important to disclose the extent of the medical condition to LiveBetter so that it may fulfil any requirements it has to assist you.

Where during the course of your employment with LiveBetter the CEO forms the opinion that there are reasonable concerns that you are not fit to undertake your normal duties you may be required to attend a medical examination.

14. Termination of employment

Either you or LiveBetter may terminate your employment with LiveBetter at any time by giving written notice in accordance with the National Employment Standards as outlined below.

Period of continuous service at the end of the day the notice is given	Notice period
Not more than 1 year	1 week
More than 1 year but not more than 3 years	2 weeks
More than 3 years but not more than 5 years	3 weeks
More than 5 years	4 weeks

Notwithstanding any other provision contained in the Letter of Employment, LiveBetter may terminate your employment at any time without prior notice if you commit an act of serious misconduct. Serious misconduct includes both of the following:

- wilful or deliberate behaviour that is inconsistent with the continuation of this Letter of Employment;
- conduct that causes imminent and serious risk to the health and safety of a person, or the reputation or viability of LiveBetter.

Examples of serious misconduct include but are not limited to:

- theft, fraud, assault, intoxication, or refusing to carry out a lawful and reasonable instruction consistent with this Letter of Employment;
- the commission of a crime in the course of your employment;
- the commission of a crime outside your employment with LiveBetter (eg criminal dishonesty, where your duties require good faith and honesty);
- neglect of duties; and/or
- the use of objectionable or obscene language in certain circumstances (eg if such language is directed towards managers, employees or clients of LiveBetter).

LiveBetter may suspend you on full pay from part or all of your duties at any time, including during any period of notice of termination of your employment.

live etter
community services

15. Security of equipment and documentation

Whilst working at LiveBetter you are required to take care to secure your personal belongings. LiveBetter will not reimburse an individual who suffers a loss due to theft of cash or personal possessions. You are also responsible for all equipment issued to you and documentation in your custody. This includes computers, mobile phones and confidential documentation. Any losses must be reported to your manager immediately.

16. Variation and entire agreement

This Letter of Employment may only be varied, replaced or terminated by agreement in writing signed by you and an authorised representative of LiveBetter. This Letter of Employment embodies the entire understanding of the parties in relation to your employment by LiveBetter and supersedes all previous negotiations, representations or agreements. This offer of employment is valid for strictly two weeks from the date of issue unless otherwise agreed.

Please indicate your written acceptance of this offer by signing, dating and returning the copy of this Letter of Employment to the Human Resources Department.

Yours sincerely,

Nerissa Marat
General Manager People & Culture

I have read and accept the terms and conditions of employment as set out in this Letter of Employment.

Paying by Credit or Debit Card?

From 1 January 2018, the card payment processing fee will be increasing to 0.427% (incl GST). To avoid this fee set up direct debit today.

Please see "How To Pay" on your bill or optus.com.au/payments for more info.

Need help? Visit Yes Crowd

For questions about your bill or Optus products and services, join the discussion at **Yescrowd.optus.com.au**

@ optus.com.au/customerhelp

Other enquiries call 133 937
Mon - Fri 8am to 8pm (AEST)

Manage your service 24/7 with My Optus app

How to Pay

Please pay by the due date to avoid late payments fees. For details, visit www.optus.com.au/latefees.
* Pay with Direct Debit - the fee free way to go. From 01 Jan 2018, for all other payments made via credit, debit or charge cards, the payment processing fee will increase to 0.427% (incl. GST).

BPAY ®

Pay from your savings account via Internet or phone banking. More info: **www.bpay.com.au**

Biller Code: 959197

Direct Debit

Set-up Direct Debit to have the total amount due deducted from your nominated savings, or credit/debit card on the due date. To apply or for more details go to **www.optus.com.au/directdebit**

Credit Card *

Pay using **My Optus App** or the options below.
Online: **www.optus.com.au/paymybill**
Phone: **1300 309 309**
Please note transaction limits apply.

POST Billpay ®

Pay in-store at Australia Post. A transaction fee of $1.75 will apply for these payments.

BEFORE THE FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF THE MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Supplementary statement of Deon Fleming

I, Deon Fleming, of [redacted] in the state of Queensland say:

1. I am a member of United Voice and have been a member of my union since about 2016.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

3. I have previously provided a statement in relation to these proceedings, dated 16 January 2019.

4. My date of birth is [redacted].

Travel Time

5. I began working at Excelcare in around June 2017. For a short time while I worked at Excelcare, the time that it took me to travel between appointments with clients was considered time worked and I was paid for it. I was paid my normal hourly rate for this time. I am unsure how this time was calculated by the rostering team.

6. In or around July 2017, Excelcare became Livebetter and I stopped getting paid for the travel time. This means that I have lost roughly up to 4-5 hours of pay per week. It was noticeable to me when it stopped.

7. The travel that I do as part of my job is necessary in order to provide the services my clients require. I have no option whether I do this travel or not.

8. My position description, provided with my 16 January 2019 statement, states that it is a requirement of my role that I have a driver's licence. I use my own car to travel between the appointments.

BEFORE THE FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF THE MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Statement of Belinda Sinclair

I, Belinda Sinclair, [redacted], in the state of New South Wales say:

1. I am a member of United Voice and have been a member of my union since 2 May 2016.

2. Where I refer to a conversation in this statement and I cannot remember the exact words used, I have stated my best memory of the words spoken, or the effect of what was said.

Personal Details

3. My date of birth is 11 March 1981.

4. I live in a share house with 3 unrelated adults.

Work History

5. I worked for three years as an environmental engineer for Jeffery and Katuakas, located in North Ryde.

6. I began working in home care in 2011. I initially worked with the Sister of St Joseph's Community Care, which became Catholic Community Care.

7. I started with Wesley Mission on 20th March 2017.

8. I hold a CHC30208 certificate 3 in aged care, which I have held since June 2013.

Current Work

9. I am employed by Wesley Mission as a part time home care worker. The *Social, Community, Home Care and Disability Services Industry Award 2010* ('the Award') applies to my work. I am a level 3 home care worker under the Award.

10. My contract guarantees me a minimum of 30 hours per fortnight. My duties predominantly involve home visits to assist elderly and disabled clients with cleaning, showering, dressing, medication prompting, transporting them to and from appointments and shopping for clients. Annexed and marked '**A**' is a copy of the written agreement with my current employer concerning my hours of work.

11. The hours that I am rostered for can vary greatly. Some weeks, I may be rostered for as little as 13 hours across the week and then other weeks I may be rostered for 21 hours per week. I work five days per week, Monday through to Friday.

The Impact of Broken Shifts

12. In my work, I am sometimes required to work a broken shift. On 9 February 2018, I sent an email to my supervisor about why we don't get paid travel time and kilometres travelled payment for broken shifts. I was informed that I am not undertaking duties during a broken shift and therefore I am not entitled to these allowances.

13. Since the middle of 2018, I have had only 1 broken shift scheduled. The rostering officer of my employer told me that they don't like putting broken shifts on our rosters. My workload is low some days with only 1 hour in the morning.

14. I produce at annexure marked '**B**' copies of my rosters for the period 3 December 2018 to 20 January 2019.

Mobile Phone Allowance

15. There are a number of different times or situations where I need to make phone calls on my mobile phone. I normally make two to eight calls each working week. This includes:

    - if the client doesn't open the door when I visit them,

- if there is traffic that is going to make me late,
- if the clients home phone/call alarm is not working,
- if the work email or tablet system is not working properly, and
- report a hazard/incident in line with Wesley Mission's policy and procedures.

16. I make these phone calls from my personal mobile phone. I am not provided with a phone by my employer to make these phone calls. My managers asked for my mobile phone number and routinely contact me and send work related material to my mobile phone. There appeared to be a presumption that I had a mobile phone and that I will make these work related phone calls from my personal phone. I am not reimbursed for the cost of making these phone calls or the cost required to maintain my personal phone to ensure I can make these phone calls. Wesley Mission also contacts me about roster changes and other workplace issues by sms on my mobile and I am required to reply and use my own device.

17. If the work tablet computer is not working, my employer will email my roster to me directly, so I am required to have access to a personal email account and the internet in order to check my roster. I rely on my mobile phone to check rostering when this happen. I am having problems about every month with the work tablet.

Uniforms

18. When I began with Wesley Mission, I was given two shirts to wear, identifying me as a Wesley Mission care worker. I am required to wear these shirts when I am working so as to be clearly identified as a Wesley Mission care worker by the clients. Some of the clients are elderly and have issues with dementia. My employer has a uniform policy that states we must wear the shirts when attending on clients.

19. When I only had 2 shirts, I had to wash them every day of employment, so one was ready to wear the next day. Working five days in a row meant I had to wash them at least three times per week. I asked one of the rostering staff and after six weeks of work and was given one more shirt.

20. I attempted to get more uniforms from my employer, but they didn't provide any initially. It took two emails and approximately two weeks for me to get an additional three shirts, a year and a half after I started.

21. An adequate number of uniforms would be a uniform for each day I work each week and a spare. This would allow me to wash my uniforms with my usual load of weekly washing each week and avoid daily or *ad hoc* washing.

Roster Changes

22. My roster can change without notice when another employee falls ill or is unable to work. I understand that Wesley Mission North at Macquarie Park uses a large number of external staff to meet the workload. If an external company can't meet the service, it is called a "push back" and my roster might change. If Wesley Mission cannot find a casual then they change the roster so that the client will not miss out on service by adding the service onto a permanent employee's roster.

23. My roster changed late in the afternoon on Friday 7 December 2018 afternoon. I don't know why. Two other care worker's clients were on my roster. I wasn't asked if I was able to or would like to do these shifts. I did not agree to the roster changes. I was required to make the following changes to my roster:

Day	Before roster change	After roster change
Monday	8.00 am – 2.10 pm	8.50 am – 2.10 pm
Tuesday	8.00 am - 10.30 am	8.00 am – 1.00 pm
Wednesday	8.00 am – 10.20 am	8.00 am – 1.00 pm
Thursday	10.00 am – 3.15 pm	8.25 am – 3.15 pm
Friday	8.00 am – 10:40 am	8.00 am – 12:10 pm

24. On, Wednesday 12 December 2018, I was asked if I could move my Health Safety Representative hour in the office to that day so I could do an additional shift on Friday, going shopping with a client. This meant I would finish my day ten minutes after my agreed availability, so I was able to decline the request. I had another commitment at 3.00 pm. I suggested that I might be able to help provided the shift finished by 2.45 pm. My Friday then changed to 7.50 am to 2.45 pm.

25. My employer is constantly making changes to my roster and these changes make it difficult for me to plan things for when I am not rostered or to make a weekly budget, despite that I am a permanent employee, not a casual.

26. I agree to changes in my roster because I need the hours and am concerned that if I complain or don't accept additional hours, I will be rostered less. This is not an accusation against my employer but my concern. I have a tight budget and cannot afford to lose hours.

Income and expenses

27. I am paid an hourly rate.

28. On average I earn a gross weekly amount of $600 for work. Attached to this statement and marked **Annexure 'C'** are copies of my pay slips for the period 2 July 2018 to 30 December 2018.

29. My average weekly expenses (excluding entertainment and savings) are approximately $533.00, comprised of:

Rent, household bills, course fees for Certificate IV in Work Health and Safety and groceries	$385.00
Car expenses, including registration and petrol:	$100.00
Other expenses: mobile phone bill, health insurance.	$48.00
Total:	**$533.00**

TO Belinda Sinclair

FROM Samip Patel, Service Team Leader, Wesley Home & Residential Care

DATE 24/09/2018

REF Hours of work update

Dear Belinda,

As discussed, this memo is to confirm an update in the hours of work in your position of Support Worker, Wesley Home & Residential Care, effective from 24/09/2018.

Hours of work

Your ordinary hours of work each fortnight shall be 80 hours

Your work schedule shall be as follows:

Monday:	6:00 am – 2:30 pm
Tuesday:	6:00 am – 3:00 pm
Wednesday:	6:00 am – 2:30 pm
Thursday:	6:00 am – 6:00 pm
Friday:	6:00 am – 2:30 pm

In your position, you may be required to work in addition to your ordinary hours from time to time. Changes in hours may be made by agreement in writing between the employer and employee.

All other conditions remain unchanged in accordance with your most recent letter of offer/transfer.

Would you please signify your acceptance of this offer by signing where indicated below and returning the original to me.

You acknowledge that, prior to entering into this agreement, you:

- Have had sufficient time to review the contents of this agreement and understand its effect, and
- Have not been placed under any undue pressure to enter into this agreement.

Yours sincerely,

Samip Patel
Service Team Leader

Acceptance of Memo

I have read, understood and accept the terms and conditions of employment contained in this memo.

Signed: B Sinclair Date: 21/9/18

BEFORE THE FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF THE MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Statement of Trish Stewart

I, Trish Stewart, [redacted] in the state of Queensland say:

1. I am a member of United Voice and have been a member of my union since about 2016.

Personal Details

2. My date of birth is 19 February 1967.

3. I live by myself in a rental property. I have two grandchildren that live close by with my daughter.

Work History

4. For the majority of my working life, I have worked as a commercial cleaner with various cleaning services.

5. In February 2014, I received my certificate III in aged care. I also received my certificate III in disability services in October 2015.

Current Work

6. In or around April 2014, I began working at Excelcare. In August 2018, Excelcare was taken over by Livebetter, who are now my current employer.

7. I am currently employed as a permanent part time support worker at level 2 under the Social, Community, Home Care Worker and Disability Services Award. My

contract guarantees a minimum of 10 hours per week. Attached and marked 'Annexure A' is a copy of my terms and conditions of employment from LiveBetter.

8. My duties predominantly involve home visits to assist elderly and disabled clients with cleaning, showering, dressing, transporting them to and from appointments, meal preparation and making phone calls to clients to perform medication checks. I also undertake social support appointments with clients, which involves taking them out for a walk or a coffee or doing their groceries with them.

Rostering

9. The hours that I am rostered for can vary greatly. Some weeks, I may be rostered for as little as 10 hours across the week and then other weeks I may be rostered for 30 hours per week. I work 5 days per week.

10. At least once per week, my roster will be altered as a result of either another support worker who has called in sick or a client cancelling their appointment. If a client cancels their appointment before 5pm the day before their scheduled appointment then I do not get paid for the shift. If they cancel after 5pm the day before, then I will get paid. This means that I can never be certain of the amount of hours I am going to receive and how much I will be paid each week.

11. Most weeks I would like to pick up more hours because I do not receive enough hours to cover my weekly expenses. My managers normally ask me to cover a shift at short notice if a colleague has taken sick leave. I will normally accept these hours if I am available because I need to accept all of the hours I am offered to make enough money.

12. I have not agreed to a normal pattern of shifts with my employer. At least once per day I am rostered on for a 15 minute shift which is interspersed with longer shifts of 1-3 hours. If I had a choice in the way my roster was structured, I would not do these 15 minute shifts but I feel that I have to accept whatever hours I am given.

The Impact of Broken Shifts

13. Each daily shift that I work is broken up by significant breaks.

14. My rostered days can vary in length and how these breaks are spread out through the day can also vary.

15. A typical day for me can consist of my shift being broken up in the following manner (the start and end times for each appointment can vary by about 30 minutes day to day):

- 6am – 90 minute appointment
- 7.50am – 10 minute medication check phone call (which I usually make from my home)
- 8am – 45 minute appointment
- 9.30am – 60 minute appointment
- 12 pm - 10 minute medication check phone call
- Break at 12.10pm until around 4 pm
- 4pm – 30 minute appointment
- 6pm – 10 minute medication check phone call (which I usually make from my home).

16. The way that these appointments are broken up across my day requires me to be available for 12-13 hours during the day, but I will only be paid for 4-5 hours of work. I am not paid for the time it takes me to travel between each appointment. Attached and marked '**Annexure B**' are copies of my rosters for the period 24 September 2018 to 14 December 2018.

17. These broken shifts impact me greatly in that I am prevented from seeking a second job because of the demands these shifts place on my availability. I am barely provided with enough hours to cover my living expenses and rent in my current job. I frequently feel that I need to supplement my current income by getting a second job. The fact I need to be effectively on call to maximize my hours makes getting a second job almost impossible.

18. I have friends who work in commercial cleaning and they have previously offered to assist me with finding casual shifts as a cleaner. However, I am rarely able to take

these shifts because my shifts with Livebetter require me to be available across 12-13 hours of the day. When I have spoken about this with my manager, I have been told that I should not be taking a second job as a cleaner because my priority is to Livebetter.

19. I have two grandchildren that live close by and I would like to spend more time with them. If my broken shifts at Livebetter were not as long, I would be able to assist my daughter with babysitting them so that my granddaughter does not have to be in daycare as frequently and I could look after my grandson after school.

Mobile Phone Allowance

20. One of my duties involves making phone calls to clients to check that they have taken their medications. I am directed to do this as part of my job. I normally make 2-3 of these phone calls per working day. I am also required to call clients if I am running late to meet them for an appointment. This can happen frequently due to traffic.

21. I make these phone calls from my personal mobile phone. I am not provided with a phone by my employer to make these phone calls. My employer asked me for my mobile number and made it clear this was because I would be contacted by my employer on my own mobile for work related matters. I have never been provided with a work mobile and the only device I can use for work related calls is my own mobile. I am not reimbursed for the cost of making these phone calls or the cost required to maintain my personal phone to ensure I can make these phone calls. My phone bill costs approximately $170 per month. If I was not required to make as many work calls, I could consider dropping to a cheaper mobile phone plan.

22. Since August 2018, my employer has been emailing our rosters to us, so I am required to have access to an email account and the internet in order to check my roster. I also scan and email timesheets to my employer at the end of each week, which also requires access to the internet. I am also reliant upon the internet at home if I am asked to pick up a shift with a client I am not familiar with. I will have the care plan emailed to me and I will read it from home prior to attending the appointment so that I am aware of their history and requirements.

Income and expenses

23. I am paid an hourly rate.

24. On average I earn a gross weekly amount between $500 and $1000 for work, depending upon the hours worked. Attached to this statement and marked **'Annexure C'** are copies of my pay slips for the period 15 February 2018 to 9 December 2018.

25. My average weekly expenses (excluding entertainment and savings) are approximately $873.00, comprised of:

Rent, household bills and groceries	$500.00
Car expenses, including registration and petrol:	$330.00
Other expenses: mobile phone bill etc.	$43.00
Total:	**$873.00**

[redacted]

community services

27 June 2018

Trish Stewart
4 Comber Street
SVENSSON HEIGHTS QLD 4670

Dear Trish,

I am pleased to offer you employment with LiveBetter Services Limited (LiveBetter) on the terms set out in this Letter of Employment. Please read these terms carefully and, if you wish to accept this offer, sign and return the attached copy to the Human Resources Department.

TERMS AND CONDITIONS OF EMPLOYMENT

1. Commencement date

This Letter of Employment will be effective from the 1 July 2018.

2. Term of employment

Your employment with LiveBetter will continue for an indefinite period, subject to successful relevant background checks including a review of your national police record, and working with children check. You will also be required to successfully complete a health & wellness check. If you do not consent to these background checks and health & wellness check or, if your background checks reveals past behaviours that are inconsistent with the expectations of you in this role and this Letter of Employment, then this offer of employment will be revoked immediately.

3. Role, duties and performance

You are engaged as Support Worker on a permanent, part time basis of 20 nominal hours per fortnight plus any reasonable additional hours. You will be working in the Bundaberg / Wide Bay area, in the Aged Care Services and reporting to Sharon Walker, Coordinator.

During your employment with LiveBetter, in addition to those duties outlined in your position description, you are required to:

- comply with all policies and procedures (as amended from time to time) that pertain to your employment and the performance of your duties, which are published by e-mail and/or located on the LiveBetter Intranet;
- perform the duties assigned to you from time to time and comply with all lawful and reasonable directions given to you by your Manager;
- perform your duties and responsibilities in a proper and efficient manner;
- except in the case of absence by reason of illness or incapacity or leave in accordance with this contract of employment, devote your time, attention and abilities during normal business hours exclusively to the business of LiveBetter;
- use your best endeavours to promote and enhance the interests, welfare, business, growth and reputation of LiveBetter; and

- not intentionally do anything which is or may be harmful to LiveBetter.

Your duties, responsibilities, team and location may be revised from time to time in consultation with you to meet the changing needs of the organisation. Any changes will be discussed with you in advance and confirmed in writing.

4. Remuneration

Classification
Your conditions of employment will be governed by the applicable provisions of the Social, Community, Home Care and Disability Services Industry Award 2010 (SCHCDSI).

Due to the nature and scope of your role, your position has been classified as SCHCDSI Level 2 Pay Point 2 Schedule (E) Home Care Employee on the basis of the nature and scope of the role and your qualifications and experience.

Rate of Pay
Your rate of pay upon commencement will be $22.24 per hour which represents an above Award payment. This rate is subject to change as per LiveBetter's obligations under the *Social, Community, Home Care and Disability Services Industry Award 2010*. LiveBetter will also make superannuation contributions on your behalf in accordance with the Superannuation Guarantee legislation.

Payment of Salary
Payment of your salary will be made on a fortnightly basis, in arrears, by electronic deposit to an account nominated by you. Your manager will confirm if you are required to complete a timesheet.

Superannuation contributions
You are free to direct your superannuation contributions to a regulated complying superannuation fund of your choice. If you do not advise us of your choice of a regulated complying fund, your contributions will be made to the superannuation fund chosen by LiveBetter as the default fund, currently HESTA. If you choose your own fund and do not become a member of the LiveBetter default fund, you are required to provide the information about your chosen fund as listed in the Choice of Superannuation Fund form.

Additional contributions to superannuation
In addition to the legislated employer superannuation contributions, you may direct an additional amount to the fund by means of automatic deduction from your pay. For further information please contact the Payroll Officer.

Salary packaging
You may be entitled to participate in LiveBetter's salary packaging scheme, which at present is administered by AccessPay.

Remuneration reviews
Salaries are reviewed annually in conjunction with the annual performance review process, the relevant industrial Award and the LiveBetter remuneration framework.

5. Hours of work

You are engaged on a permanent part time basis of 20 hours per fortnight. Your usual days and times of work are variable and dependant on a roster system which is published and communicated fortnightly. The

roster is based on the needs of the service and will potentially include some stand up shifts, sleep over shifts, afternoon shifts, evening shifts and potentially weekend work. Any variation of hours will be published in the roster.

6. Overtime

All overtime worked must be approved by your manager in advance and, providing approval is obtained, you will be paid in accordance with the overtime provisions of the appropriate Award. Alternatively, you may like to make use of time in lieu provisions, if mutually agreed between yourself and your supervisor and in accordance with the relevant Modern Award.

7. Leave entitlements

Annual leave
You will be entitled to accrue entitlements to paid annual leave at the rate of 20 days for each year of continuous service (or, if part-time, pro-rated) in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time and the appropriate Award.

Annual leave loading of 17.5% will be paid on accrued leave when it is taken.

Unused annual leave will be paid out on termination of employment.

Personal/carer's leave
You will be entitled to ten days paid personal/carer's leave for each year of continuous service (or, if part-time, pro-rated) in accordance with the LiveBetter Leave Entitlements Policy as amended from time to time.

You are not entitled to any payment in lieu of accrued personal leave on termination of your employment.

Compassionate leave
You will be entitled to up to two days paid compassionate leave per permissible occasion in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time.
Parental leave
You will be entitled to parental leave in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time and relevant industrial instruments, such as the Fair Work Act.

Long Service Leave
You will be entitled to long service leave in accordance with LiveBetter's Leave Entitlements Policy as amended from time to time.

Public holidays
You will be entitled to public holidays as proclaimed in your relevant state or territory without loss of pay. Payment will be made in accordance with the National Employment Standards.

Other leave
For information regarding all other leave such as community service leave, religious holidays, study leave and leave without pay, refer to LiveBetter's Leave Entitlements Policy or contact the HR team.

Service Date
For the purpose of calculating service and leave accruals, your original start date with Excelcare Australia Limited will be used.

live etter
community services

Transfer of leave entitlements
As part of your transition from Excelcare Australia Limited, LiveBetter will be transferring your statutory entitlement accruals. This transfer is conditional upon LiveBetter receiving sufficient funds from Excelcare Australia Limited to cover these entitlements prior to commencement.

8. Workers' compensation

LiveBetter has workers' compensation insurance in accordance with the relevant state or territory legislation. In the event of any injury occurring during working hours you should immediately notify your manager.

9. Code of Conduct

LiveBetter is committed to ensuring that all individuals are treated with dignity and respect. The LiveBetter Code of Conduct explains what is meant by equal employment opportunity, discrimination, harassment, victimisation and bullying. It is essential that you understand and comply with the Code of Conduct as amended from time to time. A copy of the Code of Conduct is included in your employee handbook which is issued at induction and is also available on the Intranet.

10. Conduct and attire

You will be expected to conduct yourself in a manner that enhances the professional standing of LiveBetter, whether in the office, at third party locations, or any forum in which you may be seen as representing LiveBetter.

11. Driver's Licence

Given the nature of the role, a condition of employment is that you must possess and maintain a valid unrestricted Australian driver's licence. You must provide LiveBetter with a copy of your valid driver's licence and must notify LiveBetter immediately if you are disqualified from driving.

12. Confidentiality

You must not disclose, or allow access to, any confidential information, to any person except in the proper course of your duties, or as permitted by LiveBetter, either during or after the course of your employment. Confidential information is defined as any information relating to LiveBetter employees and clients, which is not lawfully available to the general public.

Further, as an employee of LiveBetter you will have access to "Know-How", and have a detailed knowledge of LiveBetter's clients and business' clients. You will have the opportunity to build professional relationships with those clients, employees and others engaged in LiveBetter's Business (goodwill). It is reasonable for LiveBetter to protect the goodwill of the business and as such, you must not during or post employment with LiveBetter, induce, solicit, canvas or approach any customers of LiveBetter on behalf of any other business. This includes, but is not limited to soliciting or approaching LiveBetter clients/and or families to move providers, or encouraging LiveBetter client/ and or families to select another service provider on the basis of your employment with that provider.

liveBetter
community services

In addition, you must not during or post employment with LiveBetter, do or say anything that may be harmful to the reputation of LiveBetter in any forum, or that may lead a person to cease, curtail or alter their dealings with LiveBetter.

13. Medical Examinations and Considerations

Where a specific medical examination is not required for your position, LiveBetter assumes that you are medically fit to undertake employment with LiveBetter unless you notify it otherwise. If you have a medical condition that may have an impact upon your ability to carry out your duties or may require LiveBetter to provide you with assistance to undertake your duties then it is important to disclose the extent of the medical condition to LiveBetter so that it may fulfil any requirements it has to assist you.

Where during the course of your employment with LiveBetter the CEO forms the opinion that there are reasonable concerns that you are not fit to undertake your normal duties you may be required to attend a medical examination.

14. Termination of employment

Either you or LiveBetter may terminate your employment with LiveBetter at any time by giving written notice in accordance with the National Employment Standards as outlined below.

Period of continuous service at the end of the day the notice is given	Notice period
Not more than 1 year	1 week
More than 1 year but not more than 3 years	2 weeks
More than 3 years but not more than 5 years	3 weeks
More than 5 years	4 weeks

Notwithstanding any other provision contained in the Letter of Employment, LiveBetter may terminate your employment at any time without prior notice if you commit an act of serious misconduct. Serious misconduct includes both of the following:

- wilful or deliberate behaviour that is inconsistent with the continuation of this Letter of Employment;
- conduct that causes imminent and serious risk to the health and safety of a person, or the reputation or viability of LiveBetter.

Examples of serious misconduct include but are not limited to:

- theft, fraud, assault, intoxication, or refusing to carry out a lawful and reasonable instruction consistent with this Letter of Employment;
- the commission of a crime in the course of your employment;
- the commission of a crime outside your employment with LiveBetter (eg criminal dishonesty, where your duties require good faith and honesty);
- neglect of duties; and/or
- the use of objectionable or obscene language in certain circumstances (eg if such language is directed towards managers, employees or clients of LiveBetter).

LiveBetter may suspend you on full pay from part or all of your duties at any time, including during any period of notice of termination of your employment.

liveBetter
community services

15. Security of equipment and documentation

Whilst working at LiveBetter you are required to take care to secure your personal belongings. LiveBetter will not reimburse an individual who suffers a loss due to theft of cash or personal possessions. You are also responsible for all equipment issued to you and documentation in your custody. This includes computers, mobile phones and confidential documentation. Any losses must be reported to your manager immediately.

16. Variation and entire agreement

This Letter of Employment may only be varied, replaced or terminated by agreement in writing signed by you and an authorised representative of LiveBetter. This Letter of Employment embodies the entire understanding of the parties in relation to your employment by LiveBetter and supersedes all previous negotiations, representations or agreements. This offer of employment is valid for strictly two weeks from the date of issue unless otherwise agreed.

Please indicate your written acceptance of this offer by signing, dating and returning the copy of this Letter of Employment to the Human Resources Department.

Yours sincerely,

Nerissa Marat
General Manager People & Culture

I have read and accept the terms and conditions of employment as set out in this Letter of Employment.

BEFORE THE FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF THE MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Supplementary Statement of Trish Stewart

I, Trish Stewart, of [redacted] in the state of Queensland say:

1. I have previously provided a statement dated 17 January 2019 in these proceedings.

2. My date of birth is [redacted].

Travel Time

3. My work in home care requires a significant amount of travelling between client's homes for their appointments. This travel is an essential part of the job and is a requirement in order for the services to be delivered.

4. I use my own car to travel to and from the appointments. The position description provided to me by Livebetter states that it is a requirement of my position that I have a driver's licence.

5. Prior to July 2017, I received pay for the travel time between appointments. The amount we were paid depended on the time that it took for us to travel between appointments. We were paid our normal hourly rate for that time and it was counted as time worked. I understand the rostering staff used Google maps to get an estimate for how long the travel should take and this was how our pay was calculated.

6. In July 2017, Excelcare, the company I worked for, became Livebetter, who are my current employer. This change, I believe, is the reason that we are no longer paid our travel time. I do not know why Livebetter chose to stop paying for travel time.

7. Attached to this statement and marked 'A' is a spreadsheet showing an estimate of my time spent travelling between appointments for the period 26 July 2017 to 8 February 2019.I used a website called Openstreet map to calculate the estimates and it includes traffic.

8. As the spreadsheet shows, I can spend up to 1-2 hours accumulatively during a working day travelling between appointments. This is time that I used to be paid for and now I miss out on that pay. It has been a significant paycut for me.

[redacted]

BEFORE THE FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF THE MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Further Statement of Trish Stewart

I, Trish Stewart, of 37A Plum Tree Crescent, Moore Park Beach in the state of Queensland say:

1. I have previously provided statements dated 17 January 2019 and 1 April 2019 in these proceedings.

2. I recently resigned from my role as a home care support worker with LiveBetter. My last day of employment with LiveBetter was 16 September 2019.

3. I resigned from my role with LiveBetter for the following reasons:

4. I did not receive enough hours of work to meet my financial responsibilities. I did speak to my direct coordinators (Ms. Jenni Bruce and Ms. Sharon Walker) on several occasions about receiving more hours, but I was not provided with more hours. Towards the end of my employment with LiveBetter, there was a period of time when additional hours of work were being emailed to a group of support workers, and whoever saw the email first and was able to respond first received the additional hours, or the shifts were given to casual staff.

5. Broken shifts - In my role with LiveBetter, I was required to be available for around 12-13 hours in a day, in order to try and receive a few hours of paid broken shifts. The long availability period affected my family life and it also affected my ability to maintain a second job.

6. Unpaid travel time - I was not paid for travelling between shifts. I live about 30 minutes' drive out of town and when there were gaps between broken shifts I either had to wait around in town or drive home and then drive back to town to the next client.

7. In around April 2019, I obtained a casual job with Edmen Group as a disability support worker. I needed a second job as my income from LiveBetter was not sufficient to live on. I told my coordinator (Ms Jenni Bruce) at LiveBetter about

working for Edmen Group and she said words to the following effect: "*It is fine as long as it does not interfere with your job at LiveBetter.*"

8. However, as I was required to be available for long periods of the day with LiveBetter, I did not have much availability for shifts with Edmen Group. Edmen Group cancelled my contract and listed me as '*inactive*' in around August 2019 as I did not have good availability. In total, I think I did approximately 6-8 shifts with Edmen.

9. I am now employed as a casual Environmental Service Worker in the kitchen of a residential aged care facility (Gracehaven –Churches of Christ Care) in Bundaberg. I am employed at Level 1.1 under the *Aged and Community Care Support Staff Enterprise Agreement* and I am paid $21.21 per hour, plus a 25% casual loading.

10. I have been receiving 8 hour shifts 4 days a week.

11. I do not work any broken shifts. When I go to work, I am there for a full 8 hours and I am paid for those hours. With my new job, I am better able to meet my financial commitments.

12. As my new job has shifts in one block, I have more availability to take on additional hours of work in a second job. I now do occasional work as a contract cleaner and this allows me to supplement my income and pay for bills and other expenses.

13. I am also hoping to be able to move back into my own home now that I have a new job. Because of my income as a home care worker, I was struggling to pay my mortgage repayments in 2018. I applied for financial hardship assistance from my bank, and received a fee free period for 6 months. I tried to sell my home but was unable to.

14. In late 2018 I moved out of my home and found a town house to rent. I am still living in this town house.

15. I was able to lease out my home to a tenant by around February 2019. The mortgage is $400 per week, and the rental income I receive is $360 per week.

16. I am in arrears on my mortgage repayments but I am now able to start paying it back. I am hoping to move back into my home towards the end of the year as I should be able to make my mortgage repayments with my new job if I continue to receive the same number of shifts regularly.

17. I loved working in home care and would have liked to have continued to work in home care. I loved the clients and I felt that I made a difference in the lives of my clients. Most of my clients I had been working with for around 5 years and I had built

a rapport with my clients. It was hard for me to leave my role in home care because of the relationship I had with the clients; however I resigned because of the stress I was under from the low pay, low hours, and broken shifts and from not receiving payment for travel time.

BEFORE THE FAIR WORK COMMISSION

MATTER NO. 2018/26

Section 156 - Four Yearly Review of Modern Awards – Social, Community, Home Care and Disability Services Industry Award 2010 – Substantive review

Statement of Melissa Coad

I, Melissa Coad, union official, of [redacted] say:

1. I am employed by United Voice as the Executive Projects Coordinator.
2. I am responsible for the coordination of United Voice's activities in home care, disability care and the residential aged care industries. The role requires an in depth knowledge of the home care, disability and aged care sectors, including a detailed knowledge of:
   a. the structure and operation of the sectors, including eligibility processes for consumers, and funding mechanisms,
   b. legislative and policy reforms in both sectors, and
   c. workforce and the issues impacting the provision of quality care and support.
3. The role requires contribution to and involvement in stakeholder and government forums and engagement in the policy debate. I am or was a member of or participate in the following groups and forums: National Aged Care Alliance (NACA) including chairing the NACA workforce sub-committee, the Aged Services Industry Reference Committee, the Aged Care Workforce Industry Council, the (former) Community Services and Health Industry Skills Council, the University of South Australia Quality Jobs Quality Care Project Advisory Committee and Project Working Group, the (former) Department of Health and Ageing Strategic Workforce Advisory Group. My participation in these groups is on behalf of United Voice and its members and the main focus of my involvements is the protection and enhancement of the industrial rights and general well-being of our members.
4. I have been in this role since August 2013.
5. I previously made a statement in the 4 yearly review Part time and Casual proceedings. I have updated that statement for the purposes of these proceedings.
6. I have read the submissions of Australian Business Industrial, the NSW Business Chamber Ltd, Aged and Community Services Australia and Leading Age Services Australia dated 2 July 2019.
7. I have read the submissions of National Disability Services dated 2 July 2019.

Funding of Aged Care

8. The Commonwealth is the primary funder and regulator of aged care in Australia. At the Commonwealth level, the main regulatory instrument is the *Aged Care Act 1997* (Cth), which sets out the basis for service planning, user rights, eligibility for care, funding, quality assurance and accountability.

9. Aged care can be delivered in the home or in a residential aged care facility. There are different models of funding for each sector.

10. Home care employees covered by the *Social, Community, Home Care and Disability Services Industry Award 2010* predominantly provide aged care services in the home. Care workers in residential aged care facilities are covered by the *Aged Care Award 2010*.

11. Eligibility for residential aged care or a Home Care Package is determined by assessment. Assessments are undertaken by an Aged Care Assessment Team ('an ACAT'). Eligibility for services delivered under the Commonwealth Home Support Programme (CHSP) are assessed by a Regional Assessment Service (RAS). A person wanting to enter residential aged care or wanting assistance at home would first contact the Commonwealth Government through a contact centre called My Aged Care. Where appropriate the contact centre will refer the person to an ACAT, or RAS in their local area for assessment. The ACAT or RAS will determine if a person is eligible for residential aged care or for home care and the level of support they are able to receive.

12. Once a person is assessed and eligible they can enter residential aged care or receive a home care package or services provided through CHSP. If residential places or home care packages are not available immediately they will go on a waiting list until places or services are available.

Federal Funding of Home Care

13. Consumer Directed Care ('CDC') and individualised funding is the current model of funding for Federal Home Care Packages Programme. Home Care Packages are different to the Commonwealth Home Support Programme (CHSP).[1]

---

[1] The CHSP brings together four programs: Commonwealth Home and Community Care (HACC) Program, Planned respite from the National Respite for Carers Program (NRCP), Day Therapy Centres (DTC) Program, Assistance with Care and Housing for the Aged (ACHA) Program. The CHSP is one consolidated programme that provides entry-level home support for older people who need assistance to keep living independently at home and in their community.

14. Home Care Packages were introduced on 1 August 2013, to replace the former Community Aged Care Packages (CACPs), Extended Aged Care at Home (EACH) Packages and Extended Aged Care at Home Dementia ('EACHD') Packages as part of the *Living Longer, Living Better* aged care reforms. With the introduction of the Home Care Packages programme, the first tranche of home care places were required to be delivered on a CDC basis.

15. As at 30 June 2014, there were 6,833 home care packages being delivered on a CDC basis. From the 1 July, 2015 all Federal Home Care Packages are required to be delivered on a CDC basis. On 1 July 2015, approximately 59,000 existing Federal Home Care packages were converted to the CDC funding model. As at December 2018 there were 93, 331 people receiving Home Care Package.

16. The purpose of CDC is to deliver greater flexibility and choice to home care clients, who will now be able to choose the types of care and services that they want. This will include how the service is delivered. Individualised funding gives the consumer more control by clearly identifying the sum of money available to support the individual and how that money is spent.[2]

17. The introduction of CDC was a significant change in the way that home care is delivered in Australia. The most significant change that CDC presents is the introduction of individualised budgets for each consumer. Previously, funding of Home Care Packages was provided as 'block' funding to care providers, with a sum of money being provided to care providers to care for an allotted number of consumers. Although they were not entitled to move funds from one client to another, providers would move 'unused' funds from one client to another that required topping up. Some recipients with less intense packages essentially subsidised those who needed more intensive in-home care. However, this can no longer occur due to the introduction of individualised budgets. This 'cross-subsidisation' is impossible under the new system.

18. There is a substantial amount of unspent funds as clients either 'save' for a genuine high cost item or event, save due to attitude "I don't really need it now" or they just don't spend the funds – it is not known exactly why. There was about $539 million in unspent funds as at the end of the 2018 financial year.[3] This was up on the previous financial year. As of 20 June 2017, there were $329 million in unspent funds.[4]

---

[2] Guidelines outlining how the Home Care Packages Programme is to be delivered can be found here:https://www.dss.gov.au/sites/default/files/documents/08_2014/home_care_packages_guidelines_2014.pdf

[3] Aged Care Financing Authority, Seventh report on the Funding and Financing of the Aged Care Industry. July 2019, pg 56, available here: https://agedcare.health.gov.au/sites/default/files/documents/08_2019/acfa-seventh-report-2019-acc.pdf

19. Home Care Packages are additionally funded through a consumer contribution of a 'basic daily fee' and dependant on income an 'income tested care fee' as well.

20. Currently, the Federal Home Care package subsidy will still be paid to the home care providers and not directly to the consumer. The Home Care subsidy is paid to the home care provider monthly in advance through the Department of Human Services aged care payment system. The subsidy is calculated on a daily basis.[5]

21. Reforms that commenced in February 2017 enabled funding to follow the consumer (although it will still be paid to the provider). This will mean packages are no longer allocated via an annual planning round to providers; instead, consumers will take their eligible package to any provider of their choice.

22. Additional reforms, which were slated for 2018 (but have yet to occur) will effectively merge the Commonwealth Home Support Programme (previously state based HACC), Home Care Packages and ultimately residential aged care into one seamless aged care system, accessed by the consumer at the appropriate level based on assessment.

23. A crucial feature of both the NDIS and Home Care Packages is an increase in the standardisation of policy and practice across Australia and also the use of a diverse and competitive array of providers. United Voice has been an advocate for workers in these sectors during recent changes to ensure our members conditions are maintained and improved.

24. Employers in aged care, home care and disability appear to be using fears about the change in the funding model for home care and the introduction of the NDIS to demand greater workforce flexibility. When in fact for many providers it may mean a more certain income stream as they are able to attract a greater number of consumers than they were allocated under the previous funding arrangements.

25. A feature of CDC is that greater choice is provided to the consumer. United Voice members are the individuals providing the care and support under this system and the face of the provider. United Voice has been working with employers and peak organisations and amongst the more progressive there is an awareness that stability and better terms and conditions for the workers delivering the actual service is critical for a provider's survival and growth when consumers have greater choice concerning where the money goes. There are a number of factors that militate against uncertainty in this sector under the CDC model of funding.

---

[4] As above.

[5] https://www.dss.gov.au/our-responsibilities/ageing-and-aged-care/aged-care-funding/aged-care-subsidies-and-supplements

26. CDC provides incentives for employers to increase the predictability and consistency of service delivery. The work involves delivering personal care services to vulnerable persons who are often isolated in various ways. Continuity of service is sought and desirable. When a good relationship has developed between a carer and a recipient of care, there are incentives to maintain this relationship under CDC.

27. Demand for aged care services (both residential and in the home) is higher than what can currently be delivered due to the planning process effectively 'capping' supply. Many stakeholders in the aged care sector, providers and consumers alike have and continue to call for an uncapping of supply. Demand for aged care services is likely only to grow into the future as the population ages. As at 31 March 2019 there were 129, 038 people waiting to receive a package at their assessed level of need.[6]

28. The nature of the care and support provided by United Voice members in aged care, both in residential and in home care includes, domestic support such as cleaning, cooking and transport, personal care such as assistance with showering, dressing, eating and incontinence and medication management. The care provided is generally low acuity care and should be able to be provided in a planned manner. While our members assist persons in the community with medical emergencies and other one off needs for assistance this is not what this type of service is designed to provide.

29. Accordingly, the nature of these services is that they tend to be performed in a routine manner, *i.e.* at the same time each day, and this allows for both the recipients and providers of the care to negotiate mutually acceptable times for the service to be provided in advance. Continuity and predictability in the pattern of the provision of care is consistent with a higher quality service. An important element of this is the development of relationships between the provider of care and the recipient.

30. There will always be demands on care giver and providers to provide more services and respond to requests for additional services. Many of the recipients of care are socially isolated and have significant mental and physical illnesses. This is the case under past and current funding arrangements and it is incumbent on providers to provide the services that they are able to provide in a planned and measured manner. The majority of care recipients understand and will be able to negotiate a balance between their desired service and the capacity for that service to be provided by the person of their choice and at the time of their choice.

---

[6] Department of Health. Home Care Packages Program Data report 3rd Quarter 2018-2019. ! January to 31 March. 2019. June 2019

Funding of residential aged care

31. CDC does not apply to the Residential Aged Care. The *Living Longer Living Better* reforms announced by the former Labor government in 2012 included a commitment to pilot CDC in residential care. Despite this initial interest from government, a trial is yet to commence. If CDC was to be implemented in a residential care setting it would require a very different approach to CDC in home care. The congregate care setting, shared costs and group rosters would make the application of individual budgets in a residential environment impractical. The concept of CDC in residential care is further complicated by the vulnerability and frailty of residents.[7]

32. Residential aged care places are allocated to providers in an annual Aged Care Approvals Round ('ACAR'). ACAR is an annual competitive application process in which prospective and existing approved providers of aged care can apply for Government funded residential aged care places. These places are capped and become available on the basis of planning based on demographics and geography. The ACAR also provides the opportunity to apply for financial assistance in the form of a capital grant. Applications are assessed and places allocated to those providers that demonstrate that they can provide the best care to potential residents. There is currently a review of the ACAR process underway. The consultation period ends on 13 September 2019.[8]

33. Once assessed by an ACAT, individuals can then access residential aged care based on availability.

34. Consumers contribute to the cost of their care and accommodation in residential aged care via payment of a 'basic daily fee' and possibly a 'means tested care fee'. Accommodation payments are means tested and can be paid via a refundable lump sum or as a 'daily accommodation payment'.

35. Residential aged care providers receive funding per resident based on each resident's care needs and any supplements they may be entitled to. This is paid monthly. An accommodation supplement is also paid for those residents not paying their own accommodation fees due to limited income or assets. A higher accommodation supplement is paid to facilities that are new or recently refurbished.

36. Capital grant funding for capital investment may also be available to residential providers who meet a number of criteria.

FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Statement of Jared Marks

I, Jared Marks, Industrial Officer of [redacted] in the State of Queensland, state as follows:

1. I am employed by United Voice (**UV**) and have the conduct of proceedings in the Queensland Magistrates Court (matter numbers MEC/2019/24, MEC/2019/27, MEC/2019/28 and MEC/2019/29) which address the monetary loss caused by the defendant's failure to pay travel time (**related proceedings**).

2. I am aware that UV has advanced claims relating to travel time in these proceedings.

3. I make this statement to inform the Commission on the background to and current state of the related proceedings and the respective positions of the parties.

The parties in the related proceedings

4. LiveBetter Services Limited (**LiveBetter**) is a business engaged in the provision of in-home care providing domestic services to disabled and aged clients.

5. LiveBetter employs home care workers (termed 'support workers') who are classified as *'home care employees'* in accordance with the classification definitions of Schedule E to the *Social, Community, Home Care and Disability Services Industry Award 2010* (**Award**).

6. UV has coverage of home care employees.

Background to the related proceedings

7. On 3 August 2018, UV applied pursuant to s.738(a) of the *Fair Work Act 2009* (Cth) for the Fair Work Commission to deal with a dispute between UV and LiveBetter (**Dispute**).

8. I had the conduct of the Dispute.

9. At that time, the Award dispute procedure provided arbitration by consent only.

10. The Dispute was listed for two Conferences before Commissioner Simpson which occurred on 23 August 2018 and 8 October 2018.

11. The Dispute did not resolve at Conference and LiveBetter, the respondent in this matter, did not consent to the matter being arbitrated.

12. In the circumstances, UV decided to pursue the matter further in the Courts, which precipitated UV filing four employment claims in the Magistrates Court on behalf of four affected members of UV (*i.e.* the related proceedings). The employment claims were filed on 18 June 2019.

The related proceedings

13. A copy of one of the employment claims is **exhibited** hereto and marked "**JM1**".

14. All four employment claims seek orders for compensation and pecuniary penalties from the defendant, LiveBetter, for the failure to pay wages for periods of time home care workers undertook work related travel at the direction of their employer.

15. On 12 August 2019, LiveBetter filed a defence to each of the employment claims.

16. A copy of one of the defences is **exhibited** hereto and marked "**JM2**".

17. On 12 September 2019, LiveBetter filed interlocutory applications and supporting affidavits (each affidavit constituting 379 pages) applying for an order staying any further steps in the related proceedings pending the determination of these proceedings (**stay applications**).

18. A copy of one of the interlocutory applications is **exhibited** and marked "**JM3**". I do not produce a copy of the supporting affidavits however a copy can be produced upon request.

19. The stay applications have been listed for hearing on 2 December 2019.

The parties respective positions in the related proceedings

20. The principle issue in dispute is whether home care workers covered by the Award are entitled to be paid as time worked for time spent travelling between clients of LiveBetter when directed to attend clients' homes on the employer's behalf.

LiveBetter's position

21. The pattern of work (determined by LiveBetter) is for home care workers to attend the residences of clients at non-consecutive times throughout the work day.

22. LiveBetter characterises the pattern of work as a series of broken shifts and concedes that travel time is payable except for travel to and from a broken shift.[1]

23. By LiveBetter's reasoning, a broken shift commences when a support worker arrives at a client's home and ends when the home care worker departs from the client's home.

24. It appears LiveBetter intends to argue the principle that '*employees are not entitled to be paid for their commute between home and work*' should be extended to broken shifts.

UV's position

25. UV does not agree that travel time can be severed from a shift irrespective of whether the shift has been broken or not.

26. A key feature of the duties of a home care worker under the Award is the provision of domestic assistance in clients' homes at the direction of their employer. For this to occur, the home care worker must travel to and between clients at the direction of the employer. This is part of their normal work and anticipated in the Award classifications.

27. LiveBetter requires home care workers to use their own vehicles for this purpose and compensates them by paying a kilometre allowance in accordance with clause 20.5(a) of the Award. The kilometre allowance compensates support workers for some of the wear and tear on their vehicles and fuel, but it does not compensate them for their time which we say is time worked.

28. In any employment relationship it is fundamental that when an employee is directed to perform a function for the employer, usually for the benefit of the employer and/or its client, the employee is engaged in work which must attract remuneration.

---

[1] Paragraph 4 of the defence.

29. In the case of home care workers, the function of work related travel is inherent to the role because the service occurs at the premises of a client.

30. For this reason, the concept of *'travelling to and from a broken shift'* is unsound, because the travel cannot be separated from the domestic assistance that takes place in the client's home from the shift. This is because when a home care worker travels to a client they are performing their duties as directed.

31. LiveBetter's position is that travel to and from a broken shift is equivalent to the commute from home to work.

32. UV's position is that the commute between home and work occurs at the start and end of a work day. Work related travel, being inherent to the role, occurs during the working day and forms part of any shift, including shifts arising out of a broken shift.

The stay application

33. LiveBetter seeks to defer the matter pending the conclusion of the award review proceedings because, in its view, the Full Bench is a specialist tribunal who are currently addressing the issues relevant to the related proceedings.

34. UV does not agree with LiveBetter's approach because the review proceedings are an *inter partes* review of the Award. Any variation that the Full Bench may make to the Award will be prospective and will not affect the employment claims which have been made by our members. Further, the Full Bench in the review is not in a position to deal with individual cases or make any kind of determination about individual cases. In light of the refusal of LiveBetter to consent to arbitration, there is no jurisdiction for a member of the Commission to sit as a private arbitrator and make a binding determination concerning the employment claims.

35. I trust this material assists the Full Bench in its review of the Award.

Jared Marks

Dated: 3 October 2019

FAIR WORK COMMISSION

FOUR YEARLY REVIEW OF MODERN AWARDS

SOCIAL, COMMUNITY, HOME CARE AND DISABILITY SERVICES INDUSTRY AWARD 2010

MATTER NO. 2018/26

Exhibit JM1

MAGISTRATES COURT OF QUEENSLAND

REGISTRY: Brisbane
NUMBER: M 2400/19

Plaintiff: **MARGARET BLACKHURST**

AND

Defendant: **LIVEBETTER SERVICES LIMITED ACN 160 259 512**

EMPLOYMENT CLAIM

STATEMENT OF PARTICULARS OF CLAIM

The Parties

1. The plaintiff is and has been employed by the defendant in the role of Support Worker since 27 April 2017.

2. The defendant is, and was at all material times:

   (a) a body corporate duly registered and capable of being sued;

   (b) engaged, *inter alia*, in the provision of in-home domestic services to disabled and aged clients (**clients**).

The plaintiff's employment

3. Prior to 1 July 2018, the plaintiff was employed by Excelcare Australia Limited ACN 614 290 292 t/a Excelcare Australia Incorporated (**Excelcare**) on a permanent part-time basis in the role of home care worker (the **employment**).

4. On about 1 July 2018, Excelcare's business transferred to the defendant (the **transfer of business**).

14 JUN 2019

EMPLOYMENT CLAIM
Filed on Behalf of the Plaintiff

Form 2A Version 1
Uniform Civil Procedure Rules 1999
Rule 22; 522C

Name: Jared Marks, Industrial Officer
Address: United Voice, 27 Peel Street, South Brisbane 4101

Phone No: 07 3291 4654
Fax No: 07 3291 4699
Email: jared.marks@unitedvoice.org.au

5. The defendant continued to employ the plaintiff after the transfer of business and the plaintiff's service and entitlements transferred with the employment (the **transfer of employment**).

6. By virtue of the transfer of business and the transfer of employment, the defendant assumed liability for any unpaid wages and/or entitlements accrued but not paid during the period the plaintiff was employed by Excelcare.

Relevant Industrial Instruments

Agreements and Awards

7. The *Keppel Community Care Association Inc Support Workers Agreement 2008 Employee Collective Agreement* (the **Agreement**), covered and applied to the employment from 2008 until it was terminated on 19 June 2017.

8. On and from 19 June 2017, the *Social, Community, Home Care and Disability Services Industry Award 2010* (the **Award**) covered and applied to the employment.

Contracts of employment

9. On 8 October 2016, the plaintiff entered into a contract of employment with Excelcare dated 1 October 2016.

10. On 1 July 2018, the plaintiff entered into a contract of employment with the defendant dated 27 June 2018.

Particulars

Clause 4 of the contract dated 1 July 2018 states, "*Your conditions of employment will be governed by the applicable provisions of the Social, Community, Home Care and Disability Services Industry Award 2010*".

Work arrangements

11. Throughout the employment, the plaintiff has been required and authorised to use their personal motor vehicle to travel to and between client residences (**work related travel**) to provide in-home domestic services, in accordance with a fortnightly roster.

12. On and from 19 June 2017, the plaintiff has been paid a travel allowance in accordance with Clause 20.5(a) of the Award (the **travel allowance**).

Particulars

Clause 20.5(a) of the Award states, "*Where an employee is required and authorised by their employer to use their motor vehicle in the course of their duties, the employee is entitled to be reimbursed at the rate of $0.78 per kilometre.*"

13. Prior to 26 July 2017, the plaintiff was paid for work related travel.

14. On and from 26 July 2017, the plaintiff was no longer paid for work related travel.

Relevant entitlements

15. On and from 19 June 2017, the plaintiff was entitled to be paid for all hours worked in accordance with the classification levels in Clause 17 of, and the classification definitions in Schedule E to, the Award.

16. In the premises, since 19 June 2017 the plaintiff was entitled to be paid for work related travel as time worked in accordance with the Award.

Contraventions

17. By virtue of the above matters:

(a) the defendant is liable for the failure to pay the plaintiff for travel time since 19 June 2017;

(b) thereby contravened a term of the Award;

(c) thereby contravened s.45 of the FW Act.

Loss and damage

18. As a consequence of the defendant's contraventions of s.45 of the FW Act, as pleaded in paragraphs 17 herein, the plaintiff has suffered pecuniary loss in the sum of $4,494.30 particulars of which are set out in Appendix A to this claim.

Orders sought

19. The plaintiff seeks the following orders:

(a) by reason of the matters pleaded in paragraph 18 herein, the defendant pay compensation to the plaintiff in the sum of $4,494.30 pursuant to s.545 of the FW Act for loss suffered because of the contraventions of s.45 of the FW Act;

(a) the defendant pay interest on compensation in accordance with s.547 of the FW Act or, alternatively s.58(3) of the *Civil Proceedings Act 2011* (Qld);

(b) the defendant pay a pecuniary penalty pursuant to s.546 of the FW Act for its contraventions of s.45 of the FW Act;

(c) the pecuniary penalties be paid to United Voice pursuant to s.546(3) of the FW Act.

The plaintiff claims the amount set out below and elects to have this claim heard and decided in the Magistrates Court under the simplified procedures as an Employment Claim:-

Claim	$	4,494.30
Filing fee	$	62.05
Bailiff's service fee	$	50.40
Total	$	4,606.75

To the defendant[s]: TAKE NOTICE that you are being sued by the plaintiff in the Court.

If you assert that this claim is not an employment claim for the purposes of the *Magistrates Courts Act 1921* you may apply under section 42C of that Act to the court to decide the issue.

If you do not dispute that the claim is an employment claim, the Registrar will appoint a conciliator who will contact you to arrange a conciliation process and may require you to participate in a particular way.

If the employment claim is not resolved in the conciliation process and you intend to dispute the claim you must file a Notice of Intention to Defend and Defence to an Employment Claim in the registry within 28 days after the conciliator files a certificate in the registry and serve a sealed copy of it at the plaintiff's address for service shown in the claim as soon as possible.

The Notice should be in the approved form under the *Uniform Civil Procedure Rules 1999*. You do not need to do this until after the conciliation process has ended. If you do not comply with this requirement, judgment may be given against you for the amount claimed without further notice to you.

The Notice should be in the approved form under the *Uniform Civil Procedure Rules 1999*. You do not need to do this until after the conciliation process has ended. If you do not comply If you object that these proceedings have not been commenced in the correct district or that this Court does not have jurisdiction in this matter, that objection should be included in your Notice of Intention to Defend and Defence to an Employment Claim.

Address of registry: 363 George St, Brisbane City QLD 4000

PARTICULARS OF THE PLAINTIFF:

Name: Margaret Blackhurst
plaintiff's residential or business address: 397 Pine Creek Road, Pine Creek, 4670, QLD
Name of solicitor or agent: Jared Marks, Industrial Officer, United Voice
Business address of solicitor or agent: 27 Peel Street, South Brisbane, 4101, QLD
Address for service: 27 Peel Street, South Brisbane, 4101, QLD

MAGISTRATES COURT OF QUEENSLAND

REGISTRY: BRISBANE

NUMBER: M2400/19

Plaintiff: **MARGARET BLACKHURST**

AND

Defendant: **LIVEBETTER SERVICES LIMITED (ACN 160 259 512)**

DEFENCE OF THE DEFENDANT

The defendant relies on the following facts in defence of the claim:

1. The defendant admits the allegations in paragraphs 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 of the statement of claim.

2. The defendant denies the allegation in paragraph 14 of the statement of claim because, pursuant to the *Social, Community, Home Care and Disability Services Industry Award 2010* (the **Award**), properly construed, the Defendant did pay the plaintiff for any work related travel that the plaintiff undertook.

3. The defendant denies the allegation in paragraph 15 of the statement of claim because, when properly construed, the plaintiff was only entitled to be paid for hours worked in accordance with one classification level (or pay point) set out in clause 17 of the Award, at any one point in time.

4. The defendant denies the allegations in paragraph 16 of the statement of claim, and says that:

   (a) the plaintiff was entitled, pursuant to the Award, to be paid by the defendant for time taken for travel which is (properly construed under the Award) work related travel;

   (b) the defendant paid, pursuant to the Award, the plaintiff for any time taken for travel which was (properly construed under the Award) work related travel; and

Name: Lander & Rogers
Address: Waterfront Place,
Level 11, 1 Eagle Street,
Brisbane, Qld 4000

Phone No: 07 3456 5000
Email: lnixon@landers.com.au

(c) the plaintiff was not entitled, pursuant to the Award, to be paid for time taken travelling to and from broken shifts.

5. The defendant denies the allegations in paragraph 17 of the statement of claim because:

   (a) of the matters set out in paragraph 4 of this defence;

   (b) the defendant has no liability for "travel time since 19 June 2017";

   (c) the defendant has not contravened a term of the Award; and

   (d) the defendant has not contravened s 45 of the *Fair Work Act 2009* (Cth).

6. The defendant denies the allegations in paragraph 18 of the statement of claim because of the premises set out in paragraphs 4 and 5 of this defence.

7. The defendant does not plead to the prayer for relief (set out in paragraph 19 of the statement of claim).

Signed: 

Description: Lander & Rogers Lawyers as town agent for Kardos Scanlan

This pleading was settled by R W Haddrick of Counsel.

NOTICE AS TO REPLY

You have fourteen days within which to file and serve a reply to this defence. If you do not do so, you may be prevented from adducing evidence in relation to allegations of fact made in this defence.

Social, Community, Home Care and Disability Services Industry Award
Matter no: AM2014/285 and AM2018/26

SUBMISSION IN REPLY – FOUR YEARLY REVIEW – SUBSTANTIVE ISSUES
Social, Community, Home Care and Disability Services Industry Award

Overview

These submissions are made by Business SA's as Submission in Reply to the substantive claims lodged by the Health Services Union (HSU) and United Voices (UV) to vary the Social, Community, Home Care and Disability Services Award 2010 (the Award). The matters listed in Attachment C of the Amended Directions issued by the Fair Work Commission on 28 June 2019. Business SA has not addressed all the issues set out in the Statement; however, this should not be taken as Business SA's agreement to the remaining Union claims set out in their applications.

Clothing and equipment allowance

1. United Voice (UV)[1] and the Health Services Union (HSU)[2] lodged substantive applications to vary Clause 20.2 – Clothing and Equipment.

2. The SCHCADS Award currently provides the following in clause 20.2 – Clothing and Equipment:

> *20.2 Clothing and equipment*
>
> *(a) Employees required by the employer to wear uniforms will be supplied with an adequate number of uniforms appropriate to the occupation free of cost to employees. Such items are to remain the property of the employer and be laundered and maintained by the employer free of cost to the employee.*
>
> *(b) Instead of the provision of such uniforms, the employer may, by agreement with the employee, pay such employee a uniform allowance at the rate of $1.23 per shift or part thereof on duty or $6.24 per week, whichever is the lesser amount. Where such employee's uniforms are not laundered by or at the expense of the employer, the employee will be paid a laundry allowance of $0.32 per shift or part thereof on duty or $1.49 per week, whichever is the lesser amount.*

1 Submission of United Voice – Four Yearly Review, 5 February 2019 para 48 - 59
2 Submission of Health Services Union – Four Yearly Review – Substantive Issues, 15 February 2019 para 61-62

(c) The uniform allowance, but not the laundry allowance, will be paid during all absences on paid leave, except absences on long service leave and absence on personal/carer's leave beyond 21 days. Where, prior to the taking of leave, an employee was paid a uniform allowance other than at the weekly rate, the rate to be paid during absence on leave will be the average of the allowance paid during the four weeks immediately preceding the taking of leave.

(d) Where an employer requires an employee to wear rubber gloves, special clothing or where safety equipment is required for the work performed by an employee, the employer must reimburse the employee for the cost of purchasing such special clothing or safety equipment, except where such clothing or equipment is provided by the employer.

3. The HSU has made an application to amend the uniform allowance to ensure that a uniform is provided, or an allowance is paid; and providing a new entitlement for the replacement of damaged clothing.

Damaged clothing allowance

(i) Where an employee, in the course of their employment suffers any damage to or soiling of clothing or other personal effects (excluding hosiery), upon provision of proof of the damage, employees shall be compensated at the reasonable replacement value of the damaged or soiled item of clothing. (ii) This clause will not apply where the damage or soiling is caused by the negligence of the employee.

4. UV has made an application to vary subclause 22.2(b) to provide:

An adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.

The HSU Claim

5. The HSU submits the Award should include a damaged clothing allowance, to take into account that employees' clothing will frequently become damaged, soiled or worn given the nature of the work they do. Where such damage occurs, upon provision of proof of the damage, employees should be compensated at the reasonable replacement value of the damaged or soiled item of clothing.

6. Business SA acknowledges that not all workplaces provide uniforms, or the uniform provided will be a company shirt and not pants and there is a requirement for employees to wear some of their own clothing.

7. Business SA acknowledges that employees covered by the SCHCADS Award may undertake work that results in the soiling or damage of clothing, such as using harsh cleaning chemicals or from bodily fluids.

8. The HSU witness, Ms Waddell states that their uniform becomes damages or worn out very quickly and that clothing can become spoiled with bodily fluids.

9. It is not unusual for employees to wear their own clothes to work and general wear and tear of such clothing should not be the liability of the employer. Employees are expected to take all reasonable care necessary to protect their clothing.

10. The HSU has proposed the following wording:

20.3 Damaged clothing allowance

(i) Where an employee, in the course of their employment suffers any damage to or soiling of clothing or other personal effects (excluding hosiery), upon provision of proof of the damage, employees shall be compensated at the reasonable replacement value of the damaged or soiled item of clothing.

(ii) This clause will not apply where the damage or soiling is caused by the negligence of the employee

11. The standard wording for reimbursement of clothing allowance is as per the Manufacturing Award and has been used in a number of other, similar awards.

Manufacturing Award: 32.2 (d) Damage to clothing, spectacles, hearing aids and tools

(ii) Where an employee as a result of performing any duty required by the employer, and as a result of negligence of the employer, suffers any damage to or soiling of clothing or other personal equipment, including spectacles and hearing aids, the employer is liable for the replacement, repair or cleaning of such clothing or personal equipment including spectacles and hearing aids.

Food and Beverage Manufacturing 26.2 (d) Damage to clothing, spectacles and hearing aids

Where an employee as a result of performing any duty required by the employer, and as a result of negligence of the employer, suffers any damage to or soiling of clothing or other personal equipment, including spectacles and hearing aids, the employer is liable for the replacement, repair or cleaning of such clothing or personal equipment including spectacles and hearing aids.

The UV Claim

12. UV have submitted that the wording "adequate" contained in the Award allows for employer discretion resulting in the employees not receiving enough uniforms.[3] UV have also submitted that many workers covered by the Award carry out work that results in their clothing being stained, resulting in the employees washing their uniforms multiple times per week, which can be onerous.
13. UV submit that employees should be provided with enough uniforms so that they do not need to wash more than once per week.[4]

[3] Submissions of United Voice, 4 February 2019, Para 50
[4] Submissions of United Voice, 4 February 2019, Para 54

14. United Voice have proposed the following wording:

20.2(b) An adequate number of uniforms should allow an employee to work their agreed hours of work in a clean uniform without having to launder work uniforms more than once a week.

15. UV have relied on the modern award objective contained in the Fair Work Act 2009, specifically:

s 134(1)(a) – 'relative living standards and the needs of the low paid' -this variation would assist provide for the needs of the low paid. Employees covered under the SCHDS Award can generally be considered low paid.

s 134(1)(c) – 'the need to promote social inclusion through increased workforce participation' – participation in the workplace is facilitated by the dignity in having a clean uniform.

16. The UV witness, Ms Belinda Sinclair, indicates that she was not provided with enough uniforms to attend work in a clean uniform without having to wash her uniforms more than once a week. She states: '*When I only had 2 shirts, I had to wash them every day of employment, so one was ready to wear the next day. Working five days in a row meant I had to wash them at least three times per week*.'

17. While washing clothing more than once a week, may be seen as an inconvenience, the Union has not provided sufficient evidence to show that by requiring an employee to wash more than once a week results in the modern award objectives are not met. Ms Sinclair's statement does not provide evidence that participation in the workplace is facilitated by having a clean uniform or that providing additional uniform will improve the relative living standards and needs of the low paid.

18. The provision of additional uniforms to ensure an employee only washes clothing once a week is a cost on employers that is unnecessary and prohibitive. It is not possible for an employer

19. If an employee is required to wash uniforms, the employer will be in breach of the Award.

Telephone allowance

20. The SCHADS Award currently has the following provisions for telephone allowance:

20.6 Telephone allowance

Where the employer requires an employee to install and/or maintain a telephone for the purpose of being on call, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.

21. The HSA and UV have submitted claims to increase the telephone allowance.
22. The HSU wording to be submitted is a new clause:

20.7 Telephone allowance

Where the employer requires an employee to use a mobile phone for any work related purpose, the employer will either:

(a) provide a mobile phone fit for purpose and cover the cost of any subsequent charges; or

(b) refund the cost of purchase and subsequent usage charges on production of receipts.

23. UV has submitted the following wording:

Where the employer requires an employee to install and/or maintain a telephone ***or mobile phone*** *for the purpose of being on call,* ***for the performance of work duties or to access work related information****, the employer will refund the installation costs and the subsequent rental charges on production of receipted accounts.*

24. Business SA and its members acknowledge that employees are, at times, required to use personal mobile phones in the course of their employment.
25. Business SA does not believe it is appropriate for an employer to pay for a mobile phone, which may only be used for a small amount of work, for the employee to keep. There are fringe benefit issues that need to be explored here. It is not a matter of just providing a phone.
26. Mobile phone plans vary significantly. A preliminary search of mobile phone plans shows that the availability of plans from $15 per month with all calls and text messages covered and 3 gigs of data. An employer should only be required to pay for a suitable plan or a mobile phone allowance, rather than subsidise an employee's personal phone usage. The following provides evidence of a significant number of phone plans from various providers that do not require the payment of calls.
27. The United Voice witness, Trish Stewart states she spends $170 per month on phone bills due to work commitments.[5] Business SA submits that such a high cost is an anomaly and can easily avoided if the employee is on a cost-effective plan. Most plans include all phone call and text messaging costs and any reimbursement should be a reasonable amount and not subsidise either poor phone plan choice or an employee's personal usage.
28. HSU states in para [60], Any employees required to use a phone for work int his way should receive a telephone allowance which reflects the cost of maintaining and using such phone. Business SA agrees to a degree. Businesses should only be required to reimburse the work-related cost of maintaining and using a phone, not the personal component.
29. While Business SA is not proposing a variation to the phone allowance in the current SCHCADS Award, we draw the Commission's attention to the Real Estate Industry Award's mobile phone allowance which contemplates and better reflects the nature of using a personal mobile phone for work purposes.

[5] Submission of United Voice para 95, witness statement Stewart at [20] - [22]

18.6 Mobile telephone allowance

(a) Where the employer requires the employee to use the employee's own mobile phone in the course of employment and:

(i) the mobile telephone is provided under a mobile phone plan from a telecommunications provider, the employer and employee must agree in writing on the amount of reasonable reimbursement payable by the employer to the employee for the use of the employee's mobile phone in the course of employment provided that such reimbursement must not be less than 50% of the cost of the employee's monthly mobile phone plan, up to a maximum monthly phone plan of $100; or

(ii) the mobile phone is a pre-paid mobile phone; the employer and employee must agree in writing on the amount of reasonable reimbursement payable by the employer to the employee for the use of the employee's pre-paid mobile phone.

(b) Without limiting an agreed method of payment for reimbursement, an employee's salary in excess of the minimum weekly wage may be inclusive of reimbursement providing the reimbursement component of the salary is identified in the agreement.

(c) The mobile phone allowance under cause 18.6(a) is payable during the entire period of employment, except when the employee is on any period of leave either paid or unpaid.

(d) If requested, the employee must provide the employer with a copy of the mobile phone plan associated with the mobile telephone to be used by the employee in the course of employment.

(e) If the employee enters into a new mobile phone plan or arrangement with a telecommunications provider entitling the employee to a different allowance under this sub-clause, the new allowance will become payable from the first full pay period after the date the employee provides the employer with a true copy of the new mobile phone plan.

Minimum Engagement

30. The HSU has made an application to vary the Award to allow for all employees, whether full-time, part time or casual to be entitled to a minimum engagement of three hours in all sectors covered by the award.
31. Currently the Award only contains a minimum engagement clause for casual employees.
32. The casual minimum engagement clause states:

(c) Casual employees will be paid the following minimum number of hours, at the appropriate rate, for each engagement:

(i) social and community services employees except when undertaking disability services work—3 hours;

(ii) home care employees—1 hour; or

(iii) all other employees—2 hours.

33. Business SA acknowledges that there is no minimum engagement for part-time or fulltime employees and agree with the HSU that, this is generally not an issue for full-time employees due to roster arrangements.
34. The HSU, in its application has provided cogent reasons why there should be a minimum engagement for part-time employees, has not provided any evidence or rationale on why all minimum engagements should be set at three hours.
35. HSU has not provided a reason why casual employee engagement should be increased for home care employees or all other employees to three hours. and has only focused on part-time employment and then extrapolated this to other classifications.
36. In the process of creating the SCHCADS Award Australian Industrial Relations Commission (AIRC) released an exposure draft of September 2009, which contained a minimum engagement of three hours. This was argued against by employer parties on based on the inherent requirements of the industry. On 29 December 2009 the AIRC handed down a decision that varied the minimum engagement clause to the current modern award clause. The AIRC stated:

    [83] The minimum engagement has been established to take into account the different sectors in the industry.

37. Although the funding model of the industry has changed, the requirements of clients who receive the services has not. The requirement for short shifts still exists. Larger organisations in some circumstances may be able to roster around the shorter shifts, however, this will not be possible for smaller and regional employers.
38. HSU has made its submission on the minimum engagement in isolation and has not explored how the proposed variation will affect the broken shift clause, re-call to work clause and responding to emails after hours clause.
39. Business SA submits that a minimum engagement of 3 hours across for all work types would be a significant cost impact to the industry and would not meet the modern award object of the need to promote flexible modern work practices and the efficient and productive performance of work[6]; and the likely impact of any exercise of modern award powers on business, including on productivity, employment costs and the regulatory burden.[7]

S.35 Broken Shifts

ASU Claim

40. The ASU is seeking a variation to Clause 25.3 to provide a 15 per cent loading to be paid to employees who work broken shifts to compensate for the disunity associated with working unusual broken shift arrangements.[8]

[6] Fair Work Act 2009 s134(d)
[7] Ibid s134(f)
[8] ASU Submission, 18 February p.7

41. Broken shift allowances in other modern awards are:

    a. Children's Services Award – 1.19% of the standard weekly rate = $10.26[9]
    b. Aged Care Award – No allowance
    c. Hospitality Industry Award:

       where the time between periods of work is two hours and up to three hours—an allowance per day equal to 0.33% of the standard weekly rate; or $2.85

       where the time between periods of work is more than three hours—an allowance per day equal to 0.5% of the standard weekly rate. $862.50 = $4.31[10]

    d. Fitness Industry Award - 1.7% of the standard rate extra and for excess fares $1.94 extra. = $13.91[11]

    e. Security Services Award - 1.62% of standard rate = $14.11[12]

42. Business SA submits the claim for a 15% loading of their ordinary rate of pay for each hour from the commencement of the shift to the conclusion of the shift is significantly higher than any other industry. If a Level 2, pay point 1 casual worker receives the minimum of $27.80 per hour and works split shifts over the maximum allowable period of 12 hours[13], they will receive a shift allowance of $50.04 per shift (12 x $27.80 = $333.59 * 15% = $50.04). This is an extraordinarily high shift allowance for an industry with low margins and limited ability to absorb increased costs. The claim by the ASU is out of line with other industries and it is Business SA's view that the evidence provided does not substantiate a shift allowance of such a high amount, especially when viewed along with the other claims to vary the broken shift provision.

United Voice Claim

43. United Voice and HSU have submitted that broken shifts should only be worked in two parts. The evidence produced by the United Voice witness, Belinda Sinclair does not address the issue of broken shifts as she states that since the middle of 2018, she has only had once such shift scheduled as her employer does not like to use them.

44. It is Business SA's submission that evidence has not been provided to limit the splitting of shifts to only two. It is common practise in the industry to have a person provide support over three distinct parts of the day in order to meet the client's needs. If shifts are limited to only two, this will reduce the continuity of service to clients in the industry, who request the same carer for all shifts. The care of a person is a very personal choice and the client will request or choose a carer who makes them comfortable. Restricting the number of parts of

[9] Children's Services Award 2010 cl.15.1
[10] Hospitality Industry Award 2010 cl.21.3
[11] Fitness Industry Award 2010 cl.18.4
[12] Security Industry Award 2010 cl.15
[13] SCHADS Award cl 25.6(a)

the broken shift to two will significantly impact the choices of the clients. As well as be a cost impact of the business due to increased scheduling.

45. In addition to limiting broken shifts to two parts, as detailed above, the HSU is also seeking to vary the broken shift clause to ensure that broken shifts can only be worked by agreement and short shifts are not broken. (Clause 25.6; ED Clause 13.6)[14]

46. It is Business SA's submission that preventing an employer from being able to direct an employee to work broken shifts will significantly impair the ability to provide services to clients. It is recognised that, in homecare services the provision of care to a client over the course of the day is a regular requirement.

Conclusion

47. Funding arrangements for the NDIS are complex and there is no guarantee from the Federal Government that the National Disability Insurance Scheme (NDIS) will make adjustments to cover all of the additional costs specific to the increases if the Award is varied. This will result in businesses absorbing the cost of the increases. The flow-on effect of such increases will be the reduction of services to clients, reduction in staffing numbers, organisations looking towards alternative businesses models to overcome the increased costs and the closure of businesses.

48. Consideration of applications to vary the Award should only occur in the context of industry specific criteria and the unusual difficulties faced by the industry.

49. Business SA asks the Fair Work Commission to be cautious in implementing increases and variations that will have counter intuitive results to the industry and its stakeholders.

FAIR WORK COMMISSION
4 Yearly Review of Modern Awards
Social, Community, Home Care and Disability Services Industry Award 2010

Matter: AM2018/26

WITNESS STATEMENT OF JEFFREY OWEN SMITH
Filed on behalf of People with Disability Australia and Disabled People's Organisations Australia (DPO Australia).

I, Jeffrey Owen Smith, of 3 Moncur St, Marrickville, Sydney, New South Wales, affirm:

Background

1. I am the Chief Executive Officer for People with Disability Australia. I have been employed by PWDA since August 2019.

2. People with Disability Australia (PWDA) is a national cross-disability rights and advocacy organisation run by and for people with disability. Working within a human rights framework, PWDA represents the interests of people with all kinds of disability. We are a Disabled Peoples Organisation (DPO), meaning that our primary membership is people with disability and organisations primarily constituted by people with disability. We also have a large associate membership of other individuals and organisations committed to the disability rights movement. We have a vision of a socially just, accessible, and inclusive community, in which the human rights, citizenship, contribution, potential and diversity of all people with disability are recognised, respected and celebrated.

3. As a national DPO PWDA has a significant interest in the successful transition to the NDIS. We campaigned with and for people with disability for the introduction of the scheme over many years; we conducted a national engagement project with the National Disability and Carers Alliance to co-design the Scheme (2012-13) and I represent PWDA at the NDIA CEO forum. PWDA also provides a Commonwealth funded Individual Advocacy Service across NSW and locations in Queensland assisting over 2400 clients each year, many of whom will be effected by the NDIS transition.

4. PWDA is also a founding member of the Disabled People's Organisations Australia (DPO Australia), the others being First Peoples Disability Network Australia (FPDNA), Women With Disabilities Australia (WWDA), and National Ethnic Disability Alliance (NEDA). The key purpose of DPO Australia is to promote, protect and advance the human rights and freedoms of people with disability in Australia by working collaboratively on areas of shared interests, purposes and strategic priorities and opportunities. DPO Australia has been funded by the Australian Government to be the recognised coordinating point between Government/s and other stakeholders, for consultation and engagement with people with disability in Australia. In forming DPO Australia, its four founding member organisations recognise and value the strength of working together in a spirit of mutual respect and trust, to proactively pursue human rights outcomes for all people with disability in Australia.

5. In making this witness statement I am representing the views of PWDA.

6. I hold a Bachelor of Arts and Law at Macquarie University and a Masters of Law at the University of Sydney.

Choice and control for people with disability

7. The NDIS is premised on the principles of choice and control for people with disability. Choice of support provider and control over the terms of the supports being provided. In doing this people with disability are reshaping the market for disability supports by creating demand on their own terms, as opposed to accepting an inflexible, block funded supply. By funding individuals to create demand as opposed to funding services to create supply, the person centred approach of the NDIS takes the provision of disability support out of the specialised, segregated market and opens it up to operate within a free market model – like other services required by people in the community such as grocery shopping, leisure, entertainment, healthcare and transport, all of which operate outside of a traditional 9-5 office hours framework and respond to uncertain demand.

8. The NDIS is supporting people with disability to receive their disability supports in a way which will increase their social and economic participation. For example, the provision of disability support at flexible times to allow participation in social activities, employment and to make necessities such as visiting the doctor and shopping more convenient. It is the right of people with disability to undertake these activities as and when it suits them.

9. Some flexibility from the workforce will be required in order to realise this vision of the NDIS, and the ability of providers to deliver flexible, appropriate, good value, high quality, safe services must be a standard to which the success of the NDIS is held. The challenge of meeting these expectations lies with the service provider who must develop a business model that meets the needs of consumers through engagement of a workforce that is appropriately skilled, motivated, paid and valued for their work.

10. Spontaneity of needs may be addressed by existing casual support worker provisions, and it is important that these casual staff are properly remunerated for the insecure nature of their work. However, people with disability must not be characterised as unreasonable, unpredictable or irrational people who expect to have their preferred staff ‘on call’ to respond to their whims. People with disability are aware of the constraints that workers operate under and in some instances are also disability support workers themselves.

11. It is also critical to note that for the majority of people requiring disability supports their needs are regular and predictable. For example, a person requiring personal care every morning before work will be likely to require it at the same time, every working day, for every working week of the year. In our experience people with disability value continuity of support and are likely to seek to retain ‘’good’’ staff on a regular basis. They frequently express immense frustration with having to repeatedly 'train' new support workers in how to provide person-centred services to them as a result of a highly casualised and transient workforce. To our knowledge, the majority of NDIS participants want to employ staff regularly and over the long-term.

12. NDIS Support Plans are also drawn up and pre-agreed in advance, with spending justified at regular intervals. It is erroneous to characterise the NDIS as a system that provides for people with disability to change their support preferences on an ongoing and erratic basis.

The emphasis is on encouraging regimes of support that work well, when these patterns are achieved there should be little need for significant alteration to plans and service provision. Again, the key to meeting the expectations of people with disability and enabling service providers to operate with predictability and consistency is reliable, content, quality staff.

13. People with disability want to employ staff who are paid appropriately for their work, and for working anti-social hours whether they be long, short, late, early, fall on public or religious holidays, or at other times when they may prefer to be spending time with family and friends. Not only do positive working conditions mean that staff are more content in their job; their ability to build trusting, positive and productive relationships with clients is increased. Resentful and disgruntled staff are more likely to be more difficult for people with disability to work with, influence high rates of staff turnover, and ultimately can result in people with disability being put at risk of harm.

Devaluing the work of disability support workers devalues the lives of the people with disability they support

14. The proposed changes to the SCHDS Award – including to ordinary hours of work and rostered work - threaten the quality of staff and thus services on offer to people with disability.

15. The removal of overtime protections and changes to roster provisions would make disability support work an increasingly unattractive career path and lower the level of skills and commitment in the already strained workforce. This is at a time when the workforce should be expanding, diversifying, and up-skilling to adapt to the new environment and provide innovative solutions to people with disability. Disability support work is a challenging and rewarding career path, it should not be characterised as a fall back, or stop gap career for people unable to secure alternative better paid work with more standardised working conditions.

16. The proposed changes will potentially create a category of worker who is offered insecure employment with less protections *specifically* because they work with people with disability. The inference being that people with disability somehow still require something ‘different’ than others in the community, and cannot be served by mainstream style supports. The NDIS challenges this perception, and it is the service sector that must respond by changing working cultures, raising expectations, and rewarding good staff as opposed to targeting the workforce for cuts and placing the responsibility for this on people with disability who are merely seeking the choice and control experienced by others in the community.

17. Moreover, the changes will disproportionality affect women who make up the majority of the current disability support workforce. It will also create a further barrier to employment for people with disability themselves who could be using their skills and expertise to increase their economic participation and strengthen their economic security by working in the sector.

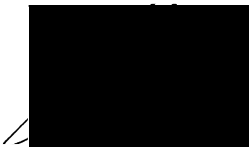
18. Creating systemic employment discrimination problems for disability support workers discriminates against people with disability too by indirectly channelling potential staff into

other industries with better working conditions. Devaluing the work of disability support workers devalues the lives of the people with disability they support.

19. Furthermore, there is considerable evidence linking underpaid, unmotivated, undervalued staff to violence, abuse, neglect and exploitation of people with disability especially those living in residential institutions or receiving personal care in their own homes. Research demonstrates that violence, abuse and neglect tend to occur where work is precarious, unstable or contingent (Mayhew and Quinlan, 2000 Both PWDA have advocated extensively on this topic, most recently in evidence to the Senate Community Affairs Inquiry into Violence, Abuse and Neglect Against People with Disability in Residential and Institutional Settings (2015). The Senate Report made specific recommendations around workplaces and worker practices with regard to addressing violence committed by staff.

20. Given the Royal Commission into Violence, Abuse, Neglect and Exploitation of People with Disability is just starting, it is premature to rein in employee entitlements in the manner suggested. The Royal Commission is likely to uncover many examples of violence, exploitation, abuse and neglect, and undoubtedly some of these will be due to structural issues arising out of the employment relationship, including where this spills over into unhappy and resentful staff.

21. Attractive working conditions for disability support workers are essential in order to support and maintain the paradigm shift embodied by the NDIS, encourage the development of a high quality market for disability supports which meets the needs of consumers, and to ameliorate the risk of violence towards people with disability. I urge the Fair Work Commission to look past the reactionary and short term needs of a service sector going through a period of urgent transition, and put the needs of people with disability and those who they employ to support them at the forefront of your deliberations.



Jeff Smith
CEO People with Disabilty Australia
